

## **Attachment 7**

### **Web Access to Remittance Advice**

Make remittance advice available through the NPI Portal according to the business requirements defined by the Iowa Medicaid Enterprise (IME) and approved by the Department to help providers more quickly identify potential issues relative to claims processing.

### **Mass Provider EMail Capabilities**

Provide Mass Provider EMail Capabilities functionality that supports provider type-specific communication and information sharing relative to IME and NPI-centric claims issues as defined by the business requirements defined by the IME and approved by the Department.

### **Edit Enhancements**

The existing MMIS system must be modified to support more than 25 claim exceptions (the current limit). This is required because NPI and other changes have raised the likelihood that claims will contain more than 25 processing exceptions.

The change includes modifying the claim file structure, as well as modifying all programs that access, modify and display the data contained in the file.

All scopes of work above will be completed within a timeframe defined by a Department approved workplan to be submitted at the beginning of each project.
