Our organization's quality performance has a strong reputation among our State partners for rapid and responsible response to identified quality improvement opportunities.

The State of Iowa has already launched several important initiatives which will contribute to the State's overall goal of cost-effective delivery of superior health and wellness outcomes. ***Amerigroup is committed to building on the initial momentum in Iowa by tailoring our market leading programs to***

Iowa and to each program objective. Specifically, we will actively align to each of the specified State initiatives:

- Healthiest State Initiative
- Mental Health and Disability Services Redesign
- State Innovation Model

Healthiest State Initiative (10.2.3)

Question 10.2, #1

1. Describe how you propose to work with the Healthiest State Initiative.

Through its Healthiest State Initiative, Iowa has committed to improve from #10 on the Gallup-Healthways Well-Being Index to #1 by 2016. We are excited to collaborate in this bold effort and to be part of the number one team. To make this happen, we will appoint Amerigroup's COO as our team lead for this initiative. We will closely collaborate with key constituents (for example, the State, Healthiest State Initiative workgroups, local businesses, community organizations, providers, other MCOs, and our members); we will work to tailor our market leading programs to address key performance gaps; and we will lead by example. Through our commitment to the Healthiest State Initiative, we will not only help drive superior health and wellness performance, but improve quality and cost-effectiveness across the system.

IA_10.2.3_GOB_1.2

Leadership and commitment drive successful initiatives. For this reason, we will make supporting the Healthiest State Initiative a primary responsibility of our health plan COO. A supporting team will be comprised of key members of the clinical team, provider services, marketing and outreach, as well as our innovation team. This team will meet bi-weekly, if not more regularly to develop strategies and tactics and monitor implementation. This team will also be responsible for close collaboration with all relevant constituents including member committees and community organizations. Collaboration will include: supporting, participating, and cross-promoting Healthiest State Initiative events, like the annual Healthiest State Walk, to engage our members, local staff, and the community. We also plan to participate in Healthiest State Conferences, and send quality leads and encourage them to maximize the opportunity to learn, network, and share best practices.

Leveraging our commitment to wellness and prevention across our portfolio of State partnerships, we will build on the most relevant programs to target key performance gaps. Specifically, we will rollout programs that target each of the five key goals of the Healthiest State Initiative:

- Decreasing the Number of Iowans Who Smoke
- Increasing Consumption of Fruits and Vegetables
- Increasing the Number of Iowans Who Have Visited the Dentist in the Last Year
- Increasing the Number of Iowans Who are Learning or Doing Something Interesting Daily
- Increasing the Number of Iowans Who Feel Their Boss Treats Them Like a Partner at Work

In addition, we will support the Blue Zone Project by becoming a certified Blue Zone employer and encouraging our providers to do the same.

Following execution of the Contract, Amerigroup will obtain DHS approval of the proposed approach to supporting the Healthiest State Initiative. We will implement and adhere to the DHS-approved approach. We understand that any changes to this approach must receive prior approval from DHS.

To support the five key goals of the Healthiest State Initiative, we have identified specific programs we plan to deploy in Iowa – many of which have been proven to be highly effective by our affiliate health plans in other states. The programs we have identified thus far, grouped by the goal they support include:

1. Decreasing the Number of Iowans Who Smoke

Smoking Cessation Value-Added Service: Amerigroup will offer **smoking cessation coaching** as a Value-Added Service. Additionally, we will offer a **\$30 incentive** for those members using tobacco who receive coaching to quit smoking through the Iowa Tobacco Quitline and/or Amerigroup's value-added smoking cessation program. Combined with coverage of smoking cessation medications on the Iowa Medicaid formulary, these programs will help establish Iowa Medicaid as a best practice State for smoking cessation model. In our most recent participant survey, 31.75 percent of our affiliates' member respondents receiving coaching and medication achieved the six-month quit metric.

Pro-active Referral Systems: To maximize participation in smoking cessation programs, our Disease Management and Care Coordination programs actively refer members to our smoking cessation coaching programs. Members may also self-refer.

General Member Education: In addition to coaching and medication, we take advantage of other member interactions to provide general education on smoking cessation. For example, the Amerigroup hotline provides callers with a number of health tips during on hold messaging. Examples of some of these smoking cessation messages include:

- Tip #1: "The Great American Smoke Out is in November. The American Lung Association sponsors the event each year to challenge smokers to kick the habit. Now is the time to say goodbye to your cigarettes, cigars, chewing tobacco or snuff. Don't forget to throw away lighters and ashtrays, too. Tell your family and friends that you are quitting so they can support you. Keep gum, mints and crunchy vegetables like celery and carrot sticks to snack on. These can be helpful when you get the urge to smoke. There are many programs to help people quit smoking. Your doctor can help you find the best program for you."
- Tip #2: "Cigarettes can hurt more than just the person smoking them. Children who are around smokers breathe the smoke. This can be as bad as smoking. Kids who live where there is cigarette smoke usually have more colds and sore throats. Teach your children that smoking is not healthy and is a hard habit to break. Please hold. Someone will be right with you."

2. Increasing Consumption of Fruits and Vegetables

Healthy Families Program Value-Added Service: This program includes **education and counseling on nutrition and fitness**. We offer a standard program targeting 7 to 13 year-olds, a teen program for 14 to 17 year-olds, a program for adults, and for specialized populations such as ID/DD. Members can be referred by a provider, self-referral, or outbound call campaign. Nurse coaching over a six-month period helps families explore and set goals, resolve ambivalence, develop small doable steps, and assist in removing

We will support Iowa and the Blue Zone Project by becoming a certified Blue Zone employer.

IA_1023_COB

Together with coverage of smoking cessation medications on the Iowa Medicaid formulary, our counseling programs will help establish Iowa Medicaid as a best practice State for smoking cessation model.

IA_1023_COB_22

barriers. Motivational Interviewing and Stage-Based Communication guides conversations for member-centric goal setting and building on successes. The program includes verbal education and guidance to online resources including “Nourish.” Education materials are also sent to families and high-volume providers.

The Healthy Families Program has been highlighted by MHPA Diabetes Care Best Practice Compendium. It is currently deployed in five affiliate health plans (Kansas, Florida, Washington, Louisiana and Kentucky), with results among children ages 7 to 13 shown in Figure 10.2-1.

Figure 10.2-1. Healthy Families Program Encourages Healthy Behavior

Diabetes Prevention Program: We will deploy the Diabetes Prevention Program (DPP) to help Iowa’s Medicaid population make healthier dietary decisions. The DPP, nationally recognized through the Centers for Disease Control (CDC), is a **16-week, community-based program** conducted by trained lifestyle coaches to teach people with pre-diabetes how to modify their eating and physical activity habits and to sustain those changes overtime.

We will also leverage our experience participating in other State diabetes performance improvement initiatives to develop a best in class approach tailored to the Iowa population. For example, our New York health plan is participating in a two-year performance improvement project with the New York State Department of Health. This program is aimed at diabetes prevention and control. The goal is to help members with high risk of

developing diabetes reduce their weight through a healthy low-calorie, low fat diet and by engaging in at least 150 minutes per week of moderate physical activity. The University of Pennsylvania is responsible for the research aspect of the program.

3. Increasing the Number of Iowans Who Have Visited the Dentist in the Last Year

Dental Vendor Collaboration: Based on our experience, collaborating with State dental vendors is critical to realizing improved dental health. Amerigroup successfully collaborates with various dental subcontractors to manage government-sponsored dental benefits across our affiliate health plans in other states. We leverage best practices from other states to develop effective working relationships with incumbent dental vendors to provide the best possible service to both members and providers. Established protocols for coordinating with the incumbent dental vendor and the State to optimize oral health include:

- Regular communication to identify and resolve opportunities for program improvement and to share treatment information
- Prevention through member education about decreasing the incidence of dental care, stressing the importance of preventive care such as annual dental visits and reducing the risk of mouth and jaw injuries
- Established care coordination protocols
 - Direct collaboration on cases where a member requires a medical setting for a dental procedure
 - Collaboration with other medical, behavioral, or dental providers where a member’s health, dental, or behavioral health needs warrant such collaboration (for example, cases where a member may be at risk for seizures or have a co-existing behavioral, dental, and physical health issues)

We will leverage best practices from other states to develop an effective working relationship with incumbent dental vendors to provide the best possible service to both members and providers.

IA_1023_GOB_32

- Prospective agreement on claims responsibility on shared cases to facilitate seamless coordination of benefits
- Accepting written documentation of prior authorization of ongoing services

Member Outreach: We operate a “txt4health” text message outreach program to remind members to visit the dentist and provide helpful information to schedule an appointment. An example message is shown in Figure 10.2-2.

This text program can also be used for general health education on diet, fitness, and other health and wellness topics.

Oral Hygiene Kit Value Added Service. Additionally, we will offer an oral health hygiene kit as a value added service and opportunity for education about the importance of oral health as a component of overall well-being.

Figure 10.2-2. txt4health Member Outreach Program

4. Increasing the Number of Iowans Who are Learning or Doing Something Interesting Daily

Community Outreach: We have a number of “on-hold” messages that provide health and wellness tips to members. A sample on-hold message that is included in new member household welcome calls to encourage members to socialize and participate in an interesting activity is provided below:

“Many of our members enjoy the fun health tips we sometimes share. So, we’d love to share a quick one with you right now. Did you know that laughing for 15 minutes a day can give your immune system a boost, help decrease stress, and just make you feel better? So invite your friends over for a night of karaoke or a game of charades. Bring on the laughter and let the good health flow!”

As appropriate, we will incorporate the message of learning or doing something interesting on a daily basis into all forums where we engage members such as marketing events or home visits. Through our conversations with members or as closing messages on some of our member handouts and on the Iowa member website, we will remind members that learning or doing something interesting on a daily basis is important to their health.

5. Increasing the Number of Iowans Who Feel Their Boss Treats Them Like a Partner at Work

Leadership by Example: As a leading healthcare organization, we believe it is essential to model the policies we promote. Our organization promotes coordination and collaboration among all employees, regardless of position. We will bring this philosophy and related infrastructure to our Iowa offices to lead by example (see below for more details on key policies and programs, like Associate Resource Groups).

We will also actively support the Blue Zone Project to help Iowans “live better, longer” by promoting the policy and infrastructure to “make the healthy choice the easy choice.” Amerigroup and our corporate parent, Anthem, have a well-established commitment to work place policies which promote health and wellbeing. To drive Blue Zone achievement in Iowa we will:

- **Get Certified** - We believe in leading by example and we will commit to becoming a Blue Zone Certified Workplace
- **Support Provider Certification** – Commitment to becoming a Blue Zone certified workplace will be included in our PCP Quality and Access to Care provider incentive program, creating explicit alignment within our operating model

- **Build on Experience** – We work closely with Healthways and others on Blue Zone-like programs in several other states and we will expand that relationship to Iowa
- **Lead by Example** – Together with our parent company, Anthem, Amerigroup is a leader in workplace health and prevention as well as being a socially responsible employer. By delivering to our employees what we believe and what the State of Iowa believes, we will provide a role model as well as provide the momentum for the Blue Zone initiative. (See below for more details on key policies and programs.)

We believe there is no better means of communicating commitment and generating momentum than setting the standard in how we operate. *Amerigroup is aligned with the 10 characteristics of a Socially Responsible Employer based on the Healthiest State Initiative.* We are proud to build on this established excellence in Iowa:

- 1) **Sustain a work environment founded on dignity and respect for all employees** – Our town halls, informal workgroups, committees, sub-committees, and other routine meetings make sure that every functional area of the health plan has a regularly scheduled time to communicate with other related areas. Our Associate Resource Groups help develop a deeper understanding of diversity and cultural competence in the workplace and the marketplace. They promote opportunities for leadership development and growth among all employees and act as internal consultants by providing cultural insight to business initiatives targeted at different segments of our multicultural marketplace.
- 2) **Make employees feel their jobs are important** – Our Leadership Committees meet regularly within our affiliate health plans and provide operational oversight for all health plan functions to all employees. Our annual associate satisfaction survey informs specific action plans focused on the most critical engagement and satisfaction cited by employees to allow for a highly focused approach in continually improving the experience of our employees. Across our parent company and affiliates, over 80 percent of our employees in our 2014 survey indicated they would recommend our organization to their informal networks while reporting high levels of engagement in their work.
- 3) **Cultivate the full potential of all employees** – We know that unlocking our employees' full potential is critical to driving performance and engaging employees in becoming high performers. We have several programs that acknowledge employees for longevity, professional growth, and exemplary job performance, such as *Certification Awards*, where we give monetary awards for the first-time completion of approved certifications relevant to the professions of those employed by the company. This policy provides recognition and rewards for mastering competencies in an expertise relevant to an employee's current position or mastering skills that would enable them to take on new roles that benefit the company. Additionally, we provide *Job-related Licensure Reimbursement* as appreciation for the effort it takes to maintain required licenses for employees to do their job. Amerigroup reimburses the cost of fees to renew their license to eligible employees holding positions that require licensure. We also offer *Education Reimbursement* to encourage the pursuit of learning opportunities at accredited institutions and earning credits toward the completion of a degree that will assist employees in current or potential roles at Amerigroup. Employees are reimbursed for 100 percent of eligible expenses up to \$5,000 (\$2,500 for part-time employees) per calendar year for a grade "C" or above (or "pass" for a pass/fail course).

IA_10.2.3_COB_5.2

- 4) **Encourage individual pursuit of work/life balance** – We understand that work-life balance is vitally important to our employees and encourages employee engagement, productivity and accountability, which in turn drive company success. We offer our employees the following programs:
- i. *Flexible Work Schedule* –Allows options for determining start/end work times, numbers of hours worked each day, and days worked
 - ii. *Work at Home* – Employees can work all or part of their time from home
 - iii. *Job Sharing* – Allows two employees to share the same position on a part-time basis
 - iv. *Part-time* – For employees who want to work fewer than 33 hours/week
 - v. *Phased Retirement* – This is an opportunity to gradually transition from work to retirement. We support our employees work under flexible arrangements with tools and coaching to help them to do their best work, measured through their achievement and performance goals.
- 5) **Enable the wellbeing of individuals and their families through compensation, benefits, policies, and practices** – Amerigroup is committed to providing employees with a pay package that is market-competitive and rewards results and the way they are achieved. Our philosophy is to target base pay at competitive levels, while also sharing our financial success through employee incentives. All of our employees are eligible to receive an annual or quarterly bonus, depending on the type of job they perform. Our employees' pay package is made up of base pay and incentive (bonus) pay, which together make up their total cash compensation. Additionally, all full- and part-time employees (along with eligible spouses, domestic partners, and/or children) are eligible to participate in our benefits programs, which include a comprehensive selection of health, dental and vision benefit options.
- 6) **Develop great leaders at all levels who excel at managing people as well as results** – We fully support ongoing learning, development, and tools for our employees to grow their careers. We offer an extensive library of online learning in over a dozen areas, such as office skills, project management, leadership, customer service, Medicaid, Medicare, and more. In addition, we sponsor several year-round leadership development forums which are a blend of classroom and online learning and include assigning a mentor to each program participant:
- *Future Leader*: For frontline employees aspiring to move into managerial positions
 - *Emerging Leader*: For current managers who aspire for increasing levels of managerial responsibilities)
 - *Winning Leader*: For current senior leaders who aspire to executive leadership roles
 - *SOAR*: Our newest diversity and leadership development initiative prepares our mid-level leaders for future senior leadership opportunities
- 7) **Appreciate and recognize the contributions of people who work there** – We have several means of recognizing individual contributions. For example, we recognize our employees through our *Values in*

- Action Program** providing an opportunity to reward employees on the spot for specific accomplishments that exceed expectations. The program recognizes high performers who exemplify Amerigroup's values and contribute to our overall success. We also engage in **Informal Recognition Activities**, which includes timely and effective acknowledgements of an employee's contribution toward a department goal or objective. Rewards may include: gift certificates/card; cash; tickets for movies, sporting events, and amusement parks; team parties; and other appropriate gifts or outings.
- 8) **Establish and communicate standards for ethical behavior and integrity** – Our management team builds training into employee annual development plans as applicable. These trainings are at various levels from leadership and career development to current job enhancement skills. Annual required training includes cultural sensitivity and diversity, compliance, ethics, and HIPAA and privacy training.
 - 9) **Get involved in community endeavors and/or public policy** – We strongly encourage participation in volunteer and community events. In 2014, across our parent company and affiliates, employees completed 35,375 volunteer hours in the communities we serve. Through our **Associate Giving Program**, employees have the year-round opportunity to give back to their communities by contributing to non-profit organizations focused on health and human services. In 2014, our associates raised \$3 million with \$1.5 million matched by the Anthem Foundation. In addition, 90 percent of giving is earmarked for healthcare related causes in the communities served. Since 2000, we have raised over \$160 million to such causes, including active lifestyles, cancer prevention, diabetes prevention, and maternal practices. We continuously look to find ways to help those in the communities we serve, as well as for our own employees. Through our **Anthem Cares Fund**, employees have the opportunity to help their co-workers who experience a natural disaster or personal hardship. The Anthem Foundation matches these contributions 50 cents for every dollar.
 - 10) **Consider the human toll when making business decisions** – Our employees are at the heart of what we do for our members. Amerigroup has proven practices and processes in place to verify that business decisions take into account the impact they have on our most valuable asset – our people. In many of our organizational units, we cross-train our employees to handle a variety and diversity of tasks and responsibilities which allows us to redeploy our human capital resources to other areas of the business when necessary in an effort to avoid job reductions. In addition, every management level employee across the company is aligned to a people leadership goal, which is weighted to at least 10 percent of his or her overall annual performance goal metrics – holding our leadership directly accountable for motivating, developing, and retaining our employees.

Amerigroup is committed to retaining its employees by creating an engaging and supporting work environment across all of our affiliates' 19 state-sponsored plans. We live this commitment daily through our internal processes and programs. Maintaining a positive and productive work environment is a priority for us and we have robust menu of programs available to our employees and managers that drives employee commitment and retention. Through our selection, development, wellness, recognition, promotion, and transfer policies and day-to-day processes, we strive to be the best employer possible to retain a highly qualified workforce that reflects the availability of the talent in the communities we serve. In 2014, our organization retained nearly 90 percent of its employees across its state sponsored program health plans, and we continue to see a high level of employee commitment in 2015 with an employee retention rate of nearly 90 percent year-to-date. Most recently, Forbes and Statista.com polled more than 20,000 workers at companies employing more than 2,500 associates across several industries, including ours. *The result was Forbes named our parent company, Anthem, as one of America's Best Employers for 2015.*

Mental Health/Disability Services Redesign (10.2.4)

Question 10.2, #2

2. Describe how you propose to work with the Mental Health and Disability Services Redesign.

In 2011, Iowa embarked on a process to establish a plan to strengthen its community-based services infrastructure to promote recovery, reduce the need for more costly crisis-oriented and institutional settings, and facilitate community integration. Workgroups and Task Forces brought together stakeholders to review, evaluate, and develop recommendations that included best practices and the need to serve persons with serious mental illness in more integrated settings. In 2012, legislation was passed to formalize the mental health and disability services redesign - addressing eligibility for non-Medicaid services, identifying core services, directing knowledge and skills of providers for persons with co-occurring conditions, providing evidence-based services, and providing trauma informed services. Additionally, the legislation addressed finance and a regional management and administrative structure forming 15 MHDS Regions with responsibility to ensure that services are available regardless of funding source.

Building on this important initiative, we will leverage our work with affiliate health plans in Florida, Tennessee, and Kansas where we partner with the States, local agencies, and providers to promote community inclusion and best practices to increase timely access to services for Iowa's members. Amerigroup will partner with Iowa agencies, organizations, and stakeholders such as: Mental Health and Disability Services Commission, the Mental Health Planning Council, the Iowa Developmental Disabilities Council, the Advisory Council on Brain Injuries, the Prevention of Disabilities Council, the Olmstead Consumer Task Force, Iowa Behavioral Health Association, Iowa Behavioral Health Collaborative, and other statewide advocacy groups to identify strategies to support an integrated system of care that is person-centered addressing physical, behavioral health, and social relationships and opportunities for meaningful participation by people with disabilities. Working in collaboration with these organizations, DHS, and the MHDS Regions, we will promote the currently established MHDS goals to:

- Ensure effective use of Habilitation Services
- Establish processes to assure that resources are used for those with the highest need at the time of their need
- Identify innovative services across the State that are successfully supporting individuals with SMI in the community and identify how those programs could be replicated
- Develop processes to streamline eligibility and authorization for 1915(i) Habilitation Services
- Increase quality through monitoring performance indicators and outcomes
- Engage other systems such as criminal justice, child welfare, education and vocational services, and supportive housing

In addition, Amerigroup will work closely with key Iowa stakeholders, and the MHDS Regions to design effective strategies to align the redesign goals with efforts that include building capacity of community supports and services as well as systems to promote rapid response when service gaps or capabilities are identified or health disparities are documented.

"In 2007, Amerigroup [Corporation] and a culturally diverse group of community advocates, health care experts and academics launched a first for the healthcare industry: the National Advisory Board (NAB) on Improving Health Care Services for Seniors and People with Disabilities...In addition to supporting our work, Amerigroup has sought and leveraged our collective experience, perspective and guidance to develop more effective programs and better serve its members."

*Lex Frieden,
Professor and Director,
ILRU at TIRR Memorial
Hermann and Convener,
National Advisory Board
on Improving Health Care
Services for Seniors and
People with Disabilities*

IA_3.2.2_COB_12R

Through our affiliates, Amerigroup's experiences include strong collaboration with State and community partners as well as engaging advocacy organizations in evolving systems of care that are responsive, innovative, and accountable. Amerigroup Corporation established a National Advisory Board composed of prominent national leaders with lived experience to inform and evaluate our programs and services, and we will tap into this expertise to develop the Iowa program. We will also utilize the experience and guidance of the many State advisory groups across our various projects that were used to establish integrated health systems that will be invaluable in supporting Iowa's mental health and disability services redesign. We will build on the core of this work, best practices, and lessons learned that our affiliates have accomplished to-date across the country, then refine and evaluate Iowa's efforts to-date. We are well positioned to be active participants in this building process, given our extensive expertise in integrated clinical care, program design and implementation, quality and outcomes evaluation, data analytics, public policy, and advocacy. Activities may include, but not be limited to:

- Meeting individually and collectively with the MHDS Regions
- Establishing a Statewide Advisory Group
- Meeting and actively participating in redesign work groups and task forces
- Collaborating with public policy organizations such as the University of Iowa Public Policy Center
- Collaborating with other MCOs
- Evaluating and conducting research on service needs based on the geographic area(s) to promote community inclusion, recovery and resilience
- Establishing and funding innovative demonstration projects and programs

In summary, we are committed to leveraging our experience and proven innovation in the delivery of mental health and disability services across the many states our affiliate health plans serve, as well as our deep knowledge of effective physical health integration that will enable Iowa to achieve the goals of redesign.

Following execution of the Contract, Amerigroup will obtain DHS approval of the proposed approach to supporting the redesign. We will implement and adhere to the DHS-approved approach. We understand that any changes to this approach must receive prior approval from DHS.

State Innovation Model (SIM) (10.2.5)

Question 10.2, #3

3. Propose strategies to incorporate the Value Index Score (VIS) as a tool to drive system transformation, and other strategies to support the State Innovation Model (SIM).

Amerigroup looks forward to working with Iowa's well-developed Accountable Care Organization (ACO) infrastructure. We have learned from discussions with Wellmark that upwards of 80 percent of Iowa's PCP's are currently aligned with an ACO. This strong foundation will springboard the Medicaid delivery system transformation. Amerigroup's sophisticated, integrated care model/interdisciplinary team aligns with the CMS triple aim initiative to optimize population health, experience of care, and per capita cost. The integration of value-based principles into provider workflows will enable even more cost-effective realization of these goals. To maximize the benefit from the State Innovation Model, Amerigroup will actively support its implementation. Specifically, we will pursue the following strategies:

- Drive implementation of value-based shared savings programs with ACOs including VIS
- Seek alignment with other plans, leveraging our Wellmark relationship
- Support broad provider alignment with value-based reimbursement beyond ACOs and PCPs

- Provide support and tools that enable provider transformation
- Use aligned incentives to promote member engagement and participation

CONTAINS CONFIDENTIAL INFORMATION

In addition to the range of value-based incentives, and the providers engaged in our incentive programs, Amerigroup will offer the resources and tools that assist in embedding patient-centered medical home-based concepts, such as: enhanced access, integrated and coordinated care, increased patient engagement, and health information technology adoption into their practices. Amerigroup has resources specifically designed to support providers with these processes that focus on outcomes and optimal delivery of care. We also encourage and support practices to improve best practice-based strategies and action plans to address their identified high-value opportunities.

Finally, to fully align the system in a manner consistent with the State Innovation Model, we will leverage member incentives to promote aligned member engagement. The more aligned members are with the value-based system, the better it will work. For example, we will deploy our Healthy Rewards member incentive program, designed to incent members to become and stay healthy. This program includes incentives for smoking cessation, breast health, well-child visits, etc. exercise, etc.

Following execution of the Contract, Amerigroup will obtain DHS approval of the proposed approach to supporting the SIM. We will implement and adhere to the DHS-approved approach. We understand that any changes to this approach must receive prior approval from DHS.

Amerigroup's affiliates have substantial experience participating in multi-payer collaborations to drive aligned incentives and payment reform to achieve the triple aim. Specifically, Amerigroup affiliates have participated in multi-payer initiatives in numerous states including Ohio, Colorado, New York and New Jersey. In those states, our affiliate health plans are participating in CMS' Comprehensive Primary Care Initiative (CPCi), a multi-payer aligned delivery system transformation project. In this initiative, we are partnering with CMS, commercial and Medicaid payers, providers, and others to focus on achieving the Triple Aim – improved care, better health for populations, and lower cost. The collaboration consists of multi-payer payment reform through an aligned payment model, continuous sharing of data to guide practice improvement, and reinforcement of meaningful use health information technology. While still early in the project, the largest transformation appears to be in the application of risk-stratified care management where the primary benefit appears to be reductions in hospitalizations. Leveraging this CMS pilot, as well as our experience in other states, Amerigroup is well-positioned to participate in and contribute to the Iowa State Innovation Model.

Amerigroup and its affiliates have substantial experience participating in multi-payer collaborations to drive aligned incentives and payment reform to achieve the triple aim.

IA_12_COB_12

Substance Abuse Prevention and Treatment Block Grant (10.2.6)

Question 10.2, #4

4. Describe your experience in supporting a State authority in meeting the requirements of the Department of Health and Human Services Substance Abuse and Mental Health Services Administration Substance Abuse Prevention and Treatment Block Grant.

Through our affiliate health plans, we have extensive experience working with states to make sure that all appropriate block grant services are understood and made available to health plan members. We also assist State agencies in ongoing planning efforts to identify emerging needs, identify service gaps related to access and the range and breadth of services, and optimize program evaluation and outcomes reporting. We will collaborate with Iowa to do this in support of the goals of the block grant to:

- Improve access to prevention and treatment services
- Provide primary prevention services
- Provide specialized services for pregnant women and women with dependent children
- Provide outreach and treatment to intravenous drug users
- Make available and monitor tuberculosis services to each individual receiving substance use treatment
- Make available early intervention services for individuals with HIV and STDs
- Verify each pregnant woman be given preference in admission to treatment facilities or referred to IDPH

We will also assure continuity of access to gambling addiction programs funded by the State.

In Kansas, our affiliate health plan collaborated with the State and the other KanCare MCOs in the administration and interpretation of the annual Substance Use Disorder Member Satisfaction survey, detailing member satisfaction with their counselor, coordination of care, access to care, and outcomes of service, etc. We also implemented and support the State's SBIRT initiative, our behavioral and physical health programs coordinate care for substance using pregnant members, and we implemented a strong lock-in program with a significant focus on drug-seeking and using members.

Our affiliates have experience working with states to make sure that all appropriate block grant services are understood and readily available, while also assisting state agencies in ongoing planning efforts and reporting.

IA_1025_COB_13

We also have experience through affiliates in other states meeting all block grant reporting requirements. We typically include this information as a standard component of our routine monthly submissions to the State. For example, in several states, our encounter files are used as a data source from which the State extracts information submitted as part of the block grant reporting requirements.

To ensure we meet all reporting requirements, we will work with Iowa to ensure we provide all necessary data in the form, format, and timeframe required. For example, in Kansas we provide a Level of Care report which documents admissions, days/1000, and other metrics for inpatient and outpatient utilization and varying levels of care. Kansas uses this information to support their documentation of the scope and intensity of SUD services provided in the State.

Question 10.2, #5

5. Submit a project plan describing your specific approach and timetable for addressing this section.

Our Iowa Quality Management and Quality Improvement Work Plan includes the activities and initiatives Amerigroup will undertake to support the Healthiest State Initiative, Value Index Score (VIS), State Innovation Model, Mental Health and Disability Services Redesign, and Substance Abuse Prevention and Treatment Block Grant. The Work Plan includes our goals for the year, work steps, timelines, and ownership. Our initial draft work plan is included with this RFP submission (see Attachment 14.5.1-1, Work Plan). An updated, official draft plan will be submitted to DHS within 15 days following contract execution.

Please refer to Section 10.1 for details on how our quality work plan is developed, monitored, and updated.

Incentive Programs (10.3)

General (10.3.1)

As detailed in our responses to 10.3.2 and 10.3.3, we will align our provider and member incentive programs to the clinical outcome goals of the State's pay-for-performance initiatives.

Provider Incentive Program (10.3.2)

Question 10.3, #1

1. Describe your proposed provider incentive programs.

General (10.3.2.1)

At the core of Amerigroup's values is the delivery of member-centric, high quality healthcare. Our network of providers is essential to meeting these objectives and our successful provider incentive programs are critical to our comprehensive collaboration strategy.

Amerigroup will implement performance-based incentive systems for providers, obtaining DHS approval prior to implementation, and before making future changes to any previously-approved incentive programs. Our provider incentive programs will focus on issues prevalent to Iowa's members as data and experience are accumulated and analyzed. Our provider incentive programs comply with all applicable requirements

We view our network of providers as critical and essential partners in delivering member-centric, high quality health care. In fact, over 50% of our affiliate's state sponsored program members across 19 states are impacted by some provider incentive programs.

IA_10.12_C08_322

including federal regulations. We will provide information on these programs in our marketing materials and to members upon request.

As a recognized leader in Medicaid managed care, Amerigroup analyzes best practices from across the nation that are used in developing and deploying robust provider incentive programs for our clients. Our affiliate health plans offer 24 years of managed care experience in the states they serve. This combined experience offers the State some of the most progressive ideas and programs available to achieve your quality goals. In fact, over 50 percent of our affiliates' state sponsored program members across 19 states are positively impacted by our successful provider incentive programs.

Amerigroup's holistic provider incentive strategy empowers providers to accomplish quality goals, improves the coordination of healthcare services, and reduces duplication of services. We work with providers by specialty and type to help them manage their member populations providing the information, tools, and financial incentives they need to meet incentive program goals. We will implement an Iowa-specific ACO provider incentive model similar to the programs currently in place through Wellmark and the State Innovation Model (SIM).

Our incentive programs will align with how the Iowa provider community is organized, from large volume ACOs and integrated delivery systems to PCP-based organizations, and behavioral health to LTSS providers serving members with specialized support needs. We also consider the direction CMS may be moving with their value-based purchasing initiatives. To align with CMS' January 2015 announcement, our incentive programs strive to build a healthcare system that improves the delivery of care, and spends health care dollars more wisely, resulting in healthier members.

Our provider incentive programs are based on our affiliates' extensive experience serving members in similar programs across the country, our understanding of DHS priorities, and our discussions with Iowa providers. Our PCP Quality and Population Management program is our longest-running, most expansive provider incentive program, serving 414,000 members across our affiliate health plans in 11 markets.

Pending approval by DHS, Amerigroup's provider incentive programs incentivize ACOs, PCPs (including FQHCs/RHCs), OB/GYNs, behavioral health, and LTSS providers to deliver high quality, cost-effective services. Our incentive programs reward providers for connecting members to the behavioral, physical, and LTSS services they need, promoting coordination, integration, and member access to appropriate services to improve health outcomes. We will work closely with DHS as we implement to ensure compliance with all regulatory requirements.

We understand that just working with providers and offering incentive programs will not achieve its full potential unless members, families, and providers actively partner to engage individuals in managing their own health and care. We offer tools that focus on member engagement strategies, such as activation and self-management. We encourage sharing information on community resources that can further engage members, their families and/or caregivers. We have proven that informed, actively involved members are more likely to engage in positive health behaviors leading to improved outcomes.

Clinical Quality Goal Alignment

Our incentive programs will align with Iowa's specific clinical quality goals outlined in the Year Two measures in the State pay-for-performance program. As demonstrated in Table 10.3-1, all 15 of the Year

Tab 3: Bidder's Approach to Meeting the Scope of Work
10 Quality Management and Improvement Strategies

Two DHS performance measures are included as a component of one or more of our proposed provider incentive programs. While these programs include measures beyond this list, we believe this comprehensive alignment will drive improvement in the quality areas and measures that are most important to Iowa in helping the State to become the leading Medicaid program for high-quality, cost-effective care.

Table 10.3-1. Amerigroup's Proposed Provider Incentive Programs

DHS Priorities	Amerigroup Proposed Provider Incentive Programs					
	ACO Shared Savings	PCP: Quality & Population Management	PCP: Quality & Access to Care	Birth Outcomes	Behavioral Health	LTSS (both Nursing Homes and Personal Attendant Care Providers)
LTSS Priorities						
Decreased Nursing Facility & ICF/ID Days of Care						•
Hospital Admission Following Nursing Facility & ICF/ID Discharge						•
Behavioral Health Priorities						
Number and percent of members utilizing inpatient psychiatric services					•	
Follow-up After Inpatient Hospitalization for Mental Illness					•	
Children's Health Priorities						
Well-child Visits Ages 0-15 months	•	•	•			
Well-child Visits Ages 3-6 years	•	•	•			
Adolescent Well-Care Visits	•	•	•			
Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents	•					
Pregnancy Priorities						
Elective Deliveries				•		
Pre-term Births				•		
Chronic Condition Management Priorities						
Comprehensive Diabetes Care	•	•	•			
Controlling High Blood Pressure	•					
Adult Preventive Care Priorities						
Adults' Access to Preventive/Ambulatory Health Services	•	•	•			
Breast Cancer Screening	•	•	•			
Body Mass Index (BMI) Documentation - Adults	•					
VIS Implementation						
Improvements in VIS combined with a decrease in Total Cost of Care	•

CONTAINS CONFIDENTIAL INFORMATION

PCP Quality and Population Management Incentive Program

Using quality and claims data, the PCP Quality and Population Health Management Program to be implemented in Iowa sets quality targets on specified HEDIS-like measures. If those quality targets are met and the provider meets or exceeds cost targets, we will award enhanced pay for PCPs. Since one year of historical quality and claims data are required for baseline rates, we anticipate implementing this program in the second full calendar year of the Contract starting January 1, 2017.

This provider incentive model was successfully implemented around the country by our local affiliate health plans for provider groups with a minimum of 1,000 assigned members. This membership threshold is required to accurately measure quality and financial performance. The goal is to improve both quality of care outcomes and medical cost efficiency for large provider groups. The program is designed to:

- Improve targeted clinical quality results, such as children's health, adult preventive, and chronic condition management

- Promote coordinated, safe, and effective patient care across the healthcare delivery system
- Improve provider operational efficiency through sharing timely, actionable data utilized by providers in transforming workflows to incorporate processes that deliver higher quality, patient-centered care

Improve medical cost management through the reduction of medically unnecessary utilization and costs, such as reducing the incidence of ambulatory care-sensitive admissions and emergency room visits and more efficient use of resources

Nationally, we deploy this model across 11 of our affiliate health plans, encompassing PCPs who serve 414,000 members. For full-year 2013 results (the most recent available), providers showed a year-over-year quality improvement rate that was higher than providers not in the model. For example, one market showed a three percent favorable difference in quality performance for groups participating in the program. In terms of improved total medical cost efficiency, providers in the program showed a 2.8 percent year-over-year improvement in their full-year 2013 efficiency (as measured by the medical-loss ratio of their attributed members) than those non-participating providers, with one market recording an 8.6 percent favorable difference.

PCP Quality and Access to Care Incentive Program

To incent PCP provider groups with lower membership panel sizes to increase access, improve clinical quality, and better manage unnecessary utilization, Amerigroup will implement the PCP Quality and Access to Care Incentive program. This incentive program will measure the PCP's performance against a set of measures such as the following:

- Clinical quality measures based on HEDIS measures covering pediatric, adolescent, and adult preventive visits, diabetes care, cancer screenings, asthma medication, and others
- After-hours availability
- Appointment availability
- Non-emergent emergency room utilization
- Percent of newly assigned members with a PCP visit within 60 days of assignment
- Percent of members with at least one PCP visit per year
- Percent of members with a follow-up visit seven days after an inpatient discharge
- Percentage of members with a completed health risk screening

Additionally, we will tie some portion of the enhanced pay opportunity to whether the provider is a Blue Zone certified employer.

CONTAINS CONFIDENTIAL INFORMATION

CONTAINS CONFIDENTIAL INFORMATION

Behavioral Health Incentive Program

Members with behavioral health needs often have complex or co-morbid conditions that impact their engagement in healthcare services. To address this need, we partner with providers to achieve sustainable gains to members' quality of care.

Amerigroup's Behavioral Health Incentive Program (BHIP) has been implemented in Amerigroup's affiliate health plans in other states, and will be adapted for deployment in Iowa. BHIP offers incentives to Community Mental Health Centers (CMHC) to improve coordination of members' physical and behavioral healthcare needs and for the quality of care they provide to our members with behavioral health conditions.

BHIP offers CMHCs an incentive to provide quality and efficient care while keeping members' healthcare needs as its primary focus. CMHCs receive incentive payments for achieving performance targets on specific measures that are important to the health of our members and in alignment with State goals, such as:

- Reduction in behavioral health inpatient readmission rates
- Follow-up after inpatient hospitalization for mental illness
- Follow-up care for children prescribed ADHD medication
- Adherence to antidepressant medication for adults diagnosed with major depression
- Decrease in behavioral health related emergency room visits
- Increase in PCP visits

Amerigroup will use Year One of the contract to gather benchmark information to support full implementation beginning in Year Two, effective January 1, 2017.

IA_10.3.2_COB_352R

CONTAINS CONFIDENTIAL INFORMATION

LTSS Incentive Programs

Amerigroup will implement provider incentive programs for nursing home facilities, as well as personal attendant care providers under the LTSS Incentive Program.

Nursing Home Quality Incentive Program

To incentivize nursing home facilities to improve clinical quality, patient outcomes, patient satisfaction, improved cost management, and alignment with State goals, Amerigroup will implement a Nursing Home Quality Incentive Program (NHQIP). We will use Year 1 to gather benchmark information to support full implementation beginning in Year Two, effective January 1, 2017.

This incentive program will measure the nursing home's performance based on a set of quality, care coordination, and service measures such as:

- Potentially avoidable hospitalizations (PAH) and potentially avoidable Emergency Room visits (PAED)
- CMS Nursing Home Compare Star Ratings for quality measures, health inspections and staffing
- Collaboration and care coordination, such as nursing home facility participation in interdisciplinary care planning conference calls, effective support for discharge planning and transition of members to community settings, ready availability of behavioral health providers, and implementation of in-house staff training programs.

CONTAINS CONFIDENTIAL INFORMATION

Personal Attendant Care (PAC) Providers – PACQIP

To incentivize PAC providers to improve clinical quality, patient outcomes, patient satisfaction, and cost management, Amerigroup will implement a Personal Attendant Care Quality Incentive Program (PACQIP). We will use Year 1 of the contract to gather benchmark information to support full implementation beginning in Year 2, January 1, 2017. This incentive program will measure the PAC's performance based on a set of quality, Case Management and service measures such as:

- Potentially avoidable hospitalizations (PAH) and potentially avoidable emergency room visits (PAED)
- Patient care, safety and service indicators, including prevalence of falls and falls with medical intervention, critical incident identification and reporting, health and safety checklist submission, caregiver retention, training, and timeliness
- Patient satisfaction including member complaints or grievances and member satisfaction with caregivers

CONTAINS CONFIDENTIAL INFORMATION

Empowering Providers to Improve Member Care and Meet Incentive Goals

We have found that provider incentive programs are most effective when we assist providers in maximizing their incentive payments and we are able to meet our population management and quality outcomes goals by offering an enhanced provider service model featuring online tools, detailed reporting, and additional opportunities to work more closely with us. We have systems and processes in place to provide actionable information and support in effectively using available data to enhance performance as outlined below.

ACO Shared Savings/Shared Risk Providers

As mentioned above, we will utilize the 3M licensed Value Index Score (VIS) tool to measure ACO performance. The VIS tool includes a provider facing online performance reporting capability that allows providers to access timely information to manage member Quality and Care Management. Available reporting examples includes the following:

- VIS composite score reporting for each PCM, providing scoring details and historical performance
- Population management reporting to assist in understanding the clinical category and risk of their attributed members
- Care coordination gap reporting to identify which members are in need of services to improve quality performance

Many ACOs have already-developed their own reporting and analysis systems. They generally prefer to receive bulk claims, membership, and provider data from payers to input into their own systems. We have the capability and experience to perform this function, and we can accommodate this preference.

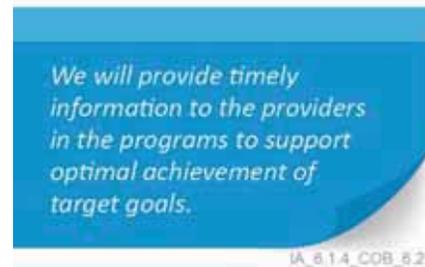

CONTAINS CONFIDENTIAL INFORMATION

CONTAINS CONFIDENTIAL INFORMATION

Providers in Birth Outcomes, Behavioral Health and LTSS Incentive Programs

These programs include provider reporting that is timely, actionable, and relevant to the program. The reporting is based on members that are attributed to the program providers. Members are not required to prospectively select and are not assigned to specific behavioral health or LTSS providers. We use retrospective claims analysis to accomplish the visit-based member attribution to providers in these programs.

We provide timely information to the providers to support optimal achievement of target goals. For example, we will periodically provide updated member attribution reports, as well as relevant information related to any identified gaps in care. We will also provide interim performance reports to support transparency and visibility into provider performance during the measurement period.

For all of our provider incentive programs, Amerigroup assigns a Provider Relations Associate to assist the participating providers in using this information to improve quality. These associates use the above reports to help focus on interventions that improve population health outcomes by maximizing available practice resources and establishing quality improvement structures. They work collaboratively with the providers to establish quality and cost efficiency improvement action plans. Our goal is to empower the provider groups to succeed, which ultimately improves member care and outcomes.

Incentive Payment Restrictions (10.3.2.2)

We will comply with this requirement. Our Shared Savings/Shared Risk Programs are designed to require compliance with all applicable 42 CFR 422.208 and 422.210 regulations. Within the shared savings or risk contracts offered by Amerigroup, providers are specifically informed that it is not the intent of any Amerigroup program to induce the provider to reduce or limit medically necessary care. This is also reinforced within the general provider manual. Additionally, certain shared savings and shared risk arrangements require that providers are protected with stop-loss coverage. Our arrangements either

incorporate that element as a part of the program, or, if the provider chooses to purchase external stop-loss coverage, we verify the appropriateness and existence of the coverage prior to the execution of the arrangement. Amerigroup will always work in a cooperative fashion with DHS to ensure that any program offered within Iowa complies with all State and federal rules and regulations.

Member Incentive Program (10.3.3)

Question 10.3, #2

2. Describe your proposed member incentive programs.

Overview (10.3.3.1)

Amerigroup's "Healthy Rewards" incentive program promotes overall member responsibility and engagement as well as facilitating targeted improvement in specific HEDIS and other wellness and preventive care measures. The goals of our member incentive program are to help engage members in managing their health and any chronic conditions and to gain knowledge about activities that will keep them healthy.

Amerigroup's Healthy Rewards program promotes personal responsibility by encouraging and rewarding healthy behaviors (such as smoking cessation) and age and gender appropriate preventive care. Coupled with our extensive Health Promotion, Case Management, and Disease Management Programs, Healthy

IA_10.3.3.1_COB_1.2

Rewards builds members' health literacy and self-care skills, improving health and productivity, while reducing the risk of poor long-term health outcomes. Additionally, Healthy Rewards promotes optimal maternal and child health outcomes through our Taking Care of Baby and Me[®] sub-program which provides education and care coordination as well as incentives for attending prenatal and postnatal visits and completing appropriate health risk screenings.

The Healthy Rewards Program provides members with the opportunity to earn credits for completing specific health-related activities, such as, preventive care services, participating in care coordination, or complying with provider recommendations.

Members can convert their credits to dollars, which are loaded onto a prepaid debit card, and then can be used to purchase health related over-the-counter items.

Our Healthy Rewards program aligns with both the State's overall goals as well as the pay-for-performance clinical outcome goals for contractors including incentives to promote improvement across the following challenge areas:

- **Smoking cessation:** Our smoking cessation incentives aim to help lower the adult cigarette use rate, which is currently 20.4 percent for adults and 25.3 percent for high school age youth (as of 2011). This ranks Iowa 21 out of 50 states and 28 of 44 states, respectively.
- **Fitness and nutrition:** Our fitness and nutrition incentives aim to help address the adult obesity rate of 31.3 percent, which has increased each year from 2004 and ranks Iowa as 12 out of 50 states. In addition, statistics show that from 2009 to 2010:
 - 24.2 percent of Iowans reported no physical activity during the past month
 - 65.4 percent of Iowans are overweight
 - 17.2 percent of children ages 2 to 5 are overweight with 14.7 percent considered to be obese
- **Diabetes management:** Our diabetes management incentives aim to improve outcomes for the 8.6 percent of Iowans with diabetes (as of 2012)

Amerigroup acknowledges that our proposed member incentive program is subject to the State's final review and approval and that contract award does not constitute approval or acceptance of the program. Upon contract award, we will submit our program for State approval in the required format.

Program Details

Each member enrolled in Healthy Rewards receives a debit card, which will be credited with the appropriate incentive amount once we verify member eligibility and completion of the incentive-related service. Members can redeem their credits at any participating store within our retail network, offering greater member convenience and flexibility than a single-store debit card.

Members can use Healthy Rewards credits to buy health-related items, such as:

- **Hygiene Products:** deodorant, shampoo, shaving cream, facial cleansers, moisturizer
- **Baby Care:** food, formula, diapers, clothing, bedding, toys
- **Nutrition:** vitamins, dairy, bread, cereal
- **Diabetic Care:** test strips, glucose monitors, diabetic candy, and supplements
- **Over-the-Counter (OTC) Medication Items:** pain relief, antacids, cold and allergy
- **Eye Care:** sunglasses, lens solution, eye drops, magnifying glasses
- **Basic Needs:** first aid, toothpaste, mouthwash, sunscreen
- **Home Health Care:** safety accessories, blood pressure kits, hand exercisers

Member Enrollment and Education

Amerigroup realizes that a simple enrollment process strengthens our ability to maximize member participation so we offer two convenient options, online or by phone. Members can enroll via our easy-to-use online portal or by calling Member Services or their Case Manager, who will complete the enrollment process for them. After a member is enrolled, he or she can access the online portal through our secure member website, review all incentive opportunities and monitor their rewards status. Amerigroup's HIPAA-compliant website offers full accessibility offering alternative language translation and is in compliance with Section 508c requirements supporting assistive technology tools to eliminate barriers for people with disabilities. Website content is currently available in Spanish and can also be translated into 90 languages using Google Translate functionality.

Figure 10.3-1. Our Healthy Rewards Online Tools Promote Member Accessibility

As a component of their care coordination or disease management activities, our local Case Managers, also help educate, engage, and invite eligible members to participate in Healthy Rewards. Our Case Managers understand the importance of integrating care and services for members with co-occurring medical and behavioral health diagnoses. As an example: Case Managers will offer education on incentives for members with schizophrenia or bipolar disorder, and who are currently prescribed antipsychotic medications, to complete diabetic health screenings because they are at a greater risk for developing that condition. Case Managers will also provide education on specific incentives for maintaining medication adherence as well as other appropriate eligible incentives, such as preventive care (shown in Figure 10.3-1). Case Managers serving pregnant members will provide information on our Taking Care of Baby and Me sub-program that includes incentives and member education. In addition to the incentives for timely prenatal and postnatal checkups, our Taking Care of Baby and Me sub-program provides:

- Individualized, one-on-one case management support for women at the highest risk; care coordination for moms who may need a little extra support
- Educational materials and information on community resources
- Incentives to sustain well-child visits after the baby is born
- Prenatal and postpartum packets containing educational materials and incentive redemption cards

Program Promotion

Our promotion strategy builds on proven approaches that have been successful in our affiliate health plans including:

- Home mailings to all new members with promotional materials that include program descriptions and enrollment instructions
- Quarterly home mailings of program reminders, including enrollment instructions
- Educational and promotional messages when members call Member Services
- Provider education about the program so network providers can educate members in their offices

Amerigroup will also include a \$20 screening survey incentive for all new members. Survey results are essential for proper case management because the results are automatically downloaded into CareCompass allowing Case Managers to see which members trigger nurse outreach. We will educate members about our survey incentive via the member welcome kit and website, telephonic outreach calls, clinic days and community outreach events.

Proven Results

Amerigroup's Healthy Rewards program for Iowa will be built off a solid foundation of administering a similar program in our Kansas affiliate since January 2013, and recently implementing state-specific Healthy Rewards programs in Louisiana and Texas. Healthy Rewards participation across our affiliate health plans has consistently grown due to our comprehensive communication and education campaigns. For example, between July 2013 and 2014, the participation rate in our Kansas affiliate more than doubled. Because we propose a broad array of incentives that promote preventive health and condition-specific screenings for members, we anticipate strong participation by Iowa's Medicaid members as well.

IA_10.3.3.1_COB_3.2

Amerigroup's robust technology platform supports program administration (card issuance and financial management of incentive accounts) which enables us to tailor the program specifically to the unique priorities of Iowa Medicaid population. Our affiliate's 24 years of experience in Medicaid Managed Care also demonstrate our ability to implement proven tracking and analytic tools to monitor program performance. Our team of data experts is skilled at assessing the impact of these programs and our local Iowa team will receive support from our national Data Analytics team, who bring their extensive experience with similar programs from other affiliate plans.

As the Iowa Initiative Healthy Rewards program matures, we will continually re-evaluate its impact, and our platform allows us to easily modify program design as necessary to reflect evolving State priorities and member behaviors.

Figure 10.3-2 demonstrates the strong impact of our member incentive program for our Kansas affiliate using 2014 HEDIS measures.

Figure 10.3-2. Healthy Rewards Drives Improved Quality Scores in our Kansas Affiliate (August 2014)

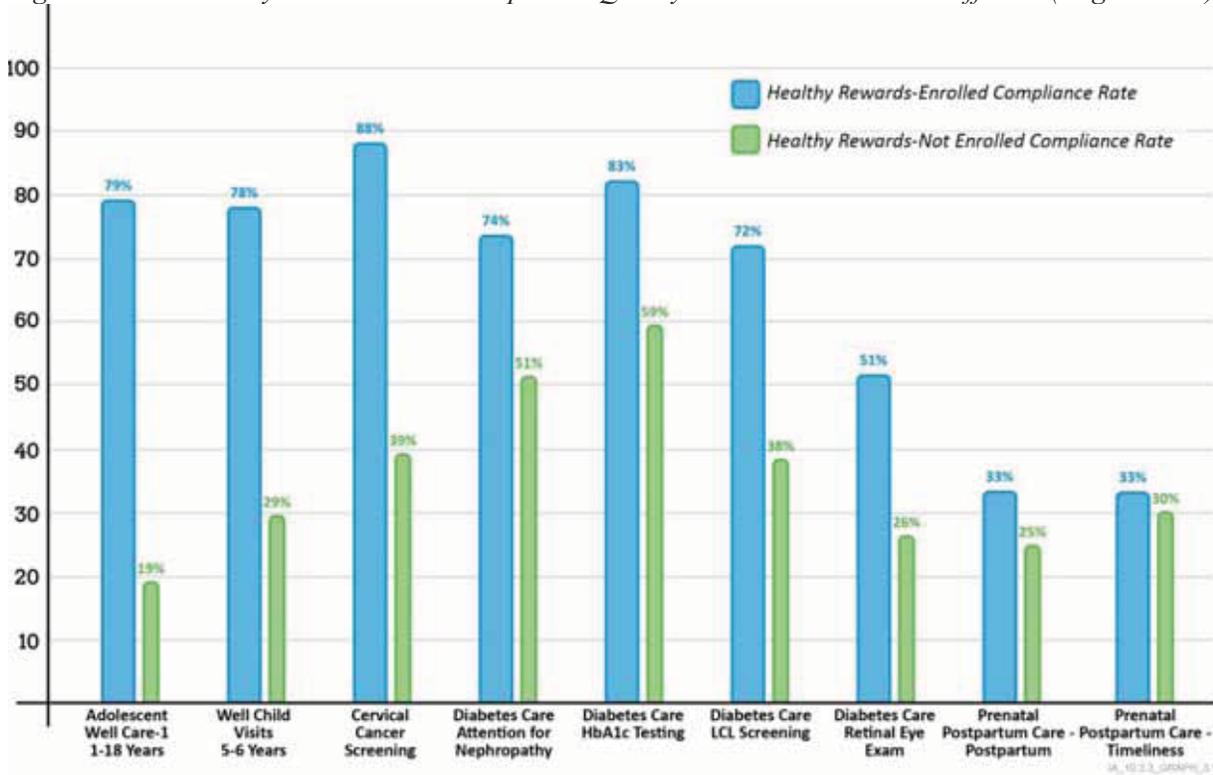

Table 10.3-2 summarizes our proposed Healthy Rewards incentives for Iowa.

Healthy Rewards Incentives

Our proposed Healthy Rewards incentives are summarized in Table 10.3-2 below.

Table 10.3-2. Member Incentives Encourage Preventive Care and Services

CONTAINS CONFIDENTIAL INFORMATION

Incentive Payment Restrictions (10.3.3.2)

Amerigroup understands that we must receive written approval from the State before offering any incentives. Incentive materials related to mailers will be approved through requests for health promotion materials using the standard regulatory approval process.

Critical Incidents (10.4)

General and Provider Requirements (10.4.1-2)

Question 10.4, #1

1. Describe your critical incident reporting and management system.

Through our affiliates' 24 years of experience administering government healthcare programs serving populations like those enrolled in Iowa's managed care program, they have developed a well-tested Critical Incident Reporting and Management System. We continually refine our quality management strategy to focus on the development of programs and services that will best meet the members' service and support needs. We quickly respond, report, and track incidents, and develop protocols to reduce the occurrence of critical incidents. We will bring this experience to Iowa to manage critical incidents and document our proven protocols and best practices in Iowa-specific policies and procedures for DHS review and approval.

Our program will promote the protection and safety of all members including children, older adults, people with physical, intellectual, mental or developmental disabilities. In Iowa, our health plan will recognize, report, and address the following types of both minor and major critical incidents, including, but not limited to those listed in Table 10.4-1.

We quickly respond to, report, and track incidents and develop protocols to reduce the occurrence of critical incidents.

IA_10.4.1-2_COB_1.2

Table 10.4-1. Major and Minor Critical Incidents

Major Incidents	Minor Incidents
Unexpected death of a member	Results in the application of basic first aid
Suspected physical or mental abuse of a member	Results in bruising
Severe injury sustained by a member	Results in seizure activity
Theft or financial exploitation of a member	Results in injury to self, others, or property
Medication error involving a member	Constitutes a prescription medication error
Sexual abuse and/or suspected sexual abuse of a member	
Abuse or neglect and/or suspected abuse or neglect of a member	

Our program is based on our associates and providers serving as the eyes and ears on the ground on behalf of our members. When one of our associates or providers has reasonable cause to believe that a member has been or is being subjected to abuse, neglect, and/or exploitation, he or she must immediately report this information to their direct supervisor, the Quality Management Department, or the appropriate State agency. Additionally, all enrollees in receipt of long term services and supports identified with a potential quality of care issue are referred to the Quality Management Department.

Our health plan staff (for example, LTSS Community-Based Case Manager, Case Manager, etc.) and providers are trained to report any suspected critical incident to quality management no later than the end of the next calendar day of the incident (within 24 hours), or if the incident is a minor incident, within 72 hours.

A dedicated critical incident reporting and management system is available for staff and providers for all incidents that occur in home and community-based long-term care service delivery settings (HCBS), including a member’s home if the incident is related to the provision of covered HCBS.

While we have robust systems in place to document and respond to critical incidents, we recognize the importance of staff and provider training to help drive the effectiveness of our protocols. Our provider education and staff training programs draw from our affiliates’ extensive experience in programs across the nation. We conduct training and maintain oversight of all applicable staff and network providers to assure compliance with critical incident requirements.

Our procedure for handling both major and minor critical incidents includes the following steps to verify accuracy and timeliness of critical incident reporting, to make sure all incidents are addressed and tracked appropriately to prevent further harm to the member - and avoid recurrence:

- As a result of policy and training, staff members or providers will report the suspected critical incident details directly to the abuse hotline, if abuse or neglect is involved. Next, the provider or staff member will report through the designated Quality Management channels within 24 hours of incident occurrence as specified by Iowa requirements.
- Staff members and providers are trained to immediately take appropriate steps to prevent further harm to the member and to respond to emergency needs. The staff member or provider will immediately assess the safety of the member and take the appropriate steps to ensure the member’s safety. If outside agencies need to be involved, the Case Manager and/or provider will initiate this action, (including involving adult or child protective agencies or law enforcement, as needed)
- The manager, after communication with the provider, LTSS Community-Based Case Manager, or Case Manager will enter the applicable information on any suspected critical incident into the Quality of Care Event Tracking System (QOC database) and HCBS system, if applicable.

- In addition to the internal tracking system, the clinical manager or designee will report the incident to DHS and any other relevant agencies (for example, Department of Social Services) in the form and format specified. This will be done as part of the reporting process of the critical incident (within 24 hours of occurrence).
- The manager or designee will document initial notification of relevant agencies in the QOC database.
- If the QM coordinator determines the incident report is reflective of potential fraud, waste, or abuse, the QM coordinator will initiate a Corporate Investigations Department (CID) referral.
- If the provider is incarcerated, the QM coordinator will notify the department manager and compliance officer so they can follow the appropriate protocols.
- Amerigroup will deploy relevant staff (for example, Case Manager /LTSS Community-Based Case Manager), as appropriate, to follow up with the member regarding any changes to the member's service plan. Amerigroup staff will also document notification and findings of member's support needs and any revisions to the service plan.
- Amerigroup staff will comply and assist with investigation of the incident.
- The manager, after communication with the LTSS Community-Based Case Manager or Case Manager, will update the QOC database with any additional information they may receive throughout the investigation and inform the QM coordinator and DHS of such updates.
- The Provider Relations team will follow up with the provider as appropriate.

CONTAINS CONFIDENTIAL INFORMATION

Information documented and reported on the critical incident includes, but is not limited to:

- Reporting party
- Member information
- Incident information
- Resolution information
- Type of physical injury/outcome
- Type of mental health outcome
- Law enforcement participation
- Abuse report
- Location of incident
- Staff review
- Member review
- Equipment and supply review
- Environmental review
- Systemic resolution

We will collaborate with DHS and other Iowa stakeholders and MCOs on prevention activities and risk management strategies to promote health and safety with evidence based policies and procedures. For example, a comprehensive training program for providers, particularly providers of in-home services, to avoid providers receiving duplicative trainings.

Critical Incident Provider Requirements (10.4.2)

Amerigroup leverages our deep relationships with providers to support our comprehensive critical

IA_10.4.1-2_COB_2.2

incident reporting protocols. We require our network providers to report, respond, and document critical incidents to our Quality Management Department, and immediately take steps to prevent further harm to any member and respond to any emergency needs.

Our providers are trained on critical incidents, including what comprises a critical incident, how to report a critical incident, expectations regarding investigation, and process timelines. The critical incident process is reinforced through one-on-one interaction between our staff and network providers when critical incidents occur. Providers are required to have a formal policy and procedure regarding critical incidents in accordance with State and federal law. Providers will sign an attestation that they have policies in place. Through critical incident tracking and trending, we will flag providers to audit their policies and procedures and

internal corrective actions to mitigate minor and major incidents. In our contracts, we also require providers to cooperate with any investigation into a critical incident conducted by Amerigroup or any State or federal agency.

Critical Incident Training for Staff and Network Providers (10.4.3)

Question 10.4, #2

2. Describe strategies for training staff and network providers on critical incident policies and procedures.

We have robust systems in place to document and respond to critical incidents and we understand the importance of continuously training both staff and providers to assure that protocols are consistently and comprehensively followed. Our provider education and staff training program draws from our extensive experience across the nation. We conduct training and maintain oversight of all applicable staff and network providers to assure compliance with critical incident requirements.

We train all staff who have a touch point with the member or provider, including our clinical and utilization staff, our Member Call Center and Provider Helpline staff, provider relations and quality management, and marketing and outreach team members. Staff training is incorporated in continuous quality training programs and based on job function as it relates to potential involvement in the critical incident process. Training is provided by webinar online as well as in-person. We track participation in online training and use sign-in sheets to track attendance for in-person trainings.

Our Quality Management and Provider Relations teams carry out our provider training strategies in the following manner:

- Provider Relations conducts provider training on critical incident requirements and submissions as part of their standard provider training and onboarding program
- Critical incident policies and procedures are contained in the provider manual as well as on the Amerigroup provider website
- Provider Relations educates providers and subcontractors on issues such as timeliness, accuracy, routing and completeness of incident reports
- Providers are educated on required reporting to the appropriate State agencies in case of abuse, neglect, or exploitation
- Quality Management reviews the incident management system, policies, and employee training programs for all applicable providers and subcontractors

Our training and education programs will be supported by consistent and frequent provider education and outreach through several other communication methods, including our provider manual, provider newsletters, provider websites, and toll-free provider services line.

IA_104.3_CO8_1.3

In addition to our provider training protocols listed above, our established training and education programs are supported by consistent and frequent provider education and outreach through several other provider communication methods, including our manual, newsletters, website, and toll-free services line. We tailor our ongoing training and education programs to meet the unique needs of the local provider community. We periodically hold workshops and seminars to afford our health plan staff with opportunities to communicate program updates, industry trends, and enhancements to our products and services to providers. We offer quarterly group training sessions for a refresh and to enable providers to train new office staff. We conduct individual training anytime we identify a need or upon provider request.

Implementing Corrective Action (10.4.4)

Question 10.4, #3

3. Describe processes for implementing corrective action when a provider is out of compliance with critical incident reporting.

Because all healthcare is local, our Iowa-based quality management team will be responsible for implementing corrective action when a provider is non-compliant with our critical incident reporting policies and procedures.

When we learn of any deficiency, whether identified by the State, a provider, or internally, our Iowa Compliance Officer, in collaboration with other internal stakeholders and business owners, investigates the root cause of the problem and develops an action plan to prevent a recurrence.

Specifically, we will take the following steps to communicate with our providers in Iowa and verify all entities involved understand how to prevent future compliance issues:

- Telephone discussion with the involved provider
- Written correspondence with the involved provider
- Increased intensity of utilization management activity
- Required consultation for specified categories of cases
- Appearance and discussion before the Peer Review Committee
- Satisfactory completion of designated continuing education
- Other action(s) deemed appropriate by the Quality Management team or Peer Review Committee

The corrective action plan is reviewed by the Quality Management team with the provider and agreed to by both parties. If non-compliance continues, we would eliminate the provider from the network.

Monitoring and Reducing the Occurrence of Critical Incidents (10.4.5)

Question 10.4, #4

4. Describe how critical incidents will be identified, tracked and reviewed and how data gathered will be used to reduce the occurrence of critical incidents and improve the quality of care delivered to members.

As part of Amerigroup's ongoing commitment to improve quality of care and reduce occurrences of critical incidents, Amerigroup will review critical incident data on a monthly basis. We will evaluate critical incident trends to identify opportunities for improvement, which are then included and monitored through our Quality Management and Improvement (QM/QI) Program described earlier in Section 10.1.

We will use tracking and trending of data to inform needed provider training, such as positive behavioral supports if trends demonstrate providers are ill-equipped to meet the support needs of members with challenging behaviors, and use baseline data to set performance metrics.

Data Collection and Utilization

Data, including critical incident data used to support the QM Program and Work Plan, will be collected on a routine basis (monthly, quarterly, and/or annually) and on an ad hoc basis from internal and external sources to systematically and objectively monitor, analyze, evaluate, and report health outcomes and indices of quality. Data collection follows protocols established in approved policies or QM/QI Program design. Data related to all aspects of member services, departmental operations, and

outcomes may be collected.

Data sources may be administrative, surveys, medical records, or a combination. Data sources may include, without limitation: enrollment information, claims, encounters, authorizations, appeals, complaints, disease/case management documentation, access and availability survey findings, member medical records within provider offices and facilities, surveys by external bodies such as accreditation entities or CMS, quality improvement studies, CAHPS, and HEDIS results.

Quantitative and qualitative analyses are conducted to evaluate the effectiveness of activities in achieving Amerigroup clinical and service performance goals.

IA_1.2_COB_1.2

We evaluate critical incident trends to identify opportunities for improvement which we then include and monitor through our Quality Management and Improvement work plan.

IA_10.4.5_COB_2.2r

Data collection is the responsibility of the department or functional area conducting the related QM activity. Medical data may be collected manually and completed by qualified staff (for example, data extraction from medical records is completed by or under the direction of licensed personnel). Data collection follows protocols established in approved policies or program design. Standardized data collection tools ensure consistent and accurate abstraction of data per indicator/written specifications. Inter-rater reliability is evaluated for all manual data abstraction processes. There is a written, systematic step sequence process for all administrative data collections. Administrative data completeness and accuracy is identified when reporting data collection and/or findings. We also have mechanisms in place to assess the quality and appropriateness of care and services furnished to enrollees with special healthcare needs.

Quantitative and qualitative analyses are conducted to evaluate the effectiveness of activities in achieving Amerigroup clinical and service performance goals. These analyses take into account, among other things, potential barriers for achieving desired outcomes and interventions or recommended strategies. Data is aggregated to track and trend over time for identification of optimal and suboptimal plan performance. Revisions to the Work Plan are initiated as a result of findings or reprioritization of projects and new events.

Provider Preventable Conditions (10.5)

Question 10.5, #1

1. Describe how you will ensure payment is not made for provider preventable conditions.

General (10.5.1)

In an effort to drive quality and efficiency in the delivery of services, Amerigroup Iowa (Amerigroup) has robust claims protocols in place to systemically determine when issues such as provider preventable conditions arise, well before a payment is issued. We do not reimburse for provider preventable conditions as identified by CMS contracts and requirements. There are no exceptions to this policy. This includes:

- Health-acquired conditions as identified by Medicare other than deep vein thrombosis and pulmonary embolism following total knee replacement or hip replacement surgery in pediatric and obstetric patients
- Wrong surgical or other invasive procedure on a patient
- Surgical or other invasive procedure performed on the wrong body part or wrong patient
- Any future additions to the list of non-reimbursable provider-preventable conditions maintained by DHS or other State or CMS policy
- Claims that are identified as provider preventable or facility acquired will be rejected or denied.

The following process is standardized across our claims system to ensure payment is not made for provider preventable conditions or facility acquired conditions.

Claim Entry: Claims that successfully complete the claims receipt process are loaded into the claims processing system for adjudication where claim editing and payment calculation are performed. Initial edits verify the member's eligibility and benefit plan on the date of service, determine the treatment type, and re-validate the diagnostic codes.

We have robust claims protocols to systemically determine when issues such as provider preventable conditions arise, well before a payment is issued. We do not reimburse for claims related to provider preventable conditions.

IA_10.5.1_COB_2.2

Claim Status Verification: Next, the claim is checked for timely filing (submitted within one year of the date of service). Then, the next series of edits verify the provider's in-network or out-of-network status and the provider's billing information. Network providers undergo an additional check to verify they are contracted to deliver the services billed. Duplication logic then verifies the claim has not been previously submitted and adjudicated.

Authorization Determination: The next set of edits determines if an authorization is required for the service and, if so, checks to see if there is an authorization on file for the procedure code(s) and date(s) of service. If the system is unable to verify if an exact authorization exists, it will pend the claim to a queue for an analyst to review. Specific edits evaluate inpatient claims for the presence of provider-preventable conditions.

Claims Adjudication: Once the authorization process has been completed, the claim is adjudicated. The system evaluates inpatient claims for the presence of provider-preventable conditions or facility acquired conditions. If indicated, we will reduce or deny payment for claims that demonstrate that the patient acquired the condition while in the hospital or if there was a preventable condition based on provider action. If indicated, the system will reduce or deny payment.

Claims Payment: When a claim reimbursement is made to a provider, there is an explanation of why the claim paid as it did. The Explanation of Payment will indicate to the facility the reduction or denial because of provider preventable or facility acquired conditions.

Provider Requirements (10.5.2)

We require all providers to comply with the CMS, DHS, and any other relevant State or federal reporting requirements. This is written into all contracts and provider materials and includes identifying provider-preventable conditions that are associated with claims for Medicaid payment or with courses of treatment furnished to Medicaid patients for which Medicaid payment would otherwise be available. Erroneous events would be reflected on Type of Bill 0110 (no-pay claim) along with all services or procedures related to the event. Any other procedures or services would be submitted on a separate claim.

Utilization Management Program (11.1)

Question 11.1, #1

1. Describe in detail your utilization management program, including how you will operate and maintain the program.

Amerigroup Iowa (Amerigroup) will have a singular focus on serving the healthcare needs of those enrolled the Iowa Initiative. Our affiliate health plans have a singular focus on state-sponsored programs. Because of this focus, we concentrate our utilization management (UM) efforts on engaging providers in a productive dialogue about getting members the level of care that will drive the best health outcomes.

Rather than using UM as a mechanism for authorization or denial of requested service, we use it to creatively address our members' health challenges and help them access the right care, at the right time, in the right place.

real solutions mean real results

In our New Jersey health plan, our Medical Director recently authorized non-covered services because they would expedite recovery and promote enhanced quality of life for our member. In this case, the member had an Achilles tendon contracture and the health plan authorized bone stimulation and an orthotic device, which resulted in a positive health outcome.

IA_10.3.2_COB_20.1

For 24 years, our affiliates have provided appropriate care and services to more than 5.2 million members in Medicaid and other state-sponsored health programs across 19 states while achieving ongoing improvements in utilization management and quality outcomes. In many of these markets, our affiliates have demonstrated an industry-leading track record of successful implementations from RFP awards similar to Iowa. Such implementations require a tremendous amount of resource dedication and wholesale changes and adjustments to UM protocols for members, providers,

and stakeholders. We have achieved improvements through our management of lower-level services that have increased access to care. Our management has made providers more aware of the need to be available to members and intervene early in the course of urgent medical situations so that they do not escalate and require hospitalization. ***Based on our experience, we are confident we can roll out an effective UM program that is seamless for members, providers, and stakeholders in Iowa's time frame.***

Efficiency, accountability, and results drive our UM program design and operations. Amerigroup strives to identify and implement industry best practices to positively impact our members, providers, and State customers. The Amerigroup UM program, combined with our Service Coordination, Disease Management, and Health Promotion programs, facilitates the delivery of the most appropriate care to members in the most cost-effective setting. Our industry-leading systems and techniques improve efficiency for Amerigroup and our providers while promoting improved health outcomes and well-being for our members.

Collaboration with providers is critical to establishing more efficient patterns of utilization. We facilitate provider access to data, information, and systems that ease the administrative burden of review and approval processes and support the most effective delivery of services. Here are just a few examples:

We make utilization management decisions on a case by case basis, using collaboration across the functional departments, providers, and other stakeholders represented on the interdisciplinary team to assess members' holistic needs, including medical, behavioral, and social factors.

IA_10.3.2_COB_22

- We provide real-time authorizations in response to telephone and online requests from providers (providers may also request a fax response). Upon receipt, calls are automatically routed to UM professionals who guide providers through the authorization process.
- Amerigroup frequently evaluates the list of services requiring prior authorization to stay current with industry best practices and utilization guidelines. As a result, we eliminated certain services from the prior authorization list, eliminating unnecessary barriers to care.
- We provide evidence-based clinical practice guidelines, new technologies, and best practices to help providers in delivering optimal care for members.
- We conduct workshops for providers on relevant topics; these workshops often provide credit for continuing medical education.

We make all medical necessity determinations using nationally accepted, evidence-based medical necessity guidelines, described in Section 11.1.2, which promote consistency and integrity in clinical decision-making. In addition, we follow specific protocols to support the integrity of coverage determinations. Any decision that is unsatisfactory to the member or provider can be appealed and further reviewed. Our appeals process is described in Section 11.1.2 as well.

Our UM process takes an integrated approach between service authorization and appeals, streamlining activities in a user-friendly system for members and providers. This integrated functionality will allow us to collect and analyze critical data, leading to a continuous quality improvement process, including the

IA_1032_C08_293

establishment of thresholds for grievances and appeals, outlier utilization of certain services, and other important activities. These results will drive ongoing program improvements.

For example, our affiliates have achieved success in steering care away from unnecessary inpatient admissions. Instead, they are moving toward the use of observation beds, reducing the cost of services and efficiently delivering services in the right setting by implementing effective provider education and incentive tools.

Clinical observation units provide a viable cost-effective alternative to short inpatient stays when presenting symptoms need to be monitored to rule out an acute condition. Our Texas affiliate reduced inpatient admissions by 38 percent during our first year in Texas, even though we were not at risk for inpatient services at the time for that program. For the Texas Medicaid population, the plan reduced medical/surgical bed days per 1000 members by 16 percent from 2009 to 2010 and by 20 percent over a three-year period. We also reduced our Medicaid Neonatal Intensive Care Unit (NICU) bed days per 1,000 members by 18 percent from 2009 to 2010 and by 20 percent over a three-year period.

We understand the unique challenges of adapting our UM program for populations receiving LTSS, and our affiliates have 17 years of experience with LTSS populations experience from other states. Our affiliate health plans currently serve more than 200,000 Medicaid members through integrated LTSS plans across seven states. In addition, our affiliates have significant experience managing LTSS benefits offered as part of several states' Medicaid managed care benefits package. By supporting member preferences to live in the community with the person-centered care planning process, we have achieved the following outcomes in local affiliate health plans in other states:

IA_1032_C08_33

- Our affiliate health plans transitioned 285 nursing facility members into the community in 2014. The following provides a breakout of our affiliates that had the most nursing facility member transitions during 2014:
 - Our Florida affiliate health plan transitioned 88 of 1,453 members — more than 6 percent
 - Our New York affiliate health plan transitioned 10 of 182 members — more than 5 percent
 - Our Kansas affiliate health plan transitioned 100 of 4,569 members — more than 2 percent
 - Our Tennessee affiliate health plan transitioned 87 of 3,895 members — more than 2 percent

Overview of Utilization Management

The purpose of the Amerigroup UM program is to assist in assuring that eligible members receive the most clinically appropriate care and services in the most efficient manner possible and to enhance consistency in reviewing cases by providing a framework for clinical decision-making.

The UM program includes activities related to inpatient and ambulatory care and collaborates with other departments in care coordination, discharge planning, and case management to meet the physical and behavioral healthcare needs of Amerigroup members. It adopts an integrated medical management model based on the physical, behavioral, and social needs of eligible members. The UM program, in collaboration with other departments such as Disease Management (DM) and Case Management, facilitates the delivery of the most appropriate medically necessary care and services to eligible members in the most appropriate setting. Amerigroup utilizes a coordinated, comprehensive approach to verify that members receive services at the appropriate level of care through the development of individualized, innovative programs and coordination of services with other Amerigroup departments, providers, and community resources.

Our UM program promotes consistent use of nationally recognized, evidence-based medical management criteria and practice guidelines for medical necessity determinations; fosters continuity across care settings; maintains strict confidentiality of clinical and proprietary information; and promotes access to care for our members. Our program meets all NCQA standards, and we continuously evaluate our practices so that UM achieves its intended purpose in a problem-free, easy-to-navigate process.

The goals of our UM program are:

- *To enable service availability and accessibility to eligible members*
- *To maximize appropriate medical and behavioral healthcare*
- *To minimize/eliminate over- and under-utilization of medical care, behavioral health care, and LTSS, including waiver and institutional services*

Our Iowa Medical Advisory Committee (MAC) will review relevant UM information as it relates to quality improvement activities. This information includes identifying quality of care concerns, disproportionate utilization trends, duplicative services, adverse access patterns, and lack of continuity and coordination of care processes. The UM program and the MAC achieve their goals and objectives by working collaboratively with a variety of other local and national departments such as Regulatory Services, Compliance, Provider Contracting/Provider Relations, Clinical Informatics, Quality, Medical Finance, and Member Services. The MAC will be responsible for providing sight of UM activities at the plan, provider, and membership levels. It will convene quarterly but will meet on an ad hoc basis as needed. Our UM systems and processes are designed to facilitate members' access to quality, efficient medically necessary services delivered in a member-centered, culturally, and linguistically competent setting and to enhance consistency in the delivery of those services by providing a framework for clinical decision-making.

Operating and Maintaining Our UM Program

We operate and maintain our UM program by having clearly defined UM processes, established program objectives, clearly outlined structure and accountability, and well-developed policies and procedures that support timely decision-making. The Iowa Medical Director will have day-to-day oversight of UM operations and complete accountability for outcomes. The Iowa Medical Director will collaborate with senior leads from other departments to verify all medical, health, and LTSS needs and issues are addressed in an integrated fashion.

We will communicate all utilization management strategies and/or changes to the community upon DHS approval within thirty days prior to implementation. This includes our members, providers, and the community at large.

Amerigroup will use reporting to identify providers and members with utilization patterns that fall outside the norms. We outreach through case management and education to address outliers.

IA_322_COB_1.3

UM Policies and Procedures and Program Elements (11.1.1-11.1.2)

Question 11.1, #2

2. Describe your policies, procedures and systems to:

- a. Assist utilization management staff to identify instances of over- and under-utilization of emergency room services and other health care services;
- b. Analyze emergency department utilization and diversion efforts;
- c. Identify aberrant provider practice patterns;
- d. Monitor patient data related to length of stay and re-admissions related to hospitalizations and surgeries;
- e. Assure the appropriateness of inpatient care;
- f. Ensure active participation of a utilization review committee
- g. Evaluate efficiency and appropriateness of service delivery;
- h. Incorporate subcontractor's performance data;
- i. Facilitate program management and long-term quality; and
- j. Identify critical quality of care issues.

Over- and Underutilization of ER and Other Services

Overutilization and underutilization of services are monitored using reports made available to the Healthcare Management (HCM), Quality Management (QM), and Health Promotion (HP) Departments by the Plan Performance Management Analysts/Plan Finance Analysts. Amerigroup uses reporting to identify providers and members with utilization patterns that fall outside the norms. The utilization norms are adjusted to reflect regional and local practice variations and are compared to national benchmarks or Amerigroup aggregate data for all affiliate health plans. We target intervention strategies to enhance appropriate utilization practices and provide member intervention for cases of member overutilization and under-utilization through care coordination and/or health education and outreach.

Members

When we identify patterns that fall outside the norms or receive a referral, we are quick to correct the situation and also educate our members on the appropriate use of benefits and services available to them through Amerigroup. Members are identified by either:

- **Data Review:** We will review existing data and establish any necessary reporting that enables us to identify patterns of behavior that are outside of the norm. For example, we currently review a monthly identification report using pharmacy claims data. Routine review of utilization data will identify patterns of over-utilization, while anti-fraud software may help us identify cases of member fraud and abuse. A typical criterion would be to select members with two or more providers and pharmacies and five or more controlled substances with three or more opiates in the last 45 days.
- **Referral:** We can receive referrals via multiple avenues that can include mail, telephone, in-person contact, email, Internet, Intranet, or the Amerigroup compliance hotline. Referrals can come from members, providers, employers, law enforcement agencies, and professional organizations. As an example, a provider may call to report a member who continuously sees multiple similar providers.

When a member's utilization pattern suggests outreach and education are warranted, our medical management clinical team will collaborate with the Chief Medical Officer to determine appropriate interventions, including outbound telephone calls to educate him or her about appropriate use of services, the importance of preventive care, or the need to refer to case management for care coordination.

Providers

Supporting the health plan with utilization data analysis and reporting is an expansive team of professionals in our national Health Care Analytics department, which provides healthcare analysis, consulting, and analytical capabilities to help optimize business decision-making. This group will collaboratively develop reports to monitor utilization each month to drive improvements in utilization patterns with our local health plan business and clinical teams. Where we identify utilization increases not explained by member mix or benefit changes we take the next step to identify outlier providers.

We will review both primary care provider (PCP)-panel utilization patterns and servicing provider billing patterns to conduct the provider-level analysis. The team identifies outlier providers based on relative distribution of services and then refers the cases to appropriate functional areas for intervention. Interventions range from fraud investigation, to pre- or post-payment claims adjudication prompted by possible waste or abuse, to revision of provider contracts, to panel reassignment, to inclusion in our provider quality incentive program.

Underutilization Evaluation

If we identify any underutilized services, we investigate to correct the issue and root cause. In addition, we conduct an ongoing review of service denials and monitor utilization on an ongoing basis to identify services that may be underutilized. We consider the expected utilization of services regarding the characteristics and healthcare needs of the member population. The results of the reviews will be reported to the MAC and the Quality Management and Improvement (QM/QI) Committee and are used to help implement strategies to achieve utilization targets consistent with clinical and quality indicators and identify fraud and abuse. The reports are reviewed looking for patterns of over-utilization and/or underutilization of services with specific attention given to acute/chronic care and preventive care services, including:

- Acute/Chronic care:
 - Re-admissions
 - Pharmaceuticals
 - Specialty referrals
 - Emergency room utilization
 - Home health and durable medical equipment utilization relative to diagnostic entity
- Behavioral health
- Inpatient utilization
- Preventive care:
 - Well-child/adult PCP visits
 - Age-appropriate immunizations
 - Mammograms
 - Blood lead testing

Examples of Leveraging Utilization Data to Drive Performance Improvements

We target intervention strategies at enhancing appropriate utilization practices and provide member intervention for cases of member overutilization and underutilization through care coordination and/or health education and outreach. Examples of strategies that we have implemented are:

- The **Pharmacy Restriction "Lock-in"** process, which may limit members to a single pharmacy to obtain their medications. We determine the need for restriction through medication claims review and implement it only in those affiliate health plans that have a state-approved program. Members identified with uncoordinated care, excessive utilization, or suspected patterns of fraud and abuse may also be referred to the Pharmacy department from a specific health plan or providers.
- Targeted outreach attempts to members for **early and periodic screening, diagnosis, and treatment (EPSDT)** services and a general mailing program of member birthday card EPSDT service reminders and overdue services postcards.

To identify possible underutilization in providers participating in our Quality and Population Management Incentive Program, we will run and review our Underutilization Monitoring Report every six months to review incurred claims activity for the periods January 1 to June 30 and then July 1 to December 31 each year. The report is used to identify potential underutilization patterns. The report shows both standard deviation results for the current quarter and year-to-date and year-over-year change for the utilization indicators. The data will be analyzed at the same level as the program is administered (for example, solo PCP, PCP group, or independent physician association (IPA), depending on which is the highest contractual level). The report displays the following utilization indicators:

- Non-emergency room physician visits
- Non-emergency room outpatient diagnostic services (includes radiology, lab, etc.)
- Non-emergency room outpatient therapeutic procedures (includes PT/OT/ST, Home Health, and outpatient surgery)

Separate reporting for adults and children is used. Once adults and children have been separated, services per 1,000 members are evaluated.

If any one of the measured utilization indicators falls below the outlier limit, the Medical Director and assigned Provider Services Staff or Member-centered Care Consultant conduct an internal review that includes, at a minimum, review of the following:

- Current utilization compared to peers
- Utilization year-over-year trends
- Member turnover data

The internal review will also include an in-person meeting with the PCP to review the data and discuss whether there are any extenuating circumstances if there is evidence of underutilization. If warranted, the PCP will be notified in writing of the underutilization concern and required to submit a Corrective Action Plan (CAP) to the health plan within 30 days. Failure to submit a CAP within the required time frame will result in the immediate removal of the PCP from the Quality and Population Management Incentive Program. For providers who comply with submitting a CAP, we approve the CAP and monitor progress on a quarterly basis. If no improvement is noted after the first quarter, the PCP will be notified of his or her termination from the Quality and Population Management Incentive Program.

Emergency Room Utilization and Diversion Efforts

We have the following innovative tools and initiatives – developed through our extensive UM experience in our affiliate health plans -- in place to effectively monitor emergency room utilization. See 3.2.5 for more detail on strategies and outcomes.

- **Emergency Room Triage Model** developed by our national Healthcare Analytics team to identify those members who are at high risk for frequent emergency room utilization; it assigns scores to members for case management evaluation
- **Dedicated Case Management** by Case Managers who will monitor members closely for ER utilization and reach out to them with additional education
- **Targeted Member Management** for members with behavioral health, substance abuse, and/or homeless issues that could result in episodic ER utilization in lieu of continuous primary care
- **24/7 Nurse HelpLine** availability of registered nurses to assist members with health care concerns via the toll-free telephone number to Member Services
- **Network Access** to optimize performance of PCP networks by reviewing data with providers on member emergency room visits made during regular office hours and encourage after-hours availability on weekdays and weekends
- **Urgent Care/Retail Clinic Strategies** to increase awareness of and access to these care locations

We have a comprehensive process and back-end systems to verify timely responses to ER providers within one hour 24/7. UM nurses are available at all times, including holidays, to verify eligibility for members with urgent or emergent conditions and to process requests for prior authorizations by phone or fax. **We also operate a 24/7 behavioral health call center.** Behavioral health call center representatives and UM nurses have access to the entire patient record, including medical, behavioral, LTSS, pharmacy, and social information on the member. Amerigroup encourages providers to contact us and/or the member's PCP when a member presents for emergency services, but we will not refuse to cover emergency services based on the emergency room provider failing to notify us.

Identifying Aberrant Provider Practice Patterns

Amerigroup recognizes our accountability for assessing and evaluating contracted practitioners who manage healthcare services delivered to plan members. We review information and data derived from practice experience within the organization, including utilization data, complaints regarding a practitioner site, adverse events, medical record reviews, and internal potential quality-of-care issues. Our monitoring occurs on an ongoing basis, and we take swift action when we identify aberrant provider practice patterns.

Our QM department tracks and trends provider performance data on a regular basis to identify trends that represent clinical practice patterns that are inconsistent with practice guidelines. This information is reviewed with an interdisciplinary team during QM/QI committee meetings, and corrective actions are taken to address identified issues. Specific provider performance issues are shared with the Credentialing department for consideration during the re-credentialing process.

The Credentialing department incorporates internal information regarding a practitioner's performance in the ongoing monitoring process. Credentialing department staff assign point levels to each issue depending on severity and place all information received from the QM department into each practitioner's file. When a provider attains the threshold of 25 points or greater between credentialing cycles (a rolling 36-month period), the Credentialing Committee conducts a review. Concurrently, the MAC may also review the provider depending on the types of issues involved.

Monitor Length of Stay and Re-admissions Data

We will monitor patient data related to length of stay and re-admissions related to hospitalizations and surgeries. Hospital re-admissions are a cost-and-quality issue for Amerigroup members. The first 24 to 72 hours post discharge represent the highest risk time frame for re-admissions, and delay in engagement purports a missed opportunity, especially during the transition from acute care to the home. As such, there has been a strategic focus on analyzing our total number of 30-day re-admissions. Utilizing short-term case management activities, the Stabilization Care Management model demonstrated a reduction in re-admissions. ***For example in our Louisiana affiliate, our Stabilization Care Management model showed an avoidance of approximately 45 readmissions in 2014, which translated in an estimated savings of almost \$250,000.*** The model exploits opportunities for coordination of discharge care and augments our existing UM and case management activities. We welcome the opportunity to work with the State and, if requested, lead a workgroup that will work to design final reports that best align with State needs.

CONTAINS CONFIDENTIAL INFORMATION

Between November 2012 and December 2014, the program prevented more than 600 expected re-admissions (based on RAS Score), resulting in \$2.9 million in estimated savings across Amerigroup affiliate health plans.

To further reduce hospital readmission rates in Iowa, Amerigroup will offer a post-discharge stabilization kit and home-delivered meals as Value-Added Services for eligible members. The discharge kit provides tools for family members and caregivers to successfully help transition members from hospital to home, aid in recovery,

and help decrease the chances for readmission. The meal program provides nutritious home-delivered meals, which allows members to focus more on recovery rather than proper nutrition, shopping, or finding a caregiver to prepare them. We are confident that these two Value-Added Services will deliverable meaningful additional value to our members in addition to helping reduce readmission rates.

Evaluating Appropriateness of Inpatient Care

Amerigroup follows established procedures to help assure the appropriateness of care and the applying of medical necessity criteria based on individual member needs and an assessment of the availability of services within the local delivery system. These procedures apply to precertification, concurrent, and retrospective reviews. UM clinicians collect and review relevant clinical information to determine if the level of service requested meets medical necessity criteria. Criteria can be accessed via criteria-specific software/web applications.

Clinical information for making determinations of coverage may include but not be limited to:

- Office and/or hospital records
- History of the presenting problem
- Results from clinical exam(s)
- Results from diagnostic testing
- Treatment plans and progress notes
- Psychosocial history
- Consultations with the treating practitioner(s)
- Evaluations from other healthcare practitioners and providers
- Photographs (MRIs, X-rays, ultrasounds, ECGs, and EEGs)
- Laboratory results
- Operative and pathological reports and results
- Rehabilitation evaluations
- Criteria related to request
- Information regarding benefits for services and/or procedures
- Information regarding the local delivery system
- Member's characteristics and information
- Information from responsible family member(s)
- Member's safety issues

Amerigroup does not employ utilization controls or other coverage limits to automatically place limits on the length-of-stay for members requiring hospitalization or surgery. ***We base length-of-stay for a member's request for hospitalization or surgery on the needs of the member***, rather than on arbitrary limits. Members who are hospitalized or receiving surgical services are managed by an assigned Utilization Manager. The clinical review for these services will specify authorization for coverage limits as determined by clinical guidelines and individual needs. Subsequently, the Utilization Manager, working with the hospital, PCP/attending physician, and other parties, will monitor and continually review the case to determine discharge readiness and to facilitate discharge planning. For members found to require extended benefits as identified by the concurrent review of individual needs, severity of illness, and services being rendered, the Utilization Manager has the authority to extend the hospital stay or other services as needed.

Active Participation of the Utilization Review Committee

Our Iowa-based MAC and QM/QI Committees which will serve as our Utilization Review Committee, are governed by our UM program descriptions, allowing them to operate under established parameters. The committee will meet at least quarterly on a regular schedule. Committee members are formally appointed for a two-year term and include network providers from differing specialties. We will also involve providers in the quality process through our MAC. The committee will be accountable to the

Iowa plan Medical Director, and the board and will maintain appropriate documentation of the committees' activities, findings, recommendations, actions, and follow-up.

Performance Monitoring is a formalized function within Amerigroup. The monitoring activities help identify opportunities for improvement that can lead to delivery of higher-quality services and/or more efficiency of operations, thus cost savings. Monitoring for standardization helps better identify gaps in processes that inhibit efficiency and effectiveness of our programs. The Inter-Rater Reliability (IRR) program is designed to assess the consistency and adherence to Amerigroup policy and process as related to UM practice. The consistency with which healthcare professionals involved in UM apply criteria in decision-making is evaluated at least annually.

Appropriate mechanisms, such as use of hypothetical UM test cases or use of a sample of UM determination files using an NCQA-approved auditing method, are utilized to evaluate the consistency of application of criteria. Physician and non-physician reviewers are assessed in applying medical necessity criteria to promote consistency and accuracy in the application of the criteria. Licensed clinical UM staff, including behavioral health, who apply medical necessity criteria participate in the IRR process. IRR results, as well as aggregate national results, are reported to the UM and QM/QI Committees. Opportunities for improvement are identified and addressed by action plans.

Amerigroup will conduct an annual evaluation of our UM program, including clinical and service outcomes for medical and for behavioral health, in comparison to program objectives and activities. Results will be submitted to the MAC and QM/QI Committee for review and approval annually. Results and recommendations will become the basis for the following year's activities, and unrealized goals/objectives may be carried over to the subsequent year. 2014 IRR results are illustrated in Figure 11.1-1.

Figure 11.1-1. IRR Results for 2014

As a component of the program evaluation, we will conduct provider surveys to determine satisfaction with the UM process. We will identify opportunities for improvement and initiate actions to meet our goals and member/provider expectations. Results will be monitored through ongoing surveys.

Evaluating Efficiency and Service Delivery

We are continuously developing and implementing new, more efficient processes based on feedback from other functional areas and stakeholders. The Annual UM program evaluation serves as a reporting mechanism for progress and outcomes related to goals, planned activities, processes, and initiatives.

Our formal evaluation consists of a review of the efficacy of the program structure and an assessment of the program activities, including non-delegated and delegated UM, special UM programs, an assessment of potentially avoidable hospitalizations, an assessment of over- and under-utilization, and an assessment

of inter-rater monitoring and analysis. The UM Annual Evaluation Report concludes with an overall summary and recommendations for next year's activities.

Our QM department performs an annual review of access and availability as well as an over- and under-utilization analysis. This is achieved by analyzing both quantitative and qualitative data to detect barriers and identify trends; monitoring areas with the potential for over- and under-utilization specific to the membership population, local practice patterns, and national healthcare trends; and acting on the opportunities identified by implementing interventions and evaluating the effectiveness of the interventions implemented.

Incorporating Subcontractor's Performance Data

As detailed in Section 11.1.4, we will not delegate any UM functions to non-affiliate subcontractors.

Facilitating Program Management and Long-term Quality

Our UM processes and procedures are integrated with our Quality Management Incentive Program (QMIP) to facilitate program management and promote long-term quality. Our MAC is charged with overseeing our UM program activities and processing and reporting findings and recommendations for actions to improve quality.

The MAC reviews under- and over-utilization reports; provides guidance to the Medical Directors and UM employees; reviews and adopts UM standards; develops and implements programs based on review of UM data; assesses physician and facility performance; and adopts the annual UM plan, work plan, and evaluation. The UM department provides relevant UM information to the Quality Management (QM) department for quality improvement activities.

Our QM department tracks provider performance data on a regular basis to identify trends that indicate quality-of-care concerns, disproportionate utilization trends, adverse access patterns, and lack of coordination of care. This information is reviewed with an interdisciplinary team during QM/QI committee meetings, and corrective actions are taken to address identified issues.

Identifying Critical Quality of Care Issues

We are committed to identifying, reporting, and addressing critical quality of care issues. Potential issues include misdiagnosis; inappropriate treatment or complication after a procedure resulting in an adverse outcome or causing a minimum one-day increase in length of stay; an access-to-care issue resulting in an adverse outcome or causing a minimum one-day increase in length of stay; delays in care or referral to specialists due to scheduling problems or inability to make contact with the physician resulting in an adverse outcome or causing a minimum one-day increase in length of stay; and an unplanned readmission related to the same condition.

Depending on their severity/complexity, selected cases are presented to the MAC for review and recommendation. The MAC provides input regarding community standards for medical care, considerations for corrective action, and/or recommendation for termination.

Once the case is selected for peer review, the Medical Director forwards the case to the QM department. A QM employee places it on the MAC meeting schedule. The Medical Director submits the case to the appropriate specialty MAC member for review and presentation to the committee. If there is not a member with appropriate specialty on the committee, the case is given to a provider with such specialty to review the case in advance for presentation by the Medical Director.

The MAC makes recommendations on cases brought for Committee review. The Medical

Director governs the oversight of the corrective actions related to clinical quality issues or provider or office staff behavior. The Medical Director may recommend immediate action if the member's health or well-being is in jeopardy. Other corrective actions may include but are not limited to:

- Obtaining the provider's written response to the Committee's questions or concerns
- Obtaining the hospital's response that validates the issue was referred to or discussed in the hospital's QM/QI Committee
- Approving the response previously provided by the physician
- Closing the case with no further action required
- Follow-up medical record reviews
- Referral to the Credentialing Committee for further appropriate action up to and including possible termination from network participation

Once a decision regarding the appropriate action has been made, a QM employee:

- Notifies Grievance and Appeals that the MAC reviewed the case and that a letter has been sent to the provider
- Notifies the Credentialing department in writing of the MAC decision, as appropriate
- Prepares letters regarding MAC and Medical Director decisions to the provider and requests corrective action, as appropriate

Utilization Management Work Plan (11.1.3)

Question 11.1, #3

3. Provide a sample UM Work Plan

An integral component of our UM program is the annual UM Work Plan, which represents a road map for the upcoming year and is built based on detailed analysis of provider and member data. The Work Plan is the vehicle through which we monitor, evaluate, and take effective action to identify and address all program improvements, including those related to quality of care. Our Work Plan is the tool that guides our team in measuring our success in achieving the targeted improvement goal.

Amerigroup develops the UM Work Plan on an annual basis. It includes the following:

- Objectives for the year and program scope
- Activities planned for the year, including quality and safety of clinical care and quality of service
- Performance measurement, including benchmarks and goals
- Performance improvement projects' (PIPs) baselines and interventions
- Time frame within which each activity will be achieved
- Person(s) responsible for each activity, including department collaboration and coordination
- Monitoring of previously identified issues
- Planned evaluation of the UM program and Work Plan
- Schedule for reporting to the governing body (or designee)
- Schedule for evaluation of delegated services

The Work Plan is a dynamic document and is updated as needed to reflect changes in processes, priorities, and/or activities. The UM Work Plan lists the measures we will collect; the previous year's performance and benchmark, if applicable; and the current year's target measure, listing the interventions for each aspect. The Work Plan also reflects quality targets for the health plan's care coordination programs, including case management (CM) and DM, such as top conditions, member satisfaction, and member engagement rates. A sample UM Work Plan is shown in Table 11.1-1.

Leveraging local knowledge, national health plan experience, and the best practices across our state-sponsored health program business that currently supports more than 5.2 million members, our Iowa UM Work Plan will reflect a full scope of quality metrics. Examples of metrics include those specific to our CM and DM programs, HEDIS[®] measures, and measures that target condition-specific care such as diabetes, asthma, coronary artery disease, mental health, avoidable emergency room services, and members with special health needs. We will focus on outreach, patient safety, preventive services, closing gaps in care, and provider engagement and profiling. We will encourage the use of clinical practice guidelines, high-risk prenatal, and chronic and complex condition management processes. We will also focus on member assessment, care planning, and engagement in their self-management, and we will assist with care navigation. Of course, all of these Work Plan features will be layered on top of an Iowa-specific foundation that caters to the unique needs of the State's dynamic populations.

Table 11.1-1. Sample Annual UM Work Plan Features Interdisciplinary Participation and Accountability

Question 11.1, #4

4. Describe if any UM functions will be delegated. If any functions will be delegated, describe proposed ongoing monitoring strategies of the delegated entity.

Utilization Management Subcontractors and Staff Delegation and Monitoring (11.1.4)

Our affiliate, AIM, conducts UM leveraging its specialized expertise in specialty radiology, cardiology, medical oncology, radiation therapy, medical benefit drugs, and sleep medicine. Amerigroup's Iowa-based local leaders oversee and review AIM's UM services to verify performance and compliance. Health plan leadership holds Monthly Workgroup Meetings to formally review performance metrics and data obtained through our attendance at quarterly national Vendor Selection and Oversight Committee (VSOC) and Delegated Workgroup (DWG) meetings. Each Amerigroup affiliate health plan has voting members in the DWG, which is responsible for seeing that we follow established policies and procedures in accordance with State, federal, NCQA, and any other applicable regulatory and accreditation standards. The DWG has collaborative relationships with, and representation from, internal departments. As a governing body comprising local health plan representatives, the DWG will support corrective actions, as needed.

Question 11.1, #5

5. Describe the process for developing and updating practice guidelines.

Utilization Management Practice Guidelines (11.1.5)

Our utilization management procedures determine the necessity of care or services on a case-by-case basis in accordance with State and federal laws and regulations. Our process is grounded in nationally recognized, evidence-based criteria and guidelines. We are also acutely aware of and responsive to the differing needs and situation of each unique member. UM staff considers the severity of illness, presence of multiple conditions, and episode and member-specific variables when applying criteria to determine necessity of care or services. Our member-centric, holistic approach enables members to receive necessary care, support, and services within a safe setting that promotes optimal health and well-being. We have extensive experience working with state-defined medical necessity criteria in our local affiliate plans, and we are ready to work with DHS to implement any Iowa-specific criteria or process guidelines.

Our UM guidelines are developed and updated annually based on nationally accepted, evidence-based practices. We take medical, behavioral, social, and functional factors into account and will work with DHS to incorporate state-specific criteria.

IA_1032_CCB_9 2

Medical Necessity Determination

For medical State plan benefits, UM nurses will review the members' conditions and compare to the appropriate medical necessity criteria. We will use nationally accepted, evidence-based medical necessity criteria.

For behavioral health State plan benefits and substance use disorder services, we will use Amerigroup Behavioral Health Medical Necessity Criteria and American Society of Addiction Medicine

(ASAM) Criteria, unless superseded by State or regulatory guidance. We will also develop psychosocial medical necessity criteria specific to the Iowa Initiative.

For EPSDT services for members under 21, we will comply with State requirements to provide any services that could correct or ameliorate physical or behavioral health.

For emergency services, we will not impose restrictions on coverage that are more restrictive than those permitted by the prudent layperson standard. This means we will not deny emergency services when a prudent layperson who possesses an average knowledge of health and medicine could reasonably expect the absence of immediate medical attention to result in placing the health of the individual (or unborn child) in serious jeopardy, serious impairment to bodily functions, or serious dysfunction of any bodily organ or part.

LTSS Determination

Our affiliates have 17 years of experience managing LTSS benefits and will adhere to Iowa's criteria and methodology regarding the reasonableness and volume of services selected for inclusion in the member-centered care plan by the member and community-based care coordinator. We know how to manage all LTSS services, beyond the standard medical services in the State health plan. We will integrate and manage a full range of LTSS for eligible members.

Amerigroup's affiliate health plans have vast experience conducting utilization management of LTSS across seven markets. We understand and adhere to the variations of LTSS review criteria across those markets as each state has its own criteria, guidelines, and rules against which LTSS authorization decisions are made.

For LTSS, we will not use medical necessity criteria; however, we apply functional necessity based on our assessments/reassessments. The provision of LTSS and related durable medical equipment will be determined and approved through the member-centered care planning process in consultation between the member, his or her family or caregiver, and the community-based care coordinator. Spending on covered services must fall within the budget cap. We plan to partner with Telligen on a consultative basis during the implementation period to understand the existing process and criteria for LTSS in Iowa to promote consistency and continuity of care through the transition.

Following our process of comprehensive functional assessment and development of a member-centered service plan with involvement of the member's interdisciplinary team, the community-based case manager coordinates submission of all required documentation for NF LOC (the Iowa Level of Care Certification for Facility form, supporting clinical documentation) to the UM reviewer.

We will not limit or reduce coverage unless supported by individualized determination of necessity based on the specific member situation. We will apply appropriate medical necessity criteria to physical and behavioral State health plan services based on individual member needs and a thorough assessment of specific services available within the local delivery system. For LTSS, ***we are experienced working with members and their families or caregivers to make decisions about services as part of the member-centered assessment and resulting care planning process.***

During periods of transition, we will not reduce or deny members continuing access to their providers, services, or care until we are able to conduct a full assessment and develop a care plan. During Contract implementation and transitional periods, we will honor prior authorizations and support members to continue accessing their current providers, care, and services to verify a seamless experience and continuity of care.

Special attention will be paid to identifying and authorizing services needed to support the member remaining in his or her home or in another community-based setting of his or her choice; services needed to participate in the community (employments, school, other); and any extended State plan services such

as additional therapies included in a waiver because the State plan's service is capped or designed in a different way than the waiver.

Our utilization management and case management staff will refer members to cost-effective alternative services when appropriate to meet the member's needs. We will also train providers to help direct members to the most cost-effective and appropriate option for their situation. For example, we encourage members to use urgent care instead of the emergency room if their condition is not an emergency through PCP consultations, a 24-hour Nurse HelpLine, and member materials. In addition, we may require providers to document attempts to use a more cost-effective drug or therapy before we authorize a more costly drug or therapy if there is reason to believe the lower cost option will meet the member's needs as well as or better than the higher-cost alternative. In addition to promoting value for the State, this helps assure the safety, health, and well-being of our members.

Updating Practice Guidelines

We update our UM guidelines annually using clinical best practice guidelines from professional organizations; up-to-date clinical research; and practicing, licensed, and board-certified physicians through our national Medical Policy and Technology Assessment Committee (MPTAC). MPTAC is an interdisciplinary group, including network physicians from various medical specialties, clinical practice environments, and geographic areas. The committee considers information from a variety of sources, including the results of electronic literature searches; independent technology evaluation programs; and materials published by professional associations such as the Blue Cross Blue Shield Association, technology assessment entities, appropriate government regulatory bodies, and national physician specialty societies and associations. The committee may also consider a service or procedure being reviewed, with supporting documentation, as a standard of care in the medical community. For topics that represent a significant change or are otherwise required by law or accreditation, we also seek input from academic medical centers and specialty societies from around the United States. For example, UM of substance abuse disorder services will use the most current version of the American Society of Addiction Medicine Patient Placement Criteria (ASAM), as published by the American Society of Addiction Medicine. Additionally, MPTAC has designated subcommittees for certain specialty topics such as hematology/oncology and behavioral health. For example, criteria for review of behavioral health issues are reviewed by the National Behavioral Health Clinical Advisory Committee, a subcommittee of MPTAC.

Our Iowa MAC will review and approve criteria and guidelines annually with input from the Iowa QM/QI Committee, which will include practitioners knowledgeable about local delivery systems. All newly approved criteria and guidelines will be approved by DHS and shared with providers at least 30 days prior to the implementation of the guidelines. Additionally, providers may access Amerigroup UM criteria at any time through our provider portal (we also provide them to members and potential members upon request). Clinical Practice Guidelines are reviewed and approved bi-annually by the MPTAC. The MPTAC serves as the official medical/clinical policy-making body of Amerigroup in development of clinical standards or review and adoption of nationally recognized standards to support evidence-based coverage policies.

Question 11.1, #6

6. Describe how your UM program will integrate with other functional units as appropriate and support the Quality Management and Improvement Program.

Utilization Management Care Coordination (11.1.6)

Amerigroup's UM program includes activities related to the delivery of care in a proactive, coordinated, collaborative manner. We work closely with other departments, our provider partners, community agencies, and other resources that enhance care coordination, discharge planning, and care coordination to meet the physical and behavioral healthcare needs of our members. For example, our UM program staff connect members to our disease management, care coordination, and complex care coordination programs, as appropriate. Through this collaboration, the UM program facilitates the delivery of quality, medically necessary care and services to eligible members in the most appropriate setting.

For example, our Provider Services and UM teams work together to make sure members have access to medically necessary care. When members require services that are not available within the contracted network of providers, UM and Provider Services coordinate to obtain single-case agreements with identified providers and/or attempt to contract the provider to join the network.

Our UM program is also integrated into a cross-functional workgroup referred to as the Network Strategy Workgroup. This group includes representatives from Provider Services, Medical Management (MM), Quality Management, Compliance, Community Outreach, Government Relations, and Finance. The purpose of this team is to provide insight and feedback to make sure that our network has the right number, mix, and geographic distribution of quality providers to meet the needs of our members.

Our UM protocols, systems, and processes promote collaboration across the organization. We provide examples of the types of coordination that regularly occur below.

- Amerigroup's UM staff coordinate closely with compliance when potential fraud, waste, and abuse are identified through utilization review activities. Our UM staff report these instances and fully participate in investigative reviews.
- When implementing our provider incentive program, UM staff work closely with other functional areas, such as Quality Management, Provider Relations, Financial Services, Legal, and Claims to track provider performance against established targets, promote performance improvement, and communicate with providers.
- Amerigroup's innovative, member-centered care model includes UM support for providers. Each provider has a designated UM nurse with whom to communicate to meet the needs of our members through activities such as care coordination, prior authorization, social support, or other necessary services.
- Through the MAC, we review utilization data and collaborate on initiatives to improve member access to appropriate services. These initiatives may include member or provider education and outreach, corrective actions, innovative program development, or clinical practice guideline changes.
- Our UM staff coordinate with quality management if UM activities identify a potential quality-of-care concern. When completing UM processes, our clinical staff identifies potential issues that may

indicate a risk to the member; they report those concerns to Quality Management and participate in the investigative process, as appropriate.

- Our UM program is embedded in our interdisciplinary care team, which integrates all aspects of physical, behavioral, oral, social, and LTSS services for members, as well as PCPs, hospitals and institutional providers, behavioral health providers, Community Mental Health Centers (CMHCs), Federally Qualified Health Centers (FQHCs), Rural Health Centers (RHCs), LTSS providers, and health homes. UM staff work side by side with the rest of the interdisciplinary team on the same systems with the same approach to care planning to facilitate holistic, integrated care coordination.

Integrating with the Quality Management and Improvement Program

Amerigroup's UM program is an integral part of our quality improvement and system change efforts. We collect and report relevant information to the Quality Management and Improvement (QM/QI) program for quality improvement activities. This includes identifying quality-of-care concerns, disproportionate utilization trends, adverse access patterns, and lack of continuity and coordination-of-care processes.

The UM program is integrated with quality improvement activities to capture utilization trends and/or patterns, and our data are compared to nationally recognized thresholds to alert us to over- and under-utilization. Potential areas reviewed for utilization trends include but are not limited to:

- Inpatient/emergency room utilization
- Selected procedures
- Referrals to specialists
- Ambulatory care
- Behavioral health services
- Access to preventive care

Our Medical Advisory Committee (MAC) is an integrating forum where representatives from UM, QM, Network Providers, and other departments review utilization and quality data generated through our UM program. Additionally, the MAC collaboratively establishes key performance and quality-of-care indicators and criteria that are incorporated into the UM program.

Our MAC or UM Committee provides another opportunity for integration between our UM and QM/QI programs. An interdisciplinary team reviews utilization data during MAC meetings. Where results fall outside of performance standards, we conduct a qualitative analysis used to design and implement interventions to eliminate any barriers to care to promote improved outcomes. One such intervention is the use of provider and member incentives to encourage and reward access to high-quality services that improve member health outcomes.

In addition to routine care coordination, Amerigroup designates a specific clinician or case manager to verify continuity of services for members who are in active case management and members with severely emotionally disturbed children, adults with serious mental illness, children with special healthcare needs, and women with high-risk pregnancies.

IA_12_C08_12

Question 11.1, #7

7. Describe how the UM program will encourage health literacy and informed healthcare decision-making.

UM staff, as an embedded part of the interdisciplinary team, will play a key role in directing members to the wealth of educational programs we offer to promote health literacy. Our UM program also makes available a variety of settings of care, such as emergency room alternatives, and leverages these options to encourage informed healthcare decision-making.

Health literacy is the ability to obtain and understand health information and services and use those to make informed health-related decisions. Put simply, health-literate members are empowered and responsible members and are more likely to have better health outcomes. Amerigroup employs member education, outreach, and incentive programs to promote health literacy and encourage informed healthcare decision-making. Improving health literacy is a critical element of our holistic approach to healthcare and a key objective of our Cultural Competency program, embedded in all interactions with our members. As they interact with members throughout the care planning process, the UM team reminds members about the availability of educational materials and programs and educates members on how to employ informed healthcare decision-making. In addition, key messaging is incorporated into our phone system when members call Member Services or their case manager.

Amerigroup will focus on the health issues most prevalent to Iowa members. We will provide a range of member education tools and outreach programs to help promote health and wellness and appropriate care utilization. We will work to influence the behavior of our Iowa members building on the existing

programs that have proven successful in other states and implementing new strategies to further educate and motivate members in making healthy decisions. Our health education initiatives will include maternal and child health, preventive and general health, member engagement and empowerment, appropriate use of emergency services, community outreach and education, and substance use disorder prevention and treatment. Our UM team, as an embedded part of the interdisciplinary team, will play a key role in referring members to these programs. These programs are described in more detail in Section 8.7 and include initiatives around maternal and child health, preventive health and general health and wellness.

Additionally, our **mobile notification program, Txt4health**, gives members the option to receive text alerts containing health and wellness information and reminders. Since implementing this program our affiliate health plans have seen the following results:

- Over 185,000 members enrolled; only four percent opted out of receiving the texts
- Seventy-two percent of recipients responded that the texts helped them remember to go to the doctor
- Members who received texts about a certain program/phone number (Nurse HelpLine, coaching, etc.) were six times more likely to call the promoted phone number within 30 days of the text than non-recipients
- Members who received texts reminding them to get a screening/physical were three times more likely to get a physical exam within 90 days of the text than non-recipients

Furthermore, our **Healthy Rewards member incentive program** will reward members for

Our Healthy Rewards program will reward members for actively participating in defined preventive care initiatives, such as completing well-care visits, obtaining routine lab tests, participating in screenings, and attending follow-up appointments.

IA_10 3 2_C08_13 1

actively participating in defined preventive care initiatives, such as completing well-care visits, obtaining routine lab tests, participating in screenings, and attending follow-up appointments. As members participate in these types of wellness activities, they earn points. Points can be converted to reward dollars loaded onto a prepaid Healthy Rewards card that the member can use to purchase health- and wellness-related items at stores and pharmacies that accept prepaid cards.

For pregnant women in particular, Amerigroup offers a program to encourage beginning prenatal care visits in the first trimester of pregnancy. The *Taking Care of Baby and Me*[®] program offers prenatal and postpartum care incentives aimed at promoting early intervention and prenatal care to decrease infant mortality and low birth weight and to enhance healthy birth outcomes. Prenatal and postpartum incentives may include the provision of maternity and child-related items and will be fulfilled via the Healthy Rewards card.

We also make *emergency room alternatives* available to members and support informed decision-making. LiveHealth Online will provide members a convenient alternative to visiting the emergency room. We will offer online physician visits for members with the ability to access secure online video streaming services. As we implement this option for Iowa members under the statewide Contract, we will fully comply with all State statutes, regulations, and rules on virtual healthcare services. Amerigroup also mails postcards to members that live in areas with urgent care clinics, where providers have walk-in hours or extended office hours, or where a new PCP becomes available, informing them of alternatives to the emergency room. We focus these mailings on areas with high emergency room utilization and send to all members when we identify a new provider with extended office hours.

Question 11.1, #8

8. Describe strategies to monitor member access to preventive care and strategies to increase member compliance with preventive care standards. Describe how you will identify and address barriers which may inhibit a member's ability to obtain preventive care.

Amerigroup is committed to connecting members to the preventive care services they need to improve their health outcomes and avoid inpatient care. Our UM staff assist providers in connecting members to primary care, preventive services, and specialty services. UM staff also work with providers to identify appropriate services that meet the member's needs, locate resources, and facilitate the referral process. Our goal is to afford members access to the most appropriate services to meet their needs and achieve positive health outcomes in the least restrictive setting.

We understand that our members' lives are complicated with barriers and social determinants that impact their ability to deal with their healthcare. To assist our members in dealing with those barriers, the plan will assess for social barriers ongoing from the time of initial screening upon enrollment. We will conduct an initial screening for those members in care coordination and routinely screen members during interactions with our National Customer Care Organization and our 24-hour Nurse HelpLine. Our providers and community partners also seek to identify psychosocial factors that may impact the member's participation in care during routine and ongoing interactions.

Our goal is to facilitate member access to the services they need by proactively identifying and addressing any issues that may impede the member from actively participating in treatment. To that end, Amerigroup deploys multiple strategies to identify and remove all barriers to member care, including:

- Conduct outreach calls to members who do not have well-child or adolescent well-care visits and assist with identifying a doctor in their area, scheduling the appointment, and arranging transportation

- Enhance provider communication by sending quarterly reports to PCPs indicating which members on their panel require preventive care visits

We also have a number of incentives and Value-Added Services to encourage member participation in preventive care measures. Our Healthy Rewards incentive program encourages preventive care by rewarding members with financial incentives for completing appropriate screenings, attending well-child visits and completing disease-specific online education modules. Additionally, as part of our Health and Wellness Value-Added Services Suite, Amerigroup will waive member copays for all physician office and psychologist office visits.

Question 11.1, #9

9. Describe your UM Committee, including proposed committee composition and tasks.

Utilization Management Committee (11.1.7)

The Medical Advisory Committee (MAC) serves as the Utilization Management (UM) Committee, and is responsible for the development and implementation of the UM program.

The Iowa UM Committee will be led by the local Medical Director and will consist of the Behavioral Health Team Leader, the Quality Management Manager, the Utilization Management Manager, the Long-Term Care Manager, six to ten fully credentialed and actively participating providers, and other specialty associates as determined by the Medical Director.

The tasks of the UM Committee are as follows:

- To assess levels and quality of care provided to members and recommend, evaluate, and monitor standards of care for members
- To provide advice and input to the corporate committee with oversight over developing and updating clinical practice guidelines
- To identify opportunities to improve services and clinical performance by establishing, reviewing/updating CPGs based on review of demographic and epidemiologic information to target high volume, high cost, high risk, problem prone conditions
- To conduct a peer review process in order to provide a systematic approach for the monitoring of quality and appropriateness of care
- To conduct a systematic review process for network maintenance through the credentialing/re-credentialing process
- To provide advice to the health plan administration in any aspect of the health plan policy or operation affecting network providers or members
- To provide oversight for the peer review and drug utilization review processes
- To monitor practice patterns in order to identify appropriateness of care, over and underutilization trends, and for improvement/risk prevention activities
- To review and provide input, based upon the characteristics of the local delivery system, and approve evidence-based clinical protocols/guidelines to facilitate the delivery of quality care and appropriate resource utilization
- To review and provide input for the following processes and procedures: credentialing / re-credentialing, clinically-oriented Quality Management policies and procedures, Utilization Management and Disease/Case management

Our UM Committee Organizational Structure can be seen in Figure 11.1-2.

Figure 11.1-2. Our UM Committee Organizational Structure Engages Local, Interdisciplinary Expertise

Question 11.1, #10

10. Describe any benefits which are proposed to require PCP referral and what services would be available on a self-referral process.

Amerigroup encourages members to be the CEO of their personal healthcare process. To that end, we educate members about benefits available to them. PCP visits, specialist visits, behavioral health, family planning, and other preventive services are available through self-referral.

IA_1032_COB_15.2

Amerigroup places great value on the ability of members to not only be involved in the management and coordination of their care, but to actively manage their personal healthcare process. To that end, we strive to make resources easily available to members and make members aware of these resources and how to receive the most benefit from them. This includes easy access to the member handbook, newsletters, our member website, and provider directory.

Visits to specialist are available through self-referral, but services may be subject to prior authorization requirements based on our medical necessity guidelines. Amerigroup will provide female members direct access to a women's health specialist as necessary to provide women's routine and preventive healthcare services.

Prior Authorization (11.2)

Question 11.2, #1

1. Describe policies and procedures for processing authorization requests including when consultation with the requesting provider will be utilized.

General (11.2.1)

As described in Section 11.1 (Utilization Management), Amerigroup is solely focused on serving the health care needs of those enrolled in public sector health care programs. We leverage a prior authorization program as part of our broader UM program in order to actively engage providers and ensure that our members are getting the level of care that will drive the best health outcomes and promote optimal safety and well-being.

Amerigroup's approach to prior authorization promotes the right care at the right time in the right place. We believe that prior authorization presents an opportunity to determine medical necessity and appropriateness of services, procedures, and equipment prospectively to ensure that the right care is given in the right place at the right time. Such prospective medical necessity determinations promote member safety through avoidance of unnecessary interventions that may impart risk to member health. It also affords the opportunity to determine whether the services, procedures, or equipment are a covered benefit for the member and whether the member can be directed to Network Providers. The use of Network Providers helps facilitate consistency in service delivery, confirm that providers rendering care are

Our prior authorization program actively engages providers and interdisciplinary team members to make sure members receive the level of care that will drive the best health outcomes and promote optimal safety and well-being.

IA_1032_COB_16.3

appropriately credentialed and delivering the highest quality of care, and allows such care to be delivered in a cost-effective manner

The goals of our prior authorization program are:

- To assure adequacy of service availability and accessibility to eligible members
- To maximize appropriate medical and behavioral health care and substance abuse services
- To resolve over- and under-utilization of medical and behavioral health care and substance abuse services

We processed more than 3.6M authorizations across all of our Medicare and Medicaid businesses in 2014.

IA_10.3.2_COB_18.2

Through our affiliates, we have extensive a great deal of experience processing prior authorizations across all of our business lines. In 2014 alone, our affiliates processed more than 3.6 million prior authorization requests across all of our Medicaid and Medicare businesses. We process prior authorization requests in a timely manner to assure that our Members are receiving the right care at the right time. **Our Louisiana affiliate, for example, processed almost 100 percent of inpatient authorization requests within two business days, 94 percent of outpatient authorization requests in within two business days, and 100 percent of requests within 14 calendar days.**

Our policies and procedures incorporate our affiliates' years of experience across different states. We select the services that require authorization carefully limit the care and services that require prior authorization in order to minimize administrative barriers for physicians and other providers. We continuously reassess our prior authorization requirements to be consistent with recommended industry standards that are generally accepted by the provider community to benefit members.

A prior authorization clinician performs the following activities during the review process:

- Informs Case Managers of complicated admissions or members requiring care coordination
- Enters information into our core operations system
- Documents and provides authorization reference numbers to providers
- Promotes continuity of care between primary care providers (PCPs) and specialists
- Identifies potential quality of care, member safety, or fraud and abuse issues

We encourage member-centric consideration of medical necessity criteria and/or community standards of care, promoting proper care and member outcomes relative to each unique situation. Designed to be effective and provider-friendly, Amerigroup's prior authorization process promotes consultation between the treating provider and our Medicaid Medical Director in all cases in which medical necessity criteria are not met or when an alternate level of care appears more clinically effective.

To ease administrative burden on our providers and maximize efficiency, Amerigroup facilitates real-time authorizations for online and telephonic requests. Upon receipt, calls are automatically routed to Utilization Management (UM)

professionals who guide providers through the authorization process. We also provide the ability for providers to request authorization through the online provider web portal or by Rightfax. At any time, providers can check on the status of authorization through the provider portal or our telephonic voice portal.

Prior authorization presents an opportunity to determine medical necessity and appropriateness of services, procedures, and equipment to assure that the right care is given in the right place at the right time.

IA_10.3.2_COB_17.2

Amerigroup attempts to avoid denial of service requests because of failure to meet medical necessity or other relevant criteria. The medical management clinicians work collaboratively with providers and facilities, discussing cases, asking for additional clinical information to clarify the need for the services, or finding an alternative service package that would better address the member's condition. If no further information or alternative service package can be identified and the Utilization Management Nurse Medical Manager cannot approve the request, then he/she will forward the request to an Iowa Medical Director for further review. Our goal is to develop a collaborative working relationship with providers so that they see us as a clinical resource rather than a roadblock or barrier to members receiving care.

UM Personnel

Local Amerigroup staff will be responsible for the decisions made regarding services for members in the Iowa plan. We train our staff to use policies and procedures as a guide; however, we consider each member situation on a case-by-case basis, taking into account medical, behavioral, and social factors to reach the best decision for each unique member and scenario.

The prior authorization program is primarily executed by Utilization Management staff specialized nurse coordinators and member and provider services staff. These staff members coordinate with other departments and staff as needed, such as care specialists for care coordination purposes. When necessary, our experienced local professionals will be supported by clinical staff at our corporate office. The Iowa Medical Director will also engage in prior authorization decisions and communication with providers as needed.

The following provides a brief description of the two main prior authorization staff roles:

- **Utilization Management Nurse Coordinator:** The Nurse Coordinator is responsible for day-to-day management of prior authorization activities. He/she manages member care, ensuring essential, effective, appropriate, and coordinated behavioral and physical health and social services.
- **Customer Care Representative II (CCR II)/Care Specialist:** The Customer Care Representative II/Care Specialist is responsible for responding to inquiries from members and practitioners to clarify benefits, providing member education and health referrals. Representatives document prior authorization requests and arrange for services as identified by the Nurse Coordinator and/or the Care Manager.

Employee training, including new employee onboarding training and ongoing training, is addressed in Question 11.2, #10.

Policies

We design our prior authorization policies to assure that members are treated in the most appropriate and most cost-effective setting compatible with medical necessity. We make medical necessity decisions according to the severity of the illness and/or the intensity of the services needed to contribute to an improved health status relative to the specific condition. We also use behavioral health guidelines, psychosocial criteria, and the LTSS member-centered planning process to inform decisions.

We require prior authorization for non-emergent inpatient admissions, partial hospitalization, residential treatment, and psychological testing. We conduct concurrent review for inpatient hospitalizations and partial hospital/acute outpatient care to assess member progress, timeliness of care, level of care, members' strengths and needs, and "super-utilization" indicators that impact members' transition from

IA_10.3.2_COB_19_2

inpatient to outpatient care. We conduct these reviews telephonically. Our UM employees work with providers to gather clinical information to support the necessity for requested services and coordinate with facilities to begin transition planning and to determine members' needs for services and supports.

We educate our network providers about the covered services and benefits available to members through our comprehensive provider relations model, and we have significantly reduced the number of services that require prior authorization to promote access to care and ease of provider administration.

As required by State and federal regulations, we will not require notification or prior authorization for emergency medical/behavioral health or substance abuse services. Our provider manual and member handbook inform providers and members that involuntary detentions or commitments (96-hour detentions or court-ordered commitments) will not require prior authorization for inpatient days when the detention or commitment is in effect.

Prior Authorization Review Criteria

We will use nationally accepted, evidence-based criteria to promote appropriate utilization of covered services. We will implement criteria and guidelines that are objective and provide a rules-based system for screening proposed care and services based on member-specific, best practice processes and consistently match services to member needs. We will coordinate with DHS and local stakeholders to align with Iowa-specific criteria and processes.

- For **medical State plan benefits**, UM nurses will review the members' conditions and compare to the relevant medical necessity criteria. We will use nationally accepted, evidence-based medical necessity criteria, unless superseded by State requirements or regulatory guidance. We will also develop psychosocial medical necessity criteria
- For **behavioral health State plan benefits and substance use disorder services**, we will utilize Anthem Behavioral Health Medical Necessity Criteria and American Society of Addiction Medicine (ASAM) Criteria, unless superseded by State requirements or regulatory guidance
- For **Early Periodic Screening, Diagnosis, and Treatment (EPSDT) services** for members under 21, we will comply with State requirements to provide any services that could correct or ameliorate physical or behavioral health
- For **emergency services**, we will not impose restrictions on coverage that are more restrictive than those permitted by the prudent layperson standard. This means we will not deny emergency services when a prudent layperson who possesses an average knowledge of health and medicine could reasonably expect the absence of immediate medical attention to result in placing the health of the individual (or unborn child) in serious jeopardy, serious impairment to bodily functions, or serious dysfunction of any bodily organ or part
- For **Long Term Services and Supports (LTSS)**, we will not use medical necessity criteria; however, we apply functional necessity based on our assessments/reassessments. The provision of LTSS and related DME will be determined and approved through the member-centered care planning process in consultation between the member, their family or caregiver, and the Community-Based Care Coordinator. Spending on covered services must fall within the budget cap. We plan to partner with Telligen on a consultative basis during the implementation period to understand the existing process and criteria for LTSS in Iowa in order to promote consistency and continuity of care through the transition.

When developing an Individual Service Plan (ISP), Community Based Care Coordinators consider medical necessity criteria based on individual member needs and preferences, an assessment of the availability of services within the local delivery system, and treating provider service requests. The UM criteria's comprehensive range of level of care alternatives is sensitive to the differing and complex needs of children, adolescents, and young adults, as well as members with specialized health care needs. When using the criteria to match a level of care to the member's current condition, coordinators consider the severity of illness and multiple conditions, as well as episodic variables such as living situation and available supports. Field-based coordinators at select provider locations, such as Health Homes and high-volume PCPs, facilitate the gathering of information for determination of medical necessity as necessary. We realize that members who are medically fragile will require significant in home, private duty nurse utilization; therefore, we employ Community Based Care Coordinators with pediatric nursing experience in an intensive care setting to assist with their service coordination.

Procedure

Amerigroup has established procedures for applying clinical criteria based on the individual member's needs and the local delivery system for medical and behavioral health services. These procedures apply to pre-service, concurrent, and retrospective reviews.

Amerigroup UM nurses complete prior authorizations on a case-by-case basis. UM nurses are licensed professionals with training and experience in utilization management and clinical expertise in treatment for the member's condition. We verify eligibility and benefits in the claim payment system and our prior authorization clinicians UM nurses collect relevant clinical information and review it against the prior authorization guidelines to determine if the level of service requested meets medical necessity criteria. The UM nurse prior authorization clinician approves the services for situations that meet medical necessity criteria, and all results, including the reason(s) for decisions made and/or any alternative services approved in lieu of the original request, are documented and maintained in our prior authorization system. Clinical employees must consider the member circumstances, including:

- Age
- Comorbidities
- Complications
- Prior treatment
- Progress of treatment
- Psychosocial situation
- Home environment, when applicable
- Capabilities of the local delivery system, such as the ability to provide medically necessary treatment and level of care

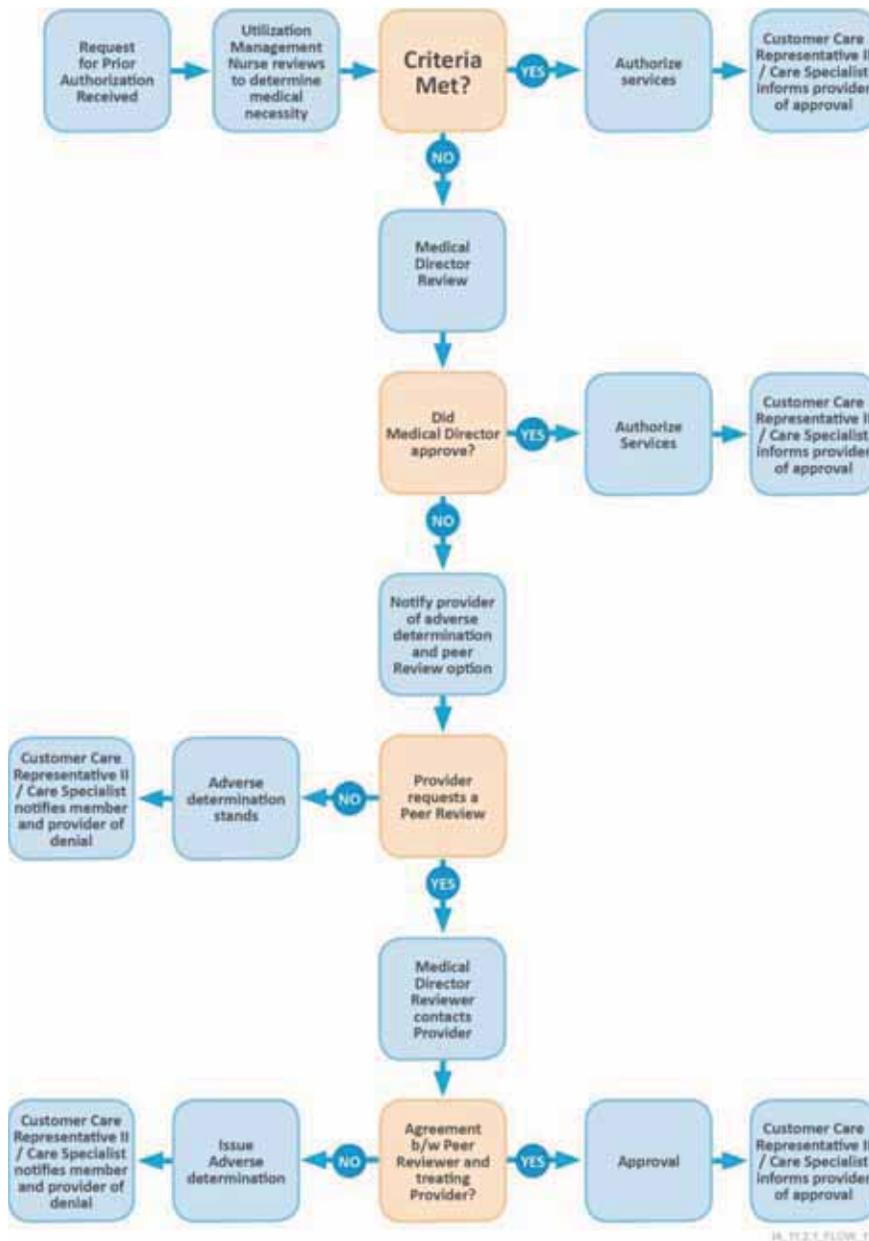

For medically necessary services, Amerigroup may compare the cost-effectiveness of alternative services or supplies when determining which of the services or supplies will be covered. All medical necessity determinations are subject to member eligibility and benefit availability at the time of the delivery of service, including benefit limitations. We may approve services that are non-covered except as otherwise required or as directed by the State.

In circumstances where medical necessity or alignment with other criteria is in question, the clinician refers the case to our Iowa-licensed local Medical Director for review. The Medical Director offers the attending physician an opportunity to review and discuss the case, making every effort to find and agree on an acceptable service/care plan before making an adverse medical necessity determination.

If the Medical Director makes an adverse medical necessity determination, we communicate the decision to the provider verbally and via fax within one business day, followed by written notification to the provider and member. We always make prior authorization criteria available to providers and members upon request. Any denial or decision that the member or provider disagrees with can be appealed and will be reviewed by our professionals skilled with the relevant clinical expertise of the member's condition.

Figure 11.2-1 demonstrates the steps we take to review and complete a prior authorization request, including provider and member notification. We continuously evaluate our practices so that prior authorization achieves its intended purpose and is not an impediment to the timely delivery of medically necessary services. We will assist the member when the services require assessment or other requirements prior to the member accessing the care whenever necessary, such as scheduling appointments, arranging transportation, and providing a list of available providers to deliver the required services. We will approve the requested medically necessary services to make sure the member receives the right care in the right place at the right time without interruption or delay due to scheduling or other arrangements.

Figure 11.2-1. Our Prior Authorization Process Incorporates a Variety of Stakeholders to Ensure a Comprehensive Approach

Consulting with Provider Requesting

Amerigroup values our provider relationships, and we engage providers in collegial discussions about requests for service. Through this process we promote provider satisfaction and deliver value to the State by streamlining provider interaction. Our authorization process respects our providers' clinical judgment, incorporating their expertise into the decision-making process. Our Medical Director is available to providers to discuss specific requests. Providers may request these consultations during the authorization process.

The Medical Director offers the attending physician an opportunity to review and discuss the case, making every effort to find and agree on an acceptable service/care plan.

IA_10.32_COB_21.2r

Use of Board-Certified Consultants

We maintain policies and procedures for requesting board-certified medical or behavioral health consultations from board-certified specialists or subject matter experts individually or via Independent Review Organizations (IRO) to assist in making utilization management medical necessity determinations.

Requests for board-certified consultations may occur in, but are not limited to situations involving unusually complex cases when the facts are not clearly defined and there are alternative decisions that may be made based upon assessment of the clinical condition of the situation:

- Cases requiring special expertise in order to determine medical necessity and expertise is not readily available within the network of credentialed providers to provide a nonbiased and evidence-based review
- Situations where conflicts of interest are identified with the current potential reviewers or associations with network facilities
- Situations involving discordance between the treating provider and the health plan Medical Director or a behavioral health Medical Director about a treatment plan or a medical necessity appeal decision, such that an external objective opinion is warranted to attest credibility of the process.

When the local health plan Medical Director or behavioral health Medical Director determines that such a consultation is needed, a board-certified consultant is selected from a list of available consultants, or the contracted IRO is contacted.

- The health plan Medical Director or behavioral health Medical Director verifies that the consultant or contracted IRO has no known conflict of interest with the initial reviewer or parties involved with the particular case.
- The health plan maintains business associate agreements with all approved consultants and the contracted IRO, allowing for disclosure of Protected Health Information (PHI), or in the absence of such an agreement, the Health Care Management (HCM) staff obtains the required consent from the member as per policies and procedures related to disclosure of PHI.

Designated HCM staff notifies the consultant or the contracted IRO of the pending referral and any questions to be addressed and furnishes all necessary clinical information via an approved form of transmission to the external party.

Based on the medical information provided, the consultant or the contracted IRO will use the latest available knowledge to confirm the diagnosis, review the current treatment plan, define standards of care, and identify deviations from or adherences to standards of care and recommend a treatment plan.

Within a specified timeframe, the consultant or the contracted IRO provides the results of the consultation to the referring health plan Medical Director, behavioral health Medical Director, or designees.

The referring health plan Medical Director, behavioral health Medical Director, or designees review the report of the consultant or the contracted IRO and make a medical necessity determination, which is documented in the member's clinical record.

All applicable policies and procedures are followed in notifying the member and provider, as applicable, of the determination.

The health plan verifies through the credentialing and recredentialing process that the consultant is licensed and board-certified in one or more of the relevant specialties. The IRO performs verifications through their credentialing and recredentialing process that the consultant is licensed and board-certified in the relevant specialties.

- Corporate HCM – Clinical Operations staff maintains the national list of board-certified consultants or contracted IRO for each health plan on the HCMS SharePoint site.
- Designated HCM health plan and behavioral health staff notifies Clinical Operations of updates to their consultants or contracted IRO.

We acknowledge our policies and procedures for board-certified consultants are subject to State review and approval.

Denial

All decisions to deny service requests will be made by the Amerigroup Iowa Medical Director or another designated, qualified physician/practitioner. If the Medical Director or other practitioners within Amerigroup need additional expertise to make a decision about a service or condition, we will seek consultative review from additional professionals.

Amerigroup is particularly well-positioned in this regard due to our abundance of qualified medical personnel across our organization with a wide variety of expertise. Only in the most unusual circumstances will it be necessary to seek medical consultation regarding service requests outside of the Amerigroup medical staff. In those instances where this is necessary, we will contract with local, Iowa-licensed practitioners as much as possible.

We will deny services for members only if those services are not covered in the Iowa fee-for-service program or if the service requested does not meet medical necessity criteria. We will not deny any medically necessary treatment or services. If the requested services are covered under the fee-for-service program but are excluded from the Amerigroup Iowa contract, our Care Coordination staff will refer the member to the appropriate provider and will communicate with that provider to coordinate care with services that we are providing to the member.

Timelines for Review Decisions

Each type of authorization request has a specific timeframe for completion of the review process and communication to the provider and member as directed by the State.

Amerigroup's prior authorization employees conduct timely reviews to comply with industry, accreditation, and contract-specified timeframes. We review reports daily that track aging of open cases to set priorities and focus on those that require immediate action. The Medical Management Team reviews system-generated logs to identify and resolve potential barriers to timely case closure. They also monitor trended data in weekly or monthly reports to identify trends that may indicate problems with current processes or workload distribution.

Amerigroup is particularly well-positioned to address all denials in-house due to our abundance of qualified medical personnel with a wide variety of expertise.

IA_10.3.2_COB_22.1

Table 11.2-1 specifies the timeframe Amerigroup will follow when making a decision and communicating the decision to the provider and member by type of request.

Table 11.2-1. We Will Comply with Timeframes Required for Prior Authorization/Certification Reviews

Type of Request	Decision/Notification Timeframe
Prior Authorization*	
Routine requests	Approval or denial of routine requests within 7 days
Emergency room staff request for non-emergency service	Approval or denial of non-emergency services within one hour of request
Urgent as determined by treating provider	Approval or denial within 24 hours of request
Requires additional information	Provider notification within 36 hours, which includes one working day following receipt of the request of service for any additional information
Additional information received	Approval or denial within 36 hours, which includes one working day of obtaining all necessary information
Initial Inpatient Admission*	
Initial review	Approval or denial within 36 hours, which includes one working day of obtaining all necessary information
Concurrent Review*	
Concurrent review	Approval or denial within one working day of obtaining all necessary information
Requires additional information	Provider notification within 36 hours, which includes one working day following receipt of the request of service for any additional information
Retrospective Review	
Retrospective review	Within 30 working days of receiving all necessary information

*Approval or denial will not exceed 14 calendar days following the receipt of additional information for a request for services requiring prior authorization and initial and concurrent reviews.

Concurrent Review

From the point of admission, our concurrent review nurses immediately begin planning for each member's discharge. They assess member progress and their expected needs at discharge (for example, the need for home health services or durable medical equipment); work with the facility to verify the medical necessity of continued stays; and coordinate discharge planning to facilitate a safe transition to the next level of care. Throughout concurrent review process, we verify that the right services are integrated, not duplicated, and are provided at the right time based on the member's changing needs. As necessary, the review nurses engage Medical Directors (including our Behavioral Health Medical Director) on cases in which medical necessity is in question.

Amerigroup concurrent reviewers may work onsite at high-volume facilities in our network to maintain collegial relationships with physicians, nurses, and administrative employees and promote strong local knowledge of available resources. Our Medical Directors talk to provider and facility employees every day and make themselves available for peer-to-peer discussions.

Discharge planning is also an essential part of concurrent review, ensuring that members are fully supported when they leave the hospital. Our organization does not employ utilization controls or other coverage limits to automatically place restrictions on length-of-stay for members requiring hospitalization or surgery, nor on length of service for outpatient levels of care. We base length of stay for a member's

request for hospitalization or surgery or for outpatient care on medical necessity rather than on arbitrary limits. Assigned HCM clinical employees manage additional coverage decisions when required for a member's care. The clinical review for these services specifies precertification for coverage limits as determined by clinical guidelines and individual needs. Subsequently, the HCM clinical employee working with the hospital, PCP/attending physician, and/or other parties monitors and continually reviews the case to determine discharge readiness and to facilitate discharge planning. This helps to avoid a re-admission or another acute care episode.

The concurrent review clinician coordinates with the Member's PCP, attending physician, and the discharge planning personnel at the hospital to arrange services necessary to transition a member to a more appropriate level of care. When the member is discharged, the concurrent review clinician documents the plan in the Amerigroup authorization database for monitoring. If at any time we identify a potential quality issue through the review process, we refer it to our QM Department.

Amerigroup established a **stabilization program** to augment our UM team's discharge planning efforts and to prevent unnecessary re-admissions. Members who are at risk receive intensive outreach and individual coaching until they are stabilized at home or in a community setting. The program also targets members with behavioral health diagnoses. The goal of stabilization care is to reduce overall 30-day re-admission rates and to facilitate a smooth transition between inpatient settings and the home or other community settings by providing intensive, short-term support. For moderate- to high-risk members, a stabilization coach collaborates with the concurrent review clinician to work with the member or caregivers and, when appropriate, the hospital's discharge planning employees. The coach coordinates all necessary follow-up care, including community-based home care and personal care services, if included in the benefit package. The stabilization care coach is a resource to members and their families and caregivers by being available to provide information regarding post-discharge services.

The stabilization coach works directly with the member either on the telephone or in-person, depending on the risk level, to educate them about the transition and develop a written discharge plan with the member, their family, or other caregivers. The plan includes: (1) pre-transition visits, (2) follow-up care, (3) post-discharge check-in, (4) medication reconciliation, (5) red flag education, (6) disease-specific interventions, and (7) discharge plan reminders.

In addition to the stabilization coach, another tool available for members is our Value-Added Service post-discharge stabilization kit. The kit provides tips and tools for family members and caregivers to facilitate member education, maintain appointment attendance, help improve medication and treatment plan adherence and successfully help transition members from hospital to home

We base length of stay for a member's request for hospitalization or surgery, or for outpatient care, on medical necessity rather than on arbitrary limits.

IA_10.3.2_COB_23.2

Question 11.2, #2

2. Describe mechanisms to ensure consistent application of review criteria for prior authorization decisions.

Mechanisms for Consistent Application of Review Criteria

Inter-Rater Reliability (IRR) testing is a formal auditing methodology performed annually by Amerigroup Corporate national Health Care Management (HCM) to assess the consistency and accuracy of employees in applying medical necessity criteria.

The IRR Program is designed to assess the consistency and adherence to corporate policy and process as related to utilization management practice within the corporation. Amerigroup strives to assure that members and practitioners receive fair and consistent treatment in the coordination and approval/adverse determination for payment of health care services. The knowledge of the guidelines and criteria used by Amerigroup's staff involved in these activities helps verify that the corporation is limiting its exposure to risk from both a medical and financial perspective. The impact of the IRR Program is intended to result in the following:

- Knowledge of nationally accepted, evidence-based criteria, Amerigroup Medical Policies, Amerigroup Behavioral Health Utilization Management Guidelines, American Society of Addiction Medicine, and Pharmacy criteria/guidelines
- Minimized variation in the application of the above guidelines
- Staff recognition of potentially avoidable or inappropriate utilization
- Identification of staff that need additional training
- Identification of training opportunities
- Identification of potential risk due to inconsistency in the application of guidelines

Question 11.2, #3

3. Describe processes for retrospective utilization monitoring for IDPH population services.

IDPH Prior Authorization (11.2.2)

We will not require prior authorization for any level of service for the IDPH population. However, we will conduct retrospective review of IDPH-funded service utilization to make sure clinical criteria have been applied accurately and consistently. We will utilize retrospective reviews to look for outlier utilization and use the data to further explore the situation with providers and IDPH.

UM clinicians will conduct retrospective reviews of medical records when members have received IDPH-funded services to assess medical necessity and appropriate application of our utilization management guidelines. We have a well-established process for retrospective review based on member medical necessity, level of care, inpatient/outpatient, elective/urgent/emergent status urgency of the service need, and timeliness of notification. We will adapt our process to IDPH service-specific issues as needed.

If Amerigroup-approved medical necessity criteria are not met, the case is referred to the appropriate Medical Director for review and determination. The Medical Director reviews the clinical information and determines if the admission, procedure, or service was medically appropriate. The member's claims record contains documentation of the retrospective review process and determination. When conducting retrospective reviews, determinations are based on the medical information available to the attending

physician or ordering provider at the time the medical care was provided. Providers may dispute the decisions/claims payment. Our dispute team will render decisions based on the same or new information given by the provider (e.g., new correspondence or updated medical records).

We also use retrospective review findings to conduct outreach to providers and to educate them on our policies. If, for example, we identify that a particular provider of IDPH services who is routinely rendering care that upon retrospective review meets criteria for a less restrictive/more cost-effective service or level of care, we will take that as an opportunity to reach out to the provider and discuss alternatives.

Along with retrospective review findings, we also deploy dedicated care managers, called Recovery Coaches, to focus solely on our members with SUD issues, especially those with high utilization of detoxification services and admission/readmission to inpatient settings. In 2013, one of our affiliate plans placed a special emphasis on discharge planning for these members., the 30-day SUD readmission rate decreased 2.8 percent, and the 90-day SUD readmissions rate decreased 5.3 percent from 2013 through year-to-date 2014.

In addition, we have the ability to develop reports that identify inappropriate drug utilization and/or inappropriate prescribing patterns in the following categories: Pain Management, Opioid Outliers, and Dedicated Provider Programs. Using the data, we develop a work plan for each prescriber that includes action to further investigate the data and to bring to the prescriber our concerns and to the proper authorities as required for corrective action. The data also allow us to recommend members for RCP. The report also allows us to identify specific members who are at risk for inappropriate drug utilization. These members are reviewed by the Amerigroup Recovery coach for possible enrollment into the SUD program.

In our affiliate health plans, they deploy dedicated care managers to focus solely on their members with SUD issues. This program has resulted in the 30-day SUD readmission rate decreasing 2.8% and the 90-day SUD readmissions rate decreasing 5.2% from 2013 through year to date 2014.

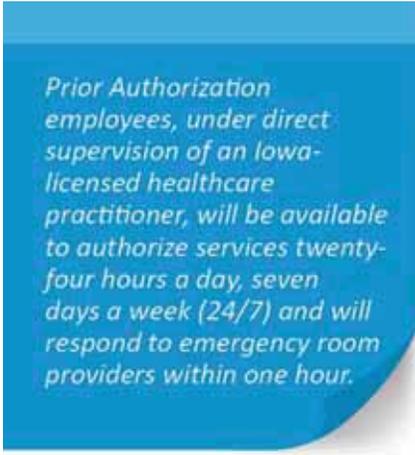

IA_10.3.2_COB_24.1

Question 11.2, #4

4. Describe required staff qualifications for UM staff.

UM Staff Required Qualifications

Prior Authorization employees will be available to authorize services twenty-four hours a day, seven days a week (24/7). Employees will be directly supervised by an Iowa-licensed registered nurse, physician, or nurse practitioner. Our clinical associates who require licensure for employment based on Amerigroup's job descriptions go through a clinical peer review process (including a review of credentials and professional competence and conduct) at the time of hire and are subject to recertification every three years during the course of employment. In addition, background checks and drug screenings will also be conducted at hire. Prior authorization functions for behavioral health services are performed and/or supervised by a Behavioral Healthcare professional who is licensed in Iowa and who will collaborate with health care providers and members to promote quality member outcomes, optimize member benefits, and promote effective use of resources.

Prior Authorization employees, under direct supervision of an Iowa-licensed healthcare practitioner, will be available to authorize services twenty-four hours a day, seven days a week (24/7) and will respond to emergency room providers within one hour.

Staff will do the following:

- Facilitate medically appropriate, high quality, cost-effective care by assessing the medical necessity of inpatient admissions, outpatient services, focused surgical and diagnostic procedures, out-of-network services, and appropriateness of treatment setting by using the applicable medical policy and industry standards, accurately interpreting benefits and managed care products, and steering members to appropriate providers, programs, or community resources
- Work with Medical Directors in interpreting appropriateness of care and accurate claims payment
- Conduct prior authorization, continued stay review, care coordination, or discharge planning for appropriateness of treatment setting reviews to verify compliance with applicable criteria, medical policy, and member eligibility, benefits, and contracts
- Promote member access to medically necessary, quality care in a cost-effective setting according to the Contract
- Consult with clinical reviewers and/or the Medical Director to facilitate medically appropriate, high quality, cost-effective care throughout the medical management process
- Refer treatment plans/plan of care to clinical reviewers as required and do not issue non-certifications
- Facilitate accreditation by understanding, correctly interpreting, and accurately applying accrediting and regulatory requirements and standards

Education, Training, and Experience Qualifications

Prior Authorization employees require a current active, unrestricted nursing (RN) license to practice as a health professional within the scope of practice in applicable state(s) or territories of the United States with two years acute care clinical experience. Prior authorization functions for behavioral health services require a licensed behavioral health staff. Staff must have strong oral, written, interpersonal communication skills, problem-solving skills, facilitation skills, and analytical skills.

Question 11.2, #5

5. Describe proposed utilization management clinical standards, including the use of any nationally recognized evidence based practices.

Proposed UM Clinical Standards

Amerigroup uses nationally recognized, evidence-based clinical standards. Although our medical policy governs the medical necessity of individual services and procedures, we always first consider federal and State law and Contract language when determining eligibility for coverage.

We involve actively practicing physicians to develop and adopt review criteria. Through our national Medical Policy and Technology Assessment Committee and local Quality Management and Improvement (QM/QI) Committee, we review and approve criteria annually. See Section 11.2.3 for additional detail.

The national Anthem Office of Medical Policy and Technological Assessment (OMPTA) developed policies and guidelines that serve as sources for making decisions about coverage. The development process relies upon thorough consideration of guidelines prepared by professional organizations such as the American Psychiatric Association, American Academy of Child and Adolescent Psychiatry, American Society of Addiction Medicine, American Academy of Pediatrics, American Academy of Neurology, Association for Ambulatory Behavioral Healthcare, and others. In addition, we may also adopt national guidelines produced by health care organizations, such as individual medical and surgical societies, the National Institutes of Health, and the Centers for Disease Control and Prevention.

Guidance provided by authoritative agencies such as the Substance Abuse and Mental Health Services Administration and Agency for Healthcare Research and Quality are also consulted. Because the standard of care is constantly evolving, we research peer-reviewed medical literature to provide the most up-to-date perspective. We synthesize the information obtained into proposals for the medical necessity of various types of behavioral health services.

Proposed behavioral health policies and guidelines are sent to multiple academic centers for consideration by experts selected by each medical center. The proposed behavioral health policies and guidelines are sent to professional organizations, including those listed previously for feedback from consultants of the professional organizations' choice. The input from these external sources is synthesized into policies and guidelines that merit consideration for approval. No less than annually, a subcommittee of independent consultants (including primary care, psychiatry, psychology, and social work representatives) reviews the behavioral health policies and guidelines for approval. Because behavioral health care represents an integral aspect of the medical system that is critical to many other practitioners, the behavioral health subcommittee presents its decision to the Medical Policy and Technology Assessment Committee, a group of professionals representing a host of specialties that review the recommendations of the subcommittee and finalize decisions about implementation of the guidelines. Although the behavioral health policies and guidelines capture services relevant to the treatment of behavioral health disorders, each type of service receives member-centered consideration to be sensitive to the unique characteristics of each individual seeking care.

Question 11.2, #6

6. Describe how you will identify those services that will be reviewed for medical necessity determination. Provide a list of services for which prior authorization would be required.

Medical Necessity Determinations (11.2.3)

Our Medical Directors, UM supervisors, physician reviewers, and physician consultants work together to verify that day-to-day prior authorizations and other specialty prior authorization program decisions are based upon medical necessity, medical appropriateness, contract provisions, and covered benefits. Our process includes considering the unique needs of individual members such as cultural and linguistic needs and characteristics of the local delivery system, including the capacity and capabilities of the medical delivery system.

We consider the unique needs of individual members such as cultural and linguistic needs and characteristics of the local delivery system when making authorization decisions.

IA_10.3.2_C08_252R

Annual Review

The national Medical Operations Committee (MOC) performs annual prior authorization reduction review to verify that services are appropriately identified for medical necessity determination. We complete this review by analyzing utilization data such as:

- The top 100 procedures by volume and cost
- The top 50 denied and modified procedures
- Appropriateness reviews of all procedures that require prior authorization
- Procedures associated with specific medical policy or clinical guidelines that warrant medical review

Based on the annual review, recommendations may be made to revise the authorization requirements. All recommended changes, along with relevant data, are reviewed/approved by the Precert Change Committee. This committee is comprised of Corporate and Health Plan Medical Directors, along with senior management from Health Care Management. Once approved, recommendations are submitted to a multidisciplinary team for implementation. Written notices of changes are sent out to Network practitioners and providers per State guidelines. All authorization requirement changes are presented to the UM Committee and the Medical Advisory Committee. We distribute final revised versions of the Prior Authorization Lists to the provider network and to members via our website and changes to the member handbook and provider manual.

Services Requiring Prior Authorization

While most services do not require prior authorization in order to support access, the following major types of services are subject to prior authorization:

- Elective inpatient admission
- Specialty procedures (the organization does not require prior authorization for any emergency services, including specialty care, for treatment of any immediately life-threatening medical condition)
- Non-emergent services rendered by an out-of-network provider, with exception of covered EPSDT services, covered family planning services, and women's preventive health services, unless excluded by State or Federal requirements

Additionally, several behavioral health, substance abuse, activity therapies, mental health, housing, and community services require prior authorization.

Below is a short list of behavioral health services that require prior authorization. We have similar lists for all the categories mentioned above and will make sure to communicate these prior authorization requirements to providers as part of our provider education efforts.

Behavioral health services requiring prior authorization include:

- Initial, including cortical mapping, motor threshold determination, delivery and management
- Subsequent delivery and management, per session (predominant code)
- Subsequent motor threshold re-determination with delivery and management
- Electroconvulsive Therapy
- Psychological Testing
- Psychological Testing by Technician
- Psychological Testing by Computer
- Assessment of aphasia
- Developmental Testing Limited
- Developmental Testing Extended
- Neurobehavioral Status Exam
- Neuropsychological Testing
- Neuropsychological Testing by Technician
- Neuropsychological Testing by Computer
- Standardized cognitive performance testing
- Resource-intensive Behavioral Health services (e.g., inpatient care, residential care, etc.)

Medical Necessity of Mental Health Services (11.2.4)

We will develop and implement guidelines for determining the psychosocial necessity of clinical, rehabilitative, or supportive mental health services which meet all the following conditions:

- Are appropriate and necessary to the symptoms, diagnoses, or treatment of a mental health diagnosis
- Are provided for the diagnosis or direct care and treatment of a mental disorder
- Are within standards of good practice for mental health treatment
- Are required to meet the mental health needs of the member and not primarily for the convenience of the member, the provider, or the Contractor
- Are the most appropriate type of service which would reasonably meet the need of the member in the least costly manner

Our guidelines will comply with contract requirements and will take into consideration:

- The member's clinical history, including the impact of previous treatment and service interventions
- Services being provided concurrently by other delivery systems
- The potential for services/supports to avert the need for more intensive treatment
- The potential for services/supports to support the member to maintain functioning improvement attained through previous treatment
- Unique circumstances which may impact the accessibility or appropriateness of particular services for an individual member (e.g., availability of transportation, lack of natural supports including a place to live)
- The member's choice of provider or treatment location
- The member's family and natural supports and what is achievable by the family in the community

Our affiliates have experience with psychosocial criteria; for example, we use CASII in Nevada and know and are familiar with both LOCUS and CALOCUS. Our affiliates also have experience working with the State on state-specific psychosocial guidelines, for example, in Georgia.

We look forward to collaborating with State, provider experts, and potentially other MCOs to develop guidelines that make sense for Iowa consumers and providers. We wish to avoid "guideline fatigue" for providers and suggest the MCOs selected collaborate on one set of criteria for psychosocial guidelines.

Prior Authorization Requests (11.2.5)

Our Pharmacy Benefit Manager's (PBM's) prior authorization process complies with State and federal laws. We require prior authorization to verify medical necessity and assure compliance with the formulary and Preferred Drug List (PDL). Non-preferred drugs are subject to PDL prior authorization and may require the prescriber to submit documentation that shows trial and failure of preferred drugs. We do not require prior authorizations for non-preferred drugs that meet state exception criteria or are exempted by federal or State law. Both preferred and non-preferred drugs may require clinical prior authorization to confirm that therapies are clinically appropriate and prescribed in a manner that minimizes risks and maximizes therapeutic outcomes. In addition, specialty drugs (e.g., biological) require special handling and pose additional risk factors; therefore, they are also subject to prior authorization to mitigate these risks.

Policies and Procedures

Our PBM's prior authorization policies and procedures provide seamless processes for our providers. Providers can submit prior authorization requests online through our PBM provider portal, by calling the toll-free line or by fax or mail. Certified Pharmacy Technicians and Clinical Pharmacists review prior authorization requests to deliver a timely and accurate evaluation and decision. Our PBM embeds prior authorization policies and clinical protocols in the decision logic to give the prior authorization team real-time access to information about member eligibility and medication history, as well as formulary and PDL benefits, to enable a timely response. Our National Medicaid Division maintains oversight and audit of the PBM. We do not charge pharmacies for any costs related to prior authorization. Providers who request authorizations must provide medical necessity certification and justification. If the prescriber does not supply the necessary clinical information to render a decision, we fax a notice to the prescriber's office within two hours of the request that indicates the request was received and identifies the additional data needed. Established protocols based on clinical policies direct authorization decisions. Our PBM notifies the prescriber and the dispensing pharmacy of the decision within one hour and mails a letter to the member within 24 hours.

Procedure for Accessing a 72-hour Emergency Medication Supply

When a prescription is not filled when presented due to an authorization requirement, the pharmacy must contact the provider and dispense a 72-hour emergency supply if the provider is not available.

Amerigroup employees are trained to quickly facilitate this process. The pharmacist is trained to use professional judgment to confirm that dispensing the prescribed medication would not jeopardize the health or safety of the member and to enter an override code for billing purposes. Periodic written reminders to pharmacists promote ongoing compliance. Pharmacies identified as under- or over-utilizing the emergency fill are re-educated.

Policies and Procedures for Escalating Prior Authorization Requests Not Approved Within 24 Hours

Providers can identify a prior authorization request as urgent in order to escalate those they deem to be urgent, and we prioritize those requests. We have established PBM policies and procedures for prior authorization requests that cannot be approved within 24 hours. We take additional steps to obtain supporting clinical information from the prescriber. If the prescriber does not supply the documentation to support medical necessity within 24 hours, the request will be denied. The prescribing provider or member may appeal the denial.

Procedure for Transitioning Members to Preferred Drugs

Continuity of care and access to necessary medications are primary objectives of our Pharmaceutical Care Management Program. Breakdown in drug therapy can lead to reduced medication adherence and increase the risk of adverse outcomes. To mitigate potential lapses in care, a transition process provides coverage for members who are stabilized on drugs not included in the PDL. This process applies to new members transitioning into Amerigroup and members affected by formulary/PDL changes. Our transition process covers non-preferred drugs for the first 60 days or until the member's physician has completed the prior authorization process.

Procedure for Members Transitioning From Another Plan into Amerigroup

We look at available authorization and claims data to identify previously authorized medications. Evidence of paid claims for a non-preferred drug demonstrates that the drug was previously authorized. Our PBM accepts this evidence as proxy for an authorization and allows claims to process during the defined transition period without the need for an additional prior authorization. Members who receive non-preferred drugs continue on that medication during the transition period and up to the length of the existing authorization. When the prior authorization from the previous plan expires, the Pharmacy Department works with the prescriber to initiate a prior authorization and determine medical necessity for the non-preferred drugs.

Second Opinions

Our members have the right to ask for a second opinion about the use of any health care services. Second opinions, which are described in our member handbook, may be requested and obtained by members in situations where there is a question concerning the diagnosis or the options for surgery or other treatment of a health condition. The member is entitled to obtain a second opinion from a network provider or a non-network provider (if a network provider is not available). There is no cost to the member for obtaining a second opinion. At the member's choice, members may receive a third surgical opinion at no cost, provided by a third provider, if the second opinion fails to confirm the primary recommendation that a medical need exists for the specific surgical operation. This policy applies consistently to all member populations for all medical, behavioral, and LTSS services.

Other Prior Authorization Requirements

Amerigroup will comply with all Prior Authorization program requirements in the Scope of Work. Through our affiliate health plans in 19 other states, we have experience meeting similar requirements and will leverage existing policies, procedures, systems, and training to ensure compliance in Iowa from day one. This includes:

- Complying with all timeframes for determining prior authorization, communicating decisions to members and providers, and handling appeals as required by the contract
- Facilitating provider requests for authorization for primary and preventive care services and assisting the provider in providing appropriate referrals for specialty services by locating resources for appropriate referral
- Granting members with special needs, who are determined to need a course of treatment or regular care monitoring, the ability to directly access a specialist for treatment
- Providing female members direct access to self-refer to a women's health specialist within the network for routine and preventive health care services
- Meeting the requirements of the Newborn and Mothers Health Protection Act and not limit benefits for postpartum hospital stays per the contract or require a provider to obtain prior authorization for stays up to 48- or 96-hour periods
- Not requiring authorization for emergency services within or outside the network; and providing post-stabilization care services in accordance with the contract, as described in detail in Section 3.2.5

- Not requiring authorization or PCP referral for EPSDT screening services; see Section 3.2.7 for additional details
- Not requiring PCP referral to behavior health services; see Section 3.2.8 for additional details
- During transition of new members, honoring existing prior authorizations per contract requirements and continuing medically necessary covered services as outlined in Section 3.3

Question 11.2, #7

7. Describe your prior authorization request tracking system.

Tracking & Reporting (11.2.6)

PA Tracking Requirements (11.2.6.1)

Prior authorization tracking is an integral part of our information and reporting systems. Prior authorizations are entered in our Core Operating system, thus allowing Amerigroup to easily access both authorizations, provider information, reimbursement, claims payment, and much more in a single system. As per our policies and procedures, all correspondence and notes in the prior authorization tracking system will be signed and suffixed by clinical staff. The system tracks all users' input and with automated date and time stamping, allowing Amerigroup to easily audit and provide detailed reporting as needed. Access and functions are assigned to a specific job function (job roles and responsibilities), thus controlling access and administration rights by job function to ensure compliance. Additionally, our prior authorization documentation processes will require our employees to record the following information for each approval:

- Name and title of caller
- Date and time of call, fax, or online submission
- Prior authorization number
- Time to determination, from receipt
- Approval/denial count

Authorizations are assigned a tracking number and tied to the member and provider so that they can easily be matched to claims. The authorization system allows the UM team to enter notes and updates within the record. For example, if a member is hospitalized and clinical information is needed to make determinations, then the UM team can place the updates in the system and track the status of approvals or denials. Also, our tracking and reporting systems maintain a historical record of notes so that no one can override any information previously placed within the system.

Denials (11.2.6.2)

Amerigroup will maintain a record of prior authorization denials in accordance with Iowa State requirements. Please see prior sections for additional details on denial policies and procedures.

Question 11.2, #8

8. Provide sample notices of action as described in Section 11.2.7.

Notice of Actions for Services (11.2.7)

Notification Letters (11.2.7.1)

Amerigroup will comply with the State's requirements around providing notices of action for services within the mandated timeframe. Examples of provider and member authorization denial letters follow. Final letters will be approved by DHS prior to implementing within our process and system. Notice will comply with the language and formatting requirements designated in SOW Section 8.2.

Time Requirements for Notices (11.2.7.2)

In addition, Amerigroup will comply with all time requirements in the Scope of Work, including:

- Notifying members of standard decisions as quickly as possible, not to exceed 7 days or a 14-day extension if requested by the member or provider in order to collect more information to better serve the member
- Making expedited decisions and notification as quickly as possible and in no more than three days if the standard timeframe would jeopardize the member's life, health, or ability to maintain function. We understand that unless otherwise provided by law, if Amerigroup fails to respond to a member's prior authorization request within three business days of receiving all necessary documentation, the authorization is deemed to be granted and notice must be given
- Notifying members in writing on decisions to terminate, suspend, or reduce authorized services at least 10 days before the date of action; for cases of probable fraud, this window may be shortened to 5 days
- Amerigroup will give notice on the date of action for denial of payment

Question 11.2, #9

9. Indicate if your organization elects not to provide, reimburse for or provide coverage of a counseling or referral service because of an objection on moral or religious grounds.

Objection on Moral or Religious Grounds (11.2.8)

Amerigroup does not have any objections on the basis of moral or religious grounds to provide, reimburse or provide coverage of a counseling or referral service.

Question 11.2, #10

10. Describe your program for ongoing training regarding interpretation and application of the utilization management guidelines.

Ongoing Training on UM Guidelines

We are committed to providing appropriate, medically necessary covered services to our members with full consideration of individual member needs and preferences. To fulfill this commitment, we will provide appropriate training through our initial new hire clinical training program. Beginning with new hire training, Amerigroup will educate employees on our member-centered approach to UM, clinical best practices, and tools used for UM decision-making and provides training to foster positive relationships with providers.

To further support our employees in making appropriate clinical decisions, we will assign a preceptor to all new staff. Preceptors provide coaching, mentoring, and oversight to verify that new staff fully understand how to apply clinical practice guidelines.

Our UM employees will continually build their skills through Continuing Education Units required to maintain licensure. Through the production of job aids that provide a quick reference resource for employees and individual skill-building provided by managers, we maintain a continual improvement process for the competency and expertise of our staff. In 2013, for example, across our organization we targeted education on the tools and systems used within UM, such as our knowledge base system, our Member Grievance Tool, and the procedure for reviewing incoming requests.

Providing rigorous oversight of all clinical training activities promotes strong employee performance.

Organization-wide, Amerigroup's clinical compliance program addresses the following areas:

- Training for clinical employees
- Monitoring and auditing mechanisms
- Policies and/or procedures outlining corrective action plans for non-compliance
- Tracking to verify that targeted employees fulfilled the training expectations, on-going training, and improvement initiatives
- Tracking on-going evaluation expectations, such as inter-rater reliability assessments

Such efforts promote consistent adherence to federal and State contractual or regulatory compliance, as well as NCQA or other accrediting body compliance and support organizational initiatives.

General Expectation (12.1)

Amerigroup’s affiliate health plans administer healthcare benefits to more than 5.2 million members in state-sponsored programs across 19 states, giving us extensive experience in detecting and preventing fraud, waste and abuse, as well as recovering taxpayer dollars inappropriately spent on the administration of Medicaid programs. The increasingly complex Medicaid marketplace and interconnected programs require diligent monitoring and oversight to safeguard against fraud, waste and abuse. **Across our affiliate health plans operating state-sponsored health programs, our comprehensive approach to program integrity resulted in significant savings of over \$210 million dollars in calendar year 2014**

We have extensive experience implementing program integrity initiatives and processes and will bring the best practices we have developed over the years to Iowa. Program integrity at Amerigroup is defined as a set of initiatives, policies, procedures, systems, and best practices directed at the detection and prevention of fraud, waste and abuse. The key objectives of our program integrity initiatives are:

- Identification and implementation of system and oversight activities to reduce instances of fraudulent activities
- Increased use of advanced data analytics, expanding detection capabilities across a broader spectrum of clinical services
- Deployment of improved operational performance and metrics aimed at optimizing savings for the Iowa Initiative
- Combatting the diversion of funds that could otherwise be spent/applied to safeguarding the health and welfare of our members

As illustrated in Table 12.1-1, Amerigroup’s program integrity activities and responsibilities cross many functional areas with multiple departments working together against fraud, waste and abuse.

Table 12.1-1. Illustrates the Interdepartmental Program Integrity Structure at Amerigroup

Health Plan	<ul style="list-style-type: none"> Issue Identification Provider Relations Project Approvals

Amerigroup’s program integrity initiatives in Iowa will benefit from the policies and procedures developed by our affiliate Medicaid health plans. We will customize and implement a compliant program assuring that the Iowa Medicaid dollars entrusted to us are properly spent. To do so, we will work to ensure that the services provided to members are effective, efficient and safe, and that payments are made to legitimate providers for reasonable services provided to eligible members. Amerigroup will deploy experienced staff in Iowa who will use a variety of tools and processes to promptly investigate reports of suspected fraud and abuse by employees, subcontractors, providers, and others with whom we conduct business. Prior to implementing our comprehensive set of policies and procedures, we will submit them to the State for approval.

Program Integrity Plan (12.2)

Plan Contents (12.2.1)

Our Fraud, Waste and Abuse Compliance Plan includes a system of processes and controls to prevent, detect, report and implement corrective action for fraud, waste and abuse. Amerigroup’s best-in-class program and extensive program integrity experience positions us to fully deliver on this requirement. We understand that the Fraud Program Integrity Plan must include the following core elements:

- Written policies, procedures, and standards of conduct that articulate our organization’s commitment to comply with all applicable state and federal standards
- The guidance and fraud referral performance standards published by CMS in September 2008 entitled “CMS Performance Standard for Referrals of Suspected Fraud from a Single State Agency to a Medicaid Fraud Control Unit” (Amerigroup’s Program Integrity Officer will incorporate any other appropriate guidance and/or future CMS guidance into our written policies and procedures and training materials)
- Provision for a data system, resources, and staff to perform the fraud, abuse, and other compliance responsibilities including running algorithms on claims, analyzing data, performing predictive analytics, trending claims behavior and conducting provider and member profiling
- Designation of a Program Integrity Officer and a Compliance Committee accountable to senior management (our full-time Iowa Compliance Officer will meet with State audit and investigations representatives at the frequency required by DHS)

- Annual training and education for the Program Integrity Officer and other employees involved in program integrity work; trainings include instruction on the False Claims Act
- Effective lines of communication between the Program Integrity Officer and the organization's employees (Employees are able to report any suspected fraud and abuse activity directly to the Program Integrity Officer, the Compliance Officer or the Medicaid Special Investigations Unit)
- Enforcement of standards through well-publicized disciplinary guidelines
- Provision for internal monitoring and auditing
- Provision for prompt response to detected offenses and for development of corrective action initiatives
- Written standards for organizational conduct
- Inclusion of information on fraud and abuse identification and reporting in provider and member materials
- Program integrity-related goals, objectives, and planned activities for the upcoming year
- Compliance with 42 CFR 455, including timeframes for implementing and completion
- Coordination with DHS Program Integrity to remove incarcerated, deceased or incorrectly enrolled members or providers

The Program Integrity Plan will be updated annually, and as contractually required, submitted for review and approval. We will implement the plan as approved and will submit any changes to the State for approval prior to implementation. Functional managers throughout the organization in consultation with the Program Integrity Officer develop standard operating procedures for their respective units aligned with the goals and procedures outlined in the Plan. We have experience developing Program Integrity Plans across our affiliate health plans, and we will take the best practices from each of those in developing the Iowa Plan. Monthly, we will submit a Program Integrity activity report compliant with the minimum data elements, and will outline our program integrity-related activities and findings, as well as our progress in meeting Iowa specific program integrity-related goals and objectives. We welcome an opportunity to engage the State in discussions regarding additional reporting capabilities we could bring to the table.

Amerigroup Iowa will maintain a dedicated Program Integrity Officer at the health plan who will devote at least 90 percent of his/her time to the oversight and management of our local program integrity efforts. In addition to our Iowa Compliance Officer, our national Medicaid Compliance Officer will work with our Iowa Program Integrity leadership team to provide extensive and focused management on program integrity issues including education and training, risk identification and mitigation, and the development and oversight of corrective actions.

The Iowa-based Program Integrity Officer will be the primary liaison with the State and other parties as identified in the contract, including the State's program integrity vendor regarding our fraud, waste, and abuse activities. Our Program Integrity Officer will provide all required data in the timeframe and manner prescribed by the State, and will work with the vendor to foster ongoing communication and collaboration regarding program integrity issues impacting providers and members. Our extensive national experience and expertise will be available to the local Amerigroup Iowa team, and will allow us to implement a robust and fully functional program from day one with an emphasis on Iowa. We will be able to build upon and exceed the gains realized by the State's program integrity contractor over the last several years. We understand that a final Program Integrity plan, incorporating any changes requested by DHS, must be submitted within 30 days after the official submission of the draft plan, which will occur within 30 days of Contract execution. Please see Attachment 12.2-1 for our Draft Integrity Plan.

Question 12, #1

1. Describe your procedures for avoiding, detecting, and reporting suspected fraud and abuse to the State.

Policies, Procedures, and Standards of Conduct (12.2.1.1)

Through our National Medicaid Division, Amerigroup has written policies, procedures, and standards of conduct that outline our commitment to comply with all applicable state and federal standards which will be used to develop the Iowa program. We will incorporate the 2008 published standard entitled “CMS Performance Standard for Referrals of Suspected Fraud from a Single State Agency to a Medicaid Fraud Control Unit”, as our affiliate health plans do in our other Medicaid state markets. Additionally, we will continuously review our policies and procedures and incorporate other appropriate guidance including State and/or future CMS standards into our written policies.

Avoiding Fraud, Waste and Abuse

Although recovering inappropriate provider reimbursement and referring suspected fraud and abuse to investigators is important, our philosophy is driven by prevention. Prepayment review is highly effective in stopping suspect claim payments. In addition to prepayment review, prevention tools and processes are included in Table 12.2-1.

Table 12.2-1. Prevention Tools and Processes

System	Activity Description
Mckesson Claim Check	Software that automatically and comprehensively audits codes before claims are paid. The system identifies the appropriate relationship between thousands of medical, surgical, radiology, laboratory, pathology, and anesthesiology procedures identified by CPT®-4 and HCPCS codes
The Policy Administration Module	This module addresses claims editing based on published national reimbursement policies and national coding standards not currently available in ClaimCheck.
LexisNexis Healthcare Portal	A retrospective, rules-based system that detects anomalies in data, using thousands of statistics, rules, and patterns. These examinations track many different aspects of healthcare billing and payment activities and identify instances where values fall outside or in excess of norms
iHealth	A pre-payment solution in a real-time environment through a Facets interface – applies iHealth edits and payment policies to all professional claims and outpatient facility claims.
FICO Insurance Fraud Manager	Use of predictive models, pre- and post- payment, to score claims and providers for the likelihood of fraud and abuse and the level of financial risk.
Credentialing and Provider Profiling	Profiling includes review of the Office of Inspector General List of Excluded Individuals/Entities and Iowa Exclusion Database; license verification; and billing history check for fraud.
Quality Control and Utilization Management	Information from our Utilization, Quality, and Case Management Departments on member and provider over- and under-utilization

Detecting Fraud, Waste and Abuse

Although Amerigroup focuses heavily on prepayment activities, we use proactive, data analysis driven, post-payment review to identify erroneously billed claims and behaviors that cannot be detected by up-front edits. Our detection systems and resources include the following:

- EDIWatch, a retrospective, rules-based system that detects anomalies in data using thousands of statistics, algorithms, rules, and patterns; trend reports identify outliers and overutilization patterns
- State-based and national medical management staff available for training and analysis
- Facility site information
- Membership information
- Medical record reviews
- Field staff information
- Electronic Visit Verification (EVV) for HCBS
- Information databases, such as:
 - LexisNexis
 - Accurint for Insurance (Public Records)
 - CPT-Inquiry Services
 - National HealthCare Anti-Fraud Association Special Investigations Resource and Intelligence System

Amerigroup conducts clinical reviews prospectively through prior authorization of select services, point-of-dispensing reviews at network pharmacies, and during Case Manager contacts with members enrolled in case management. We refer suspicion of fraud, waste or abuse to our national Medicaid Special Investigations Unit or the Program Integrity Officer for investigation.

- Amerigroup's prior authorization process requires Utilization Management employees to comprehensively and continuously review case records and assess member needs.
- Case Managers confirm member's receipt of services as authorized in the member's care plan during contact with the member, family members or the member's legally appointed representative.
- We also conduct retrospective clinical reviews during the claims process and medication therapy management programs that address potential cases of provider and member fraud, waste, and abuse.

Reporting Fraud, Waste and Abuse

Amerigroup encourages and promotes multiple avenues for reporting suspected fraud, waste and abuse activities both internally and externally. Methods available for reporting include our toll-free number, the Corporate Compliance Hotline, our email address Medicaidfraud@amerigroup.com, or the fraud, waste and abuse reporting links on our website. Referrals may come from members, providers, employees, law enforcement agencies, or professional organizations. We notify members and providers of our fraud waste and abuse initiatives at enrollment and during contracting. We use newsletters to remind members and providers of the mechanisms to report suspicions of fraud, waste and abuse, as well as monthly tips to all our employees. Our analysts, tools, and referrals allow us to detect fraud, waste and abuse that we then categorize and prioritize for investigation based on the severity, financial impact, and quality of care impact.

Program Effectiveness and Implementing Best Practices Reporting

We routinely monitor and measure our compliance program, including fraud, waste and abuse to make sure that activities and initiatives are conducted in a manner and within a framework that supports an effective compliance plan. We also use these monitors and measures to validate that controls are in place to mitigate targeted compliance risks, including those that may arise in connection with operations areas across our health plan: medical management (utilization, case and care management); marketing and enrollment; payments from federal and state regulatory agencies; data submissions and other reporting; quality management; accreditation and access to care; complaints, appeals, and grievances; claims payment; relationships with providers and contractors; subcontractor oversight; and privacy of protected information.

The oversight and support from our national Medicaid Special Investigations (SIU) Unit will enable us to implement best practices developed from the experiences of all 19 affiliate health plans. As we identify new processes, tools, and best practices, we adjust our program accordingly. This collaboration also provides our local investigators with a backup network of experienced investigators to further support Iowa activities. Amerigroup's Medicaid SIU also collaborates internally with the Medicare and Commercial SIUs to obtain best practices across the entire company. We do not share protected health information; rather, we take advantage of best practices that will result in improved integrity for the Iowa Initiative..

Tools and Systems (12.2.1.2)

Prevention is at the heart of our approach to fraud, waste and abuse, and we demonstrate this through strict vetting practices, strong contract provisions, and significant investment in education and training. Amerigroup deploys state-of-the art detection tools and systems that are applied prior to claim payment; during post-payment claim review, data mining, and referral follow-up; and when monitoring new fraud schemes identified by various organizations. We will configure Iowa-specific algorithms, detection tools, and systems and will add to them proven data analytics from our markets and vast experience bringing a first class solution to Iowa.

Prohibited Affiliations and Exclusions

Amerigroup will adhere to all federal requirements found in 42 C.F.R 1002 and the Iowa Contract with respect to excluded or disbarred providers and employees. We screen entities against the following entities:

- Office of Inspector General List of Excluded Individuals/Entities
- State-specific Exclusion Database
- The System of Award Management
- Other applicable sites as may be determined by each state where we operate

Monthly protocols are in place to process exclusions and debarments that occur after the initial screening or credentialing and before mandatory periodic screenings or credentialing. We will report exclusion information discovered during screening with three business days to DHS and will include in the comprehensive listing as required by DHS.

Watch Lists

Amerigroup establishes “Watch Lists” based on recurrent themes our Medicaid SIU has identified through trending and analysis of our affiliates’ business across the country. The Watch Lists identify common schemes pervasive in all markets as well as aberrances not yet seen in certain states, giving us the opportunity to monitor issues that may appear in the future. We will use this expertise when we review Iowa claims data. Using advanced data analytics and the experience of our entire investigative team, we extract multiple data sets periodically and match them with paid claims across all of our Medicaid affiliate health plans. We search for local aberrances as well as national fraud trends.

Medical Record Requirements

The basis for the majority of fraud detection systems is the medical record. Amerigroup has policies and procedures to maintain, or require providers and contractors to maintain, an individual medical record for each member that meets the specifications outlined in Scope of Work (SOW) Section 15.6.

Investigating Fraud, Waste and Abuse Allegations

Our Iowa Program Integrity Officer has primary responsibility for the investigative process, serving as the primary contact for identified issues and leading all investigative efforts, in conjunction with the Medicaid SIU, for any potentially fraudulent or abusive claim or issue. When our investigators or other staff within the Medicaid SIU receives a referral for investigation, they enter it into the Case Information Management System database, where it is assigned a Medicaid SIU case or lead number. Our investigators follow a formal process for investigating all possible fraud and abuse, as outlined in Table 12.2-2.

Table 12.2-2. Investigators Follow a Formal Process to Evaluate Potential Fraud and Abuse

Step	Activities
Detection and Referral	In this stage, suspected fraud and abuse is detected and the Medicaid SIU is notified.
Initial Assessment	The primary goal of assessing the lead is to firmly establish predication and the need for additional investigation. The investigator reviews the information gathered to date and accumulates any additional information needed in the initial screening process.
Investigative Strategy	If the need for additional investigation is established, we create an investigative plan and assess case prioritization. During this vital stage, the logical and appropriate investigative measures are mapped out.
Information Gathering	The investigator uses all available, legal, and appropriate measures to gather information. At this time, data is analyzed, interviews are conducted, records are obtained and reviewed, and utilization histories are scrutinized. Investigations are in-depth and can include contract and credentialing reviews; licensure validation; data analysis; medical record audits; interviews with members, providers, and office staff; on-site office visits; Internet research; or collaboration with other health plans.
Evaluation of Evidence	All of the evidence that has been collected is evaluated to determine if there is reasonable evidence that fraud or abuse has occurred.
Determination of Action	At this point, the investigator, possibly in conjunction with legal counsel, must determine if and how to pursue with the case.
Civil/Criminal Proceedings	Finally, if appropriate, the investigator will meet with the attorney responsible for litigation of the case. Typically, this stage of the investigation is worked in tandem with the law enforcement agency prosecuting the case. The investigator often becomes the expert on the case, as he or she is familiar with all details and evidence, and assists with analysis, evidence gathering, and testimony, if requested.

The results of these investigations are shared with the Program Integrity Officer, the Program Integrity Committee, and other senior-level executives who review the findings to ensure they are aware of major findings and to also identify edits and potential policy changes to prevent future inappropriate payments.

The Program Integrity Officer and Medicaid SIU meet regularly to discuss matters of potential fraud, waste and abuse and preventive measures.

Determining and Implementing Corrective Actions

Once confirmed, Amerigroup, in partnership with the State Medicaid agency and Medicaid Fraud Control Unit (MFCU), takes appropriate action to address reports of potential fraud, waste, and abuse depending on the scope and severity of the situation. We design each corrective action plan specific to the provider and nature of allegation. In doing so, we tap into our knowledge of and experience with the local provider community, setting Amerigroup apart from other health plans that apply a rigid, inflexible approach.

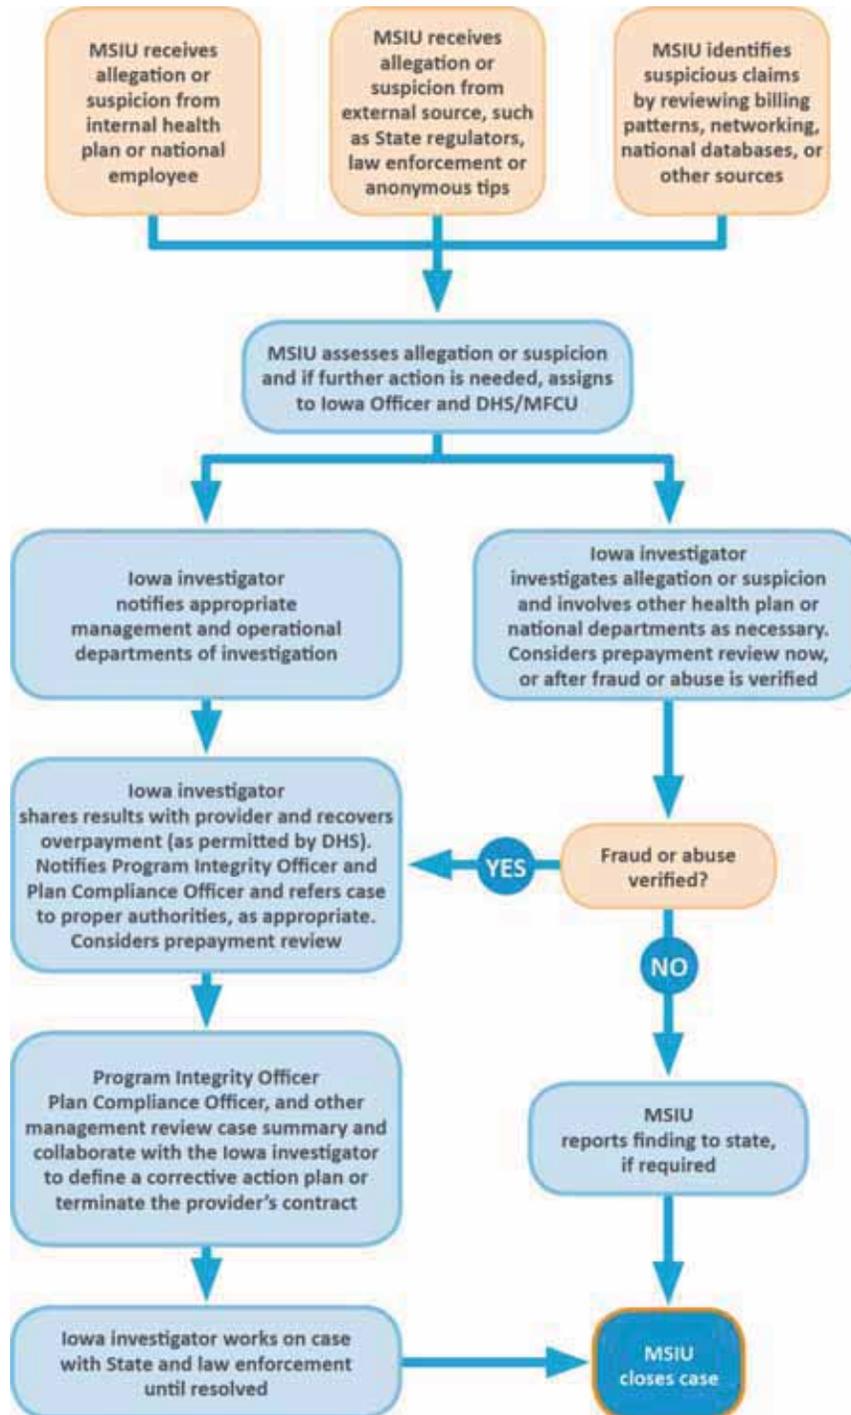

Based on the results of the investigation, we take appropriate action, which may include the following:

- **Provider letter.** Upon review by the Program Integrity Officer and Medicaid SIU management, we send certified letters to providers that document the findings and the need for improvement, and we request a timely response. We base further action on the provider's response or lack thereof.
- **Education.** Depending on the nature of the case, additional and targeted education may be directed at staff, providers, and members.
- **Medical record audits.** Our team, including clinicians, may review medical records to validate claims submissions.
- **Member lock-in.** Restricting a member to a single pharmacy and/or PCP to prevent duplicate and inappropriate drug therapies or assigning a member who sees multiple providers to a single primary care provider tends to result in reduced instances of fraud, waste, and abuse.
- **Prepayment review.** When billing issues are egregious or a provider fails to comply despite intervention, the provider may be placed on prepayment for further monitoring and evaluation. Certified Professional Coders within the Medicaid SIU review submitted medical records to verify that the services documented support the services billed on the claim forms.
- **Self Audits.** When aberrancies are detected Amerigroup may request that a provider conduct a self audit to identify billing errors and take corrective action to prevent future inappropriate payments.
- **Recoupment of overpayments.** Amerigroup may seek recoveries through either direct reimbursement by the provider to Amerigroup or through a recovery process.
- **Reporting the provider.** Amerigroup may report the provider to the appropriate legal or regulatory agency and medical board.
- **Corrective Action Plans.** Amerigroup prepares and requests providers sign a Corrective Action Plan, confirming the understanding of the changes they need to make to come into compliance.
- **Termination of the provider.** We may terminate from our network any providers who fail to comply with program policy and procedures or who violate the Contract in any way.

The Medical Director may also present a provider to our Peer Review Subcommittee for quality of care disciplinary action. Our ultimate goal is to educate providers, not penalize them, for aberrant practice patterns. We perform a follow-up review on these providers after six months and report any savings resulting from the action or education. When a situation arises that may lead to provider termination from our network, we terminate the provider if such a measure is in the best interest of our members and the State.

Figure 12.2-1 illustrates our process flow from allegations or suspicions through investigation and case closure.

Figure 12.2-1. Process Flow from Allegations or Suspicions through Investigation and Case Closure

Roles and Responsibilities of the Compliance Officer (12.2.1.3 - 12.2.1.13)

As previously indicated and in accordance with SOW Sections 12.2.1.3- 12.2.1.1.13 Amerigroup will designate an Iowa Compliance Officer, a Program Integrity Officer, and a Compliance Committee accountable to senior management. The Program Integrity Officer, the Medicaid SIU and other appropriate personnel will be available to meet with State audit and investigations representatives at the frequency required by DHS. Additionally the Amerigroup Program Integrity Officer will:

- Conduct initial and ongoing program integrity trainings for all employees in addition to the annual training that, at a minimum, will include instructions on the False Claims Act, as directed by CMS and written standards for organization
- Maintain effective lines of communications with employees and widely publicize disciplinary guidelines, detailing enforcement standards in a variety of ways, including employee trainings and provider orientations via our website and other documents
- Implement internal oversight activities to monitor and audit program integrity initiatives
- Implement policies and procedures to assure prompt response to detected offenses and the development of corrective action initiatives
- Coordinate with other business owners to assure that information regarding fraud and abuse identification and reporting is included in provider and member materials
- Include program integrity-related goals, objectives and planned activities for the upcoming year in the annual Program Integrity Plan
- Assure compliance with 42 CFR 455 including timeframes for implementing and completion
- Establish a process to coordinate with DHS Program Integrity to remove incarcerated, deceased, or incorrectly enrolled members or providers.

Required Fraud and Abuse Activities (12.3)

Question 12, #2

2. Provide examples of outcomes achieved in other states regarding program integrity efforts.

Activities (12.3.1)

In accordance with SOW Section 12.3, Amerigroup will deploy a team trained and experienced individuals to manage our fraud, waste, and abuse program both at the national and local plan level. Our teams comprise former law enforcement officers, former Medicaid regulators (federal and state level), and a wide variety of other experienced healthcare investigators. Our current Medicaid SIU Director is also an Accredited Healthcare Fraud Investigator, a Certified Fraud Examiner, and a certified Health Care Anti-Fraud Associate. This wide ranging and diverse set of expertise has allowed us to implement a best-in-class approach to detecting and reducing Medicaid fraud and positions us to be fully compliant with all required activities.

The Medicaid SIU is an internal proprietary function fully dedicated to the detection, prevention, and prosecution of fraud and abuse across Amerigroup and its affiliate health plans' state-sponsored programs. The unit is physically separate from the Claims and Operations Departments, administratively reporting to the national Medicaid Compliance Officer with dedicated investigation resources to each state health plan.

In calendar year 2014, our Medicaid SIU opened a total of 1,200 fraud, waste and abuse cases and identified over \$33,864,899.97 in suspected fraud, waste and abuse activities across our affiliate health plans. We recovered \$3,511,948.62 and avoided payments of \$25.4 million, resulting in net savings of \$28.9 million, which equates to a return on investment of approximately 9-1 as compared to the national average of 8-1.

The Medicaid SIU maintains strong working relationships across our national support functions and will extend that to local Iowa leadership, including the Program Integrity Officer, to effectively prevent, detect, investigate, and report fraud, waste and abuse. The Program Integrity Officer will work closely with the following staff, who lead our national efforts for fraud and abuse activities. There will be an Iowa dedicated investigator who will bring years of healthcare fraud investigation experience to bear for Iowa and build relationships within the DHS, MFCU, and other Managed Care Organizations.

Mary Beach has been a Director of the Medicaid SIU, since 2007. Ms. Beach brings over 30 years of healthcare fraud investigation experience and is an Accredited HealthCare Fraud Investigator, a Certified Fraud Examiner, and a Health Care Anti-Fraud Associate. She served on the Board of Directors for the National Health Care Anti-fraud Association and currently represents Amerigroup on the CMS Public Private Healthcare Fraud Prevention Partnership.

Bob Mays is also a Director of the Medicaid SIU. Mr. Mays has over 33 years of fraud investigation experience with many years of white collar crime investigations including healthcare fraud investigations in Medicaid and Medicare. He is an Accredited HealthCare Fraud Investigator, a Certified Fraud Examiner, and the recipient of the FBI Directors Award in 2008 for distinguished public service in healthcare fraud. He holds a Master's of Science degree in Public Administration. He serves on several committees and is a frequent instructor for the National Health Care Anti-fraud Association and currently represents our parent company, Anthem, on the CMS Public Private Healthcare Fraud Prevention Partnership.

Examples of Outcomes Achieved (12.3.1)

Below are examples of fraud, waste and abuse activities detected and pursued by some of our affiliate health plans. These examples highlight the experience we have in investigating Medicaid healthcare fraud in many Medicaid state programs and will leverage that experience for Iowa. These examples illustrate different methods of detection, degree of difficulty, types of investigations, and actions taken.

Home Health Services: This resulted from a member complaint that she had not seen her caregiver in several months. Initial review indicated that the provider had billed our affiliate health plan for services during the time period that the member had reported no services. The Medicaid SIU launched an investigation and requested the member's non-clinical, personal care records. The records were audited for appropriateness. The audit found the attendant timesheets for each of the four caregivers showed deficiencies. Dates were missing or changed, member signatures were vastly different from known samples, member and employee names were crossed through or changed, and signature lines were distorted. The Medicaid SIU identified an overpayment of \$7,883.95

- **How Detected:** Member Complaint
- **Action Taken:** Due to the significant findings of the initial audit, the Medicaid SIU extracted a sample from the attendant care agency's entire universe of claims. The provider's records were audited to determine if they were sufficiently detailed to substantiate the date, time, eligible recipient's name, level, and quantity of services. The Medicaid SIU also reviewed services billed on the basis of time units to determine if time spent with the eligible recipient was sufficiently documented. The results indicated inaccurate billing. Dates of service were denied as follows:
 - Inconsistent Signatures between Comparable Documents
 - No Documentation Submitted to Support the Requested Dates of Service

- No Personal Care Services Documented
- Altered Employee Signature Line & Inconsistent Markings
- Altered Dates on Signature Lines
- Copied Signatures and Dates
- No Personal Care Services Documented & Inconsistent Signatures

Once the audit was complete, an extrapolated overpayment of \$129,921.00 was identified. The Medicaid SIU recovered \$86,694.75 before the provider declared bankruptcy. The allegations were referred to the States Human Services Department and the Attorney General's Office, Medicaid Fraud Control Unit.

Home Health Services: Acting on a member complaint and proactive initiative, the Medicaid SIU investigated and substantiated allegations of services not rendered, time travel discrepancies, altered timesheets, and inconsistent or non-existent member/caregiver signatures for billed attendant care services. Two audits were performed. Records were requested from the home health agency to support billed visits and audited by the Medicaid SIU to determine appropriateness. Based upon the review, multiple dates of services were not supported by complete or accurate information.

- **How Detected:** Member complaint and retrospective claims audit
- **Action Taken:** Subsequent to members' complaint, the Medicaid SIU had already launched an investigation and discovered:
 - Inconsistent Signatures between Comparable Documents
 - Caregiver's Signature Missing
 - Inappropriate Markings Between Comparable Documents
 - Services Not Rendered
 - Incorrect Dates
 - Inconsistent Signature(s)/Caregiver and Member
 - Caregiver Signature Missing/Member "unable to sign"

An overpayment was calculated based on the audit results. The overpayment was \$80,236.38. The allegations were referred to the New Mexico Human Services Department and the Attorney General's Office, Medicaid Fraud Control Unit.

Physicians: In July of 2013, the Medicaid SIU was contacted by the New York city Human Resources Administration (HRA), Office of Investigations, Revenue, and Enforcement Administration; Bureau of Fraud Investigations. The HRA was conducting an ongoing fraud investigation and requested two Amerigroup Medicaid ID cards for an undercover operation. The Medicaid SIU worked in conjunction with the appropriate functional unit to create the "undercover" ID cards.

- **How Detected:** External Referral/Collaboration with a State Agency
- **Actions Taken:** Amerigroup created the cards and began authorizing services and making payments approximately every three to four months. The Medicaid SIU received requests from the HRA for medical and prescription claims for the two "undercover" IDs to track office visits and the associated prescription claims. In February 2014, HRA sent a request to the Medicaid SIU for copies of the checks sent to the providers who submitted claims using the "undercover" ID to the affiliate health plan. On February 3, 2015, the Medicaid SIU received a subpoena to appear in front of the Grand Jury and validate the Amerigroup claims and payment data. A Senior Investigator appeared before the Grand Jury on February 19, 2015. Arrests were made on April 1, 2015, and the press release indicated the providers were involved in a \$7 million fraud scheme. The Medicaid SIU will continue to work with the local District Attorney's office as this case moves forward. The Medicaid SIU will also verify if any of the other providers arrested are in the Amerigroup network and determine exposure. The Medicaid SIU will realize approximately \$1.4 million in costs of care savings associated with this investigation.

Home Health Agency: Acting on a referral the FBI, a multi jurisdictional task force launched an investigation regarding allegations of fraudulent billing by a home health agency for members served by one of our affiliate health plans

- **How Detected:** External Referral from Law Enforcement
- **Actions Taken:** As directed by the task forces, the health plan created a “fake” authorization for home health services for a member who was working undercover as an FBI informant. The provider used the “fake” authorization to bill Amerigroup for services not rendered, giving the FBI enough information to make an arrest. After the arrest, the FBI met with the local team to discuss ongoing collaboration and present commendations to two of our investigators for “outstanding work”.

Federally Qualified Health Center: Using data analytics, including EDIWatch, Amerigroup discovered that a provider submitted duplicate claims for clinic visits using an all-inclusive code, T1015. The duplicate billings were not immediately detected by the claims processing system because the provider used different place of service codes for the visits.

- **How Detected:** Proactive advanced data analytics
- **Actions Taken:** Referred the allegations to the State Medicaid agency and the MFCU. Amerigroup recovered all duplicate payments and the provider was placed on prepayment review whereby all claims were reviewed prior to payment. We shared results of the investigation with other MCOs in the marketplace.

Hospital: Using data analytics, an affiliate health plan discovered that a hospital provider submitted claims for identical services on the same dates of services for the same patient. The duplication of services was not immediately detected by the claims processing system because the provider used different identification numbers for each claim. Our affiliate determined that the provider was overpaid \$27,421.81.

- **How Detected:** Proactive advanced data analytics
- **Actions Taken:** Referred the allegations to the Medicaid agency and Amerigroup recouped the funds from all duplicate claims by offsetting future claims payments. We shared results of the investigation with other MCOs in the marketplace.

Ambulance/Behavioral Health: Using data analytics and cooperation from employees in one of our affiliate health plans, we identified a significant number of Basic Life Support ambulance services with no corresponding medical service claims. A review of transportation logs from a sample of ambulance providers identified common behavioral health provider destinations. During surveillance, Medicaid SIU investigators observed a number of questionable practices of up to five members transported in the same ambulance per ride, transportation provided in van then billed as ambulance services, and members being transported in an unsafe manner.

- **How Detected:** Referral from health plan, advanced data analytics, and members interviews
- **Actions Taken:** A total of 44 investigations were initiated and 11 ambulance providers and six behavioral health providers were terminated from the network. To date, 40 ambulance providers and six behavioral health providers have been referred to the state for credible allegations of fraud. This investigation is ongoing. Overpayment of approximately \$12 million has been identified and approximately \$12.3 million in inappropriate expenditures were avoided. We also contacted Adult Protective Services.

Psychologist: After receiving an allegation that a provider was billing under another provider's name, data mining revealed a provider in an affiliate health plan was billing psychotherapy services for members as young as 18 months. The data was sorted by name and revealed excessive billings for a core group of

about 17 members. Submitted claims indicated that some of these members were seen six days per week. The investigation found that the provider was unbundling group psychotherapy services and submitting claims for individual therapy sessions.

- **How Detected:** Allegation submitted via email
- **Actions Taken:** All identified overpayments were recovered. Notifications were made to the appropriate state agencies, and the provider was placed on prepayment review with all claims reviewed prior to payment.

Our parent company, Anthem, is represented on the National Health Care Anti-Fraud Association Membership Forum. In this capacity, Anthem has regular interaction with the NHCAA Law Enforcement Liaisons such as the National Association of Medicaid Fraud Control Units, U.S. Department of Health and Human Services, U.S. Department of Justice, National Association of Attorneys General, National Association of Insurance Commissioners, FBI/Office of Inspector General Fraud Task Forces, and other federal and state agencies and units. We are able to leverage these relationships, expertise, and contacts to implement and maintain a best-in-class program that incorporates all elements of an effective and result-oriented fraud, waste, and abuse program.

Question 12, #3

3. Describe methods for educating employees, network providers and members on fraud and abuse identification and reporting.

Fraud, Waste, and Abuse Trainings

Appropriate training is key to avoiding fraud, waste, and abuse. We educate our employees, providers, and members on signs of fraud and abuse and how to report suspected cases. Additionally, the Medicaid SIU publishes monthly tips, available on our website and in provider publications, on how to identify and report fraud, waste, and abuse. We use these same mechanisms to widely publicize our disciplinary guidelines and how we enforce standards.

Amerigroup provides each new employee with access to policies and procedures inclusive of fraud, waste and abuse protocols and the Code of Business Conduct and Ethics. The Code promotes compliance with legal obligations; provides guidelines on principles of ethical conduct adopted by Amerigroup; and offers guidance to employees, directors, affiliates, and some subcontractors' expectation regarding standards of lawful and ethical conduct. All employees are responsible for:

- Reviewing and acknowledging compliance with the Amerigroup Compliance Program upon joining the Company and annually thereafter
- Completing training session(s) covering the Compliance Program, the Standards of Ethical Business Conduct, and other compliance-related topics including program integrity
- Reading and understanding the requirements of our policies and procedures related to their day-to-day job responsibilities
- Reporting suspected incidents of non-compliance to a supervisor, manager, or the Plan's Compliance Officer, or directly to the Medicaid SIU through the use of the established hotlines

Amerigroup deploys a comprehensive and multipronged training program for employees, network providers, and members. We tailor our trainings to reflect the environment of our local plans and assure that state-specific requirements are highlighted.

Employee Training

Amerigroup educates all employees on the general definition of fraud, waste, and abuse through our New Employee Orientation Program that occurs within the first 30 days of employment and annually thereafter.

Training modules include:

- Standards of Ethical Business Conduct
- Privacy and Security
- HIPAA mandates
- CMS' Guidelines for Constructing a Compliance Program for Medicaid Managed Care Organizations and Prepaid Networks
- 42 CFR §438.610 and all relevant state and federal laws, regulations, policies, procedures, and guidance
- Policies and procedures, including reporting requirements, for working with the State Medicaid agency

All employees are required to complete annual refresher training that addresses compliance generally, and includes specific modules on the identification, prevention, and reporting of fraud, waste, and abuse and other topics, including the False Claims Act, as directed by CMS.

Amerigroup further reinforces compliance with fraud and abuse standards through our online training program, which helps claims processors, member service representatives, medical review personnel, and other employees, identify patterns and trends indicating potential fraud. We use the term "red flags" to identify actions that may indicate the potential for fraud. Red flags may include:

- Pressure to adjudicate or process claims quickly
- Threats of legal action for delay in making payments
- Frequent telephone inquiries on claims status
- Assertive providers demanding same-day claim payment and special handling
- Charges submitted with no supporting documentation, such as X-rays or laboratory results
- An individual provider using a post office box as a return address
- Unusual charges for a service
- Unassigned bills that are normally assigned, such as large hospital or surgical bills
- Erasures or alterations
- Helping providers who abuse the system

We provide examples of fraud, waste, and abuse associated with healthcare as part of the educational process and will also include information on ***Iowa-specific Fraud, Waste and Abuse regulations***. Training reinforces that failure to comply with all policies and procedures, including the *Code of Conduct, applicable laws, and/or regulations, may result in corrective action up to and including termination or association with Amerigroup. In some instances, it may also involve civil or criminal sanctions.*

We periodically provide department-specific (Claims, Utilization Review, Quality Assurance) in-service training to Operational Departments by the Medicaid SIU. The training sessions will remind staff to constantly be aware of fraud, waste, and abuse indicators; provide tips and best practice guidelines; and reiterate the varied channels available to report suspicions of fraud, waste, and abuse.

Program Integrity Staff Training

In addition to corporate compliance training, Medicaid SIU employees annually must complete 40 hours of specialized fraud, waste, and abuse training through professional organizations including the National Health Care Association, Association of Certified Fraud Examiners, American Academy of Professional Coders, and the National Health Care Anti-fraud Association (NHCAA). The training can be either in-person or via audio conferences and webinars. It should be noted that several members of the Amerigroup Medicaid SIU management team are frequently invited to participate as instructors at some of these national trainings. The Directors of the Medicaid SIU, Bob Mays and Mary Beach, were both instructors at the March 2015 Investigator Boot Camp. Mary Beach conducted two training sessions at the 2014 Annual Training Conference and previously served on the Board of Directors for NHCAA. Both Directors currently serve on committees of the NHCAA and bring a wealth of networking capabilities as well as over 60 years of investigative experience to lead the Medicaid SIU.

Network Providers

Amerigroup Provider Relations Department employees provide fraud and abuse education to providers during orientation and in-service trainings and through the Provider Manual, e-mail alerts, newsletters, and our provider website. We advise providers and subcontractors of the consequences, including provider termination, of participating and/or contributing to fraud, waste, and abuse via our contractual agreements. We include fraud, waste, and abuse information in the Provider Manual and review it during provider orientation. We periodically include fraud, waste, and abuse training during in-person provider forums and webinar training sessions held during the lunch hour. These have proven to be a convenient and economical way to keep providers informed. We also use blast fax communications to update providers on important fraud, waste and abuse issues. The Provider Manual, quick reference cards, and blast faxes are always available to providers on our website.

Members

We educate members on our fraud, waste, and abuse program in a variety of ways and make sure our members know the channels available to report suspected incidents of fraud, waste, and abuse. We educate members through the following methods:

- **Member Handbook:** The Member Handbook includes an overview of what constitutes fraud, waste, and abuse and instructions on how to report suspected fraud, waste, and abuse activities
- **Member Newsletter:** We will include periodic articles on fraud, waste, and abuse in the member newsletter and will include contact information for reporting suspected fraud, waste, and abuse activities.
- **Explanation of Benefits:** As contractually required, we will provide members with an explanation of benefits monthly that summarizes services billed in the prior month. Members will be instructed to contact us if they believe that the services billed are not reflected of the services used.

Question 12, #4

4. Describe internal controls to ensure claims are submitted and payments are made properly.

Amerigroup uses several automated methods to assure claims are submitted and payments are made properly. Our core operations system audits claims throughout the claim processing cycle, applying program-specific processing rules and validating claim information against system data for members, providers, authorizations, and benefits prior to payment. These methods and systems allow us to validate the appropriateness of healthcare services and assure that billed services were actually provided to

members. Amerigroup will develop specific edits and algorithms for preventing, detecting, and investigating healthcare fraud, waste, and abuse for Iowa.

Pre-payment Review

We use McKesson Corporation's ClaimCheck[®] and the Integration Wizard[®] software to perform prepayment audits on submitted claims. ClaimCheck automatically and comprehensively audits codes before claims are paid. The system identifies the appropriate relationship between thousands of medical, surgical, radiology, laboratory, pathology, and anesthesiology procedures identified by CPT[®]-4 and HCPCS codes. ClaimCheck's sophisticated clinical logic is based on clinical practice and reimbursement standards, along with the knowledge and judgment of medical experts. The system incorporates clinical coding sources including CPT-4, HCPCS, and ICD-9 Clinical Modification, American Medical Association and CMS guidelines as well as industry standards, medical policy, literature, and academic affiliations

In addition to ClaimCheck, we use a clinical Policy Administration Module, part of the Integration Wizard interface, which addresses claims editing based on published corporate reimbursement policies and national coding standards not currently available in ClaimCheck.

iHealth Technologies is a healthcare analytics company contracted to assist in identifying inappropriately paid claims. iHealth provides pre-payment solution in a real-time environment through a Facets interface. It is similar to McKesson's ClaimCheck with added functionality and flexibility. iHealth applies payment policy accurately and consistently allowing for accurate coding and payment. All professional claims and outpatient facility claims are reviewed during claims adjudication applying the iHealth edits and payment policies. In addition to ClaimCheck, iHealth is employed as a "final filter" before professional and outpatient facility claims are paid.

In addition to the automated prepayments checks the Medicaid SIU has a team of Certified Professional Coders (CPCs), who conduct pre-payment claims reviews. Based on findings from investigations, the Medicaid SIU may place a provider on pre-payment review. Providers placed on pre-payment review status are required to submit medical records with the submission of claims. The medical records are reviewed by a CPC. Should the records not support the services as billed, the claims are denied. Providers are provided information and education regarding documentation requirements and will remain on pre-payment review until the documentation submitted supports the services billed.

Post Payment Review

Amerigroup uses EDIWatch Intelligent Investigator,[™] which is a user-friendly, desktop fraud and abuse detection tool designed specifically for healthcare investigators, SIU management, and support staff. It is a retrospective, rules-based system that detects anomalies in data using thousands of statistics, rules, and patterns. These examinations track many different aspects of healthcare billing and payment activities and identify instances where values fall outside or in excess of norms. EDIWatch Intelligent Investigator rules are based on objective industry reference sets maintained by sources.

In accordance with continuing efforts to improve our processes, the Medicaid SIU recently launched a new project called the Data Analysis Work Group (DAWG). We believe that this enhanced capacity will significantly improve our post-payment review process. The DAWG focuses on proactive data analysis and its membership includes Directors of the Medicaid SIU, the technology manager, a senior data analyst, a coder, and several senior level investigators who have shown a propensity for enhanced data analysis. To date, the DAWG has identified two major projects that are in the initial stages of investigation with the potential for recouping millions of dollars in improperly billed/paid claims as well as avoiding payment of millions of dollars. Below is an overview of the tools used by this team:

- **Analysis and Review:** The group analyzes and discusses current and/or emerging fraud, waste, and abuse schemes occurring nationally and locally, and works to identify patterns that could be indicators of inappropriate billing and indicative of fraud, waste, and abuse trends.
- **Provider Patterns:** The proactive data analysis is performed at the provider level, searching for trends throughout the 19 state markets including trends by provider specialty. Once outlier occurrences are detected, they are assigned to investigators to open a case and conduct an investigation.
- **Tools:** The DAWG sifts through approximately 65 reports generated by EDIWatch as well as other intelligence data to identify aberrant providers billing patterns and inappropriately paid claims. The team also reviews "spike" reports from all 19 markets. The "spike" reports identify providers with significant changes in billing patterns from quarter to quarter, and allows us to quickly identify and investigate aberrant billing patterns using many variables, including provider specialty and geographic area.

Question 12, # 5

5. Describe methods for verifying whether services reimbursed were actually furnished to members as billed by providers.

In addition to the systematic and audits' process in place to detect fraud, waste, and abuse; we work with members, their caregivers, and authorized representatives to verify that services billed were actually provided. Methods deployed include:

- Amerigroup will generate monthly mailing to a random and statically valid sample of members for whom we paid claims in the prior month to verify if services were performed. We may oversample members receiving certain services or certain provider/provider types as a result of trends in the marketplace either nationally or locally. If a member reports that services were not rendered, the information will be forwarded to the Medicaid SIU for verification and further investigation.
- As contractually required and as previously indicated, we will send an explanation of benefits to members that, the EOB notification and will include a request for members to contact us if services billed are not reflective of the services received. All such contacts are routed to the Medicaid SIU for additional follow up.
- For members receiving long-term services and supports, the Community-Based Case Managers will confirm with the member receipt of services as authorized and documented in the member's care plan in our electronic case management system. As with the sample mailings, we may target certain services with higher prevalence of fraud, waste, and abuse activities such as home health services for more frequent and targeted reviews. The Community-Based Case Manager will check service delivery against authorized services and providers, and identify when additional information is needed during contact with the member, family, or the member's legally appointed representative. Cases of suspected fraud, waste, and abuse are routed to the Medicaid SIU for further investigation.

Reporting Fraud and Abuse (12.4)

Amerigroup's Medicaid SIU team has extensive experience reporting fraud or abuse activities to states. We will leverage our existing policies, procedures, and processes and make the modifications necessary to meet Iowa-specific requirements. Specifically, under the leadership of the Iowa Program Integrity Officer, we will report all possible fraud and abuse activities to the State, immediately launch an investigation, and within two days submit the results of our investigations to DHS. We will provide cumulative reports in the format and timeframes prescribed in our contractual agreement with the State and in compliance with all regulatory requirements. We will cooperate fully in any State reviews and/or investigations and subsequent legal actions. All corrective actions from the State or other authorized entities will be immediately implemented.

Coordination of Program Integrity Efforts (12.5)

Amerigroup understands the importance of and values open communication, coordination, and collaboration with other regulatory entities and the efficacy of coordination as we collectively work to reduce instances of fraud, waste and abuse. In each state where our affiliates operate, we establish strong partnerships with regulatory agencies, the Medicaid Fraud Control Unit (MFCU), and law enforcement. Additionally, our Medicaid SIU employees regularly participate in CMS-sponsored fraud, abuse, and waste outreach and education events to provide us with information and insight on the most current trends and tools in healthcare fraud prevention. We have found these to be very beneficial and anticipate an effective partnership in Iowa. Specifically, and in accordance with SOW Sections 12.5 -12.5.1.6, Amerigroup will implement and promote polices to:

- Include language that meets all relevant Contract, state, and federal requirements
- Make available the Iowa Program Integrity Officer, local investigators, and other team members as appropriate to meet monthly with the DHS Program Integrity Unit, Department of Public Health staff, and MFCU staff
- Upon request, provide originals or copies (at no charge) of any and all documentation or information to DHS, the MFCU, U.S. Department of Health and Human Services Office of the Inspector General or the U.S. Department of Justice and/or their designees in a timely manner and in the format requested. We will promote continued adherence to these requirements through our internal policies and procedures
- Within two working days report to the DHS Program Integrity and Medicaid Fraud Control Unit, and other appropriate legal authorities, any evidence indicating the possibility of fraud and abuse by a network provider network
- Annually, submit reports of all investigative activities and corrective actions taken, which will include all mandated data elements and will be submitted in the format and manner prescribed
- Hire and maintain an Iowa-based full-time Iowa Program Integrity Officer who will devote at least 90 percent of his or her time performing the duties and responsibilities as outlined (The Program Integrity Manager will have access to our entire claims and provider payment systems and other system and processes sufficient to meet DHS requirements. Our officer will be the primary liaison with Iowa's MFCU and/or the Office of the Attorney General.)
- As directed by the State, coordinate program integrity activities with other Managed Care Organizations.

Verification of Services Provided (12.6)

In accordance with CFR (a) 42 CFR 455.20, and as currently performed in our other affiliate health plans, Amerigroup will implement a process to verify with members whether services billed by providers were actually provided. A summary of the process follows.

- Monthly, we will randomly select a statically valid sampling of members for whom claims were paid in the prior month. It should be noted that our selected criteria excludes certain “sensitive services” such as any neonate services that resulted in a death.
- Selected members are sent a Member Verification of Services (MVS) letter with bold notification that “This Is Not a Bill”. We further explain that we are sending this information because we paid the identified providers for the service (s) listed under the “Procedure Description Column”. Members are informed that this is informational, and they do not have to do anything unless they did not receive the services listed. If the services listed were not received, they are instructed to contact our Member Services Department. All such calls are logged and /documented, and then routed to the Medicaid SIU for further review and/or investigation in accordance with their standardized protocols. The Medicaid SIU tracks the calls for inclusion in the mandated fraud allegations reports.
- The health plan operations team monitors the status of all MVS letters that were mailed to members and whether or not the mailing resulted in a call that was forwarded to the Medicaid SIU for investigation. This information will be made available to the State in the timeframes and format prescribed, and will include all required data elements.

Obligation to Suspend Payments to Providers (12.7-12.7.1.4)

Our affiliate health plans have implemented compliant Medicaid payment suspension processes in all of our Medicaid markets. We will modify our payment suspension polices and procedures to reflect Iowa-specific requirements. In accordance with SOW Sections 12.7, Amerigroup will suspend all payments to a provider after DHS determines that there is a credible allegation of fraud, unless we receive written directive from DHS, or any of its s authorized agents, not to suspend payments; or we are directed to initiate partial suspension. We will notify providers of the suspension and the reason(s) for the suspension. We will maintain a complete file of all materials related to payment suspensions for a minimum of five years. Additionally we will:

- Afford providers for whom payments have been suspended an opportunity to file a grievance (The provider notice of payment suspension will include information and instructions on the provider suspension grievance process.)
- Include in its provider agreements and/or provider manuals a requirement that providers must comply with Iowa Code 249A Subchapter II –Program Integrity
- Develop and implement a process for referring providers to DHS for sanctions as outlined under 441 IAC 79.2
- Update recoupment policies and procedures to reflect Iowa-specific requirements detailed in Section 12.7.1.4., which will include the requirement to not take any actions to recoup or withhold improperly paid funds or potential payments due to a provider when the issues, services, or the claim for the withhold meet one or more of the identified criteria (Department- and unit-specific standard operating procedures will clearly identify the prohibitions criteria and the Program Integrity Officer will

oversee the internal processes to assure compliance. We will assume responsibility for the external verifications with the IME Program, the State of Iowa, and we will review RAC recoveries prior to initiating any recoveries.)

Required Provider Ownership and Control Disclosures (12.8)

In accordance with SOW Section 12.8, Amerigroup will implement policies and procedures that are complaint with federal laws regarding required provider ownership and control disclosure as detailed in 42 CFR §§455.104, 105, and 106.

Contractor Reporting Obligations for Adverse Actions Taken on Provider Applications for Program Integrity Reasons 42 CFR §455.1002.3 (12.9)

Amerigroup's affiliates have extensive experience establishing a provider network that is adequate and fully compliant with established accreditation standards (NCQA) and federal and state requirements. Our enrollment processes obligate providers to disclose the identity of any person described in 42 CFR § 1001.1001(a)(1). All such disclosures will be immediately forwarded to DHS. Amerigroup will abide by DHS direction regarding admission of any such providers into the network. Specifically, the provider will not be permitted into the network if DHS or Amerigroup determines that any person who has ownership or control interest in the provider, or who is an agent or managing employee of the provider, has been convicted of a criminal offense related to that person's involvement in any program established under Medicare, Medicaid or CHIP; or if DHS or Amerigroup determines that the provider did not fully and accurately make any disclosure required pursuant to 42 CFR § 1001.1001(a)(1).

Termination of Providers (12.10)

In accordance with SOW Section 12.10 and as required by 42 CFR §455.416, Amerigroup will comply with contractual requirements for provider disenrollment and termination.

Enforcement of Iowa Medicaid Program Rules (12.11)

In accordance with SOW Section 12.11, Amerigroup will, by contract, notify providers of our extensive fraud, waste and abuse program. As good stewards of the State's resources, we will use all the tools at our disposal to vigorously pursue fraudulent activities. We will notify DHS of provider activities that may incur sanctions as noted under 441 IAC 79.2(249A).

Information Services & System (13.1)

Question 13.1, #1

1. Provide a general systems description and a systems diagram that describes how each component of your information system will support and interface to support program requirements.

Amerigroup Iowa's (Amerigroup) fully integrated Medicaid Management Information System (MMIS) complies with and will support SOW Section 13.1 requirements. Information systems are critically important to the effective management of clinical and healthcare services. Through our affiliate health plans, we have 24 years of experience managing state-sponsored health programs spanning 19 states, and more than 5.2 million members in programs such as Medicaid, CHIP, and coverage for the uninsured. As a result, we bring a structured, expertly operated, and well-maintained MMIS and best practices that will help deliver a successful Iowa implementation.

A secure state-of-the-art systems infrastructure and high systems reliability are key initiatives of Amerigroup. Our systems hardware and software architecture permits scalability of the technology platform to meet current and future capacity needs. Reliable, secure and easily accessible systems are critical to:

- Facilitating the delivery of quality care
- Providing a platform for utilizing data for better health outcomes
- Delivering the most efficient stewardship of taxpayer dollars in Medicaid service delivery
- Processing prompt payment to providers
- Communicating with members

We assess our architectural framework regularly – both hardware systems and applications software – to assure that they are flexible and scalable to meet future market needs. We maintain and test business continuity and disaster recovery plans to confirm our ability to provide continuous operation in the event of a disruption of any size, including a major disaster.

Medicaid Management Information System Description

Amerigroup's MMIS is built on a managed Medicaid model. We designed our systems to be configured and customized to meet the unique requirements of each state agency. Our integrated MMIS meets federal and state Medicaid requirements and it will support Amerigroup's Iowa operations. It will provide the functionality and capability to meet the processing requirements for the Iowa Initiative and the flexibility to customize to the program's unique needs.

A single, integrated system supports each of our affiliate health plans and accommodates market-specific needs and innovations. This model allows capabilities implemented for one affiliate to be leveraged for other health plan affiliates, which means that the Iowa Initiative can benefit when an enhanced capability is implemented for an affiliate health plan.

In support of the customers, we serve—state agencies, members, and providers—our national Information Systems Department management is fully integrated to support operations, including Claims, Case Management, Provider Data Management, Credentialing, Enrollment, Member and Provider Services, and Program Integrity. Integrating the management of these functions creates a collaborative environment that focuses on implementing technology tools to strengthen customer relationships and drive operational improvements. Our MMIS includes five essential integrated components:

- **Core Operations System**—The Core Operations System will serve as the system of record for all Iowa Initiative provider, member (including enrollment and eligibility), claims, and authorization data. All updates to this information will occur through the user interface or through application-specific data loads such as enrollment files received from the State. All other applications interfacing with the Core Operations System map to its data structures to enable consistency in naming, formatting, and validation and drive data quality and reliability.
- **Care Management System**—Our care management system is the system of record and the core of our clinical care management solution. Our care management system collects, organizes, and presents information enabling management and coordination of member care and supports and facilitates communications among participants of the member's care team. Member utilization data, such as claims history, authorization, immunization records, lab results, and care and disease management data is readily available in an organized format with tools for Care Managers to identify and manage members' needs.

Our Member 360 application consolidates and presents member data and information from various sources into a single record in a series of dashboards designed to deliver a holistic picture of an individual's utilization, Case Management services, and gaps in care. It includes information, such as member health risk assessments (HRAs), care plans, longitudinal health records, and clinical data. Through the provider facing Member 360 tools, providers can see their members' records via the Amerigroup self-service website, giving them simple, easy-to-access data and information to help engage members in their own health and well-being. Integrated data is displayed to make it easy for providers to act, assuring their members receive the services they need. This view enables any provider who treats our members to see the full picture, including care plans and assessment information, enhancing their ability to reduce duplication and improve quality of care. The physician view will enable providers to understand, from a population health perspective, how members are doing and more importantly, get information to help them achieve better results. Member 360 integrates seamlessly with the Core Operations System and our care management system, among others.
- **Member and Provider Websites**—Amerigroup websites will deliver vital information and tools to our Iowa members, providers, and other stakeholders. Provider and member websites have public and secure self-service areas, and industry-standard web services and content management system technologies. Our websites comply with Section 508 of the Rehabilitation Act as well as the more stringent Web Content Accessibility Guidelines (WCAG) 2.0. Our interactive voice response system will deliver additional member and provider self-service tools.
 - Presented in English and Spanish, our member website will deliver information about Amerigroup, the Iowa Initiative program, and include self-service tools such as allowing members to submit questions, search for providers via an interactive online Provider Directory, and request an ID card.
 - Effective provider collaboration and support is critical to maintaining a partnership that can improve care coordination, operational efficiency, and improve member outcomes and health. The public pages of the provider website will contain information about our network and basic information and tools such as our Provider Manual and reimbursement policies. Our secure provider website enables providers and their authorized delegates to submit claims and prior authorization requests, view claims status and prior authorizations, access member eligibility data, view panel lists, update their own demographic information, and access Member 360. Amerigroup partners with Availity, a multi-payer portal, to maximize usability and administrative simplicity for our providers. Availity enables them to conduct transactions and exchange information with many payers through a common portal through a single sign-on.
- **Data Warehouses**— Our data warehouses support processes and functions within our MMIS. They are fed directly from the source (for example, the Core Operations System) to enable data quality,

control, and consistency. The data warehouses maximize our capacity for data analytics and afford the flexibility to produce targeted reporting to support state customers, business processes, and enhance provider and member support.

- **Supplemental Applications**—Our MMIS also includes numerous integrated surround applications that support the overall functionality of Medicaid managed care, including provider profiling, EPSDT, HEDIS, member ID cards, PCP assignment, credentialing, imaging and workflow, desktop integration for contact center efficiency, and workforce management. Dashboards/business intelligence analytical reporting and other supplemental applications maximize functionality, efficiency, security, and data analytics.

Through our affiliates, we already transact all of the interfaces identified by DHS in the RFP requirements with various state agencies and their agents, including incoming and outgoing enrollment and eligibility data, claims and encounters, provider data, third party liability, and specialized extracts as required. As shown in Figure 13.1-1, these existing capabilities will allow us to quickly implement the needed data interfaces with DHS systems, the Enrollment Broker, and other State agents.

A dedicated internal team of highly skilled and experienced technology professionals delivers MMIS support and is committed to providing solutions to best serve members, providers, and State agency customers. As detailed in Section 13.2, a set of business continuity and disaster recovery plans will allow us to deliver continuous operation in the event of a disaster.

We know technology can be a powerful tool that improves operations and delivers measurable impact to members and providers. We continually search for ways to apply existing and new technology to:

- Better understand and enable access to healthcare services and benefits for members
- Ease the operational burden on providers related to claims and authorizations
- Maintain a high level of member and provider satisfaction
- Improve the quality and efficiency of data collection
- Maximize the impact of performance improvement studies and results
- Provide measurable results to the state programs

The following diagrams illustrate our MMIS that will support the Iowa Initiative program. Figure 13.1-1 provides a conceptual overview diagram of our MMIS and shows the flow of information into our MMIS from DHS, members, and providers; the major functional processing components; and the flow of information sent from our MMIS to members, providers, and DHS.

Figure 13.1-2 illustrates the additional integrated applications that support the overall functionality of Medicaid operations, including workflows, business intelligence, analytical reporting, and other supplemental applications that maximize functionality, efficiency, security, and data analytics.

CONTAINS CONFIDENTIAL INFORMATION

Required Functions (13.1.1 – 13.1.19)

Amerigroup has a fully functioning MMIS that integrates member, provider, claim, authorization, and clinical information to deliver all of the required functions described in SOW 13.1.1 – 13.1.9.

Member Database and County of Legal Residency (13.1.1.1 – 13.1.1.2)

Our MMIS serves as the member database and maintains comprehensive information on member demographics and eligibility, using Medicaid state ID numbers – and capturing information on the county of legal residence – based on daily 834 files received from the State.

Comprehensive and accurate member data is critical to the support of a majority of the major operations functions, including claims processing, utilization management, and care management. Our MMIS will load and track eligibility begin and end dates and overall enrollment history (eligibility span) for every Iowa Initiative member, including utilization and expenditure detail for 1915(c) HCBS waiver members, long-term care recipients, and expenditures as required.

Clinical Information (13.1.1.3)

Amerigroup's MMIS will incorporate all of the clinical information captured in member clinical records, as described in Scope of Work (SOW) Section 13.1.13 Clinical Records. Our integrated systems collect and process data related to the member's experience including clinical information such as health assessments, immunizations, lab and pharmacy records, as well as provider, authorization and claims data. All of this data is aggregated within the MMIS, enabling us to provide data as needed—in real-time—and make it available to meet and exceed the reporting requirements for all of the states in which we do business.

Reporting (13.1.1.4)

In accordance with SOW requirement 13.1.1.4, Amerigroup will develop and implement reports as required by the key performance indicators identified to assess our performance as outlined in Section 6.2.3, Section 14, and Tables F1 and F2 in Exhibit F. We track most, if not all, of the data required for the identified performance measures today and are experienced at reporting on this data for the other states in which we do business.

We fully understand DHS' reporting requirements and the operational commitment necessary to meet them. Regulatory compliance is an essential part of our corporate culture, and we work continuously to meet reporting expectations and requirements. We will provide ongoing reports upon request and within the timeframes specified by DHS.

We have a very mature regulatory reporting process that starts with oversight from our Regulatory Services Department, includes identified business ownership and responsibility for each report, and is supported by the Enterprise Reporting team within our Information Systems Department as well as by the data within our MMIS and the reporting tools we have available. We develop and formalize the production of the recurring required reports. These reports follow our development lifecycle, which includes thorough testing as well as programmatic edits and controls to verify the completeness and accuracy of the data. Our operational systems provide a solid foundation for accurate reporting.

In order to meet timely and accurate delivery to the State, we will generate our reports a few days in advance and business owners will perform a quality review. This timing will allow any issues to be identified and resolved prior to the submission of the reports. Additionally, for those reports requiring data certification, this timing will support the reviews necessary for that process.

Claims Processing (13.1.1.5)

Today, our MMIS performs claims processing, authorizations, and payments for all of our markets. Claims processing and payment is an integral part of Amerigroup's Core Operations System and will be performed in accordance with SOW requirement 13.4. Amerigroup accepts paper and electronic claims. We scan paper claims into our document management system and transform them into electronic claim transactions. We receive electronic claims from clearinghouses and our secure provider website.

The claims editing and adjudication processes access a significant amount of data, including member eligibility, provider, prior authorizations, other health insurance information, and previously paid claims.

Processed claims data is input for provider reimbursement (via check or electronic funds transfer) and remittance advice generation (with multiple options for delivery, including paper, website, or HIPAA-compliant 835 data file). Providers can access claims status information directly through our secure provider website and our interactive voice response system. Please see our response to Sections 13.4 and 13.5 for more information on claims processing and claims auditing.

Medication Management (13.1.1.6)

Amerigroup's MMIS stores information about the services provided to our members through the claims submitted by their providers, including pharmacy data in support of Medication Therapy Management (MTM) activities, as described in Section 14.8.4 Pharmacy Reporting. In doing so, we comply with SOW requirement 13.1.1.6.

For example, our national healthcare analytics pharmacy team receives quarterly reports from MTM vendors and evaluates the effectiveness of the program on a semi-annual basis. Our experience with MTM programs in Texas, Kansas, and Louisiana indicates that these programs have resulted in improved outcomes. Some of these outcomes include dramatically improved medication adherence rates and improvement in gaps in care as well as overall safer, more effective medication regimens. Collaboration with providers who are willing to take action leads to healthier members and engaged providers.

Capitation Payment (13.1.1.7)

In accordance with SOW requirement 13.1.1.7, Amerigroup will document receipt and distribution of capitation payments as described in Section 13.3.1.2. Amerigroup has operational processes to reconcile the premium payments with member enrollment each month. Our process compares the 820 premium payment transaction files we receive from the State against member enrollment data provided on the State's 834 file and loaded into our Core Operations System. Each month, the system generates a billing file based on membership in the system. The data is triangulated with the 820 premium files and the raw 834 data. We will notify the State of any discrepancies within 30 days, as required in SOW 13.3.1.2.

Incurred Claims (13.1.1.8)

All clean claims for medical services are loaded into our MMIS. As claims progress through the adjudication cycle, their information is available in an unpaid status to support incurred but not reported tracking. As claims are paid, they become part of the reported set through the payment cycles and associated reporting.

Third Party Liability (13.1.1.9)

Amerigroup maintains data on Third Party Liability (TPL) payments and receipts within our MMIS and includes this data in our annual audited financial report in accordance with SOW Section 2.3.5 and 13.1.1.9. Amerigroup will share information regarding its members with third party payers as specified by DHS and in accordance with 42 CFR 438.208(b). Amerigroup collects and maintains current TPL data in other states today as identified in SOW Section 13.6 Third Party Processing Liability (TPL) Processing.

Further, we acknowledge that Amerigroup will identify, collect, and report third party liability coverage and collection information to the State, in accordance with SOW Section 13.6.3. As third party liability information is a component of capitation rate development, we agree to maintain records regarding third party liability collections and report these collections in the timeframe and format determined by DHS.

Claims Processing Timeliness (13.1.1.10)

Claims processing is part of our Core Operations System. Our claims processing system is configured to meet the requirements presented in Section 13.4.6, including claims payment timeliness standards and out-of-network provider filing limits. Amerigroup will use effective technology and experienced employees to consistently deliver prompt and accurate claims payment. We process large volumes of claims on a timely basis. In 2014, our national Medicaid Division processed more than 60.7 million Medicaid claims, paying 99.77 percent within 30 days. We are confident we can meet Iowa claims processing and payment requirements. We will meet performance targets and submit data and reports as described in Section 14.9.1 and Section 14.9.2.

Critical Incident Data (13.1.1.11)

In accordance with SOW 13.1.1.11, we will track and report critical incidents and unauthorized uses of restrictive interventions through care plan reviews and medical record audits. For example, Amerigroup's Quality of Care/Incident and Sentinel reporting includes date of incident, date reported, type of incident (critical incident/unauthorized use of restraint and seclusion), date of investigation, date of resolution, and outcome. Amerigroup will meet DHS' requirement to maintain critical incident data in our MMIS. As described in Section 10.4, information documented and reported on a critical incident may include, but is not limited to:

- Reporting party
- Member information
- Incident information
- Immediate resolution
- Physical injury/outcome
- Mental health outcome
- Law enforcement participation
- Abuse report
- Location
- Staff review
- Member review
- Equipment and supply review
- Environmental review
- Systemic resolution

Clinical Data (13.1.1.12)

Amerigroup maintains clinical and functional outcomes data to support quality activities and requirements with a combination of the Core Operations System, care management system, Data Warehouses, supplemental applications, and member and provider website components of our MMIS. Our Data Warehouses enable access and analysis of large amounts of data, including one dedicated to HEDIS. Please see our response to Question 13.1.3 for more information on the ways we use data and systems to support our Quality Management and Improvement (QM/QI) Program.

Grievance and Appeals (13.1.1.13)

The Core Operations System and supplemental applications components of our MMIS support our grievance and appeals processing. The Core Operations System is the authoritative host for information on grievances and appeals. We generate required letters and store supporting documentation in our document management system.

Amerigroup has the systems, processes, and resources in place to meet or exceed all grievance system requirements by maintaining documentation and data on clinical reviews, appeals, grievances and complaints and their outcomes, in accordance with SOW Sections 14.3.6 and 14.3.7, Member Grievances

Report, and Member Hearing and Appeals Report, respectively; and SOW Sections 8.15.5.1 and 8.15.5.2, Filing a Grievance or Appeal, and General Process for Appeals, respectively.

Our systems support ongoing tracking of all grievances and appeals via a daily report to designated grievance and appeals personnel of all open and unresolved cases in our system. We monitor status, track timeliness of resolutions, identify and quickly address patterns or concerns, and ultimately improve the quality of care provided to our members. Through this system, we are able to report on the data elements required by Iowa and are prepared to submit all required grievance and appeals information in the required format and timeframes stipulated by the State.

Aggregating and Analyzing Complaint, Grievance, and Appeals Data

Review and analysis of complaint, grievance, and appeals data is an integral part of Amerigroup's Quality Management program. In addition to preparing, reviewing, and submitting required reports to the DHS, our Quality Management Department will conduct a comprehensive review of complaint, grievance, and appeals data each quarter. The review will focus on identifying issues, problems, and trends for presentation to the Quality Management Committee.

Utilization Management (13.1.1.14)

In accordance with SOW Section 11 Utilization Management (UM), Amerigroup will maintain data on services requested, authorized, provided, and denied. We support utilization management requirements within the MMIS including the transition and continuity of care, prior authorization and pre-certification requirements, concurrent reviews, and reports that support utilization management activities and analyses. Some of the key UM requirements and the systems we use to meet them include:

- Prior authorization and pre-certification requirements supported within the Core Operations System
- Concurrent reviews
- Reports supporting utilization management activities and analyses generated primarily from our Data Warehouse with data fed from the Core Operations System
- Transition and continuity of care supported by the Data Warehouse

Our MMIS supports UM functions, such as clinical and concurrent reviews, through census reporting. Through an integrated process for the intake of authorizations, we will receive prior authorization requests from several sources, including the provider website, our custom-built FaxII application, and direct entry into the Core Operations System by our UM nurses. We load prior authorization requests into the Core Operations System and any attachments into our document management system.

We record UM decisions in our Core Operations System and share this information with providers. The prior authorization data is accessed during claims processing and used downstream in our care management system to support care coordination. Please see Section 11 for more information on the way we use systems and data to support our utilization management activities and meet DHS requirements.

Ad Hoc Reporting (13.1.1.15)

Amerigroup has experience meeting ad hoc reporting requirements. The accessibility of our data and availability of tools throughout the organization and within the Information Systems Department enables us to meet DHS' ad hoc reporting requests with a turnaround time averaging no more than five business days. In meeting any reporting request, we check to see if we have delivered something similar in the past that will give us an advantage in meeting the current request. Whether we have performed the request previously or not, our knowledgeable subject matter experts and technical staff bring their experience to bear to meet the reporting request.

Service Referrals (13.1.1.16)

In accordance with SOW requirement 13.1.1.16, Amerigroup will maintain data on member service referrals. Amerigroup can track referrals such as those from a PCP to the emergency room within our MMIS.

Service Specific Information (13.1.1.17)

Amerigroup is able to retrieve information specific to service type, including but not limited to behavioral health, Long-Term Services and Supports (LTSS), pharmacy, inpatient, and outpatient services through various data element indicators such as provider type and specialty, claim type, place of service, diagnosis and procedure codes. We maintain service-specific information through an integrated claims history; this information flows into our Data Warehouse from our Core Operations System and from our delegates. Additionally, we will augment our Data Warehouse with any claims history obtained from the State or Iowa Health Information Network. From the Data Warehouse, we are able to run reports and queries to analyze the services performed including procedures, physician type, behavioral health, and LTSS.

Age Specific Information (13.1.1.18)

In accordance with SOW requirement 13.1.1.18, Amerigroup will maintain data to generate member information by age. We maintain members' dates of birth as part of the demographics captured and received on daily 834 eligibility files and loaded into our MMIS. We take age information into account in innumerable ways; for example, EPSDT programs, reporting, system edits, and validations.

Encounter Data (13.1.1.19)

Amerigroup has a robust encounter management process focused on transmitting and receiving encounter data accurately, securely, and efficiently. The Encounter Management System (EMS) in our MMIS supports encounter data processing and submission. Our encounter data submission process relies on data from our Core Operations System such as member eligibility, provider, and adjudicated claims data, as well as from our data warehouse, which houses our subcontractor encounter claims in order to validate and deliver a comprehensive set of encounter data to the DHS.

Our national Encounter Management Department provides encounter data to all of our state-sponsored health plan affiliates in either HIPAA compliant ASC X12 837 and NCPDP formats or the state's proprietary format, depending on that state's requirements. The team has experience with multiple transmission standards and working with state-designated fiscal agents across our affiliate health plans. We will configure our encounter extract in accordance with DHS' specific requirements.

Processing encounter response files from the State is an important part of the encounter submission process. Information on rejected encounter records is updated in our EMS, and reviewed and remediated before resubmission in a subsequent file. Please see our response to Section 13.5 for additional detail.

We maintain data interfaces with our material subcontractors for pharmacy, vision, and transportation to exchange data in support of program requirements. Amerigroup sends regularly scheduled member eligibility data to each subcontractor to support member access to services. Amerigroup integrates encounter claim data we receive from our subcontractors into our data warehouse to support a variety of processes, including care coordination; encounter data submission; and fraud, waste, and abuse detection. We generate a series of operational reports against this subcontractor data to help us ensure that they are meeting program requirements.

General Systems Requirements (13.1.2)

Amerigroup's MMIS is capable of conforming to the general system requirements identified in SOW Section 13.1.2 including online access; online access to all major files and data elements within the information system; timely processing; daily file updates of member, provider, prior authorization, and claims to be processed; and weekly file updates of reference files and claim payments.

Our integrated MMIS is an online system with real-time user interfaces that enable access to our core data; for example, member, provider, claims management, and care management. There are many ways people may access the MMIS, including by VPN connection, or remotely via mobile technologies, to enable employees in the field to have online, real-time access to data.

Edits, Audits, and Error Tracking (13.1.2.1)

Amerigroup maintains comprehensive automated edits and audits to validate data and meet Contract requirements. Our MMIS tracks errors by type and frequency and maintains detailed audit trails.

Our state partners need the ability to monitor and audit the data, processing, and procedures of the implementation on a regular basis in order to confirm that we meet requirements. We encourage DHS to become active partners in our efforts to actively monitor all information system aspects of managed care operations in Iowa, including data exchanges, individual claims, and reports.

We maintain strict security policies and procedures to protect the personal data of our members and providers. We require anyone given access to the system to use a unique user identifier to gain access to workstations or systems. The access management function also restricts users by varying hierarchical levels of entry based upon system function.

Our MMIS maintains Audit Trails that track changes to source data. Whenever an authorized user makes a change to one of the database tables, the application automatically creates a history of the update transaction. The data is stored in an Audit Table with a before and after picture of the data being updated along with other identifying information, including:

- The unique log-on or terminal identification number of the person who made the change
- The subsystem used to generate the change
- The time and date of the change

Our MMIS is compliant with generally accepted accounting principles (GAAP) as well as the Sarbanes-Oxley Act (SOX).

System Controls and Balancing (13.1.2.2)

Amerigroup's MMIS has a system of controls and balances to make sure data input is accounted for—depending on how the data is received into our system—and outputs are validated. For instance, when loading our 834 enrollment files, we track to record count by checking load reports throughout processing, and we make sure all records are resolved by placing any member who cannot be loaded automatically due to a data issue into a work queue where they are manually addressed and re-queued to load once the issue is resolved. Additionally, we have a membership reconciliation database where we independently reconcile our 834 membership load against the data in our core system outside the actual enrollment processing to balance adds, terms, duplicates, etc.

We use work queues extensively to manage calls routed for resolution and follow-up, claims that do not auto-adjudicate and require manual intervention to process, care management workflow, and many other input items flowing throughout the organization. These queues allow us to track and manage work items so all are recorded and can be managed timely. Similarly, we validate outputs through various means, including manual review and validation for certification, error reports accounting for records that could not go on the report due to hitting data edits, and balancing against operational control totals.

Back-up of Processing and Transaction Files (13.1.2.3)

Question 13.1, #2

2. Describe data back-up processing plans including how data is stored at an off-site location.

In compliance with SOW Section 13.1.2.3, Amerigroup will comply with the following back-up timelines. For other states, we exceed these requirements:

- Twenty-four hour back-up of eligibility verification, enrollment/eligibility update process, and prior authorization processing
- Seventy-two hour back-up of claims processing
- Two-week back-up of all other processes

We have policies and procedures governing system backup, storage, and tracking. Our Infrastructure team manages the regular backups, the documentation and tracking of these backups, and their secure offsite storage. We perform daily, weekly, and monthly full backups to tape and additionally, for certain databases, we take incremental snapshots throughout the day, including those of our core operations system, which contains our member, authorization, and claims data. Tapes are stored offsite with Iron Mountain. Our procedures detail the rotation of tapes to and from Iron Mountain and the documentation and logging maintained to support tracking. In addition to these backups, we have the backups and off-site storage through our business continuity and recovery solutions in our alternate data centers and our high availability solutions.

Our Business Continuity Plans comprise a number of processes and strategies that enable us to maintain business operations and services to our members and providers.

Data Storage Off-site

Our Information Systems Department maintains backup and recovery plans for the types of events that could interrupt operations or cause a loss of data. We regularly back up systems and data and store copies of key files in secure off-site locations. Processes and procedures define steps for backing out transactions, restarting at certain checkpoints, or completely re-running programs.

The majority of the systems, applications, and technology that will support our Iowa program will operate out of data centers located in Virginia Beach and Richmond, Virginia, and each of these data centers have backup sites. Critical systems in Virginia Beach have replicated backups at the Dallas, Texas hot site. Critical production systems in Richmond have standby systems in St. Louis or at IBM Business Continuity and Resiliency Services in Sterling Forest, New York. We invest in the technology and equipment necessary to support our operational and business continuity needs.

In most cases, we maintain mirror images of files so that, if the hardware fails, a system can be automatically switched to operate from those databases. We maintain complete redundancy for all tiers of our Core Operations System, providing a high availability instance in addition to the production and disaster recovery instances.

This high availability solution is located in our primary data center in Virginia Beach, and if there is a non-disaster issue with our MMIS, we are able to switch to it. Likewise, we back up key hardware and communication lines that enable us to switch operations quickly from one piece of hardware to another.

Data Usage (13.1.3)

Question 13.1, #3

3. Describe how clinical data received will be used to manage Providers, assess care being provided to Members, identify new services and implement evidence-based practices.

Amerigroup will deploy a comprehensive, dynamic approach to data collection, evaluation, and analytics to determine how the implementation and operation of the Iowa Initiative will help the State achieve its access and quality-of-care goals. In accordance with SOW Section 13.1.3.1, we will use the data received to manage providers; assess member care including access to care, barriers to care, and quality of care; develop new services to improve access and program cost-effectiveness; and implement evidence-based best practices across the provider network.

For example, one of the most valuable supports we offer our providers is access to the wealth of data we have for our members who access healthcare services. To foster continuity of care and to reduce duplication of services and waste, we collaborate with our providers through sharing data through reports and a secure provider portal. The type of provider drives the type and amount of reporting and access we offer, with PCPs prioritized for information sharing. We facilitate information sharing and collaboration among all providers, offering technology that strengthens the role of the PCP and other providers involved in the care of our members. We offer our providers an array of data and resources such as:

- Interactive Provider website with links to a variety of resources, such as Amerigroup Patient and Medical Supports, Clinical Practice Guidelines, and Office Support. We recently migrated our provider claims and eligibility tools to **Availity**, a multi-payer portal that allows providers to use a single sign-on to access multiple payers. Providers can check eligibility, submit claims, and check claims status through Availity free of charge. Our website includes online copies of Provider Manuals, orientations, and training materials. After secure login, providers can access specific Amerigroup tools, including submitting prior authorization requests and retrieving panel listings.
- Reports to providers on their overall panel allow them to view their success at meeting certain quality measures. A HEDIS Quality Measurement Report Card enables us to engage in improvement discussions with the largest 50 provider groups.
- Preferred Provider Scorecard, a tool we developed to enable staff to implement member service referrals to high-quality providers—those with proven records of quality service and outcomes, such as annual quality audit scores, complaint counts, potential quality of care counts, and critical incident handling timeliness.

Managing Providers

We regularly review the ability of our contracted network to serve our members. We review providers' training, experience, and specialties, as documented in our credentialing files. To monitor service quality, we review quality of care concerns. Some measures allow us to monitor both access to care and quality of services. These measures include HEDIS Scores, administrative data review, grievance and appeals data, and feedback from the Provider Access, Availability, and Satisfaction Intervention Workgroup. We describe each of these below.

- **Routine phone calls** are placed to PCP offices once per year to collect data from the provider regarding appointment availability and hours of operation, including after-hours availability. We document provider responses in our data and analyze the data to confirm compliance, identify any potential quality improvement opportunities, and make sure accurate information is maintained in our data system and the Provider Directory.

- **Annual "Access to Care"** surveys allow us to assess provider compliance with appointment standards, wait time, and after-hours access.
- **Member Helpline** data identify potential compliance issues. For example, if we receive numerous calls regarding a specific provider's inaccessibility, we contact the provider and investigate the situation.
- **Quality of Care concerns** are reviewed and investigated as part of our Quality Management and Improvement Program (QMIP). We review the outcome of Quality of Care concerns, including Peer Review Committee actions, as part of our network monitoring activities.
- **HEDIS® Scores.** The HEDIS hybrid process allows Amerigroup many opportunities to monitor providers. Visits to the providers' offices allow our staff to monitor access and availability. We review medical records for documentation and access to care as well as quality of services.
- **Administrative data review** and annual comprehensive analysis of access and availability are conducted. The review includes analysis of administrative complaints, after-hours availability survey information, appointment access statistics, provider services helpline reports, GeoAccess reports, grievance and appeals data, and provider satisfaction survey results. In the analysis, we use results of telephone and mailed surveys, along with data from other departments, such as Provider Contracting and Database Administration, Operations, Medical Management, and Quality.
- **Grievance and appeals data** identify any trends at an individual provider level regarding adherence to contract requirements.
- **Provider Access, Availability, and Satisfaction Intervention Workgroup** reviews and analyzes the annual data reports, to identify barriers to adequate access, and to develop interventions to improve access and availability. The Quality Management and Improvement (QM/QI) Committee approves the annual analysis and recommendations from the Provider Access, Availability, and Satisfaction Intervention Workgroup and incorporates any changes into the provider contracting and training priorities as needed.

Any findings of provider noncompliance with access and availability standards may result in a variety of interventions, primarily focusing on assisting providers to improve their performance. Our assistance may include working with providers to extend their office hours or expand their practice.

Data-driven Monitoring to Assess Care

Using our integrated MMIS, the Iowa Initiative Program's Medical Director, Quality Management Manager, and Utilization Management Manager will have the ability to objectively and systematically monitor and evaluate member care and services, safety mechanisms and service delivery, including ongoing assessment of performance against program standards. We will assess the quality of care rendered to track members enrolled in the State's programs using provider, member, and stakeholder feedback and quantifiable data. We will employ these evaluation and improvement methods:

- Data-driven monitoring (service utilization, gaps in care)
- System outcomes data (HEDIS®, national core indicators)
- Member feedback
- Programmatic reviews
- Quality of care concerns
- Evidence-based practices

Using Evidence-based Practices to Improve Quality

Amerigroup will use nationally-recognized, evidenced-based guidelines and standards of care to improve member outcomes, minimize unnecessary costs, and gather data from our providers to evaluate their overall performance. We will disseminate clinical practice guidelines through our website and distribute hard copies on request from providers. We will also conduct annual reviews to evaluate provider compliance with clinical practice guidelines, and we will subsequently aggregate and share results with our providers to improve performance and with our committees to address barriers and opportunities. We continuously review this data and meet with members, providers, and stakeholders to discuss quality of care expectations, share data and best practices, collect feedback, and provide resources to improve accountability and quality of care. If providers do not accept accountability or meet quality-of-care expectations, we offer guidance and implement corrective action. If we identify issues related to the quality of care rendered by providers, we will notify DHS and furnish available information to facilitate performance improvement.

Taking Actions to Improve Access to Care

Amerigroup's integrated MMIS enables ongoing monitoring and trending processes that facilitate interventions in a timely manner to address any identified opportunities for improvement. Through our multi-disciplinary QM/QI Committee structure, Amerigroup will conduct routine analysis of these and other data elements to identify opportunities to improve member access to services and quality of care. We will incorporate performance data into our QM/QI Program to:

- Track and monitor performance and quality of care at the aggregate and individual provider and member level
- Identify opportunities for improvement
- Measure the successful implementation of interventions or corrective actions
- Evaluate our effectiveness in meeting our QAPI program goals

Our QM staff will work with providers to inform them on strategies to increase compliance with performance standards, adhere to best practices, and improve member health outcomes. We will also compare our annual and monthly performance measurement results to established minimum standards, NCQA percentiles, our own goals, and those specified by DHS.

Data Management (13.1.3.1)

Amerigroup uses the clinical data we receive to manage the care our members receive effectively. We agree to submit reports based on this data, in compliance with SOW Section 14 Performance Targets and Reporting Requirements. We actively seek out sources for data that we can use to better serve the needs of our members and providers. For example, if we receive immunization data from the State, we will integrate that data as well as any lab results data we may receive into our data warehouse and thus into the information we deliver to our care managers and providers through our care management system and Member 360 to support the care of our Iowa members.

Provider data is another integral part of the MMIS, and the Core Operations System is the authoritative host for provider demographic, network, and contracting data. In many states, we receive provider master files, which we use to identify new Medicaid Providers not currently in our network and support our recruiting efforts. If DHS provides such a file, we will integrate that data into our system and process as well. Additionally, Amerigroup will be in compliance with provider data submission requirements to DHS.

Our Core Operations System maintains comprehensive provider information, including demographic data, provider type, specialty codes, payment information, provider contract status, and affiliations. To support network analysis and our Provider Directory, our provider dataset includes information such as provider

capacity, locations, specialties, office hours, accessibility, and age/gender serviced. Once in the Core Operations System, provider data is available to other systems and processes, including member PCP assignment, claims processing and payment, utilization management (authorizations), and quality management (clinical service management). Provider data also feeds our Data Warehouse for reporting and analysis, including reporting that demonstrates compliance with member access standards.

Data Accessibility (13.1.3.2)

Amerigroup agrees to make data available to DHS and CMS as requested. In accordance with 42 CFR 438, subpart H, we will submit all data, including encounter claims, signed by Amerigroup's Financial Officer or authorized executive leadership attesting to the accuracy, truthfulness, and completeness of Amerigroup's data in the manner and timeframe requested by DHS. We are accustomed to making data available for our state partners including encounter data, regulatory reports, and other data TPL data provisioning requirements, provider provisioning requirements, and all others as required.

Amerigroup will Certify Data Provided to the State

Amerigroup acknowledges our understanding of the DHS requirement to certify data and documents submitted to the State. The certification will attest, based on the best knowledge, information, and belief as to the accuracy, completeness, and truthfulness of documents and data submitted to the State.

Amerigroup will submit the certification concurrently with the certified data and document. Data will be certified by the Amerigroup Iowa CEO or his or her designee.

System Adaptability (13.1.4)

Amerigroup expects that technical requirements may change over the life of our contract. To that end, our MMIS not only maintains sufficient capability and capacity to meet and exceed DHS' requirements, but the system is also capable of adapting to new technical requirements established by the State.

With the support of our national Information Systems Department, Amerigroup will have the resources necessary to make modifications to the claims processing edits or expansion of MMIS capabilities.

Amerigroup assigns a Customer Account Manager (CAM) as the technical liaison and single technical point-of-contact for the State. This Customer Account Manager attends regular State meetings and provides an accountable conduit into Amerigroup for State technical personnel.

Our national Information Systems Department comprises highly skilled and dedicated technology professionals experienced in managed healthcare information technology and committed to delivering real solutions to State customers. Within the Department, the average tenure of an employee is more than seven years, and 35 percent have more than eight years with the company. The Iowa implementation – and subsequent modification support – will be performed by a team with significant experience adapting and configuring our MMIS to support State programs. Operating a single MMIS across our state-sponsored health plan affiliates provides many key benefits and features to include:

- Resources and technology investments that are focused on common integrated platforms
- The ability to leverage technology investments and enhancements for one state health plan to others
- A broad and deep knowledge base across business operations and technical employees
- Best practices that can be shared across our National Medicaid Division

Our Information Systems Department consistently seeks opportunities to enhance system performance, capabilities, and functionality and to conform to future federal or State standards. We identify system changes in a variety of ways, including those needed to support new requirements, correct an issue, or respond to changing business needs. Our defined Change Management process governs the development and testing of changes and deployment to production, and confirms that changes are appropriate and implemented correctly.

Amerigroup will respond to Iowa changes by successfully introducing the necessary modifications to production environments. We measure success as a balance of timeliness and completeness of change implementation with minimal disruption to systems, services, environment, or stakeholders, members, providers, and State agency staff. Our process also dictates that appropriate details of changes to information technology resources must be recorded, and those changes assessed, approved, implemented, and reviewed in a controlled and secure manner.

We tightly integrate our MMIS change management and production control operations processes with our Systems Development Life Cycle (SDLC) methodology. Besides the traditional waterfall SDLC, we also use iterative software development methods, allowing us to choose the best methodology for each situation. For system changes, we develop an implementation plan that includes a timeline, milestones, dependencies, and risks. Development follows a process that includes standards for requirements gathering, analysis, design, tests, and implementation.

Information System Plan (13.1.5)

Question 13.1, #4

4. Submit a draft Information Systems Plan as described in Section 13.1.5.

Amerigroup has included its draft Information Systems Plan as Attachment 13.1.5-1 for receiving, creating, accessing, storing, and transmitting health information data. It is compliant with HIPAA standards for electronic exchange, privacy and security requirements (45 CFR 160, 162 and 164 and the HIPAA Security Rule at 45 CFR 164.308). In accordance with SOW Section 13.1.5.1 – 13.1.5.7, Amerigroup will comply with the requirements pertaining to the Information Systems Plan including:

- Planning, developing, testing, and implementing new operating rules, new or updated versions of electronic transaction standards, and new or updated national standard code sets
- Concurrently using multiple versions of electronic transaction standards and code sets
- Registering and certifying new and existing trading partners
- Creating, maintaining, and distributing transaction companion guides for trading partners.
- Providing its proposed staffing plan for the electronic data interchange help desk to monitor data exchange activities, coordinate corrective actions for failed records or transactions, and support trading partners and business associates
- Adhering to all HIPAA Privacy and Security Rules, state, and federal laws
- Applying the strategies used for our affiliate health plans for maintaining the most current information related to HIPAA mandates and defined or expected future compliance deadlines

We understand that a final plan, incorporating any changes requested by DHS, must be submitted within 30 days after the official submission of the draft plan, which will occur within 15 days of Contract execution.

Information System Staffing Model (13.1.6)

Question 13.1, #5

5. Describe your proposed information systems staffing model.

The Information Systems (IS) Department supports multiple disciplines, including programming, analysis, database management, website development, systems engineering, telecommunications, operations, network engineering, technical support, security, quality assurance, project management, and contract and financial management. Our IS employees are focused on the development, support, maintenance, and operation of our systems and infrastructure. In addition to being information technology professionals, IS employees are also experienced and knowledgeable in healthcare.

Our national Information Systems Department organizational structure is built on a model that centralizes common capabilities and infrastructure to minimize risk and improve economies of scale. The Department maintains some capabilities, such as application services, with a dedicated team centralized in individual business lines. For Iowa, this means that we perform key MMIS functions using a team of more than 1,200 technology professionals who are not only highly skilled in information technology, but also experienced in managed healthcare in the Medicaid environment.

This organizational structure sharpens our focus on the customers we serve—members, providers, and State agencies. We integrate Information Systems with our operations, including Claims, Care Management, Provider Data Management, Credentialing, Enrollment, and Member Services. By partnering technology and operations staff, we leverage the talents and experience of both while meeting Iowa requirements and delivering a cohesive solution.

Our national Vice President of Information Systems maintains direct responsibility for our National Medicaid Division's integrated, comprehensive managed Medicaid technology platform and monitors its integration with the enterprise-wide shared service areas, such as security and compliance.

Amerigroup will provide Iowa and its designees a primary technical point of contact to facilitate communication and assure timely response to all issues.

The differentiator for Amerigroup is the tight integration of this Department with our business operations departments. Our experience has demonstrated to us that complete coordination between the functions that the business units perform with the technology used to support them delivers the best value to our state partners. Our business operations staff works side-by-side with the Information Systems Department to define, test, and deliver a cohesive MMIS to support state Medicaid operations. Technology support for all health plans emanates from the corporate Information Systems team. Field Service Technicians located at each health plan provide onsite desktop and technology support.

We recognize the value of technology employees to smooth health plan operations. The Information Systems Department strives to hire experienced information technology professionals with a background in healthcare. We are also committed to employee retention and ongoing training.

Resources Monitoring System Performance

Amerigroup dedicates resources to staff the technical help desk to monitor system performance, identify and troubleshoot system issues, monitor data exchange activities, coordinate corrective actions for failed records or transactions, and support trading partners and business associates. Our technical help desk includes staff through our systems and Infrastructure teams including associate help desk, data center, data base, and application focused associates, who perform proactive monitoring 24/7 for data center servers, systems, and applications. We use a broad suite of tools for system monitoring. For example, we use IBM Tivoli to monitor system availability and performance including:

- Resource monitoring, including alerts for server infrastructure and hardware (CPU, memory, disc)
- URL monitoring and synthetic transaction monitoring including alerts for web-enabled applications
- Up/down status of infrastructure devices via ping
- Network and voice (VoIP) monitoring
- Application log file monitoring
- Mainframe monitoring
- E2E application transaction monitoring
- In-depth J2EE monitoring

Our robust monitoring practices reduce the impact of outages by immediately alerting support team members when an application is experiencing degradation or the system becomes non-responsive. In addition, our help desk staff automatically performs corrective action, such as restarting a service or deleting a specified file to avoid an outage entirely and tracks performance over time to identify trends in outages or to predict the need for additional resources. We capture underlying data for at-a-glance dashboard fulfillment.

We use the Precise monitoring tool for our Commercial-off-the-Shelf (COTS) applications and Oracle and SQL Server database systems to identify less than optimally performing components and address potential Service Level Agreement (SLA) issues before they even occur. We have more than 1,200 custom alerts for monitoring our MMIS. Amerigroup uses scripts to look at event viewer data. We review data for any errors and make sure that we highlight any new errors. Our refined process sends only the alerts that are the most critical to our system performance.

Another tool, TeamQuest® Analyzer, offers reporting on service performance and predictive modeling for capacity planning in real-time, which allows for fast root-cause identification and resolutions should issues be detected and enables us to consistently meet IT SLAs. These tools are deployed in multi-system environments and incorporate business measurements along with related IT Infrastructure metrics.

To monitor network communications 24/7, including voice and video, Amerigroup uses NetQoS, which monitors WAN and VoIP performance by measuring up/down status, latency, and throughput. We have a converged, multi-purpose network upon which voice, video, and application traffic travels. It provides efficiencies that enable us to employ monitoring and management tools to judge network performance. We instrument the environment with these tools to monitor performance on the network for our most critical applications and services. In addition to NetQoS, we employ point solutions to monitor certain elements of the environment such as routers and Private Branch Exchange (PBX), our private telephone network server.

Because we maintain redundant operations for key functions, including care management, the call center, and claims offices, we can use telecommunications and networking technology to enable transparent transition among remote sites to re-route member and provider calls quickly and seamlessly to an unaffected worksite, if necessary.

Our Information Systems team is on-call to respond to alerts on any issues, such as when a circuit is down or system latency occurs. Latency has a big impact on network performance; therefore, checking IP latency is an important part of network monitoring and of any network performance test. The networking and telecom team meets daily to review the events of the night before to review alerts and performance site-by-site. We address any exceptions to expected performance at these meetings.

HIPAA Compliance (13.1.7)

Question 13.1, #6

6. Describe your plan for creating, accessing, transmitting, and storing health information data files and records in accordance with the Health Insurance Portability and Accountability Act's mandates.

Amerigroup understands the sensitive nature of the information we collect and maintain to conduct our business and the importance of securing this information to protect the privacy of our individual members and providers. Our Information Systems Plan, included as Attachment 13.1.5-1, governs and guides our compliance policies and procedures. We are compliant with HIPAA mandates and National Provider Identification (NPI) requirements, and we have policies, processes, and infrastructure to maintain continued compliance. ***Amerigroup will make system and operational enhancements necessary to comply with new or updated standards at no cost to DHS.***

We carefully monitor HIPAA, Health Information Technology for Economic and Clinical Health Act (HITECH), and other federal and state requirements to identify the impact that changes in electronic transactions and code sets have to our systems and operations. When system changes are required for our continued compliance, we create a project, define the scope, assign resources, and monitor progress toward compliance. Amerigroup works proactively with healthcare partners and state agencies to facilitate and support HIPAA-compliant formats and procedures.

We have detailed policies and procedures in place to govern privacy and security including administrative procedures and safeguards, physical safeguards, and technical safeguards. We have a Corporate Privacy Officer as well as a Corporate Security Officer and our privacy and security information is available to all associates through our Corporate Intranet, called WorkNet.

Creating, Accessing, Transmitting, and Storing Health Information

Storage and access of historical member, eligibility, claims, and encounter data in a manner that supports ongoing processing as well as reporting and auditing is key to effective operations. Amerigroup has policies and procedures in place and can meet or exceed DHS's requirements related to historical data maintenance and access. Amerigroup's Core Operations System will serve as the system of record for information, such as member demographics and eligibility, provider demographics, claims adjudication, and authorizations, with the Data Warehouse housing claims from delegated vendors.

Amerigroup's Records and Information Management (RIM) Policy governs the creation, receipt, use, access, security, privacy, reproduction, retention, preservation, and/or destruction of business records regardless of media or format (including electronic and paper). Each Amerigroup health plan establishes and maintains recordkeeping systems that comply with legal, regulatory, and contractual requirements. We will hold our Iowa management accountable for assuring that RIM policies and procedures are implemented at all levels of the office.

For Iowa, we will store all electronic data and documents for no less than seven years in our live systems. Amerigroup retains or archives all records that are part of our designated record set in accordance with state and federal laws and regulations. Our designated record set includes enrollment, payment, claims adjudication, and case or medical management records concerning a member, and such other records used to make a treatment or payment decision about a member. Our Privacy Officer, in collaboration with our Information Systems Department and the business owners, is responsible for assuring that we retain the designated record sets stored in an electronic format.

The business owners who create or handle paper records that are part of the designated record set file, maintain, and retrieve paper documents. According to our documented procedures, paper documents must

be archived according to a defined schedule and stored in an off-site storage facility operated by Iron Mountain. These documents are placed in archival boxes, labeled, catalogued, and stored in such a manner that they can be retrieved easily when needed. We destroy all data and documents according to established procedures once they are no longer required. Paper documents are shredded; electronic versions of files are deleted; and electronic media formats such as CDs, diskettes, or magnetic tape are forwarded to the Information Systems Department for proper disposal.

The Core Operations System maintains an audit history of data updates, including time and source of change. We maintain audit trail information for no less than 10 years, online for no less than six years, and then make the information available from archive.

EDI Transaction and ICD-10 Compliance

Amerigroup is compliant with the most recent versions of all of the EDI transactions and the national code sets as required by the State: We are 5010 compliant. We interface with a number of clearinghouses to support data exchange between Amerigroup and our providers.

We maintain industry-standard code sets (ICD, CPT, HCPCS, CDT/ADA, revenue, and NDC), and we have processes in place to monitor and maintain code sets to deliver timely and accurate updates. We load updated code sets into our MMIS with effective dates so that transactions reference the correct information.

Amerigroup is on track to meet the ICD-10 compliance date of October 1, 2015. Our core systems modifications are complete and we are testing internally and externally.

To comply with Iowa Medicaid NPI requirements, Amerigroup will apply enhanced edits and checks regarding Provider NPI attestation in our claims processing and encounter management systems. We describe this in more detail in Section 13.4.3.

Amerigroup is committed to physical security within our facilities and data and network security within our MMIS. We store health information within Amerigroup's MMIS. Access to workstations and systems requires the use of a unique user identifier with a complex password that must be changed at regular intervals. Our access management function limits access to systems, applications, and Data Warehouses to only those individuals who have a legitimate business need for the data. Role-based security limits update capabilities and access to application functionality based on job role and responsibilities and the sensitivity of the data stored. Reports and alerts highlight unsuccessful attempts to access systems and websites.

The Information Systems Department controls network access through usernames and passwords and two-factor authentication controls remote access. We control individual user level access to systems through Active Directory group membership, in addition to application, file, directory, and drive-level security. We manage and protect our network using industry-standard tools.

Privacy and Security

Amerigroup has been compliant with the HIPAA Privacy and Security Rules since 2003.

As a covered entity, Amerigroup Iowa maintains compliance with the provisions of the HIPAA Privacy Rule, including designation of national Privacy and Security Officers through our national Privacy and Security Offices. In addition, we maintain a national Member Privacy Unit who focus on the fulfillment of member privacy rights requests; investigate and resolve privacy incidents; and maintain Medicaid privacy procedures. We maintain an infrastructure designed to support on-going compliance requirements throughout the company, including the development and adoption of policies and procedures and annual training of all employees. Please see our response to Question 2.15 for a complete description of our adherence to the HIPAA Privacy and Security Rules.

Electronic Mail Encryption (13.1.8)

In accordance with SOW Section 13.1.8, Amerigroup affirms that we can support DHS' Tumbleweed software interface. We understand that DHS may send an email to Amerigroup and we will be able to access and respond to the email via a link to the Tumbleweed server. Likewise, Amerigroup may send an email to DHS containing confidential information, and it will be transmitted securely and made available via an HTTPS link. Amerigroup uses ZIXCorp Secure eMail, a secure email program that encrypts emails and attachments identified as potentially having Protected Health Information (described in Section 6.1.9). In either case, we are able to comply with the State's requirement for electronic mail encryption.

Interface with State Systems (13.1.9 – 13.1.9.3)

In accordance with SOW requirements 13.1.9 – 13.1.9.3 and 13.5, Amerigroup is capable of receiving, processing, and reporting data to and from the DHS Medicaid Management Information System, DHS Title XIX Eligibility System, and the Iowa Department of Public Health (IDPH) Data System.

Amerigroup's MMIS electronically receives information through a file transfer process. We have experience accessing and interfacing with other state data systems, and we are confident in our ability to access the State's IDPH system as requested. We will see to it that substance use disorder treatment services are accurately documented and reported as required.

All interfaces into our Core Operations System, such as eligibility/enrollment and claim loads, are developed under the Information Systems Department's SDLC standards and rigor. We will customize the loads to meet DHS requirements and apply appropriate front-end edits to make certain that data going into the Core Operations System is clean, accurate, and compliant.

Amerigroup has the capacity to submit encounter data to the State's MMIS in the manner and timeframe specified by DHS. In support of other state plans, we currently load and evaluate encounter response files to identify errors in encounter data submitted to State Fiscal Agents. We mark rejected records in our Encounter Management System for investigation and remediation.

Connecting our MMIS to DHS Systems

Electronic exchange of information is a critical component of the implementation of the Iowa Initiative. Interfacing with state systems is an Amerigroup core competency. We have extensive experience with implementing against similar state requirements using common interfaces, such as eligibility, encounter, and claims files; and we will collaborate with DHS to identify sources of key data and information that will allow us to provide the best care for members.

Timely access to member information can drive meaningful outreach and care coordination strategies and result in a greater opportunity to improve health outcomes and manage costs. We will leverage member data from all available sources, including DHS, its affiliate agencies, and the Iowa Health Information Network. We will work with all to determine a schedule that will deliver the most current information to our care managers and predictive modeling process.

Maintaining secure, ongoing data interfaces is a strength of Amerigroup's Information Systems Department team, which has more than two decades of experience exchanging data with ancillary vendors, state partners, and others, including enrollment brokers, fiscal agents, and intermediaries; external quality review organizations; and recovery audit contractors. We are 5010 compliant and currently support interfaces in the HIPAA standard X12 and NCPDP formats. Additionally, we support HL7 and many state-specific formats, among others. When establishing new data interfaces, we collaborate with the external entity to identify or confirm detailed data transmission requirements, and establish and test connectivity and exchanges. For each data feed, we coordinate the format, timing, and delivery mechanism with DHS or other external entity. Upon receipt, we validate data feeds for completeness and credibility, and then we load it into the production environment.

Data Exchanges – Method, Triggering and Frequency

Amerigroup accomplishes data exchange interoperability between our systems in one of three ways:

- **Web services-based interfaces mainly for real-time integration.** Asynchronous interfaces exist between all of our core systems. We are currently processing 7mm transactions per month between environments. We use SOAP/Web Services for smaller transactions where large batch file processes would be too cumbersome, inefficient, and slow. For instance, single member eligibility lookup can be accommodated in real time rather than awaiting a file up load, processing, and validation of the file and then sending back a response file.
- **Batch file-based interfaces using Extract/Transform/Load (ETL) tools.** Interfaces used to move data from our core systems to a reporting or Data Warehouse environment often use ETL. These interfaces are typically batch-based interfaces that run on a scheduled frequency based on business requirements (daily, weekly, or monthly, for example). Our enterprise scheduling software manages job control and scheduling for these interfaces. Interfaces are built using industry standard tools designed for moving and integrating large volumes of data quickly. These ETL tools allow for Metadata management and code re-use within the development process to ensure consistency of data-length, data types, and data format across systems.
- **Storage system-based data snapshots or replication.** These interfaces are mainly storage system or database system replication-based interfaces that are used to maintain a secondary online or near line copy of a production system for high availability or disaster recovery

Our data exchanges between key production systems fall into two main categories: third party integrations and custom built. For third party integrations, we rely on vendors to provide the integration between purchased products. Examples of these interfaces include core operations system to prospective payment system, core operations system to care management system, and core operations system to clinical editing software. These interfaces are typically real-time and web services based.

We use custom-built interfaces where our core systems have pre-built Application Program Interfaces and extensibility. These interfaces allow us to develop specific functionality to meet business needs when requirements are not met by standard system functionality.

Secure Connectivity

Our Information Systems Department has experience establishing appropriate protocols for connectivity and developing solutions that foster interoperability and conform to open systems architectural standards. While the majority of our data exchanges are performed using Secure File Transfer Protocol (SFTP), we also maintain data exchanges using Hypertext Transfer Protocol Secure (HTTPS) and Virtual Private Network (VPN). We are confident using multiple methods and we will continue to collaborate with DHS and other external entities to use the best method for each data exchange.

Amerigroup applies comprehensive system and process checks to monitor data integration and confirm that data is successfully imported and exported. Information Systems Department staff monitor data interfaces to address any transmission or data errors, and confirm successful processing.

Use of Common Identifier (13.1.10)

In accordance with SOW requirement 13.1.10, Amerigroup will use common identifiers, such as member identification numbers, to link databases and computer systems. Our MMIS stores all required member information, including any State-assigned member identification number, which may include Social Security numbers.

Unique Member IDs across Systems

Amerigroup assigns each member a unique number that allows us to track and manage the individual throughout all systems within our span of control, including our relationship with subcontractors. This

number stays with the member even as there are changes in eligibility categories and products. Our systems manage variation in the member's eligibility category and product eligibility through uniquely dated spans within the Core Operations System. In addition to tracking a member by this specific number, Amerigroup also maintains the member's state-assigned Medicaid ID, Social Security number, and Medicare number, if provided. Our understanding and experience with state-assigned identifiers extends to a custom built extension, State Assigned Member Identifier (SAMI), to our Core Operations System. In SAMI, we are able to track and associate multiple identifiers for a member beyond the single currently assigned Medicaid ID, when they exist.

Identification of Duplicate Member Records

During the automated load process, we compare several data elements, such as name, address, date of birth, and Social Security number, to identify potential duplicates. The system pends for review prior to loading to avoid creation of most duplicates. The enrollment team will work with DHS to make a final determination regarding the disposition of identified records and update member data accordingly.

We perform a secondary check for duplicate member records as part of a weekly enrollment data review. We review any duplicates identified during this process to determine if claims history is present for both member IDs. If both member IDs have claims history, we work with the Claims Department to determine which member ID to keep, and we move the claims. We also maintain a cross-reference that links the active member ID with the inactive one.

We understand and acknowledge that we are prohibited from publishing, distributing, or releasing Social Security numbers of members.

Electronic Case Management System (13.1.11)

Question 13.1, #7

7. Describe your proposed electronic case management system and all information which is tracked in such system.

Care Management System Supports Members

Our care management system integrates information and data to support community-based management activities and care coordination in compliance with the State's 1915(c) and 1915(i) HCBS waiver programs and the Law. Specifically, our MMIS is able to capture and track:

- Key dates and timeframes such as:
 - Enrollment date
 - Date of development of care plan
 - Date of care plan authorization
 - Date of initial service delivery
 - Date of level of care and needs reassessments
 - Dates of care plan updates
 - Enable notification of Community-Based Case Manager, Case Manager or Care Coordinator of care plan, assessment, and reassessment deadlines
 - The care plan
- All referrals
- Level of care assessment and reassessments
- Needs assessments and reassessments
- Service delivery against authorized services and providers

- Actions taken by the Community-Based Case Manager, Case Manager or Care Coordinator to address service gaps
- Case notes

We fully integrate our care management system into our MMIS. It collects, organizes, and presents information to enable management and coordination of member care and support and facilitate communications between the member and participants of the member's care team.

Member utilization data—such as claims history, authorization, immunization records, lab results, and care and disease management data, as well as UM data from our subcontractors, and external entities—are readily available in an organized format with tools for Care Coordinators to identify and manage members' needs.

Member 360 consolidates member data and information from various sources into a single record to deliver a holistic picture of the individual's utilization, Case Management services, and gaps in care. Member 360 includes information such as member health risk assessments, care plans, longitudinal health records, and clinical data. Member information is accessible through numerous dashboards. Please see Section 9 for a complete description of Amerigroup's Care Coordination Program.

Supporting Care Coordination and Management

Our care management system provides Case Managers with the information and tools they need to develop, maintain, and monitor care plans that support member-centered medical coordination. Specifically, the system:

- Consolidates all available member information from internal and external sources (such as DHS paid claims, if available) to present a comprehensive picture to help the Care Manager evaluate current health status and identify necessary services and outreach activities for the member or their providers (Available member data includes claims history, authorizations, lab results, immunizations, and demographic information.)
- Supports the Care Manager, the Medical Home Provider, and other interdisciplinary team participants in developing an appropriate care plan for the member; and it also allows the Care Manager to track and record individual interactions with each member
- Enables the Care Manager, in conjunction with other members of the interdisciplinary team, to:
 - Access available member information, including:
 - Demographic information
 - Initial Health Risk Assessments and Comprehensive Health Risk Assessments
 - Clinical conditions
 - Claims and authorization history
 - Medical Home Provider
 - Treating Providers
 - Prescriptions, including dosage and last refill date
 - Lab results
 - Access comprehensive clinical assessment instruments to evaluate member healthcare needs
 - Review and import evidence-based clinical guidelines into the care plan
 - Document the care plan, including short- and long-term goals, barriers, milestones, and interventions
 - Document progress toward meeting goals
 - Set follow-up reminders and interventions
 - Modify the care plan as necessary to improve member health outcomes

- Record interactions with members, their authorized representatives, or the provider in support of the care plan, including telephone calls, care coordination activities, clinical interventions and outcomes, education information, care coordination across providers, and referrals
- Deliver the care plan and information on interactions and services provided to the member to the interdisciplinary team

Our care management system is built on a series of screens that allow Care Managers to view and document all aspects of a member's health status and care plan. The amount of detail in the care plan may vary depending on the complexity of the member's condition, identified needs, and level of care coordination performed. Each care plan includes short- and long-term goals, interventions, and outcomes. The member's risk stratification results, results of screenings and assessments, engagement with the medical home provider, and preventive services are also included in the care plan.

Electronic Visit Verification System (13.1.12)

Question 13.1, #8

8. Indicate if an Electronic Visit Verification (EVV) System is proposed and what methodologies will be utilized to monitor Member receipt and utilization of HCBS.

Through our affiliates, Amerigroup has experience in implementing and monitoring HCBS services through an EVV in other states and working collaboratively with other MCOs. For services to have positive outcomes, we must be able to confirm that the services have been provided. To monitor member receipt of HCBS, Home Health Services, Hospice, and EPSDT utilization for Iowa, ***we recommend that all selected MCOs come together to select a single EVV vendor for the State's program. This approach will simplify implementation and reduce administrative burden for providers and personal care attendants/caregivers*** so that they only have a ***single consistent system*** to use. Within 30 days of the Contract award, DHS and the MCOs (and their IT teams) would meet and then reach out to EVV vendors to solicit presentations, and then select a single EVV. Through this process of collaboration the MCOs would identify, review system requirements, qualify and select a single EVV vendor to engage for this program.

Included in the final selection then the MCOs with the approval by DHS would define the methodologies utilized to monitor receipt and utilization of services.

- Select a vendor that offers telephone, mobile and computer based system to verify service visits occur and document the precise time service provisions begin and end.
- Verification is the key prior to paying claims and helping to guard against fraud and abuse while improving care delivery.
 - Authorization validation matches to visits prior to claims payment
- Alerts:
 - Identification of late/missed visit alerts through text, email and/or dashboard reports
 - Gives providers and/or Case Managers the necessary information to ensure emergency back up protocols can be activated in a timely manner
 - Instantly informs supervisors of missed visits, late visits, and other problem situations
- Comprehensive Reporting:
 - Reporting packages that include daily and date range reports
- Consumer Direction:
 - EVV would be made optional for individuals who have selected to enroll in the self directed program Consumer Choices Option

- Training for providers:
 - Training materials would be created for the EVV process for providers
 - MCOs would utilize the same training documents and process to provide consistency and administrative ease for providers as they transition from FFS to Managed Care
 - Providers can attend training sessions held by the EVV vendor in collaboration with the MCOs.
 - MCOs would make the materials available in their training sessions and online through our provider websites.

Amerigroup believes that the approach to selecting a single EVV is the ideal solution to aid providers as they transition from FFS to Managed Care. Amerigroup offers our experience to bring the MCOs and DHS together to select a single EVV vendor should we be one of the selected MCOs in Iowa.

Clinical Records (13.1.13)

Question 13.1, #9

9. Describe in detail how clinical records, as described in Section 13.1.13 will be maintained in your information system.

Amerigroup will maintain records relating to Iowa Initiative services and expenditures, including reports to DHS and source information used in preparation of these reports. The records will include financial statements, records relating to quality of care, clinical records, and prescription files. Our MMIS will store electronic data and a set of detailed policies and procedures that govern the maintenance of records across our entire operations. Amerigroup complies with 45 CFR 164.530(j)(2) and maintains records that disclose the extent of services provided to our members for seven years or for the duration of contested case proceedings, whichever is longer.

Amerigroup's MMIS Maintains Complete Information on Services Provided to our Members

Amerigroup's MMIS maintains a history of member claims processed for all services—medical, behavioral health, pharmacy, vision, and transportation. As described in our response to Question 13.1.1, Amerigroup's Core Operations System, as part of our MMIS, will serve as the system of record for all provider, member, claims, and authorization data. Our MMIS houses the information required to authorize and monitor services and provides the data necessary to perform quality assessments and other evaluation activities.

All updates to this information will occur through the user interface or through application-specific data loads. All other applications interfacing with the Core Operations System map to its data structures to enable consistency in naming, formatting, and validation and to drive data quality and reliability.

We understand that upon conclusion of the Contract, all clinical records generated by Amerigroup become the property of DHS. We also understand that, upon request, Amerigroup will transfer records to DHS at no additional cost.

Information Maintained in Clinical Records

Amerigroup will maintain and require that all providers and subcontractors maintain clinical and medical records in an updated, detailed, and organized manner in compliance with our established Clinical Records Policies and Procedures. Medical records serve as a blueprint for the providers and members in understanding the member's current healthcare needs, prior treatment plans, and short- and long-term healthcare objectives. These records are essential in ensuring that the member receives medically necessary services delivered within the highest standards of quality and timeliness. Amerigroup policies

assure that clinical records allow for effective and confidential member care and that medical records are compliant and reviewable for administrative, civil, and/or criminal investigations or prosecutions. We will comply with the requirements for maintaining clinical records as described in SOW requirements 13.1.13.1 – 13.1.13.11 Clinical Records, including but not limited to:

- We document member diagnoses and assessment scores in our care management system; diagnoses are also maintained in our Core Operations System.
- We determine and document members' level of functioning in our care management system.
- We store clinical services requested, services authorized, substituted, and provided in our Core Operations and care management systems.
- Documentation of services not authorized, the reasons for the non-authorization based on IAC citations, and substitutions offered to the member are documented by the Medical Director in the authorization decision. When substitutions are applicable, they rationale is documented in the MMIS. In addition, UM reports capture denials and the reason for the denial.
- Care Managers enter missed appointments and subsequent attempts to follow-up with the member as part of their case notes that are captured in our care management system.
- Care Managers follow up (and document this follow up) on members discharged from the ER without an admission for inpatient treatment and observation in our Core Operations Systems.
- We document joint treatment planning, clinical consultation, or other interaction(s) with the member or providers and/or funders providing services to the member, including the name(s) of people who are integral to member treatment planning and who access multiple services, in our care management system.
- We document any Medication Therapy Management by Amerigroup clinical staff in our care management system
- We capture assessment and determination of level at admission, continued service, and discharge criteria in our care management system.
- We track in our Core Operations System the discharge plan for each member discharged from 24-hour services reimbursed through Amerigroup, including the destination of the member upon discharge. The destination of the member upon discharge is tracked in the UM Notes field. Part of our normal discharge planning includes identifying the patient's destination. We start working on the discharge plan on Day One of the 24-hour services stay and document final destination upon discharge.

Documentation in the record will reflect the quality, appropriateness, and timeliness of services provided.

System Problem Resolution (13.1.14)

Question 13.1, #10

10. Submit system problem resolution plans and escalation procedures.

Amerigroup has included its plans for system problem resolution and escalation procedures as Attachment 13.1.10-1. In compliance with SOW Section 13.1.14, Amerigroup agrees to notify DHS immediately upon identification of network or software failures and sub-standard performance affecting our core operations, specifically members and providers. In addition, we agree to conduct triage with DHS to determine the appropriate severity level or deficiencies or defects and determine timelines for fixes.

Communication in the Event of a System Problem

Clear and immediate communication is vital when systems are unavailable. An Amerigroup-assigned Customer Account Manager will be responsible for communicating systems issues. In the event an issue arises, the Customer Account Manager will provide updates via phone and/or email of any core system availability issues.

We will notify DHS immediately upon discovery of a problem that may indicate network hardware or software failures and sub-standard performance, and that may jeopardize availability of critical functions. Communication will include triage with designated DHS representatives regarding the impact to critical path processes such as enrollment management and encounter submission.

Escalation Procedures (13.1.15)

Amerigroup has included its plans for system problem resolution and escalation procedures as Attachment 13.1.10-1. Amerigroup agrees to notify DHS and other stakeholders of any system problems not considered a "disaster" by definition (according to SOW Section 13.2.1) subject to DHS review and approval.

Release Management (13.1.16)

Question 13.1, #11

11. Submit sample release management plans.

In accordance with SOW requirement 13.1.16 Release Management, Amerigroup has included **Sample Release Management Plans** as Attachment 13.1.11-1. We will submit a final plan to the DHS within 30 days after the *first* submission of the plan, incorporating any changes requested by DHS, as requested. In doing so, we will execute, comply with, and provide the services set forth in the DHS-approved plan. We understand that any changes to the plan must be approved by DHS in advance and subsequent updates made to the current version of the plan.

Implementing System Changes and Maintenance

Systems changes are inevitable, whether necessary to correct a problem or to conform to future federal or DHS standards. At Amerigroup, proven Change Management processes enable our team to manage and coordinate change requests and releases to the production environment. This includes infrastructure, network, system components, protocols, configurations, hardware, and software related changes.

The Change Management Process is built upon the concept of a Change Control Board (CCB). There are two types of control boards in the process: the Change Advisory Board (CAB) and the Change Control Board (CCB). The CAB is a team of technologists that review, approve, monitor, schedule, and govern changes that occur in the production environment. They also assure that scheduled changes in a given maintenance window are compatible, mitigating risk as needed. The CCB is responsible for approving, reviewing, monitoring, and governing changes for all high risk and high impact requests for change.

We have a comprehensive set of policies and procedures that govern development and review of Change Notification Requests (CNRs) as part of the Release Management function. For high-risk and high-impact changes, the CCB is responsible for approving, reviewing, monitoring, and governing changes. System tools and strict procedures safeguard systems from unauthorized modifications.

Systems Changes and our Systems Development Life Cycle

Our information systems change management and version control processes are tightly integrated with our Systems Development Life Cycle methodology. For all system changes, the Information Systems Department follows formal change notification policies and procedures that include standards for

requirements gathering, analysis, design, tests, and implementation. Figure 13.1-3 depicts our Systems Development Life Cycle.

Figure 13.1-3. Amerigroup Systems Development Life Cycle

The Information Systems Department uses change management software during maintenance and implementation of all application software and documentation. Changes to documentation begin at the initiation of systems requirements and continue through testing. We use the updated documentation as a basis to train all employees affected by the change before deployment.

Our documented policies and procedures include all methodologies required to manage the life cycle of our applications and systems. We have procedures, templates, checklists, and processes that enable systems projects to move from a concept through requirements gathering, requirements tracking, systems design and development, complete systems testing, user training, documentation updates, and controlled deployment of new or changed source code. The processes are documented and repeatable. We monitor the processes and continuously look for process improvement activities.

DHS Notification of Systems Changes

Systems availability is critical to efficient operations in Iowa and we will schedule all system maintenance that results in systems unavailability during times that do not compromise critical business operations. Our usual practice is to schedule system down time on weekends. If we must schedule maintenance during normal systems operational hours, we will coordinate with DHS for scheduling and approval. Amerigroup is committed to compliance with SOW Section 13.1.16 Release Management. DHS will be notified at least thirty calendar days prior to the installation or implementation of minor software and hardware upgrades, modifications or replacements, and at least 90 days before major changes are made to these core processes:

- Claims processing
- Eligibility and enrollment processing
- Service authorization management
- Provider enrollment and data management

We will make sure that system changes or upgrades are accompanied by a plan that includes timelines, milestones, and testing to be completed prior to implementation and make sure that such plans are delivered to DHS upon request in the timeframe and manner specified by the State.

Environment Management (13.1.17)

As an implementation best practice, we have invested in multiple test environments that allow us to support simultaneous testing cycles and multiple initiatives. This allows a test environment to be available for follow-up and integrated testing while other specific testing is occurring in another environment. This testing environment will be available to support testing for the Iowa rollout. Thus, the environments for development, system testing, and User Acceptance Testing remain separate from the production environment. In fact, Amerigroup deploys many separate environments including Development, Training, Quality Assurance, and Production among others.

Rigorous testing of data exchanges is a critical component of our implementation plan. We understand that it is our obligation to demonstrate to DHS that data exchanges between the Fiscal Agent, Enrollment Broker, and Amerigroup systems are complete, accurate, and reliable.

Contingency and Continuity Planning (13.2)

Question 13.2, #1

1. Provide a detailed disaster recovery plan and contingency and continuity planning documents.

Continuity Planning (13.2.1)

Amerigroup Iowa (Amerigroup) will maintain a focus on effectively responding to disasters with minimal impact on all constituencies. Amerigroup's Business Continuity and Disaster Recovery plans will safeguard continuation of established services and systems and address our business processes, applications, and platforms. Each business unit, whether an individual health plan or a national support area (such as Claims, Provider Data Management, Information Technology, or Legal), develops and maintains a Business Continuity plan specific to the operational needs of its customers and stakeholders.

Amerigroup understands the importance of Disaster Recovery and Contingency/ Continuity Planning. Our affiliates successfully maintain and execute these plans in other states. Although we understand it is helpful to review potential plans, per our parent company, Anthem, policy we do not include our Disaster Recovery and Contingency/Continuity Planning documents in our proposals as we consider them company confidential. We strongly believe that we need to protect the detailed information our planning materials contain to avoid inappropriate use. However, despite this strict access control we are both willing and ready to provide DHS visibility into the documents upon request through an online meeting or during a site visit. While we are not providing actual planning documents, we do provide an explanation of our plans and planning methodology.

We maintain Business Continuity plans for operations and Disaster Recovery plans for our systems. Together, these plans represent a detailed blueprint of our preparation for and planned response to any emergency or business disruption. Plans are "scenario neutral" and focus on unavailable resources rather than the event that caused the loss. This approach allows us to respond to any event that disrupts access to necessary services or resources.

In our plans, a disaster includes both the day-to-day types of occurrences that could jeopardize processing integrity or temporarily disable or interrupt operations, as well as a catastrophic event such as a major weather event or natural disaster, human error, pandemic, malfunctioning hardware or electrical supply, major telecommunications outage, or computer virus, and includes any other kind of occurrence that severely inhibits the State's ability to conduct daily business or severely affects the required performance, functionality, efficiency, accessibility, reliability, or security of our system.

We design our Disaster Recovery plans to protect against data loss and provide recovery from major unplanned interruptions to computing services, including system infrastructure, data, and applications. Several other enterprise programs also enable maintenance of critical business functions:

- **The Safety Program** provides a guide for a safe workplace for employees, contractors, and visitors
- **The Emergency Management Program** specifies overall response, command, and control before, during, and after an incident or event causing a business disruption
- **The Business Continuity Program** documents the recovery strategy of critical business processes

Amerigroup's Business Continuity plans include access to a substantial workspace recovery capability using a combination of resources, including network redirection of work, national-owned worksite

recovery capacity, mobile recovery resources, and secure satellite connectivity for voice and data. Our Business Continuity Program aligns the business requirements of the operating units and the deliverables of support areas to meet stakeholder commitments following an unplanned event. Open communication is key in our continuity activities. We will work and coordinate with DHS and appropriate contractors to help assure a continuous delivery of services.

We believe that comprehensive Business Continuity and Disaster Recovery planning, coupled with continuous readiness, is an integral part of our responsibility as an employer, partner to DHS, and service provider to our members and providers.

Contingency Plans for Essential Business Functions

Technology tools enable our employees to seamlessly access necessary systems remotely to facilitate continuing operations for DHS. Through the use of our Citrix Access Gateway, employees can use critical applications securely from any location with Internet access. Regardless of the nature of the emergency, redundant operations will minimize disruption for our DHS members and providers.

Disaster Recovery Site

The disaster recovery site, or “hot site,” for our Virginia Beach data center is located in an AT&T Internet Data Center (IDC) in Dallas. The hot site includes equipment to support our most critical medical management and member/provider contract applications, including our core operations system, clinical criteria, Fax II/Rightfax, imaging and workflow document management, and call center workforce management. There is continuous real-time replication between the production data center in Virginia Beach and the hot site to keep critical applications in sync with production. The AT&T IDC facility is 142,000 gross square feet with 72,150 square feet of raised floor in the data center. It is a tier 3-4 data center with N+1 redundancy on all critical infrastructure systems.

The Dallas IDC provides a secure, reliable environment for the internal disaster recovery hot site. It also provides a very scalable environment with tremendous capacity for additional space, power, HVAC, UPS, and all other critical infrastructure components as our requirements increase over time.

General Responsibilities (13.2.2.1-13.2.2.5)

Strong leadership, timely notification, and activation of our Business Continuity and Disaster Recovery plans are critical to the management of any incident that disrupts normal business operations. Generally, the time frames for notification are based on the impact and severity of the incident and may vary from immediate to a few hours. After the initial assessment and according to the documented plan for recovery, notification is sent to key management and support areas to advise or engage staff as needed. The Amerigroup Health Plan Administrator or Director of Operations will notify DHS of an incident impacting our Iowa High Quality Healthcare Initiative operations. A number of emergency notification system (ENS) methods are available to support contact and notification between resources during an incident.

Notification of Members and Providers

Amerigroup knows that communicating promptly and effectively with our members and providers is critical in an emergency or service disruption. Consequently, our Business Continuity and Disaster Recovery plans include steps to notify members and/or providers depending on the type of event and what services are unavailable. Notification methods may include:

- **Member and Provider Websites** — In addition to maintaining ongoing emergency procedures on our website and in member and provider manuals, we may post alerts on our website notifying members and providers of a service disruption and how it impacts their ability to access services
- **Automated Calls, Text Messages, and Email Messages** — We can generate automated telephone calls, text messages, and emails to communicate information to our members and providers

- **Personal Calls** — Amerigroup employees may make personal telephone calls to vulnerable members, including those in case management
- **Call Center** — Our Member call center and Provider Helpline employees will provide up-to-date information to callers on how to continue accessing services
- **Local Media** — Local radio and television can be used to disseminate emergency information

Maintaining Member Access to Information and Services

Amerigroup is committed to maintaining member access to information and services in any emergency. We will use our Member call center, member website, and member self-service voice portal to provide information, and our Business Continuity and Disaster Recovery plans contain processes to maintain availability of these services before, during, and after an emergency or business disruption.

We will also mobilize our health plan employees, including case managers, member and provider services representatives, and other medical management employees, to assist members with access to information and services before and during a declared incident.

Helping assure data is safeguarded and accessible is a key element in our disaster recovery planning. We store copies of key files in secure off-site locations. We back up data files daily, as well as transactions, program libraries, job scripts, operations procedures, and systems documentation. Our technology tools enable our employees to seamlessly access necessary systems remotely to facilitate continuing operations for DHS.

Information systems employees are assigned to disaster recovery teams that are responsible for and have developed contingency plans to respond to worst-case scenarios. The disaster recovery teams take ownership of the recovery of business operations by reviewing all documentation, making recommendations, alerting the disaster recovery contingency planners of system changes and upgrades, and participating in the testing of the Disaster Recovery plans.

Amerigroup is committed to conducting annual exercises to test current versions of information system contingency and continuity plans. Annual exercises can be coordinated with the approval of DHS. Reports of activities performed, results of the activities, corrective actions identified, and modifications to plans based on results of the exercises will be recorded and shared with DHS.

IS Contingency Planning and Execution (13.2.3)

Amerigroup is experienced and able to meet the State's needs in IS contingency planning and execution. Amerigroup agrees IS contingency planning will be developed in accordance with 45 CFR 164.308. Amerigroup contingency plans will include: (i) Data Backup plans; (ii) Disaster Recovery plans; and (iii) Emergency Mode of Operation plans. Application and Data Criticality Analysis and Testing and Revisions procedures will be addressed within the required contingency plans. Amerigroup agrees to be responsible for executing all activities needed to recover and restore operation of information systems, data, and software at an existing or alternate location under emergency conditions within 24 hours of identification or declaration of a disaster. Amerigroup agrees to protect against hardware, software, and human error. Further, we agree to maintain appropriate checkpoint and restart capabilities and other features necessary to help assure reliability and recovery, including telecommunications reliability, file backups, and disaster recovery.

Backup Requirements (13.2.4)

Section 13.1.2.3 provides a robust description of our backup capabilities. Amerigroup not only meets, but also exceeds the State's backup requirements for safe storage and accessible data. As described in Section 13.1.2.3, Amerigroup agrees to maintain full and complete backup copies of data and software in accordance with the timelines. We will maintain a backup log to verify the backups were successfully run,

and a backup status report will be provided to DHS upon request. Amerigroup maintains off-site storage for our Virginia Beach data center backups in Richmond, Virginia. On the Contract end date or termination date, all DHS-related data will be returned to DHS.

Data Exchange (13.3)

Question 13.3, #1

1. Describe your process for verifying member eligibility data and reconciling capitation payments for each eligible member.

Member Enrollment Data (13.3.1)

Retrieve and Integrate Enrollment Data

Our National Medicaid Division manages eligibility (enrollment) files in the HIPAA X12 834 format, as well as other formats received from state customers for each of our affiliate health plans. Amerigroup Iowa (Amerigroup) will meet or exceed all DHS requirements for eligibility/enrollment processing. Recognizing that the enrollment process depends on the timely availability of accurate member data, we leverage technology to streamline the data exchange processes while facilitating transaction tracking and reporting.

The national Enrollment Operations Department's mission is to process accurate and timely membership data into our Core Operations System and maintain the data to respond to changes in status, primary care provider (PCP) assignment, and demographic information. We will establish scheduled FTP downloads across secure connections with DHS to enable timely receipt of the enrollment files. After successfully completing HIPAA compliance checks, DHS-specific data edits, and business rule validations, the enrollment process will create and/or update member records in the Core Operations System. The system pends Individual Benefit/Enrollment records with identified issues so that the complete records can be loaded. We review the pended records and, where possible, correct problems and trigger records for processing. When the issue cannot be immediately resolved, an analyst consults with functional operations staff to obtain the missing information necessary to process the enrollment record. At various checkpoints during the enrollment process, reports are generated to balance records processed and identify any member errors that need to be corrected and reprocessed to accomplish a complete load into the system.

We structure our enrollment load processes to achieve optimal processing time and accuracy. The process incorporates numerous technology efficiencies that facilitate timely access to member data. As an example, rather than reloading every record within the entire 834 weekly Benefit/Enrollment Reconciliation file, we process only member data that has been changed or added since the last file processed. This significantly reduces the number of transactions and time to process. Once processed in our system, we will transmit enrollment/benefit data to our subcontractors via X12 834 transactions.

Identification of Duplicate Member Records

The automated member enrollment load process compares several data elements, such as name, address, date of birth, and social security number, to identify potential duplicates. The system pends Individual Benefit/Enrollment records with identified issues but continues processing/loading the remaining records in the file. The enrollment team will work with the State to make a final determination regarding the disposition of possible duplicate records and update member data accordingly. A secondary check for duplicate member records occurs as part of a weekly enrollment reconciliation data review. Any duplicates identified during this review are resolved by merging the member records when claims history

is not present for both member IDs. If claims history is present for both member IDs, a link between the records is created.

Maintaining Audit Trails of Data Changes

Whenever a change is made to member information, a history of the update transaction is automatically created, including the time and source of the change. Audit trail data through our Core Operations System is available for inquiry and reporting. We maintain audit trail data online for the duration the State requires, but not less than six years. Once archived, audit trail data is available for recovery in 48 hours or less.

Assigning PCPs

Amerigroup's Medicaid Management Information System (MMIS) will meet the requirements for PCP auto-assignment. As part of enrollment file processing, Amerigroup will receive notification of a newly enrolled member. If the member enrollment data does not indicate a PCP has been chosen, the system will assign a PCP for the member. The PCP assignment will take into consideration a current member-provider relationship or existing provider relationships with family members, if the data is available. The system will also consider other factors such as the member's location or language preference and will determine the PCP's capacity to accept the member assignment. If a member is a dual member then the system will bypass and not assign them a PCP as dual members are not required to have a PCP. If the dual member calls and requests that we identify their PCP, then the call center will assign them to their selected PCP.

Within five days of auto-assignment, we will provide the member with PCP contact information, as well as information on the process to change PCPs. Please refer to Section 13.1 for further information on assigning PCPs.

Reconciling Enrollment to Capitation Payments

Amerigroup has additional operational processes to reconcile the premium payments with member enrollment each month. Our process compares the 820 premium payment transaction files we receive from the State against member enrollment data provided on the State 834 file and loaded into Facets. Each month, the system generates a billing file from 834 enrollment data and compares the data to the 820 premium files. Additionally, a member-to-member comparison looks for discrepancies that could be the result of the following:

- Members on the premium 820 file who are not in our MMIS
- Members in our MMIS who are not on the premium 820 file
- Members whose data differs between the premium 820 file and our MMIS

As in the monthly eligibility reconciliation, discrepancy reports receive careful review to identify the reason for the discrepancy. The Premium Reconciliation Manager and the Enrollment team collaborate with the Iowa Finance and Accounting team to investigate discrepancies. If we can resolve the discrepancy, we update the member files in our MMIS. If we cannot resolve a discrepancy, we will notify the State. Resolved discrepancies will be processed during the next reconciliation cycle and will, therefore, not appear on subsequent reports. The Enrollment team tracks the results of each monthly reconciliation and provides analysis and reporting information to the Finance and Accounting team.

Member Enrollment Data Exchange (13.3.1.1)

Amerigroup fully meets and exceeds the requirements for member enrollment data exchange. We will maintain stringent operational processes and controls to support the Iowa Initiative eligibility and enrollment data exchange requirements. We are HIPAA-compliant and capable of receiving 834 enrollment files within 24 hours of receipt. Our MMIS assigns each member a unique identifier that is

used on all member-specific materials and member-related processing. We cross-reference our assigned member ID to other numbers such as SSNs and State-assigned member numbers.

As we outlined in Section 13.3.1, our daily enrollment load process includes logic that identifies potential duplicate members. Our processes are proven and results focused, based on years of experience in multiple markets. We have succeeded in designing, testing, and deploying the enrollment and eligibility data exchange early in the implementation project plan. Having a tested data exchange accomplishes two key objectives: it serves as a needed prerequisite for claims, authorization, and encounter testing; and it positions us to begin processing actual 834 eligibility and enrollment files months before the start of operations to distribute materials and identification cards to our members.

Reconciliation Process (13.3.1.2)

As described in Section 13.3.1, we have a robust reconciliation process. Amerigroup uses the monthly 834 file to reconcile member eligibility records. Our process compares the State's 834 file to member eligibility data in our MMIS to identify the following:

- Members on the 834 file who are not in our MMIS
- Members in our MMIS who are not on the 834 file
- Members whose data differs between the 834 file and our MMIS

We carefully review discrepancy reports to identify the reason for the discrepancy and then take appropriate action. We will notify the State of any eligibility discrepancies within 10 days.

Provider Network Data (13.3.2)

Amerigroup agrees to submit provider network information to the State in the time frame and manner defined by the State. Amerigroup agrees to keep provider enrollment and disenrollment information up-to-date.

Claims Processing (13.4)

Question 13.4, #1

1. Describe your capability to process and pay provider claims as described in the RFP in compliance with State and Federal regulations.

Amerigroup Iowa (Amerigroup) is committed to adjudicating claims in a timely, accurate, and provider-friendly manner. All claims that pass initial edits and are accepted into our highly automated claims processing system, including adjustments, are considered clean claims. Each of our affiliate health plans is required to meet a specific percentage of claims payment within a designated time period based on individual state and program requirements, so overall claims operations are designed to facilitate claims aging and workflow management. We do not distinguish between in-network and out-of-network claims payment timeliness, and our claims payment timeliness reporting includes both paper and electronic clean claims.

Our core operations system generates daily, weekly, monthly, and ad hoc reports that allow leadership to gauge processing performance, identify problem areas, and monitor quality performance. These reports detail the number of pended claims by aging category and allow us to quickly react to any fluctuations in claims submission and pended volumes. By working pended claims in order of receipt, we can pay providers efficiently and achieve processing goals. We automatically post resolved claims to the next payment cycle. Our system completes adjudication cycles nightly. We perform two payment cycles each week.

While claims operations monitors performance against claims timeliness standards in each of our affiliate health plans, they also maintain internal standards that are often higher than state requirements. Claims

operations recognize that our primary goal is to adjudicate claims quickly and accurately so that providers can receive payment in a timely manner.

Amerigroup will require monthly reports from our subcontractors that provide detailed information on claims processing and performance, as well as quarterly reports that will include the number of claims received, paid, denied, pending, and adjusted and the number and percentage of claims paid within ranges of days. We meet quarterly with each subcontractor to review the subcontractor's performance and discuss any issues.

Question 13.4, #2

2. Describe your plan to monitor claims adjudication accuracy.

Monitoring Provider Claim Submissions

Amerigroup uses several methods to monitor provider compliance with our claims submission and billing procedures. We subject EDI claims to extensive format and syntax edits. We report and reject exceptions and respond to the provider via their clearinghouse. We closely monitor the number of rejections and initiate contact with any providers with unusually high rejection rates.

Once claims enter our claims processing systems, they are fully edited prior to the automated adjudication process. We may return claims with missing data to the provider and may deny claims that fail to meet program requirements for member and provider eligibility, benefit coverage, or medical policy. We report denied claims on a Claim Denial Notice back to the provider.

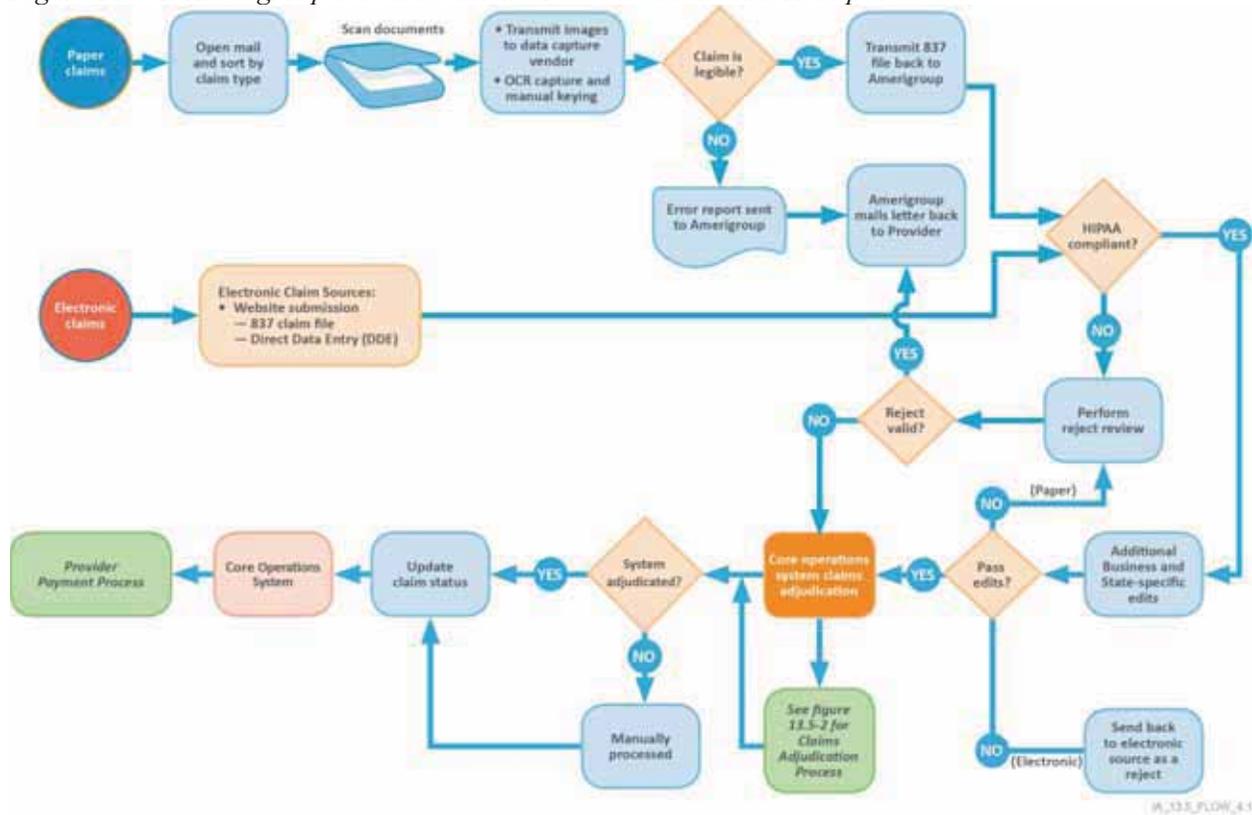

We continually monitor claims processing performance and compliance. Daily, weekly, monthly, and ad hoc reports allow management to monitor and measure processing performance, identify problem areas, and review quality. Reports list the number of pending claims by aging category and allow us to quickly react to any fluctuations in claims submission and volumes. By working pending claims in the order of receipt, we can pay providers efficiently and achieve processing goals.

Management reports summarize the number of denials by type of denial and provider, and, again, any unusually high number of denials for a particular provider will trigger follow-up action with that provider. When we identify common issues, we educate providers through our Network eUPDATE service or fax blasts and incorporate them into our Provider Manual.

Claims operations and management analyze claims reports for issues such as possible provider submission problems, system problems, or other areas of improvement. If, for example, we see a high number of claims pending for a specific reason, we will analyze the claims to determine if there is an appropriate intervention, including provider education, reviewing authorization rules, or modifying a system edit. ***A high volume of claims pending or denying for a specific provider will prompt additional review and often results in proactive outreach to the provider by Amerigroup Provider Services Staff.***

Figure 13.4-1 shows Amerigroup's overall claims process—from receipt to payment—with additional detail on the claims receipt process. The figure highlights where in the process that adjudication and payment activities, detailed on subsequent charts, occur.

Figure 13.4-1. Amerigroup's Overall Claims Process and Claims Receipt Process

Audit Trails and Claims Review Process

Amerigroup bases its claims processing practices on comprehensive policies and procedures that guide our professional audit staff as they monitor and audit claims to verify timeliness, accuracy, and integrity and evaluate claims processing for financial, payment, and statistical accuracy. We maintain an internal audit function independent of claims management. In the paragraphs below, we describe our process for sampling paid claims and our claims auditing process to verify claims payment accuracy.

Audit Trails

Amerigroup's claims processing system maintains audit trails to track changes of claims and claims-related data. When an authorized user makes a change, including adjustments to claim information, the application automatically creates an audit record with before and after images of the data, the time and date of the change, and the user and subsystem that made the change. Our systems maintain audit trail data online for a minimum of six years.

We maintain the audit trails in a separate database and can create audit reports using all or portions of the audit trail records. We use audit trail information to create comprehensive reports of system and user activity.

Additional Claims Payment Accuracy Processes

Amerigroup's claims will be subject to quality audits executed by our national Quality Process and Improvement Department. Claims quality audits are part of our quality assurance program and verify that we accurately process system adjudicated claims as well as manually adjudicated claims. Our claims auditing function is independent of claims management. To measure our overall performance on claims accurately, we will audit a random sample of claims each week. In addition, we perform specialized audits, including the following:

- **High-dollar audits**—Daily pre-payment audits of all high-dollar claims where the payment amount or the denied claims amount is over specific dollar thresholds
- **Individual focus audits**—Weekly audits on claims from each claims analyst and daily audits of claims during the new-hire training period to determine processing accuracy
- **Focus audits**—Targeted audits on specific claim types or surrounding processes to measure performance and remediate claims issues
- **Post-implementation audits on new markets/expansions**—Targeted audits on new or expanded markets to verify accuracy

The audit process includes a thorough end-to-end review (from receipt to final disposition) to verify our compliance with all federal, State, and internal requirements and any specifics in the provider agreements.

If the process finds errors, the audit is not closed until the claim is corrected and the correction is validated by the auditor. We examine root causes of errors to prevent future instances.

Additional Resources to Improve Claims Quality

Our national Claims Quality Steering Committee includes senior leadership from operational areas and meets monthly to review audit errors, discuss the root causes, and create action plans to address deficiencies. Based on our audit findings, we develop policy changes or edits to our claims processing system to mitigate future problems and improve our claims payment accuracy. We log all corrective actions identified by the Steering Committee and track them through completion in the action item log.

A dedicated national Quality Process Improvement team works on large projects to improve claims payment accuracy, increase auto adjudication rates, and bring efficiencies to internal processes. This team follows an established project methodology through five phases: initiation, planning, execution, control, and close. It also employs Six Sigma methodology when warranted.

Monthly Quality Framework meetings provide an opportunity to review manual claims audit data and create action plans to prevent future errors. Led by Regional Operations Experts, the meetings bring together the Director of Performance Enhancement, Process Improvement Business Analysts, and Claims Quality Managers. All actions initiated through these meetings are tracked by the Quality Process Improvement team.

Amerigroup will use effective technology and experienced employees to consistently deliver prompt and accurate claims payment. We have proven ability to process large volumes of claims on a timely basis; *in 2014, our national Medicaid Division processed more than 60.7 million Medicaid claims, paying 99.77 percent within 30 days.* Amerigroup is confident we can meet Iowa claims processing and payment requirements. The claims processing component of our MMIS fully integrates with all key systems (member, provider, prior authorization, encounter, third party liability, and case management) and accurately and efficiently adjudicates claims.

We will offer providers multiple options for claims submission, including electronic submission via Automated Clearing Houses or our provider website as well as paper claims submission. The claim adjudication process applies edits to all claims based on eligibility, provider status, medical necessity, type and quantity of benefits, pricing, authorization, and third party liability. Through the provider payment process, we receive the adjudicated claims from claim processing and create financial transactions to transfer the calculated funds to the provider, either by check or electronic fund transfer. Our national Quality Process and Improvement Department executes quality audits on all claims as part of our Quality Assurance Program and verifies that we accurately process adjudicated claims. Upon completion of the adjudication process, we offer flexible options and notification vehicles in paying providers, including:

- Electronic deposits directly to designated provider accounts
- Remittance advice statements that can be downloaded electronically and a remittance advice archive with HIPAA-compliant 835 data file compatible with most electronic billing software.

Amerigroup is confident that our claims processing capability will meet or exceed Iowa Initiative requirements. We believe that maintaining a single manual for our providers simplifies the process for those who deliver services across multiple programs. Claims submission procedures are minor and deal primarily with covered benefits and member eligibility requirements. Feedback from providers on our consolidated Provider Operations Manual is positive.

Our providers also have a single point of access for information via our website, Amerigroup.com, and single telephone numbers for our Customer Care Center and our EDI Solutions Center. We will maintain this policy as we implement programs and services for the Iowa Initiative.

Question 13.4, #3

3. Describe your provider claims submission process, including provider communications addressing the provider claims process.

Claims Submission Methods

Amerigroup has instituted fully operational and well-tested procedures to receive and process claims submitted by providers. We accept professional and institutional claims in electronic and paper formats. Electronic claims submission facilitates accurate, timely, and efficient claims processing. We work with a number of clearinghouses to enable providers to submit claims through EDI in HIPAA-compliant ANSI X12 file format. On our provider website, we also list information about web-based claims submission services that providers may choose to use. We recognize that the technology environments and needs of our providers vary, so Amerigroup supports a variety of electronic claims submission solutions.

Providers can find detailed information about submitting EDI transactions in the Provider Operations Manual posted on our provider website and by calling our EDI Solutions Center.

Our experience demonstrates that providers realize a number of benefits when they file claims electronically, including:

- Increased completeness of claims information submitted for adjudication
- Consistency in payment accuracy
- Better cash flow through faster payment turnaround

We actively encourage our network providers to submit claims electronically through:

- Distributing newsletters describing the benefits of EDI
- Posting information on the provider portion of our website
- Discussing EDI with providers as part of the initial contracting process
- Conducting targeted outreach to high-volume providers who continue to submit paper claims to identify any existing barriers that prevent them from submitting electronically and determine how those barriers can be removed

Providers can call our EDI Solutions Center for technical assistance in submitting electronic claims. We train our EDI Solutions Center staff to help providers with initial set up, with specific problems, and with the submission of individual batches or individual claims. When there are major changes, such as the implementation of 5010, our EDI Solutions Center plays a critical role in quickly addressing and resolving provider issues so claims processing is not interrupted or delayed.

Paper claims are scanned and converted to electronic X12 837 claims format throughout each production day. Once the claim is in electronic format, it can be auto adjudicated, which speeds processing, improves consistency, and reduces errors. On average, this cycle occurs within 48 hours of receipt, helping us process clean claims as quickly as possible. Once in the system, we subject paper claims to the same data validation protocols used for electronic claims. We may return paper claims with missing or invalid information to the provider with a "mail back" form enclosed. Once a provider responds, we enter the corrected information and complete the processing.

Regardless of whether a claim is submitted on paper or electronically, providers can access claims status information through Availity.com, a multi-payer portal, and our interactive voice response system.

Provider Communication

Amerigroup uses a variety of methods to communicate with providers about claims submission, including:

- **Provider website** – Using our provider website, providers can verify and update their enrollment data and access plan- and program-specific information, including information on claims submission and billing procedures, our newsletters, and bulletins.
- **Provider Operations Manual** – We post our Provider Operations Manual on our provider website for easy availability.
- **Provider bulletins** – We generally deliver provider bulletins through Amerigroup's Network eUPDATE email service and/or fax blast. We also post provider bulletins on our provider website, distribute them as handouts at Amerigroup workshops, and use them as an educational resource during visits by Provider Services Staff.
- **Training and education** – We educate providers on claims submission using either group seminars and webinars or one-on-one sessions in provider offices at their request. Our locally based Provider Services Staff work in the field and meet one-on-one with network providers and their office staff to educate and answer questions about a variety of topics, including claims submission.
- **Provider calls** – Specialized call center employees work with providers who contact Amerigroup with a question or concern about claims submissions, claims status, authorizations, or any other matter. Our IVR system is also available twenty-four hours a day, seven days a week (24/7) for claims status information.

Providers can call our EDI Solutions Center or our provider helpline for claims submission assistance. Amerigroup's EDI Solutions Center is a special technical support group that assists providers with electronic claims submission while our provider helpline can assist providers with a variety of issues, including:

- Enrolling with Amerigroup or updating enrollment information
- Checking claims status
- Clarifying the reasons for a particular claim denial or a specific payment amount
- Requesting claims submission and payment policies and procedures
- Determining how to request a reconsideration or adjustment
- Filing a grievance

We track the reason for a provider's call and whether or not the call was answered completely or a referral was required. We then use this information to improve provider communications. For common problems, we assess the best method for reaching providers with the information they need—newsletters, special workshops, website updates, and/or updates to our manuals—and take the appropriate action.

Question 13.4, #4

4. Describe policies and procedures for monitoring and auditing provider claim submissions, including strategies for addressing provider noncompliance; include any internal checks and balances, edits or audits you will conduct to verify and improve the timeliness, accuracy, and completeness of data submitted by providers.

Claims Processing Capability (13.4.1)

All Amerigroup claims are subject to periodic quality audits executed by our national Quality Management and Improvement department. Claims quality audits are part of Amerigroup's quality assurance program and verify that we accurately process system adjudicated claims as well as manually adjudicated claims. In addition, we perform specialized audits, including the following:

- **High-dollar audits**—Daily pre-payment audits of all high-dollar claims where the payment amount or the denied claims amount is over specific dollar thresholds
- **Individual focus audits**—Weekly audits on claims from each claims analyst and daily audits of claims during the new-hire training period to determine processing accuracy
- **Focus audits**—Targeted audits on specific claim types, or surrounding processes, to measure performance and remediate claims issues
- **Post-implementation audits on new markets/expansions**—Targeted audits on new or expanded markets to ensure accuracy

Our audit process includes a thorough end-to-end review (from receipt to final disposition) to confirm that we are in line with all federal, State, and internal requirements and with any specifics in the provider contracts. If errors are found, the audit is not closed until the claim is corrected and the correction is validated by the auditor. We work to determine root cause of errors so we can prevent future instances.

We record all audit results, including error sourcing and attribute testing results, and use the data to produce internal and external reports and ad hoc requests. Monthly dashboards present current, quarterly, and year-to-date performance to share with executive leadership and all internal departments involved in the claims process. We track error data over time to identify trends and maintain consistent performance. We conduct trend analyses by market as well as by broad and sub-error category.

To maintain the quality of the audit data, auditors present all identified errors to leadership for review. If the source department and auditor(s) disagree, we follow a formal escalation process. We also have a separate group of senior auditors who "audit the auditors." In addition, we evaluate all auditors quarterly based on key claim processes in a Measurement System Analysis. In this process, auditors review selected claims and compare results against the expert. This process identifies learning opportunities for our auditors and promotes knowledge sharing.

Monitoring Provider Claim Submissions

Amerigroup uses several methods to monitor provider compliance with our claims submission and billing procedures. We subject EDI claims to extensive format and syntax edits. We report and reject exceptions and respond to the provider via their clearinghouse. We closely monitor the number of rejections and initiate contact with any providers with unusually high rejection rates.

Once claims enter our claims processing systems, they are fully edited prior to the automated adjudication process. We may return claims with missing data to the provider, and we deny claims that fail to meet program requirements for member and provider eligibility, benefit coverage, or medical policy. We report denied claims on a Claim Denial Notice sent to the provider.

Amerigroup continually monitors claims processing performance and compliance. Daily, weekly, monthly, and ad hoc reports allow management to monitor and measure processing performance, identify problem areas, and review quality. Reports list the number of pended claims by aging category and allow us to quickly react to any fluctuations in claims submission and volumes. By working pended claims in the order of receipt, we can pay providers efficiently and achieve processing goals.

Management reports summarize the number of denials by type of denial and provider, and, again, any unusually high number of denials for a particular provider will trigger follow-up action with that provider. When we identify common issues, we educate providers through our Network eUPDATE service or fax blasts and incorporate them into our Provider Operations Manual, as indicated.

Claims operations and management analyze claims reports for issues such as possible provider submission problems, system problems, or other areas of improvement. If, for example, we see a high number of claims pending for a specific reason, we will analyze the claims to determine if there is an appropriate intervention, including provider education, reviewing authorization rules, or modifying a system edit. A high volume of claims pending or denying for a specific provider will prompt additional review and often results in proactive outreach to the provider by Amerigroup Provider Services Staff.

Question 13.4, #5

5. Describe your claims dispute procedures.

Claims Disputes (13.4.2)

We maintain robust, effective procedures for our provider complaint and appeal process, from receipt and tracking methods, to escalation processes and resolution timeframe requirements, to follow-up responsibilities. Our comprehensive provider complaint and appeal program includes specialized staff to manage complaints and appeals, systems to track and monitor resolution, tracking and trending of issues to improve processes for providers, and hands-on provider training.

Our provider complaint and appeal process is specific to providers and does not replace the member grievance system. When a provider submits a grievance or appeal on behalf of a member, the requirements of the member grievance system apply.

All disputes between Amerigroup and providers, both in-network and out-of-network providers, will be resolved via a provider payment dispute process that is currently operational in our 19 affiliate state-sponsored program health plans. If the payment dispute involves payment for covered services, we will not charge the member for any portion of the disputed amount.

We designed our Provider Payment Dispute procedure to afford providers access to a timely dispute process. If the provider is dissatisfied with the resolution of a dispute, the provider can file an appeal as outlined in the Provider Manual and can submit a written payment dispute to an address included in the manual. We require all disputes to be submitted within 12 months/365 days from the provider's receipt of the EOP. We will not penalize providers for filing a payment dispute.

We log all provider payment disputes into a reportable database. We maintain the provider claims payment dispute records for a minimum of seven years or in accordance with the respective state or federal laws, regulations, and/or contractual obligations.

See Section 6.1.6 for further information on our provider complaint and appeal process.

Compliance with State and Federal Claims Processing Regulations (13.4.3)

Amerigroup has instituted fully operational and well-tested procedures to receive and process claims submitted by providers. We accept professional and institutional claims in electronic and paper formats. Electronic claims submission facilitates accurate, timely, and efficient claims processing. On our provider website, we also list information about web-based claims submission services that providers may choose to use. We recognize that the technology environments and needs of our providers vary, so Amerigroup supports a variety of electronic claims submission solutions. Amerigroup agrees to comply with the requirements related to claims forms as set forth in Iowa Admin. Code 441 Chapter 80.2. Amerigroup fully complies with applicable federal regulations, including HIPAA regulations related to transactions and code sets and confidentiality and submission requirements for protected health information (PHI). Amerigroup agrees to require that all providers that submit claims have a national provider identifier (NPI) number and will be consistent with 45 CFR 162.410.

Out-of-Network Claims (13.4.4)

We are committed to adjudicating claims in a timely, accurate, and provider-friendly manner. All claims that pass initial edits and are accepted into our highly automated claims processing system, including adjustments, are considered clean claims. We require our affiliate health plans to meet a specific percentage of claims payment within a designated time period, so we design overall claims operations to facilitate claims aging and workflow management. We do not distinguish between in-network and out-of-network claims payment timeliness, and our claims payment timeliness reporting includes both paper and electronic clean claims.

Our core operations system generates daily, weekly, monthly, and ad hoc reports that allow leadership to gauge processing performance, identify problem areas, and monitor quality performance. These reports detail the number of pended claims by aging category and allow us to quickly react to any fluctuations in claims submission and pended volumes. By working pended claims in order of receipt, we can pay providers efficiently and achieve processing goals. We automatically post resolved claims to the next payment cycle and complete adjudication cycles nightly. Two payment cycles are performed each week.

While claims operations monitors performance against claims timeliness standards in each of our affiliate health plans, they also maintain internal standards that are often higher than state requirements. Our Claims Department recognizes that our primary goal is to adjudicate claims quickly and accurately so that providers can receive payment in a timely manner.

We will hold our subcontractors to DHS claims processing standards. We include language in our subcontractor agreements that clearly defines requirements for claims payment timeliness and accuracy. The agreements also specify fines and penalties that we will assess for noncompliance. Further, we require monthly reports from our subcontractors that provide detailed information on claims processing and performance, as well as quarterly reports that include the number of claims received, paid, denied, pended, and adjusted and the number and percentage of claims paid within ranges of days. We meet quarterly with each subcontractor to review the subcontractor's performance and discuss any issues.

Amerigroup will take proactive steps to maintain claims payment timeliness. As noted above, we enter paper claims into the system within 48 hours of receipt, and electronic claims are entered into the system the same day of receipt. Our active encouragement of providers to submit claims electronically is a critical factor in maintaining claims payment timeliness.

Question 13.4, #6

6. Describe proposed processes for collaborating with other program contracts to simplify claims submission and ease administrative burdens for providers.

Coordination among Contractors (13.4.5)

In the state-sponsored programs our affiliates administer in 19 states, it is our standard practice to coordinate with government organizations, providers, health plans, and community organizations to secure services and supports for each member. In Iowa, we will implement effective system-level policies that are important in promoting care coordination in our other programs, such as:

- We will designate staff to regularly meet with system partners and stakeholder organizations.
- We will invite community stakeholders to participate in our training programs and in quality improvement initiatives.
- We will seek opportunities to collaborate with other agencies on health-related initiatives such as strategic planning and strengthening community-based services or supports.

Amerigroup will offer providers three options for submitting electronic claims; we accept claims through:

- Three nationally recognized EDI clearinghouses
- Free of charge through our provider website, including:
- Submission of an 837 file
- Submission of claims entered on-line via Direct Data Entry (DDE)

Availity MPP is a multi-payer portal that will allow our Iowa providers to submit claims to a number of payers through a single sign-on. The Availity MPP offers providers a number of services, including claims submissions, claims status inquiries, claims appeal submission, and eligibility and benefit inquiries. See Section 13.1 for further information on Availity.

A dedicated Amerigroup toll-free hotline is available to answer specific questions related to electronic claims. The hotline employees can help providers with set-up questions and to resolve any submission issues or claim rejections. Provider services staff are also available via a toll-free number to assist providers with any questions or concerns.

Claims Payment Timeliness (13.4.6)

We will pay claims accurately and timely. We understand that timely and accurate payment to providers is critical to maintaining provider satisfaction. Amerigroup has a strong track record of meeting claims payment timeliness standards. Our highly automated claims adjudication process, which processes a high percentage of claims on the first pass, combined with careful attention by our claims operations team to pending claims aging reports leads to our quick, efficient, and consistent performance.

Amerigroup will negotiate payment rates and timeframes with providers mutually acceptable to both and in compliance with RSMo 376.383 and RSMo 376.384. We will also make timely payments to in-network and out-of-network providers subject to applicable conditions within other Section 13.1 requirements regardless of the arrangements between Amerigroup and the providers. Amerigroup is committed to adjudicating claims in an accurate, timely, and provider-friendly manner.

Our National Medicaid Division has extensive experience configuring varied negotiated provider payment rates in our claim payment system across our affiliates' health plans, and we will implement the payment rates as negotiated with providers for DHS.

Claims Reprocessing and Adjustments (13.4.7)

Amerigroup educates providers on how to submit corrected claims. Health Plan IRU teams review claims payments to providers. As they identify root cause issues or payment issues, Amerigroup works with configuration to correct the system and re-process claims and apply interest as applicable. Amerigroup will adjudicate 100 percent of all clean, provider-initiated adjustment requests within 10 business days of receipt. We will also reprocess all claims processed in error within 10 business days of identification of the error or upon a schedule approved by the State.

Member Financial Participation and Cost Sharing (13.4.8)

Question 13.4, #7

7. Propose ideas for handling Medicare crossover claims which reduce the administrative burden on providers.

Amerigroup brings vast experience in working with Medicaid plans where members have dual coverage. In these markets we have worked with the state to obtain the CMS claims files and pull them in daily for our members to process claims for providers. This reduces the administrative burden on the provider in having to submit a claim with a copy of an EOP from Medicare. Amerigroup would then process the claim and pay any co-insurance or deductible always applying lesser of rules and paying only up to the Iowa Medicaid allowable rates. For claims that are not on the files coming over from CMS or other third parties, then the provider would then submit a claim with the copy of the EOP. This happens rarely when Amerigroup is obtaining the CMS paid claims reports for our members.

Question 13.4, #8

8. Describe processes for notifying providers of a member's financial participation or cost sharing requirements.

Providers are sent an explanation of payment (EOP) statement with information explaining the dates of service, diagnosis code(s), charges, amount allowed, amount disallowed, co-pay (financial participation/cost sharing), and payment amount including applicable explanation codes.

In our Virginia affiliate, for duals members we send letters to providers notifying them that they are recognized as the provider with the most authorized HCBS services and will be required to file claims with the member's patient liability and it must be collected directly from the member. The provider bills their full charges and indicates the patient liability on the claims. We would pay the claim less the liability. If the provider fails to bill the liability then based on the information from the State enrollment files we deduct the amount from the provider's payment.

IDPH Prospective Reimbursement (13.4.9)

Question 13.4, #9

9. Describe processes for providing monthly prospective reimbursement to providers of IDPH funded services.

Amerigroup understands that the risk is borne at the provider versus Contractor level for IDPH funded services. We will provide prospective reimbursement each month to contracted IDPH funded substance use disorder network providers. We will pay the provider one-twelfth of its annual contract by the fifteenth day of the month of service. The provider must agree to accept the payments as payment in full for all services provided to clients beyond the client co-pay according to the standardized sliding fee scale. The provider will be required to serve all IDPH Participants who seek services, within capacity constraints, and to serve a minimum number of clients as defined in the contract. A portion of the payment may be withheld if penalties are assessed.

Audit (13.4.10)

Amerigroup agrees DHS reserves the right to perform a random sample audit of all claims. We will comply with the requirements of the audit and provide all requested documentation, including provider claims and encounter submissions in the form, manner, and timeframe requested by the State.

Encounter Claim Submission (13.5)

Question 13.5, #1

1. Describe your policies and procedures for supporting the encounter data reporting process, including:
 - a. A workflow of your encounter data submission process proposed...
 - b. Your operational plan to transmit encounter data to the State...

Encounter Submission Process

The Encounter Claim Submission process begins when a member visits his or her provider. Providers provide services for members and file claims with Amerigroup. The claim is then accepted and loaded into the adjudication system. When the claim is processed and finalized, the encounter process begins. After claims are received, in either paper or electronic form, claims operations and management analyze claims reports for issues such as possible provider submission problems, system problems, or other areas of improvement. If, for example, we see a high number of claims pending for a specific reason, we will analyze the claims to determine if there is an appropriate intervention, including provider education, reviewing authorization rules, or modifying a system edit. A high volume of claims pending or denying for a specific provider will prompt additional review and often results in proactive outreach to the provider by Amerigroup Provider Services Staff.

As shown in Figure 13.5-1, our encounter data process combines claims and claims adjustment data processed since the last submission with encounter claim data from our subcontractors and loads the data into our Encounter Management System (EMS). Controls validate that all retrieved claims and subcontractor encounter claim records load properly for subsequent processing.

Our EMS will edit and process all encounter records against DHS requirements. Business rules evaluate each claim or service line to validate that records meet state-specific processing requirements and confirm the presence and validity of all required data elements, including member and provider data; date of

service; diagnosis; procedure; and revenue codes, date of claim processing, and date of payment. Business rules will be invoked to validate that the encounter records meet Iowa-specific processing requirements.

We pend any claims or service lines that fail an edit or business rule without impacting remaining records. The Encounters Management Team reviews pended records and coordinates corrective action with the appropriate operational unit such as claims or provider data management. We involve subcontractor on errors in subcontractor encounter claims data. Management reports help monitor pended encounters and deliver timely remediation and submission. Corrected encounters are automatically included in the next submission.

We also validate member and product eligibility for the date of the encounter to confirm that all claims are appropriate to be submitted for the market. As with business rule remediation, we pend any encounters that fail compliance checks and submit them after remediation and resolution.

After all issues that can be resolved are addressed, we create a final encounter data file. To confirm compliance, we rerun the file through the HIPAA compliance software, as well as the member/product eligibility check before submission. To complete the submission process, we encrypt the file and place it on the Secure File Transfer Protocol (SFTP) server as designated by the DHS Fiscal Agent. We maintain comprehensive information on each encounter submission, including information on each claim submitted, including claim, line, type (original, adjustment, or void), file, path, and creation date.

Daily encounter aging reports allow the team to remediate encounter records that were pended during the encounter submission process. Employees work with operational departments to resolve issues. Remediated encounter records are included in the next weekly encounter data submission.

Our system compiles encounter records that pass all edits into a HIPAA-compliant X12 837 or National Council for Prescription Drug Programs (NCPDP) D.0 format and then runs the file through HIPAA Level 1-6 compliance and business rule checks. We verify that the encounter file meets format and content rules prior to submission. This is the same software that the DHS Fiscal Agent uses to evaluate the encounter files we submit. Editing our encounter files with a tool that mirrors the exact logic that the DHS Fiscal Agent uses enables us to submit the cleanest data possible and allows us to correct any problems before they become rejections. Please see Attachment 13.5-1 for our Encounter Claims Draft Plan.

Figure 13.5-1 illustrates the flow of the claims submission process *before* the encounter generation and submission process, and Figure 13.5-2 illustrates the flow of the claims submission process *after* the encounter generation and submission process

Figure 13.5-1 Claims Submission Process BEFORE Encounter Generation and Submission Process.

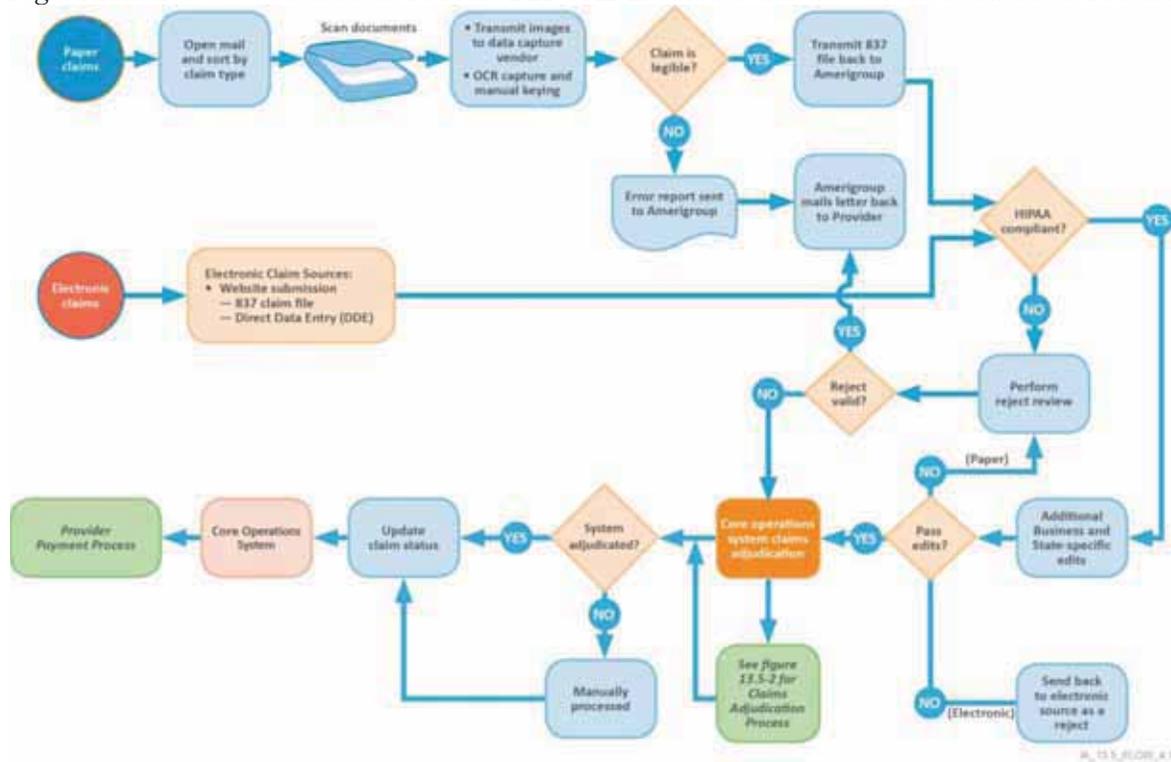

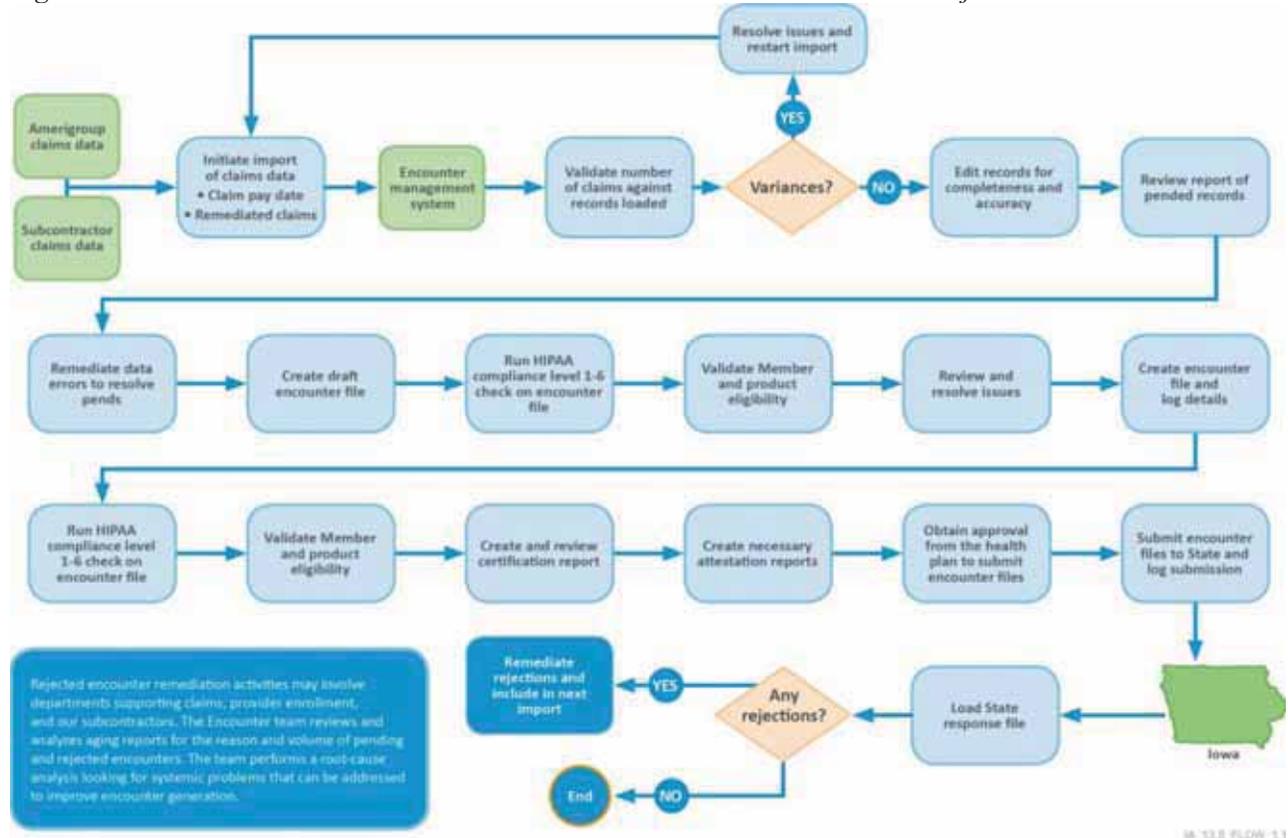

Figure 13.5-2. Encounter Generation and Submission Process AFTER Claims Adjudication

The encounter generation process begins with all the adjudicated claims data from our subcontractors and all the claims and claims adjustment data processed by the Core Operations System since the last submission of encounter records. Claims data is consolidated and stored in the EMS. Adjudicated claims include paid, denied, adjusted, and zero-paid claims. Amerigroup will submit a single 837P, a single 837I, and a single 837D encounter file to DHS containing all encounter data. This process provides consistency regardless of the source of the claim data or type of provider. We will hold subcontractors accountable for the timely and complete submission of encounter data and specify penalties for non-compliance.

The claim data import process includes checks that balance the number of claims contained in the imported files to the number of claims loaded into the EMS. If an imbalance is identified, we investigate and remediate the cause and rerun the load process.

System edits will check for completeness and accuracy, duplicate claims, and verification of provider data and apply business rules to validate that the encounter records meet DHS-specific processing requirements.

We will review and correct records that pend as a result of editing prior to the first creation (draft) of the encounter file. We process the draft encounter file through HIPAA compliance Level 1–6 checks and a process to validate member information. Prior to the next process steps, we identify and resolve any identified issues.

We then generate another iteration of the encounter file through HIPAA compliance Level 1–6 checks and the member validation process. Once the accuracy and completeness of the file have been determined, the certification report and other necessary reports are created. After health plan staff review and approve the encounter file and reports, the file will be submitted to the State.

Robust Claims and Encounter Processes

Amerigroup recognizes the critical value that accurate claims and encounter data bring to effective management of clinical and healthcare services information—and the systems, processes, and staffing necessary to maintain high standards.

We also know the importance of complete, accurate, and timely encounter records, and our results demonstrate our ability to meet DHS quality standards. We transmit encounter files once each week using SFTP and have never missed an encounter file submission deadline, even during major weather events.

After careful review of the Iowa High Quality Healthcare Initiative RFP, we are confident in our ability to meet and exceed the requirements for encounter data with our existing systems, policies, and procedures. The Encounter Management Team in our National Medicaid Division currently provides encounter data to all of our state-sponsored health plan affiliates in 19 states in either an ASC X12N 837 standard or the state's proprietary format, depending on the state's requirements. We are committed to complying with DHS requirements for encounter submission.

The Encounter Management Team has experience with multiple transmission standards and working with state-designated external agencies across our affiliate health plans. We understand the importance of transmitting and receiving encounter data accurately, securely, efficiently, and in accordance with the DHS schedule. Most encounter submissions in our affiliate health plans are transmitted using HTTPS or secure File Transfer Protocol (FTP), and the team is experienced using both methods. DHS will benefit from Amerigroup's tailored service: We will configure our encounter file in accordance with the specific requirements of the Iowa High Quality Healthcare Initiative as specified in 13.1.9.1.

Amerigroup understands and supports the State's need for accurate and timely encounter data to support many purposes such as federal reporting, rate setting, and risk adjustment, payment indication of delivery, services verification, managed care quality improvement activities, utilization patterns and access to care, hospital rate setting, and research studies. We will carefully review available documentation to create compatible encounter files that meet DHS requirements.

We void encounter claims when we discover data is not correct or not valid or when some element of the claims not identified as part of the original claim needs to be changed, unless noted otherwise. Our Encounter Management Team has experience with this requirement in other markets and has the systems and procedures to support the encounter void process.

We will consistently submit accurate, timely, and complete encounter data using dedicated staffing, a robust and proven EMS, and a tightly managed submission schedule. The Encounter Management team will include full-time business analyst staff trained specifically on DHS encounters who will partner with the Information Technology staff and functional departments to meet all encounter submission and reporting obligations.

Rejected Encounters

After the State has processed our encounter file submission, we will receive, process, and review the State response 837 Reject File. We understand the State will apply edits to the incoming encounter files to identify valid and invalid encounter records. We also understand that we will receive Adjudication Confirmation files generated by the State. These files will confirm those encounters that were successfully processed by the State. Additionally, we will receive a weekly Adjudication Rejection File containing those encounters that were initially accepted but were not successfully processed. If the State returns records to us for research and resolution, the Encounter Management Team will carefully review and research all rejections and remediate errors.

The Encounter Management Team uses daily encounter aging reports to identify the encounter records that were rejected during the most recent encounter submission process. Working with operational departments and subcontractors as appropriate, the Encounter Management Team will remediate the rejected encounter records. Remediated encounter records will be included in the next encounter data submission.

The Encounter Management Team aggregates rejected encounters to identify trends and perform root cause analysis and, if necessary, initiates changes to operational and system processes to increase the number of accepted encounter records. If analysis identifies a pattern of deficiencies for specific providers or subcontractors, we will work with the appropriate business function areas to identify and resolve issues.

Submission Acceptance Rate

We will maintain at least a 98 percent submission rate of all encounters submitted to DHS. We will also maintain an encounter acceptance rate of 98 percent as measured by the State agency.

Capitated Services

Amerigroup will contract with most of our providers on a fee-for-service basis, which inherently drives claims submission and quality results in encounter data. For those few arrangements in which we may have capitated provider reimbursement, we will require the provider to submit encounter data as zero-pay claims. Claims from capitated providers will process through our Core Operations System, will receive all the same edits and validations, and will become part of the overall claims data set extracted by the EMS for encounter submission.

Amerigroup understands that not including encounters for providers contracted though capitated reimbursement may result in a corrective action for the health plan.

Audit Process

We will implement policies and procedures to validate that encounter claims submissions are accurate. We agree DHS reserves the right to monitor encounter claims for accuracy against our internal criteria, as well as State and federal requirements. In addition, DHS may regularly monitor our accuracy by reviewing compliance with our internal policies and procedures for accurate encounter claims submissions and by random sample audits of claims. We understand and will comply with requirements

of these audits and provide all requested documentation, including applicable medical records and prior authorizations. We will submit a corrective action plan and will require non-compliance remedies for failure to comply with accuracy of these reporting requirements.

To evaluate claims payment accuracy, we will audit a random sample of Iowa claims each month. The sample will include claims from providers, including vision and non-emergency medical transportation; nursing facility claims; and home- and community-based waiver claims.

To further assess claims payment accuracy, we perform additional audits, including the following:

- **High-dollar Audits**—Daily pre-payment audits of all high-dollar claims where the payment amount or the denied claims amount is over specific dollar thresholds
- **Individual Focus Audits**—Weekly audits on five claims from each claims analyst to determine processing accuracy and daily audits of 10 claims during the new-hire training period (Results impact performance management and process improvement of manually processed claims.)
- **Focus Audits**—Targeted audits on specific claim types or surrounding processes to measure performance and remediate claims issues
- **Post-implementation Audits on New Markets/Expansions**—Targeted audits on new markets/expansions to ensure accuracy

Our audit process includes a thorough end-to-end review (from receipt to final disposition) to assure that we are in line with all federal, state, and internal requirements, and any specifics in the provider contracts. If errors are found, we do not close the audit until the claim is corrected and validated by the auditor. We work to determine root cause of errors so we can prevent future instances.

In the event we process a claim in error, we will give providers multiple avenues to pursue resolution:

- Call Provider Services. Dedicated employees trained to answer provider claim inquiries review the claim and either educate the provider on why the claim was processed correctly; immediately reprocess the claim for correct payment; or forward the claim for further research and resolution to the Internal Resolution Unit (IRU). The IRU is a team of expert claim reviewers dedicated to resolving claim inquiries by identifying and resolving the root cause of the error for correct payment or educating the provider on the accuracy of the claim's original payment.
- Call their assigned Provider Services Staff. The representative will submit the claim inquiry to the IRU for research and resolution.
- File a formal claim dispute. We maintain a department dedicated to researching and resolving claim disputes within 30 days of receipt.

Definition and Uses of Encounter Claims (13.5.1)

Amerigroup's encounter claim process will be maintained and geared to meet the State's requirements. We agree to submit an encounter claim to the State or its designee for every service rendered to a member for which Amerigroup has either paid or denied reimbursement. We agree the State shall primarily use encounter data to calculate the Amerigroup's future capitation rates, with alternative data sources utilized as appropriate to meet actuarial and federal standards. We acknowledge that encounter claims data will also be a source used to calculate any liquidated damages assessed to Amerigroup.

Reporting Submission Schedule (13.5.2)

Amerigroup agrees to submit encounter claims in an electronic format that adheres to the data specifications set forth by DHS and in any State or federally mandated electronic claims submission standards. We will submit encounters weekly (medical and pharmacy) if we are allowed. These submissions will include all claims finalized for the week prior or received by our subcontracted vendors the prior week. All remediable errors will be fixed within the timeframes required. We will provide the

State with all of the remedies available under the Contract, including liquidated damages, for failure to comply with these requirements. Further, we agree pharmacy encounter data must be submitted for adjudicated claims weekly in support of the IME's pharmacy drug rebate invoicing process identified in Section 3.6.2.11.

Amerigroup processes encounter claims weekly. We agree encounter data must be submitted by the 20th of the month subsequent to the month for which data are reflected, but will also be submitted weekly. We will finalize all corrections to the monthly encounter data submission within 45 days from the date the initial error report for the month is sent to Amerigroup or 59 days from the date the initial encounter data were due. Our error rate for encounter data will not exceed one percent.

Encounter Claims Policies (13.5.3)

Amerigroup will maintain policies and procedures that support encounter data reporting for the Iowa Initiative. These policies and procedures will reflect requirements listed in Section 13.5 and will address submission of encounter claims to DHS. Amerigroup agrees to submit our draft plan to the Agency within 30 days of Contract execution, and a final plan, incorporating any feedback from the Agency, within 60 days of the official submission of the plan. We will resubmit a work plan annually.

Accuracy of Encounter Claims (13.5.3.1)

Verifying Accurate Submission

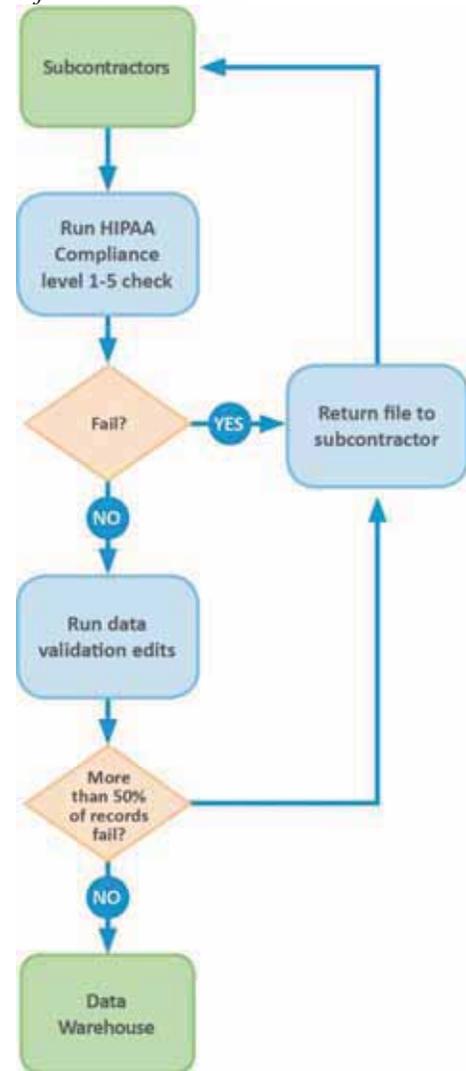

Amerigroup requires that our subcontractors submit encounter claim files in HIPAA-compliant X12 or NCPDP format and with the required data elements as specified in the Encounter Data Companion Guides. As shown in Figure 13.5-3, our encounter process includes several steps to verify the accuracy of subcontractor encounter claims files we receive.

First, we run HIPAA level 1-5 compliance checks. If any record in the file fails, we reject the submission and return the file to the subcontractor with the reason for the failure. Subcontractors typically submit a corrected file within 24-48 hours.

After passing the HIPAA compliance check, the file goes through a set of data validation edits, including checks for claims previously submitted, duplicates within the same file, and member eligibility. The process marks individual encounter claim records that fail validation edits as rejected and returns them to the subcontractor in a HIPAA-compliant file so they can initiate a correction/re-submit action. If more than 50 percent of individual encounter records fail, we reject the entire file, and we notify the subcontractor. We track rejected records to verify that subcontractors re-submit within 30 days.

We load subcontractor encounter claim records that pass validation edits into our data warehouse for inclusion in our weekly DHS encounter process.

Figure 13.5-3. Subcontractor Files are Subject to Validations

IA_13_FLOW_1.1

Our weekly encounter data process combines claims processed by Amerigroup with encounter data from our subcontractors and loads the data into our EMS for further processing. Edits confirm the presence of Critical Data Elements prior to submission to DHS's Fiscal Agent. Please see our response to Section 13.5 for more information on our process to submit encounter files to DHS.

We carefully review the response file we receive from the DHS Fiscal Agent and evaluate any rejected encounter records. We work with the subcontractor to resolve any rejected encounter claim records. As necessary, we perform a root cause analysis to understand the reason for the error and identify opportunities to mitigate future rejections.

Maintaining Timely, Accurate, and Complete Encounter Data

Our national Encounter Management Department manages our submission encounter data through dedicated staffing, a robust EMS, and a tightly managed submission schedule. The EMS is a critical component of our MMIS and is highly customizable to meet the encounter data requirements of each of our state partners. The EMS includes controls that allow the Encounter Management Team to closely monitor compliance with DHS requirements during the creation of each encounter data file.

We have established policies and procedures that will support encounter data submission for the Iowa Initiative. These policies and procedures reflect requirements in the Encounter Data Companion Guides and Contract compliance requirements. Our systems, strict processes, and tight controls allow us to deliver:

- **Timely Encounter Data.** Our submission schedule is designed to meet DHS submission requirements and includes adequate time for careful review and remediation of any errors.
- **Accurate Encounter Data.** We will edit incoming provider claims and encounter claims from our subcontractors for the presence and validity of required data elements, and we will apply business rule edits and HIPAA compliance checks prior to encounter data submission to DHS's Fiscal Agent. Business rule edits will verify that encounter records meet DHS requirements, including Critical Data Elements and other required fields, and allow us to maintain a low Encounter Error Rate.
- **Complete Encounter Data.** We will maintain strict controls throughout our operational environment to deliver complete encounters to DHS. Our encounter process captures all paid, denied, and adjusted claims, paper and electronic, and combines them with encounters from subcontractors into a complete submission.

Our experience demonstrates our ability to successfully meet DHS requirements for encounter data submission:

- **Timeliness.** Amerigroup has submitted weekly encounter files in a timely manner since we began operations
- **Accuracy.** Our current Encounter Error Rate is consistently one to two percent, significantly less than the five percent requirement across our affiliate health plans

The section below provides a brief overview of the process our national Encounter Management Team executes to deliver weekly encounter data files that meet program requirements.

Encounter Data Completeness (13.5.3.2)

Monthly Verifications of Encounter Completeness

Each month, we verify the completeness of our encounters using a process that mirrors the one used by the State's Recovery Audit Contractor, Myers and Stauffer. We execute this process for encounter claim data submitted by our subcontractors and for our own paid claims data. Understanding variances early will allow us to be proactive in investigating and resolving discrepancies and deliver complete encounter data to DHS.

Each month, we proactively verify the completeness of our encounter data using a process that mirrors the one used by Myers and Stauffer.

For our dental and vision subcontractors, we reconcile the encounter claim data received against the provider payments they report, and for our pharmacy subcontractor, we reconcile encounters against the invoice received. For our own paid claims data, we reconcile encounters against the same cash disbursement journal data we provide to Myers and Stauffer.

If discrepancies exist, the Encounter Management team performs a root cause analysis to determine the source of the problem. The discrepancy may be due to a number of factors, including rejected encounters, the cash disbursement journal data, or claims payment issues. The team will engage representatives from appropriate

departments to effect resolution. For discrepancies with subcontractor encounters, the Encounter Management Team will engage our national Vendor Contracts and Management and will collaborate with the subcontractor to determine the root cause of the problem and the best path to resolution.

Question 13.5, #2

2. Describe your experience and outcomes in submitting encounter data in other states.

Experience Submitting Encounter Data in Other States

Amerigroup has affiliates in 19 states covering more than 5.2 million members in state-sponsored programs. Across all markets, we submit more than 10.5 million encounters to our state partners each month. Our national experience allows us to leverage best practices across all of our state partners. Our experience demonstrates the strength of our system, process, and commitment.

Amerigroup’s affiliate health plans currently administer managed care services for beneficiaries of all populations included in the Iowa Initiative, providing our national encounters management organization with valuable experience to draw upon for the Iowa Initiative. Our national experience and outcomes submitting encounter data for our state-sponsored programs in other states demonstrates our commitment and our success. As we implement programs and services for the Iowa Initiative, we will leverage our experience in affiliate states serving a similar population to deliver timely, accurate, and complete encounter data.

Third Party Liability (TPL) Processing (13.6)

TPL Responsibility (13.6.1)

Question 13.6, #1

1. Describe your plans for coordinating benefits in order to maximize cost avoidance through the utilization of third-party coverage.

Plan to Coordinate Benefits and Maximize Cost Avoidance

Amerigroup Iowa (Amerigroup) recognizes the importance of a strong Third Party Liability (TPL) cost avoidance and recovery program in lowering costs. We maintain sound fiscal management practices by staffing a corporate Cost Containment (CC) Department responsible for a wide variety of programs, including identification of Other Health Insurance (OHI), cost avoidance through Coordination of Benefits (COB), overpayment/collections, and subrogation. We leverage experienced financial personnel,

technology, and automated applications, and consistent, replicable processes. Our Cost Containment Program focuses on:

- Cost avoidance through COB prior to claim payment
- Post-payment recovery after payment of a claim

We design our cost avoidance efforts so that Medicaid is the payer of last resort. Recovery efforts will bill liable third parties following our payment of a claim. Recovered funds will be applied to claim records and reflected in encounter files. ***Amerigroup will comply with all activities laid out in the Iowa Department of Human Services Medicaid TPL Action Plan.***

Our guiding principle is that **member access to medically necessary services is paramount**. Cost avoidance and recovery strategies prudently manage Medicaid funds with the least impact on providers and members. Further, our approach includes working with network and out-of-network providers to identify and resolve the root causes of inappropriate billing.

Our Cost Containment Program uses experienced employees, strategic vendors, and documented policies and procedures to maximize the identification and recovery of TPL. In our culture of continuous improvement, the CC Department regularly evaluates the program to:

- Accurately identify and maintain comprehensive OHI information on our members
- Increase the number of claims where OHI and TPL are identified prior to claims payment
- Raise the percentage of post-payment recoveries

In addition to our employees experienced and skilled in TPL/COB programs, we also have structured strategic partnerships with industry-leading vendors who specialize in key aspects of TPL/COB identification and recovery. These vendors assist our CC Department employees with:

- **COB Recovery** – Identifies OHI and recovers any payments associated with COB from the provider or directly from the primary carrier through Medicaid reclamation. OHI identification uses a repository that includes health information from more than 150 health insurance organizations, as well as telephonic and online verification tools to facilitate prompt confirmation
- **Subrogation** – Assists with TPL subrogation cases, including the initial identification of liable third parties, such as auto carriers, through final payment recovery/reimbursement and case closure
- **Credit Balance Recovery** – Conducts ongoing audits across our provider network to identify credit balances on a providers' accounts receivable

Amerigroup Seeks to Maximize Cost Avoidance

Amerigroup emphasizes and prefers prospective cost avoidance versus retrospective pay-and-chase whenever possible. Identifying OHI coverage and TPL prior to claims payment minimizes the need for more difficult and costly post-payment recoveries.

We employ a number of cost avoidance strategies, including capturing OHI data from all available sources, validating OHI leads, storing OHI information on a member's electronic record, and applying extensive edits in our claims processing system. We strive to maximize the identification of OHI and TPL and increase cost avoidance by:

- Capturing any available data regarding OHI, including receipt and processing of an electronic file from our state partners

- Dedicating staff to the daily review and update of potential OHI and TPL leads received from members and providers
Validating potential OHI leads with the primary carrier and information stored in the member's electronic record
- Reporting members identified as having Medicare or other coverage to our state partners
- Incorporating a series of edits into our claims processing system to identify alternate insurance information
- Suspending claims where OHI data is attached to the member record and triggering them for follow-up
- Automatically incorporating COB information into the claims adjudication process
- Evaluating root cause analysis and educating providers to reduce billing errors

While we will actively pursue legal avenues to recoup Medicaid monies, we carefully evaluate all cost avoidance strategies to assure that they do not prevent our members from receiving medically necessary services.

Identifying Other Health Insurance Information

Amerigroup stores in each member's electronic record any available data regarding alternate insurance carriers, such as a commercial health care insurer or HMO; TRICARE (the health care program for active duty service members, National Guard and Reserve members, retirees, their families and others); or an employer-administered Employee Retirement Income Security Act of 1974 (ERISA) plan. Sources for this information include state-identified OHI, Amerigroup's recovery vendor, providers indicating this information on or with claim submissions, and Amerigroup Provider Services or Member Services Representatives.

All potential OHI leads are submitted to a dedicated unit for validation. These employees conduct a daily review of all potential OHI and TPL leads received throughout the company from members, providers and others. The information is validated with the primary carrier; and if appropriate, it is added to the member's record on a COB tab. The COB tab includes the policy issuer and number, effective and termination dates, and last date verified. The tab also identifies the policy holder, which is important if the member is a child and the insurance coverage is through an absent parent. For members with such information noted in their record, COB is automatically incorporated into the claim adjudication process.

We regularly share member demographic data with our COB recovery vendor who uses the demographic data to search an extensive data repository of OHI information for any new, modified, or terminated coverage for members. The findings are reported at least monthly to the CC Department for validation and addition to the member's record on the COB tab.

Cost Avoidance is Integrated with Claims Adjudication

Amerigroup's claims processing system is fully integrated with our TPL process to:

- Capture OHI information contained on the claim
- Evaluate OHI information stored on the member's electronic record
- Suspend claims where OHI or TPL is indicated, unless the service is designated pay-and-chase

Our claims process effectively supports cost avoidance by automatically incorporating a series of edits that prospectively identify and correct potential overpayments based on current alternate insurance information housed in a member's medical record.

When alternate insurance is noted with the claim or we have alternate coverage information on file, the information is included on the COB tab of the member record. The record notes the policy issuer and

number, effective and termination dates, and last date verified. If OHI exists on the member record, COB is automatically evaluated during claims adjudication.

During adjudication, our claims processing system compares the submitted Dates of Service (DOS) to the effective and termination dates of the OHI coverage on the member record. If the claim DOS are within the OHI effective and termination dates, the claim is suspended for additional analyst review. If the analyst determines the claim is eligible for cost avoidance, they will coordinate the claim based upon our COB guidelines. For example, if an OHI source is identified and the required Explanation of Benefits (EOB) is not attached, we will notify the provider that it must be submitted to the appropriate third party for a determination of the OHI amount. If the required information is attached to the claim, the claim is suspended for additional analyst review prior to final adjudication. We use this information to assure the total benefits issued by the primary carrier and Amerigroup do not exceed Medicaid's allowed amount. In certain circumstances, such as claims for EPSDT/preventive services or when the primary coverage is held by an absent parent, we will pay the claim first and then pursue recovery.

Post-Payment Recovery Efforts are Captured in the Claim Record

Once we adjudicate claims and disburse payments, we analyze data to retrospectively identify opportunities for COB or TPL recoveries. We provide our recovery vendor with a monthly data file of all processed claims with associated member and provider data. They compare claims information against their data repository that contains health information from more than 150 health insurance organizations, identify the appropriate primary carrier, and bill them for payment.

When overpayments are identified, we gather all claims documentation and send written notification to the provider of the overpayment, furnishing supporting documentation. We offer providers the option of refunding the overpayment directly to Amerigroup or offsetting future payments by the overpayment amount. We wait a minimum of 45 days for the provider to respond to the written request. Once we receive confirmation, we adjust the individual claim record and configure the record to either accept a refund or withhold future payments up to the overpayment amount.

All reimbursements are directed to Amerigroup and recoveries are noted in the claims record for reporting to our state partners. When new OHI information is identified, it is incorporated into the member record to facilitate COB for future claims. See Figures 13.6-1 and 13.6-3 for an illustration of our process.

Figure 13.6-1. COB Verification

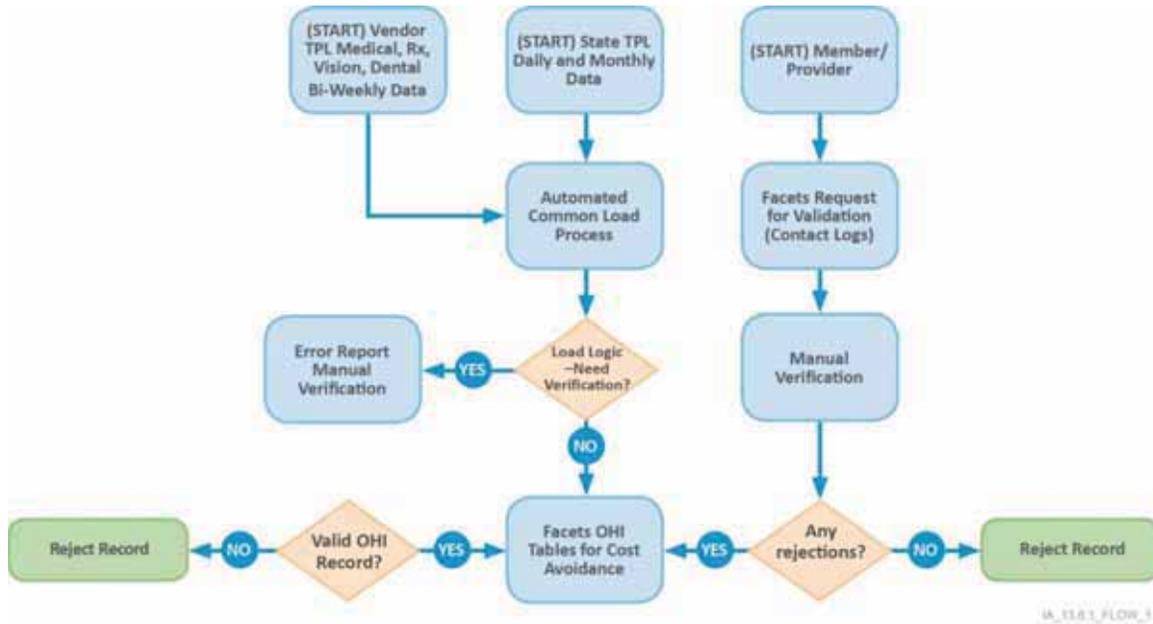

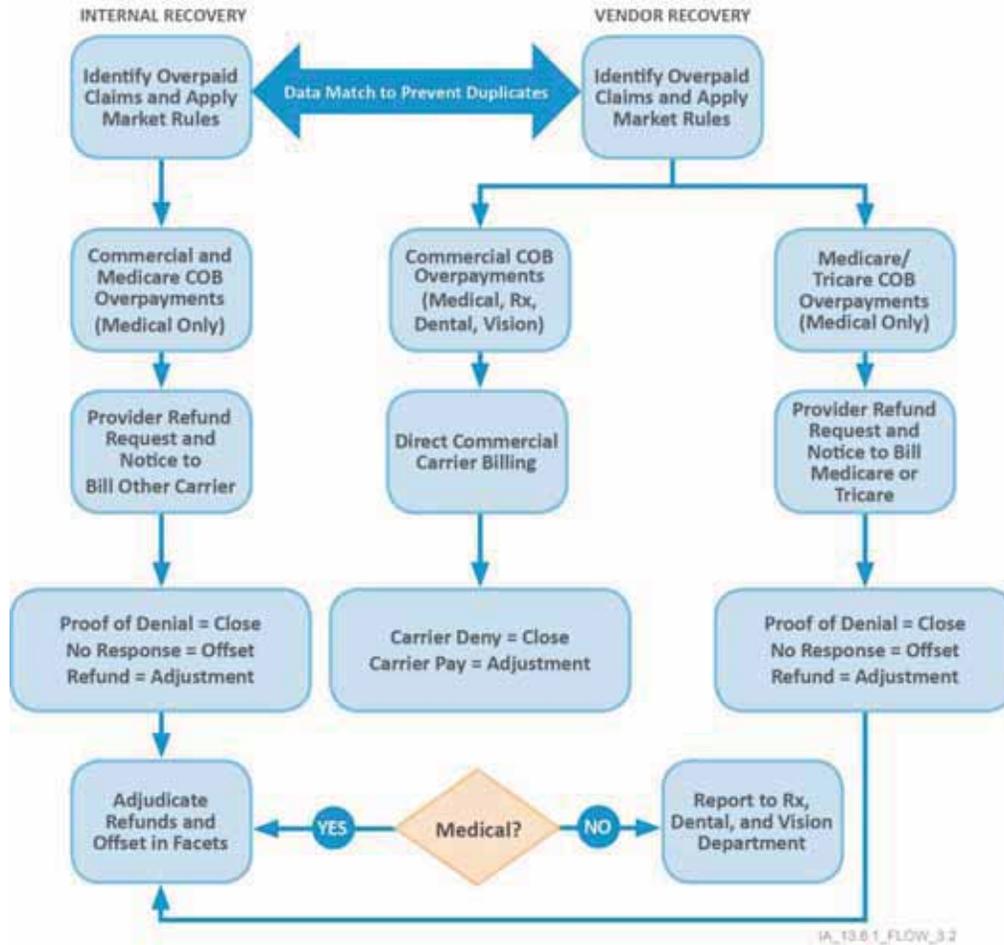

Figure 13.6-3. COB Post Payment Recovery Process

Question 13.6, #2

2. Describe your process for identifying, collecting, and reporting third-party liability coverage.

Process for Identifying, Collecting, and Reporting TPL Coverage

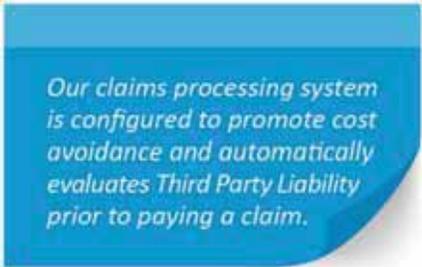

A key part of the claims adjudication process is TPL processing. The member's data is interrogated for the presence of an OHI. If no OHI is indicated, the claim resumes processing. If the member has an OHI or another insurer's EOB is attached to the claim, the claim is pended for further review. If the claims analyst review verifies the member has another insurer, the TPL guidelines are applied—cost avoidance, pay and chase, or other state exceptions. The claim then resumes processing.

A centralized Coordination of Benefits team validates all potential OHI leads. The team conducts research to validate other coverage, collects necessary detail, and takes appropriate actions to update member records so claims process appropriately. Once member data is updated, the Recovery team will identify any claims that were overpaid and initiate recovery actions.

During adjudication, our claims processing system compares the submitted dates of service to the effective and termination dates of the OHI coverage on the member's record. If OHI is found and the claim is submitted without evidence of being paid or rejected by the other insurer, the claim is denied and returned to the provider. The provider must submit claims to the primary payer first and then submit them to Amerigroup to coordinate any remaining balance, if applicable.

We will continue to coordinate benefits and payments with the health or casualty insurer for services authorized by Amerigroup but provided outside our network. Such authorization may occur prior to provision of service, but any authorization requirements imposed on the enrollee or provider of service by Amerigroup will not prevent or unduly delay an enrollee from receiving medically necessary services.

As secondary payer, we will reimburse the provider the maximum allowable Medicaid benefit payment, less any amounts paid by other payers. We understand that Amerigroup is wholly responsible for any services we cover that are not covered by the other insurer. A centralized Coordination of Benefits team validates all potential OHI leads. The team conducts research to validate other coverage, collects necessary detail, and takes appropriate actions to update member records so claims process appropriately. Once member data is updated, the Recovery team will identify any claims that were overpaid and initiate recovery actions.

Our claims processing system is configured to promote cost avoidance and automatically evaluates Third Party Liability prior to paying a claim.

IA_132_COB_2

During adjudication, our claims processing system compares the submitted dates of service to the effective and termination dates of the OHI coverage on the member's record. If OHI is found and the claim is submitted without evidence of being paid or rejected by the other insurer, the claim is denied and returned to the provider. The provider must submit claims to the primary payer first and then submit them to Amerigroup to coordinate any remaining balance, if applicable.

Post-payment TPL Identification and Recovery

Once we adjudicate claims and disburse payments, we analyze data retrospectively to identify opportunities for COB or TPL recoveries. Once a month, we send our paid claims, membership, and other data to our recovery vendor. Our recovery vendor identifies claims that have been paid by Amerigroup that are potentially the responsibility of another payer and sends letters to providers requesting refunds. We maintain a lock box where we instruct participating providers to direct their refunds. After 45 days, we receive a list of claims for our participating providers on which no refunds have been received. Amerigroup then takes the outstanding balances of the overpaid claims and establishes an account receivable for the provider. Our claims payment system offsets future claims against the outstanding

balances until the money has been recouped. Our recovery vendor pursues recoveries from nonparticipating providers.

Sources of TPL (13.6.1.1)

Amerigroup agrees applicable liable third parties can be held legally responsible for the payment of all or part of the medical costs of a member. We identify trauma and accident cases where funds expended can be recovered from liable third parties and recover the funds.

A claim submitted to Amerigroup for payment in which indicators suggest the service rendered is the result of an automobile, liability, or workers' compensation injury or illness may mean that another entity has primary responsibility for the cost of health care services. We will pay the provider for the service rendered and then evaluate claims data in accordance with diagnosis and trauma codes designated in the code of federal regulations. Specifically, we use the diagnosis codes identifying injury or poisoning in the range between 800 and 999.9 (excluding 994.6) in the International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM), and "E" codes (External Causes of Injury and Poisoning) in the range between E800 and E998. If we determine that pursuit of payment by another entity may be appropriate, we establish a case for further investigation and recovery of payments made.

TPL Data (13.6.1.2)

Amerigroup agrees to share information regarding members with other payers as specified by DHS and in accordance with 42 CFR 438.208(b). In the process of coordinating care, we protect each member's privacy in accordance with the confidentiality requirements stated in 45 CFR 160 and 164. We agree that DHS will provide information on member TPL that is collected at the time of Medicaid application and through ongoing TPL identification processes. We will report weekly any new TPL to DHS to retain in the TPL system. The information collected will contain the following:

- First and last name of the policyholder
- Social security number of the policyholder
- Full insurance company name
- Group number, if available
- Name of policyholder's employer (if known)
- Insurance carrier ID
- Type of policy and coverage

We will implement strategies and methodologies to assure the collection and maintenance of current TPL data, including recoveries from direct billing, disallowance projects, and yield management activities.

Cost Avoidance (13.6.2)

To avoid overpayment, the Amerigroup claims adjudication system incorporates a series of edits to prospectively identify and correct potential overpayments based on current alternate insurance information housed in a member's record on the COB tab. These edits also check for inappropriate coding of charges or bundling of services and incorrect coding of procedures on submitted claims. When a member has coverage with another primary carrier, incoming claims are automatically pended for review when loaded into our core operations system. From this review, the claim record is updated with primary carrier payment information.

During adjudication, our claim system's COB logic rules compare the submitted dates of service to the effective and termination dates of the other health insurance coverage on the member's file. If the dates of service on the claim are within the other health insurance effective and termination dates, the claim is suspended for additional analyst review according to our COB guidelines. If the claim reflects adjudication by the identified primary carrier and the required EOB documentation is attached, the analyst reviews the claim to assure that any copayment, coinsurance, or deductible amount required by the primary carrier is considered in determining any balance due to the provider and that the combined payments by the carrier and Amerigroup do not exceed allowable amounts. If the claim does not reflect

adjudication by the identified primary carrier or references payment, but the required EOB documentation is not attached, Amerigroup returns the claim to the submitting provider with instructions to bill the appropriate third party for payment adjudication and then re-submit a claim to Amerigroup if there is a balance owed. Claims/services appropriate for “pay and chase” are an exception. These claims are paid if other coverage criteria are met. See more about pay and chase below.

Provider Education (13.6.2.1)

Our provider education and training program is built on our experience working with provider communities through our affiliate health plans in 19 states. Through this experience, we have learned what types of training work best with different providers and what information they value most. Specific to billing requirements, we educate providers through:

- In-person and live webinars
- Online tutorials
- Our Provider Manual
- Newsletters and fax blast updates

Regular contact with our Provider Services Staff

Our Iowa-based Provider Relations Representatives have experience and understanding of provider office functions and challenges. They receive and review claims trending reports for their assigned providers and present individualized coaching on billing requirements to facilitate prompt payment.

Initial Education and Training

For new providers joining our network, Table 13.6-1 outlines our initial training topics on billing. A newly contracted provider completes initial training within 30 days of going on active status with our network. Qualified Amerigroup Provider Services Staff and leadership team members conduct the training. We post all materials from training sessions to our provider website.

Table 13.6-1. Billing-related Topics Covered in Initial Training

Topic	Provider Education
Eligibility Verification	<ul style="list-style-type: none"> • Enrollment and eligibility for the program • How to verify member eligibility
Covered Services and Cost Sharing	<ul style="list-style-type: none"> • Covered services • Prohibition against member cost-sharing
Claims Submission Guidelines and Processes	<ul style="list-style-type: none"> • Claims submission requirements and timeframes • Clean claim requirements • Electronic claims submission process • Electronic Funds Transfer (EFT) setup
Provider Payment Guidelines and Processes	<ul style="list-style-type: none"> • Reimbursement policies (policies are available on our provider website) • Payment cycles (Amerigroup runs twice weekly payment cycles) • Explanation of Payment (EOP) and Remittance Advice generation, content and timeframes (providers are given their choice of remittance options, including RAs in HIPAA-compliant 835, PDF, and HTML formats, as well as hard copy; and checks or EFT for payment) • Interest payments
Prior Authorization and Referrals	<ul style="list-style-type: none"> • Services requiring prior authorization and referral • Prior authorization and referral submission requirements and timeframes (Amerigroup provides real-time authorizations for telephonic and online requests from providers) • Use of evidence-based and nationally accepted clinical criteria • Decision timeframes • Demonstration of the look-up tool on our provider self-service • Website

Topic	Provider Education
Grievances, Appeals and Claims Disputes	<ul style="list-style-type: none"> • Provider complaint, grievance and appeal, and claims dispute processes and timeframes (phone, web, and mail submissions)
Provider Website	<ul style="list-style-type: none"> • How to access our self-service tools • How our site interacts with Availity.com, a multi-payer portal • A demonstration of each site’s and tool’s functionalities
Third Party Liability	<ul style="list-style-type: none"> • Overview of TPL Processing
Fraud and Abuse	<ul style="list-style-type: none"> • Prohibitions against fraud and abuse • Reporting and compliance • How to contact our Office of Business Ethics with concerns or questions

Customized Training for Specific Provider Types

We tailor our training to meet the needs of specific types of providers. For instance, we provide hospitals with a separate, comprehensive orientation session that includes policies, procedures, and formal agreements for communications between our Medical Management team and the hospital. We conduct ongoing Joint Operating Committee meetings with them to provide further education and address any operational issues. Amerigroup is prepared to educate new providers on The Iowa Initiative. We will work personally with them, explaining billing and authorization guidelines. We will closely track cycles of claims payments to these critical providers. While the claims may well be within DHS standards for cycle time, we follow-up internally as necessary to promote more rapid payment. This helps avoid disruption of services, and in particular, disruption of important relationships between members and provider staff that can be critical to avoiding acute inpatient hospitalizations or nursing facility admissions.

Our Provider Website

To simplify practice management, our provider website also supplements live training by allowing providers to review billing and claims payment information, including:

- Important billing news and administrative updates
- Claims submission and status
- Prior authorization requirements and requests status

Cost Avoidance Requirements (13.6.2.2)

If insurance coverage information is not available or if one of the cost avoidance exceptions described below exists, Amerigroup agrees to make the payment and make a claim against the third party, if it is determined that the third party is or may be liable. We will always make sure that cost avoidance efforts do not prevent a member from receiving medically necessary services in a timely manner.

Cost Avoidance Exceptions – Pay and Chase Activities (13.6.2.3)

Amerigroup agrees to first pay the provider and then coordinate with the liable third party. We will not require providers to bill the third party prior to Amerigroup in the following situations: (i) the claim is for prenatal care for a pregnant woman; (ii) the claim is for coverage derived from a parent whose obligation to pay support is being enforced by the State Title IV-D Agency and the provider of service has not received payment from the third party within 30 calendar days after the date of service; or (iii) the claim is for preventive pediatric services (including EPSDT) that are covered by the Medicaid program. Following reimbursement to the provider in these cost avoidance exception cases, we will actively seek reimbursement from responsible third parties and adjust claims accordingly.

Collection and Reporting (13.6.3)

Our Finance Department will track TPL collections and report these collections to DHS as required. We will track cases until each case is settled or closed and update claims history files to reflect subsequent recoveries or settlements.

Amerigroup agrees to identify, collect, and report third party liability coverage and collection information to the State. We will maintain records regarding third party liability collections and report these collections to DHS in the timeframe and format determined by DHS. We will retain all third party liability collections made on behalf of our members. We will not collect more than what has paid out for any claims with a liable third party. We will provide to the State or its designee information on members who have newly discovered health insurance, in the timeframe and manner required by DHS. We will provide members and providers instructions on how to update TPL information on file and shall provide mechanisms for reporting updates and changes.

We produce the following reports:

- Monthly amounts billed and collected, current and year-to-date
- Quarterly recoveries and unrecoverable amounts by carrier, type of coverage, and reason
- Quarterly TPL activity reports
- Internal reports used to investigate possible third-party liability when paid claims contain a TPL amount and no resource information is on file
- Monthly quality assurance sample verifying the accuracy of the TPL updated applied during the previous month
- Monthly pay-and-chase carrier bills

Other Insurance for IDPH Participants (13.6.4)

Amerigroup has a long-standing history of open communication and collaboration. We agree to work closely with the State and providers to develop policies regarding IDPH eligibility for persons with insurance coverage.

HIPP Program (13.6.5)

Question 13.6, #3

3. Describe your process to identify members with third party coverage who may be appropriate for enrollment in the Health Insurance Premium Payment (HIPP) program.

Amerigroup understands that Health Insurance Premium Payment (HIPP) program helps Medicaid-eligible individuals get insurance or keep insurance by reimbursing the cost of premiums when doing so is cost-effective for the State (meaning that it will cost the State less to reimburse all or a portion of a member's health insurance premium than for Medicaid to pay all of the costs). We identify members with third party coverage who may be appropriate for enrollment in the HIPP program through a variety of sources including State-identified OHI, our vendor partners, claim submissions, and our Provider Services or Member Services Representatives.

Amerigroup agrees to identify, collect, and report members with third party coverage who may be appropriate for enrollment in the HIPP program to the Agency in the timeframe and manner to be determined by the Agency. We acknowledge that the Agency maintains full and final authority for determining if an individual is eligible for HIPP.

Health Information Technology (13.7)

Amerigroup Iowa (Amerigroup) understands that Health Information Technology (HIT) and data sharing initiatives help drive fundamental changes that will transform healthcare delivery. We support DHS’s commitment to using HIT and data sharing to improve health status, achieve better health outcomes, improve service delivery, and maximize patient safety.

With 24 years of experience supporting publicly funded programs in 19 states and Amerigroup and our affiliate health plans have found that a critical success factor in effective care coordination is the appropriate and timely sharing of relevant clinical information. This includes the effective exchange of information between Amerigroup and our Network Providers and also between individual providers to optimize care coordination.

Question 13.7, #1

1. Describe your proposed healthcare information technology (HIT) and data sharing initiatives.

A major component of Amerigroup’s HIT and data sharing plan is to implement new methods for the efficient, secure, and timely exchange of pertinent and actionable health information with our providers for meaningful, impactful purposes, including to:

- **Supply vital information at the point of care** – Deliver relevant clinical information, including gaps in care, that directly impact provider interaction with members
- **Increase efficiency** – Give providers a complete view of a person’s medical history, even if the patient has had multiple sources of care; deliver clinical information that can help the provider avoid duplication of services; help providers intervene when prescriptions have not been filled or prescribed therapy has not been completed
- **Facilitate care coordination** – Foster collaboration between our care coordinators, interdisciplinary team, and Network Providers to improve member health outcomes; provide care coordinators and case managers with alerts to reach out when new actions are needed or when planned actions have not occurred
- **Improve quality** – Achieve sustainable improvements in the quality and coordination of care for members across all categories and benefits through robust analytics and actionable data that facilitate improved measurement of quality through outcomes data rather than through treatment
- We recognize that our HIT and data sharing initiatives must extend beyond our Network Providers. To meet DHS’s goals of improving quality-of-care and health outcomes and coordinating and integrating care, we also must share data and collaborate with our members and other Iowa stakeholders, including participants on the interdisciplinary team, health homes, transition specialists, and support coordinators, as well as DHS, the IHIN, and social services agencies.

IA_13.7_COB_1.3f

In this section, we first discuss Amerigroup’s vision for HIT and data sharing—a vision shared across our affiliate health plans. We follow this discussion with a description of the HIT and data sharing initiatives we propose for the Iowa Initiative.

National Vision Drives HIT and Data Sharing Initiatives

A cross-functional national team stays abreast of developments in HIT and Health Information Exchange (HIE) and supports Amerigroup and our affiliate health plans. This cross-functional team includes

representatives from a variety of functional areas impacted by HIT and HIE, including Case Management, Provider Collaboration, Provider Contracting, Health Care Analytics, and Information Technology. Team members monitor state HIE developments and meet with HIE representatives in each of our Medicaid markets to understand additional opportunities for data sharing. This team will take the necessary steps in the Participation Agreement application process upon notification of contract award.

Our straightforward approach to HIT and data sharing incorporates two main tenets:

- Deliver an enriched data set that combines administrative and clinical data and add value to providers, members, payers, and the State of Iowa
- Meet our providers where they are—at their level of technology adoption

With support from our parent company and affiliate health plans, we will continue to challenge ourselves to identify, investigate, and implement HIT and data sharing initiatives that can help us achieve increased efficiency and avoid duplication of services, while at the same time supporting the State’s goals for the Iowa Initiative of improving the quality of care and health outcomes for Medicaid and CHIP enrollees.

An Enriched Data Set Adds Value

Bidirectional data sharing to create, maintain, and deliver an enriched set of clinical and administrative data benefits all of the Iowa Initiative stakeholders and supports DHS’s goal to “integrate care and improve quality outcomes and efficiencies across the healthcare delivery system.” We can all play a role and work collaboratively to enrich the set of available data to drive better patient care, population health initiatives, and decision-making.

As shown in Figure 13.7-1, Amerigroup’s vision includes bidirectional data sharing between providers, Amerigroup, and the IHIN. Providers share clinical data with IHIN and Amerigroup. Amerigroup shares administrative data, as well as care plans and healthcare assessments, with providers and the IHIN. The IHIN can then share an enriched set of clinical and administrative data with providers and Amerigroup. Combining Amerigroup claims data with provider clinical data creates a wider and deeper set of member data that can drive better outcomes and help manage costs. Our goal is to support the IHIN as a primary aggregator of patient information. For providers who are not yet engaged with the IHIN, we will encourage participation and data sharing while at the same time serving as a conduit to deliver access to meaningful and actionable population management and member data.

As a payer, Amerigroup maintains a wealth of data and information about its members. We enrich our claims data with clinical data, including lab results, state immunization registry and provider Electronic Health Record (EHR) data. We use our clinical and administrative data sources to produce reports and analytics to monitor and manage the delivery of quality care for our providers and our state partners. The core mission is to provide member-centric data in an actionable format and distribute it in ways that encourage engagement. Amerigroup’s data will be strengthened with the clinical information we will obtain from the IHIN. Better data will allow us to derive more value from our analytical tools and processes, enable better care coordination and management, and help us drive better decision-making.

Collaboration and information-sharing between Amerigroup and our providers help improve operational processes, effectiveness of care, avoidance of duplication of services, member satisfaction, patient safety, prevention and wellness, chronic disease management and physician engagement. Our information-sharing technology vision and strategy help define our initiatives to enable all providers to take advantage of our analytics and data, especially small, rural practices.

Figure 13.7-1. Our Vision Includes Bidirectional Data Sharing

We Need to Meet Our Providers Where They Are

When it comes to HIT and data sharing, providers possess varying capabilities and have different workflow and logistical needs. We know that they are at different stages in their move to adopt EHRs and clinical data sharing. We use a tiered approach to data sharing that allows us to leverage the current capabilities of our Network Providers while supporting their move along a path to expanded, meaningful use of online clinical information and data sharing with the IHIN.

Amerigroup will deploy the technology and tools to meet providers at their level of technology adoption. All Iowa beneficiaries are entitled to benefit from the value that HIT can deliver—care coordination, prevention and wellness, and improved healthcare quality—regardless of whether the provider they choose has embraced EHR technology and HIE. We will support all providers by communicating with them in the manner that works within their practice:

- **Low Tech.** This provider is paper based and does not have an EHR but has Internet access and the ability to retrieve member information from Amerigroup through our secure provider website. We will implement programs to encourage low-tech providers to adopt EHRs and use of IHIN services (especially direct secure messaging), and we will connect them to resources, including the HIT Regional Extension Center (HITREC), for support.
- **Moderate Tech.** This provider has begun to adopt HIT. This provider may have an EHR and may be engaging with the IHIN on a limited basis but is not currently exchanging patient clinical data. The moderate-tech provider can benefit from our web-based tools for accessing population and member data to drive better health outcomes.
- **High Tech.** This provider has implemented extensive HIT capabilities within the provider's operations, has attested to meaningful use of the EHR, and is able to share patient clinical data in standard formats with HIE from the EHR. High-tech providers are ready to integrate data at the point of care—whether from the IHIN or Amerigroup—to augment their clinical data set.

Amerigroup will deliver a menu of HIT and information-exchange capabilities that enable and encourage electronic information-sharing in ways that can meet the needs of each of our providers. We understand that HIT adoption varies significantly across providers, and we consider it our responsibility to deliver consumable information to our providers at a level each can use.

However, we know the substantial benefits to healthcare delivery that providers can achieve by adopting EHR and fully integrating with the IHIN. Adopting the best practices of our affiliate health plans, Amerigroup will implement a plan to educate and encourage our providers to adopt a certified EHR and interface with the IHIN. This will increase the number of high-tech practices, while still providing value to our members by accommodating providers who remain low-tech and paper-based. We will leverage the IHIN's communication plan so that we can deliver a consistent message and educate providers on the benefits of the IHIN and the resources available, including Direct Secure Messaging (DSM) and how to use Query (patient look-up) to access patient information. And, more importantly, we will help providers determine how to integrate use of the IHIN into their practice workflow.

Amerigroup views HIT as a catalyst in our overall provider collaboration strategy—delivering additional methods for working with our providers to achieve the overall goal of improving the quality of healthcare delivery for all populations that will be served under the Iowa Initiative.

Proposed HIT and Data Sharing Initiatives

We know the value of technology. When applied correctly, it can be a powerful tool to improve efficiency and effectiveness of healthcare operations and to deliver measurable impact to members, providers, and the State. We focus our proposed HIT and data sharing initiatives on those that will be most impactful.

To support our Iowa programs and services, we will deploy several HIT and data sharing initiatives that will deliver tangible results toward the State's program goals that emphasize member choice, access, safety, independence, and responsibility. These initiatives capitalize on access to clinical and administrative data available from our providers and the IHIN and will include:

- **Integration with IHIN** that will allow Amerigroup to make use of the data and services available through the IHIN and, potentially, allow us to deliver our data to the IHIN to further enrich the available data set. We discuss our plans to interface with the IHIN in our response to question 2.
- **Accountable Care Organization (ACO) Provider Tool** that will deliver continued and consistent access to the population health tool already being used by Iowa ACO providers to support population health management
- **Population Health Management System** that will support providers who participate in one of our provider incentive programs and deliver actionable information to enhance the delivery of care they provide to our members and enhance their performance
- **Clinical Data Sharing and Collaboration Tools** that will give our providers, members, and other stakeholders electronic access to member health and care management information and support collaboration
- **Additional Information and Data Sharing Tools** that will support the needs of our providers, members, and other stakeholders to help reach DHS goals for the Iowa Initiative

ACO Provider Tool

Amerigroup will provide the 3M Treo Solutions Value Index Score (VIS) methodology and tools to offer our ACO providers a consistent measurement tool with a common measure set, including a dashboard and drill-down reporting. As discussed in Section 10.2, ***Amerigroup's intent is to build upon the VIS foundation that is already in place within the State to continue the positive trends in driving improvements in the cost and quality of care.***

We will collaborate with 3M and other Iowa VIS users, including Wellmark, to take full advantage of the existing VIS process so that our providers have information on their relative ranking in the Network, the strengths and weaknesses of their performance versus their peers, and actionable items such as member-level details and outliers to further improve quality care. After we have enough data and working experience with VIS, providers, and the State, we will develop enhanced approaches such as a mechanism to measure providers against any applicable State/national benchmarks so we can further improve Amerigroup HEDIS results and contribute to Iowa's State quality ranking.

In addition, we will work with 3M, in conjunction with Wellmark and other Iowa payers, to increase the value of the VIS product by incorporating feedback recently learned from the ACO community in Iowa, such as increased transparency and increased data sharing tempo. We strongly believe that payer alignment regarding the common use of the VIS dashboards and other reporting tools will allow providers to concentrate on improvement efforts to increase accountability, quality, and efficiency.

Population Health Management System

Providers participating in one of our incentive programs, as discussed in Section 10.3, will be able to review their performance and identify opportunities for improvement through our proprietary online reporting tool. This web-based, interactive tool will allow providers to see actionable, member-specific information to help identify members who need outreach and engagement or have care gaps that may

impact their performance. The tool includes alerts, icons, hover overs, drop downs, and drill-through to support population health management, including the ability to filter patient populations by key conditions, risk factors, gaps in care, and visit history. This tool not only gives providers real time information to help improve their performance as it relates to incentives, but most importantly it identifies opportunities to improve member health outcomes by specific disease state, such as diabetes, hypertension, smoking, etc. Accessible information for providers includes the following:

- **Care Opportunities:** This view identifies attributed members with gaps in care and provides alerts when the next clinical interventions are due. It also addresses pending gaps in care, looking forward 30 and 60 days and to the end of the calendar year, so that care planning can comprehensively cover future clinical due dates, address member needs, and help physicians practice medicine efficiently.
- **Hot Spotter:** Through a combination of claims and pharmacy data, we identify high-risk members who have impactable clinical opportunities and members who are at increased risk for hospital readmission. This helps providers identify members who will benefit most from care planning and increased care coordination.
- **Inpatient Census:** Through the Inpatient Census, PCPs can view information about members who are in the hospital to facilitate the PCP's active involvement in the discharge planning process beginning at the time of admission.
- **Emergency Room:** This view alerts providers to members who frequently use the emergency room and those who may have avoidable emergency room visits.
- **Medical Cost Performance:** If applicable, this view identifies opportunities to more efficiently manage the total cost of care for the provider's assigned members by displaying historical and current unit cost and utilization data across the full spectrum of medical costs.
- **Performance Score Card:** If applicable, the Performance Score Card provides a summary of physician performance against quality targets and includes historic measure rates for the baseline period, rolling measure rates, and performance benchmarks.

To help our providers use this information to improve quality, Amerigroup Provider Services Staff will work collaboratively with the practices to establish quality and cost-efficiency improvement action plans.

Clinical Data Sharing and Collaboration Tools

When it comes to data sharing and collaboration, Amerigroup believes that we need to deliver “the right tool for the right job.” The information, data sharing, and collaboration needs of our Care Coordinators and Case Managers are very different than our providers, members, and other stakeholders. To encourage widespread use, the tools must be tailored for the audience and give each consumer the information they need in a manner that supports understanding and action. We will deliver a suite of integrated data sharing and collaboration tools that allows us to extend our ability to coordinate with stakeholders beyond the Provider Network—including members, caregivers, and other agencies or service providers as shown in Figure 13.7-2.

Amerigroup Care Coordinators and Providers

Accessed through our secure provider website, Member 360 will give all of our providers, including ACOs, a single view that displays member data in an easy-to-navigate dashboard, including HEDIS care alerts, authorizations, prescriptions, and claims organized by type, such as inpatient, emergency room, behavioral health, and office visit. Providers can link from one of our population health management tools directly to Member 360 to see member-level detail. Member 360 will also serve as our primary method for sharing member care management information, including health risk assessments and the care plan, with providers on the interdisciplinary team. Please see Section 9.1.7 for screen shots of the Member 360 dashboard and longitudinal patient record.

Member 360 also organizes information into a timeline of clinical events representing a longitudinal patient record for the member across a number of domains, including diagnosis, providers, and medication history. Events are displayed as icons that show the intersection of “what and when.” In the diagnosis domain, events also indicate “where,” displaying a different icon for inpatient, emergency room, clinic/office, and home/hospice. Providers can access additional details of clinical events simply by placing their mouse over the icon or clicking to drill down.

The ability to view clinical events integrated into a timeline highlights opportunities for intervention from the provider, creating an easy “to do” list. The Member 360 view gives providers the ability to understand all aspects of the member's health, services, and utilization history, supporting the holistic management of the member's care and service needs. For example, they can easily find out whether members are taking their prescribed medication or visiting the emergency room frequently.

Members and Authorized Other Stakeholders

Amerigroup supports a holistic, person-centered approach to coordinating care and services. Working with their Care Coordinator, members create a care plan that guides the care and services that will help them achieve their goals.

An interdisciplinary team comprised of multiple stakeholders engaged in the member's life is critical to developing and delivering high-quality and accessible services and supports. Amerigroup will create and nurture an environment that promotes the involvement and engagement of a variety of individuals to support and enhance member health and well-being, including members and their families/caregivers, providers, and other stakeholders such as transition specialists and support coordinators.

Amerigroup will deliver an information-sharing and collaborative platform where interdisciplinary team participants can review and contribute to the care plan, as authorized by the member. The platform is operational today in several states serving members with disabilities and mental health and substance use conditions, including individuals with intellectual and developmental disabilities or those with a serious mental illness. Through our platform, we will strive to deliver the right information to each audience in a way that supports understanding, coordination, and action in the context of role-based authorization and access. Working together, we can support our Iowa members in directing a meaningful plan with their desired health and quality-of-life outcomes.

Additional Information and Data Sharing Tools

As discussed throughout our response to this RFP, Amerigroup will deliver a substantial array of information and data sharing tools to deliver relevant, actionable information to our Iowa members, providers, and other stakeholders. Some of the key tools include the following:

- **Mobile Tools for Field-based Case Managers.** CareCompass Mobile is fully integrated with our MMIS and will allow field-based LTSS Community-Based Case Managers to use guided tools to complete assessments, consent documents, and other critical forms while in the member's home.
- **Member Outreach and Engagement Tools.** Amerigroup will deliver a member website and mobile application that will deliver information and self-service tools that support member health and well-being. Key tools include an online provider directory (updated nightly), request or print an ID card function (or access through the mobile application), and a “Call Me!” feature with our Member Services call center information.
- **Provider Outreach and Engagement Tools.** Our provider website will deliver information and self-service tools to make it easy for providers to do business with Amerigroup. We support Availity, a multi-payer portal that allows providers to check eligibility, submit claims, and inquire on claims status for multiple payers from a single sign-on. Providers can access our population health and Member 360 clinical data sharing tools, as well as tools to submit requests for prior authorization. Our website also delivers easy access to educational information, including manuals, quick reference guides, and video-based tutorials and training documents.

Information on these capabilities and additional data sharing initiatives are discussed throughout our response to the RFP questions and Scope of Work requirements.

Question 13.7, #2

2. Describe how you propose to interface with the Iowa Health Information Exchange.

Amerigroup is excited to work with the Iowa Health Information Exchange, IHIN, to support Iowans and advance the Iowa e-Health mission to “to improve care, increase security, promote cost savings, streamline treatment, and reduce medical errors through the secure exchange of electronic health information.” ***We applaud the significant growth demonstrated by the steady increase in IHIN Participation Agreements and the use of DSM and Query. Amerigroup will actively support and participate in the IHIN, and we are committed to being an active proponent of the IHIN with our providers. Together, we can help the IHIN and DHS meet their goals.***

Our strategy in working with the IHIN is similar to our data sharing strategy with providers. We will work with the IHIN at their current level of interface and integration and move with them as they expand their service offerings. With state-sponsored affiliate health plans and commercial affiliates across the country, Amerigroup Information Technology professionals have gained valuable experience in working with more than 11 state, regional, and private HIEs and managing direct data exchange with a significant number of hospitals and large provider groups that Amerigroup will leverage to interface with the IHIN today and in the future.

Representatives from our national Information Technology and Provider and Clinical Analytics teams recently met with IHIN technical representatives to better understand the services, technology, and data sharing protocols in place today and on the IHIN's roadmap. This conversation helped confirm that we have the right tools and technology in place to interface with the IHIN.

Full IHIN Support and Engagement

As discussed earlier, Amerigroup believes that bidirectional data sharing with the IHIN will deliver the most value to them as well as to our members and providers. Also, it will enable us to more effectively manage The Iowa Initiative and help realize DHS's goals. Amerigroup will use IHIN services that are available at contract start to support our Iowa operations, pending the outcome of legislation to remove the barrier that restricts use of the IHIN to treatment purposes only. With IHIN we will evolve our interface as capabilities expand and are available to payers. We recognize the

enormous potential that accessing patient clinical data through the IHIN can bring, including access to:

- Lab and diagnostic test results to identify members who would benefit from disease management or care management based on current levels
- Medical record data that are more comprehensive and timely than our claims data, enabling us to improve our care management identification, outreach, and assessments
- Data for HEDIS measures that could reduce the number of necessary medical record reviews and improve data quality

Amerigroup also sees great value in the ability to receive admission, discharge, and transfer (ADT) data from the IHIN, and we are excited to see it on the IHIN's roadmap for later this year with the planned pilot for ACO providers. Several of our affiliate health plans are currently receiving, or will soon be receiving, near real-time feeds of ADT data from HIEs. Timely access to ADT data can support a number of our activities in Iowa, as discussed in our Utilization Management Program in Section 11.1.

We would appreciate the opportunity to participate in Iowa e-Health and IHIN work groups and strategy sessions to share ideas and help support common goals.

Our Technology Infrastructure and Tools are Ready

The Medicaid Management Information System (MMIS) that will support the Iowa Initiative is ready to interface with the IHIN. The technology platform that supports part of our care management and information sharing system, Member 360, also operates as the platform for seven state HIEs with robust capabilities and a proven track record. This platform gives our MMIS the technology infrastructure necessary to integrate with the IHIN. Our Medicaid affiliate in Tennessee is working closely with Informatics Corporation of America (ICA), giving our Information Technology team familiarity with the technology powering the IHIN.

Our MMIS is currently receiving real time ADT HL7 transactions from several HIEs. Interfaces use an internally developed HL7 engine that supports real-time SOAP/Https as well as batch interfaces based on FTP, both via secure connections. The engine supports transaction receipt (including delivering an acknowledgement to the HIE), validation, and routing to the care management subsystem to support care management, disease management, and utilization management activities, and to data warehouse and reporting environments. Prior to integrating with HIEs, our MMIS demonstrated the ability to exchange data with standalone health systems, delivering valuable feedback on the technology and impact on operational processes. Integration with HIEs increases the ability to scale across multiple health systems at a faster rate and with greater consistency.

To further demonstrate our capability and readiness to interface with IHIN, our MMIS is currently exchanging data with five HIEs and actively working to implement interfaces with an additional three by the end of the year. Outreach efforts are in progress with three additional state HIEs.

As early as July 2013, Grant Thornton concluded that our MMIS met the necessary standards and requirements during an HIE Readiness Assessment that was performed for one of our affiliate state-sponsored health plans. Grant Thornton awarded our MMIS the highest scores, evaluating HIE readiness across three dimensions: Functionality, Technical Infrastructure, and Governance, Operations, and Policy. Our MMIS capabilities related to HIE integration and data sharing have continued to grow in the last two years.

Question 13.7, #3

3. Describe HIT initiatives you have implemented in other states.

With Medicaid and commercial affiliates throughout the country, Amerigroup will capitalize on a substantial amount of HIT knowledge, experience, technology, best practices, and lessons learned. Sharing information about innovations that can positively impact the lives of our members is embedded in our organizational culture and consistently encouraged. In addition, our technology infrastructure enables us to leverage technology implemented for one health plan to affiliates, directly benefiting our programs as part of the Iowa Initiative. The following represent just a few of the initiatives implemented in other states that Amerigroup will leverage to support our Iowa members and providers.

Bi-Directional Data Sharing in Georgia

Our Georgia affiliate is working with the Georgia Health Information Network (GaHIN) to implement data exchanges to support their more than 353,000 state-sponsored program beneficiaries. It is the only MCO to be an approved member of the GaHIN. Care managers are actively using the GaHIN's web-based clinical viewer to access member health records to support their TANF and CHIP members, as well as children, youth, and young adults in foster care or receiving adoption assistance and select youth involved with the Department of Juvenile Justice. To further support health information exchange, they are working with GaHIN to establish bidirectional interoperability to *send* care plans and *receive* ADT data. Working with the GaHIN already provides enormous support to program operations by delivering easy access to member clinical data. Our affiliate expects to realize significant additional benefits through bidirectional data exchange, especially the ability to receive near real-time ADT notifications.

ADT Data Supports Maryland Clinical Initiatives

For more than three years, our affiliate health plan in Maryland has been receiving feeds of ADT data from Maryland's statewide HIE, the Chesapeake Regional Information System for our Patients (CRISP). CRISP receives data from all 42 Maryland hospitals, plus five hospitals in Washington D.C. and one in Delaware. The method CRISP uses to send ADT data and the health plan's processes to use the data have evolved—moving from a Microsoft Excel spreadsheet three years ago to today's near real-time HL7 data feed directly into our MMIS. As CRISP evolved, our affiliate modified its data exchange processes to adapt to the new method. Our affiliate has also improved how it integrates the information ADT data provides into care management processes and clinical initiatives to derive the most value.

Our affiliate receives approximately 1,000 ADT alerts each day for its more than 270,000 members. The system analyzes ADT data against high-priority clinical members and generates a set of email alerts to the member's PCP and individuals on the healthcare team. An alert also informs the hospital that the affiliate is monitoring the member's status and clinical condition.

Internally, our affiliate uses ADT data to support several clinical initiatives, including readmission reduction and discharge planning. Consistent access to timely ADT data enables the health plan to engage the member and initiate interventions much faster. The health plan is seeing positive outcomes in emergency room utilization and member PCP visit trends, documenting a 15.7-percent reduction in readmission rates for high-risk members across five Baltimore hospitals last year. Later this year, the health plan will begin using an online dashboard that will deliver additional capabilities to support the use of real-time ADT data.

Telemedicine for Rural Georgia Members

Our affiliate health plan in Georgia is improving the availability and provision of specialty services in rural and underserved parts of the State through telemedicine. In August 2011, it was the first MCO to partner with the Georgia Partnership for TeleHealth (GPT) to provide innovative solutions to expand access to healthcare services. Our affiliate increased access to services by:

- Equipping six rural and underserved counties with telemedicine presentation capabilities
- Enhancing access to specialty care for 20,000 to 30,000 Medicaid recipients
- Providing 1,200 children and adolescents in one rural county with on-site access to primary and specialty care by equipping school-based health centers with telemedicine capabilities
- Equipping six pediatric patient-centered medical home practices with on-site presentation capabilities, including same-day and next-day scheduling of behavioral healthcare appointments

Through telemedicine, our affiliate is improving the availability and provision of physical, behavioral, and dental health services, especially in rural and underserved parts of Georgia.

General (14.1)

Question 14, #1

1. Describe your plan to provide the reports described in the RFP, in the format required, and using templates that may be specified in the Reporting Manual and updated from time to time.

Performance Reporting Requirements

Through our affiliate health plans, Amerigroup Iowa (Amerigroup) has extensive experience producing reports to support state-sponsored health programs across 19 different states. Through our collective 24 years of participating in these programs, we have a proven track record for timely and accurate reporting. In addition to producing the required program reports for DHS and its designees, Amerigroup will continuously track and monitor current performance internally for a variety of care and service measures. We utilize these indicators to verify the effectiveness of services, assess provider performance and member outcomes, allowing us to assess the efficacy of programs and services and as applicable identify opportunities for improvement.

Amerigroup will capitalize on the national experience and resources of our affiliate state-sponsored health plans and leverage their established policies and procedures, mechanisms to expedite report development using the templates and format prescribed by DHS in its reporting manual, or if none is provided we will use a standard format from a similar market. Our oversight, monitoring and validation processes will assure that all financial and non financial performance data is accurate. For our local Iowa health plan, we will hire experienced individuals who understand managed health data, current data mining technology tools, and who will position us to meet the information and data analytics needs of DHS.

Amerigroup has carefully reviewed required reports within each reporting category, such as quality and LTSS, described in the RFP. We understand that the Reporting Manual will be provided following contract awards and it will provide the detailed reporting requirements and the full list of required reports. Due to our extensive experience with reporting in other states, we are confident in our ability to meet all Iowa reporting requirements and will comply with the requirements as specified by DHS, and will coordinate with DHS accordingly when updates and changes are needed to reporting formats or requirements. We will use the processes and tools summarized in Table 14.1-1 comply with reporting requirements and help promote high quality and accurate performance reporting.

Table 14.1-1. Summary of Processes and Tools Amerigroup Uses to Facilitate Accurate Reports and Data

Process/Tools	Summary Description	Benefits to the State
National Information Management Data Governance Process	Data governance is a set of formal management processes that include accountability, risk management, and quality control to assure important data assets are managed in accordance with best practices.	<ul style="list-style-type: none"> Assures consistency and quality of information of all data sources Supports a process to continually enhance resources with additional value-added data.
Business Intelligence Competency Center (BICC)	Supports the Information Management Data Governance Process Provides training, help desk, and real-time associate support.	<ul style="list-style-type: none"> Provides consistent training in reporting tools and techniques to assure accuracy in reports and data

Tab 3: Bidder’s Approach to Meeting the Scope of Work
14 Performance Targets and Reporting Requirements

Formal Software Development Life Cycle (SLDC)	Standardized tools and techniques to assure each report is developed through a consistent process that includes the capture and validation of all report requirements, quality testing, and business review and validation.	<ul style="list-style-type: none"> • Supports both routine and additional reports assuring accuracy • Uses a streamlined process for reports to reduce development time and assure high-quality data
Regulatory Services Report Tracking Database	Tracks reports, data owners, due dates, and record of submissions	<ul style="list-style-type: none"> • Managed and updated by our Regulatory Services Department and Regulatory Oversight Manager to be sure we meet our contractual requirements • Tracks thousands of reports across our affiliates’ state-sponsored programs in 19 states. • Generates reminders for business owners and responsible managers to facilitate timeliness of submission and provides scorecards for managers for monitoring and tracking performance
Enterprise Data Warehouse	Amerigroup focuses on providing quality data, refreshed daily and housed in our enterprise data warehouse as the core foundation of reporting and analytics.	<ul style="list-style-type: none"> • Facilitates consistency and quality of information of all data sources • Does not burden online transactional systems with queries to maintain its performance
Advanced Reporting	Gap In Care and Primary Medical Physician Data Sharing and other performance-based reports	<ul style="list-style-type: none"> • Improves member care by encouraging behavior changes • Reduces costs

Reporting Requirements, Audit Rights, Meeting with Agency (14.1.1-14.1.4)

In accordance with the Scope of Work requirements, Amerigroup will comply with all reporting requirements and as previously described we will utilize the policies and procedures, and oversight and monitoring activities in place across our affiliate health plans as a foundation to ensure that all submitted reports are accurate and in the format prescribed and using the templates provided by DHS. It is further understood that:

- DHS may audit self-reported data at any time and may require corrective action or other remedies as specified in Exhibit E, if Plans are non-compliant.
- Upon receipt of our reports DHS may schedule conference calls to discuss submitted data, if DHS identifies potential performance issues, we will formally respond in writing within the timeframe required and that failure to do so may cause DHS to consider the Contractor noncompliant and that DHS may implement corrective actions.
- DHS may require more frequent reporting at the beginning of the Contract to: (i) monitor program implementation; (ii) permit adequate oversight and correction of problems as necessary; and (iii) ensure satisfactory levels of member and provider services.

Other Reporting and Changes (14.1.5)

Question 14, #2

2. Describe additional data/reports you are capable of providing that can help the State evaluate the success of the program.

Additional Data Reports

In keeping with our vision of creating the best health care value in the industry by making health care more affordable for our customer and providing access and guidance to the right care, we actively pursue program initiatives to deliver improved health outcomes for providers and members. We will use our extensive data analytics and reporting capabilities to work independently or in conjunction with the State to identify opportunities for improvement in health outcomes specific to goals of the Iowa Initiative. Our system contains a best practices library that represents state-of-the-art health care knowledge and clinical rules. The rule authoring tool allows easy configuration for specific programs, so that the reports generated are valid measure for each program. The Iowa Initiative will benefit from Amerigroup and its affiliates' extensive experience and expertise in collecting and reporting data for state-sponsored programs, and we will be able to draw upon our best in class analytic capacity from day one. We look forward to collaborating with DHS following distribution of the Reporting Manual to identify potential additional reports to enhance DHS' opportunity to review and assess the High Quality Healthcare Initiative's program effectiveness and performance.

Across our affiliates, we have an extensive history and proven record of accomplishment for generating compliant, timely, and accurate reports on a weekly, monthly, quarterly, and annual, basis for all of our state customers. Our reporting capabilities also allow us to quickly respond to any DHS request for ad hoc reports. We have the capability to use our extensive data analytics and reporting capabilities to work independently or in conjunction with DHS to identify opportunities for improvement in health outcomes and to report those improvements to DHS. Our system contains a best practices library that represents state-of-the-art health care knowledge and clinical rules. We have the capability to track specific measures for conditions prevalent among specific member populations and we have the capability to aggregate and/or compile the reports on a regular basis, and submit the data to the State, to facilitate an open line of communication about some of the common problems Iowa members face. We can demonstrate how the specific interventions we develop are able to improve health outcomes for our members.

We currently generate thousands of reports to meet the needs of our current state partners across all of our affiliates. Our dedicated health plan team, along with our Iowa Compliance Officer and Regulatory Oversight Manager, will use well-established and documented processes to confirm that all required reports are available to DHS and can make available other ad hoc reports as needed by DHS. We will work closely with DHS to make sure the required report content, formats, submission media, and timetables meet contract specifications, as well as providing additional data and/or ad hoc reports to assist DHS in evaluating the success of programs.

Representative examples of the types of reports our affiliates have recommended for other state programs, and may be beneficial to DHS, are included below.

Service Utilization Reports: We continuously monitor member service utilization in accordance with industry clinical standards and guidelines at the member, provider, and care coordinator levels. We use this data to alert care coordinators about member-specific gaps in care, and to monitor care coordinator and provider performance in engaging members in their care. We can track specific measures for conditions prevalent among specific member populations. We require each department to develop

interventions to provide services in accordance with the guidelines via comprehensive member and provider outreach activities. We share service utilization reports and identify gaps in services for HEDIS and other quality measures with all employees periodically, allowing proactive interventions aimed at improving service utilization and better clinical outcomes.

LTSS Reports: Amerigroup's affiliate health plans have worked collaboratively with a number of our states to provide LTSS reports that document outcomes for individuals residing in an institutional setting or receiving HCBS to demonstrate the effectiveness of our institutional diversion strategies and promotion of HCBS. Examples of report elements that we currently track, trend, and analyze include grievance and appeal data, members returning to the community, critical incidents, fall risk management, out-of-state placements and quality of care concern reports, provider/member satisfaction surveys, and utilization data, readmission to nursing facility or hospitals, employment metrics and many other elements related specifically to members participating in waivers and residing in institutional settings. Through the analysis of these reports we find opportunities at the member and systems level to improve quality and processes and, ultimately, outcomes for applicable members.

Ad-hoc Monitoring Reports: We have the capability to aggregate and/or compile reports on a regular basis and submit the data to the State to facilitate an open line of communication about some of the common problematic health outcomes Iowa members' face. We can demonstrate how the specific interventions we develop are able to improve specific health outcomes for our members.

For example, our Complex Care Management team is collaborating with our team in Advanced Analytics to develop a Complex Care Management report that will monitor program activity and help demonstrate program effectiveness. The report will include Care Management activity metrics, as well as utilization measures for members receiving Care Management.

In another example of our ad-hoc reporting capabilities, our Texas affiliate launched a HealthCare Disparities (HCD) program in 2012, with the purpose of reducing health disparities, which disproportionately affect our members. In 2013 the program evolved to what we currently call the Healthcare Disparities program 2.0. The ongoing goal of this program is to develop replicable models for preventing and managing diseases and ultimately, reduce health care disparities in underserved communities within the State. We developed racial/ethnicity reports and along with HEDIS data and the population assessment, we established program goals and identified components that would align with the Cultural Competency Plan and target our population's needs.

Question 14, #3

3. Describe your internal operational structure that will support the compilation of the performance data and reporting processes of the programs, including:
 - a. The qualifications and experience of the staff responsible for the production and delivery of performance data to the State.
 - b. The process for internal review and validation of data prior to submission to the State.

Internal Operational Structure and Report Tracking

Our national Regulatory Services Department, oversees all regulatory State and Federal reporting requirements. Our dedicated Iowa Regulatory Oversight Manager facilitates, monitors, and promotes an understanding of, and compliance with, the regulatory and contractual obligations.

Key factors that contribute to our proven success in submitting timely and accurate reports include:

- The central accountability of the Regulatory Oversight Manager
- Generation of reports in advance of the due date allowing time for internal review

- Execution of a thorough review by Business Owners who know the data and have ready access to resources to validate reports and, resolve identified issues
- A Data Warehouse designed for warehouse data extraction

Our Regulatory Oversight Manager will track the status of all reports required by DHS and other regulatory entities, as applicable. We use our report tracking database to document the contractual requirements of each report and identify the primary and secondary business owners responsible for reviewing for completeness and accuracy, and approving reports prior to submission. Assigned Business Owners will create a business requirements document for new reports and deliverables to drive necessary programming and report development.

The Regulatory Oversight Manager maintains the reporting tracking database and will generate reminders that go to the Business Operation Owners and responsible managers to alert them of upcoming reporting requirements. The Regulatory Oversight Manager will serve as our primary liaison with DHS for day-to-day contract management and oversight issues, will manage the submission of all required regulatory reporting, and will be our internal subject matter expert and resource regarding Amerigroup Iowa's contractual and regulatory obligations. Additionally, we will provide dedicated technical resources to support the Iowa Initiative from our national Business Relationship Management organization. This technical support resource works directly with Business Owners and their teams to assure that all regulatory and compliance requests are satisfied and delivered timely and efficiently.

Our reporting process automatically generates most reports according to a defined schedule; yet, we also have the capability to manually generate reports to fulfill off-schedule needs or to develop additional reports. An integrated enterprise scheduler allows data center operations to schedule, execute, and monitor the system processes required to generate each requisite report according to the defined schedule, which allows us to incorporate schedule changes easily. Our Business Owners prepare and generate all reports requiring manual data collection, aggregation, and analysis. These Business Owners thoroughly understand the data sources, data elements, relationships between data, and the contractual reporting requirements. They are also in the best position to collect data and verify report accuracy.

We design our operational processes with reporting in mind to make sure we are capturing correct, complete data for reporting and our systems allow us to configure data collection, analysis, and reporting that will accommodate the specific Iowa reporting category requirements. For example, we will assign a Quality business owner to develop and design the Quality Management reports format. All reports and changes will be implemented and systems tested to verify reports are complete and accurate prior to final report production. After program launch, our Quality report business owner will take responsibility for producing the Quality Management reports and delivering them to the Regulatory Oversight Manager, who tracks all reports through a Regulatory Reporting Grid and compiles and submits the reports to DHS in accordance with contract requirements.

We have a prescribed escalation process that is implemented if a report is at risk of being late, inaccurate, or incomplete. In this rare instance, the Regulatory Oversight Manager, in collaboration with the local Iowa Plan Compliance Officer, will alert the Executive Director of the potential risk, and will contact the responsible Business Owner to report the issue and discuss the corrective action plan. The appropriate escalation level and resolution process is determined based on the level of risk. At a minimum, we notify key stakeholders of the risk to help assure that all necessary resources are promptly engaged to eliminate any barriers to timely, accurate, or complete delivery.

If the report requires certification, the Regulatory Oversight Manager will complete the Data Certification form and forward the report and the form to the Plans Executive Director (or designee) for review and signature. Once the certification is signed, the Regulatory Oversight Manager will submit the report to DHS. After we submit each plan, report, or data file; the Regulatory Oversight Manager updates the

Reporting Tracking Database to indicate that the report has been submitted, along with the date of submission. The database automatically generates the due date for the next monthly, quarterly, or annual report. These processes help to assure that all reports, and data extracts are reviewed and verified *before* we send them to the State.

Qualifications and Experience

Our reporting process and structure of quality control are key elements to producing accurate and timely reports and data to our State partners. We will leverage the expertise and qualifications from both our national experts and affiliate health plans managing similar populations. As previously indicated the Iowa Regulatory Oversight manager with support from business owners, data analytics, and Compliance Officer manages and monitors the submission of all reports to DHS. He/she will work closely with the identified primary and secondary business owners, defined as senior level staff within the organization that have the specific expertise and accountability to be able to prepare, assess, and review and validate the accuracy of each regulatory report. Our qualifications include:

- Ability to capitalize on national experience of our affiliate health plans operating state-sponsored health programs across 19 states in leveraging reporting capabilities that enable us to expedite new report deployment
- Applying consistent edits to incoming data and carefully monitored processing to promote data accuracy
- Designated Iowa reporting and data analytics employees who are supported by our national team
- Experienced employees responsible for report preparation who understand the data, managed health care, technology tools, and the information and data analytics needs of internal and external stakeholders
- Tools available for reporting and data analytics throughout the organization to format, aggregate, and report data

Table 14.1-2 summarizes our approach to making sure each category of reports we submit are accurate and provided timely.

Table 14.1-2. Summary of Approach and Qualifications by Report Category

Reporting Category	Description of Approach and Qualifications
Financial	<ul style="list-style-type: none"> • Financial report business owners who are functional subject matter experts with knowledge of, and responsibility for monitoring the health plan’s financial performance will be identified • The business owners will work closely with our national Information Technology department, national accounting and finance teams, and other reporting analysts to define clear and consistent methodologies for developing each report in accordance with State guidelines, and for testing prior to production, as applicable. • After program launch our finance business owner, who has complete understanding of the program data and reviews finance reports for completeness and accuracy will be responsible for delivering final reports to the Regulatory Oversight Manager for compilation and submission to DHS and/or DOI in accordance with contract requirements. • Amerigroup’s Compliance Officer and Regulatory Oversight Manager will confirm that all required financial reports are available to DHS and will coordinate with business owners to make available other ad-hoc reports as needed by DHS.

<p>Member Services</p>	<ul style="list-style-type: none"> • Member Services business owners who are functional subject matter experts with knowledge of, and responsibility for monitoring member services’ performance and activities will be identified • The business owners will work closely with our national Information Technology department, and other reporting analysts to define clear and consistent methodologies for developing each report in accordance with State guidelines, and for testing prior to production, as applicable. • After program launch our Member Services Manager, who has complete understanding of the program data and reviews member services reports for completeness and accuracy will be responsible for delivering final reports to the Regulatory Oversight Manager for compilation and submission to DHS in accordance with contract requirements. • Amerigroup’s Compliance Officer and Regulatory Oversight Manager will confirm that all required member services reports are available to DHS and will coordinate with business owners to make available other ad-hoc reports as needed by DHS..
<p>Provider Network</p>	<ul style="list-style-type: none"> • Our Iowa-based Provider Services team will be the functional subject matter experts with knowledge of, and responsibility for monitoring the health plan’s network access and adequacy, provider helpline, and other provider related activity reports; An assigned account manager will be responsible for monitoring all subcontractor reports • The Provider Services’ business owners will work closely with our national Information Technology department, and other reporting analysts to define clear and consistent methodologies for developing each report in accordance with State guidelines, and for testing prior to production, as applicable. • After program launch, our Provider Services Manager, who has complete understanding of the program data and reviews Provider Services reports for completeness and accuracy will be responsible for delivering final reports to the Regulatory Oversight Manager for compilation and submission to DHS in accordance with contract requirements. • Amerigroup’s Compliance Officer and Regulatory Oversight Manager will confirm that all required Provider Services reports are available to DHS and will coordinate with business owners to make available other ad-hoc reports as needed by DHS.
<p>Quality Management</p>	<ul style="list-style-type: none"> • Quality management business owners who are functional subject matter experts with knowledge of, and responsibility for monitoring the health plan’s quality management activities will be identified • The quality management business owners will work closely with our national Information Technology department, and other reporting analysts to define clear and consistent methodologies for developing each report in accordance with State guidelines, and for testing prior to production, as applicable. • After program launch our Quality Management business owners, who have complete understanding of the program data and reviews quality management reports for completeness and accuracy will be responsible for delivering final reports to the Regulatory Oversight Manager for compilation and submission to DHS in accordance with contract requirements. • Amerigroup’s Compliance Officer and Regulatory Oversight Manager will confirm that all required quality management reports are available to DHS and will coordinate with business owners to make available other ad-hoc reports as needed by DHS.

<p>LTSS</p>	<ul style="list-style-type: none"> • LTSS report business owners who are functional subject matter experts with knowledge of the LTSS reports and specific data elements will be identified • The LTSS business owners will work closely with our national Information Technology department and other reporting analysts to define clear and consistent methodologies for developing each report in accordance with State guidelines, and for testing prior to production. • After program launch our LTSS business owner, who has complete understanding of the program data and reviews LTSS reports for completeness and accuracy will be responsible for delivering final reports to the Regulatory Oversight Manager for compilation and submission to DHS in accordance with contract requirements. • Amerigroup’s Compliance Officer and Regulatory Oversight Manager will confirm that all required LTSS reports are available to DHS and will coordinate with business owners to make available other ad-hoc reports as needed by DHS to assist DHS in evaluating the success of the LTSS program.
<p>Quality of Life</p>	<ul style="list-style-type: none"> • Quality of life report business owners who are functional subject matter experts with knowledge of, and responsibility for monitoring the health plan’s related quality of life activities will be identified • The quality of life report business owners will work closely with our national Information Technology department, and other reporting analysts to define clear and consistent methodologies for developing each report in accordance with State guidelines, and for testing prior to production, as applicable. • After program launch our quality of life report business owner, who has complete understanding of the program data and reviews the reports for completeness and accuracy will be responsible for delivering final reports to the Regulatory Oversight Manager for compilation and submission to DHS in accordance with contract requirements. • Amerigroup’s Compliance Officer and Regulatory Oversight Manager will confirm that all required quality of life related reports are available to DHS and will coordinate with business owners to make available other ad-hoc reports as needed by DHS.
<p>Utilization Reports</p>	<ul style="list-style-type: none"> • Utilization report business owners who are functional subject matter experts with knowledge of, and responsibility for monitoring the health plan’s utilization activities and performance will be identified • The utilization report business owners will work closely with our national Information Technology department, and other reporting analysts to define clear and consistent methodologies for developing each report in accordance with State guidelines, and for testing prior to production, as applicable. • After program launch our utilization report business owners, who have complete understanding of the program data and reviews utilization activity reports for completeness and accuracy will be responsible for delivering final reports to the Regulatory Oversight Manager for compilation and submission to DHS in accordance with contract requirements. • Amerigroup’s Compliance Officer and Regulatory Oversight Manager will confirm that all required utilization reports are available to DHS and will coordinate with business owners to make available other ad-hoc reports as needed by DHS. s
<p>Claims</p>	<ul style="list-style-type: none"> • Claims report business owners who are functional subject matter experts with knowledge of, and responsibility for monitoring the health plan’s claims processing performance will be identified • The claims report business owners will work closely with our national Information Technology department and other reporting analysts to define clear and consistent methodologies for developing each report in accordance with State guidelines, and for testing prior to production, as applicable. • After program launch our claims reporting business owners, who have complete understanding of the program data and reviews claims activity reports for completeness and accuracy will be responsible for delivering final reports to the Regulatory Oversight Manager for compilation and submission to DHS in accordance with contract requirements. • Amerigroup’s Compliance Officer and Regulatory Oversight Manager will confirm that all required claims reports are available to DHS and will coordinate with business owners to make available other ad-hoc reports as needed by DHS.

<p>CMS Reporting</p>	<ul style="list-style-type: none"> • We will identify report business owners who are functional subject matter experts with knowledge of the requested data or content for any CMS required reporting • The identified business owners will work closely with our national Information Technology department, and other reporting analysts to define clear and consistent methodologies for developing each report in accordance with State guidelines, and for testing prior to production, as applicable. • After program launch the identified business owners, who have complete understanding of the program data and reviews CMS reports for completeness and accuracy will be responsible for delivering final reports to the Regulatory Oversight Manager for compilation and submission to DHS in accordance with contract requirements. • Amerigroup’s Compliance Officer and Regulatory Oversight Manager will confirm that all required reports for CMS are available to DHS and will coordinate with business owners to make available other ad-hoc reports as needed by DHS.
<p>IDPH Reporting</p>	<ul style="list-style-type: none"> • IDPH report business owners who are functional subject matter experts with knowledge of, and responsibility for monitoring the health plan’s IDPH service delivery and activities will be identified. • The IDPH report business owners will work closely with our national Information Technology department, and other reporting analysts to define clear and consistent methodologies for developing each report in accordance with State guidelines, and for testing prior to production, as applicable. • After program launch our IDPH report business owners, who have complete understanding of the program data and reviews IDPH reports for completeness and accuracy will be responsible for delivering final reports to the Regulatory Oversight Manager for compilation and submission to DHS in accordance with contract requirements. • Amerigroup’s Compliance Officer and Regulatory Oversight Manager will confirm that all required IDPH reports are available to DHS and will coordinate with business owners to make available other ad-hoc reports as needed by DHS.

Internal Review and Validation Process

Amerigroup’s Regulatory Oversight Manager is central to the quality control of our reporting, including submitting accurate data to DHS within contractual timelines. As described above, our Regulatory Reporting database will document the regulatory and contractual requirements and identify accountable Business Owners for each report, the due date to DHS, and an interim due date to allow time for review.

We generate reports in advance of DHS’ submission deadline to allow adequate time for a thorough review. Business Owners and health plan leadership are responsible for reviewing reports for completeness and accuracy prior to submitting the report to DHS. Business Owners use a number of different methods to confirm the quality of reports. They compare the report to previous reports to identify changes in trends. They also compare them against other reports for the same time period to verify that data track across reports that include similar data elements. They consider events that have occurred during the reporting period that could affect the data. Business owners work with our IT department when necessary to immediately address any errors prior to the report being submitted to the State or makes updates for future reporting.

Following their review, Business Owners submit approved reports to the Regulatory Oversight Manager to review for compliance with DHS’ requirements, before submitting timely reports to DHS. Accountability for timely report submission and accuracy remains at the senior level of the organization. Senior management reviews a quarterly reporting scorecard to monitor performance against both internal and DHS reporting timelines.

These factors to our affiliates' proven success in submitting timely and accurate reports to our state customers:

- The **central accountability** of the Regulatory Oversight Manager
- **Generation of reports in advance** of the due date allowing time for internal review
- **Execution of a thorough review** by Business Owners who know the data and with ready access to resources to research and resolve identified issues
- **A Report card** developed for senior leadership to monitor performance
- **A Data Warehouse** designed for data extraction

The designated Regulatory Oversight Manager will remain the accountable and centralized point of contact for the reporting and communications process. We subject each plan, report, or data submission to extensive review and validation before certifying the product for submission. We do this because we understand how critical it is to get it right. DHS and others—including entities acting on behalf of the State,—need correct information to carry out their responsibilities properly.

We understand the requirements, and we plan the aspects of reporting to be measured (including key quality characteristics and key process variables). Furthermore, we create and run reports, measure the process, check the results, and take action to correct problems. Those actions may be process improvements to achieve higher performance levels or other quality initiatives to detect and correct the systemic cause of errors.

Section 14, # 4

4. Please provide any available Medicaid HEDIS scores in states in which you operate

Our dedicated national HEDIS Data Management teams oversee the HEDIS data processes and we work closely with our state partners across all of our affiliate health plans to meet or exceed each State's performance targets. Annual HEDIS rates are analyzed against national benchmarks and state performance targets to identify opportunities to improve clinical care and service.

We have included the Summary Sheets for each of our affiliate annual HEDIS reports as Attachment 3.2.7.5-3.

Section 14, # 5

5. Provide a copy of your most recent external quality review report for the Medicaid contract that had the largest number of enrollees as of the RFP release date

Amerigroup's affiliate, Amerigroup Texas, Inc., (Amerigroup Texas) holds a contract with the Texas Human Health and Services Commission for the State's Medicaid managed care program as an MCO in numerous service areas across the state. This contract had the largest number enrollees, as of the RFP release date, across Amerigroup and its affiliate health plans operating Medicaid contracts.

We have included the Texas Medicaid Managed Care and Children's Health Insurance Program External Quality Review Organization (EQRO) Report as Attachment 3.2.7.5-1.

Financial Reports & Performance Targets (14.2)

Amerigroup Iowa (Amerigroup) will submit all required reports in DHS-specified formats and timeframes. Our established processes and flexible infrastructure will make sure that required financial data and reports covering all Amerigroup operational areas in Iowa – from Contract award, throughout implementation, and after program launch – are complete, accurate, and on time.

Through our affiliate health plans operating state-sponsored programs in 19 states, Amerigroup has extensive experience meeting the financial data reporting requirements of our state partners. In our Kansas affiliate plan, for example, Amerigroup submitted 1,307 required reports in 2014 – 99.7 percent of them were submitted on time, as scheduled. Following established processes across our National Medicaid Division, our Iowa Regulatory Oversight Manager will coordinate and monitor compliance with all DHS reporting requirements, including submission schedule, format, and certification/attestation.

We understand that DHS requires regular financial reports to assess its stability and ability to provide efficient, cost-effective services to members. And the more precise and complete those reports, the better. As Iowa launches its High Quality Healthcare Initiative, we offer our assistance in providing, developing, and customizing any new templates or reporting processes DHS may need or want. We welcome the opportunity to collaborate with our state partners..

In April 2014, for instance, the Kentucky Department for Medicaid Services (DMS) requested assistance from our Kentucky affiliate health plan, as well as the other Medicaid MCOs in the State, in revising their reporting processes and templates. The DMS goal was to not only make its reporting process more efficient, but also determine what data elements they truly needed. We all came together, reviewed the current reports, then provided requested feedback and suggestions. DMS was very grateful and has spent much time reviewing that information.

In February 2015, DMS began jointly meeting with the MCOs to discuss proposed changes. Those meetings included discussion of proposed template changes, as well as the creation of new reports and future deactivation of current reports. The meetings provided an opportunity for our Kentucky health plan and the other MCOs to collaborate with DMS to revise reporting and enable it to receive the most complete, relevant data.

Third Party Liability Collections (14.2.1)

Amerigroup agrees to report all third party liability collections to the State in the timeframe and format determined by DHS. We maintain records of all money collected from third party resources on behalf of all members, as well as certify that all third party collections are identified and used as a source of revenue. These records will be available for Status audit and review as needed.

Iowa Insurance Division Reporting (14.2.2)

Amerigroup will comply with all reporting requirements at Iowa Admin. Code r. 191-40.14(514B), and will copy DHS on all required filings with the Iowa Insurance Division. We will annually (on or before the first day of March) file with the Commissioner of Insurance a report verified by at least two of its principal officers and covering the preceding calendar year. We will provide this information on the form designated by the National Association of Insurance Commissioners (NAIC) and will complete it using statutory accounting practices. Further, we recognize the Commissioner of Insurance may request additional reports and information. We will provide the requested information in a timely manner.

Annual Independent Audit (14.2.3)

Amerigroup understands and will comply with all requirements specified in Scope of Work (SOW) Section 2.3.5. We will submit an annual audited financial report comprising our financial activities under the Contract within six months of the end of each calendar year. In accordance with NAIC Statutory Accounting Principles, an independent Certified Public Accountant – chosen from a list of three we will provide DHS – will prepare the report, and we will cover the cost of the audit.

Physician Incentive Plan Disclosure (14.2.4)

Amerigroup agrees to submit information on physician incentive plans, as prescribed by DHS, with sufficient detail to permit DHS to determine compliance with 42 CFR 422.208 and 42 CFR 422.210. Our affiliate health plans currently provide similar reports for our state-sponsored health programs in 19 other states and are accustomed to providing the detail required. We will leverage our flexible data systems to customize our existing reports to include all DHS-required elements.

Insurance Premium Notice (14.2.5)

Amerigroup agrees to submit certificates of required insurance no less than 30 calendar days prior to the policy renewal effective date.

Reinsurance (14.2.6)

Amerigroup will provide to the State a summary of our self-insurance plan, which will meet all requirements set forth in Section 2.3.2. As applicable, we will report to the State, in the manner dictated by DHS, all health care claims costs paid by our self-insurance after meeting the reinsurance attachment point.

Medical Loss Ratio (14.2.7)

Amerigroup agrees to maintain, at a minimum, a medical loss ratio of 85 percent, in compliance with SOW Section 14.2.7.

Member Services Reports & Performance Targets (14.3)

Amerigroup Iowa (Amerigroup) will submit reports to DHS in accordance with the terms of the Reporting Manual. Reports will include and are not limited to reports described in Sections 14.3.1 through 14.3.9. We understand that DHS may request additional reports prior to and following project go live. Amerigroup is accustomed to receiving such requests and prepared to work with the State to expeditiously provide these additional reports in the desired format.

Initial Health Risk Screenings (14.3.1)

As part of our comprehensive approach to identifying and addressing the needs of our Iowa members, Amerigroup will complete and report on initial health risk screenings as defined in Scope of Work Section 14.3.1. We know that early engagement with our Iowa members will help promote the appropriate use of health care services and will result in better outcomes. The initial screening is our first opportunity to identify immediate physical health, behavioral health, and/or LTSS needs that require expedited appointments with providers, as well as to identify members for disease management, complex case management, behavior health, care coordination, or other programs and services. We have established processes to conduct initial health risk screenings for new members, members who have not been enrolled in the prior twelve months, and members for whom there is a reasonable belief they are pregnant. We provide a variety of time-tested approaches to encourage participation and engagement and provide members the opportunity to obtain assistance if needed to complete the screening. We describe

our processes to complete initial health risk screenings within the required timeframe and our outreach and follow-up methods to make sure members receive these screenings in Section 9.1.1.

Comprehensive Health Risk Assessments (14.3.2)

Amerigroup will complete comprehensive health risk assessments in the timeframe mutually agreed upon by DHS and Amerigroup during Contract negotiations. As we fully describe in Section 9.1.2, we use several avenues for our members to receive a comprehensive Health Risk Assessment (HRA):

- When a member is **identified in the initial screening process** as having a special health care need or when there is a need to follow up on problem areas identified in the initial screening
- When members are identified for additional care coordination needs through **subsequent reassessments** as members' needs evolve over time
- When **referred for care coordination** (we accept referrals from all sources, including providers, self-referrals, caregivers or family members, and community-based organizations)
- When **analysis of claims** reveals a major change in status (such as a hospital admission, new diagnosis, change in ability to perform activities, etc.)

Care Plan Development (14.3.3)

Amerigroup will support care plan development for 100 percent of members identified through comprehensive health risk assessments and as otherwise defined in Scope of Work Section 14.3.3. Our interdisciplinary teams work together to develop person-centered care plans that address members' needs and goals in a holistic, fully integrated way.

Member Helpline Performance Report (14.3.4)

Amerigroup will meet all call center standards as specified in 14.3.4. Our affiliates operating state-sponsored health programs' experience typically exceed state call center performance expectations and we are confident we can bring superior performance to the Iowa Initiative by leveraging these processes. We will generate regular reports to monitor that we maintain service levels for incoming provider calls at or above DHS' expected rate and using DHS' defined formulas. We use multiple call status reports at a variety of frequencies, ranging from every 15 minutes to quarterly, that detail our compliance with performance standards. Our reports show trends for call volume, average speed of answer, and abandonment rate. We evaluate existing processes for our call center and make necessary adjustments to meet or exceed all service levels and requirements to improve the quality of service offered by our Member Service Representatives.

We maintain operating protocols that promote consistent achievement of our service standards. Our Workforce Management team conducts real-time monitoring of the call center's telephony metrics, using a variety of technology tools and custom reports. When call volume increases beyond the capacity of our scheduled Member Service Representatives, we expand the call answering queue to include designated back-up Member Service Representatives who may be located in any of our six call centers. This approach enables us to optimize staff efficiency while capably meeting performance standards.

Additionally, our workload balancing application helps to ensure that our scheduled staff can meet the forecasted needs. An added benefit of being able to move calls between our multiple call centers is that we react quickly during natural disasters. For example, inclement weather during the winter of 2015 forced the closure of Amerigroup call centers in New York, Virginia, Kansas, and Tennessee. We were able to immediately shift calls to our other call center sites and maintain service levels.

Member Enrollment and Disenrollment (14.3.5)

Amerigroup will report member enrollment and disenrollment information as defined in Scope of Work Section 14.3.5.

Member Grievances Report (14.3.6)

Amerigroup will resolve 100 percent of grievances within 30 calendar days of receipt or within three business days of receipt for expedited services. In addition, we will maintain and report to the State a member grievance log that includes the current state of all grievances.

Our member grievance system is supported by robust information systems, whose tracking and reporting capabilities, together with clearly delineated policies and procedures and appropriate timelines, help us facilitate a timely review and response to member inquiries, grievances, and appeals. Our systems support on-going tracking of all grievances and appeals via a daily report notifying the Complaint, Grievance, and Appeal Coordinator of all open and unresolved cases in our system. We maintain and track all inquiries, grievances and appeals to monitor status, track timeliness of resolutions, to identify and quickly address patterns or concerns, and to ultimately improve the quality of care provided to our members. Grievances, whether received verbally or in writing, are tracked in our core operating transaction system. This system will provide a separate log for Iowa Initiative members. Through this system, we track grievance data elements that including:

- Date received and date of decision (resolution)
- Identification of the individual filing the grievance (reported through a drop-down box indicating member, provider, or person acting on behalf of the member)
- Identification of Amerigroup employee recording the complaint
- Nature of problem
- Disposition
- Corrective action required

Grievances received in writing, other correspondence, and hard-copy information are electronically imaged and can be easily accessed through our system. We will work with DHS to develop an agreed upon timeframe and format to submit a log sheet for all inquiries, grievances, and appeals.

Other Monitoring Processes and Reporting Requirements

Amerigroup closely monitors grievance and appeal volumes, and daily aging reports will help us achieve timely resolution within State requirements. We use our member grievance and appeals processes to identify, assess, and address specific areas of member concern and dissatisfaction. These issues can include problems with Amerigroup or its employees or with providers who serve members.

Review and analysis of inquiry, grievance, and appeal data is an integral part of Amerigroup's Quality Management program. In addition to preparing, reviewing, and submitting required reports to the State, our Quality Management Department conducts a comprehensive review of inquiry, grievance, and appeal data each quarter. It focuses on identifying issues, problems, and trends for presentation to the Quality Improvement Committee. The primary report generated for review aggregates inquiry, grievance, and appeal data across a number of key dimensions, including type of inquiry or grievance, appeal action, and disposition. All report data is aggregated to protect member privacy. We also perform a root-cause analysis to identify drivers of increased inquiries, grievances, and appeals, as well as any specific trends in the types of issues received. We analyze results for review discussion and development of action plans for improvement, including member or provider education, and examining internal processes and/or development of a formal internal improvement initiative.

Member Hearing and Appeals Report (14.3.7)

Amerigroup will resolve 100 percent of appeals within 45 calendar days of receipt or within three business days of receipt for expedited appeals. In addition, Amerigroup will acknowledge 100 percent of appeals within three business days. We will maintain and report to the State a member appeal log that includes current status of all appeals.

Appeals are also recorded and tracked through our system that includes a recognized industry-leading application in business process management, business rules, and customer relationship management. Through this system, we maintain and track appeal data elements. Our technology is an enterprise solution for managing Medicaid appeals, reducing many of the manual and human processes that go along with it and thereby reducing error and increasing timeliness and efficiency. The application interfaces with our other systems, providing real-time access to member and provider information, including membership, eligibility, service, and claim payment details.

Our application also has the capability to track an appeal by member, provider, authorization, and/or claim, as well as act as the central repository for all segments of the appeal, regardless of whether it is related to benefit coverage. Our application also enables us to configure member notifications in other languages to accommodate diverse language needs and generates notifications based on State-required timeframes as well.

The filing date in our system will correspond to the verbal submission, when an appeal is initially filed verbally. The written and signed appeal request and other related correspondence and hard-copy information are electronically imaged and also accessible through our system and application. All required elements are obtained and tracked for appeals, and our system will provide a separate log for Iowa Initiative members.

Summary CAHPS Survey (14.3.8)

Annually, Amerigroup assesses member satisfaction through the Consumer Assessment of Health Plans Survey® (CAHPS) administered by an independent third-party vendor. It gathers data on member satisfaction with access, availability, and quality of services. We assess year-over-year improvements in survey results and compare our performance to that of the industry overall. The results provide us with valuable benchmark information and point us to those areas where we can focus for improvement. We are accustomed to provide survey results to State oversight agencies and will provide DHS our survey results from the independent CAHPS survey.

Member Website Utilization Report (14.3.9)

Amerigroup will track and report to the State member website utilization data, including EOB and quality information hits.

Member PCP Assignment Reports (14.3.10)

Amerigroup will provide a PCP Assignment Report in a format and frequency dictated by the State.

Provider Network Reports & Performance Targets (14.4)

Network Geographic Access Reports for Providers (14.4.1)

Amerigroup will leverage the best practices of its affiliate health plans operating state-sponsored health programs across 19 states and will continuously review network adequacy to proactively monitor access for our members. We will provide network adequacy reports to DHS upon request. Amerigroup will

demonstrate access for 100 percent of members by generating GeoAccess[®] reports for network adequacy according to the mileage requirements set forth in Exhibit B or additional network adequacy standards developed by DHS. We understand that DHS may request more frequent Network Geographic Access Assessment reporting at the beginning of the Contract.

Our Iowa-based Provider Services team will be responsible for generating and analyzing network access reports. The Provider Services Manager will be monitor these reports to validate network adequacy compliance.

GeoAccess offers reporting features that evaluate network adequacy for physical and geographic access that include the following:

- **Geographic Overview Maps:** Displays PCP and specialty care provider locations by geographic area.
- **Provider and Member Location Maps:** Plots members and providers of any or all specialty/specialties—or combinations of both; these maps overlay the provider network against the membership base with the appropriate radius encompassing each provider to identify geographic coverage in a particular area.
- **Member Accessibility Summary:** Provides an overview of the entire analysis displayed in a given report. It details the number and percentage of members with and without access to a PCP, as well as to key specialists (for example, number and percent of members with and without access to a gastroenterologist).
- **Access Comparison:** Provides a graph that demonstrates the point at which the percentage of members attains compliant status with the specified provider type and defined access standard.
- **Accessibility Detail:** Presents counts of members with and without access to care under the defined access standards. It provides the total number of members, providers, and a member-to-provider ratio for the demographic or geographic area analyzed. The report also provides a detailed analysis of a member's choice of up to five providers and the average distance to achieve that access.

If the network adequacy standards are met but our members' needs could be better served by a provider outside our network, Provider Services staff provides outreach to the identified provider(s) to discuss participation in our network. If a deficiency occurs, we immediately act to remedy the situation in accordance with our established policies and procedures. To address any deficiencies in our provider network, our Provider Services team develops action plans that identify staffing, responsibilities, resources, and a timeline to correct the situation.

24-Hour Availability Audit (14.4.2)

Amerigroup will require 100 percent of our network primary care providers to be available twenty-four hours-a-day, seven days-a-week (24/7)—using appropriate after-hours call services—by complying with Iowa after-hours standards, and will audit providers for compliance to this standard. We educate providers on this requirement and contractually obligate them to adhere to the standards. Our Provider Services Manager is responsible for oversight and analysis of provider audits around access and availability. Amerigroup routinely uses an independent audit firm to perform regular surveys that monitor provider availability. Amerigroup follows the detailed process outlined previously in Section 14.1 to validate the survey results to maintain 100 percent compliance with 24-hour availability.

When we identify a provider who is out of compliance with appointment standards, our employees visit the provider and present a letter requesting a corrective action plan. We will continue to monitor compliance and re-survey the provider after 90 days to verify compliance. Ultimately, we will remove any provider who fails to meet access standards from our network.

Provider Credentialing Report (14.4.3)

Amerigroup will provide DHS with a report on the timeliness and effectiveness of our provider credentialing processes, to include reporting on the following standards: (i) 90 percent within 30 calendar days; and (ii) 100 percent within 45 calendar days. We will adhere to DHS' defined time frames, tracking the start time when Amerigroup receives all necessary credentialing materials from the provider. Completion time ends when written communication is mailed or faxed to the provider notifying the provider of Amerigroup's decision.

Our Provider Services Manager analyzes credentialing timeliness reports to determine compliance. The Provider Services Manager and the Provider Services team follow defined processes that enable Amerigroup to fully credential providers in a timely manner. Amerigroup follows the internal review and validation process outlined in Section 14.1.

Subcontractor Compliance Report (14.4.4)

Amerigroup will conduct quarterly formal reviews of all subcontractors and provide summary reports in the prescribed format to DHS of all key findings and applicable corrective actions if implemented.

Every Amerigroup subcontractor is assigned an Account Manager who is responsible for receiving monthly, quarterly, and annual subcontractor data reports that our internal subject matter experts (SMEs) review further.

We assign an Amerigroup Account Manager from our National Provider Services Organization to any subcontractor who provides services to more than one Amerigroup affiliate. The National Provider Services Organization, comprised of 11 staff, has successfully managed subcontractor oversight in Amerigroup's affiliate plans and will bring that same expertise to our Iowa operations.

For our local Iowa subcontractors, the Account Manager function will be the responsibility of a health plan manager with the appropriate expertise to monitor that subcontractor's performance (for example, the Provider Services Manager would be Account Manager for a delegated Network Development subcontractor). If a subcontractor does not provide these reports in a timely fashion, or a deficiency is detected by either the Health Plan SME or the Account Manager, it is the Account Manager's responsibility to communicate such deficiencies to the subcontractor and initiate a corrective action plan.

The Account Manager is responsible for coordinating the formal, quarterly reviews for Iowa and then providing a summary report of the findings and any corrective action plans to various oversight committees including, but not limited to, the local Vendor Compliance Workgroup, which is a collaborative effort between Amerigroup's compliance, quality, and functional leadership.

Provider Helpline Performance Report (14.4.5)

Prompt response to incoming provider calls is very important to Amerigroup. Amerigroup will generate regular reports to monitor that we maintain service levels for incoming provider calls at or above DHS' expected rate and using DHS' defined formulas.

Our Provider Services Manager will analyze and validate service-level reports for provider calls. The Provider Services Manager and Provider Services team works closely with helpline leadership to review the results of provider service levels and will take appropriate actions to maintain required levels.

Amerigroup uses multiple call status reports at a variety of frequencies that range from every 15 minutes to quarterly and that detail our compliance with performance standards. Our reports show trends for call volume, average speed of answer, and abandonment rate. We evaluate existing processes for our provider helpline and make necessary adjustments to meet or exceed all service levels and requirements to improve the quality of service offered by our Provider Services staff.

We maintain operating protocols that promote consistent achievement of our service standards. Our Workforce Management team conducts real-time monitoring of the helpline's telephony metrics, using a variety of technology tools and custom reports. When call volume increases beyond the capacity of our scheduled Provider Services staff, we expand the call answering queue to include designated back-up from the Member Services and Provider Services staff who may be located in any of our six call centers. This approach enables us to optimize staff efficiency while capably meeting performance standards.. An added benefit of being able to move calls between our multiple helplines is that we can react quickly during severe storms or power outages to maintain optimal service levels for our members.

We will submit reports to DHS at the frequency specified in their Reporting Manual.

QM Reports & Performance Targets (14.5)

Amerigroup Iowa's (Amerigroup) Quality Management program reports provide the data which allows us the opportunity to identify ways to improve member satisfaction, enhance appropriate member access to services, level of care, quality and use of program services. Our QM reports objectively and systematically monitor and evaluate the quality, appropriateness, accessibility, and availability of safe and equitable medical, social, and behavioral health care and services. These reports will assist DHS in monitoring our quality management program and improvement activities. We will provide reports in the format prescribed by DHS in its Reporting Manual or if none prescribed, in a standard format used in similar markets.

QM/QI Program Work Plan (14.5.1)

Through our affiliate health plans, we have extensive experience developing and implementing Quality Management and Improvement Program Work Plans developed in support of state-sponsored health programs across 19 different states. Our work plans reflect the efficiencies and priority required to effectively manage quality programs. Through these plans we establish quality improvement strategies and use comprehensive quality tools, resources, and quality improvement processes to accomplish the QM/QI program goals. We monitor, measure, and report the outcomes of clinical care and services, by analyzing clinical and service performance indicators and health care outcomes, and identify and act on opportunities for improvement. The QM/QI program incorporates health promotion as well as performance monitoring in order to positively impact and improve the quality of care and services delivered to members.

The annual QM/QI Work Plan identifies specific activities and projects to be undertaken and the performance measures to be evaluated throughout the year. Work Plan activities align with contractual accreditation, and/or regulatory requirements and identify goals for improving the delivery of health care

benefits and services including a timeline with target dates and measurements to accomplish the goals. Attachment 14.5.1-1 Work Plan, provides a copy of our initial draft QM/QI Program plan and we will incorporate DHS requested changes and submit an official draft plan within 15 days of Contract execution and will execute and adhere to the plan as approved by DHS. Our work plan will include our proposed strategy to align with the SIM project, including specific detail for the value based purchasing requirements.

Please refer to Section 10.1.2 QM/QI Program Requirements and 10.2.5 State Innovation Model (SIM), for a complete description and additional detail of our QM/QI work plan. As requested, Amerigroup will provide the QM/QI work plan, prospectively each year, with quarterly updates and a final evaluation of the prior year, for DHS approval.

QM/QI Committee Meeting Minutes (14.5.2)

Drawing on regular, written minutes and reports from the Quality Management and Improvement Committee that list actions taken and improvements made, Amerigroup will identify needed enhancements to the operational QM/QI Program and Work Plan based on their review of the findings and issues of concern. These activities will be documented in Committee meeting minutes in sufficient detail to demonstrate that action was taken and will be provided in the reporting cycle following the meeting. A copy of the written minutes signed and dated will be available on-file and for review upon DHS or its designee request.

Care Coordination Report (14.5.3)

Amerigroup will submit care coordination reports summarizing all members engaged in our care coordination programs including active participation, member contacts, disenrollment and outcomes. Through our affiliates, we have experience providing these reports for each of our other state programs and closely track the member participation rates and outcomes; always looking for opportunities to provide members with the most effective resources and solution for the delivery of their medical, social, and behavioral health care service needs. For example, we have developed a "Care Opportunities Report"; which identifies attributed members with gaps in care and provides alerts when the next clinical interventions are due. The report also addresses pending gaps in care, looking forward 30 and 60 days, so that care planning can comprehensively cover future clinical due dates, addresses members needs and help physicians practice medicine more efficiently. We can adapt to report changes that the State may require and provide the flexibility to incorporate enhancements and changes when requested. Please refer to Section 9 Care Coordination for additional information on our care coordination reports and program.

HEDIS Report (14.5.4)

Amerigroup's dedicated national HEDIS Data Management teams oversee the HEDIS data processes to verify that our quality metrics accurately reflect our performance. We work closely with our State partners across all of our affiliate health plans to meet or exceed the baseline performance targets. We analyze the annual HEDIS rates against national benchmarks and state performance targets to identify opportunities to improve clinical care and service. We will conduct an annual HEDIS audit survey and submit the final audit report along with the audited data provided to NCQA.

Quarterly Health Outcomes and Clinical Reports (14.5.5)

Amerigroup will work with DHS and comply with DHS established quarterly clinical reports and baseline rates for monitoring health care services use and quality outcomes. We will provide reports for the priority areas as directed by DHS. The data and reports are a valuable resource which we use to effectively change and positively impact member behavior, approach and outcomes.

Behavioral Health (14.5.5.1)

Through our affiliate health plans, Amerigroup has extensive experience producing behavioral health reports and as a result we have implemented a variety of care management initiatives that have contributed to reductions in behavioral health readmissions and achieved cost savings while enhancing quality and positive outcomes for members. We will provide the following behavioral health reports as outlined by DHS: Follow-up after inpatient hospitalization for mental illness; Readmission rates for psychiatric hospitalizations; Anti-depression medication management; Follow-up care for children prescribed attention deficit hyperactivity disorder (ADHD) medication; Diabetes screening for people with schizophrenia or bipolar disorder who are using antipsychotic medication; Adherence to antipsychotic medications; Number and percentage of members receiving mental health services; Number and percent of members receiving substance use disorder services; Foster children by a common identifier, age diagnosis, prescribed medication; and Foster children who are on 2 or more prescribed psychotropic medications, psychotropic prescriptions, and diagnoses to support prescribing pattern. We will provide these reports in the format prescribed by DHS in its Reporting Manual or if none prescribed, in a standard format used in similar markets.

Children's Health (14.5.5.2)

Amerigroup's advanced EPSDT Datamart is designed to capture, store, and analyze internal and external data to monitor each member's compliance with the EPSDT periodicity schedule. The EPSDT Datamart provides a mechanism for tracking EPSDT screenings, well-child visits, adolescent well-care visits, childhood immunization status, adolescent immunization status, foster children that receive EPSDT screenings and developmental screening for children age 0-3, diagnoses, and treatment for our members. Our affiliate health plans have produced these reports in our other state programs and Amerigroup will provide these children's health reports as required by DHS. In addition to claims and authorizations, we capture data from many available sources, including state registries, pharmacy, lab vendors, medical record reviews, member assessments, and member care plans; therefore, providing the opportunity for additional reporting if requested by DHS. We use this data and the reports to identify opportunities to improve member participation and take appropriate action to support positive member outcomes.

Prenatal and Birth Outcomes (14.5.5.3)

Amerigroup will provide reports for prenatal and birth outcomes identifying the number of infants born between 34 and 36 weeks; percentage of deliveries that received recommended prenatal and postpartum visits; cesarean rate and frequency of ongoing prenatal care. As we evaluate the results of these reports we look for opportunities to enhance or implement new initiatives and conduct additional outreach and member education all in support of positively impacting prenatal and birth outcomes.

Chronic Condition Management (14.5.5.4)

Through our affiliate health plans, Amerigroup has extensive experience and dedicated programs supporting and coordinating care for members with chronic conditions. We continuously monitor and track these programs to measure our effectiveness of services for our members with chronic conditions and take appropriate action when needed. We will collect data and provide reports to support improvements and measure the effectiveness of the services delivered to members with chronic conditions such as diabetes; cardiovascular; HIV/AIDS; COPD; asthma; chronic kidney disease and other chronic condition prevalent among our members.

Hospitalization and ER (14.5.5.5)

We have extensive experience and provide hospitalization and ER reports currently in each of our affiliate health plans and will provide DHS required reporting including potentially preventable admissions; hospital readmission rates; potentially preventable ER visits and emergency room diversion. We use these reports to monitor readmissions by provider and provider type. We identify members who have frequent

readmissions and the inpatient provider who admitted the member. We use this information to target outreach to providers and members to identify the reasons for readmission and determine which admissions were potentially avoidable. We review the member's clinical conditions that led to admission and identify any contributors to readmission, including break down in inpatient, outpatient, or health plan processes. We may also identify a need for new initiatives during this analysis; which we can then implement to help avoid preventable hospital admissions, readmissions and ER visits. Please refer to Section 10.5 Provider Preventable Conditions for specific information demonstrating our process for avoiding payment for provider preventable conditions.

Adult Preventive Care (14.5.5.6)

Amerigroup will collect and develop reports to measure adult preventive care services to include cervical cancer screening; breast cancer screening; colorectal cancer screening and adult access to preventive/ambulatory health services.

For example through our provider collaboration model we orient providers toward timely delivery of preventive services for all members. Our providers will receive valuable reports such as the Monthly Potential Missed Care Opportunities Report identifying members who have not yet had a test, screening, or visit for various quality-of-care indicators. This report may prompt a provider to reach out to a member because of a missed breast cancer screening, cervical cancer screening or other preventive care services and increase the potential of closing this gap for the member.

LTSS Reports & Performance Targets (14.6)

Amerigroup Iowa (Amerigroup) will work collaboratively with the State of Iowa to develop reports that provide meaningful outcomes data for individuals residing in institutional settings or receiving HCBS. We track and report on several operational areas in LTSS to assure we are meeting our member's needs, such as: Assessment and Reassessment Completions, Care Plan updates and review dates, Medicaid redetermination dates, Staffing ratios for HCBS and nursing home, and New and Termed Provider reports.

Amerigroup's affiliate health plans have worked collaboratively with a number of our states to provide LTSS reports that document outcomes for individuals residing in an institutional setting or receiving HCBS. These reports demonstrate the effectiveness of our institutional diversion strategies and promotion of HCBS.

Examples of report elements that we currently track, trend, and analyze include grievance and appeal data, members returning to the community, critical incidents, fall risk management, out-of-state placements and quality of care concern reports, provider/member satisfaction surveys, and utilization data, readmission to nursing facility or hospitals, employment metrics and many other elements related specifically to members participating in waivers and residing in institutional settings. Through the analysis of these reports we find opportunities at the member and systems level to improve quality and processes and, ultimately, outcomes for applicable members. ***For example, in our New York health plan our member satisfaction survey results demonstrated a 96 percent overall satisfaction with the performance of the plan; 98 percent satisfaction with performance of care managers and 98 percent satisfaction with home care aide and personal care workers.*** In addition, in 2014 in Kansas, our affiliate health plan, we accomplished 100 nursing facility member re-integrations into the community and 640 nursing facility and ICF diversions.

Please refer to Section 4.3.12.4 Diversion Strategies for our implementation plan and proposed strategy for our comprehensive institutional diversion program and promotion of the provision of HCBS.

Nursing Facilities Admission Rates, Nursing Facility Days of Care (14.6.1 – 14.6.2)

Amerigroup will document the nursing facility, ICF/ID, and PMIC admission rate. We will collaboratively develop and provide reports that document nursing facility, ICF/ID and PMIC days per thousand used by eligible members. We will work with DHS, as baseline rates are established and deploy strategies that have proven successful in other markets to decrease the number of nursing facility, ICF/ID and PMIC days per thousand used by eligible members.

Amerigroup provides real solutions to meet our member's preference to remain in their own homes and communities through our comprehensive care coordination program and strategies. Amerigroup's approach builds upon principles of trust, collaboration, and understanding to engage members in the coordination of health, long-term supports, Value-Added Services and community services in creative solutions that support community-based alternatives to institutional settings of care. The elements of our approach include timely assessments, referrals, and member education regarding available services and benefits, and effective collaborative service planning. We also conduct intensive follow-up to ensure that at-risk members wishing to remain in a community setting are able to do so.

Return to Community (14.6.3)

Amerigroup's affiliates currently produces LTSS reports in each state program where we provide long term care services, including a return to community report, which documents the percentage of members who return to the community following nursing facility, ICF/ID and PMIC admission. We will collaborate with DHS as they establish both the report format and baseline rates, and we will implement our plan and strategies to increase the number of members returning to the community.

ICF/ID and PMIC Report (14.6.4)

Amerigroup will provide the reports necessary to document measures for ICF/ID and PMIC services as identified by DHS. We will collaborate with DHS and can adapt to program changes and work to incorporate measures as required.

Fall Risk Management (14.6.5)

Amerigroup will provide the report necessary to document the percentage of members in long-term care at risk for falling who are seen by a practitioner and receive fall risk intervention. Through experience with our affiliate health plans we have used fall risk management reports to take extra precaution for members at increased risk for falling and promote the most effective interventions and increase practitioner and member awareness. For our LTSS members, community-based case managers routinely observe the member's environment for potential health and safety issues related to falls, and discuss with the member available interventions and incorporate the most appropriate interventions into the member's care plan.

Hospital Admission after Nursing Facility Discharge (14.6.6)

Amerigroup will provide reports documenting the percentage of members discharged from a nursing facility who had a hospital admission within 30 days. We will collaborate with DHS as baseline rates are established and develop a strategy to demonstrate a decrease in the hospital admission rate following a member's nursing facility discharge.

Self-direction (14.6.7)

Amerigroup fully supports self-directed care. Through our affiliate health plans, we have extensive experience in educating our members with regard to this option. Numerous states that we are engaged in require some form of reporting as well as tracking or outcomes related to increasing the number of consumers selecting self-directed options. *In these states, our affiliates work closely with our state partners and have developed comprehensive policies and procedures that guide member education and election and implementation of self-direction.* We provide reports to identify the number of members who are self-directing their HCBS and use these reports to monitor member progress in self-directed services. In support of the State's HCBS transition plan goals, of increasing member self-direction, we will promote and look for opportunities for self-direction with our members.

Please refer to Section 4.4.8 Self-Direction for our proposed strategy for implementing the Consumer Choices Option to include monitoring and reporting.

Timeliness of Level of Care, Timeliness of Needs Assessment and Reassessment (14.6.8 – 14.6.9)

Amerigroup and our health plan affiliates has well-established, reliable, and efficient processes for tracking and reporting timeliness of level of care, assessments and reassessments to our state partners. Our innovative CareCompass technology and robust reporting systems reduce administrative burden and create efficiencies by automating the transfer of information. Our enabling technologies coupled with our well-defined policies and procedures and dedicated care coordination staff provides the consistency and efficiency required to meet the State timelines. For example, a 2013 annual quality survey in our Tennessee health plan reviewing a sample of member files revealed a 100 percent compliance score for timeliness of reassessments and reporting level of care changes to the State for determination.

We will complete one hundred percent of level of care reassessments within twelve months of the previous assessment and fully cooperate with a DHS audit; which we are confident will demonstrate our accuracy and appropriate application of criteria. We will report the timeframes for completion of needs assessments and reassessments for the 1915(c) HCBS waiver members and collaborate with DHS to establish a mutually agreeable timeframe during contract negotiations, for completion of these needs assessments.

Care Plan and Case Notes Audit (14.6.10)

Amerigroup will collaborate with DHS as they determine compliance by auditing the 1915(c) HCBS waiver care plans and case notes. Amerigroup and our affiliate health plans have experience complying with audits as *demonstrated in the results of our LTSS EQRO audits showing a ninety percent or greater compliance rate.*

Our member care plans and case notes will demonstrate our compliance with (i) timely completion; (ii) a care plan addressing the member's assessed health and safety risks and personal goals; (iii) member signature on the care plan; (iv) all providers are listed on the care plan; (v) all funding sources are listed on the care plan; (vi) plan for supports available to the member in the event of an emergency are documented; (vii) provision of services as delineated in the care plan; (viii) discussion of advanced directives with members; (ix) percentage of new members starting ongoing services within the required timeframe; (x) member and/or guardian participation in care plan development; and (xi) number and percentage of in-person visits that were on time, late or missed, as required by DHS.

Critical Incident Reporting (14.6.11)

We will regularly track and trend critical incident data and coordinate necessary oversight, performance improvement strategies, and ongoing monitoring as part of our ongoing commitment to improve quality of care and reduce occurrences of critical incidents. Amerigroup will provide the reports necessary to

document the number, percent, and frequency of critical incidents in the required timeframes. We will collaborate with DHS and other Iowa stakeholders and MCOs on critical incidents prevention activities and risk management strategies to promote health and safety with evidence-based policies and procedures.

Please refer to Section 10.4 Critical Incidents for additional detail of our plan to report on and identify trends, patterns, and areas for improvement, including our strategy for reducing the occurrence of critical incidents and improving the quality of care delivered to members.

Out of State Placements (14.6.12)

Through our health plan affiliates, Amerigroup has experience tracking out of state placements for our LTSS members and will track and collect the data required that provides the information and number of members receiving out of state placements and providers for adults and children for the Iowa program. We use this report to help identify options for member placement and assist with the most appropriate placement for our member's needs.

Quality of Life Reports and Performance Targets (14.7)

Amerigroup Iowa (Amerigroup) will provide data and reports in support of DHS's goals of measuring the quality of life for members and developing performance targets. We can coordinate with DHS for the measurement areas to include increased life expectancy, number and percentage of members who gain and maintain competitive employment, number and percentage of members engaged in volunteer work, satisfaction and reduction in homelessness, and other quality of life indicators as needed. When DHS determines a member survey is needed, we will conduct the survey to measure key experience and quality of life indicators using best practices for reaching populations with special health care needs. We have experience surveying a multitude of populations, including those with special needs. We have extensive experience meeting the needs and driving improvements in services and programs for special populations through collaborations with members and stakeholder.

For example, in our affiliate health plans we currently serve almost 31,000 individuals with intellectual/developmental disabilities (I/DD). We bring experience coordinating the full array of services needed to support individuals with I/DD, including self-direction, individual supports, employment supports, community activities, and supportive home care. Through monitoring and tracking these individuals, we make sure we understand the member's experience and satisfaction to continuously evaluate and support the most optimum quality of life outcomes for the members.

In addition, in our New York plan we developed a First Episode Psychosis Program where we conduct a member assessment that asks member's specific questions to help understand their quality of life and better address barriers and challenges they are facing. Questions that address their environment-housing and community; occupational-employment; emotional health and social-sense of connection to family, friends and community group.

Amerigroup has always been committed to providing quality health care services and supports to allow the best opportunity for people of all races, ethnic backgrounds, and religions and to those who are aging, have disabilities or special needs, or are homeless to reach their maximum potential and achieve the highest quality of life. We have done so in a way that recognizes and respects members' needs and preferences, values each individual's worth, and protects and preserves each individual's dignity. This is at the heart of who we are.

Utilization Reports & Performance Targets (14.8)

For 24 years, Amerigroup Iowa's (Amerigroup) affiliate health plans have provided appropriate care and services to over 5.2 million state-sponsored health program members across 19 states while achieving ongoing improvements in utilization management and quality outcomes. Through our affiliate health plans, we have extensive experience providing utilization reports and data which allows us the opportunity to identify ways to enhance appropriate member access to services, level of care, and use of program services in the most efficient manner possible. We facilitate provider access to reports, data, and information and systems that ease the administrative burden of review and support the most effective delivery of services.

We will submit our utilization reports which provides the data to assist DHS in monitoring program utilization trends and assess our stability and continued ability to offer health care services to members. We will provide reports in the format prescribed by DHS in its Reporting Manual or if none prescribed, in a standard format used in similar markets.

Program Integrity Plan (14.8.1)

Amerigroup's local Iowa Compliance Officer, accountable to our senior management, maintains responsibility, in conjunction with our national Medicaid Special Investigations Unit (MSIU), to develop and implement our Program Integrity Plan. Through quarterly reporting we provide DHS an outline of our key activities, findings and progress in meeting our stated goals and objectives. This report also includes the quarterly recoupment totals including the recoupment actions and receivables. Our Compliance Officer is responsible for communicating information about fraud, waste, and abuse across all functional areas and with system stakeholders. Changes to the Program Integrity Plan will be presented to DHS for approval.

We are quite familiar with these reports and take all reports of potential fraud and abuse very seriously. Our national Medicaid Special Investigation Unit (MSIU) staff addresses all allegations referred by company personnel, members, health care providers, vendors, subcontractors, and other external entities. The MSIU submits a monthly activity report of all investigative activities to the health plan leadership team as noted in our Program Integrity Plan. This report includes internal monitoring and auditing activities, review of fraud and abuse activities, corrective action plans and outcomes. We use this information in developing and incorporating changes and updates to our Program Integrity Plan.

Please refer to Section 12.2 Program Integrity Plan for additional information on our Program Integrity Plan that will be submitted annually, along with updates for DHS approval.

Prior Authorization Report (14.8.2)

We will make decisions within seven calendar days of the request for the service on 100 percent of the authorization requests with the exception of the requirement for an expedited decision which will be made within three business days of the authorization request. Decisions for pharmacy prior authorizations will be made within 24-hours of the request for service. In accordance with our tracking requirements, as referenced in Section 11.2.6.1 PA Tracking Requirements, quarterly prior authorization reports will include a summary of prior authorization approvals, pending requests and denials from the end of the previous reporting period.

Pharmacy Rebate Reporting (14.8.3)

As specified in Section 3.2.6 in accordance with Section 1927(b) of the Social Security Act and amended by Section 2501(c) of PPACA we will provide utilization information on covered drugs in the quarterly

rebate invoices to drug manufacturers and in the quarterly utilization reports to CMS. We will work with our PBM, Express Scripts to meet all pharmacy-related reporting requirements accurately and promptly. Our PBM provides claims and rebate data, which is used to create customized reports to meet Iowa requirements and goals. In addition, we have policies and procedures in place to support the transmission of pharmacy encounter data. Through our internal data warehouses, we pull encounter data from all systems representing all covered services, which enables us to report on the full spectrum of care provided and report to DHS as required.

Pharmacy Reporting (14.8.4)

We will provide Iowa pharmacy program reporting in the format or templates requested by DHS. We will work with our PBM, Express Scripts to meet all pharmacy-related reporting requirements accurately and promptly to include: Performance of the Pharmacy help desk; prior authorization performance; prior authorization turnaround times; number of claims submitted as a 72-hour emergency supply; denials; pharmacy network access; grievance and appeals and medication therapy management initiatives. Our PBM provides claims and rebate data, which will be used to create reports to meet Iowa requirements and goals. In addition, we have policies and procedures in place to support the transmission of pharmacy encounter data. Through our internal data warehouse, we pull encounter data from all systems representing all covered services, which enables us to report on the full spectrum of care provided.

Amerigroup's access to pharmacy and medical claims data affords us a unique opportunity to closely monitor all prescription drugs that members may be currently taking and providers are currently prescribing, which assists with identifying and engaging high utilizers, inappropriate prescription drug usage, and candidates for disease management, care management, training, and education. Our experience with our various programs and tools will enable us to not only trend our member and provider habits in under- and over-utilization, but also to act upon the information using technology and outreach.

Claims Reports & Performance Targets (14.9)

Amerigroup Iowa (Amerigroup) has a solid track record of delivering accurate and timely data reports. Amerigroup agrees to submit claims processing and adjudication data. We will identify specific cases and trends to prevent and respond to any potential problems relating to timely and appropriate claims processing. We will meet performance targets described below and will submit the data and reports described in Section 14.9.1 and Section 14.9.2.

Adjudicated Claims Summary, Claims Aging Summary and Claims Lag Report (14.9.1)

All adjudicated claims, both paid and denied, receive a specific explanation code informing the provider of the level of payment or corrective action required to complete the claim. We report this information to the provider on subsequent notifications that accompany the claim payment or denial.

Amerigroup agrees to pay or deny 90 percent of clean claims within 20 calendar days of receipt, 99 percent of clean claims within 60 calendar days of receipt and 100 percent of claims within 90 calendar days of receipt.

Claims Denials Reasons (14.9.2)

If a claim does not pass the adjudication edits, it is denied. Claims that require further information from the provider or a third party are also denied. We notify the provider of the issue, and after receipt of the

requested information, the claim is processed as an adjustment. Amerigroup agrees to report the top 10 most common reasons for claim denial.

CMS Reporting (14.10)

Amerigroup Iowa (Amerigroup) agrees to comply with the requirement to provide data to CMS and the State in support of federal waiver requirements in the manner and timeframe specified by the requesting agency. Such provision of data will include cases in which we identify Health and Wellness Plan or HCBS waiver members that may have other health coverage. In such cases, we will make a referral to the DHS Health Insurance Prepayment Unit (HIPP), providing the HIPP unit with the individual's Medicaid SID number and the name of the employer through which the individual has health insurance or may have insurance coverage available.

IDPH Reporting (14.11)

Reports Supporting Substance Abuse Prevention and Treatment Block Grant

Amerigroup Iowa (Amerigroup) will submit reports to IDPH as required supporting the Substance Abuse Prevention and Treatment Block Grant and other reporting as determined by IDPH. Through our affiliate health plans, we have experience in other states meeting all block grant reporting requirements. We typically include this information as a standard component of our routine monthly submissions to the State. For example, in several States our encounter files are used as a data source from which the State extracts information that is submitted as part of the block grant reporting requirements. We will work with Iowa to provide all data needed in the form, format, and timeframe required.

Please refer to Section 10.2.6 Substance Abuse Prevention and Treatment Block Grant for additional information regarding Amerigroup's support of IDPH.

Contractor's Termination Duties (15.1)

Question 15.1, #1

1. Describe your plan to complete the duties outlined in Section 15 in the event of contract termination or expiration.

Plan to Complete Duties in Event of Contract Termination or Expiration

In the event of contract termination, our focus is on the needs of the member, with particular attention to continuity of care. *We take transitions seriously and execute them with integrity and quality. We do the right thing, and we do it well. Our organization has never had a state-sponsored contract terminated for performance.* If the transition is a result of implementing a turnover plan, we follow a prescribed process to minimize disruption of services for the member, support the needs of the State, and assure complete and accurate data transmission to the appropriate parties involved. Our plan to complete the duties outlined in Section 15 includes the formation of a Transition Project Team consisting of:

- A Steering Committee
- A Transition Liaison
- Our national Implementation Management Office (IMO) staff
- Use of a Project Management Lifecycle
- Development of a Transition Plan
- Use of a quality oversight process, including a Risk Mitigation Plan

Amerigroup Iowa will be supported by our National Medicaid Division and resources throughout transition and post-transition. In the event of Contract termination or completion, we will maintain health plan capabilities and meet all obligations through a combination of Amerigroup Iowa staff and national capabilities.

Transition Project Team

The Transition Project Team will use established tools and procedures to help ensure completion of all required transition and post-transition activities while helping members and providers transition to another managed care contractor. The Transition Project Team will develop a written Transition Plan which addresses the key components outlined in Section 15, an example of which is provided in Subsection 15.1.2.

Transition Steering Committee

Central to a successful transition will be the formation of an Amerigroup Iowa Transition Steering Committee that includes the health plan's senior leadership. They will oversee the project team and termination process, including completion of milestones and deliverables specified by the Agency. The Transition Steering Committee will:

- Guide decisions
- Resolve issues or barriers
- Facilitate on-time execution of the Transition Plan
- Maintain compliance
- Maintain quality of care during transition

Transition Liaison

As specified in Section 15.1.1.3 of the RFP, we will appoint a Transition Liaison who will serve as the central point of contact with the Agency throughout the transition period and post-transition. The Liaison will be a member of the health plan’s leadership team whose experience and existing working relationship with key Agency staff will help ensure an orderly transition. The Transition Liaison will be responsible for day-to-day oversight of transition activities, including ensuring records are provided to the Agency in the format and timeframe required and for addressing post-transition concerns. He or she will work closely with the Agency until transition is determined complete by the State. The Transition Liaison will be supported by the Transition Steering Committee and the IMO, which identifies responsible business owners and required records, develops a project management plan and retrieves, collects, and tracks all records that must be submitted to the Agency. The IMO documents transmission completion and closeout.

Implementation Management Office

Our national Implementation Management Office (IMO) is charged with coordinating turnover planning and implementation, in partnership with the key department leadership at the health plan, and our national Technology Services Department. IMO is led by a certified Project Management Professional (PMP) with more than 20 years of health insurance industry experience. IMO staff are seasoned subject matter experts representing all areas of health plan operations who work closely with our local health plan leaders and other key personnel. IMO employs formal project management practices to help ensure projects are completed on time and in compliance with specified requirements. IMO will use a formal Project Management Lifecycle and Risk Mitigation Plan to guide completion of transition activities.

An example of a Project Management Lifecycle is depicted in Figure 15.1-1.

Figure 15.1-1. Amerigroup’s Formal Life Cycle for Project Management of Plan Transition Activities

Risk Mitigation

The IMO employs a formal risk management process in accordance with PMI’s global standard for project risk management. The project Risk Management Plan is used specifically for capturing and managing those things that are not necessarily known or given but might occur, and if they did, would present a risk to the project’s successful execution. The identification of project risks and their associated mitigation and/or contingency plans can and should occur at any point in the project lifecycle where they present themselves. Once the requirements and the schedule of task for the project are defined, it is advisable to gather the project team and facilitate a risk planning conversation to validate all risks captured to date, identify any risks not previously documented, and complete the Risk Management Plan with the input and consensus of the team. As the project progresses, it is the responsibility of the Project Lead to monitor the plan, regularly review it with the team, continually assess the risks, ensure the mitigation plans are progressing as planned, and communicate the need to invoke contingency plans as necessary.

The development and execution of the Requirements Matrix Document, the MS Project Schedule, and the Risk Management Plan are the foundational deliverables of the IMO team and the place where the discipline of project management adds considerable value in delivering what is required and promised by the source documentation. Expert project execution leads to smooth implementation and excellent operational performance, which is why our customers selected us in the first place.

Our Risk Management template is displayed in Figure 15.1-2.

Figure 15.1-2. Our Risk Management Template Provides a Formal Structure for Rapid Identification and Resolution of Any Threats to Completion of Required Transition Activities

Risk #	Functional Category	Description of Potential Risk	Deliverables or Operations at Risk	Prob Scale			Impact Scale	Total Risk	Who Monitors	Indicators to Monitor for the Risk	Actions to Recover from Risk (Contingency Plan)	Contingency Plan Execution Date	Contingency Plan Authorized By	Who Activates Recovery Plan

Question 15.1, #2

2. Provide a general end-of-contract transition plan which addresses the key components outlined in Section 15.

Written Transition Plan

The Transition Project Team will develop a written Transition Plan that specifies the activities to be carried out through completion all of the health plan’s obligations. Amerigroup will submit the Transition Plan to the Agency for approval within 60 days of Contract execution and comply with all other requirements as specified in Scope of Work Section 15.1.1.4.

Table 15.1-1 provides a general end-of-contract Transition Plan which addresses the key components outlined in Section 15 and that will be finalized with DHS following contract award.

Table 15.1-1. Our General End-of-contract Transition Plan Will Include the Following Activities

Organizational Area	Activity	Responsible Staff
Compliance	<ul style="list-style-type: none"> • Provide a written Transition Plan for the State’s approval. • Revise and resubmit that plan to DHS on a regular basis. 	Transition Steering Committee
Regulatory	<ul style="list-style-type: none"> • Provide required records to DHS or its designated entity in the format and within the timeframes required by the State as specified in Section 15.1.1.5 of the RFP or as otherwise directed by DHS • Supply program information to, any successor program contractors as specified by DHS • Submit required reporting as specified in Section 15.1.1.10 of the RFP or as otherwise directed by DHS <ul style="list-style-type: none"> ➢ Review regulatory and internal reporting requirements and update reporting grids/attestations ➢ Identify and track completion of required close-out reporting and activities including: <ul style="list-style-type: none"> ▪ Progress report every 30 days ▪ Information on all Iowa Health and Wellness Plan members’ completion of Healthy Behaviors Program requirements ▪ Performance data • Complete Turnover Results report documenting successful completion of Turnover tasks 	Regulatory Oversight Manager
Quality Management	<ul style="list-style-type: none"> • Submit performance data, including self-reported audited HEDIS® and CAHPS data and any other data specified by the Agency to the Agency or its designated entity • Participate in the External Quality Review, as required by 42 CFR 438, Subpart E, for the final year of the Contract. 	Quality Management Manager
Financial Management	<ul style="list-style-type: none"> • Maintain required fidelity bonds and insurance as specified in the Contract until all obligations of the Contract have been fulfilled. • Continue to pay claims as specified in Sections 15.1.1.13 through 15 for services rendered through the day of termination or expiration of the Contract including those previously denied but subsequently approved upon appeal or State fair hearing • Submit encounter data as specified in Section 15.2.2.16 • Report any capitation or other overpayments as specified in Section 15.1.1.22 	Claims Administrator and CFO
Grievance and Appeals	<ul style="list-style-type: none"> • Continue to resolve member grievances and appeals for dates of service prior to the day of Contract expiration or termination as specified in Section 15.1.1.11 	Grievance and Appeals Manager
Health Care Management Services	<ul style="list-style-type: none"> • Arrange for the orderly transfer of patient care and patient records to members’ new providers in conjunction with Health Care Management (Case Management, Disease Management and Utilization Management) • Complete HCM staff turnover training • Review and approve Prior Authorization and Case Management data transfer file 	Utilization Management Manager Behavioral Health Manager Case Management Manager Long Term Care Manager

Organizational Area	Activity	Responsible Staff
	<ul style="list-style-type: none"> ● Develop Transition of Care Plans for members enrolled in CM/DM, or in a residential or long-term care setting, or during a period of treatment including acute treatment, to help ensure continuity of care ● Authorize continued treatment for members for whom a change of providers could be harmful for up to forty-five (45) calendar days from the Contract Termination Date or until the members can be transferred to another program contractor, whichever is longer. ● Coordinate continuation of care for members undergoing treatment of an acute condition 	
Member Services	<ul style="list-style-type: none"> ● Develop member notification materials about Contract termination (as described below) and provide to the Agency for approval in advance of distribution. <ul style="list-style-type: none"> ➢ Complete Member Services Representative staff turnover training ➢ Design and implement call center turnover communication protocols ➢ Make National Call Center available for member calls during turnover timeframe 	Member Services Manager
Provider Relations and Communications	<ul style="list-style-type: none"> ● Develop provider notification materials about Contract termination (as described below) and provide to the Agency for approval in advance of distribution. ● Notify all providers about the Contract termination and the process by which members will continue to receive medical care. <ul style="list-style-type: none"> ➢ Complete Provider Relations turnover training ➢ Design and implement call center turnover communication protocols ➢ Make National Call Center available for provider calls during turnover timeframe 	Provider Services Manager
National Service Administration	<ul style="list-style-type: none"> ● Transfer mail and phone for post-turnover support ● Complete office space planning and closure 	Corporate Real Estate Manager
Information Systems	<ul style="list-style-type: none"> ● Prepare data dictionary, data mapping, and testing for file and data transfers ● Determine recipients of records/data files (the Agency, another contractor, or other entity) ● Identify record/file format (data mapping/data dictionary) and transfer method ● Generate and test data files ● Generate and execute data transfers 	Management Information Systems Manager
Legal	<ul style="list-style-type: none"> ● Complete contract terminations or amendments 	Legal Services Manager
Vendor Management	<ul style="list-style-type: none"> ● Identify and coordinate needed the Agency/ subsequent subcontractor training 	Vendor Account Manager

We will fully cooperate with DHS, its employees, agents, and independent contractors during the transition period to provide a seamless transition with minimal disruption for our members and providers.

Amerigroup Iowa understands the vital importance of continuing to serve or arrange for provision of services to members for up to forty-five (45) calendar days from the Contract Termination Date or until the members can be transferred to another program contractor, whichever is longer. Our continuity of care processes and experience supporting continuity of care for members with a range of needs and living or receiving services in a variety of settings are described in Section 3.3 of our proposal. Two key aspects of supporting successful continuity of care are 1) Comprehensive staff training and communication during the transition process; and 2) Provision of vital information to program contractors to whom the member will be transferred.

Turnover Training and Communication

A primary objective during transition is to give staff sufficient training so that providers, members, their families, or legally appointed guardians do not need to make multiple requests for the same information. We focus on:

- Timely and comprehensive Turnover Training for Amerigroup staff
- Timely and frequent communication with our members and their families/guardians, network providers, and other partners to apprise them of transition activities and status
- Direct support of members, families, and guardians throughout transition

Prior to transition, Amerigroup staff who interact with members or providers will be required to participate in extensive training to thoroughly understand transition implementation to support continuity of care for members and minimal disruption for members and providers.

Provision of Vital Information

We will provide vital information to the managed care contractor selected by the member or his or her family following the member's transition or at the time specified by DHS. We maintain a range of information that is vital to the receiving contractor to support continuity of care, including open authorizations for hospitalization, surgery, procedures, demographic information, provider and facility information, and diagnosis and procedure codes. This information is easily extracted and exportable using HIPPA compliant methods.

The following high-level list summarizes the optimal transition information that we provide to support a member's transition to another managed care contractor. We are prepared to work collegially with DHS and other managed care contractors to identify and agree upon a file transfer method for communicating data.

- Open Authorizations—Details on any service or benefit authorizations for covered services (including HIPAA-compliant 278 Files)
- Average Daily Census—Daily (Monday to Friday) summary-level statistics of members admitted to each facility
- Detail Daily Census—List of inpatient admissions including behavioral health admissions
- Pregnant Women Listing—List of pregnant women who are due to deliver
- Case Management listing—List of members who are currently in case management and their care plans or those who have been identified as potential candidates for case management and have not yet been contacted
- Disease Management Listing—List of members who are currently enrolled in a Disease Management program
- Recent/Planned Transplant Listing—List of members who have had a transplant within the past three months or have a transplant planned for the future
- Children with Special Health Care Needs—List of children with special healthcare needs
- Member PCP Listing—List of members with their current assigned PCPs
- Members Receiving LTSS and Type of LTSS

We will comply with all duties and obligations incurred prior to the actual termination date of the Contract, including maintaining sufficient staffing across departments to help ensure completion of all required functions, including but not limited to claims payment, care coordination, and support for members and providers as they transition to another managed care contractor. In addition, we will take whatever other actions are necessary in order to ensure the efficient and orderly transition of members from coverage under this Contract to coverage under any new arrangement developed by DHS.

Experience (3.2.5.1)

The bidder shall provide the following information regarding the organization's experience:

A program of the magnitude and scope of Iowa's High Quality Healthcare Initiative, encompassing multiple high-risk and special needs populations, requires a managed care organization with proven success launching and operating similarly comprehensive, complex programs and working with a wide range of stakeholders.

Amerigroup Iowa (Amerigroup) will leverage the experience of its ultimate parent organization, Anthem, Inc. (Anthem), and its affiliate health plans to bring Iowa 24 years of publicly-funded program experience, providing a fully integrated approach to physical and behavioral healthcare across the nation. We will draw on their experience effectively implementing and managing administratively complex programs serving populations with diverse health needs that span the spectrum of care, such as Long-Term Services and Supports (LTSS), Foster Care, Aged, Blind, and Disabled (ABD), and Substance Use Disorder. Currently, our affiliate health plans provide healthcare services to more than 5.2 million members in state-sponsored programs across 19 states as shown in Figure 3.2.5-1.

Figure 3.2.5-1. Amerigroup's Affiliate Health Plans Have Extensive Publicly-Funded Program Experience

3.2.5.1.1 Experience Launching New Programs

3.2.5.1.1 Level of technical experience in providing the types of services sought by the RFP.

Amerigroup is one of the few managed care organizations with the experience, capacity, infrastructure, and proven processes to tackle a program the size and complexity of the Iowa Initiative. Our ability to successfully implement complex new programs while seamlessly transitioning new members and providers into our operations is one of our core competencies. But while our broad experience, deep resources, and extensive infrastructure provide the foundation, we treat each implementation as unique. We use each state's specifications to configure our technology systems and operations to meet residents' particular healthcare needs.

Over the past 24 years, our organization has successfully implemented more than 100 public-sector healthcare programs, service area expansions, and program enhancements, including three new health plans between February 2012 and January 2013. During that 15-month period, our affiliates managed the start-up of Medicaid health plans in Kansas, Louisiana, and Washington that comprised more than 256,000 new members. They completed these implementations without any disruption in service. In fact, the call center abandonment rate during those 15 months was just 1.04 percent.

In our collective history of state sponsored program implementations, none of our affiliate health plans have ever missed an operational start date.

In our collective history of Medicaid program implementations, ***none of our affiliate health plans have ever missed an operational start date.***

That proven experience will support our commitment to bringing DHS an efficient, fully integrated program that puts Iowa members first. It will serve the full continuum of their physical, behavioral, and special healthcare needs, including Long Term Services and Supports (LTSS); Aged, Blind, and Disabled (ABD); and foster care. Amerigroup's whole-person approach and strong care coordination are a natural complement to the breadth and scope of the Iowa program. We emphasize choice, independence, engagement, and personal responsibility in all aspects of member care, including our Value-Added Services and member incentive programs.

Regardless of age, ability, or need, we will emphasize care connections – our healthcare management programs will connect our Iowa members with the right providers to get the right care and services at the right time. Through our affiliated health plans in 19 other states, our organization delivers member access to care through recruitment, development, and maintenance of robust provider networks that reflect our members' diversity, geographic location, and preferences. Our quality initiatives and provider collaboration programs incorporate monitoring and oversight of patient safety measures. For instance, our parent company created the strengths-based National Advisory Board (NAB), which promotes services and supports models to foster independent living, choice, recovery, and quality of life for people who are aging or have disabilities.

Healthcare is local – each market poses different needs and conditions. We know that program delivery must be tailored to the particular needs and assets of its members. We understand the challenges faced by low-income and underserved individuals in each of the 19 states our affiliate health plans currently serve and have designed each of our programs to specifically address these challenges. We have the knowledge, support, and commitment to meet the particular healthcare needs of Iowa's residents with compassionate, high quality care.

Our best-in-class programs successfully manage all populations and services referenced in this RFP in a capitated environment across multiple states. ***Our affiliates' experience with populations requiring specialized services include:***

- Rendering fully integrated physical and behavioral healthcare, as well as LTSS, to Medicaid populations across 8 states
- Serving more than 168,000 dual eligible members in 11 states
- Implementing Home and Community-Based Services, training, and employment services for individuals with intellectual or developmental disabilities (IDD) in Kansas
- Administering Indiana's Hoosier Indiana Plan (HIP) 2.0, an ACA Medicaid expansion alternative comprising 19 different benefit packages
- Managing behavioral healthcare and services in-house in 16 states, including crisis services and outpatient therapy for families and children, intensive psychiatric rehabilitation, and peer support.

Our affiliates have also implemented a number of programs where individuals transitioned directly to managed care from Fee-for-Service (FFS), comparable to Iowa's objective for its High Quality Healthcare Initiative, including:

- Our Kansas affiliate collaborated with the State to launch a significant redesign of its Medicaid program, which launched in 2013. The new program includes the full range of populations and services, including LTSS, waiver programs, individuals with ID/DD, and members of all ages with disabilities.
- We participated in Louisiana's 2012 move from FFS to managed care, which included TANF, CHIP, and ABD populations.
- We worked with Georgia to launch managed care for its foster care population in 2014.
- We worked with Tennessee to roll out their TN CHOICES program, which transitioned HCBS waiver services to MCOs instead of FFS.

Effective Care Integration and Coordination

In each of the 19 states Amerigroup's affiliates serve, our integrated care approach and systems deliver superior quality through superior coordination because we do not subcontract any part of our care model. We manage the physical/behavioral, LTSS, and special healthcare needs of our members at the same place, at the same time, and with the same people. Our network includes specialized clinicians, clinical practices, and guidelines that address the unique physical, behavioral health, and social support needs of each of our members, aiming for reduced fragmentation of care and improved member outcomes. This gives us superior control and enables a seamless experience for both members and providers.

Our care coordination approach, developed and refined through our years of experience providing services to Medicaid, CHIP, LTSS, and special needs populations, addresses the needs of:

- Expectant mothers
- Young children
- HCBS waiver populations
- Hospital inpatients and those transitioning place of service
- Persons in nursing homes
- Persons with behavioral health needs
- Children and youth with special health care needs
- Other persons with chronic care or complex care needs

Innovative Integration Strategies for Specialized Populations

Amerigroup has developed innovative care management strategies for our members who have specialized physical, behavioral, or social challenges. Our affiliate health plans' interdisciplinary teams support their specialized populations with these strategies, including:

- ***PC INSITE*** integrates behavioral health capabilities into primary care clinics for universal depression and substance use disorder screening, enabling us to provide treatment, monitor, and follow-up with members
- ***CareMore Model*** improves coordination of care for members with complex or chronic disease management needs
- ***Community Mental Health Center Primary Care*** integrates behavioral and medical healthcare for members with Serious Mental Illness (SMI) through community mental healthcare partnerships
- ***Autism Services and Supports*** deploy Autism Specialists to delivered integrated care
- ***Intellectual and Developmental Disability(IDD) Services Program*** coordinates health plan staff and relevant community partners to execute fully integrated IDD care
- ***Prescription Opiate Use Interventions*** take a multi-faceted approach to reducing prescription opiate abuse

Amerigroup's Case Managers and Care Coordinators meet with members to develop individualized service plans that span the delivery systems of physical, behavioral health and LTSS to address their barriers, maximize their independence, and facilitate the care they need. That individualized, member-centric foundation actively engages individuals in their healthcare decisions and addresses their biopsychosocial strengths and needs by rendering the right quality care, services, and supports in the right place and at the right time. It is the cornerstone of the seamless experience both members and providers receive from Amerigroup.

For instance, starting October 1, 2015, our affiliate health plan in New York will be one of the few selected to administer a comprehensive and innovative program – the Health and Recovery Plan (HARP) – that supports members with severe mental illness. It seamlessly integrates the disparate physical health, behavioral health, and social services available to members and coordinates them to provide a meaningful, outcomes-focused system of care.

That integration of physical/behavioral healthcare and LTSS, shown in Figure 3.2.5-2, is a core value of our organization. Our affiliates' experience in other states has shown integration is the most efficient, cost-effective care model and has enabled us to develop best practices and refine our infrastructure, processes, tools, and approach to best serve the special needs of all state sponsored health program populations.

Provider Networks

Amerigroup’s integrated care coordination begins with recruitment, development, and maintenance of a robust provider network. Our affiliate health plans are recognized for building network solutions, including LTSS providers and community based resources and for rural areas similar to Iowa’s, that support the needs of our state partners’ most vulnerable citizens – respecting their cultural and linguistic needs while providing them geographic accessibility. Our provider network development and management are based on the experience our organization has gained over 24 years, collaborating with providers, community leaders, and advocacy groups and listening to our members’ and families’ descriptions of the challenges they face.

We develop our networks to meet or exceed state requirements and include specialized providers, clinical practices, and guidelines that address our members’ unique healthcare and social support needs, reduce fragmentation of care, and improve their outcomes. Dedicated, regionally based staffs support our networks, enabling providers to transform member-centered care by developing their care coordination and member engagement skills.

Our national network development team, which will build Iowa’s network, has developed 12 different state Medicaid networks over the past 36 months. Most recently in Kentucky, Tennessee, and Virginia, we contracted with more than 72,000 providers to meet or exceed each state’s requirements as shown in Table 3.2.5-1.

Table 3.2.5-1. Rapid Network Development in Kentucky, Tennessee, and Virginia

Provider Types	Kentucky	Tennessee	Virginia
Primary Care	5,672	2,167	7,765
Behavioral Health	2,452	1,348	5,783
Specialists	23,176	5,068	14,202
LTSS	985	763	1,352
Urgent Care	482	246	51
Hospitals	113	52	74
Nursing Facilities	10	166	159
FQHC/RHC	207	101	87
TOTALS	33,097	9,911	29,473

In Iowa, we are currently partnering with Wellmark, which is helping us develop deep relationships with its existing Accountable Care Organization (ACO) providers, comprising more than 2,000 primary care providers.

Provider Incentives

Effective providers are the backbone of all our networks. They have the ability to touch every one of our members in a way that can alter the course of our members’ lives. Our goal is to provide the tools, support, and incentives to our providers to help them deliver optimal care and at the same time maintain practice viability. To promote that, Amerigroup’s affiliates have implemented a shared savings program in their state sponsored programs that incentivizes providers. With our support, providers cost-effectively manage the medical cost of members by reducing unnecessary expenses like non-emergent emergency room use, focusing on care coordination for those most at risk for high utilization, and effectively coordinating needed specialty care. Providers who effectively manage the quality and efficiency of care for their assigned members will receive rewards in the form of a shared savings payment.

Care Coordination

Our integrated care coordination model provides access, efficiency, and effectiveness in the system of care by supporting the following activities:

- Identification of members with potential or actual care coordination needs through early screening, comprehensive assessments, and periodic reassessments
- Stratification of risk level for each member based on a multi-faceted consideration of available information
- Placement of members into care coordination programs based on needs assessment
- Development of an integrated care plan that addresses physical/behavioral health and LTSS needs for members as they transition across all settings
- Reciprocal referrals and information sharing
- Formation of an interdisciplinary team to support members, provide consistency and continuity of contact with a familiar support system, as well as the expertise of a broader team of specialists as their needs evolve over time
- Care coordination support to improve member access to needed services, including scheduling appointments; arranging transportation; conducting appointment reminder calls; following up to verify service initiation, member progress, and appropriate service adjustments and incorporation into the care plan
- Ongoing evaluation of our care coordination program, including reviewing, tracking, monitoring, adjusting, and analyzing for outcomes, quality metrics, and performance improvement

- Emphasis on disease prevention, chronic condition management, and increasing member compliance with recommended treatment protocols
- Member education to enhance understanding of healthcare conditions and prescribed treatment
- Member empowerment

In addition, Amerigroup supports the development of Health Homes (HHs), Patient-Centered Medical Homes (PCMHs), Primary Care Case Management (PCCM), and other models that facilitate strong care coordination and improved care access on a systems level. Our efforts have resulted in improvements in provider compliance with evidence-based clinical practice guidelines and a reduction in avoidable, unnecessary inpatient admissions and emergency room visits, including measured improvements in the quality of health care delivery. *In Maryland, for instance, our affiliate health plan realized a 22 percent decrease in 30 day readmission rates among a population of more than 6,000 members with PCMH, 10 percent for patients with diabetes, and 77 percent for persons with chronic asthma.*

Program Results

Amerigroup's affiliate health plans have successfully administered state programs that meet and exceed quality targets established in their contracts, as well as those identified internally as important to the quality of our service delivery system. Our commitment to member care is demonstrated in the positive outcomes our programs have achieved.

- Our Indiana affiliate has successfully achieved the 90th percentile for three consecutive years on the HEDIS[®] post-discharge follow up for a mental illness within seven days, demonstrating our ability to effectively manage and coordinate appropriate care following a mental illness discharge from the hospital.
- Our Texas affiliate implemented programs that resulted in a 38 percent increase in community-based adult day care services, a 32 percent increase in personal assistance while demonstrating improved health outcomes, and a 38 percent reduction in inpatient stays for targeted ABD members.
- Our Texas and Maryland affiliate health plans exceeded the 75th percentile for HEDIS measures related to pharmacotherapy management for COPD exacerbation.

A Focus on Community-Driven Prevention

Amerigroup's approach to comprehensive care coordination provides members the right care in the right setting at the right time. We know that what happens in the community can impact a person's health as much as what happens in the doctor's office or hospital. That knowledge has driven our affiliate health plans to develop programs and services that meet the particular needs of residents in the 19 states we serve.

Telemedicine/Telepsychiatry Services

Limited access to medical or behavioral healthcare in rural areas is a challenge many members face. To address that, our affiliate health plans provide members with a variety of telemedicine and telepsychiatry services that enable them to receive physical and behavioral health services from qualified providers in centers set up near their homes.

To increase the availability of behavioral health services where access is limited, such as Iowa's rural areas, we provide psychiatric services through telepsychiatry modeled after a best practice from our Georgia affiliate health plan. It enables members to receive those services in their primary provider's office from board-certified psychiatrists who are out of the area.

In Iowa, we will work with the substantial telehealth services currently in place in Iowa, such as those provided by the University of Iowa, and partner with providers to expand existing services as needed to meet the needs of our members.

- **Breakthrough Technologies:** We will partner with Breakthrough, a telehealth platform for behavioral health, and will be exploring other methods to deliver one-on-one consultations with board-certified clinicians either through personal computers or at kiosks installed at strategic community locations.
- **LiveHealth Online:** Several of Amerigroup's affiliate health plans provide their members access to physical and behavioral health consultation 24 hours a day, 7 days a week through our LiveHealth Online program, which we will offer in Iowa as well. When members call the Nurse HelpLine with certain non-emergent conditions, they will be connected to a physician for a web-based consultation when appropriate based on their condition and ability to access video streaming capabilities. These web-based consultations occur with board-certified, Iowa-licensed doctors who conduct a brief assessment, provide diagnosis, and recommend treatment—all of which will broaden member access to care, especially after-hours. Members also have access to our Behavioral Health Services Hotline through a single toll-free Member call center. Callers who do not speak English or Spanish are provided free, immediate translation services in more than 200 languages through a language line. Interpreters are available to join a call 24/7 and also support members calling from a provider's office.

Healthy Families

Obesity is a growing issue throughout the country, particularly among low-income residents. In response, Amerigroup has developed its Healthy Families program. This six-month program helps children and adolescents make lifestyle changes, such as healthier eating and increased physical activity. Healthy Families, which is operational in our Kansas, Florida, Washington, Louisiana, and Kentucky health plans, combines a family focus with nurse coaching to address youth obesity risk factors. So far, the program has realized a 57 percent increase in fruit and vegetable intake, 42 percent increase in activity level, and 30 percent decrease in screen time. We intend to implement Health Families in Iowa as a Value-Added Service.

Healthy Rewards

Another way Amerigroup encourages members to take responsibility for their own health is our Healthy Rewards program. It is a comprehensive member incentive program designed to encourage members to seek preventive services and screenings and manage their chronic conditions. Incentives provide a tool to engage members in self-management and personal responsibility. Since January 2013, our Kansas affiliate has had an established platform supporting program administration (card issuance and financial management of incentive accounts), and our Louisiana and Texas affiliates are in the process of implementing it. That platform enables us to tailor Healthy Rewards to address the unique needs of our state customers and members. We also have proven tracking and analytic tools and data experts who conduct ongoing assessment of the program's impact. Its flexible platform will enable us to easily modify program design to reflect Iowa's needs and impact member behaviors.

While Healthy Rewards has undergone only one HEDIS cycle in Kansas, there are early indications that members enrolled in the program are more successful in attaining important health screenings than those who are not.

HomeConnect

Amerigroup's affiliate health plans know from experience that avoidable hospital readmissions are primarily driven by a lack of follow-up care, with the greatest risk occurring in the first 48 hours post-hospitalization. To address this, we developed our HomeConnect program to engage members before discharge and create a transition plan with appropriate follow-up care. In addition, we reconnect members with their PCP for face-to-face interactions during the inpatient stay and improved access after discharge to follow-up care.

The Home Connect Program comprises the following interventions to support the member's seamless transition into the community. Interventions include:

- Discharge planning
- Daily Census Reports
- Educational letters to members
- Care Coordinator engagement with members during their inpatient stay
- Member visits, including transitional facility and bridge-on-discharge visits
- Provider outreach during admission and verification of follow up post-discharge
- Member outreach calls within one business day of discharge
- Stabilization care management
- Readmission rounds
- Facility feedback presentations to share performance data with high-volume providers

Amerigroup understands the unique challenges members can face when transitioning back home from a hospital stay. As a complement to our HomeConnect Program, we will also offer post-discharge stabilization kits and home-delivered meals to eligible members as Value-Added Services. The discharge kit provides tools for family members and caregivers to successfully help transition members from hospital to home, aid in recovery, and help decrease the chances for readmission. The meal program provides nutritious home-delivered meals, which allows members to focus more on recovery rather than proper nutrition, shopping, or finding a caregiver to prepare them.

Quality Management and Improvement

Amerigroup's affiliate health plans maintain comprehensive quality programs that span all functional areas – physical and behavioral health, LTSS, member safety, and community health – and include ongoing initiatives to strengthen integration. For example, our Tennessee affiliate developed a program striving to improve screening rates for members with cardiovascular disease and LTSS. In its first year, this program boosted low-density lipoprotein (LDL) screening rates by more than 120 percent.

Another example – In 2014, in New Jersey, our Quality Management program initiatives generated the following improvements for our members:

- Increased their customer service ranking from the 25th to the 90th percentile
- Increased their “Getting Care Quickly” ranking from the 25th to the 75th percentile
- Increased their “Health Plan Overall” ranking from 25th to 50th percentile

As further evidence of our organization's commitment to quality, the National Committee for Quality Assurance (NCQA) includes seven Amerigroup affiliate health plans in its list of the Top 100 Medicaid health plans in the country. Other key achievements across our affiliate health plans include:

- 51 NCQA-accreditation certificates in 13 states
- Exceeding the NCQA 90th percentile on critical performance measures, such as timeliness of postpartum care, appropriate medication use for members with asthma, post-discharge follow-up for individuals hospitalized for mental illness, breast cancer screening, HbA1c screening, and adult BMI assessment

Protecting Our Members

Protecting member safety is a hallmark of Amerigroup's organization-wide Quality Assessment and Performance Improvement (QAPI) program. Our affiliate health plans currently maintain a number of

patient safety initiatives, including processes for reviewing all potential Quality of Care issues. We supplement these efforts and expand our capabilities by capitalizing on the increasing abundance of available performance data to collaborate with our network providers to improve patient safety initiatives.

Additionally, our national Quality Management team has instituted a National Patient Safety Committee that provides strategic direction to our local health plans, including policies and procedures related to healthcare-associated infections, medical errors, preventable serious adverse events, and unnecessary and ineffective performance. This cross-functional committee comprises national and local health plan staffs, including Medical Directors. It will collaborate with our Iowa team to develop recommendations to improve patient safety throughout the program; establish patient safety standards, benchmarks and programs; and continually assess our patient safety and refine our programs based on benchmarked performance. This approach reinforces the Amerigroup organization's commitment to protecting the safety of the people we serve.

Program Integrity

Amerigroup and our affiliates have one of the most proactive regulatory compliance programs in the industry. We maintain a robust system of processes and controls to prevent, identify, and mitigate potential fraud, waste, and abuse risks. Our organizational commitment to compliance and to establishing a culture that encourages our employees to embrace this commitment is reflected in one of our company's core values: being trustworthy.

Last year, across the 19 states where we operate state-sponsored programs, our affiliate health plans opened a total of 1,200 suspected fraud, waste, and abuse cases totaling \$33.8 million. We recovered \$3.5 million and avoided payments of \$25.4 million for a net savings of \$28.9 million. That corresponds to a Return-On-Investment of approximately 9-1, as compared to the national average of 8-1.

We provide an overview on each of our contracts over the past five years in Tab 6, Q3.2.7.4 Contract Lists.

References (3.2.5.1.4)

3.2.5.1.4 Letters of reference from three (3) of the bidder's previous clients knowledgeable of the bidder's performance in providing services similar to those sought in this RFP, including a contact person, telephone number, and electronic mail address for each reference. It is preferred that letters of reference are provided for services that were procured in a competitive environment. Persons who are currently employed by the State, or who have been employed by the State in the past 5 years, are not eligible to be references.

We provide five reference letters from state agencies (listed below) with whom our affiliated companies hold current managed care contracts for services similar to those sought in this RFP.

- Kansas Department of Health and Environment
- Louisiana Department of Health & Hospitals
- New York State Department of Health
- Tennessee Bureau of TennCare
- Virginia Department of Medical Assistance Services

The Reference Letters and accompanying Questionnaires completed by each reference are included in Attachment 3.2.5-1.

Experience Managing Subcontractors (3.2.5.1.5)

3.2.5.1.5 Description of experience managing subcontractors, if the bidder proposes to use subcontractors.

Amerigroup's mission is to operate a community-focused managed care company that responds to the physical, behavioral, and LTSS needs, improves outcomes, and offers choice, access, safety, and independence to Iowa's residents.

As a new DHS partner, we will leverage the deep organizational expertise administering state-sponsored programs of our affiliate health plans and our parent company, Anthem, Inc. (Anthem). All have in-depth experience and proven track records of subcontractor management, as well as the development and maintenance of a robust network of delegated vendors. Our affiliate health plans successfully manage various vision, non-emergency transportation, and physical/behavioral health vendors across multiple states. We believe that a primary reason for our success is that we have continually refined our vendor oversight and selection process over 24 years. We believe in a best practice approach, and constantly strive to find ever more efficient ways to hold our delegated vendors accountable, help them remain solvent, and meet all contractual and performance expectations, while delivering high-quality services and access to care.

One of our core competencies is the ability to successfully implement complex new programs, including those involving broad scale changes across a delivery system, in a manner that smoothly transitions members, providers, and stakeholders and avoids disruption to care.

Amerigroup has stringent requirements for selecting and overseeing subcontractors that perform delegated activities, including administrative functions we choose to delegate. We leverage centralized national resources and processes to obtain and manage the services of high-quality subcontractors. Our selection and management process assigns responsibilities in a way that drives authority to the appropriate organizational level and creates a system of checks and balances.

Monitoring and Evaluating Subcontractors

At the **local level**, Amerigroup's Vendor Compliance Workgroup (VCW) and Quality Management and Improvement (QM/QI) Committee will work together to see that subcontractors comply with all applicable requirements and expectations. Our goal is to promptly identify and mitigate potential risks. Our Plan Compliance Officer (PCO) heads this workgroup that includes Department Leads and Account Managers for subcontractors that also serve our affiliate health plans. This will be the cornerstone of our local subcontractor oversight program that includes:

- **Monthly Workgroup Meetings** with health plan leadership to review subcontractor performance metrics and data obtained through our attendance at quarterly Vendor Selection and Oversight (VSOC) and Delegated Workgroup (DWG) meetings. Examples of reviews include vendor rosters to identify adequacy of service coverage and access; call center reports to monitor call volume and resolution; customer complaint reports to identify quality and compliance issues; and claims payment reports to monitor payment accuracy, timeliness, and service utilization.
- **Quarterly Meetings with Subcontractors** to discuss performance against Contract provisions and customer expectations. If we identify performance issues, we work closely with the subcontractor to investigate each case, then take appropriate steps to quickly resolve the issue and prevent recurrence.

Each quarter, we will review service-level standards and management reports, such as claims processing timeliness and accuracy; Member call center and Provider Helpline statistics; and Fraud, Waste, and Abuse program activity and results.

For subcontractors that also serve our affiliate health plans, Amerigroup will leverage the following *national oversight* functions and governance structures to select, monitor, and regulate subcontractor activities and performance:

- The national **Quality Improvement and Compliance Committees** meet quarterly and are responsible for reporting any quality- or compliance-related issues to Amerigroup's local committees (including the Quality Management, Compliance, and Medical Advisory Committees).
- **Vendor Selection and Oversight Committee (VSOC)** has primary responsibility for overseeing subcontractors that serve multiple health plans. It is responsible for their compliance with state, federal, NCQA, CMS, and state program requirements, standards and expectations, and any other applicable regulatory or accreditation standards. VSOC reports to the national Quality Improvement Committee.
- **Joint Operations Committee (JOC) meetings** blend local and national oversight functions. Amerigroup's Quality Management staff, as well as key affiliate health plan personnel and staff, attend quarterly JOC meetings to discuss subcontractors' performance across markets and present issues and concerns to the DWG. Local Medical Advisory and QM/QI Committees receive a summary of each JOC meeting.
- **DWG reports to VSOC monthly.** Amerigroup affiliate health plans have voting members in the DWG. It is responsible for seeing that we follow established policies and procedures in accordance with State, federal, National Committee for Quality Assurance (NCQA), and any other applicable regulatory and accreditation standards. The DWG has collaborative relationships with, and representation from, internal departments. As a governing body comprising local health plan representatives, it also reviews results of the annual state program audits and supports corrective actions, as needed.

Compliance Audits for Subcontractors

Amerigroup will continuously monitor its subcontractors to verify compliance with its standards and requirements, State and federal laws and regulations, and applicable NCQA standards. Amerigroup retains full legal responsibility for all subcontractor performance and activities under a contract.

Amerigroup's Iowa-based VCW and QM/QI Committee will audit our delegated subcontractors' performance through quarterly reports specific to the types of services they provide, such as transportation access and service quality indicator reports, and vision services utilization reports. These reports will enable us to promptly identify and address issues as soon as they arise.

Managing Subcontractors Through Regular Reporting

Amerigroup will monitor its delegated subcontractors' performance through quarterly reports specific to their provided services. Examples of general reports include subcontractor rosters to identify adequacy of service coverage and access; call center reports to monitor volume and resolution of member calls; member complaint reports to identify quality and compliance issues; and claims payment reports to monitor payment accuracy, timeliness, and service utilization. Subcontractor-specific reports include transportation access and service quality indicator reports and vision services utilization reports.

Iowa's local health plan leaders will oversee delegated subcontractors' performance, regularly review their performance reports, and monitor member grievances and appeals. If we identify any subcontractor that is not meeting established goals, we will address the issues through a formal written Corrective Action Plan (CAP) and work closely with the vendor to investigate and take appropriate steps to promptly resolve them. For example, our Louisiana affiliate health plan's transportation subcontractor was placed under a CAP in October 2012, when Amerigroup noticed an uptick in the number of member complaints. They worked with the subcontractor to improve customer service through increased training for customer service representatives, a revised call script that included warm transfers to Amerigroup, unannounced

rides to promote compliance with vehicle and driver standards, and warnings and terminations to drivers who did not adhere to these standards. That subcontractor has shown marked improvement since.

Amerigroup will track and document progress on corrective action every 30 days until all items are addressed and the CAP is closed. Our Quality Improvement and Compliance Committees also track and monitor all active CAPs.

This proven material subcontractor oversight program and these methods will promote service quality and consistency for all Iowa members covered by this program.

For more on our selection and management of subcontractors, please see Tab 4, 2.2 Subcontractors.

Personnel (3.2.5.2)

The bidder shall provide the following information regarding personnel:

Tables of Organization (3.2.5.2.1)

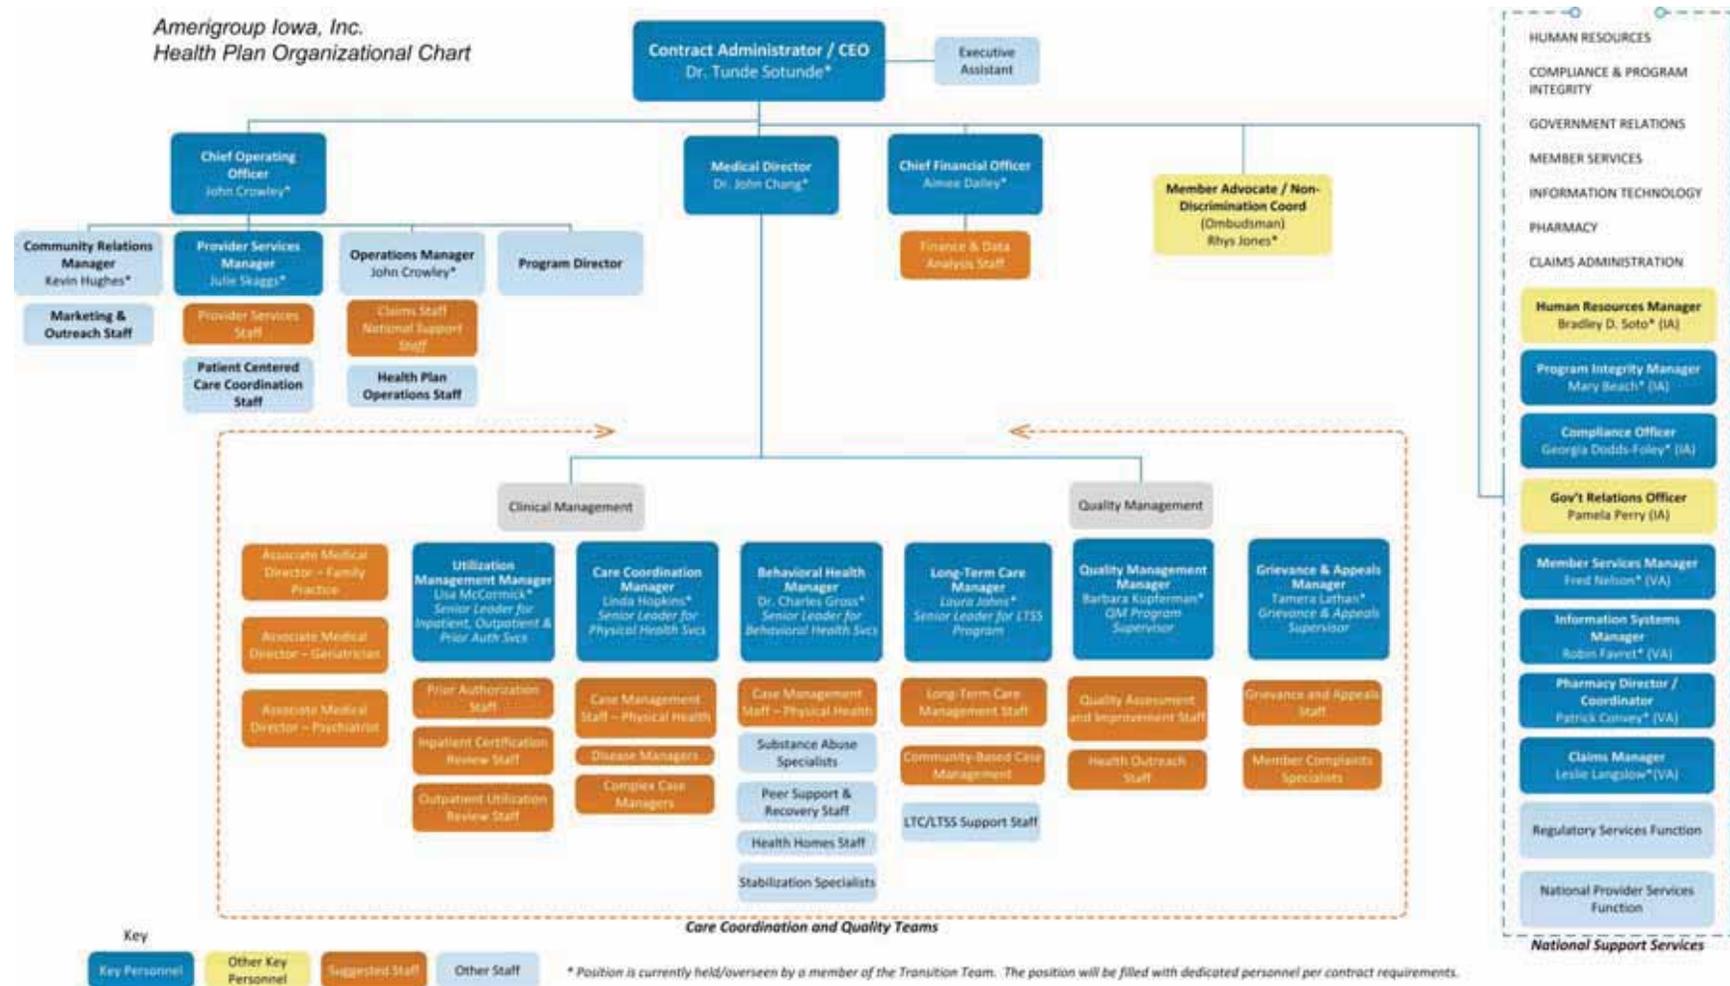

Illustrate the lines of authority in two tables:

- One showing overall operations
- One showing staff who will provide services under the RFP

The tables below provide information regarding the lines of authority and staffing levels for Amerigroup operations in Iowa. The organizational structure of Amerigroup Iowa (Amerigroup) is fully detailed in Sections 2.8 and 2.9.

Our local staff has ready access to collaborate and share best practices, not only with one another but with our national support services teams without compromising local authority and control of health plan operations. Figure 3.2.5-3 illustrates the local health plan organizational model.

Figure 3.2.5-3. Health Plan Organizational Chart

Amerigroup will hire talented, qualified employees to fill positions to meet the requirements of the contract in addition to dedicated national support services positions to further support Iowa operations. We continually evaluate and adjust our staffing to maintain and exceed quality service for our members. Table 3.2.5-2 outlines our anticipated staffing levels based on current membership assumptions and projections for the Iowa Initiative. We anticipate hiring 552 employees – 346 employees who will be locally based and an additional 206 who will be located elsewhere in Amerigroup's national support facilities. We will continually adjust based on membership volume and/or type.

Table 3.2.5-2. Staffing Levels for Amerigroup Iowa

Position	Location	Staffing Level

Young, Jack	120 Monument Circle Indianapolis, IN 46204	Assistant Secretary
Noble, Rick	120 Monument Circle Indianapolis, IN 46204	Assistant

Information About Key Project Personnel (3.2.5.2.3)

Provide name and a general description of proposed Key Personnel as set forth in Section 2.9.3 of RFP Attachment 3.2.7.3-1, Scope of Work. Include the qualifications, number of years of experience in their field, and the proposed location from which the position shall be based. Provide resumes for each of these Key Personnel behind Tab 6 of the Bid Proposal. If the key staff person is not yet identified, state so in the response to this subsection.

In preparing to implement operations in Iowa, Amerigroup has identified a seasoned Transition Team with extensive Medicaid experience and a deep understanding of the needs of Medicaid members. The Transition Team will be responsible for overseeing initial operation of the Contract, which will include hiring highly qualified Iowa-based staff to initially fill the roles of the Contract Administrator, Medical Director, Chief Financial Officer, Compliance Officer, Pharmacy Director, Grievance and Appeals Manager, Quality Management Manager, Utilization Management Manager, Behavioral Health Manager, Member Services Manager, Provider Services Manager, Information Systems Manager, Claims Administrator, Care Coordination Manager, Program Integrity Manager, and Long-term Care Manager.

The Transition Team members will be responsible for overseeing initial operations of the contract, which includes hiring highly qualified, Iowa-based staff to fill these key roles, and will have ultimate accountability and responsibility for the success of Iowa health plan on a go-forward basis, as well as being able to easily step in on an interim basis (having knowledge of the Iowa operating landscape without any disruption to members, providers, and other stakeholders) in the event of a Key Personnel vacancy at any point during the life of the contract. More information regarding our organization's well-documented history of successful large-scale Medicaid plan implementations can be found in Section 1.1.

Our affiliates' vast experience in successfully operating Medicaid plans across the country, such as Tennessee, Kansas, and Texas, provides a roadmap for our future programs. We benefit from lessons learned that show us what is needed to be successful in the states where we operate. Amerigroup understands the staffing needs for successful Medicaid operations in Iowa. In addition to the aforementioned Key Personnel, Amerigroup will be hiring individuals for the Additional Key Personnel for the following position: Government Relations Officer, Human Resources Manager, Community Relations Manager, and Member Advocate/Non-Discrimination Manager (Ombudsman).

Table 3.2.5-4 provides the name, description, qualifications, and number of years of experience of Key and Additional Key Personnel. Full resumes for each of these individuals are provided behind Tab 6. All positions listed below will be located in Iowa, except for the Claims Administrator, Information Systems Manager, Pharmacy Director and Member Services Manager.

Table 3.2.5-4. Amerigroup Key Personnel

Name of Key Personnel	Title & Location of the Position	Scope of Work Requirement Met	Experience and Qualifications

He holds a Master's degree in Public Health, Health Policy, and Administration from the University of California.

** The COO will have a direct line of sight to and accountability for how our plan's healthcare delivery system functions and flexes due to programmatic changes and transformation efforts. This role or their designee (the Program Director) will serve as the primary point of contact for delivery system reform activities.*

In addition, in Table 3.2.5-5 we provide job descriptions for the Additional Key Staff Positions.

Table 3.2.5-5. Job Descriptions for Additional Key Staff Positions

Title of Additional Key Personnel Role	Location of the Position	Experience and Qualifications
Government Relations Officer	Iowa	<p>Responsible to develop and implement strategies to advocate enterprise and large State-specific legislative and regulatory positions in the most complex legislative and/or regulatory environments, directing and overseeing the resolution of most highly complex, varied, and sensitive political issues within the region and may have federal or multi-state responsibility. This includes the following specific responsibilities: Serve as the lead business owner for the rate-setting process with State regulators; establish and implement proactive strategies to bring new products or extensions of current products to market; monitor market databases and product review to analyze opportunities. Represent Amerigroup and its specific businesses in advocacy efforts. Establish and maintain strong relationships with legislators, regulators, other policymakers, and their staff that will support membership growth. Develop strategies for utilizing PAC and/or corporate political contributions. Partner with internal organizational stakeholders to inform and support business planning processes and proactively raise and address issues of concern. Make internal and external written and oral presentations on behalf of Amerigroup. Develop coalitions and target grassroots capabilities. Manage budgets and issues of importance to the enterprise. Serve as a leader in trade associations and other advocacy organizations. Generally work with legislative sessions of 6 months or longer and/or in the most complex legislative and/or regulatory environments. A Bachelor's degree in a related field required; 10 years of legislative, regulatory, political, public affairs, or industry experience; or any combination of education and experience that would provide an equivalent background. MS preferred. In-depth knowledge of the Medicaid business, including products and regulatory issues, and knowledge of future trends in the delivery and financing of healthcare services in the public sector managed care environment required.</p>
Human Resources Manager	Iowa	<p>Responsible for providing expert HR support to assigned business clients and build relationships with business and/or local leaders to link HR strategy to short- and long-range policy and operational issues and lead the tactical implementation. This includes the following specific responsibilities: Implement short-term and long-term HR programs with emphasis on succession planning, leadership selection, leadership development/ deployment, and large-scale talent transformational change. Coach and counsel business unit leadership on how to achieve business results through effective people strategies. Review data analytics to develop and implement corrective action plans. Provide competitive, labor, and legislative intelligence on local environment to HR and business partners. Research and manage complex and highly sensitive associate relations issues and termination issues, legal and compliance issues, and investigations, and take appropriate actions; and provide coaching and counseling to managers and associates. Advise clients on organizational and team effectiveness. Partner with Talent Acquisition to develop recruitment strategies that deliver the best available talent for required roles to meet organizational objectives. Partner with compensation to develop pay-leveling strategies that create competitiveness, internal equity, and career mobility. Ensure enterprise plans requiring client coordination are well implemented (salary planning, stock award allocation, performance management) and achieve maximum value. Conduct exit interviews and reporting. Assist with new hire orientation. <i>A Bachelor's degree required; 5-8 years of human resources experience; or any combination of education and experience that would provide an equivalent background. HR designation preferred (PHR or SPHR).</i></p>

Title of Additional Key Personnel Role	Location of the Position	Experience and Qualifications
Community Relations/Engagement Manager	Iowa	<p>Integrate member outreach strategies through alternative sources, such as faith-based organizations and other initiatives. Develop and execute strategies to enhance member outreach and engagement efforts. Develop objectives, policies, and programs for activities to accomplish objectives. Strategically plan and execute strategies, outreach and education activities for products to extend and increase membership growth and marketing. Develop short and long-term strategic directives, plans, campaigns, and programs to meet goals; review department performance in relation to established goals, implementing changes to effect improvement or react to a change in the organization or industry. Develop and maintain favorable relationships with key decision-makers and influencers in the community. Direct and coordinate activities of the community relations and member outreach and marketing operations in accomplishing outreach activities, and periodically evaluate and report results. Ensure compliance with state and municipal laws, rules, and guidelines for marketing and outreach; organize and direct training and orientation for all associates. Direct outreach planning and activities, which include maintaining favorable relations with members, analysis of competitive products and outreach techniques, consumer research, marketing legislation, outreach budget, and goals. Make recommendations to appropriate functions to achieve product modifications or improvements derived from market research, technical service work or marketing feedback. Identify and implement activities/services that promote member attendance and participation, member retention and growth, member health education and promotion. Develop education materials which address the cultural and educational diversity of membership. In partnership with Marketing Communications, responsible for identifying appropriate media opportunities and developing media relationships to assist in developing brand recognition. Participate in appropriate Board(s) and or committee(s) which will assist in the development of brand recognition. Perform other duties as requested or assigned. <i>Bachelor's Degree in Marketing, Business Administration or similar field required. Master's Degree in Business, Health Care Administration or a similar field preferred. 10 years of sales, marketing or healthcare experience with 5 years of experience in a supervisory role.</i></p>
Member Advocate / Non-Discrimination Coordinator (Ombudsman)	Iowa	<p>Responsible for coordinating services with local community organizations and working with local advocacy organizations to assure that members have access to covered services and non-covered services. This includes the following specific responsibilities: Responsible for interacting with DHS equivalent ombudsman staff and submitting reports to DHS. Develop and execute statewide ombudsman strategy for the Iowa Initiative program through strategic planning, collaborations, and strategic alliances. Improve understanding of local advocacy organizations, philosophies, stakeholders, legislators, and providers that interact with or influence members and policy. Serve as an informal information resource, communication channel, complaint handler, facilitator, consultant, and practitioner for dispute resolution. Seek fair/equitable solutions to member/provider problems. Recommend dispute resolution processes to address and manage conflicts; recommend policy and procedural changes. Bring issues to health plan executive leadership to address care delivery improvement efforts and promote effective relationships/communication between members and providers. Build and develop partnerships that are in concert with the company's overall strategy to improve our collaboration within the local communities served by Amerigroup. A Bachelor's degree required. Seven years related experience, or any combination of education and experience that would provide an equivalent background. Proven track record of developing programs and services for vulnerable member populations.</p>

Reserved (3.2.5.3)

The State has marked this requirement as "Reserved" in the RFP.

Termination, Litigation, and Investigation (3.2.5.4)

Bid Proposals must indicate whether any of the following conditions have been applicable to the bidder, or a holding company, parent company, subsidiary, or intermediary company of the bidder during the past five (5) years that relate to services contemplated by this RFP unless otherwise noted. If any of the following conditions [listed in RFP Section 3.2.5.4] are applicable, then the bidder shall state the details of the occurrence. If none of these conditions is applicable to the bidder, the bidder shall so indicate.

Note: Failure to disclose information about the matters in this section may result in rejection of the Bid Proposal or in termination of any subsequent contract. The subject matter in the sixth unnumbered bullet of this subsection is a continuing disclosure requirement. Any such matter commencing after submission of a Bid Proposal, and with respect to the successful bidder after the execution of a contract, shall be disclosed in a timely manner in a written statement to the Agency. For purposes of this subsection, timely means within thirty (30) days from the date of conviction, regardless of appeal rights.

Amerigroup Iowa (Amerigroup) is a wholly owned subsidiary of our ultimate parent company, Anthem, Inc. As part of a national insurance company holding system, Amerigroup has several intermediary parent companies including ATH Holding Company, LLC and Amerigroup Corporation. Additionally, Anthem, Inc. has over 150 subsidiaries, which include licensed and operational health plans that operate across the country. For the purposes of this response, we use the term “Anthem” to refer to our parent company and all affiliate companies (inclusive of ATH Holding Company, LLC and Amerigroup Corporation).

Contract Termination

Amerigroup and Anthem have *never* had a federal or state-sponsored health program contract involuntarily terminated for performance and have not voluntarily terminated such contract in the last five consecutive full calendar years. Anthem's health plan subsidiaries currently hold more than 75 contracts nationwide serving more than 5.2 million members through state-sponsored health care programs.

Amerigroup's affiliate health plan in Maryland, Amerigroup Maryland, Inc., entered into an agreement by mutual consent with the Centers for Medicare and Medicaid Services (CMS) to terminate their Medicare Advantage Prescription Drug Plan (contract H5896) on January 1, 2015. There were no members enrolled in the plan when the request was made to CMS on September 3, 2014, nor when the termination was effected. Nishamarie Sherry with the Department of Health and Human Services, CMS, located at 7500 Security Boulevard, Baltimore, Maryland 21244, telephone 410-786-1189, assisted with the agreement.

Defaults and Notices of Default

Amerigroup and Anthem (inclusive of Anthem's subsidiary health plans) have *never* been subject to default or received notice of default or failure to perform a contract under a federal or state-sponsored health program contract.

From time to time, in the regular course of business, Amerigroup's affiliate health plans have received notices, sanctions, and other regulatory actions related to the numerous and rigorous requirements of any public program contract. We provide information about these actions in Attachment 3.2.7.4.2-2, Affiliate Regulatory Actions and Sanctions. None of these health plan affiliates operating federal or state-sponsored health programs will provide services for the Iowa Initiative program.

Damages, Penalties, Disincentives and Withholds

Amerigroup has never had any damages, penalties, disincentives assessed, payments withheld, or anything of value traded or given up under any of its contracts. With respect to Anthem (inclusive of Anthem's subsidiary health plans), in 11 of our markets, our affiliate health plans are subject to performance-based incentive payments and disincentive withholds under state-sponsored health program contracts. We provide information about these payments and withholds in Attachment 3.2.7.4.2-2. As noted above, information regarding notices, sanctions, and other regulatory actions for our affiliate health plans is included in Attachment 3.2.7.4.2-2.

Pending or Threatened Litigation and Other Matters

We provide information regarding any material current pending or threatened litigation, administrative or regulatory proceedings, or similar matters related to the subject matter of services sought in this RFP against Amerigroup and Anthem (inclusive of Anthem's subsidiaries), in attachment 3.2.5.4-1.

Irregularities

During the past five years, no irregularities have been discovered in any accounts maintained by Amerigroup or Anthem (inclusive of Anthem's subsidiaries) on behalf of others by an independent, state, and/or regulatory auditor in an Auditor's report.

Child or Dependent Adult Abuse Reports

No officer, primary partner, or staff providing services of Amerigroup or Anthem (inclusive of Anthem's subsidiaries) who will be involved with providing the services sought in this RFP have ever had a child or dependent adult abuse report, or been convicted of a felony. We engage in an extremely robust background screening process for all employees and those who perform work for us on a contract basis. Specifically, we conduct an in-depth criminal background check at the federal, state, and local county levels, as well as abide by all OFCCP requirements to verify that any individuals we hire meet stringent criteria related to providing services to our government-contracted business. Our screening process also includes adherence to Section 1033 of the Violent Crime Control and Law Enforcement Act of 1994, which prohibits any individual with certain felony convictions from working in the business of insurance without a waiver from the respective state regulatory body.

Amerigroup also has in place an extensive screening process for providers, which occurs during the credentialing process. That process adheres to all CMS requirements related to education, experience, licensure history, and work experience post-schooling. Our process also includes verification of credentials against the Office of the Inspector General's exclusion database.

With respect to owners of Amerigroup as noted above, Amerigroup and our intermediary parent companies are under common ownership of their ultimate parent company, Anthem, Inc. Shares of Anthem, Inc. are publicly traded on the New York Stock Exchange (NYSE) under the symbol ANTM. As such, Anthem, Inc. common stock may be acquired in the ordinary course of business through open market purchases, and information on whether any person or entity acquiring Anthem, Inc.'s stock has ever had a founded child, dependent adult abuse report, or been convicted of a felony, is not available.

Similarly, to the best of our knowledge, no owner, officer, primary partner or staff providing services of any subcontractor who may be involved with providing services sought in this RFP have ever had a founded child, dependent abuse report, or been convicted of a felony, and we will require review of this information through our subcontract agreements. We will also mandate our subcontractors to comply with the ongoing disclosure requirement of this RFP, and timely disclose any manner commencing after the submission of the Bid Proposal and/or execution of the contract.

Tunde Sotunde, M.D.
Northeast Regional Vice President
Amerigroup Iowa
5550 Wild Rose Lane, Suite 400
West Des Moines, IA 50266

Dear Dr. Sotunde:

On behalf of the Alzheimer's Association, Greater Iowa Chapter I am writing to express support for Amerigroup's proposal to the Iowa High Quality Healthcare Initiative.

An estimated 63,000 Iowans have Alzheimer's and it is the six leading cause of death in the state. One of nine people age 65 and older have Alzheimer's and nearly half of those 85 and older are affected. Total payments for health care, long term care and hospice are estimated to be \$226 billion in the U.S., including \$113 billion paid by Medicare and \$41 paid by Medicaid.

Although there is no known way to prevent, treat or cure Alzheimer's disease, community based services and support alleviate the burden for the individual with the disease and improve the resilience of their caregivers. The Alzheimer's Association provides a variety of services and supports through its six locations in Iowa. Our programs target caregivers and individuals in all stages of the disease and include education, information, referral, support groups and care consultation.

The Alzheimer's Association will collaborate with Amerigroup to provide training about Alzheimer's and dementia so that health care providers can deliver appropriate information, support and referrals. We will offer the full range of services and supports across the state to complement care coordination activities and improve health outcomes for enrollees and their caregivers.

Thank you for the opportunity to collaborate to improve the health of Iowans with Alzheimer's and their caregivers.

Sincerely,

A handwritten signature in black ink that reads "Carol L. Sipfle".

West Des Moines, IA 50266

April 6, 2015

Dear Dr. Sotunde:

I am excited to learn that Amerigroup plans to submit a proposal in response to the Iowa Department of Human Services' procurement for the Iowa High Quality Healthcare Initiative. I am happy to offer this letter in support of that endeavor. I appreciated learning more about Amerigroup's work in managed Medicaid and long term services and supports, and I believe that your company has the experience required to deliver needed services to improve the lives of those served by our Medicaid program.

We represent more than 30 voluntary health organizations that offer programs and initiatives that serve citizens of the state of Iowa, who are eligible or may become eligible for Medicaid. Your support and partnership, will help us to expand programs that will equip us to better serve our communities. I'm impressed with Amerigroup's early investment in better understanding the populations you seek to serve in Iowa. I think that Amerigroup's experience in long term services and resources will make a significant contribution to improving the lives of Iowans who participate in the State's Medicaid program.

On behalf of Community Health Charities, and the 32 organizations that we serve, thank you for your interest in and support of our work. I look forward to continuing to create a meaningful partnership with Amerigroup in serving our most vulnerable citizens.

Sincerely,

Jessica Reiter-Flax
Executive Director
Community Health Charities of Iowa

RE: Letter of Reference on Behalf of Amerigroup Corporation

To Whom It May Concern:

In response to the request for proposal by the Department of Human Services for the State's High Quality Healthcare Initiative, I am writing today to share my experience with Amerigroup's performance in and commitment to coordinating healthcare and Long-Term Services and Supports (LTSS) for older adults and individuals with disabilities.

In 2007, Amerigroup and a culturally diverse group of community advocates, health care experts and academics launched a first for the healthcare industry: the National Advisory Board (NAB) on Improving Health Care Services for Seniors and People with Disabilities. The NAB is dedicated to providing guidance and policy recommendations for improving programs and services for older adults and individuals with disabilities.

As a Board, we are people with disabilities; children of aging parents; parents of children and adults with disabilities; and allies of people with disabilities. The NAB represents millions of Americans with disabilities and older adults and their family members who have struggled with the complexities of our fragmented health care system. Each of us brings a personal perspective to the subject of LTSS because each of us has lived experience.

In 2009 the NAB published the *Declaration for Independence* which outlined Six Foundational Principles we assert as necessary for ensuring the equal rights and opportunities of older adults and individuals with disabilities. We believe the modernized health care infrastructure required to meet the needs of older adults and individuals with disabilities will come about only once these Six Principles are fully and broadly realized. Amerigroup shares this perspective and has committed to these Six Principles in practice as well as in principle.

In addition to supporting our work, Amerigroup has sought and leveraged our collective experience, perspective and guidance to develop more effective programs and better serve its members. This type of collaboration has enabled Amerigroup to coordinate person-centered, high quality and

Dr. Tunde S. Sotunde

April 14, 2015

Page 2 –

integrated healthcare and LTSS programs for the members and families it serves, as well as its state Medicaid and provider partners. It has extended beyond Amerigroup's coordination of health care and LTSS; it is a cultural competency embraced by their associates and incorporated in its business practices.

Thank you for the opportunity to share my experience with and support for Amerigroup. If you should have any questions or would like additional information about the NAB, please feel free to contact me directly. My direct telephone number is (713) 797-7124, or you may contact me by email to lfrieden@bcm.edu. I also invite you to learn more about the NAB at www.declarationforindependence.com.

Sincerely yours,

Lex Frieden, Professor

The Honorable Terry Branstad
State Capitol, 1007 E. Grand Avenue
Des Moines, IA 50319

Dear Governor Branstad,

Please accept this letter of support and reference in regard to your recent decision to implement a Medicaid managed care system in the State of Iowa. I commend your decision; managed care has been a very successful tool in managing and containing cost in the Texas Medicaid program. Texas was one of the first states to implement managed care for Medicaid. I have been involved in this initiative from the beginning in 1998. This experience included my role as Executive Director of one of the largest health care trade associations in the country, Texas Health Care Association, as well as my capacity as both Deputy Executive Commissioner and Executive Commissioner (2009-2012), appointed by Governor Rick Perry, for the Texas Health and Human Services Commission.

During my term as Executive Commissioner, I found the health plans a valuable resource in the successful integration of managed care. Since retiring from state government in 2012, I have been working with various states and managed care companies to implement managed care while protecting and maximizing federal funding. I have participated in managed care discussions in West Virginia, North Carolina, South Carolina, Louisiana, and California.

Amerigroup is one of the managed care companies I have been advising. Amerigroup was instrumental in pilot testing the early stages of managed care and assisted in designing the system to improve quality and efficiency. Amerigroup worked hand-in-hand with the provider community and consumer advocates to facilitate understanding and acceptance of managed care. Equally important, Amerigroup took the feedback it received to heart in its own operational approach and its provider and member relations. Amerigroup further worked with the State of Texas in efforts to maximize federal funds such as through the creation of alternatives for various federal Upper Payment Limit (UPL) programs, and Amerigroup continues to help the State maximize available funds today through innovative network access improvement projects created in partnership with numerous medical schools and hospitals throughout the State.

The transition to managed care is not complex, but is an intense process requiring entities to work together to achieve common goals with the primary emphasis on serving the needy citizens of the state. If I can be of assistance to you or your staff please do not hesitate to contact me.

Sincerely,

Thomas M. Suehs

Sam Brownback, Governor

April 6, 2015

The Honorable Terry Branstad
State Capitol, 1007 E. Grand Ave.
Des Moines, IA 50319

Dear Governor Branstad:

Congratulations on your plans to move Iowa Medicaid to a managed care system. In Kansas, we launched KanCare in January 2013. Since that time, KanCare continues to successfully deliver whole-person, integrated and managed care to more than 360,000 consumers across our state.

Our goal for KanCare is to improve overall health outcomes while slowing the rate of cost growth over time. This has been accomplished through the coordination and delivery of care and services by providing the right care, in the right amount, in the right setting and at the right time. The focus of our program is on ensuring that consumers receive the preventive services and screenings they need and ongoing help managing chronic conditions.

One of the keys to our success has been our working relationship with our managed care organizations. One of those partners is Amerigroup Kansas. Just a few of their 2014 achievements include:

- Achieved a clean claims turnaround time of 6.5 days;
- Assisted 600 people to exercise their preference to live in a community setting rather than a nursing facility;
- Assisted 119 people to move from a nursing facility back into the community;
- Assisted 68 people to transition into employment;
- Engaged our Waiver waiting list members in face-to-face assessment to ensure their well-being and offer assistance and support.

We appreciate that Amerigroup has a dedicated Kansas-based team deployed in communities across the state and the collaborative manner in which they work with the administration and our agency leaders. The Amerigroup leadership and staff are considered trusted partners in delivering managed care to our Kansas consumers.

We sincerely believe you would find the Amerigroup team to be an asset to Iowa as you implement your new managed care program.

Yours,

A handwritten signature in cursive script that reads "Jeff Colyer".

Charles M. Palmer, Director
Iowa Department of Human Services
1305 E. Walnut
Des Moines, IA 50319

Dear Director Palmer:

On behalf of Wellmark, I am writing in support of Amerigroup's proposal to participate in the Iowa High Quality Healthcare Initiative.

We at Wellmark have become closely acquainted with Amerigroup over the last few months, and are thoroughly impressed with their leadership in meeting the needs of Medicaid beneficiaries, their providers, and caregivers. Amerigroup currently serves nearly 5.2 million Medicaid members, including nearly 1 million in specialized populations, in 19 States.

Amerigroup has developed a unique expertise in serving Medicaid members with complex medical, behavioral, and social service needs. With over 24 years in the business, they have the experience to manage a large, complex, multi-population Medicaid program as is intended for Iowans through the Initiative. For example, in a 15 month period, they implemented three Medicaid health plans representing more than 256,000 new members in Kansas, Louisiana and Washington.

In addition, Amerigroup shares the State and Wellmark's commitment to work in innovative ways to transform health care and improve the health of Iowans. Evidence of this commitment is the high level of support and interest Amerigroup has shown in continuing the ACO and State Innovation Model Grant initiatives pioneered by Wellmark in Iowa. We believe that Amerigroup will be an accountable, innovative partner with the Iowa Medicaid Enterprise as the Initiative is implemented and as it matures.

Sincerely yours,

Laura Jackson
Executive Vice President
Health Care Innovation and Business Development

RE: Support for Amerigroup to Serve Iowans under the Iowa High Quality Healthcare Initiative

Dear Dr. Sotunde:

My name is Julianne Beckett and my daughter Katie was the first Medicaid home and community-based waiver person in the country. I have been working for the University of Iowa, retiring last August, since June of 1984 in the capacity of parent partner with the Title V program.

I am excited to learn that Amerigroup Iowa, Inc., plans to submit a proposal in response to the procurement for the Iowa High Quality Healthcare Initiative. I am pleased to offer this letter in support of that endeavor. I have appreciated learning more about the impressive Medicaid capabilities of the Amerigroup family of companies, and I believe that your company will deliver needed innovations to improve the lives of those served by our Medicaid program.

As we have discussed, our programs/initiatives serve citizens of the state who are eligible or may become eligible for Medicaid. Your support for our families and family organizations will help us to expand (program/initiative), which will equip us to better serve our community, especially those with disabling conditions. I am impressed with Amerigroup Iowa's early investment in better understanding the new populations you seek to serve in Iowa. I believe that your innovations (child obesity, prenatal care, asthma, etc.) will make a significant contribution to improving the lives of Iowans who participate in the State's Medicaid program. I view this as an opportunity to advance coordinated and meaningful access to long-term services and supports and promote community-based, self-directed and person-centered services and supports for Iowans with disabilities and their families.

From all of us serving people on Medicaid, we thank you for your interest and support of our work. I look forward to continuing to create a meaningful partnership with Amerigroup Iowa in serving our most vulnerable citizens.

Sincerely,

Julianne Beckett
Advocate for Children with Disabilities

RE: Reference Letter for Amerigroup for Iowa's Request for Proposal for High Quality Healthcare Initiative (RFP #MED-16-009)

Dear Ms. Lindgren:

Please accept this letter of recommendation regarding Amerigroup Iowa, Inc., which is submitting a proposal in response to the State of Iowa's Request for Proposal for High Quality Healthcare Initiative (RFP #MED-16-009).

Since 2013, the State of Kansas Department of Health and Environment has worked with Amerigroup Iowa's affiliate company Amerigroup Kansas, Inc., to administer the KanCare program – covering nearly all Kansas Medicaid members' physical health, behavioral health, HCBS, NF, NEMT, dental and pharmacy services. Under the KanCare contract, Amerigroup Kansas currently serves over 130,000 Medicaid members statewide, as one of our three KanCare MCOs.

Throughout the readiness process, launch, early implementation and operation, Amerigroup has been a strong and responsive partner with us on the KanCare program. They proactively learned the Kansas system, providers, members, advocates and other stakeholders. They put together a strong and capable team of leadership and management staff, including both local people experienced in the service areas and national support staff experienced in managed care operations. They are always solution-focused and responsive, extremely well organized with strong administrative staff and processes, and consistently good communicators and collaborators. They are achieving strong clinical and personal outcomes for our Medicaid members.

Enclosed with this letter, I am including a Reference Questionnaire that provides additional information about Amerigroup's performance in Kansas. Please contact me if you have any questions or would like to discuss further. My contact information follows:

Elizabeth Phelps, MPA, JD

EPhelps@kdheks.gov

Sincerely,

Elizabeth Phelps

REFERENCE QUESTIONNAIRE

REFERENCE SUBJECT: AMERIGROUP KANSAS, INC.*

Amerigroup Iowa, Inc. intends to submit a proposal to the Iowa Department of Human Services (DHS) in response to the Request for Proposal (RFP) for High Quality Healthcare Initiative (RFP #MED-16-009). This Questionnaire supplements the Reference Letter submitted on behalf of Amerigroup.

- (1) Please provide the following information about the individual completing this reference questionnaire on behalf of Amerigroup.

NAME:	Elizabeth Phelps
TITLE:	Program Finance & Informatics – Public Service Exec. III
TELEPHONE #	(785) 296-4552
E-MAIL ADDRESS:	EPhelps@kdheks.gov
SIGNATURE:	

- (2) What services does the reference subject provide to your organization?

Comprehensive Medicaid managed care organization, managing nearly all Kansas Medicaid members' physical health, behavioral health, HCBS, NF, NEMT, dental and pharmacy services. Also provide value added benefits and in lieu of services designed to effectively and efficiently meet members' needs with preventative or right-sized services.

- (3) What is the level of your overall satisfaction with the reference subject as a vendor of the services described above?

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Least Satisfied	2	3	4	5 Most Satisfied
				x

- (4) If the reference subject is still providing services to your company or organization, are these services being provided in compliance with the terms of the contract, on time, and within budget? If not, please explain.

Yes, consistently.

*Referenced subject is an affiliate of Amerigroup Iowa, Inc. (Amerigroup), the bidding entity.

REFERENCE QUESTIONNAIRE — Page 2

(5) How satisfied are you with the reference subject’s ability to perform based on your expectations and according to the contractual arrangements?

Highly. They take care to know and implement the terms of our contract to our expectations, and beyond. They get after issues promptly; raise questions until they are clear on our position, vision and expectations; and they are responsive both to us and to the providers/members they serve. They take good care of our members that pick them for managed care services, and they take good care of their staff who take care of our members.

(6) In what areas of service delivery does /did the reference subject excel?

They proactively learned the Kansas system, providers, members, advocates and other stakeholders. They put together a strong and capable team of leadership and management staff, including both local people experienced in the service areas and national support staff experienced in managed care operations. They are always solution-focused and responsive, extremely well organized with strong administrative staff and processes, and consistently good communicators and collaborators. They are achieving strong clinical and personal outcomes for our Medicaid members.

(7) In what areas of service delivery does /did the reference subject fall short?

Nothing systemic – but by exception, occasionally a staff person won’t be a good fit, either by skill set or interpersonal temperament, and when that has happened they have been prompt in identifying the concern and addressing it. Their CEO in Kansas has an expression – “run to the danger” – which summarizes their approach to getting to problem areas with solutions.

(8) What is the level of your satisfaction with the reference subject’s project management structures, processes, and personnel?

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Least Satisfied	2	3	4	5 Most Satisfied
				x

What, if any, comments do you have regarding the score selected above?

As noted above, Amerigroup has formed – and over time maintained – a really strong core set of leadership and management staff for the Kansas program. That makes a huge difference in their capabilities and responsiveness, and leaves them well poised to identify and address areas of concern across the board. Their national project management structures and processes, coupled with the strong set of staff on this program, make them extremely effective in our market.

REFERENCE QUESTIONNAIRE — Page 3

- (9) Considering the staff assigned by the reference subject to deliver the services described in response to question 3 above, how satisfied are you with the technical abilities, professionalism, and interpersonal skills of the individuals assigned?

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Least Satisfied	2	3	4	5 Most Satisfied
				x

What, if any, comments do you have regarding the score selected above?

This is the area of Amerigroup that we call their "secret weapon." They have – clearly not by accident – created an exceptionally competent, capable, communicative set of leadership and management staff for this program. Frequently I have looked to them as "setting the standard" on an issue that we then replicate across the other areas of the program. We have taken the approach of "a rising tide lifts all boats" in terms of having the three MCOs learn from and build on each other's processes and approaches, and often – especially over the first year of the program as we were setting things firmly in place – the Amerigroup staff would get teased by the other MCO staff for setting the bar so high.

- (10) Would you contract again with the reference subject for the same or similar services?

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Disagree	2	3	4	5 Agree
				x

What, if any, comments do you have regarding the score selected above?

Included above. Amerigroup is a very effective partner in providing Medicaid services in Kansas.

RE: Reference Letter for Amerigroup for Iowa's Request for Proposal for High Quality Healthcare Initiative (RFP #MED-16-009)

Dear Ms. Lindgren:

In my role as the Louisiana Medicaid Director, I am writing this letter of recommendation on behalf of **Amerigroup Iowa, Inc.** It is my understanding that they are submitting a proposal in response to the State of Iowa's Request for Proposal for High Quality Healthcare Initiative (RFP #MED-16-009).

Louisiana's DHH, Bureau of Health Services Financing (our single state Medicaid agency) recently undertook the monumental task of transitioning from a fee-for-service Medicaid delivery model to a risk bearing, managed and coordinated care delivery model for more than 900,000 of our Louisiana Medicaid enrollees. Since July, 2011 when the initial contracts were awarded, we have worked closely and in a highly collaborative manner with Amerigroup Iowa's affiliate company Amerigroup Louisiana, Inc., to administer our Bayou Health Medicaid benefit package which includes physical health, vision, pharmacy, and non-emergency medical transportation for eligible members. Under their Bayou Health Contract, Amerigroup Louisiana currently serves more than 143,000 TANF, CHIP, and ABD members statewide.

Amerigroup Louisiana was recently awarded a three year extension of their Contract during our 2014 competitive reprocurement. I have found Amerigroup Louisiana, Inc's leadership—at both the state and corporate levels—to be:

- experienced and professional,
- exceptionally well organized and committed to contract compliance, and
- highly responsive to the continually evolving needs of the State and our Medicaid enrollees.

We consider Amerigroup to be a valued partner in the already documented improvements in quality of care that have been achieved for our Medicaid enrollees since Bayou Health began.

J. Ruth Kennedy
Medicaid Director

Enclosure

REFERENCE QUESTIONNAIRE

REFERENCE SUBJECT: AMERIGROUP LOUISIANA, INC.*

Amerigroup Iowa, Inc. intends to submit a proposal to the Iowa Department of Human Services (DHS) in response to the Request for Proposals (RFP) for High Quality Healthcare Initiative (RFP #MED-16-009). This Questionnaire supplements the Reference Letter submitted on behalf of Amerigroup.

- (1) Please provide the following information about the individual completing this reference questionnaire on behalf of Amerigroup.

NAME:	Ruth Kennedy
TITLE:	Medicaid Director, Louisiana Department of Health & Hospitals, Bureau of Health Services Financing
TELEPHONE #	(225) 342-9240
E-MAIL ADDRESS:	Ruth.Kennedy@la.gov
SIGNATURE:	

- (2) What services does the reference subject provide to your organization?

Full risk Medicaid MCO for approximately 143,000 Louisiana residents. Health benefits and services; care coordination, case management, quality improvement, extra-contractual benefits to members.

- (3) What is the level of your overall satisfaction with the reference subject as a vendor of the services described above?

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Least Satisfied	2	3	4	5 Most Satisfied
				X

- (4) If the reference subject is still providing services to your company or organization, are these services being provided in compliance with the terms of the contract, on time, and within budget? If not, please explain.

*Referenced subject is an affiliate of Amerigroup Iowa, Inc. (Amerigroup) the bidding entity.

REFERENCE QUESTIONNAIRE — Page 2

How satisfied are you with the reference subject's ability to perform based on your expectations and according to the contractual arrangements?

Highly satisfied

(5) In what areas of service delivery does /did the reference subject excel?

They were highly organized and proficient from the very beginning of their contract. A good implementation plan and also their carrying out of the plan. Strong clinical focus

(6) In what areas of service delivery does /did the reference subject fall short?

Amerigroup attracted fewer voluntary enrollments which I attribute to their enhanced (extra-contractual) benefits for members being less attractive than those offered by their competitors.

(7) What is the level of your satisfaction with the reference subject's project management structures, processes, and personnel?

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Least Satisfied	2	3	4	5 Most Satisfied
				X

What, if any, comments do you have regarding the score selected above?

Amerigroup operates in a consistently, highly proficient manner.

REFERENCE QUESTIONNAIRE — Page 3

- (8) Considering the staff assigned by the reference subject to deliver the services described in response to question 3 above, how satisfied are you with the technical abilities, professionalism, and interpersonal skills of the individuals assigned?

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Least Satisfied	2	3	4	5 Most Satisfied
				X

What, if any, comments do you have regarding the score selected above?

Amerigroup, Louisiana recruited and hired highly qualified staff for key positions. Staff has corporate support but is given flexibility and autonomy to meet needs of state.

- (9) Would you contract again with the reference subject for the same or similar services?

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Disagree	2	3	4	5 Agree
				X

What, if any, comments do you have regarding the score selected above?

Amerigroup was awarded a new Bayou Health contract in late 2014 following a competitive procurement.

**RE: Reference Letter for Amerigroup for Iowa's Request for Proposal for High Quality
Healthcare Initiative (RFP #MED-16-009)**

Dear Ms. Lindgren:

Please accept this letter of recommendation regarding Amerigroup Iowa, Inc., which is submitting a proposal in response to the State of Iowa's Request for Proposal for High Quality Healthcare Initiative (RFP #MED-16-009).

Since 2005, the State of New York Department of Health has worked with Amerigroup's affiliate company Amerigroup New York, LLC to administer publicly funded programs providing physical health services, behavioral health services, long-term care, dental, vision, and pharmacy for eligible members. Under the Medicaid and Family Health Plus Participating Managed Care Plan Agreement, Amerigroup New York currently serves approximately 388,000 members, and under the Child Health Plan Contract, they serve approximately 56,000 members.

Enclosed with this letter, I am including a Reference Questionnaire that provides additional insight on our opinion of Amerigroup's performance in New York. Please contact me if you would like to discuss our letter of recommendation and Amerigroup further. My contact information is below:

RE: Reference Letter for Amerigroup for Iowa's Request for Proposal for High Quality Healthcare Initiative (RFP #MED-16-009)

Dear Ms. Lindgren:

Please accept this letter of recommendation regarding Amerigroup Iowa, Inc., which is submitting a proposal in response to the State of Iowa's Request for Proposal for High Quality Healthcare Initiative (RFP #MED-16-009).

Since 2006, the State of Tennessee Bureau of TennCare has worked with Amerigroup's affiliate company Amerigroup Tennessee, Inc. to administer publicly funded programs providing physical health, behavioral health, long-term services and supports, vision, and non-emergency medical transportation for eligible Middle Tennessee members. In a recent re-procurement of the TennCare Contractor Risk Agreement, Amerigroup was successful and won the right to a statewide contract which has moved Amerigroup's membership from 225,000 Middle Tennessee members to a statewide membership of 385,000.

Enclosed with this letter, I am including a Reference Questionnaire that provides additional insight on our opinion of Amerigroup's performance in Tennessee. Please contact me if you would like to discuss our letter of recommendation and Amerigroup further. My contact information is below:

Darin J. Gordon, Medicaid Director
Bureau of TennCare

- (4) If the reference subject is still providing services to your company or organization, are these services being provided in compliance with the terms of the contract, on time, and within budget? If not, please explain.

*Referenced subject is an affiliate of Amerigroup Iowa, Inc. (Amerigroup) the bidding entity.

REFERENCE QUESTIONNAIRE — Page 2

Services are being provided in compliance with the terms of the contract and on time. They are operating within their capitated rates.

REFERENCE QUESTIONNAIRE — Page 3

How satisfied are you with the reference subject's ability to perform based on your expectations and according to the contractual arrangements?

We are very satisfied with their ability to perform. They have been good partners and continue to focus on improving their performance and the health outcomes of their members.

(5) In what areas of service delivery does /did the reference subject excel?

They excel in placing focus on connecting members to their primary care physician and assisting the PCP in efforts to manage their patient practice. They have been a leader in this. They have recently assisted in establishing integrated clinics in Memphis that focuses on Medicare and Medicaid members.

(6) In what areas of service delivery does /did the reference subject fall short?

Amerigroup has had issues with claims payment timeliness and accuracy; however, this has been infrequent and isolated over their 9 year history with Tennessee. These issues were corrected quickly. Our claims processing standards are fairly high with accuracy being 97% and timeliness of 90% of clean claims processed within 30 days and 99.5% percent within 60 days.

(7) What is the level of your satisfaction with the reference subject's project management structures, processes, and personnel?

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Least Satisfied	2	3	4	5 Most Satisfied
				X

What, if any, comments do you have regarding the score selected above?

Amerigroup works well with our staff on implementations, identifies issues quickly, and resolves them. We are in contact with their leadership on a daily basis and they are very engaged.

REFERENCE QUESTIONNAIRE — Page 4

- (8) Considering the staff assigned by the reference subject to deliver the services described in response to question 3 above, how satisfied are you with the technical abilities, professionalism, and interpersonal skills of the individuals assigned?

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Least Satisfied	2	3	4	5 Most Satisfied
				X

What, if any, comments do you have regarding the score selected above?

We interact with their staff on a daily basis and they are very responsive and knowledgeable. They have especially been an asset in developing new programs in the behavioral health area and advising on management reforms in behavioral health and patient centered medical homes.

- (9) Would you contract again with the reference subject for the same or similar services?

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Disagree	2	3	4	5 Agree
				X

What, if any, comments do you have regarding the score selected above?

Within the last year we conducted a re-procurement that moved our program to statewide managed care organizations and Amerigroup was a successful incumbent bidder.

RE: Reference Letter for Amerigroup for Iowa's Request for Proposal for High Quality Healthcare Initiative (RFP #MED-16-009)

Dear Ms. Lindgren:

Please accept this letter of recommendation regarding Amerigroup, which is submitting a proposal in response to the State of Iowa's Request for Proposal for High Quality Healthcare Initiative (RFP #MED-16-009).

Since 1995, the State of Virginia Department of Medical Assistance Services (DMAS) has worked with Amerigroup Iowa's affiliate company HealthKeepers Plus, Inc. to administer publicly funded programs providing physical health, behavioral health, vision, pharmacy, and non-emergency medical transportation for eligible (TANF, ABD, Foster Care, SSI) members. Under the Medallion 3.0 (Medicaid) and FAMIS (CHIP) Programs, Health Keepers successfully serves more than 260,000 Medicaid and CHIP members and is the only health plan that covers the entire state. The plan also participates in our Commonwealth Coordinated Care program (CMS Medicare and Medicaid dual eligible demonstration) and serves an additional 10,000 lives.

After two decades of partnership with Virginia Medicaid, HealthKeepers Plus continues to work collaboratively with the Department on behalf of Virginia Medicaid. HealthKeepers Plus has always been a strong partner and has helped DMAS move forward with initiatives that reformed and enhanced managed care delivery system with the goal of providing access to quality health care for Medicaid beneficiaries across Virginia. HealthKeepers Plus delivers strong access for our members through its very large and robust statewide provider network, through its leadership in payment innovation and pay-for-performance programs, and NCQA accreditation and state of the art operations. Finally, Amerigroup's, ability to leverage multi-state operational efficiency on Virginia's behalf and its long-standing support,

both financial and intellectual, of many Governor and Agency initiatives have provided Virginia's managed care programs sustainability and stability . We are pleased to recommend Amerigroup/Health Keepers.

Enclosed with this letter, I am including a Reference Questionnaire that provides additional insight on our opinion of Amerigroup's performance in Virginia. Please contact me if you would like to discuss our letter of recommendation and Amerigroup further. My contact information is below:

Cheryl J. Roberts, J.D., Deputy Director – Programs
Virginia Department of Medical Assistance Services
600 East Broad Street
Richmond, Virginia 23219
Phone: (804) 786-6147
Email: Cheryl.roberts@dmas.virginia.gov

Sincerely,

A handwritten signature in blue ink, appearing to read "Cheryl J. Roberts", is positioned above the typed name.

Cheryl J. Roberts, J.D.
Deputy Director – Programs

REFERENCE QUESTIONNAIRE**REFERENCE SUBJECT: HealthKeepers, Inc.***

Amerigroup Iowa, Inc. intends to submit a proposal to the Iowa Department of Human Services (DHS) in response to the Request for Proposals (RFP) for High Quality Healthcare Initiative (RFP #MED-16-009). This Questionnaire supplements the Reference Letter submitted on behalf of Amerigroup.

- (1) **Please provide the following information about the individual completing this reference questionnaire on behalf of Amerigroup.**

NAME:	Cheryl J. Roberts, J.D.
TITLE:	Deputy Director – Programs, Virginia Department Of Medical Assistance Services
TELEPHONE #	(804) 786-6147
E-MAIL ADDRESS:	Cheryl.roberts@dmas.virginia.gov
SIGNATURE:	

- (2) **What services does the reference subject provide to your organization?**

Anthem provides managed care services for eligible Virginia Medicaid members. These include traditional health care services, pharmacy, and traditional behavioral health care services.

- (3) **What is the level of your overall satisfaction with the reference subject as a vendor of the services described above?**

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Least Satisfied	2	3	4	5 Most Satisfied
				X

- (4) **If the reference subject is still providing services to your company or organization, are these services being provided in compliance with the terms of the contract, on time, and within budget? If not, please explain.**

Yes

*Referenced subject is an affiliate of Amerigroup Iowa, Inc. (Amerigroup) the bidding entity.

REFERENCE QUESTIONNAIRE — Page 2

(5) How satisfied are you with the reference subject's ability to perform based on your expectations and according to the contractual arrangements?

Anthem consistently meets and exceeds the Department's service expectations and consistently performs in accordance with contract requirements.

(6) In what areas of service delivery does /did the reference subject excel?

Anthem consistently excels in its responsiveness to the Department. Anthem is supportive to the mission and goals of the agency and offers support and advice where needed to assist the Department in meeting its goals and objectives.

(7) In what areas of service delivery does /did the reference subject fall short?

N/A

(8) What is the level of your satisfaction with the reference subject's project management structures, processes, and personnel?

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Least Satisfied	2	3	4	5 Most Satisfied
				X

What, if any, comments do you have regarding the score selected above?

REFERENCE QUESTIONNAIRE — Page 3

- (9) **Considering the staff assigned by the reference subject to deliver the services described in response to question 3 above, how satisfied are you with the technical abilities, professionalism, and interpersonal skills of the individuals assigned?**

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Least Satisfied	2	3	4	5 Most Satisfied
				X

What, if any, comments do you have regarding the score selected above?

Anthem's team consists of highly professional staff focused on delivering care in the most efficient manner in the most appropriate setting. Anthem's Virginia Medicaid team has strong technical and business skills which serve the program and members well.

- (10) **Would you contract again with the reference subject for the same or similar services?**

Please respond by inserting an X or checkmark in the box under the appropriate number on the scale below.

1 Disagree	2	3	4	5 Agree
				X

What, if any, comments do you have regarding the score selected above?

Member Choice and Agreement for Waiver Services

Members Name

Amerigroup ID

Member Waiver Eligibility: _____

I understand I qualify for long term care services, and that services essential to my health and welfare can be provided to me in my home or community based setting. I have been informed that I am functionally eligible to receive services and may opt to remain in the community and receive the services as designated in my AGP service plan. My signature below indicates I have been informed of this choice.

My choice is to: (check one)

- Receive Home and Community Based Services.
- Refuse the Recommended Services
- Enter a Nursing Facility or ICF/DD

I understand that upon my choosing to receive Home and Community Based Services I have:

1. Free choice of which provider(s) will provide my needed services offered through Amerigroup's network.

Responsibilities of the Member: (Member/Legal Representative/Personal Representative initial each statement once reviewed)

I, _____, and my Community-Based Case Manager or Integrated Health Home Care Coordinator have discussed the following:

1. The services offered to me under the waiver program are subject to approval
2. My PCSP includes HCBS waiver services I receive under the waiver program and any Amerigroup services I am eligible to receive.
 - a. Physical and Behavioral Health Services
 - b. Durable medical equipment and supplies
 - c. AGP Value Added Benefits
3. I understand:
 - a. That it is my choice to participate in the waiver program services and I have the right to discontinue services at any time.
 - b. That I must meet functional, program, and financial eligibility in order to qualify for services.

- c. That any change in my functional, program, or financial eligible could result in termination of my waiver program services.
- d. That failure to report a change in my financial eligibility is considered fraud and could be punishable by law.
- e. That I must complete an annual assessment in order to maintain eligibility for the program.
- f. That I may be eligible to self-direct some services. If I self-direct, I am responsible for hiring providers and will assume all the risks and liabilities associated with self-direction.
- g. That I will create or update my Emergency Back Up Plan, that outlines my emergency response and safety needs.
- h. That my Primary Care Provider's (PCP) role is as my medical home.
- i. That services will suspended if I am hospitalized or institutionalized.
- j. That patient liability (if applicable) may be imposed for the cost of services as identified in my Service Plan (Plan of Care).
- k. What my Community Based Case Manager for Amerigroup does and have received my Community Based Case Manager's business card with the Outreach Case Specialist phone number and extension.
- l. If applicable, what my Integrated Health Home Care Coordinator does and have received my Integrated Health Home Care Coordinator's contact information, phone number and extension.
- m. How to report Abuse, Neglect and Exploitation including the Abuse Hotline number **1-800-362-2178**

Employment Interest (Check box for not interested) Yes No

- 4. I have discussed my interested in integrated community based employment such as HCBS waiver programs (Brain Injury and ID waivers), Vocational Rehabilitation Services and Iowa's Ticket to Work program.
- 5. I understand I am responsible for actively seeking rehabilitative progress and independence. The program is designed to assist and support with the completion of daily tasks but does not replace consumer responsibility. Failure to show progress in rehabilitative or independent goals can result in termination of program services.

My next visit with my **Community Based Case Manager/ Integrated Health Home Care Coordinator** will be _____

We will review: _____

If at any time I need a new assessment, review of services and supports, I can contact Amerigroup or my Community Based Case Manager:

Community Based Case Manager (or if applicable Integrated Health Home Care Coordinator)

Name: _____

Telephone number: _____

I have participated in the development of my essential lifestyle plan and to ensure implementation a copy will be given to my providers. My signature represents acknowledgement and discussion of the waiver program and my responsibilities while receiving services on the waiver.

Should I need assistance with a conflict with any of my waiver providers, physician, Community Based Case Manager or Amerigroup, I can contact member outreach advocate at **800-600-4441** or my Community Based Case Manager (or if applicable my Integrated Health Home Care Coordinator).

My providers will receive a copy of my service plan to ensure communication of my plan and to ensure the implementation of my services and supports. My plan will be sent to my providers by my Community Based Case Manager (or if applicable my Integrated Health Home Care Coordinator).

Member: _____

Date: _____

Designated Representative (if applicable): _____

Date: _____

Guardian (if applicable): _____

Date: _____

If the Member, Guardian, or Designated Representative does not wish to sign the plan, the Community Based Case Manager (or if applicable my Integrated Health Home Care Coordinator) will note the reason given and sign here:

Reason: _____

Actions taken to resolve any disagreement about the plan:

Provider Name: _____ **Signature:** _____ **Date:** _____

Consumer Direction Self-Assessment

To be in Consumer Direction, you must be able to do all of these things OR, you must have someone who can do all of these things for you:

- Find, interview and hire workers to provide care for you
- Define workers' job duties
- Develop a job description for your workers
- Train workers to deliver your care based on your needs and preferences
- Set the schedule at which your workers will give your care
- Make sure your workers use the call-in system to log in and out at each visit
- Make sure your workers provide only as much care as you are approved to receive
- Make sure that no worker gives you more than 40 hours of care in a week (they can't work overtime)
- Supervise your workers
- Evaluate your workers' job performance
- Address problems or concerns with your workers' performance
- Fire a worker when needed
- Decide how much your workers will be paid (within limits set by the State)
- Review the time your workers report to be sure it's right
- Ensure there are good notes kept in your home about the care your workers provide
- Develop a back-up plan to address times that a scheduled worker doesn't show up (you can't decide to just go without services)
- Activate the back-up plan when needed

BEFORE completing this assessment, do you think you understand what Consumer Direction is and how it works? If not, please stop and ask questions before you begin.

Do you have a family member or friend that you want to help you with consumer direction?
 Yes No

If yes, who is that person? _____

How often is that person in your home? (Drop Down Box)

Where does the person live? (Drop Down Box)

If in another town in IA, where? _____

Do you think they'll be willing to do all of the things you must do to be in Consumer Direction? (You can review the list above.)
 Yes No

The questions below will help decide if you can do all of these things by yourself, or if you will need help to be in Consumer Direction.

Do you know people you can hire to provide care for you?

Yes No

If not, do you know how to find people you can hire to provide care for you?

Yes No

Do you understand that you will be your workers' employer-they will actually work for you?

Yes No

Can you define the kinds of help you need and the specific tasks you want your workers to do for you?

Yes No

Can you put together a job description for your workers?

Yes No

Can you train your workers on how to give the care you need?

Yes No

Can you set a schedule for when you need your workers to provide your care?

Yes No

Can you make sure your workers stick to that schedule and provide only the hours of care you are approved to receive?

Yes No

Can you make sure your workers use the call-in system to log in and out at each visit?

Yes No

Can you make sure that no worker gives you more than 40 hours of care in a week (that they don't work overtime)?

Yes No

To direct your own care, you must be able to supervise your workers. This includes making sure your workers:

- show up on time
- stay for the amount of time they are scheduled to be there
- do the specific tasks they are supposed to do
- AND do a good job

Can you supervise your worker(s) and make sure they do all of those things?

Yes No

If you aren't happy with the care a worker gives you, will you be able to tell them why and what they must do to improve?

Yes No

Will you be able to fire a worker if you need to?

Yes No

Can you decide how much your worker(s) should be paid (within limits set by the State)?

Yes No

Can you review the time your workers report, make sure they actually worked the hours it says, and sign off so they can be paid?

Yes No

Can you make sure your workers write good notes about the care they give you, like the specific tasks they do for you each time they come, and keep it in your home?

Yes No

It is important to make sure you receive the care you need, so you must have a backup plan. Do you have family, friends, neighbors, or others that will come over to help you if a scheduled worker doesn't show up?

Yes No

Can you count on them to help you whenever you need them?

Yes No

If you qualify and choose Consumer Direction, you will receive training and support from Public Partnerships, LLC and a Supports Broker. Your Supports Broker can help you with some of the things you must do in Consumer Direction. Check the box below for each task that you will need help with:

- Finding workers
- Interviewing and hiring workers
- Defining what workers will do—the tasks they will perform
- Putting together a job description
- Training workers
- Scheduling workers
- Deciding what to pay workers
- Reviewing workers' reported time
- Making sure workers keep in the home good notes about care they give
- Putting together a back-up plan

Home- and Community-Based Services Consumer Choices Option Informed Consent and Risk Agreement

I, _____, choose to participate in the Consumer Choices Option.
Consumer

I understand that my participation in the Consumer Choices Option is completely voluntary. If I decide that the Consumer Choices Option is not right for me, I understand that I may withdraw from the Consumer Choices Option and receive the services for which I am eligible for under the traditional home- and community-based waiver services. I will not be penalized in any way. I will not lose any benefits to which I am entitled and I will not have to be placed on a waiting list.

(Initial to show you have read and understood the above information.)

I will receive a monthly budget in the amount \$_____ to buy services and make other purchases related to my long-term care needs. I understand that I will choose personal care services, community and employment supports and services, and other goods and services that will best meet my needs and are cost effective. I understand that there is an approved list of services and supports that I may purchase from and if I choose a service or support not on the approved list, I will have to seek approval from Amerigroup before purchasing. I understand that I will choose who provides my services, they do not need to be a Medicaid provider, and I will be the employer of record for employees I hire. I understand that by hiring my own employees I accept the risk associated with being an employer. I understand that I will be required to work with an independent support broker of my choosing. I will develop an individual budget with my independent support broker.

I understand that I will also be required to work with a Financial Management Services provider that will be responsible for issuing payment to my employees and for my purchases from my individual budget funds. I understand that if I overspend my budget and no longer have funds in my Individual budget, I am personally responsible to pay my employees and to pay for my purchases. I understand that I am legally required to pay employer-related taxes for the employees I hire. My individual budget must be used to pay for the employer-related taxes. My individual budget must be used to pay for the Financial Management Services fees and the independent support broker's fees. The Financial Management Services will pay for the employer-related taxes, the Financial Management Service fees and independent support broker fees from my individual budget on my behalf.

I will get help from my independent support broker in making sure the budget is being used correctly. I understand that if I misuse my individual budget, I may be transferred back to the traditional home- and community-based Medicaid services for which I am eligible. I understand that I cannot purchase room and board, childcare, and personal entertainment items with my budget.

(Initial to show you have read and understood the above information.)

I understand that I will be responsible for signing all my employees' time cards and by doing so I am verifying that my employees did work the hours claimed on the time card to provide services for me. I understand that signing an employee time card which contains false information about hours worked, may make me a party to Medicaid fraud and legal action could occur.

(Initial to show you have read and understood the above information.)

I have read and understood this consent form. I understand that I get to keep a copy of this consent form.

Join **Real Solutions**[®]
Healthy Rewards and
start earning!

¡Únase a **Real Solutions**[®]
Healthy Rewards y
comience a ganar!

Now you can earn \$10, \$15 or \$25 just for doing things that are good for your health.

It's simple.

All you have to do is to enroll. Then, you'll get dollars credited to your very own Healthy Rewards debit card every time you get certain health checkups or screenings, like:

- Well-child checkups
- Cancer screenings
- Diabetic exams
- Prenatal care

You can use your card to buy a variety of home and wellness items, such as:

- Baby and children's care
- Over-The-Counter (OTC) medicines
- Nutritional foods

You can use the card to buy items at **Family Dollar and Dollar General.**

You could be earning rewards right now.

Sign up today! Call 1-877-868-2004 (TTY 1-800-855-2880) or visit myamerigroup.com/HealthyRewards to enroll.

Ahora puede ganar \$10, \$15 o \$25 solo por hacer cosas que sean buenas para su salud.

Es simple.

Todo lo que debe hacer es inscribirse. Luego, recibirá dinero acreditado a su propia tarjeta de débito de Healthy Rewards cada vez que se hace ciertos chequeos o exámenes médicos, como:

- Chequeos de niño sano
- Exámenes de detección de cáncer
- Exámenes diabéticos
- Cuidado prenatal

Puede usar su tarjeta para comprar una variedad de artículos para el hogar y de bienestar, tales como:

- Cuidado de bebés y niños
- Medicamentos de venta libre (OTC)
- Alimentos nutricionales

Puede usar la tarjeta para comprar artículos en Family Dollar y Dollar General.

Usted podría estar ganando premios en este momento.

¡Inscríbese hoy mismo! Llame al 1-877-868-2004 (TTY 1-800-855-2884) o visite myamerigroup.com/HealthyRewards para inscribirse.

www.nursefamilypartnership.org

© Copyright 2010 Nurse-Family Partnership. All rights reserved.

What is Nurse-Family Partnership?

Nurse-Family Partnership is a program for women who are having their first baby. If you enroll, a registered nurse will visit you in your home throughout pregnancy and continue to visit until your baby is 2 years old.

How much does the program cost?

Nurse-Family Partnership is FREE to all eligible women.

How often will my nurse visit?

Your nurse will visit every week or two during your pregnancy and up until your baby is 2 years old. You and your nurse will decide the exact schedule.

“My nurse gave me the extra bit of confidence to acknowledge that continuing school would be beneficial to me.”

- Gabriela, 18 year-old mom

My nurse will help me:

- Have a healthy pregnancy and a healthy baby.
- Become a better parent.
- Build a strong network of support for me and my baby.
- Make my home a safe place for my baby to live and play.
- Get referrals for healthcare, childcare, job training and other support services available in my community.
- Find ways to continue my education and develop job skills.
- Set goals for my family’s future and find ways to help me reach them.

Can my baby’s father participate, too?

- Nurse-Family Partnership encourages fathers, family members and even friends to be involved in the visits and learn how they can best support you.
- You and your nurse decide who gets involved.
- Because you are the one who carries the baby and you are the first person to take care of your baby, you are the one who is actually enrolled in the program and you are the main focus of the nurse.

Who can enroll in the program?

Any woman who:

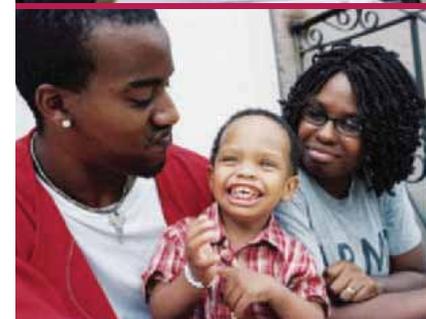

- Is pregnant with her first child.
- Meets income requirements.
- Lives in the service area.

You are encouraged to enroll as early as possible in your pregnancy.

“What really made the difference for me, was that my nurse didn’t tell me to do something—she showed me how to do it the right way.”

- Rebecca, 17 year-old mom

\$30 gift for a prenatal checkup
Un regalo de \$30 por hacerse el chequeo prenatal

*Taking Care of Baby and Me®
(Cuidando a mi bebé y cuidándome)*

www.myamerigroup.com/GA

HP-C-1129-13 01.14

Your baby grows fast. That's why it's important to go for a prenatal visit within the first 30 days of joining Amerigroup Community Care. Prenatal care is the health care you receive during pregnancy. Seeing your doctor as soon as possible for your prenatal checkups can help you have a healthy baby.

Go within 30 days, get a \$30 gift card

We will send you a \$30 gift card for your efforts to begin prenatal care. Go to your doctor for your first prenatal visit as an Amerigroup member within 30 days of enrollment. Just take this card with you, fill out the member section and have your doctor's office sign it. Seal the postcard and mail it to us. We even pay the postage!

Need help with transportation or making an appointment?

Call Member Services at **1-800-600-4441**.

If you are deaf or hard of hearing, call the toll-free AT&T Relay Service at **1-800-855-2880**.

Su bebé crece muy rápido. Por eso que es importante que usted acuda a una consulta prenatal en los primeros 30 días de hacerse miembro de Amerigroup Community Care. La atención prenatal es la atención médica que usted recibe durante el embarazo. Acudir a consulta con su doctor tan pronto como sea posible para sus chequeos prenatales puede ayudarle a que su bebé nazca sano.

Acuda a su doctor en los próximos 30 días y recibirá una tarjeta de regalo de \$30

Le enviaremos una tarjeta de regalo de \$30 por su iniciativa de comenzar la atención prenatal. Vaya a su doctor para su primera consulta prenatal como miembro de Amerigroup en los primeros 30 días de su inscripción. Simplemente lleve esta tarjeta a su doctor, complete la sección del miembro y pida en el consultorio que firmen la tarjeta. Selle la postal y envíenosla por correo. ¡Nosotros pagamos el franqueo!

¿Necesita ayuda con el transporte o para hacer una cita?

Llame a Servicios al Miembro al **1-800-600-4441**.

Si es sordo o tiene problemas de audición, llame gratis al servicio de retransmisión de AT&T al **1-800-855-2884**.

Taking Care of Baby and Me® ■ *Cuidando a Mi Bebé y Cuidándome*®

Best wishes on the birth of your baby! Amerigroup Community Care can help you get the care you need. We also want to help you get the care your baby needs for a healthy start.

Checkup Time for the Two of You

Your body goes through many changes after giving birth. This is the best time to see your doctor for a postpartum checkup. When you go for your postpartum checkup, you will get a special gift. See the attached postcard for details.

Your baby also needs to see his or her doctor. Regular checkups and immunizations, or shots, will help keep your baby healthy.

Easy to Find, Quick Answers

New mothers sometimes wonder:

- Is my baby getting enough to eat?
- When should I call my baby's doctor?
- How can I comfort my crying baby?

You can find answers to these questions and other questions in your copy of *Caring for Your Newborn*.

Talk to a Nurse, Day or Night!

Having a new baby can be stressful. It is normal to feel tired or unsure. Or you may have questions or concerns after the baby is born. If so, you can call our 24-hour Nurse HelpLine at **1-800-600-4441**. Day or night, our nurses can assist you.

Call Your Doctor Today

Call your doctor for a postpartum checkup today. Your baby also needs a checkup. Call your baby's doctor to schedule a visit, too.

¡Felicitaciones!

Taking Care of Baby and Me® ■ *Cuidando a Mi Bebé y Cuidándome*®

Los mejores deseos por el nacimiento de su bebé. Amerigroup Community Care puede ayudarla a obtener la atención que usted necesita. También queremos ayudarla a obtener la atención que su bebé necesita para comenzar su vida en forma saludable.

Es hora de chequeos para los dos.

El cuerpo pasa por muchos cambios después del parto. Este es el mejor momento para consultar a su médico y realizarse un chequeo postparto. Cuando asista a su chequeo postparto, recibirá un obsequio especial. Para obtener más detalles, consulte la tarjeta adjunta.

También debe llevar a su bebé al médico. Los chequeos y las inmunizaciones o vacunas regulares ayudarán a que su bebé se mantenga sano.

Respuestas rápidas y fáciles de encontrar

Las madres recientes a veces se preguntan:

- ¿Está mi bebé comiendo lo suficiente?
- ¿Cuándo debo llamar al médico de mi bebé?
- ¿Cómo puedo consolar a mi bebé cuando está llorando?

Puede encontrar las respuestas a estas y otras preguntas en su copia de *Cuidar de su recién nacido (Caring for Your Newborn)*.

Hable con un integrante del personal de enfermería, de día o de noche.

Tener un nuevo bebé puede ser estresante. Es normal sentir cansancio o inseguridad. O bien, es posible que tenga preguntas o inquietudes después de que nazca el bebé. Si es así, puede llamar a nuestra Línea de Ayuda de Enfermería de 24 horas al **1-800-600-4441**. De día o de noche, nuestro personal de enfermería puede ayudarla.

Llame hoy a su médico

Llame hoy a su médico para realizarse un chequeo postparto. Su bebé también necesita un chequeo. También comuníquese con el médico de su bebé para hacer una cita.

Si desea una copia de *Cuidar de su recién nacido (Caring for Your Newborn)* en español, llame a Servicios al Miembro.

Health Tips That Make Health Happen

WHAT IS DIABETES?

LIVING WITH DIABETES IS A LEARNING PROCESS. EVEN IF SOME CHANGES ARE NEEDED, MOST PEOPLE WITH DIABETES STILL LEAD A NORMAL, ACTIVE LIFE.

What Is Diabetes?

Diabetes occurs when your body cannot make enough of a hormone called insulin or cannot use insulin properly.

Our bodies turn most of what we eat and drink into a type of sugar called glucose. Glucose travels through the bloodstream.

Insulin helps turn glucose into energy. If you have diabetes, that process does not work right. Glucose builds up in the blood and passes out of the body in the urine. Your body does not get the fuel it needs.

Words to Know

Glucose: A simple sugar used by the body as its main source of energy

Hyperglycemia: High blood sugar level

Hypoglycemia: Low blood sugar level

Insulin: A hormone that helps the body turn glucose into energy

What Are the Main Types of Diabetes?

Check the type you have:

- Type 1 diabetes** – This is a less common form of diabetes. With this type, the body does not produce insulin.
- Type 2 diabetes** – Around 95 percent of people with diabetes have type 2. The body develops insulin resistance and can't properly use insulin.

What Can I Do?

Be sure to see your doctor often. He or she will help you make a plan for controlling your diabetes. The more you

know about diabetes, the better you will be at living with it.

Here are a few questions you may want to ask your doctor:

- What is my blood sugar level, and how do I keep it under control?
- What should I do if my blood sugar level is too high or low?
- What tests do I need?
 - Eye exam each year
 - Hemoglobin test each year
 - LDL screening each year
 - Kidney function each year

Write down other questions here:

1. _____

2. _____

Tips for Living with Diabetes:

- Take medication
- Check blood sugar levels regularly
- Eat 3 meals a day, 4 or 5 hours apart
- Plan meals and snacks
- Avoid high-sugar foods and drinks
- Become more active

Consejos Para Mantener La Buena Salud

¿QUÉ ES LA DIABETES?

VIVIR CON DIABETES ES UN PROCESO DE APRENDIZAJE. AUNQUE SON NECESARIOS ALGUNOS CAMBIOS, LA MAYORÍA DE LAS PERSONAS CON DIABETES LLEVA UNA VIDA ACTIVA Y NORMAL.

¿Qué es la diabetes?

La diabetes se produce cuando el cuerpo no puede producir cantidad suficiente de una hormona llamada insulina, o bien no puede utilizarla en forma adecuada.

Nuestros cuerpos transforman la mayoría de lo que comemos y bebemos en un tipo de azúcar llamado glucosa. La glucosa viaja a través del torrente sanguíneo.

La insulina ayuda a transformar la glucosa en energía. Si tiene diabetes, ese proceso no funciona correctamente. La glucosa se acumula en la sangre y se elimina del cuerpo a través de la orina. Su cuerpo no obtiene la energía que necesita.

Palabras para tener en cuenta

Glucosa: Un monosacárido utilizado por el cuerpo como su principal fuente de energía.

Hiper glucemia: Nivel de glucemia elevado

Hipoglucemia: Nivel de glucemia bajo.

Insulina: Una hormona que permite que el cuerpo convierta la glucosa en energía.

¿Cuáles son los principales tipos de diabetes?

Marque el tipo de diabetes que usted tiene:

- Diabetes tipo 1:** Este es un tipo de diabetes menos frecuente. Con este tipo de diabetes, el cuerpo no produce insulina.
- Diabetes tipo 2:** Alrededor del 95 % de las personas con diabetes tienen el tipo 2. El cuerpo desarrolla resistencia a la insulina y no puede utilizar la insulina adecuadamente.

¿Qué puedo hacer?

Asegúrese de consultar a su médico con frecuencia. Él o ella le ayudarán a elaborar un plan para controlar su diabetes.

Cuanto más sepa acerca de la diabetes, mejor se sentirá al vivir con ella.

Estas son algunas preguntas que puede hacerle a su médico:

- ¿Qué es el nivel de glucemia y cómo puedo mantenerlo bajo control?
- ¿Qué debo hacer si mi nivel de glucemia es demasiado elevado o bajo?
- ¿Qué pruebas necesito?
 - Examen de la vista cada año
 - Análisis de hemoglobina cada año
 - Análisis de LDL cada año
 - Prueba de la función renal cada año

Escriba otras preguntas aquí:

1. _____

2. _____

Consejos para vivir con diabetes:

- Tome los medicamentos
- Revítese los niveles de glucemia con regularidad
- Coma 3 comidas por día, cada 4 o 5 horas
- Planifique comidas y refrigerios
- Evite las comidas y bebidas con alto contenido de azúcar
- Sea más activo

I want to stop my substance use

Take this quiz to see what you know about stopping substance use.
Put a check in the box for true or false.
Then, check your answers on the back.

True or False Quiz – Stopping Substance Use	True	False
1. Addiction is a chronic or long-term disease.	<input type="checkbox"/>	<input type="checkbox"/>
2. Untreated mental illness puts me at risk for substance abuse.	<input type="checkbox"/>	<input type="checkbox"/>
3. Stopping my substance use suddenly or cold turkey is the best way to stop.	<input type="checkbox"/>	<input type="checkbox"/>
4. I want treatment for my substance use, but I have been told it will take six months.	<input type="checkbox"/>	<input type="checkbox"/>
5. I am addicted when I keep using despite negative effects on my health.	<input type="checkbox"/>	<input type="checkbox"/>
6. Families affected by substance use experience high levels of stress.	<input type="checkbox"/>	<input type="checkbox"/>

Thinking About Stopping Your Substance Use?

Learn more about it. Talk to your Primary Care Provider (PCP). Your PCP can help you find support or a treatment program in your area. If you need help finding a PCP, call Member Services at 1-800-600-4441 (TTY: 1-800-855-2880).

Other Resources

You can also contact the Alcohol and Drug Addiction Resource Center by calling 1-800-390-4056 or going online to www.addict-help.com.

Other resources include:

- Substance Abuse and Mental Health Services Administration (SAMSHA) — www.samhsa.gov
- The National Alliance on Mental Illness (NAMI) — www.nami.org

Amerigroup

Amerigroup is a culturally diverse company. We welcome all eligible individuals into our health care programs, regardless of health status. If you have questions or concerns, please call 1-800-600-4441 (TTY 1-800-855-2880) and ask for extension 34925. Or visit www.myamerigroup.com.

Answer Key – Stopping Substance Use

	True	False
1. Addiction is a chronic or long-term disease. True. According to the National Institute of Drug Abuse and Addiction (NIDA), drug addiction is a lot like other long-term illnesses such as diabetes. Therefore, long-term behavioral and lifestyle changes may be needed to avoid relapse.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Untreated mental illness puts me at risk for substance abuse. True. People with mental illnesses are twice as likely to also suffer from substance use. It is very important to treat substance use and mental illness together.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3. Stopping my substance use suddenly or cold turkey is the best way to stop. False. Stopping substance use suddenly may lead to withdrawal symptoms. Withdrawal from certain substances may be harmful. The safest way to stop is under a doctor's care.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
4. I want treatment for my substance use, but I have been told it will take six months. False. The goal of substance abuse treatment is to stop drug use and allow people to live productive and active lives. The amount of time needed for treatment varies per person. Treatment options may include counseling, support groups, and inpatient and outpatient treatment programs.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
5. I am addicted when I keep using despite negative effects on my health. True. There are many health problems that may be related to substance use such as heart disease, stroke, HIV, hepatitis and lung disease. Brain changes that occur with substance use can affect coordination and decision making.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6. Families affected by substance use experience high levels of stress. True. High levels of stress, domestic violence and intense family conflicts are more common in families with a substance user. Family therapy can often help the substance user and his or her family.	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Amerigroup Iowa, Inc.
Member Explanation of Benefits

October 1, 2015

Mary Jane Smith
123 Anywhere St.
Des Moines, IA 50301

Dear Member:

Thank you for choosing Amerigroup Iowa, Inc. as your health plan. We want you to be informed about your health care. This is an explanation of benefits (EOB). It lists services that your provider said he or she gave you for your health care. This is being set to you for one of the following reasons:

1. You need to pay for a part of the bill for the Skilled Nursing Facility and/or Home- and Community-Based services you received.
OR
2. We will not pay for one or more of the services that you received because it is not a covered benefit. In the chart on the next page, the service is listed under "Procedure Description." The reason we will not pay for it is listed under "Explanation Code."
OR
3. We would like to verify that you received these services.

What do you need to do next?

Look at the "What You Need to Pay" column	Then do this:
<p>Is it more than zero? If so, you will need to pay that amount for the Skilled Nursing Facility or Home- and Community-Based services you received.</p>	<p>Please mail your payment for the amount(s) in the "What You Need to Pay" column to:</p> <p>Amerigroup Iowa, Inc. P.O. Box 12345 Des Moines, IA</p>
<p>Is it zero or blank? Look at the amount in the "Provider Paid" column. Is that zero or blank too? If so, we will not pay for that service that you received because it is not a covered benefit.</p>	<p>Nothing. If your provider tells you that you have to pay for the service, please call us at 1-800-600-4441 (TTY: 711). Do not pay anything. If you do not agree with this decision, read the "Appeals" section below.</p>

<p>If neither of the above situations applies, we're sending you this to verify that you received the services that your provider billed.</p>	<p>Review the list of services and confirm that you did receive them on the date listed. If you did not, please call us immediately at 1-800-600-4441 (TTY: 711).</p>
---	---

Appeals

If you do not like the decisions we have made about what we will pay for, you can ask for an appeal. An appeal means you can ask to have this decision looked at again by another qualified medical professional. You must ask for an appeal within <30 calendar days> from when you get this letter. If you need help filing an appeal, call us toll free at 1-800-600-4441 (TTY 711). You may choose someone, including an attorney or provider, to represent you and act on your behalf. You must sign a consent form allowing this person to represent you. Amerigroup does not pay for any fees or payments to your representatives. That is your responsibility.

If you have any questions about this EOB or need it translated at no cost to you, please call Member Services toll free at 1-800-600-4441. If you are deaf or hard of hearing, call TTY 711.

Sincerely,
Amerigroup Iowa, Inc.

FRAUD, WASTE, AND ABUSE PLAN

FRAUD, WASTE AND ABUSE PLAN IMPLEMENTATION

The initial Special Investigations Unit (SIU) Fraud, Waste and Abuse Plan was implemented in 2004. The Fraud, Waste and Abuse Plan is considered a “living” document and the SIU will continue to evaluate, on an ongoing basis, the organizational, operational, training and staffing requirements to keep up with the current changes in the industry and ever changing fraud schemes. This re-evaluation will also allow the SIU to ensure that the operation conforms to the strictest statutory and contractual obligations.

When the Fraud, Waste and Abuse Plan is amended, the changes will be reflected in the written plan and notification will be issued to appropriate regulatory authorities when requested or on the appropriate submission schedule. If contractual requirements dictate notification more frequently than an annual basis, such will be noted in the state’s addendum to this plan.

SIU shall maintain up-to-date and accurate records on their fraud, waste and abuse plan, which shall at minimum, include those necessary to prepare the reports as required in each contract as detailed in the addendum.

DRAFT

Executive Summary

Amerigroup has been compliant with HIPAA Privacy and Security since the CMS required dates in 2003 and 2005 respectively. Additionally, we have been Transactions and Code Sets compliance since the CMS required date in 2002. We take compliance seriously and have it baked into what we do and how we do it; it's a company-wide focus. We have policies and procedures guiding the compliance of our operations, systems and our day-to-day practices, including our engagements with business associates and trading partners. We maintain compliance as additional rules and directives come out, including becoming 5010 compliant as mandated on January 1, 2012 and having a company-wide program in place for ICD-10 compliance effective October 1, 2015. Because we have a fully functioning internal Information Systems (IS) department, we have the knowledge and flexibility necessary to maintain compliance with the regulations as well as flexing with our state partners when they drive variations in the rule, such as the period of non-enforcement for 5010.

Updates to Systems

This section guides the planning, developing, testing and implementing new operating rules, new or updated versions of electronic transaction standards, and new or updated national standard code sets.

System updates, including those related to compliance activities, follow our change management and compliance policies and procedures, including:

[Change Management Standard](#)

[Electronic Data Management](#)

[System Development Life Cycle Standard](#)

[Electronic Transaction Standards](#)

[Code Sets](#)

Transactions and Code Sets Versions

This section covers concurrent use of multiple versions of electronic transaction standards and codes sets.

As governed by our policies and procedures, we maintain our systems to utilize compliant transactions and code sets. We have the ability to meet compliance rules requiring hard cut over or dual use. We enforce transaction compliance through our compliance checker and have the ability to configure this to

transaction standards universally or by market. This flexibility allows us to manage periods of dual use such as the one that resulted from CMS's period of non-enforcement for 5010 and to do so in keeping with our state partner decisions around strict enforcement or allowing the grace period.

Our code set tables include effective begin and end dates on each code. This allows us to maintain a historical perspective of our code sets and allows us to reference what was active when. It also allows us to enforce code set changes with a hard cut over date or with overlapping dates. Additionally, within the compliance editing of our transactions, we are able to apply market specific controls for which code sets to accept.

Trading Partners

This section covers the registration and certification of new and existing trading partners.

Our trading partners are primarily in two groups: providers submitting claims and subcontractors performing contracted functions.

Amerigroup has contract relationships with four national clearinghouses. Providers submitting through these clearinghouses by way of their own clearinghouse or direct relationship would follow their registration processes. Amerigroup also supports direct submission of claims by providers through Availity. Providers using the direct submission through Availity to submit to Amerigroup will follow Availity's trading partner registration and certification processes.

Subcontractors are managed through their contracted relationship and specific interfaces, including only the unique data related to their contract, will be developed and tested between Amerigroup and the trading partners. We utilize the HIPAA standard x12 transactions (834, 837, 835, etc.) where relevant with subcontractors. Where we are exchanging data not covered by a transaction standard, such as provider data, we exchange a mutually agreed upon proprietary format.

Companion Guides

This section guides the creation, maintenance and distribution of transaction companion guides for trading partners.

Where possible we do not publish unique companion guides or details beyond the TR3s; however, where there are state specific nuances to be conveyed to our trading partners, our EDI Support Team creates and maintains the Amerigroup companion guides. Distribution of our guides is managed at the point of service through our multi-payer Availity portal and our EFT service provider for providers

seeking our claims and remittance advice guides respectively. For vendors, or other non-provider trading partners, our EDI Support Team provides the guides directly

EDI Support Team

This section details the staffing plan for electronic data interchange (EDI) help desk to monitor data exchange activities, coordinate corrective actions for failed records or transactions, and support trading partners and business associates.

Our EDI Support Team staffs an EDI help desk, or EDI hotline. The EDI help desk is available through the 800 number published in our Provider Manual and on our Provider Portal and is available 8a to 8p ET Monday through Friday. The team is available to assist providers with questions around claims rejections and is staffed to meet a response turnaround time service level agreement (SLA) of 2 days. In addition to responding to incoming issues, the team proactively monitors reject rates and reasons and reaches out to providers to identify and assist with recurring issues.

HIPAA Privacy and Security Compliance

This section guides compliance with all aspects of HIPAA Privacy and Security rules.

Compliance with HIPAA Privacy and Security is baked into what we do and how we do it and we have been compliant since the initial compliance dates for each. We hold annual compliance training for all associates. Our systems and processes are built and maintained to help us stay compliant. We have extensive policies and procedures guiding our operations and compliance and make these available to all associates through the following links:

[Corporate Privacy](#)

[Medicaid Business Unit \(MBU\) Compliance Policy and Procedure](#)

[Information Security](#)

HIPAA Related Mandates

This section identifies the strategies for maintaining up-to-date knowledge of HIPAA related mandates with defined or expected future compliance deadlines.

Our Public Policy department is the team responsible analyzing proposed legislation and regulations, developing the company's positions on public policy and managing issues. This team ensures company

alignment with the policies by facilitating the timely flow of key information between the Government Affairs, business units and shared service areas. For major issues impacting multiple areas of the company, the team utilizes its Public Policy Steering Committee and for less significant issues impacting primarily one area of the company, the team partners with subject-matter experts.

In addition to the efforts of our Public Policy department, individuals throughout the organization take steps to maintain up-to-date knowledge of HIPAA related mandates. These efforts include participating in workgroups, organizations, and conferences in addition to reviewing materials, legislation, etc.

DRAFT

For issues rising to the level of a disaster, we have detailed Business Continuity and Disaster Recovery Plans. These system problem resolution and escalation procedures provide guidance on how to handle those issues not rising to the level of a disaster.

System Problem Resolution Plan

Overall we maintain a stable, reliable systems environment with proactive monitoring for performance. Occasionally we experience an issue to our core systems which could impact members and/or providers. When such events occur our Information Systems (IS) Client Account Manager (CAM) leadership is notified, along with the impacted business area(s) and technical team(s). The CAMs are aligned with the states in which we do business along with their counterparts in our Regulatory Compliance Department. The CAM team monitors the issue and coordinates required state updates, along with Regulatory, according to state direction and timing. Notification of our state partners includes informing of the issue, identifying impact to operations, plans for resolution, and time for resolution along with interim workarounds.

Escalation Procedures

- Technical helpdesk (combination of monitoring teams throughout IS) identifies network hardware or software failure or sub-standard performance
- Technical helpdesk notifies IS management team
- IS management team notifies IS CAM leadership and business leadership
- IS CAM informs Regulatory
- IS CAM and Regulatory prepare state notification
- IS CAM monitors impact, resolution, workaround, etc. and keeps Regulatory informed
- IS CAM and Regulatory keep state informed and maintain responsibility for related state deliverables

AMERIGROUP CORPORATION		DEPARTMENT PROCEDURE
Subject: Encounters Management – Inbound File Process Flow		
Primary Department: Premium Integrity & Encounters Management	Secondary Department(s): IT, Health Plan Executives	Prior Procedure Reference(s): N/A
Effective Date of Procedure: 01/01/2008	Date Procedure Last Reviewed: 05/03/2010	Date Procedure Last Revised: 05/03/2010
Plan CEO Approval/Signature:	Corporate Dept Sr Mgmt Approval/Signature:	Check Only One: Procedure is Corporate Owned <input type="checkbox"/> Procedure is Health Plan Owned <input type="checkbox"/>
Check All That Apply: Procedure is applicable to: Corporate <input type="checkbox"/> All Health Plans <input type="checkbox"/> Only the following Health Plans (please list): _____ (Note: If there are multiple Health Plans within a state, please list each specific Health Plan directly above, as appropriate)		

Purpose

The inbound file process flow addresses the procedural steps necessary to accept an inbound encounters file. Inbound encounters files will be sent to AMERIGROUP to provide verification of accepted encounters records, or to identify those encounters records rejected by the state/federal partner, or their respective agent(s). The purpose of this procedure is to ensure consistency across the organization regarding acceptance of inbound encounters files.

Definitions

Encounter – Any level of health care data required by our state/federal partners or their agents.

Inbound File – Encounter files transmitted to AMERIGROUP from our state/federal partners or their agents; typically reflect a receipt of accepted encounters and an accounting of those encounters which have been rejected.

Federal Entity – Typically CMS, or the Centers for Medicare and Medicaid Services.

State Entity – The state government agency with whom we contract.

Agent – the party with whom either the state or federal agency contracts to undertake encounters management tasks on their behalf.

Procedures

- 1) See chart on next page to determine who initiates receipt of inbound file and who notifies the Application Analyst that they need to post the file to the Encounters Management System (differs by Market).
- 2) Encounters Business Analyst (ENBA) reviews rejected encounters, determines cause
- 3) ENBA works with functional area within organization to resolve issue (e.g. – Provider Data Management, Claims, Enrollment)
- 4) Once encounters issue resolved, encounters are channeled through encounters management system as resubmissions
- 5) Follow Outbound Encounters process flow

AMERIGROUP CORPORATION		DEPARTMENT PROCEDURE
Subject: Encounters Management – Outbound File Process Flow		
Primary Department: Premium Integrity & Encounters Management	Secondary Department(s): IT, Health Plan Executives	Prior Procedure Reference(s): N/A
Effective Date of Procedure: 01/01/2008	Date Procedure Last Reviewed: 05/03/2010	Date Procedure Last Revised: 05/03/2010
Plan CEO Approval/Signature:	Corporate Dept Sr Mgmt Approval/Signature:	Check Only One: Procedure is Corporate Owned <input checked="" type="checkbox"/> Procedure is Health Plan Owned <input type="checkbox"/>
Check All That Apply: Procedure is applicable to: Corporate <input checked="" type="checkbox"/> All Health Plans <input type="checkbox"/> Only the following Health Plans (please list): _____ (Note: If there are multiple Health Plans within a state, please list each specific Health Plan directly above, as appropriate)		

Purpose

The outbound file process flow addresses the procedural steps necessary to create, validate and transmit an outbound encounters file. The purpose of this procedure is to ensure consistency across the organization regarding execution of outbound encounters files.

Definitions

Encounter – Any level of health care data required by our state/federal partners or their agents.

Outbound File – Encounter files transmitted to our state/federal partners or their agents. Attestation Reports are attestations which are approved by the Health Plan Executive, attesting to the accuracy and completeness of the encounters data to which they refer. The Attestation Report will vary by the entity requesting the information; however, the report will typically contain control totals of both record counts and dollar amounts, along with the timeframe represented by the file.

Batch Certification Report – Certifies that the data in MDE are accounted for, for any given batch. Provides an accounting of the data in the MDE database for a given batch (starting point), which reconciles to the sum of pended claims, claims excluded from submission and the final submitted batch.

Batch Reconciliation Report – reports that confirm that all source data for the batch (i.e.: FACETS, vendor tables, etc.) was successfully transmitted to the MDE database.

Federal Entity – Typically CMS, or the Centers for Medicare and Medicaid Services.

State Entity – The state government agency with whom we contract.

Agent – the party with whom either the state or federal agency contracts to undertake encounters management tasks on their behalf.

Procedures

- 1) Encounters Management Staff initiates outbound file - Encounters Business Analyst (ENBA) works with IT tech staff to initiate
- 2) ENBA runs file through editing software
 - a) If edits are within acceptable levels, move to step 3)
 - b) If edits exceed acceptable levels, ENBA engages IT tech staff for troubleshooting, re-execution. Escalate to developers, as needed.
- 3) Batch Certification and Batch Reconciliation reports created through encounters management tool
- 4) ENBA validates encounters against source system totals.
 - a) If totals match source system numbers, move to step 4)
 - b) If totals do not match source system numbers, ENBA engages tech staff for troubleshooting, re-execution. Escalate to developers, as needed.

- 5) Attestation report filled out by ENBA
- 6) ENBA forwards Batch Certification and Attestation reports to Health Plan Executive for approval, where required
 - a) If HP Exec approves, move to step 7)
 - b) If HP Exec does not approve, undertake additional discussion and research, up to re-initiating process from step 1)
- 7) Final file preparation prior to transmission, notification of file posting and actual file posting varies by market. The table below outlines responsibilities, by title/area, for each market.

<u>Plan</u>	<u>Final File Prep</u>	<u>Notification Sent By:*</u>	<u>Files Posted to State By:</u>

The purpose of the annual QM work plan is to outline measurable activities for the year. The scope of the QM work plan is based upon the goals and objectives outlined in the Quality Improvement Program Evaluation from the prior year.

The QI Work Plan is viewed as a dynamic document and is updated throughout the year to reflect progress on QI activities. Specific objectives for 2015 include:

Amerigroup Iowa 2015 Medicaid Quality Management Work Plan

Reason for Selection	NCOA req.	Topic	Objective	Activity	Goal / Benchmark	Start Date	Date Due	Q1
Accreditation Contract		Accreditation Updates	Ensure health plan readiness for exchanges and health care reform	Monitor and evaluate the progress towards state and regional accreditation and annual updates with new standards			Ongoing monthly, as needed, and annual	
Contract		External Quality Review Organization (EQRO) Audit	Ensure all activities related to the EQRO for QI are complete	Provide all requested reports, policies and documents requested by the EQRO			Annual	
Annual training		QI Operations	Ongoing training is essential for QI accountability	Annual staff training on: QI initiatives, Accreditation standards, Regional process/policies and procedures, guidelines and requirements			Ongoing	
Contract		Medical Record Standards	To evaluate practitioner documentation of member medical records	Annually review charts using the approved Medical Record Review tool, Ensure that Provider medical records are well maintained and adequate documentation. Implement corrective action when areas of non-compliance are identified, Publish Medical Record Standards annually via newsletter, as well as by implementing other educational tools as needed				
Accreditation	Website	Member and provider communication	Making information available to members and providers	Quality and content review of member and provider website content/updates, QI staff maintains grid of all required member/ provider communication that must be posted to websites, At least annual review of websites to ensure accuracy, Work with communications and other departments as needed to maintain compliance			Annual and Ongoing	
RFP		QI Operations	Medicaid expansion and RFP Support	QI will have responsibilities for expansion of Medicaid - Provide RFP and implementation support		As needed	As requested and needed	
Accreditation Contract	QI	Regional Policy Review	Complete full review with revisions as needed for policies	Annual review of all QI policies			Annual	
Accreditation Contract	QI 1	Program Description	Define the quality structure and processes	Annual review and approval of QI and UM program descriptions			Annual	
Accreditation Contract	QI 1 A	Program Description	Define the quality structure and processes	Annual review by plan and Corporate Quality Improvement Committee -describe the strategy, scope and frame work for all quality initiatives			Annual	
Accreditation Contract	QI 1 A	Annual Work Plan	Quarterly review of accomplished versus planned activities on Work Plan.	The work plan is a dynamic document that reflects ongoing progress on QI activities throughout the year and addresses: • Yearly planned QI activities and objectives for improving: - Quality of clinical care. - Safety of clinical care. - Quality of service. - Members' experience. • Time frame for each activity's completion. • Staff members responsible for each activity. • Monitoring of previously identified issues. • Evaluation of the QI program. All bulleted requirements must be met for factor 7 to be scored "yes." Annual review by plan and Corporate Quality Improvement Committee • Yearly planned QI activities and objectives for improving:			Quarterly	
Accreditation, Contract	QI 1 A	QI Operations Board of Director/Manager Reports	QI Accountability to the Governing Body	Quarterly summary review by QMC			Annual	
Accreditation Contract	QI 1 B and UM 1 D	Annual QI/UM Program Evaluation	Complete evaluation of all QI activities.	Annual review by plan and Corporate Quality Improvement Committee	Achieve measurable improvements in QI		Annual	
Medical Advisory Committee (MAC)		Oversight of Clinical Quality Activities	Assess levels and quality of care provided to members - evaluate and monitor minimum standards of care - oversight of clinical practice guidelines; - conduct peer review process;	Quarterly summary review by QMC			Quarterly	
Medical Operations Committee (MOC)		Oversight of UM/DM/CM Activities	Review and approve policy related to UM - Review and approve UM NCOA documents	Quarterly summary review by QMC			Quarterly	
Medical Policy Technology Advisory Committee (MPTAC)		Oversight of Clinical Practice Guidelines (CPG)s	Serves as the official medical/clinical policy approving body for the development of clinical standards.	Quarterly summary review by QMC			Quarterly	
Consumer Advisory Committee (CAC)		Member Advisory Activities	To provide a forum for members by guidance and recommendations to the plan regarding enrollment activities, plan documents, benefits, and quality activities.	Quarterly summary review by QMC			Quarterly	
Accreditation, Contract	QI 2 A	Plan Medical Advisory Committee	QI Committee and practitioners develop, implement and oversee the QI program	- Safety of clinical care.			Annual	
Accreditation	QI 2 B	QI Program	Inform members & practitioners of QI process	- Quality of service.			Annual	
Accreditation	QI 3 A-C	Contracts with practitioners	Provider and Specialist Contracts	- Members' experience.			Annual	
Accreditation Contract	QI 4 A	Availability of Practitioners	To ensure the network has sufficient numbers and types of practitioners who provide primary care, and specialty care that meets the cultural, linguistic, racial and ethnic needs of the membership.	- Time frame for each activity's completion.			Annual and Ongoing	
Accreditation Contract	QI 4 B	Geographical Availability of Health Plan Providers	Monitoring Geographical Availability of Health Plan Providers for Members 1. Distance in miles to PCP, Specialist, and OB/Gyn 2. Distance in miles to hospital 3. Ancillary provider access	- Staff members responsible for each activity.			Annual and Ongoing	
Accreditation Contract	QI 4 C	Practitioners providing Specialty Care	To ensure the availability of specialty care practitioners in its delivery system	- Monitoring of previously identified issues.	Networking contracting team		Annual and Ongoing	
Accreditation Contract	QI 4 D	Geo & access for BH practitioners	Ensure BH provider availability meets geographical and cultural linguistic requirements and identify opportunities of improvement, if needed.	- Evaluation of the QI program.	According to contract		Annual and Ongoing	
Accreditation Contract	QI 5 A	Customer Service Access:	Monitor statistics to ensure meeting established goal: Rate of telephone abandonment Rate of speed to answer phone Rate of response to member email inquiries	Collect and perform an annual analysis of data to measure performance against standards for access to: Regular and routine care appointments; Urgent care appointments; After-hours care; Member Services, by telephone	According to contract		Annual and Ongoing	
Accreditation Contract	QI 5 A	Provider Access	Monitor statistics to ensure meeting established goals Appointment Wait Times for: Preventive Care Apt Routine Apt Symptomatic Routine Apt Non-symptomatic Urgent apt - same day Emergency care After hours care	Monitor member access to set standards to ensure meeting established goals and identify opportunities of improvement, if needed. -Secret shopper calls, member satisfaction survey -Review annual CAHPS results -Monitor member complaint r/t access	According to contract		Annual	

Amerigroup Iowa 2015 Medicaid Quality Management Work Plan

Reason for Selection	NCQA req.	Topic	Objective	Activity	Goal / Benchmark	Start Date	Date Due	Q1
Accreditation Contract	QI 5 B-C	BH ACCESS	To ensure members have access to BH in accordance with standards.	Annual oversight of BH for compliance with appointment availability and telephone Access			Annual	
Accreditation Contract	QI 6 A RR 2 A	Grievance/ Complaint Analysis	Complaint trending and analysis to include a full complaints analysis for the 5 applicable categories (QOC, Billing and Financial, Access, Attitude and Service, Quality of Practitioner Site).	Complaints per 1000 members: Track by call reason and complaint category, Monitor trends and implement interventions for areas as identified, Complaint trending and analysis of top appeal reason and turn around time, provider complaints trending	100% meet timelines		Annual	
Accreditation Contract	QI 6 A RR 2 B	Appeals analysis	Appeal trending and analysis to include a full appeal analysis for the 5 applicable categories (QOC, Billing and Financial, Access, Attitude and Service, Quality of Practitioner Site). Appeals overturns tracking and trending	Appeals per 1000 members -Monitor trends and implement interventions for areas as identified. -Appeal trending and analysis of top appeal reason and turn around time. -Analysis of appeals Upheld, Overturn rate -provider appeals trending and tracking	100% meet Turn around times		Annual	
Accreditation Contract	QI 6 A	Member satisfaction - surveys, such as CAHPS Survey, Member understanding of Health Plan policies and complaints	Implement mechanisms to assess and improve member satisfaction	Monitor member satisfaction through DSS Research, report and analysis, implement interventions for areas not meeting goal.			Annual	
Accreditation Contract	QI 6 A Patient Safety	Patient Safety-Adverse Events and Quality of Care monitoring and trending	To identify potential trends of adverse events and act upon those identified	Investigate, track and analyze adverse events by adverse event type, provider and facility			Quarterly and Ongoing	
Accreditation Contract	QI 6 B	Opportunities for improvement for Member Satisfaction	To identify opportunities for improvement	Analyze CAHPS Survey and complaint and appeal data, identify areas of improvement, set priorities and decide which opportunities to pursue			Annual	
Accreditation	QI 6 C-D	Annual Assessment of Behavioral Healthcare and Services	To identify opportunities for improvement and act upon those identified.	Evaluate member complaints and appeals; member experience survey. Implement interventions for areas not meeting goal.			Annual	
Accreditation Contract	QI 7A	Population Analysis	Complex Case Management-The health plan's demographic profile is an important tool for selecting case management programs that are meaningful and applicable to health plan membership.	Identify demographic characteristics and high volume diagnoses to ensure appropriate CM programs are in place to serve the membership			Annual	
Accreditation	QI 7 B-E	Case Management Process	To ensure coordinated services for members with complex conditions and access needed resources	Participate in annual review of all CCM documents, participate in work groups when changes are needed to ensure NCQA compliance is met for: 1. CCM member identification; 2. Access to CM; 3. Support CM Systems & member integration; 4. Assessments			Annual and Ongoing	
Accreditation	QI 7 F-H	CCM FILE AUDIT	Appropriate assessment, ongoing case management, follow up and documentation of members enrolled into CCM.	Audit, at a minimum 10 files, for documentation and compliance.			Quarterly	
Accreditation Contract	QI 7 I	Member Experience with Case Management	Evaluate satisfaction with the CCM program	Evaluation and analysis of CCM satisfaction survey and analysis go through QMC to identify and act upon opportunities for improvement; Analysis of member complaints			Annual	
Accreditation	QI 7 J-K	Measuring the Effectiveness of CM Programs	Measure the effectiveness of CCM programs using three measures.	For each measure: Identify a relevant process or outcome, Use valid methods that provide quantitative results, Set performance goal, Identify measure specifications, Analyze results, Identify opportunities for improvement, Develop plan for intervention and remeasurement.			Annual	
Accreditation	QI 8 A	(2) Disease Management programs	Evaluate program to improve health status of members with chronic conditions	Identifies (2) DM programs that are relevant to the member population			Annual	
Accreditation Contract	QI 8A	Program Description	Define the quality structure and processes	Annual review and approval of DM program descriptions			Annual	
Accreditation	QI 8 B- C	Member Identification for DM programs	Identify sources to identify members who qualify for DM programs.	Claim or encounter data, Pharmacy data, Health appraisal results, Laboratory results, Data collected through the UM process, case management process, Data from health management, wellness or health coaching programs, information from EHRs, Member and practitioner referrals			Monthly	
Accreditation	QI 8 D	Member information on DM program	Provides member with written information about the DM program	Inform Members re: DM instructions on how to use DM services how the organization works with a practitioner's patients in the program			Annual	
Accreditation	QI 8 E	Interventions Based on Assessments	Provides members with interventions based on assessments	Provide interventions based on disease stratification and assessments			Ongoing	
Accreditation	QI 8 F	DM Active Participation Rate	Annually measure member active participation in the DM program	Measure the active member participation rate that have had at least one interactive contact in an intervention			Annual	
Accreditation	QI 8 G	Provider/Practitioner information on DM program	Provides Providers with written information about the DM program	Inform Providers re: DM instructions on how to use DM services how the organization works with a practitioner's patients in the program			Annual and Ongoing	
Accreditation	QI 8 H	Integrating Member Information	Integrate member information from various resources into the DM program	Ensure the following systems are capturing member information to for continuity of care for members in DM: Health Information Line, DM Program, CM Program, UM Program, Wellness Program			Annual	
Accreditation Contract	QI 8 I	DM Experience	Annually evaluates experience with it's DM services.	Evaluation and analysis of DM experience survey and analysis of member complaints go through QMC			Annual	
Accreditation	QI 8 J	Measuring the Effectiveness of DM Programs	Employ and track one performance measure for each DM program. (2 Programs)	Identify and act upon opportunities for improvement Pressure annual DM program summary which will: Address relevant outcomes, Produce quantitative results, Population based, Measure effectiveness of outcome data, Measure against benchmark or goal, Satisfaction, Active Participation, Opt Out Percentage, Identification, Compliance Monitoring			Annual	
Accreditation Contract	QI 9 A	Clinical guidelines	Adoption and Distribution of Clinical Practice Guidelines	Annual Review and approval of Clinical Practices Guidelines.			Annual	
Accreditation Contract	QI 9A	BH Clinical guidelines	Measure 2 important BH aspects of guideline annually. Annual distribution of guidelines to practitioners via newsletter, fax blast, website.	Annual distribution of guidelines to practitioners via newsletter, fax blast, website. Health Plan oversight			Annual	
Accreditation Contract	QI 9 B	Preventive Health Guidelines	Maintain up-to-date preventive health guidelines and promote those guidelines.	Establish the scientific basis for guidelines: Update guidelines at least every 2 years, Annual committee review and approval of guidelines, Annual distribution of guidelines, to members and providers			Annual	
Accreditation Contract	QI 9 C	CPG's Relation to DM Programs	Two of the organization's adopted clinical practice guidelines are the clinical basis for DM programs	DM Annual evaluation will define the annual review of evidence of how clinical guidelines are used to develop the organization's DM program.			Annual	
Accreditation Contract	QI 9 D	Clinical Guidelines Performance Measurement	Measures performance against at least two important aspects of clinical practice, behavioral health and preventive guidelines.	Address two specific aspects of care covered in the Clinical and Preventive Health guidelines Measure effectiveness of care against the aspects of care covered in the guidelines.			Annual	
Accreditation	QI 10 A-B	Continuity and Coordination of Medical Care.	Seamless, continuous and appropriate care for members among practitioners is key for quality care.	Identify and evaluate aspect of continuity of care across inpatient and outpatient settings. Identify and select 4 opportunities for improvement based on issues or sources of problems that were found in the analysis. Act on opportunities.			Annual	
Accreditation	QI 10 C	Continuity and Coordination of Medical Care.	Measuring effectiveness	Annually measure the effectiveness of improvement actions taken for identified opportunities.			Annual	
Accreditation	QI 10 D	Notification of Termination	Ensure continuity and coordination of care occurs when a provider terms and if a member is undergoing active treatment.	Ensure members affected by the termination are notified at least 30 calendar days prior to the effective termination date. Ensure a mechanism is in place for identifying members and assess if continuity of care occurred.		Ongoing	Ongoing	

Amerigroup Iowa 2015 Medicaid Quality Management Work Plan

Reason for Selection	NCQA req.	Topic	Objective	Activity	Goal / Benchmark	Start Date	Date Due	Q1
Accreditation	QI 10 E	Continued Access to Practitioners	Ensure continuity and coordination of care occurs when a provider terms and if a member is undergoing active treatment.	If a practitioner's contract is discontinued, the organization allows affected members continued access to practitioner: -Continuation of treatment through the current period of active tx, or for us to 90 calendar days, whichever is less, for members undergoing tx for a chronic or acute med condition; -Continuation of care through the postpartum period for members in their second or third trimester of pregnancy.			Ongoing	
Accreditation Contract	QI 10 F	Transition to Other Care	To assist with a members transition to other care if necessary	Ensure that members are assisted with obtaining other services when their benefits end with alternative resources and education			Ongoing	Ongoing
Accreditation Contract	QI 11 A - B	Continuity and Coordination of Care between Medical and Behavioral Healthcare	Seamless, continuous and appropriate care for members among practitioners and BH providers is key for quality care.	Develop opportunities to improve the collaboration between Medical and behavioral aspects of care			Ongoing	Annual
Accreditation	QI 11 C	Continuity and Coordination of Care between Medical and Behavioral Healthcare	Measuring effectiveness	The organization annually measures the effectiveness of improvement actions taken for 2 identified opportunities				Annual
	QI 12	Marketplace Network Transparency and Experience		N/A for Medicaid Plans				
Accreditation	QI 13 A-F	Delegation of QI	Oversight of delegated QI activities	Ensure vendor is meeting appropriate standards: Annual policy evaluation, Approval of QI program, if applicable, Annual file review, if applicable, Semiannual reporting, Identify and act on opportunities for improvement			Ongoing	Quarterly
Accreditation Contract	UM	Regional Policy Review	Complete full review with revisions as needed for policies	Annual review of all UM policies			Ongoing	Annual
Accreditation Contract	UM	Utilization Statistics	Monitor UM statistics	Auth Request Turn-around Time. Monitor trends in: ER Utilization, Admits/1000, Inpatient days/1000, Average LOS, Denied Inpatient Days, Observation Days, Readmissions, Preauthorization phone statistics, Preauthorization utilization			Ongoing	Quarterly
Accreditation Contract	UM 1 A-D	Program Description	Define the quality structure and processes	Annual review and approval of UM program descriptions; Senior-level physician active involvement in implementing the organizations UM program; BH practitioner active involvement in implementing the BH aspects of the UM program			Ongoing	Annual
Accreditation	UM 2 A-C	Ensuring UM Decision Consistency & Procedural Accuracy Through Inter-Rater Reliability	Consistency and accuracy are key components of the quality of all UM processes. Interpreter Reliability Review – Review for Medical Directors and Nurses to insure the consistent application of clinical criteria	Annual review of clinical criteria and corp policies. Identify opportunities to improve the consistency in applying criteria based off of IRR staffing assessment	Contract Goals			Annual
Accreditation	UM 2 A-C	Ensuring UM Decision Consistency & Procedural Accuracy Through Inter-Rater Reliability	Consistency and accuracy are key components of the quality of all UM processes. Interpreter Reliability Review – Review for Medical Directors and Nurses to insure the consistent application of clinical criteria	Annual testing of the UM staff. Implement Corrective action as needed.			Ongoing	Annual IRR
Accreditation	UM 3 A	Utilization Management Access	Customer/Provider access to the plan is a key component to overall customer satisfaction	Make criteria available to practitioners upon request Ensure corporate policies are in place and that communication of services is available to all Members and Providers.			Ongoing	Annual
Accreditation	UM 3 A	Utilization Management Access	Customer/Provider access to the plan is a key component to overall customer satisfaction	Ensure UM access is communicated to Members and Providers			Ongoing	Annual
Accreditation	UM 4 A-B	Appropriate Professionals	To ensure Health Plan has qualified licensed health professionals assess the clinical information used to support UM decisions.	Ensure polices and procedures and job descriptions are in place and are reviewed and approved in accordance with standards			Ongoing	Annual
Accreditation	UM 4 C	UM files Appropriate Professionals	Ensure utilization decisions are made in a timely manner and reviewed by the appropriate reviewer.	Audit, at a minimum 10 files, for documentation and compliance.				Quarterly
Accreditation	UM 4 D	Practitioner Review of Behavioral Healthcare Denials	Ensure BH that a physician, appropriate BH practitioner or pharmacist, as appropriate, reviews any behavioral healthcare denial of care based on medical necessity.	Audit, at a minimum 10 files, for documentation and compliance				Quarterly
Accreditation	UM 4 E	Board Certified Consultants	Ensure all medical necessity decisions are made by board-certified consultants	Note - this element is N/A if the org and its delegates do not make UM decisions and all services are auto approved; or if BH services are carved out.			Ongoing	Ongoing
Accreditation	UM 4 F	Affirmative Statement About Incentives	Encourage appropriate utilization and discourage underutilization	Utilize only board-certified consultants by contracting appropriately with vendors who have board- certified physicians Distribute affirmative statement to all practitioners, members and staff that UM Decision making is only based on appropriateness of care and service and that members, practitioners or staff are not rewarded or incentivized in issues denials or making decisions resulting in under utilization			Ongoing	Annual
Accreditation	UM 5 A-B	UM files	Ensure non-behavioral health utilization decisions are made in a timely manner and reviewed by the appropriate reviewer.	Audit, at a minimum 10 files, for documentation and compliance.				Quarterly
Accreditation	UM 5 C-D	UM Files	Ensure Behavioral health utilization decisions are made in a timely manner and reviewed by the appropriate reviewer	Audit, at a minimum, 10 files, for documentation and compliance.				Quarterly
Accreditation	UM 5 E	UM P&P Timeliness	Ensure the organization has P&P in place for UM timeliness	Annual review of documented process for UM decisions with appropriate timeframes. ** This element applies to Interim Surveys only				Annual
Accreditation	UM 6 A	File Review Clinical Information	Obtain relevant clinical information and consult with treating practitioners when making UM decisions	Audit, at a minimum 10 files, for documentation and compliance.				Quarterly
Accreditation	UM 6 B	File Review Clinical Information	Obtain relevant clinical information and consult with treating practitioners when making Behavioral Health UM decisions	Audit, at a minimum, 10 files, for documentation and compliance.				Quarterly
Accreditation	UM 7 A-C	File Review Denial Notices	To ensure the reasons for the denial are clearly documented and communicated to members and providers	Audit, at a minimum 10 files, for documentation and compliance.				Quarterly
Accreditation	UM 7 D-F	File Review Denial Notices	To ensure the reasons for the BH denial are clearly documented and communicated to members and providers	Audit, at a minimum, 10 files, for documentation and compliance. This element is N/A if BH services are carved out.				Quarterly
Accreditation Contract	UM 8 A-C	Policy for Appeals	To establish process for resolving member disputes and responding to requests for reconsideration of decisions	Ensure polices and procedures address thorough, appropriate and timely resolution of member appeals				Annual
Accreditation Contract	UM 9 A-F	Appeal files	Appropriate Handling of Appeals	Audit, at a minimum 10 files, for documentation and compliance.				Quarterly
Accreditation	UM 10 A-B	Evaluation of New Technology	Evaluation of new developments in technology for inclusion into plan benefits	1. Evaluate new technology for Medical Procedures, BH procedures, RX and devices 2. Review of case examples for evaluation of implementation				Annual
Accreditation Contract	UM 11 A	Member and Provider Experience	To continuously improve Member and Provider experience with UM process.	Annual analysis of Member and Provider Experience Survey including: - Experience with UM Process - Experience with change of information, treatment and referral with BH providers and BH vendor -Identify opportunities for improvement.				Annual

Amerigroup Iowa 2015 Medicaid Quality Management Work Plan

Reason for Selection	NCOA req.	Topic	Objective	Activity	Goal / Benchmark	Start Date	Date Due	Q1
Accreditation Contract	UM 12 A	Emergency Services	Provide, arrange or facilitate needed emergency services including appropriate coverage and costs	Ensure Health Services policies address: 1. to screen and stabilize the member without prior approval, where a prudent layperson, acting reasonably, would have believed that an emergency medical condition existed 2) If an authorized representative, acting for the organization, authorized the provision of emergency services.			Ongoing	
Accreditation	UM 13A-8, D-E	Procedures for Pharmaceutical Management	To ensures procedures for pharmaceutical management promote the clinically appropriate use of pharmaceuticals	Evaluation of: Drug Formulary and restrictions process. Ensure measures are in place to evaluate pharmaceutical Pt. Safety, drug recalls drug interaction report high risk medication			Ongoing	Annual
Accreditation	UM 13 C	Pharmaceutical Patient Safety	Ensure measures are in place to evaluate pharmaceutical Pt. Safety	Evaluation of: drug recalls drug interaction report high risk medication			Ongoing	Quarterly
Accreditation	UM 14 A-B	Triage and Referral for BH	To ensure that its centralized triage and referral functions for behavioral healthcare services are appropriately implemented, monitored and managed.	The organization's protocols for behavioral healthcare triage and referral: -Address all relevant mental health and substance abuse situations; -Define level of urgency; -Define appropriate setting of care; -Have been reviewed or revised in the past two years; -Use licensed practitioners to make decisions that require clinical judgment. Staff who make clinical decisions are supervised by appropriately trained and licensed practitioner.				Ongoing
Accreditation	UM 15 A-F	Delegation of UM	Oversight of delegated UM activities	Ensure vendor is meeting appropriate standards. Annual policy evaluation Approval of UM Program, if applicable Annual file review, if applicable Semiannual reporting Opportunities for improvement identified and followed up on for each delegate that has been in effect for more than 12 months.				Ongoing
Accreditation Contract	CR	Regional Policy Review	Complete full review with revisions as needed for policies	Annual review of all CR policies				Annual
Accreditation	CR	Credentialing	Provider Network Quality is a component of care provided to our members	Compliance with State, Federal and Accreditation regulations and standards. -new providers are credentialed within 45 days of obtaining a complete application. -Ensure practitioners are recertified within 3 years	NCOA Goals			Quarterly
Accreditation	CR 1 A	Credentialing Policies meet NCOA Standard	Ensure credentialing policies meet all NCOA criteria	Policies specify: Types of practitioners to credential and recredential Verification sources Criteria Process for decisions, managing, delegating, non discriminatory review, practitioner notification of information received and decision making Medical Director responsibility and participation in credentialing committee Confidentiality process Provider Directory rules Tracking and identifying discrimination of credentialing and recredentialing process by, provider age, sex, ethnicity -Assess provider complaints alleging discrimination	NCOA Goals			Annual
Accreditation	CR 1 B	Credentialing Rights	Notify Practitioners of rights to review information regarding their credentialing application, their right to correct erroneous information and rights to be informed of credentialing status upon request	Notify Practitioners of the rights via fax blast, website or credentialing application	NCOA Goals			Annual
Accreditation Contract	CR 2 A	Credentialing Committee	The Credentialing Committee uses a peer-review process to make recommendations regarding credentialing decisions.	Ensure Adequate Provider Participation and representation in Cred Committee. Annual review and approval of committee charter and responsibilities committees Review credentials for practitioners who do not meet established thresholds and ensure files the committee does not see are reviewed and approved by the medical director.	NCOA Goals			Monthly
Accreditation	CR 3 A-C Audits	Credentialing Verification	Compliance with State, Federal, and Accreditation regulations and standards during the credentialing process	Review files for correct credentialing verification and recredentialing cycle length. Audit 10 files per quarter	NCOA Goals			Quarterly
Accreditation	CR 4 A File Audits	Recredentialing Cycle Length	Compliance with State, Federal, and Accreditation regulations and standards during the credentialing process	Review files for correct credentialing verification and recredentialing cycle length. Audit 10 files per quarter	NCOA Goals			Quarterly
Accreditation	CR 5 A-B	Practitioner Office Site Quality	Set site performance standards and thresholds to ensure that the offices of all practitioners meet office-site standards.	Tracking and Identifying complaints for practitioner office site standards and perform site visits when thresholds have been met and implement corrective action if needed.	NCOA Goals			Annual and ongoing
Accreditation	CR 6 A	Ongoing Monitoring	Ongoing monitoring of practitioner sanctions, complaints and quality issues between recredentialing cycles	Investigate, track and analyze: - Adverse Events -Sanctions or Limitations on Licensure - Member complaints - to include quality of cares -Medicare and Medicaid sanctions Implement appropriate interventions when instances related to poor quality have been identified.	NCOA Goals			Ongoing
Accreditation	CR 7 A-C	Notification to authorities and Practitioner Appeal Rights	To use objective evidence and patient-care considerations when deciding on a course of action for dealing with a practitioner who does not meet its quality standards.	Determine if any actions have been taken against a practitioner for quality reasons. Ensure provider appeal rights have been addressed and State fair hearing provided Report to the appropriate authorities and offers the practitioner a formal appeal process.	NCOA Goals			Annual
Accreditation	CR 8 A-E	Assessment of Organizational Providers	To evaluate the quality of organizational providers with which Health Plan contracts.	Ensure that organizational providers licensing, accreditation and site visits, as applicable are up to date for: Hospitals. Home health agencies. Behavioral Health Providers Skilled nursing facilities. Free-standing surgical centers.	NCOA Goals			Annual

Amerigroup Iowa 2015 Medicaid Quality Management Work Plan

Reason for Selection	NCQA req.	Topic	Objective	Activity	Goal / Benchmark	Start Date	Date Due	Q1
Accreditation	CR 9 A-F	Delegation of Credentialing	Remain accountable for credentialing and recredentialing its practitioners even if it delegates all or part of the activities	Have a delegation agreement that describes the delegates activities and responsibilities, requires semi annual reporting, describes the process to evaluate the delegates performance and the remedies if the delegate does not fulfill its obligations. Annual review of Member Rights and Responsibilities statement in accordance with standards and regulatory requirements. Review policy	NCQA Goals		Semi-Annual and Ongoing Annual	
Accreditation Contract	RR 1 A	Member Rights and Responsibilities	To treat members in a manner that respects their rights, and its expectations of members' responsibilities.					
Accreditation	RR 1 B	Member Rights and Responsibilities	To treat members in a manner that respects their rights, and its expectations of members' responsibilities.	Ensure the Distribution of rights and responsibilities to members and practitioners upon enrollment and annually thereafter. New members - Member Handbook Existing members - Member Newsletter New practitioner - Provider Manual Existing Practitioners - Practitioner Newsletter			Annual & upon enrollment	
Accreditation	RR 2A-B	Policies for Complaints and Appeals	To ensure written policies and procedures are in place for thorough, appropriate and timely resolution of member complaints and appeals.	Annual review of Member complaints policy in accordance with standards and regulatory requirements			Annual	
Accreditation	RR 3 A	Subscriber Information	To provide each subscriber with the information necessary to understand benefit coverage and obtain care	Distribution of written information to subscribers re: benefits, etc. upon enrollment and annually thereafter			Annual & upon enrollment	
Accreditation Contract	RR 3 B	Access to Language Line	Provide access to interpreter services based on linguistic needs of members	Assessment of linguistic needs of members, language line usage and ensure member calls are completed in a timely manner.			Annual	
Accreditation Contract	RR4 A, C-E, G-J	Provider & Hospital Directories	To provide information to help members and prospective members choose physicians and hospitals.	Ensure functionality of Provider/Hospital directories meet the requirement as well as appropriate validation			Annual	
Accreditation Contract	RR 4 B, F	Provider & Hospital Directory updates	Provide information to help members and prospective members choose physicians and hospitals	Based on HEDIS measure. Members who were ages 3-6 and received one or more well-child visit in the measurement year. The Contractor shall be eligible for payment of a portion of the performance withhold based on meeting or exceeding the established benchmark.			Annual and ongoing	
Accreditation Contract	RR 5 A, C-D, G-H	PHI & security processes	To protect the confidentiality of member information and records	Ensure corporate wide privacy and security policies are reviewed and approved in accordance with Standards and Regulatory Guidelines.			Annual	
Accreditation Contract	RR 5 B, E	PHI & security processes	To protect the confidentiality of member information and records Inform members of HIPAA policies and procedures	1. Train staff on accountability and responsibility 2. Distribution of PHI use and disclosure to members 3. Ensure all HP Websites have a privacy statement 4. ensure protections are in place for physical and electronic access		Upon hire and ongoing	Annual	
Accreditation	RR 5 F	Accountability and Responsibility	Identification, reporting and improvement of impermissible uses or disclosures of sensitive information	Track and trend impermissible uses of HIPAA and educate staff on HIPAA policies and procedures		Upon hire and ongoing	Annual	
Accreditation	RR 6 A-B	Accountability and Responsibility	Prospective members receive an accurate description of the organization's benefits and operating procedures.	Review organizational marketing materials and presentations, communications with prospective members.				
Accreditation	RR 6 C	Assessing Member Understanding	The organization systematically takes steps to assess how well new members understand policies and procedures.	Implement procedures to maintain accuracy of marketing communication; Act on opportunities for improvement, if applicable.				
Accreditation	RR 7 A-F	Accountability and Responsibility	If the organization delegates any RR activities, there is evidence of oversight of the delegated activities.	Delegation Oversight				Annual and ongoing
Accreditation	MED 1 A	Direct Access	Allow direct access to women's health specialist	Member communication via website, newsletters, and member handbook			Annual	
Accreditation	MED 1 B	Second Opinions	Provides second opinions for members	Second opinion policy and notification to members via newsletters, website and member handbook			Annual	
Accreditation	MED 1 C	Out of Network Services	Provide timely out of network services if the organization cannot provide the service in network	Out of Network policy and notification to members via newsletters, website and member handbook			Annual	
Accreditation	MED 1 D	Out of Network Cost to Members	Out of network approved services will be of no extra cost to the member than in network services	Out of Network policy and notification to members via newsletters, website and member handbook			Annual	
Accreditation	MED 1 E	Hours of Operation	Hours of operations by practitioner are no less than what is offered to commercial members	Determine contract requirements for hours of operation are documented, and in provider manual			Annual	
Accreditation	MEM 1 A-G	Health Appraisals	The organization helps adult members manage their health by providing a Health Appraisal, disclosing how the information will be used and protecting it in accordance with privacy policies.	Documented process and materials for appropriate HA with PHI protection per NCQA standards.			Annual	
Accreditation	MEM 2 A, C	Self-Management Tools	The organization provides self-management tools to help members stay healthy and reduce risk.	Documented process for development and routine updating of evidence based self-management tools, that provide members with information on at least the following wellness and health promotion areas: -Healthy weight (BMI) maintenance; -Smoking and tobacco use cessation; -Encouraging physical activity; -Healthy eating; -Managing stress; -Avoiding at-risk drinking; -Identifying depressive symptoms.			Annual	
Accreditation	MEM 2 B, D	Self-Management Tools	For each of the required seven health areas in the scope of review, the organization evaluates its self-management tools for usability.	Evaluate self-management tools at least every 36 months with consideration that: -Language is easy to understand; -Member special needs, including vision and hearing are considered. -Are offered by digital services and in print or by telephone.			Annual	
Accreditation	MEM 3 A-B	Functionality of Claims Processing	The organization provides members with timely and accurate information about their claims.	Documented process, reports, materials demonstrating that members can track the status of their claims in the claims process and obtain claims information, as needed and required, via web site or by telephone request.			Annual	
Accreditation	MEM 4 A-B, D	Pharmacy Benefit Information	The organization provides members with the information they need to understand and use their pharmacy benefit.	Documented process, reports, materials demonstrating that members can complete the following actions on the organizations web site or by telephone in one attempt or contact: -Determine their financial responsibility for a drug, based on the pharmacy benefit; -Initiate the exceptions process; -Order a refill for an existing, unexpired, mail-order prescription; -Find the location of an in-network pharmacy; -Conduct a proximity search based on zip code; -Determine potential drug-drug interactions; -Determine a drug's common side effects; -Determine the availability of generic substitutes.			Annual	
Accreditation	MEM 4 C	Pharmacy Benefit Information	QI Process on accuracy of information	The organization updates member pharmacy benefit information on its web site and materials used by telephone staff, as the effective date of the formulary change and as new drugs are made available or recalled. Documented process and reports demonstrating that the organization's QI process for pharmacy benefit information collects data on the quality and accuracy of pharmacy benefit information, analyzes data results, acts to improve identified deficiencies.			Annual	
Accreditation	MEM 5 A-B	Personalized Information on Health Plan Services	Providing members with the information they need to easily understand and use health plan benefits.	Documented process, reports, materials demonstrating functionality of member web site to obtain personalized health plan services. Documented process, reports and materials demonstrating members can complete activities over the telephone.			Annual	
Accreditation	MEM 5 C	Personalized Information on Health Plan Services	Quality and accuracy of information	At least annually, the organization must evaluate the quality and accuracy of the information it provides to its members via the Web and telephone.			Annual	

Amerigroup Iowa 2015 Medicaid Quality Management Work Plan

Reason for Selection	NCQA req.	Topic	Objective	Activity	Goal / Benchmark	Start Date	Date Due	Q1
Accreditation	MEM 5 D	Personalized Information on Health Plan Services	Timely, accurate response to member email.	The organization has a process for responding to member email inquiries within one business day; has a process for annually evaluating the quality of email responses; annually collects data on email TAT, quality; acts to improve identified deficiencies.			Annual	
Accreditation	MEM 6 A	Member Support	Use of technology to improve member services	The organization uses, supports or facilitates a minimum of 4 of 9 technology-supported processes as stated by NCQA.			Annual	
Accreditation	MEM 7 A-B	Health Information Line	Informing members about wellness and prevention, using the organizations health information line.	Policies specify a health information line that is staffed by licensed nurses or clinicians that: -Is available 24hr/day; -Provides secure transmission of electronic communication, and a 24hr TAT; -Provides interpreter services			Annual	
Accreditation	MEM 7 C	Health Information Line	Informing members about wellness and prevention, using the organizations health information line.	Policies specify that the organization: -Tracks telephone and Web statistics at least monthly; -Tracks member use of the health information line at least quarterly; -Monitors calls periodically;			Monthly	
Accreditation	MEM 7 C	Health Information Line	Evaluate member satisfaction with Health Information Line	Evaluate member satisfaction with health information line at least ; -Analyze data at least annually and, if applicable, identify opportunities and establishes priorities for improvement.			Annual	
Accreditation	MEM 8 A, B	Support for Healthy Living	The organization actively works to keep members healthy.	Policies and reports describe use of data to identify and target members eligible for wellness activities.			Annual	
Accreditation	MEM 8 C	Support for Healthy Living	The organization actively works to keep members healthy.	Policies and reports describe the use of member incentives to promote wellness. ** This element is NA if the organizations elects not to be surveyed for this element.			Annual	
Accreditation	MEM 9	Delegation of MEM	Accountability and Responsibility	Documented processes and reports describing oversight of any delegated MEM functions, including an annual evaluation of delegate(s) using appropriate NCQA standards.			Annual	
Accreditation	Contract	HEDIS	Prepare annual HEDIS	Prepare Roadmap Schedule audit Complete IDSS tool Prepare MRR			Annual	
Accreditation	Contract	HEDIS	HEDIS analysis	Comparative analysis to identify opportunities for improvement.	Prepare annual report with results/benchmarks/barriers		Annual	
Accreditation	Contract	HEDIS	HEDIS Improvement Initiatives	Ongoing QI initiatives to improve HEDIS rates on strategic measures	Present report at QMC. Targeted member follow up.		Monthly	
Accreditation	Contract	HEDIS	Immunization Schedule	Maintain up-to-date preventive guidelines and promote those guidelines.	Annual committee review and approval to ensure most current guidelines are adopted -Annual distribution of guidelines, to members and provider		Annual	
Accreditation		HEDIS	Flu Shots	Increase number of high risk members receiving flu shot	Reminders by DM call center and CCM (telephonic) Phone – on-going Mail – Fall		Annual	
Contract		EPSDT	Monitor EPSDT activities for opportunities for improvement	Overview of Activities Related to EPSDT			Annual	
Contract		Performance Improvement Project (PIP)					Annual	
Contract		Performance Improvement Project (PIP)					Annual	
Delegate		Fill in Vendor information	Monitor and oversee UM delegated performance and activities	Ensure vendor is meeting appropriate standards. Annual policy evaluation Approval of UM program Semiannual reporting	NCQA Requirements		Semi-Annual	
Delegate		Fill in Vendor information	Monitor and oversee credentialing and UM delegated performance and activities	Ensure vendor is meeting appropriate standards. Annual policy evaluation Approval of UM program Annual file review Semiannual reporting	NCQA Requirements		Semi-Annual	
Delegate		Fill in Vendor information	Monitor and oversee credentialing and UM delegated performance and activities	Ensure vendor is meeting appropriate standards. Annual policy evaluation Approval of UM program, if applicable Annual file review Semiannual reporting	NCQA Requirements		Semi-Annual	
Delegate		Fill in Vendor information	Monitor and oversee UM delegated performance and activities	Ensure vendor is meeting appropriate standards. Annual policy evaluation Approval of UM program, if applicable Annual file review, if applicable Semiannual reporting	NCQA Requirements		Semi-Annual	
Accreditation	DVOC	CR, UM, QI, DVOC	Delegated Vendor Oversight Committee	Perform all annual reviews; Implement corrective actions; Semi-annual reporting; Ensure annual reviews are shared with the regional DVOC			Semi-Annual	

Litigation

In the ordinary course of business, we are defendants in, or parties to, a number of pending or threatened legal actions or proceedings. To the extent a plaintiff or plaintiffs in the following cases have specified in their complaint or in other court filings the amount of damages being sought, we have noted those alleged damages in the descriptions below. With respect to the cases described below, we contest liability and/or the amount of damages in each matter and believe we have meritorious defenses.

We are defending a certified class action filed as a result of the 2001 demutualization of Anthem Insurance Companies, Inc., or Anthem Insurance. The lawsuit names Anthem Insurance as well as Anthem, Inc. and is captioned *Ronald Gold, et al. v. Anthem, Inc. et al.* Anthem Insurance's 2001 Plan of Conversion, or the Plan, provided for the conversion of Anthem Insurance from a mutual insurance company into a stock insurance company pursuant to Indiana law. Under the Plan, Anthem Insurance distributed the fair value of the company at the time of conversion to its Eligible Statutory Members, or ESMs, in the form of cash or Anthem common stock in exchange for their membership interests in the mutual company. Plaintiffs in *Gold* allege that Anthem Insurance distributed value to the wrong ESMs. Cross motions for summary judgment were granted in part and denied in part on July 26, 2006 with regard to the issue of sovereign immunity asserted by co-defendant, the state of Connecticut, or the State. The trial court also denied our motion for summary judgment as to plaintiffs' claims on January 10, 2005. The State appealed the denial of its motion to the Connecticut Supreme Court. We filed a cross-appeal on the sovereign immunity issue. On May 11, 2010, the Supreme Court reversed the judgment of the trial court denying the State's motion to dismiss the plaintiff's claims under sovereign immunity and dismissed our cross-appeal. The case was remanded to the trial court for further proceedings. Plaintiffs' motion for class certification was granted on December 15, 2011. We and the plaintiffs filed renewed cross-motions for summary judgment on January 24, 2013. On August 19, 2013, the trial court denied plaintiffs' motion for summary judgment. The trial court deferred a final ruling on our motion for summary judgment. On March 6, 2014, the trial court denied our motion for summary judgment finding that an issue of material fact existed. A trial on liability commenced on October 14, 2014 and concluded on October 16, 2014. The matter was taken under advisement by the trial court, which has requested post-trial briefing. We expect the trial court to issue its decision on liability sometime in 2015. We intend to vigorously defend the *Gold* lawsuit; however, its ultimate outcome cannot be presently determined.

We are currently a defendant in eleven putative class actions relating to out-of-network, or OON, reimbursement that were consolidated into a single multi-district lawsuit called *In re WellPoint, Inc. (n/k/a Anthem, Inc.) Out-of-Network "UCR" Rates Litigation* that is pending in the United States District Court for the Central District of California. The lawsuits were filed in 2009. The plaintiffs include current and former members on behalf of a putative class of members who received OON services for which the defendants paid less than billed charges, the American Medical Association, four state medical associations, OON physicians, OON non-physician providers, the American Podiatric Medical Association, California Chiropractic Association and the California Psychological Association on behalf of putative classes of OON physicians and all OON non-physician health care providers. The plaintiffs have filed several amended complaints alleging that the defendants violated the Racketeer Influenced and Corrupt Organizations Act, or RICO, the Sherman Antitrust Act, ERISA, federal regulations, and state law by using an OON reimbursement database called Ingenix and by using non-Ingenix OON reimbursement methodologies. We have filed motions to dismiss in response to each of those amended complaints. Our motions to dismiss have been granted in part and denied in part by the court. The most recent pleading filed by the plaintiffs is a Fourth Amended Complaint to which we filed a motion to dismiss most, but not all, of the claims. In July 2013 the court issued an order granting in part and denying in part our motion. The court held that the state and federal anti-trust claims along with the RICO claims should be dismissed in their entirety with prejudice. The court further found that the ERISA claims, to the extent they involved non-Ingenix methodologies, along with those that involved our alleged non-disclosures should be dismissed with prejudice. The court also dismissed most of the plaintiffs' state law claims with prejudice. The only claims that remain after the court's decision are an ERISA benefits claim relating to claims priced based on Ingenix, a breach of contract claim on behalf of one subscriber plaintiff, a breach of implied covenant claim on behalf of one subscriber plaintiff, and one subscriber plaintiff's claim under the California Unfair Competition Law. The plaintiffs filed a motion for reconsideration of the motion to dismiss order, which the court granted in part and denied in part. The court ruled that the plaintiffs adequately allege that one Georgia provider plaintiff is deemed to have exhausted administrative remedies regarding non-Ingenix methodologies based on the facts alleged regarding that plaintiff so those claims are back in the case. Fact discovery is complete. The plaintiffs filed a motion for class certification in November 2013 seeking the following classes: (1) a subscriber ERISA class as to OON claims processed using the Ingenix database as the pricing methodology; (2) a physician provider class as to OON claims processed using Ingenix; (3) a non-physician provider class as to OON claims processed using Ingenix; (4) a provider ERISA class as to OON claims processed using non-Ingenix pricing methodologies; (5) a California subscriber breach of contract/unfair competition class; and (6) a subscriber breach of implied covenant class for all Anthem states except California. Following expert discovery and briefing, oral argument was held on the motion. In late 2014, the court denied the plaintiffs' motion for class certification in its entirety. The California subscriber plaintiffs filed a motion for leave to file a renewed motion for class certification with more narrowly defined proposed classes, which the court denied. Earlier in the case, in 2009, we filed a motion in the United States District Court for the Southern District of Florida, or the Florida Court, to enjoin the claims brought by the physician plaintiffs and certain medical association plaintiffs based on prior litigation releases, which was granted in 2011. The Florida Court ordered those plaintiffs to dismiss their claims that are barred by the release. The plaintiffs then filed a petition for declaratory judgment asking the court to find that these claims are not barred by the releases from the prior litigation. We filed a motion to dismiss the declaratory judgment action, which was granted. The plaintiffs appealed the dismissal of the declaratory judgment to the United States Court of Appeals for the Eleventh Circuit, but the dismissal

was upheld. The enjoined physicians and some the medical associations did not dismiss their barred claims. The Florida Court found those enjoined plaintiffs in contempt and sanctioned them in July 2012. Those plaintiffs appealed the Florida Court's sanctions order to the United States Court of Appeals for the Eleventh Circuit. The Eleventh Circuit upheld the Florida court's enforcement of the injunction as it relates to the plaintiffs' RICO and antitrust claims, but vacated it as it relates to certain ERISA claims. The plaintiffs filed a petition for rehearing en banc as to the antitrust claims only, which was denied. The plaintiffs then filed a petition for writ of certiorari with the U.S. Supreme Court. The American Medical Association filed an amicus brief in support of the petition. The U.S. Supreme Court denied the petition on February 23, 2015. We intend to vigorously defend these suits; however, their ultimate outcome cannot be presently determined.

We are a defendant in multiple lawsuits that were initially filed in 2012 against the BCBSA as well as Blue Cross and/or Blue Shield licensees across the country. The cases were consolidated into a single multi-district lawsuit called *In re Blue Cross Blue Shield Antitrust Litigation* that is pending in the United States District Court for the Northern District of Alabama. Generally, the suits allege that the BCBSA and the Blue plans have engaged in a conspiracy to horizontally allocate geographic markets through license agreements, best efforts rules (which limit the percentage of non-Blue revenue of each plan), restrictions on acquisitions and other arrangements in violation of the Sherman Antitrust Act and related state laws. The cases were brought by two putative nationwide classes of plaintiffs, health plan subscribers and providers. Subscriber and provider plaintiffs each filed consolidated amended complaints on July 1, 2013. The consolidated amended subscriber complaint was also brought on behalf of putative state classes of health plan subscribers in Alabama, Arkansas, California, Florida, Hawaii, Illinois, Louisiana, Michigan, Mississippi, Missouri, New Hampshire, North Carolina, Pennsylvania, Rhode Island, South Carolina, Tennessee, and Texas. Defendants filed motions to dismiss in September 2013, which were argued in April 2014. In June 2014, the court denied the majority of the motions, ruling that plaintiffs had alleged sufficient facts at this stage of the litigation to avoid dismissal of their claims. Following the subsequent filing of amended complaints by each of the subscriber and provider plaintiffs, we filed our answer and asserted our affirmative defenses in December 2014. Discovery has commenced. We intend to vigorously defend these suits; however, their ultimate outcome cannot be presently determined.

Where available information indicates that it is probable that a loss has been incurred as of the date of the consolidated financial statements and we can reasonably estimate the amount of that loss, we accrue the estimated loss by a charge to income. In many proceedings, however, it is difficult to determine whether any loss is probable or reasonably possible. In addition, even where loss is possible or an exposure to loss exists in excess of the liability already accrued with respect to a previously identified loss contingency, it is not always possible to reasonably estimate the amount of the possible loss or range of loss.

With respect to many of the proceedings to which we are a party, we cannot provide an estimate of the possible losses, or the range of possible losses in excess of the amount, if any, accrued, for various reasons, including but not limited to some or all of the following: (i) there are novel or unsettled legal issues presented, (ii) the proceedings are in early stages, (iii) there is uncertainty as to the likelihood of a class being certified or decertified or the ultimate size and scope of the class, (iv) there is uncertainty as to the outcome of pending appeals or motions, (v) there are significant factual issues to be resolved, and/or (vi) in many cases, the plaintiffs have not specified damages in their complaint or in court filings. For those legal proceedings where a loss is probable, or reasonably possible, and for which it is possible to reasonably estimate the amount of the possible loss or range of losses, we currently believe that the range of possible losses, in excess of established reserves, for all of those proceedings is from \$0.0 to approximately \$250.0 at March 31, 2015. This estimated aggregate range of reasonably possible losses is based upon currently available information taking into account our best estimate of such losses for which such an estimate can be made.

Cyber Attack Incident

In February 2015, we reported that we were the target of a sophisticated external cyber attack. The attackers gained unauthorized access to certain of our information technology systems and obtained personal information related to many individuals and employees, such as names, birthdays, health care identification/social security numbers, street addresses, email addresses, phone numbers and employment information, including income data. To date, there is no evidence that credit card or medical information, such as claims, test results or diagnostic codes, were targeted, accessed or obtained, although no assurance can be given that we will not identify additional information that was accessed or obtained.

Currently, we are in the process of addressing the cyber attack and supporting federal law enforcement efforts to identify the responsible parties. Upon discovery of the cyber attack, we took immediate action to remediate the security vulnerability and retained a cybersecurity firm to evaluate our systems and identify solutions based on the evolving landscape. We will provide credit monitoring and identity protection services to those who have been affected by this cyber attack. While the cyber attack did not have an impact on our business, cash flows, financial condition and results of operations for the year ended December 31, 2014, we have incurred expenses subsequent to the cyber attack to investigate and remediate this matter and expect to continue to incur expenses of this nature in the foreseeable future. Although we are unable to quantify the ultimate magnitude of such expenses and any other impact to our business from this incident at this time, they may be significant. We will recognize these expenses in the periods in which they are incurred.

Actions have been filed in various federal and state courts and other claims have been or may be asserted against us on behalf of current or former members, current or former employees, other individuals, shareholders or others seeking damages or other related relief, allegedly arising out of the cyber attack. State and federal agencies, including state insurance regulators, state attorneys general,

the Health and Human Services Office of Civil Rights and the Federal Bureau of Investigations, are investigating events related to the cyber attack, including how it occurred, its consequences and our responses. Although we are cooperating in these investigations, we may be subject to fines or other obligations, which may have an adverse effect on how we operate our business and our results of operations. With respect to the civil actions, a motion to transfer was filed with the Judicial Panel on Multidistrict Litigation on February 10, 2015 and will be heard by the Panel on May 28, 2015.

We have contingency plans and insurance coverage for certain expenses and potential liabilities of this nature, however, the coverage may not be sufficient to cover all claims and liabilities. While a loss from these matters is reasonably possible, we cannot reasonably estimate a range of possible losses because our investigation into the matter is ongoing, the proceedings remain in the early stages, alleged damages have not been specified, there is uncertainty as to the likelihood of a class or classes being certified or the ultimate size of any class if certified, and there are significant factual and legal issues to be resolved.

Other Contingencies

From time to time, we and certain of our subsidiaries are parties to various legal proceedings, many of which involve claims for coverage encountered in the ordinary course of business. We, like HMOs and health insurers generally, exclude certain health care and other services from coverage under our HMO, PPO and other plans. We are, in the ordinary course of business, subject to the claims of our enrollees arising out of decisions to restrict or deny reimbursement for uncovered services. The loss of even one such claim, if it results in a significant punitive damage award, could have a material adverse effect on us. In addition, the risk of potential liability under punitive damage theories may increase significantly the difficulty of obtaining reasonable settlements of coverage claims.

In addition to the lawsuits described above, we are also involved in other pending and threatened litigation of the character incidental to our business, and are from time to time involved as a party in various governmental investigations, audits, reviews and administrative proceedings. These investigations, audits, reviews and administrative proceedings include routine and special inquiries by state insurance departments, state attorneys general, the U.S. Attorney General and subcommittees of the U.S. Congress. Such investigations, audits, reviews and administrative proceedings could result in the imposition of civil or criminal fines, penalties, other sanctions and additional rules, regulations or other restrictions on our business operations. Any liability that may result from any one of these actions, or in the aggregate, could have a material adverse effect on our consolidated financial position or results of operations.

The National Organization of Life & Health Insurance Guaranty Associations, or NOLHGA, is a voluntary organization consisting of the state life and health insurance guaranty associations located throughout the U.S. Such associations, working together with NOLHGA, provide a safety net for their state's policyholders, ensuring that they continue to receive coverage, subject to state maximum limits, even if their insurer is declared insolvent. We are aware that the Pennsylvania Insurance Commissioner, or Insurance Commissioner, has placed Penn Treaty Network America Insurance Company and its subsidiary American Network Insurance Company, or collectively Penn Treaty, in rehabilitation, an intermediate action before insolvency. The state court denied the Insurance Commissioner's petition for the liquidation of Penn Treaty and ordered the Insurance Commissioner to file an updated plan of rehabilitation. An initial plan was filed on April 30, 2013. The Insurance Commissioner filed an amended plan on August 8, 2014 and a second amended plan on October 8, 2014. The state court ordered a hearing to consider motions in response to and in connection with the second amended plan on May 11, 2015, which has been set for July 15, 2015. The Insurance Commissioner has filed a Notice of Appeal asking the Pennsylvania Supreme Court to reverse the order denying the liquidation petition. The Supreme Court held oral argument on the appeal in September 2014. In the event rehabilitation of Penn Treaty is unsuccessful and Penn Treaty is declared insolvent and placed in liquidation, we and other insurers may be required to pay a portion of their policyholder claims through state guaranty association assessments in future periods. Given the uncertainty around whether Penn Treaty will ultimately be declared insolvent and, if so, the amount of the insolvency, the amount and timing of any associated future guaranty fund assessments, and the availability and amount of any potential premium tax and other offsets, we currently cannot estimate our net exposure, if any, to this potential insolvency. We will continue to monitor the situation and may record a liability and expense in future reporting periods, which could be material to our cash flows and results of operations.

RFP Forms (3.2.7.1)

Per RFP Section 3.2.7.1 RFP Forms, we have included the following documents:

- Attachment 3.2.7.1-1 Release of Information Form
- Attachment 3.2.7.1-2 Primary Bidder Detail & Certification Form
- Attachment 3.2.7.1-3 Subcontractor Disclosure Forms

This page is intentionally left blank

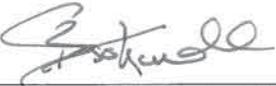

Exhibit A: Release of Information

(Return this completed form behind Tab 6 of the Bid Proposal.)

Amerigroup Iowa, Inc. (name of bidder) hereby authorizes any person or entity, public or private, having any information concerning the bidder's background, including but not limited to its performance history regarding its prior rendering of services similar to those detailed in this RFP, to release such information to the Agency.

The bidder acknowledges that it may not agree with the information and opinions given by such person or entity in response to a reference request. The bidder acknowledges that the information and opinions given by such person or entity may hurt its chances to receive contract awards from the Agency or may otherwise hurt its reputation or operations. The bidder is willing to take that risk. The bidder agrees to release all persons, entities, the Agency, and the State of Iowa from any liability whatsoever that may be incurred in releasing this information or using this information.

BID PROPOSAL CERTIFICATION

By signing below, Bidder certifies that:

1. Reserved;
2. Bidder accepts all capitation rates established by the Agency via the Agency's actuary.
3. Bidder has reviewed the Additional Certifications, which are incorporated herein by reference, and by signing below represents that Bidder agrees to be bound by the obligations included therein.
4. Bidder does not discriminate in its employment practices with regard to race, color, religion, age (except as provided by law), sex, marital status, political affiliation, national origin, or handicap;
5. Reserved;
6. Bidder has received any amendments to this RFP issued by the Agency;
7. Bidder either is currently registered to do business in Iowa or agrees to register if Bidder is awarded a Contract pursuant to this RFP;
8. The person signing this Bid Proposal certifies that he/she is the person in the Bidder's organization responsible for, or authorized to make decisions regarding the prices quoted and he/she has not participated, and will not participate, in any action contrary to the anti-competitive agreements outlined above;
9. Bidder specifically stipulates that the Bid Proposal is predicated upon the acceptance of all terms and conditions stated in the RFP and the Sample Contract without change.
10. Bidder certifies that the Bidder organization has sufficient personnel resources available to provide all services proposed by the Bid Proposal, and such resources will be available on the date the RFP states services are to begin. Bidder guarantees personnel proposed to provide services will be the personnel providing the services unless prior approval is received from the Agency to substitute staff;
11. Bidder certifies that if the Bidder is awarded the contract and plans to utilize subcontractors at any point to perform any obligations under the contract, the Bidder will (1) notify the Agency in writing prior to use of the subcontractor, and (2) apply all restrictions, obligations, and responsibilities of the resulting contract between the Agency and contractor to the subcontractors through a subcontract. The contractor will remain responsible for all Deliverables provided under this contract.
12. Bidder guarantees the availability of the services offered and that all Bid Proposal terms, including price, will remain firm until a contract has been executed for the services contemplated by this RFP or one year from the issuance of this RFP, whichever is earlier; and,
13. Bidder certifies it is either a) registered or will become registered with the Iowa Department of Revenue to collect and remit Iowa sales and use taxes as required by Iowa Code chapter 423; or b) not a "retailer" of a "retailer maintaining a place of business in this state" as those terms are defined in Iowa Code subsections 423.1(42) & (43). The Bidder also acknowledges that the Agency may declare the bid void if the above certification is false. Bidders may register with the Department of Revenue online at: <http://www.state.ia.us/tax/business/business.html>.

By signing below, I certify that I have the authority to bind the Bidder to the specific terms, conditions and technical specifications required in the Agency's Request for Proposals (RFP) and offered in the Bidder's Proposal. I understand that by submitting this Bid Proposal, the Bidder agrees to provide services described herein which meet or exceed the specifications of the Agency's RFP unless noted in the Bid Proposal and at the prices quoted by the Bidder. I certify that the contents of the Bid Proposal are true and accurate and that the Bidder has not made any knowingly false statements in the Bid Proposal.

Subcontractor's Accounting Firm:	PricewaterhouseCoopers LLP
If Subcontractor is currently registered to do business in Iowa, provide the Date of Registration:	Originally registered in 1992; re-activation of registration in 2015
Percentage of Total Work to be performed by this Subcontractor pursuant to this RFP/Contract.	More than 5%
General Scope of Work to be performed by this Subcontractor	
Pharmacy Benefits Management	
Detail the Subcontractor's qualifications for performing this scope of work	
Express Scripts, Inc. is one of the nation's leading full-service pharmacy benefit management ("PBM") companies. The Company coordinates the distribution of outpatient pharmaceuticals through a combination of benefit management services, including retail drug card programs, Home Delivery services, formulary management programs and other clinical management programs. We also distribute a full range of injectable biopharmaceutical products directly to	

patients or their physicians, and provide extensive cost-management and patient-care services. We provide these types of services for clients that include health maintenance organizations, health insurers, employers, union-sponsored benefit plans, third-party administrators, workers' compensation and governmental health programs.

Founded in 1986, Express Scripts aligns its interests with those of clients and patients. Alignment of interests means that we make money when our clients and patients save money — when patients use more generics, choose lower-cost brand drugs and take advantage of our cost-effective Home Delivery services. Our legacy of independence means that our programs and original research benefit our clients.

Every day, we handle more than a million prescriptions through our networks of retail pharmacies and our Home Delivery facilities. On the receiving end are tens of millions of individuals who count on us and their plan sponsors to provide a sound pharmacy benefit today and into the future.

Attachment A: LogistiCare's Qualifications and Work Performance

LogistiCare strongly believes that transportation to authorized medical services is an essential function within the healthcare delivery continuum. Quality healthcare delivery for Iowa Members begins with effective and efficient transportation services. With the understanding that the coordination service we provide is critical to the health and well-being of eligible Iowa Members, LogistiCare will work to meet the highest level of performance expectations in a sensitive and compassionate manner. LogistiCare will transition the existing NEMT network to one that is compliant, cost effective, and committed to NEMT stakeholder satisfaction.

LogistiCare is the Largest and Most Experienced NEMT Broker

We are the largest and most experienced broker in the country. This distinction is earned through the management of 250+ NEMT accounts in 40 states, representing a variety of transportation solutions for both state agencies and managed care organizations. To serve these programs, we operate 20 dedicated NEMT call centers with approximately 1,400+ Customer Service Representatives (CSRs) specifically trained to deliver NEMT services. In the true spirit of NEMT brokerage, LogistiCare does not own vehicles. Instead, we have built an extensive network of contracted transportation alternatives including commercial Transporters, community and faith based Transporters, transit organizations, gas reimbursement and volunteer drivers. Our network of over 23,000 vehicles provides over 56 million trips annually.

Our People, Processes and Technology Lead the NEMT Industry

Our NEMT programs combine proven NEMT leadership and innovative technology including:

- ▶ Tested Gate Keeping Ability
- ▶ Proven Network Development and Management
- ▶ Extensive Outreach
- ▶ State of the Art Technology
- ▶ Ability to Manage and Track Stringent Program Requirements
- ▶ Long Proven Gatekeeping Capabilities

General Scope of Work to be performed by this Subcontractor	
McKesson Care Management provides VITAL Nurse Advice Line services to over 30 million eligible people fielding nearly 1 million calls each year. The staff, consisting of hundreds of registered nurses backed by physicians, is available to field healthcare-related telephone calls 24 hours a day, seven days a week. McKesson employs a nationwide virtual call center environment with 100 percent of our clinical and non-clinical staff across all product lines working from home. A centralized resourcing process is in place so that all clinical resource procedures, including the handling of a crisis call, are managed the	

same way as a physical call center. In addition, the work at home staff is held accountable to the same performance expectations, quality processes, polices, and training requirements.

Detail the Subcontractor's qualifications for performing this scope of work

McKesson is the most experienced and largest provider of the 24/7 Nurse Advice Line Services in the United States. We service approximately 30 million lives and handle over one million calls each year. We have been providing telephonic Nurse Advice Line services since 1986, beginning with the nationally recognized Ask-Our-Nurse program. Our NCQA-certified and URAC-accredited program is delivered using McKesson's proprietary algorithmic based platform and is supported by two fully redundant technical data centers to ensure 100 percent up time.

General Scope of Work to be performed by this Subcontractor

Remind Technologies will be customizing, deploying and implementing for Amerigroup an Integrated Care Management Platform focused on connecting patients and healthcare providers in an ***on demand - real time manner***. The platform will help to track key aspects of care management, medication adherence, initial and follow up clinical screening and assessments, while utilizing data points and interactive tools such as adherence score per medication, side effect reporting, and a provider-patient-caregiver messaging board.

Detail the Subcontractor’s qualifications for performing this scope of work

Remind Technologies Inc. is a Texas based Health Technology Company committed to delivering advanced mobile health-tech solutions to help patients, their caregivers, and medical providers achieve radically improved Medication Adherence and Quality of Care. Our team has over 20 years of collective experience in the Medical Device/Biotech space. Our team includes clinicians and engineers with strong background in management of chronic conditions by using innovative solutions including mobile health technologies.

General Scope of Work to be performed by this Subcontractor	
<p>MySupport is an online platform designed to help older adults, people with chronic health conditions and disabilities connect with direct support workers with skills that match their individual needs, preferences and values. Members participating in one of the six HCBS waiver programs who use personal care attendants (PCAs) and other support workers providing individualized in-home and community-based services will have access to the MySupport system. Members looking for support and support job seekers answer questions to identify skills and attributes that support a successful relationship; the platform is able to recommend potential matches based on information provided.</p> <p>In addition, MySupport makes it easy for members and/or their family to coordinate and schedule with their PCAs and file their time sheets through a seamless online process. A text messaging notification feature is also available alerting workers about messages received, upcoming shifts, and reminders to submit their timesheets. Through the MySupport platform, we will also be able to cascade important health and wellness messages to a personal inbox dedicated to the member.</p>	
Detail the Subcontractor's qualifications for performing this scope of work	
<p>MySupport's team has decades of experience in Medicaid-financed home and community based services, with several former state directors of developmental disability services among our board and team. Our development team has significant experience in building HIPAA compliant information technology platforms and our management team has experience in federal disability policy, including the new CMS HCBS Settings rule and the pending FLSA home care changes.</p>

General Scope of Work to be performed by this Subcontractor

Specific services to be further defined in discussion over next sixty days. The following is a list of services that are currently in discussions between the parties.

- Minimum Data Set transmission support, onsite MDS validation, automation and education
- Level of care determinations for nursing facility, waiver programs, ICF/IDs and PMICs
- Onsite quality review of ICF/IDs, NFMIs, MHIs and PMICS in compliance with 42 CFR, Part 456

- Private duty nursing and home health aide quality review
- HCBS quality oversight:
 - Review of new provider applications
 - Provider certification, quality reviews and corrective action plans
 - Member surveys – IPES and MFP
- Core standardized assessments – Supports Intensity Scale® and interRAI™ suite of tools

Detail the Subcontractor's qualifications for performing this scope of work

Telligen has performed the above listed services for the Iowa Medicaid program for the past 10 years and some of the services for the past 35 years. Telligen's standards of quality are validated by its URAC certification for utilization management and care management; its designation as a QIO for Iowa, Illinois and Colorado; and its recent selection by CMS to serve as the national Coordinating Center for the QIO-QIN Program. Telligen also has extensive analytic skills providing data analysis, predictive modeling and other analytic support to CMS and state Medicaid programs.

Telligen brings experience and expertise in these key areas that will benefit from continuity. Telligen will assist in facilitating a successful transition to managed care and provide a continuation of quality in these designated services for Iowa Medicaid's members and providers.

By signing below, Subcontractor agrees to the following:

Financial Statements (3.2.7.2)

As Attachment 3.2.7.2-1, we are submitting the following financial statements:

- 2012 WellPoint, Inc. 10K
- 2014 WellPoint, Inc. 10K
- 2014 Anthem, Inc. 10K

Amerigroup Iowa (Amerigroup) is a new entrant to the Iowa market and is currently in the process of obtaining an HMO license from the Iowa Insurance Division. Amerigroup submitted our application on April 6, 2015, and fully expects to be licensed as an HMO prior to the Contract effective date.

Amerigroup is a wholly owned subsidiary of Anthem, Inc. (Anthem). Consequently, Amerigroup is submitting audited financial statements of Anthem from independent auditors for the last three years to demonstrate the financial strength of our organization as Attachments 3.2.7.2-1. Please note that Anthem underwent a legal name change on December 3, 2014. As such, attachments for those requested documents may reference the prior legal name of this entity, WellPoint, Inc. (WellPoint).

Capital contributions from Anthem will fund required Amerigroup accounts upon incorporation and licensure. As of December 31, 2014, Anthem held approximately \$2.7 billion in cash and investments.

Our ultimate parent company, Anthem, is ranked 38th on the 2014 Fortune 500 list, and its insurance and HMO subsidiaries are well funded at levels above the minimum threshold of 200 percent of Authorized Control Level Risk-Based Capital (ABL RBC) set by the Code of Federal Regulations. In 2014, Anthem's combined ACL RBC across its insurance and HMO operating subsidiaries was 563 percent, almost three times the federal and State requirements.

We submit our NAIC number in Exhibit B of this RFP.

TUNDE SOTUNDE, M.D., M.B.A.

Amerigroup Iowa - Contract Administrator

As a member of the Transition Team, Dr. Sotunde will serve as Amerigroup Iowa's Contract Administrator

Experience

Anthem, Inc.

President North Region, Medicaid Business Unit

2013 – Present

- Responsible for the business and financial operations of the Medicaid business unit in the North region, comprised of 5 states with a membership of approx. 1.2 million and annual revenues in excess of \$4.5 billion.

Amerigroup Georgia

President

2008 – 2013

- Direct responsibility for the Georgia subsidiary of Amerigroup Corporation, one of the largest public sector focused managed care companies in the United States prior to its acquisition by WellPoint in December of 2012.
- Doubled pre-tax earnings from \$45 million to over \$120 million between 2008 and 2012. Revenue base increased 50% during same period despite a global recessionary economic environment and public sector budget pressures.
- Drove 40% membership growth in a 4 year period to 280,000 by year end 2012.
- Expanded statewide and rolled out a Medicare Advantage and Special Needs plan.
- Realized double digit million dollar medical expense savings year over year, consistently exceeding budgeted goals.
- Mitigated all adverse legislation proposed in 5 consecutive legislative sessions including ancillary carve-outs, premium rate cuts and premium tax levies on Medicaid managed care companies in the State of Georgia.
- Awarded excellent accreditation status by the National Commission for Quality Assurance (NCQA) in 2012. The only Medicaid plan to achieve such recognition.
- Developed a strategic alliance with Kaiser Permanente creating first Pediatric Accountable Care Organization serving the Medicaid population in GA.
- Improved employee satisfaction and achieved single digit voluntary turnover rates three consecutive years in a row.

Solera Capital

Chief Medical Officer of The Little Clinic

2007 - 2008

- Established clinical guidelines and practice parameters for mid-level practitioners.
- Built supervising physician network and developed practice protocols.

- Developed a quality and patient safety program within the clinics eventually resulting in accreditation of the clinics by the Joint Commission in 2009.
- Deployed a fully fledged Practice Management and Electronic Medical Record system interconnecting all clinic sites.
- Instituted a pricing structure that resulted in double digit revenue growth in 1 year
- Diversified the portfolio of clinic services by introducing specialized services Travel Health, aesthetic procedures, health & wellness programs and weight management programs.
- Drove rapid site expansion. Tripled clinic locations in less than a year.
- Successfully planned and executed on the exit strategy for Solera Capital ultimately resulting in the sale of a controlling stake to The Kroger Company in 2008.
- Maintained a part-time Pediatric practice at the Mercy Children's Clinic, Franklin.

UnitedHealthcare***Southeast Regional Vice President and Chief Medical Officer******2001 – 2007***

- Responsible for clinical operations in the Southeast region, comprising Florida, Georgia, Louisiana, Alabama, Mississippi, Tennessee and Arkansas with combined membership of 2.5 million and revenues exceeding \$6 billion in 2006.
- Key member of a management team that has driven sequential double-digit revenue growth over the past five years. Improved employee and customer satisfaction results year over year since 2001.
- Successfully took the health plan through accreditation by the Joint Commission in 2001 and in 2004 the health plan was awarded an excellent accreditation status by the National Committee for Quality Assurance.
- Developed and implemented a medical expense strategy addressing unit cost and utilization generating savings in excess of \$10 million over a 3-year period.
- Co-implemented with Network Management a Hospital, Physician and Ancillary recontracting strategy that beat unit cost targets and improved network stability.
- Led team responsible for measuring physician performance based on quality and efficiency and implementation of a physician designation and P4P program.
- Consolidated care coordination activities to centralized care management centers. This led to improvements in customer service statistics and efficiencies due to streamlined workflows, staffing and processes.
- Led the turnaround of the Provider-Credentialing unit. Reduced turnaround times for physician credentialing from 180 days to less than 90 days within six months.
- Participated in several committees including Executive Oversight, Network Oversight, Quality Improvement and the Physician Advisory Committee.
- Maintained a part-time Pediatric practice at the Mercy Children's Clinic, Franklin.

Education

University of Ibadan, Nigeria
Medical degree

University of Memphis
Master's Degree in Business Administration

JOHN K. CROWLEY

Amerigroup Iowa - Chief Operating Officer

As a member of the Transition Team, Mr. Crowley will serve as Amerigroup Iowa's Chief Operating Officer

Experience

Anthem, Inc.

Staff Vice President, Medicaid Provider Networks

2014—Present

- Responsible for a team of 119 that own the strategy and governance of Medicaid provider networks, national provider/vendor relationships, provider communications, Medicaid/Medicare provider collaboration and risk contracting support, and support new Medicaid network development.

Consumers' Choice Health Plan of South Carolina

Vice President-Strategic Initiatives

2013 – 2104

- Part of the leadership team that formed a new not for profit health plan entering the health insurance market in South Carolina. Consumers' Choice is the only federally certified "CO-OP" (as defined by the ACA) for South Carolina.
- Operating in a matrix leadership role working for the CEO (over two "CO-OP" plans -- Tennessee and South Carolina). Responsible for ensuring cross department communication and strategic leadership in his physical absence (located in Tennessee). Examples of this leadership are: chairing regular leadership meetings, leading development of 2015 product/pricing/network strategy and acting as local leader (not day to day contact) with Department of Health and Human Services and Department of Insurance.
- Led efforts to develop a new provider network in South Carolina. There was only one hospital and less than 100 physician contracts executed in June 2013. Developed strategy and used historic relationships to build a 6000+ physician and 42 hospital statewide provider network (in four months) that meets adequacy standards and beats pricing goals.

Wellcare Health Plans

VP-Corporate Network Management

2010 - 2013

- Responsible for a team of 52 that owned the governance of provider contracting, all national contract relationships, integrity / compliance of all provider networks and supported new Greenfield network development.
- Inherited national contracting unit that managed 28 contracts and transformed it into a unit that managed in excess 70 contracts. Projected savings driven to enterprise is in excess of \$60 million since 2010.
- Enterprise had over 800 different provider templates in use in February 2010. Created and filed one (except for state required differences) new modular contract template in all markets. Selected and implemented a contract management system in all markets in less than one year.

- Supported network development for Medicare Advantage, Integrated Dual Eligible, Managed Long Term Care, and traditional Medicaid Programs. Team assisted development in Arizona, Texas, Indiana, South Carolina, Texas, Tennessee, Ohio, Missouri, Hawaii, Kentucky, New York, New Jersey, and Florida.

CIGNA Healthcare***VP—Medical Cost Lead—Carolinas Region******2007 – 2010***

- Responsible for a team of 24 that owns our overall unit cost trend, access growth and provider satisfaction results in SC and NC.
- Each year achieved the budgeted pricing unit cost results, met all targets for access growth and provider satisfaction.
- Focused on a 3-year unit cost competitiveness turnaround plan in the Carolinas markets. Identified 41 agreements throughout the Carolinas where CIGNA was disadvantaged to the best in class unit cost competitor by more than 5%. Outcome was that CIGNA Carolinas was within 5% of the best in class unit cost competitor in 7 out of its 10 primary rating areas and within 3% in 4 of these rating areas.

CIGNA Healthcare***VP—Contracting and Provider Services—Mid-Atlantic and Carolinas Region******2005 – 2007***

- Responsible for a team of 35 that owns our overall unit cost trend, access growth and provider satisfaction results in the District of Columbia, Maryland, Virginia, South Carolina, and North Carolina.
- Achieved the budgeted unit cost results, met all targets for access and provider satisfaction.
- Part of the leadership team in Mid-Atlantic that led a turnaround and produced over 95,000 new members in sales results in 2005 and 2006 (while meeting aggressive persistency goals). This result represents the top sales result for CIGNA in the entire country during 2005 and in the top three in 2006.

Education***University of South Carolina 1993******MA Economics******Clemson University 1992******BA Financial Management***

JOHN CHANG, MD

Amerigroup Iowa - Medical Director

As a member of the Transition Team, Dr. Chang will serve as Amerigroup Iowa's Medical Director

PATRICK CONVEY, PHARM. D.

Amerigroup Iowa - Pharmacy Director

As a member of the Transition Team, Mr. Convey will serve as Amerigroup Iowa's Pharmacy Director

Experience

Anthem, Inc.

Staff Vice President, Pharmacy Sales and Account Management - Medicaid

2013 – Present

- Lead a team of regional account directors and pharmacist program managers in seventeen (17) states representing approximately 4.5 million full risk pharmacy lives.
- Act as the primary pharmacy interface with Medicaid business owners, PBM's, and state regulators.
- Manage and deliver pharmacy information, cost/trend detail to help business owners make informed decisions impacting pharmacy operations and cost of care management.
- Collaborate with the pharmacy analytics team to better understand drivers of trend; analyze data and identify opportunities to improve operational efficiencies and to drive cost of care savings strategies to meet pharmacy and company goals.
- Provide pharmacy expertise and leadership for new business launches, ACA expansions, and RFP detail for new and existing business opportunities that drive profitable Anthem Medicaid growth.
- Implement quality initiatives that focus on maximizing quality based revenues from state governments.
- Lead the development of innovative, cost effective pharmacy networks for Medicaid (narrow, specialty, mail); formulary enhancements; carve-in strategies, and other strategic initiatives that differentiate Anthem.
- Partner in the development of provider collaboration initiatives focused on improving pharmacy metrics.
- Lead PBM migration of nearly 3 million Medicaid members between June 2014 and June 2015.
- Represent Anthem Medicaid pharmacy in inter-department, health plan and state pharmacy interactions.
- With regulatory and compliance teams, ensure pharmacy programs meet contractual compliance, regulatory and clinical expectations, and are operating according to state and CMS requirements.
- Support and lead end-to-end Medicaid specific PBM issue resolution (reliability).

WellPoint

Staff Vice President Business Planning and Strategic Initiatives

2011 – 2013

- Supported both Commercial and Government Business EVP's on all aspects of business operation activities targeted to meet goals and drive results, including:
 - Manage and effectively communicate weekly, monthly and quarterly updates on key strategic activities, successes, performance metrics, and progress toward goals.
 - Effectively collect, synthesize, and present information to ensure that decisions are made, documented, and communicated.
 - Facilitate the flow of people and information to the executive leaders to focus attention at the right time and place.

- Develop presentations, talking points, briefings for the EVP's around key strategies and innovation.
- Identify opportunities to continuously improve the day-to-day mechanics of the organization.
- Support the multi-year and annual strategic planning process.
- Facilitate annual goal and performance planning.
- Act as advisor and key point of contact.
- In partnership with corporate communications, develop an annual communication plan that accesses both internal and external communication channels to share Consumer successes, progress toward goals, priority initiatives.
- Facilitate and promote processes that strengthen business partnerships and clarity around expectations.
- Ensure that cross-business collaborative goals and initiatives are aligned and appropriately prioritized.
- Oversee management of the Plan of Record project funding.
- Actively participate in the development and execution of key business initiatives that drive membership growth, operating gain, and administrative efficiencies.
- Lead and manage special projects as they arise; supervise cross-organizational teams and resources; keep the team on task; negotiate with senior level management to build consensus; consistently execute on time.

WellPoint

Regional Vice President, Commercial Cost of Care (West Region)

2008 - 2011

- In partnership with PE&C analytics group and the cost of care (COC) actuarial team, coordinate data mining efforts that evaluate and assess cost trend changes/increases including unit cost, utilization, product mix, shifts in population dynamics, and other contributing factors.
- Analyze medical cost trend data and identify potential COC savings opportunities.
- Develop trend optimization strategies and industry best practices for physician, hospital, and ancillary network and product development, utilization management, and contract negotiation strategies.
- Define and scope the strategic initiatives that best mitigate rising cost trends, drive operating gain, and employ best practices focused on delivering safer and more affordable health care.
- Lead cross-organizational teams to implement the initiatives to deliver predictable, competitive COC trends
- Monitor progress of ongoing COC initiatives/trends versus budgeted forecast levels.
- Provide deep dive COC findings, trend optimization strategies and successes to our business partners.
- Coordinate all COC meetings, annual planning sessions, tracking and reporting of all COC projects.
- Serve on, and lead, enterprise and regional COC committees.
- Identify successful and scalable COC strategies employed in specific markets/regions and roll out to multiple markets and business segments to maximize COC trend mitigation activity.

Education

JULIE SKAGGS

Amerigroup Iowa - Provider Services Manager

As a member of the Transition Team, Ms. Skaggs will serve as Amerigroup Iowa's Provider Services Manager

Experience

Anthem, Inc.

Director, Health Plan Support/National Provider Relations, Medicaid Business Unit

2002 - Current

- 12 years in key roles within Provider Relations, most recently as the Vice President of Provider Relations in Nevada and currently with National Provider Relations supporting several markets.
- Extensive contract negotiation experience for all provider types and products. Experience includes risk, shared savings, pay for performance and capitation. I have overseen, led or participated in many complex negotiations while maintaining an aggressive medical loss ratio.
- Consistently earned some of the highest provider satisfaction results (compared to other markets); achieved through JOC meetings, timely resolution of operational issues and a strategic team of associates dedicated to educating providers.
- Instrumental in the development of the Nevada market for Amerigroup. I joined the Nevada team just prior to go-live and over the course of 4 years built a successful team and network while establishing AGP as the preferred MCO.
- Responsibility for medical savings opportunities (CoC) for the state of Nevada.
- Developed and implemented key initiatives resulting in millions of dollars in savings in Nevada and Texas over the course of many years.
- Developed and administered network strategies based on historical utilization, membership growth, and market conditions that support corporate goals and client expectations.
- Rolled out a Patient Centered Medical Home model in Las Vegas, which covered over 25k lives. First of its kind in Managed Medicaid in the state.
- Created the company's first OB Pay for Performance program as a pilot in Nevada, with plans to implement in Texas.

Aetna Health Plans

Network Manager

1997 - 2001

- Led the Provider Relations staff responsible for the HMO filing, expansion and development of 13 new counties in Texas, meeting an aggressive 6-month deadline.
- Negotiated and managed IPA risk relationships involving 100+ physicians and 50,000 risk members, as well as large multi-hospital systems in Dallas/Ft. Worth.
- Extensive provider contract negotiation, especially with hospitals and key physician groups. Success in completing complex provider agreements filling key network gaps.
- Recruited and trained key staff responsible for servicing of physicians, hospitals and ancillary providers in North Texas.
- Acted as key liaison with Medical Management and Operations staff to identify cost saving opportunities.

Education

University of Texas 1990

ROBIN FAVRET

As a member of the Transition Team, Ms. Favret will serve as Amerigroup Iowa's Information System's Manager

Experience

Anthem, Inc.

Director, Business Relationship Management

2012 – Present

- Provides a dedicated focus to understand the unique operational needs related to process and system optimization; provides short-term and long-term business technology planning.
- Serves as the lead technical contact for the State and associated State partners, participating in technical and operational meetings, audits, and readiness reviews; leverages industry, national, and health plan knowledge to partner with the State in developing solutions to operational or system issues.
- Collaborates with ITS development areas to offer technology solutions by leveraging existing capabilities whenever possible.
- Supports the development of new business requirements and technical solutions in collaboration with the business and ITS development areas.

Amerigroup Corporation

Associate Vice President, Customer Service Account Management

2011 - 2012

- Lead technical contact with the State and associated State partners, participating in technical and operational meetings, audits, readiness reviews, and implementations; leveraged industry, national and health plan knowledge to partner with the State in developing solutions to operational or system issues.
- Collaborated with senior management team to make sure that goals/plans align with broader strategic plans and objectives throughout the organization and Regional Health Plan and Service Center initiatives.
- Made sure that key service and performance measures were communicated to the health plans and customers in a timely, well-executed manner.
- Facilitated multi-functional review sessions with mid- and senior-level staff as appropriate when at-risk issues developed pertaining to State contract compliance; organized communication between the Health Plan and the Customer Service departments when there were escalated issues and was accountable for resolution and execution of plans.

Amerigroup Corporation

Director, Service Operations/Account Management

2009 - 2011

- Functioned as primary contact for State technical business partners and coordinated multi-functional participation in requirement changes and issue resolution for assigned markets.

- Responsible for compliance with all State-requested system changes, ad hoc ITS requests, and ITS contractual deliverables; provided feedback and alternate solutions on State-proposed changes; served as ITS Lead for State audits and assessments, and coordinated on-site reviews.
- Responsible for understanding the requirements of the State programs in terms of business rules, nuances between programs, system requirements, and interdependencies.
- Worked with Customer Service Organization departments, the Health Plan, and Regulatory to resolve operational/ITS issues and business/technical requirement changes, including enrollment, benefit configuration, call metrics, authorizations, pended claims, Provider data, appeals, encounters, Provider contracting, customer service, regulatory reporting, technical interfaces, vendors, and Facets-related issues.
- Coordinated and facilitated multi-functional issue resolution work sessions, emphasizing issue identification, assignment, global correction, and root-cause eradication to facilitate compliance with State contract.

Amerigroup Corporation

Business Analyst Principal II

2000 - 2009

- Responsible for understanding the functional areas of the organization, including claims processing, enrollment and capitation, Provider data management, and encounters reporting, and how these areas interrelate.
- Responsible for gathering requirements; performing analysis; supporting the development testing processes; and understanding the applications, data, and associated technologies for the organization.
- Served as Lead Analyst on new business, new product assessments, and implementations for assigned health plans.
- Served as technical liaison with multiple state agencies and state trading partners, with responsibility for all systems requirements, changes, and ITS compliance per State contracts.
- Responsible for assessing all contracts and regulatory changes for ITS impact
- Served as ITS Lead and managed project deliverables to make sure that all required changes were completed within contractual timeframes.
- Responsible for State ITS audits, assessments, and corrective action remediation activities; provided responses to all ITS questions; coordinated on-site reviews.
- Provided analytical and technical expertise to health plans to support internal initiatives, day-to-day operations, and strategic goals.

Contract Lists (3.2.7.4)

As a new DHS partner, Amerigroup Iowa (Amerigroup) will leverage the broad organizational expertise administering state-sponsored programs of our affiliate health plans and ultimate parent company, Anthem, Inc. (Anthem). As part of the Anthem family of companies, we are the nation’s leading provider of healthcare solutions for state-sponsored programs. Blending local and national resources allows us to stay close to stakeholders in the communities we serve and employ strategies that drive administrative efficiencies and streamline plan administration. Collectively, we have 24 years of experience administering Medicaid, CHIP, and other health programs for our state customers and currently serve more than 5.2 million members through programs across 19 states, including nearly one million in specialized populations (see Figure 3.2.7-1 below). The strength of our experience and organizational structure allows Amerigroup to bring best practices from lessons learned in innovative programs across the country, and focus on opportunities and strategies to improve appropriate utilization, quality gains, and health outcomes for Iowa members, while achieving cost efficiencies for the State.

¹ Membership numbers presented above are inclusive of membership as of December 31, 2014 for our parent company Anthem, Inc. and its state sponsored health plans. Members may be counted in more than one category and numbers may not be exact. In addition, in February 2015, our parent company completed the acquisition of two Florida managed care organizations, Simply Healthcare Plans, Inc. (Simply) and Better Health, Inc. (Better).

Key to our success in Iowa is our shared core competency in successfully designing and implementing complex new programs, including those involving large-scale changes across a care delivery system, in a manner that smoothly transitions members, providers, and stakeholders, while avoiding disruptions in services.

Over the past 24 years, our organization has successfully completed more than 100 public-sector healthcare program implementations, service area expansions, and program enhancements, including three new health plans between February 2012 and January 2013. During that 15-month period, we managed the start-up of Medicaid health plans in Kansas, Louisiana, and Washington, comprising more than 256,000 new members. We completed these implementations without any disruption in service. In fact, our call center abandonment rate during those 11 months was just 1.04 percent.

In our collective history of Medicaid program implementations, neither Anthem nor our affiliate health plans have ever missed an operational start date.

Amerigroup's affiliate health plans and Anthem also have proven track records of managing those administratively complex programs, such as the Iowa Initiative, to serve members of all ages with diverse needs via innovative solutions across the spectrum of physical/behavioral healthcare services. Many have special needs, such as members who are Aged, Blind, or Disabled (ABD); those with intellectual or developmental conditions; children in foster care; or individuals who need Long Term Services and Supports (LTSS).

3.2.7.4.1 Reserved

The State marked this requirement as "Reserved" in the RFP.

3.2.7.4.2 Table

1. Identify in table format all of your publicly-funded managed care contracts for Medicaid, CHIP and other low-income populations within the last five (5) years. If a Bidder does not have direct experience, it may include the experience of its parent company if it includes a parent guarantee with its proposal. For each prior experience identified, provide a brief description of the following:
 - a. Scope of work and covered benefits (state whether physical health, behavioral health, and long-term services and supports (LTSS) were in or out of scope)
 - b. Duration of the contract
 - c. Start and end dates of contract as originally entered into between the parties, including any alteration(s) to the timeframe. If the timeframe was altered, provide the reason(s) for the alteration(s)
 - d. Total value of the Contract at the time it was executed and any alteration(s) to that amount. Provide reason(s) for the alteration(s)
 - e. Contact name and phone number
 - f. Number of members served by population type
 - g. Annual contract payments and description if payment was capitated
 - h. Any improvements made in utilization trends and quality indicators
 - i. How the contract emphasizes member choice, access, safety, independence, and responsibility
 - j. The role of subcontractors, if any

Tables 3.2.7-1 through 3.2.7-77 provide an overview of the publicly-funded managed care contracts of Amerigroup's affiliate health plans for state-sponsored health programs within the last five years.

This document contains certain forward-looking information about us that is intended to be covered by the safe harbor for "forward-looking statements" provided by the Private Securities Litigation Reform Act of 1995. Forward-looking statements are statements that are not generally historical facts. Words such as "expect(s)," "feel(s)," "believe(s)," "will," "may," "anticipate(s)," "intend," "estimate," "project" and similar expressions are intended to identify forward-looking statements, which generally are not historical in nature. These statements include, but are not limited to, financial projections and estimates and their underlying assumptions; statements regarding plans, objectives and expectations with respect to future operations, products and services; and statements regarding future performance. Such statements are subject to certain risks and uncertainties, many of which are difficult to predict and generally beyond our control, that could cause actual results to differ materially from those expressed in, or implied or projected by, the forward-looking information and statements.

A parent guarantee is included at the end of this Section, after page 1193.

h. Improvements in utilization trends and quality indicators	<p>Under the CareMore model of care, dedicated physicians and case management teams coordinate care and transitions for members in the hospital and skilled nursing facility settings.</p> <p>CareMore hospital utilization results are significantly lower than the Medicare Fee-For-Service (FFS) average: 29 percent fewer admissions, 28 percent shorter length of stay, 48 percent fewer bed days, and 34 percent fewer readmissions. With the average CareMore Risk Adjustment Factor, results are even lower than Medicare FFS: 43 percent fewer admissions, 44 percent shorter length of stay, 59 percent fewer bed days, and 48 percent fewer readmissions.</p> <p>With our intense focus on the post-discharge care transition, which includes a follow-up visit with the physician, 30-day medication reconciliation rates in 2013 were 33 percent to 46 percent, compared to the Medicare mean of 17 percent (HEDIS® 2014 Medication Reconciliation Post-Discharge).</p> <p>We offer a comprehensive Diabetes Management Program in the CareMore Care Centers. Based on HEDIS results, more than 80 percent of diabetics have HbA1c blood sugar under control. As of 2013, diabetic amputation rates were 66 percent lower than the Medicare average.</p> <p>Patients in our Chronic Kidney Disease Program are aggressively managed to delay the onset of end-stage renal disease (ESRD). According to our modeling, the average CareMore member with chronic kidney disease Stage 3 would progress to dialysis in slightly over 24</p>				

CareMore Health Plan of Arizona, Inc. – Medicare Advantage SNP Contract H2593

Reference Information (Current/Prior Services Performed For:)

	<p>years, as opposed to less than six years noted in the landmark Modification of Diet in Renal Disease study.</p> <p>For our patients with ESRD, we offer dedicated Case Management and Nurse Practitioners who closely collaborate with nephrologists and dialysis centers. CareMore ESRD program participants are less likely to be hospitalized, with acute admission rates 50 percent below Medicare.</p> <p>Patients in our Chronic Obstructive Pulmonary Disease (COPD) Management Program receive self-care education and management of routine and rescue medications. COPD program members on oxygen have 52 percent fewer acute hospitalizations than the Medicare average.</p>
i. Contract emphasis on member choice, access, safety, independence, and responsibility	<p>As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.</p>
j. Role of any Subcontractors:	<p>Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.</p>

Blue Cross of California (dba Anthem Blue Cross) – Healthy Families HMO and EPO Contract	
Reference Information (Current/Prior Services Performed For:)	
i. Contract emphasis on member choice, access, safety, independence, and responsibility	As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.
j. Role of any Subcontractors:	Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.

h. Improvements in utilization trends and quality indicators	<p>Under the CareMore model of care, dedicated physicians and case management teams coordinate care and transitions for members in the hospital and skilled nursing facility settings.</p> <p>CareMore hospital utilization results are significantly lower than the Medicare FFS average: 29 percent fewer admissions, 28 percent shorter length of stay, 48 percent fewer bed days, and 34 percent fewer readmissions. Taking the average CareMore RAF adjustment, results are even lower than Medicare FFS: 43 percent fewer admissions, 44 percent shorter length of stay, 59 percent fewer bed days, and 48 percent fewer readmissions.</p> <p>With our intense focus on the post-discharge care transition, which includes a follow-up visit with the physician, 30-day medication reconciliation rates in 2013 were 33 percent to 46 percent, compared to the Medicare mean of 17 percent (HEDIS 2014 Medication Reconciliation Post-Discharge).</p> <p>We offer a comprehensive Diabetes Management Program in the CareMore Care Centers. Based on HEDIS results, more than 80 percent of diabetics have HbA1c blood sugar under control. As of 2013, diabetic amputation rates were 66 percent lower than the Medicare average.</p> <p>Patients in our Chronic Kidney Disease Program are aggressively managed to delay the onset of end-stage renal disease. According to our modeling, the average CareMore member with chronic kidney disease Stage 3 would progress to dialysis in slightly over 24 years, as opposed to less than six years noted in the landmark Modification of Diet in Renal Disease study.</p> <p>For our patients with ESRD, we offer dedicated Case Management and Nurse Practitioners who closely collaborate with nephrologists and dialysis centers. CareMore ESRD program participants are less likely to be hospitalized, with acute admission rates 50 percent below Medicare.</p> <p>Patients in our COPD Management Program receive self-care education and management of routine and rescue medications. COPD program members on oxygen have 52 percent fewer acute hospitalizations than the Medicare average.</p>

h. Improvements in utilization trends and quality indicators	<p>West Region Medical Management initiatives include inpatient admission reviews to assure the right level of care for each member's diagnosis, concurrent inpatient case management, post hospitalization discharge planning, comprehensive complex case management to support optimal engagement in the outpatient setting as well as promotion of recommended screenings and testing based on each member's clinical conditions.</p> <p>We have improved our Average Length of Stay (ALOS) in the Skilled Nursing Facility (SNF) setting with improved outcomes for this population. ALOS in 2013 was 16.1 and we achieved an ALOS of 15 in 2014. Our hospital inpatient admissions per 1000 members also decreased year-over-year 2013 to 2014 by 24 percent. This reduction was achieved through an increased utilization of outpatient observation status. This assures that the member receives the care they need at the level of care most appropriate. Through our stabilization case management, we reduced our 30-day all cause readmission rate from 15 percent in 2013 to 13 percent in 2014.</p> <p>We have also implemented focused areas of clinical intervention, including enhanced management of members with frequent ER utilization, health education for our members with chronic diseases, opportunities to redirect outpatient surgical procedures to ambulatory surgical centers, as well as focused care management for our members with end stage renal disease.</p>				
i. Contract emphasis on member choice, access, safety, independence, and responsibility	<p>As the nation's leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.</p>				
j. Role of any Subcontractors:	<p>Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.</p>

h. Improvements in utilization trends and quality indicators	Amerigroup Florida instituted Quality Improvement initiatives on advance care planning, medication review, and functional status assessment procedures in 2014. The health plan is currently collecting data to analyze the results of these initiatives. With respect to the SMMC-LTC Contract Care for Older Adults, we instituted the following measures: required record documentation, face-to-face encounters, Case Manager training, and timeliness of service monitoring. The baseline measurement period was January 1, 2014 – December 31, 2014, and we are presently collecting data for review.				
i. h. Improvements in utilization trends and quality indicators	<p>East Region Medical Management initiatives include inpatient admission reviews to assure the right level of care for each member's diagnosis, concurrent inpatient case management, post-hospitalization discharge planning, comprehensive complex case management to support optimal engagement in the outpatient setting as well as promotion of recommended screenings and testing based on each member's clinical conditions.</p> <p>We have improved our ALOS in the SNF setting with improved outcomes for this population. ALOS in 2013 was 16.1 and we achieved an ALOS of 15 in 2014. Our hospital inpatient admissions per 1000 members also decreased year-over-year 2013 to 2014 by 24 percent. This reduction was achieved through an increased utilization of outpatient observation status. This assures that the member receives the care they need at the level of care most appropriate. Through our stabilization case management, we reduced our 30 day all cause readmission rate from 15% in 2013 to 13 percent in 2014.</p> <p>We have also implemented focused areas of clinical intervention, including health education for our members with chronic diseases, opportunities to redirect outpatient surgical procedures to ambulatory surgical centers as well as focused care management for our members with end stage renal disease.</p>				
i. Contract emphasis on member choice, access, safety, independence, and responsibility	<p>As the nation's leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. g. Annual Contract Payment:	Year: 2010 N/A	Year: 2011 N/A	Year: 2012 N/A	Year: 2013 N/A	Year: 2014 \$165.6 million
Capitated Payment:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No If No, describe: N/A				
h. Improvements in utilization trends and quality indicators	Simply Healthcare Plans' Case and Disease Management (CM/DM) Unit works closely with other departments to promote early identification of members with complex medical conditions and special needs. In 2014, completion of health risk assessments presented challenges. Interventions, such as the recruitment of staff with specific experience to address the needs of those members, and enhancements in reporting capabilities have contributed to the improvement of this quality indicator. Health risk assessment completion for newly				

	<p>enrolled or invited in CM/DM increased to 97.6 percent.</p> <p>Our third quarter 2013 Medical Records Review identified deficiencies in Pediatric Preventive Care documentation. Interventions included increased education of providers and their office staffs, and a follow-up review within six months. By the end of the year, the score for pediatrics documentation increased from 79 to 90 percent</p> <p>Children’s Health Check-Up Program/Early Periodic Screening, Diagnosis, and Treatment (EPSDT) annual measures have improved as evidenced by an analysis of year-over-year 2012-2013 and 2013-1014 results. There was a nine percent Improvement on 90-Day Screening Ratio, five percent on Participation Ratio (now compliant with goal) and nine percent on the Eight-Month Screening Ratio. We achieved this through interventions in various departments, including Provider Relations, Member Services, as well as Quality Management. Maternity Case Managers also assisted by encouraging women who had recently delivered to schedule well-care visits for their babies. An increase in personal interactions between members and Plan staff also contributed to the improved results in 2013-2014.</p> <p>HEDIS Performance Measures rates also improved year-over-year for Better Health, Simply Healthcare Plans. An example is Adult BMI Assessment (ABA). For Simply Healthcare, the rate increased to 84.90 percent in 2014 from 63.70 percent in 2013. Better Health’s rate increased from 42.0 percent in 2013 to 60.3 percent in 2014. Improvement strategies included a fax blast to providers about the importance of assessing BMI in their adult patients, recruitment of case managers to focus specifically on helping members identified as obese by their primary care provider with weight loss efforts, and a weight loss incentive program for members with a BMI ≥ 30.</p>
<p>i. Contract emphasis on member choice, access, safety, independence, and responsibility</p>	<p>As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.</p>
<p>j. Role of any Subcontractors:</p>	<p>Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.</p>

h. Improvements in utilization trends and quality indicators	<p>Amerigroup Community Care Georgia has extensive experience in reducing preventable ER visits. Through targeted network expansion, information sharing, and incentive payments, namely with our medical homes, we have been able to drive an overall 11.3 percent decrease in ER from 2012-2014 and an increase in PCP and Urgent Care Center visits. For a comparison, six months before and six after ER case management in 2013, there was a 22 percent decrease in total ER visits, 30 percent decrease in total inpatient visits, and five percent decrease in total outpatient. Our team notifies key hospitals of members who frequently access the ER through our Case Management Program. We share weekly ER utilization reports</p>				

	<p>and scorecards with high volume practices to assist them with tracking and population management. In addition to our quality gain share program, we incentivize appointments after hours and outside of normal business hours so that members have access to appropriate care.</p> <p>We enhanced our pharmacy program in 2012 with PCP lock-in. Before this enhancement in 2011 and 2012, for a comparison three months prior and after lock-in, there was an average 25 percent decrease in average number of prescriptions. After implementing the enhancement, that average jumped to 43.5 percent in 2013 and 2014. We also offer Right Care, Place, and Time education such as “Ask my PCP first” to members, Being Healthy Brings Rewards, and interventions such as clinic days and health promotions calls and mailings. Amerigroup Community Care Georgia is NCQA ranked #32 nationally, #1 in Georgia, #1 in region, and #2 in the company nationally. We were awarded auto-assignment for seven out of 12 six-month cycles based on state quality indicators. Our success stems from a high-touch collaboration approach with high-volume practices to improve quality, produce significant cost savings, and increase our membership in high quality/low cost groups.</p> <p>In 2011, we began with five provider groups, 12 sites, 61 providers, and 20,537 members in Patient-Centered Medical Homes. In 2014, we grew to include 19 provider groups, 75 sites, 293 providers, and 52,984 members.</p>
<p>i. Contract emphasis on member choice, access, safety, independence, and responsibility</p>	<p>As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.</p>
<p>j. Role of any Subcontractors:</p>	<p>Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.</p>

h. Improvements in utilization trends and quality indicators	<p>Central Region Medical Management initiatives include inpatient admission reviews to assure the right level of care for each member's diagnosis, concurrent inpatient case management, post hospitalization discharge planning, comprehensive complex case management to support optimal engagement in the outpatient setting as well as promotion of recommended screenings and testing based on each member's clinical conditions.</p> <p>We have improved our ALOS in the SNF setting with improved outcomes for this population. ALOS in 2013 was 16.1 and we achieved an ALOS of 15 in 2014. Our hospital inpatient admissions per 1000 members also decreased year-over-year 2013 to 2014 by 24%. This reduction was achieved through an increased utilization of outpatient observation status. This assures that the member receives the care they need at the level and intensity that is most appropriate. Through our stabilization case management, we reduced our 30-day all cause readmission rate from 15 percent in 2013 to 13 percent in 2014.</p> <p>We have also implemented focused areas of clinical intervention, including: enhanced management of members with frequent ER utilization, health education for our members with chronic diseases, opportunities to redirect outpatient surgical procedures to ambulatory surgical centers as well as focused care management for our members with end stage renal disease.</p>				
i. Contract emphasis on member choice, access, safety, independence, and responsibility	As the nation's leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.				
j. Role of any Subcontractors:	Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.

h. Improvements in utilization trends and quality indicators	<p>Anthem has been serving Hoosier Healthwise (HHW) members, including those who qualify under TANF and CHIP, since 2007. We have decreased utilization by addressing unnecessary utilization and through programs to improve quality and our members’ overall health. From 2012 to 2013, high tech radiology utilization decreased 12.6 percent, outpatient surgeries 2.8 percent, inpatient admissions per thousand members 4.4 percent, and specialist physician visits 2.8 percent.</p> <p>We have been serving the Healthy Indiana Plan (HIP) population since 2008 and have had success decreasing utilization among those members. From 2012 to 2013, high tech radiology decreased 4.2 percent, with a corresponding 13.3 percent cost savings; outpatient surgery</p>				

	<p>utilization was down 3 percent; and inpatient admissions per thousand and inpatient days per thousand dropped 16.5 and 19.4 percent respectively. Emergency room visits for members were also down 11.1 percent.</p> <p>We have also improved quality in both Hoosier Healthwise and Healthy Indiana Plans. From reporting year 2013 to reporting year 2014, Indiana Medicaid improved our scores in 33 HHW HEDIS measures. In the same period, for Healthy Indiana Plan, we improved in 20 measures. In 2014, we achieved the 50th percentile in 16 of 28 HHW measures and 13 of 15 HIP measures. Indiana Medicaid experienced incremental increases in each of the last two HEDIS seasons in 16 HHW and eight HIP measures. Our best-in-class Behavioral Health Transition Appointment Program has driven our Follow up after Hospitalization rates for Hoosier Healthwise, achieving the 75th or 90th percentile year after year.</p>
<p>i. Contract emphasis on member choice, access, safety, independence, and responsibility</p>	<p>As the nation's leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. h. Improvements in utilization trends and quality indicators	<p>Health Homes</p> <p>Amerigroup Kansas, worked with the state over an 18-month period to implement health homes for those with Serious Mental Illness (SMI) in August 2014. The model includes the MCO as the Lead Entity with Community Mental Health Centers and other agencies and providers acting as Health Home Providers.</p> <p>Amerigroup has experienced a very high level of interest from members identified as meeting criteria for the health home, and we currently have more than 7,000 of them participating, with higher than an 85 percent retention rate.</p> <p>Through our coordination processes, we are able to work with our community partners to better support those members with SMI in their home communities by developing Health Action Plans that address their health goals.</p> <p>Intellectual Disabilities/Developmental Disabilities (ID/DD)</p> <p>Amerigroup Kansas worked with the state, as well as community partners and providers, to implement a carve-in of ID/DD Long-term Services and Supports (LTSS) for our 3,500 participating members from FFS into KanCare, the Medicaid Managed Care program on</p>				

	February 1, 2014. This year-long process included stakeholder, member, and family engagement; piloting service delivery, claims, and administrative processes, as well as intensive community education. Although the ID/DD waiver participants had been enrolled into KanCare for other Medicaid services, the LTSS transition represented a very large paradigm shift for them. Through collaboration with our state and community partners, we effected a seamless implementation where members benefitted from the continuity and support of their service plans and service providers.
i. Contract emphasis on member choice, access, safety, independence, and responsibility	As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. h. Improvements in utilization trends and quality indicators	<p>Amerigroup Maryland implemented its Corrective Managed Care Program (CMCP), which identifies members who need additional clinical supports to better manage their pharmaceutical utilization. Our Information Technology team addresses the programmatic problem of pharmaceutical misuse, abuse, and diversion by using data to provide members with care management services in collaboration with pharmacies, physicians, and our state partner. The goal is improving members' health outcomes, promoting medication according to medical guidelines, and eliminating inappropriate prescription drug expenditures. CMCP has had a significant impact on overall pharmaceutical spending – decreasing spending on opiates by 30 percent and non-opiate prescription drugs by 25 percent. It also lowered the number of pharmaceutical scripts written – 36 percent fewer for opiates and 27 percent fewer for non-opiate prescription drugs – while also reducing the number of ER visits by 26 percent.</p> <p>Amerigroup Maryland's CMCP reduced overall health spending by approximately 20 percent for members identified for the intervention. It was driven by a decline in unnecessary pharmaceutical scripts and avoidable medical incidents, such as non-emergent ER visits. Overall, the program promotes ongoing quality of care for all members, as well as more efficient delivery of services by limiting waste, fraud, and abuse, while preserving valuable resources for those who need them. It supports our ability to deliver the right care, at the right time, and at the right location.</p>				
i. Contract emphasis on member choice, access, safety, independence, and responsibility	<p>Amerigroup is the nation's leader in state-sponsored and other publicly funded health programs because we are passionate about promoting a health care delivery system that emphasizes member choice, independence and engagement. All Amerigroup health plans across the nation maintain a member-centered care model that is the core of all we do. It emphasizes member responsibility in every aspect of our programs – from our most basic member communications and outreach through our selection of value-added services and member incentive programs. We deliver exceptional member access to care by developing and maintaining robust provider networks that reflect the diversity, geographic location, and preferences of our members. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.</p>				
j. Role of any Subcontractors:	<p>Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.</p>

h. Improvements in utilization trends and quality indicators	<p>Amerigroup Nevada’s Quality Management and Improvement Program is essential to making sure our members’ medical and service needs are being met, and that we are continuously improving the quality of care and services we provide.</p> <p>Inpatient Utilization Goals have been met and admissions were below target. Neonatal Intensive Care Unit (NICU) admission and bed days, OB/Nursery admission and bed days, and Med/Surg admission and bed days were all below target. Nevada implemented a Hospitalists Program to assist with inpatient management. Pre-term delivery rate decreased from 12.5/1000 to 8.6/1000 over a two-year period.</p> <p>Amerigroup Nevada assesses our members’ case management experience via Morpace</p>				

	<p>satisfaction survey and monitoring member complaint data. The quantitative analysis of the case management member satisfaction survey data and the case management complaint data shows consistently high performance year over year. During 2014, Amerigroup’s performance goal of 90% “Very Satisfied”/“Satisfied” was met for member satisfaction with Amerigroup Health Plan’s Complex Care Management Program.</p> <p>The 2014 quality interventions were possible because we added additional quality resources (clinical staff), which allowed us to dedicate more focused improvement on both the member and provider side to close HEDIS gaps. On the provider side, we established a collaborative, quality network strategy through more focused and higher quality public relations and outreach.</p>
i. Contract emphasis on member choice, access, safety, independence, and responsibility	<p>As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. <p>h. Improvements in utilization trends and quality indicators</p>	<p>Under the CareMore model of care, dedicated physicians and case management teams coordinate care and transitions for members in the hospital and skilled nursing facility settings.</p> <p>CareMore hospital utilization results are significantly lower than the Medicare FFS average: 29 percent fewer admissions, 28 percent shorter length of stay, 48 percent fewer bed days, and 34 percent fewer readmissions. Taking the average CareMore RAF adjustment, results are even lower than Medicare FFS: 43 percent fewer admissions, 44 percent shorter length of stay, 59 percent fewer bed days, and 48 percent fewer readmissions.</p> <p>With our intense focus on the post-discharge care transition, which includes a follow-up visit with the physician, 30-day medication reconciliation rates in 2013 were 33 percent to 46 percent, compared to the Medicare mean of 17 percent (HEDIS 2014 Medication Reconciliation Post-Discharge).</p> <p>We offer a comprehensive Diabetes Management Program in the CareMore Care Centers. Based on HEDIS results, more than 80 percent of diabetics have HbA1c blood sugar under control. As of 2013, diabetic amputation rates were 66 percent lower than the Medicare average.</p> <p>Patients in our Chronic Kidney Disease Program are aggressively managed to delay the onset of end-stage renal disease. According to our modeling, the average CareMore member with chronic kidney disease Stage 3 would progress to dialysis in slightly over 24 years, as opposed to less than 6 years noted in the landmark Modification of Diet in Renal Disease study.</p> <p>For our patients with ESRD, we offer dedicated case management and nurse practitioners who closely collaborate with nephrologists and dialysis centers. CareMore ESRD program participants are less likely to be hospitalized, with acute admission rates 50 percent below Medicare.</p> <p>Patients in our COPD Management Program receive self-care education and management of routine and rescue medications. COPD program members on oxygen have 52 percent fewer acute hospitalizations than the Medicare average.</p>				
<p>i. Contract emphasis on member choice, access, safety, independence, and responsibility</p>	<p>As the nation's leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. <p>h. Improvements in utilization trends and quality indicators</p>	<p>East Region Medical Management initiatives include inpatient admission reviews to assure the right level of care for each member's diagnosis, concurrent inpatient case management, post-hospitalization discharge planning, comprehensive complex case management to support optimal engagement in the outpatient setting as well as promotion of recommended screenings and testing based on each member's clinical conditions.</p> <p>We have improved our ALOS in the SNF setting with improved outcomes for this population. ALOS in 2013 was 16.1 and we achieved an ALOS of 15 in 2014. Our hospital inpatient admissions per 1000 members also decreased year-over-year 2013 to 2014 by 24 percent. This reduction was achieved through an increased utilization of outpatient observation status. This assures that the member receives the care they need at the level of care most appropriate. Through our stabilization case management program, we reduced our 30-day all cause readmission rate from 15 percent in 2013 to 13 percent in 2014.</p> <p>We have also implemented focused areas of clinical intervention, including health education for our members with chronic diseases, opportunities to redirect outpatient surgical procedures to ambulatory surgical centers, and focused care management for our members with ESRD.</p>
<p>i. Contract emphasis on member choice, access, safety, independence, and responsibility</p>	<p>Amerigroup is the nation's leader in state-sponsored and other publicly funded health programs because we are passionate about promoting a health care delivery system that emphasizes member choice, independence and engagement. All Amerigroup health plans across the nation maintain a member-centered care model that is the core of all we do. It emphasizes member responsibility in every aspect of our programs – from our most basic member communications and outreach through our selection of value-added services and member incentive programs. We deliver exceptional member access to care by developing and maintaining robust provider networks that reflect the diversity, geographic location, and preferences of our members. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.</p>
<p>j. Role of any Subcontractors:</p>	<p>Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.</p>

h. Improvements in utilization trends and quality indicators

Date of Study Period: 1/1/2009 to 12/31/2012

In February 2010 following an analysis of the HEDIS rates for 2009, Amerigroup chose to focus improvement on selected Comprehensive Diabetes Care (CDC) of HbA1c and LDL-C testing screening measures for a performance improvement project (PIP). The decision was made based on far-reaching implications in the long term care and progression of diabetes, QMC

Study question(s):

Study question 1: Does outreach to non-dual CoLTS members with diabetes that meet HEDIS specifications improve the percentage of members that receive one or more HbA1c test during the measurement period?

Study question 2: Does outreach to non-dual CoLTS members with diabetes that meet HEDIS specifications improve the percentage of members that receive one or more LDL-C screening during the measurement period?

Summary of interventions from 2010 -2012

- In April of 2010, AGP pilot Lab-In-An Envelope through Home Healthcare Laboratory of America (HHLA). HHLA is a Lab Corp company that offers an innovative system designed to accommodate specimen collection by members in the convenience of their own homes. The program allows for HgbA1c and LDL-C testing of members through a finger stick and the sample is collected on a card. The specimen is then packaged in a pre-paid envelope for easy mailing to the laboratory.
- In November of 2010, AGP obtained approval for a Medicaid Outreach Associate to address member's potential knowledge deficit related to importance of diabetes and annual exams, potential for missed opportunities to screen during a sick or well visit, transportation barriers to healthcare and support services, particularly if the lab is not located at the doctor's office (includes lack of understanding about transportation services provided by AGP), and missed appointments for screening.
- Provider Interventions included coordinating and scheduling with the practitioner for member appointments; and requests that the practitioner consider addressing the wellness services or screening tests that our claims data indicate that the member is lacking.
- Member Interventions included a letter to AGP members who have been identified as having diabetes from our claims and pharmacy data, and informing them of important tests or screenings which should be done annually to monitor their diabetes.
- And a second member intervention mailed to AGP member after Member Outreach Call to member. This letter reminded the member of their appointment date with their practitioner (determined during Member Outreach call) and of the important health screenings or lab tests that our claims data indicates they have not yet had this year.
- January 1-September, 15, 2012: the Medicaid Member Outreach Associate continued to make calls to those members identified as having diabetes to encourage them to obtain the necessary testing to monitor their diabetes throughout the measurement period. The Outreach Associate also makes appointments and arranges transportation for the member when the member agrees to the offer of assistance in appointments and transportation. The Outreach Associates aides the member by 3-way call with the providers. Member Outreach Associate has made 1,921 calls. Of note, the Member Outreach Associate is bilingual.

Results Measurement and measurement for the periods 2011-2012 demonstrated significant improvement

Baseline: HEDIS 2010 was 68.50% - 76.52% for HbA1c testing

Re-measurement 1: HEDIS 2011 rate of 82.46% demonstrated statistically significant improvement, and exceeded NCQA's 50th percentile mark of 81.1% for the HEDIS Comprehensive Diabetes Care measure for HbA1c testing.

Re-measurement 2 HEDIS year 2012 (1/1/11 through 12/31/11) was 86.21%. The HEDIS 2011 rate of 86.21% is above the upper limit of 76.52%. Therefore, there was statistically significant improvement .

Baseline: HEDIS 2010 was (LDL-C screening in 2010 was 60.53%

Re-measurement 1: HEDIS 2011 rate of 71.33% is above the upper limit of 64.93% and demonstrated statistically significant improvement . This also exceeded the State of New Mexico benchmark of 71%, but was below NCQA's 50th percentile mark of 75.4% for the HEDIS Comprehensive Diabetes Care measure for LDL-C screening.

i. Contract emphasis on member choice, access, safety, independence, and responsibility	<p>As the nation's leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.</p>				
j. Role of any Subcontractors:	<p>Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.</p>

h. Improvements in utilization trends and quality indicators	<p>East Region Medical Management initiatives include inpatient admission reviews to assure the right level of care for each member's diagnosis, concurrent inpatient case management, post-hospitalization discharge planning, comprehensive complex case management to support optimal engagement in the outpatient setting as well as promotion of recommended screenings and testing based on each member's clinical conditions.</p> <p>We have improved our ALOS in the SNF setting with improved outcomes for this population. ALOS in 2013 was 16.1 and we achieved an ALOS of 15 in 2014. Our hospital inpatient admissions/1000 members also decreased year-over-year 2013 to 2014 by 24 percent. This reduction was achieved through an increased utilization of outpatient observation status. This verifies that members receive the care they need at the level of care most appropriate. Through our stabilization case management, we reduced our 30-day all cause readmission rate from 15 percent in 2013 to 13 percent in 2014.</p> <p>We have also implemented focused areas of clinical intervention, including health education for our members with chronic diseases, opportunities to redirect outpatient surgical procedures to ambulatory surgical centers as well as focused care management for our members with end stage renal disease.</p>

a. Scope of work and covered benefits	Participating at-risk MCO in Ohio’s Medicaid managed care program for the counties of Butler, Hamilton, Warren, Clermont, Clinton, Brown, Highland, Adams, Darke, Preble, Montgomery, Miami, Shelby, Greene, Clark, and Champaign				
	Responsible for the provision of physical health services, behavioral health services, LTSS, dental, vision, pharmacy, and non-emergency medical transportation				
b. Duration of Contract	Eight years				
c. Contract start/end dates, alterations to timeframe, and reason	Contract Start and End Dates: 7/1/12 – 6/30/13 Original Contract Start: 9/1/05				
d. Total value of the Contract at execution and any alteration(s) to that amount. Provide reason(s) for alteration(s)	CONTAINS CONFIDENTIAL INFORMATION				
e. Contact name and phone number	Dale Lehmann, Chief, Managed Care Contracting Ohio Department of Job and Family Services 614-752-4778* Dale.Lehmann@medicaid.ohio.gov				
f. Number of Members and Population Type (e.g., Medicaid, CHIP, Other Low Income Individuals. ABD, BH, TANF, Foster Care Children, SNP, publicly funded) for each Year of the Contract	Year: 2010	Year: 2011	Year: 2012	Year: 2013	Year: 2014**
	Population: Medicaid	Population: Medicaid	Population: Medicaid	Population: Medicaid	Population: Medicaid
	No. of Members: 55,460	No. of Members: 55,379	No. of Members: 53,672	No. of Members: 50,000	No. of Members: N/A
g. Annual Contract Payment:	Year: 2010 \$151.57 million	Year: 2011 \$151.56 million	Year: 2012 \$173.85 million	Year: 2013 \$80 million	Year: 2014 N/A

Capitated Payment:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No If No, describe: N/A
h. Improvements in utilization trends and quality indicators	Through back-to-basics Utilization Management (UM) and Care Management (CM) approaches, Amerigroup Ohio reduced its overall inpatient admissions significantly from 115.9 admissions/1000 in 2008 to 86.3 in 2012 – a 25 percent reduction. To do that, we implemented the CI3 risk stratification model to verify that we were focusing on the members with the highest risk for manageable conditions and those with the highest likelihood of inpatient admissions. In addition, we improved our process to closely manage our daily census, including educating providers on criteria we were using. We also built better relationships with our providers, implemented face-to-face CM visits, and worked with them more effectively on discharge planning.
i. Contract emphasis on member choice, access, safety, independence, and responsibility	As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a person-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.
j. Role of any Subcontractors:	Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.

Capitated Payment:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No If No, describe: N/A				
h. Improvements in utilization trends and quality indicators	Amerigroup Tennessee has used all the typical managed care programs to help keep utilization trends below national norms over the past seven years, with our primary success stemming from behavioral services, which have experienced negative trends over the same period. We have also had some significant re-contracting projects over the past five years after evaluating rate reduction opportunities from the original provider agreements put in place back in 2007 (note that Tennessee does <u>not</u> have Medicaid rates set by the state). The decreased utilization trends for long-term care resulted from efforts to keep new enrollees in community settings and out of nursing facilities, reducing the percentage of these members in nursing facilities from more than 80 percent in 2010 to about 55 percent in 2014.				
i. Contract emphasis on member choice, access, safety, independence, and responsibility	As the nation's leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. h. Improvements in utilization trends and quality indicators	<p>Central Region Medical Management initiatives include inpatient admission reviews to assure the right level of care for each member's diagnosis, concurrent inpatient case management, post-hospitalization discharge planning, comprehensive complex case management to support optimal engagement in the outpatient setting as well as promotion of recommended screenings and testing based on each member's clinical conditions.</p> <p>We have improved our ALOS in the SNF setting with improved outcomes for this population. ALOS in 2013 was 16.1 and we achieved an ALOS of 15 in 2014. Our hospital inpatient admissions per 1000 members also decreased year-over-year 2013 to 2014 by 24 percent. This reduction was achieved through an increased utilization of outpatient observation status. This confirms that members receive the care they need at the most appropriate level. Through our stabilization case management, we reduced our 30 day all cause readmission rate from 15 percent in 2013 to 13 percent in 2014.</p>				

	We have also implemented focused areas of clinical intervention, including enhanced management of members with frequent ER utilization, health education for our members with chronic diseases, opportunities to redirect outpatient surgical procedures to ambulatory surgical centers as well as focused care management for our members with end stage renal disease.
i. Contract emphasis on member choice, access, safety, independence, and responsibility	As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. h. Improvements in utilization trends and quality indicators	<p>We implemented two recent clinical initiatives in Texas to improve the care delivered to our pediatric Medicaid populations: Improving Care for Members with Asthma and Improving Access to Preventive Care for Physical and Behavioral Health.</p> <p>In 2011, 3,688 STAR members were identified as having persistent asthma, according to the Medication Management for People with Asthma measure. We also noted that only half of the members were adherent with controller medications.</p> <p>We instituted a Post-Emergency room Program to prevent further emergency room visits and inpatient admissions. Our interventions were successful in improving the care for our STAR members with asthma. We achieved a statistically significant 15.28-percent reduction in the asthma-related admission rate from 2012 to 2013, exceeding our goal of a 10-percent reduction in asthma-related admissions. We also achieved a statistically significant improvement for the percentage of members who remained on an asthma controller medication for at least 50 percent of their treatment period, increasing the rate by 3.39 percentage points.</p> <p>Amerigroup developed an initiative to improve access to preventive care for our members. Our HEDIS 2012 scores for Adolescent Well-Care Visits exceeded the NCQA 2012 Quality Compass[®] 75th percentiles. In an effort to reach the 90th percentile, we employed the following strategies as part of this initiative:</p> <ul style="list-style-type: none"> • Conducted outreach calls to members who had not had adolescent well-care visits and provided assistance with identifying a doctor in their area, scheduling the appointment, and arranging transportation • Enhanced provider communication by sending quarterly reports to PCPs indicating which members on their panel required preventive care visits (Texas Health Steps visits) in 2013 • Initiating electronic appointment scheduling—specialized software loads provider appointments along with a list of members assigned to that PCP, which is then used when Amerigroup calls, members to set up appointments (from October 2013 to May 2014, Amerigroup scheduled 1,066 appointments.) • Implementing provider incentives to encourage delivery of preventive care with their members <p>We achieved statistically significant improvement in our Adolescent Well-Care measure:</p> <ul style="list-style-type: none"> • Adolescent Well-Care Visit Rate decreased to 60.47 percent in 2013 from 62.77 percent in 2011 • Pediatric Asthma Admission Rate decreased 92.03 percent/100,000 in 2012 to 77.97 				

	<p>percent/100,000percent in 2013</p> <ul style="list-style-type: none"> Medication Management for People With Asthma (HEDIS 50 percent controller rate) improved from 40.72 percent in 2012 to 44.11 percent in 2013

Payment:	\$1.36 billion	\$1.43 billion	\$1.70 billion	\$2.07 billion	\$2.06 billion
Capitated Payment:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No If No, describe: N/A				
h. Improvements in utilization trends and quality indicators	House Call Doctors (HCD) originated in Austin/San Antonio markets in late 2011. This is an in-home medical care program, primarily implemented to make sure our homebound and complex chronically ill members receive adequate medical attention and service. From the utilization prospective, the goal of this pilot program was to pursue home-based interventions that would ultimately improve ER services and inpatient admission rates. Under the HCD program, not only have we delivered quality medical interventions and improved member satisfaction, but we have also decreased unnecessary medical care. Under the Austin Health Plan, overall inpatient admissions decreased 23 percent, while utilization of ER services improved 48 percent. Similarly, under the San Antonio Health Plan, overall inpatient admissions decreased 49 percent, while ER utilization improved 15 percent.				
i. Contract emphasis on member choice, access, safety, independence, and responsibility	As the nation's leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.				
j. Role of any Subcontractors:	Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.

h. Improvements in utilization trends and quality indicators	<p>Stabilization Program. Amerigroup established a stabilization program to augment our UM team’s discharge planning efforts and to prevent unnecessary readmissions. Members who are at risk receive intensive outreach and individual coaching until they are stabilized at home or in a community setting.</p> <p>The program also targets Members with behavioral health diagnoses with specialized supports. The effectiveness of the program is demonstrated by a 51.8 percent decrease in readmission during the first nine months of the program for STAR+PLUS in the Tarrant service area.</p> <p>Initiative to Reduce Readmission Rates for STAR+PLUS through a Stabilization Program. In 2012, Amerigroup launched our advanced Stabilization Program to augment our Utilization Management team’s discharge planning efforts for STAR+PLUS Members in the Tarrant service area. The goal of the Stabilization Program is to reduce overall 30-day re-admission rates and to facilitate a smooth transition</p> <ul style="list-style-type: none"> • between inpatient settings and the home or other community settings by providing intensive, short-term support. Members who are at risk receive intensive outreach and individual coaching until they are stabilized at home or in a community setting. <i>As a result of the Stabilization Program, we achieved a statistically significant reduction in 30-day readmission rates from 14.9 percent to 7.2 percent.</i> 															
i. h. Improvements in utilization trends and quality indicators	<p>West Region Medical Management initiatives include inpatient admission reviews to verify the right level of care for each member's diagnosis, concurrent inpatient case management, post-hospitalization discharge planning, comprehensive complex case management to support optimal engagement in the outpatient setting, and promotion of recommended screenings and testing based on each member's clinical conditions.</p> <p>We have improved our ALOS in the SNF setting with improved outcomes for this population. ALOS in 2013 was 16.1 and we achieved an ALOS of 15 in 2014. Our hospital inpatient admissions/1000 members also decreased year-over-year 2013 to 2014 by 24 percent. We achieved the reduction by increased utilization of outpatient observation status. This confirms that members receive the care they need at the most appropriate level. Through our stabilization case management, we reduced our 30-day all cause readmission</p>				

	<p>rate from 15 percent in 2013 to 13 percent in 2014.</p> <p>We have also implemented focused areas of clinical intervention including enhanced management of members with frequent ER utilization, health education for our members with chronic diseases, opportunities to redirect outpatient surgical procedures to ambulatory surgical centers as well as focused care management for our members with ESRD.</p>
i. Contract emphasis on member choice, access, safety, independence, and responsibility	<p>As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. h. Improvements in utilization trends and quality indicators	<p>Anthem's HealthKeepers Plus Quality Management and Improvement Program is essential to making sure our members' medical and service needs are being met, and that the quality of care and services are continuously improved. Twenty-six measures and/or sub-measures increased in 2014 in comparison to 2013. We maintained commendable NCQA status with a final HEDIS Effectiveness of Care score of 17.3293 for MY 2013. In March 2015, Virginia underwent its NCQA Resurvey and scored 49.94/50.00 points on standards – or 99 percent. The Virginia Market was in its infancy in 2014; therefore, it was a year of recruitment of staff, defining processes and policy and workflow development. The Clinic Day Program, a Quality Program highlight, was not implemented until fourth quarter 2014. It was specifically designed to enhance provider relationships with the Plan and close member HEDIS gaps. On the provider side, we started building a collaborative, quality network strategy through more quality-PR outreach, clinical detailing, and a quality bonus payment program (PQIP). PQIP has led to a partnership with one of the largest provider groups in the State, which encompasses every Federally Qualified Health Center and serves more than 18,000 members. New and/or ongoing quality interventions include:</p> <ul style="list-style-type: none"> • Leveraging technology to further expand the Clinic Day Program at large provider practices • Implementing an Maternal Postpartum Outreach Program • Reporting (Provider Gaps in Care) to identify those who are missing recommended care and services • Implementing member incentives for immunizations, well-child, prenatal, postpartum, and diabetic care and services. <p>The mission of the Health Care Management (HCM) Department is to coordinate timely, cost-effective, integrated services that promote positive clinical outcomes for individual members. The goal of complex case management is to help members regain optimum health or improved functional capability in the right setting and in a cost-effective manner. It involves comprehensive assessment of the member's condition, determination of available benefits and resources, and development and implementation of a case management plan with performance goals, monitoring, and follow up. Virginia Anthem HealthKeepers Plus assesses member case management experience via a telephone satisfaction survey and by monitoring member complaint data. Quantitative analysis of survey and case management complaint data shows consistently high performance year-over-year. During 2014, Anthem's performance goal of 80 percent Member Very Satisfied/Satisfied was met with our Complex Care Management Program. Survey results showed a 90 percent member overall satisfaction with the program. Member satisfaction scores on the remaining measures ranged from 88 to 92 percent. Sixty one percent of members gained more confidence in their ability to take their medication after participating in the program. Forty-six percent of members indicate that their ability to talk with their PCP about their health has improved.</p> <p>The HCM Utilization Department of HealthKeepersPlus sees that members receive the right care at the right time in the right setting. In 2014, admission trends rose two percent, reflecting greater than anticipated growth for both TANF and SSI populations via transition from the loosely managed State FFS program. Recognizing the challenge, the HCM Utilization Management (UM) unit moved to a regional integrative care "pod" structure to improve</p>				

	<p>relationships with providers, address our members’ medical and behavioral needs, and improve coordination/reconciliation of hospital and outpatient pharmacy prescriptions. Pods are composed of UM nurses, CM nurses, behavioral health nurses, a pharmacist, and a medical director. For this past year, the department focused pods on:</p> <ol style="list-style-type: none"> 1. Expanding our successful 2013 initiative that focused on whether requests for admissions that are typically one day and under Milliman Care Guidelines can be managed under observation care 2. Reducing hospital length of stay for members with complex admissions through improved discharge and care transition plans. <p>In 2014, these programs were very successful, resulting in an aggregate savings of approximately \$1million.</p>
i. Contract emphasis on member choice, access, safety, independence, and responsibility	<p>As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.</p>
j. Role of any Subcontractors:	<p>Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.</p>

**Data provided are combined totals for several contracts in Virginia: Medallion 3.0 Managed Care (formerly Medallion II Managed Care) Contract and Contract to Provide Managed Care Services for the Family Access to Medical Insurance Security (FAMIS) Program.*

h. Improvements in utilization trends and quality indicators	<p>Anthem’s HealthKeepers Plus Quality Management and Improvement Program is essential to making sure our members’ medical and service needs are being met, and that the quality of care and services are continuously improved. Twenty six measures and/or sub-measures increased in 2014 over 2013. We maintained commendable NCQA status with a final HEDIS Effectiveness of Care score of 17.3293 for MY 2013. In March 2015, Virginia underwent its NCQA resurvey and scored 49.94/50.00 points on standards – or 99 percent.</p> <p>The Virginia market was in its infancy in 2014; therefore, it was a year of staff recruitment, defining processes and policy, and workflow development. The Clinic Day Program, a Quality Program highlight, was not implemented until fourth quarter 2014. It was specifically designed to enhance provider relationships with the Plan and close member HEDIS gaps. On the provider side, we started building a collaborative, quality network strategy through more quality-PR outreach, clinical detailing, and a quality bonus payment program (PQIP). PQIP has led to a partnership with one of the largest provider groups in the State, which encompasses every Federally Qualified Health Center and serves more than 18,000 members.</p> <p>New and/or on-going quality interventions include:</p> <ul style="list-style-type: none"> Leveraging technology to further expand the Clinic Day Program at large provider practices Implementing a Maternal Postpartum Outreach Program Reporting (Provider Gaps in Care) to identify those who are missing recommended care and services Implementing member incentives for immunizations, well-child, prenatal, postpartum, and diabetic care and services. <p>The mission of the Case Management Department is to coordinate timely, cost-effective, integrated services to promote positive clinical outcomes for individual members. The goal of complex case management is to help members regain optimum health or improved functional capability in the right setting and in a cost-effective manner. It involves comprehensive assessment of the member’s condition; determination of available benefits and resources; and development and implementation of a case management plan with performance goals, monitoring, and follow up.</p> <p>Virginia Anthem HealthKeepers Plus assesses member case management experience via a telephone satisfaction survey and by monitoring member complaint data. Quantitative analysis of survey and case management complaint data shows consistently high performance year-over-year. During 2014, Anthem’s performance goal of 80 percent Member Very Satisfied/Satisfied was met by our Complex Care Management Program. Survey results showed 90 percent member overall satisfaction with the program. Member satisfaction scores on the remaining measures ranged from 88 to 92 percent. Sixty one percent of members gained more confidence in their ability to take their medication after participating in the program. Forty six percent indicate that their ability to talk with their PCP about their health has improved.</p> <p>The HCM UM unit of HealthKeepersPlus assures that members receive the right care at the right time in the right setting. In 2014, admission trends rose two percent, reflecting greater than anticipated growth for both TANF and SSI populations via transition from the loosely</p>				

	<p>managed State FFS program. Recognizing this challenge, the HCM UM unit moved to a regional integrative care “pod” structure to improve relationships with providers, address member medical and behavioral needs, and improve coordination/reconciliation of hospital and outpatient pharmacy prescriptions. Pods are composed of UM nurses, CM nurses, behavioral health nurses, a pharmacist and a medical director. For this past year, the department focused pods on:</p> <ol style="list-style-type: none"> 1. Expanding our successful 2013 initiative that focused on whether requests for admissions that are typically one day and under Milliman Care Guidelines can be managed under observation care 2. Reducing hospital length of stay for members with complex admissions through improved discharge and care transition plans <p>In 2014, these programs were very successful, resulting in an aggregate savings of approximately \$1million.</p>
i. Contract emphasis on member choice, access, safety, independence, and responsibility	<p>As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.</p>
j. Role of any Subcontractors:	<p>Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.</p>

h. Improvements in utilization trends and quality indicators	<p>East Region Medical Management initiatives include inpatient admission reviews to verify the right level of care for each member's diagnosis, concurrent inpatient case management, post-hospitalization discharge planning, comprehensive complex case management to support optimal engagement in the outpatient setting, and promotion of recommended screenings and testing based on each member's clinical conditions.</p> <p>We have improved our ALOS in the SNF setting with improved outcomes for this population. ALOS in 2013 was 16.1 and we achieved an ALOS of 15 in 2014. Our hospital inpatient admissions/1000 members also decreased year-over-year 2013 to 2014 by 24 percent. We achieved the reduction by increased utilization of outpatient observation status. This confirms that members receive the care they need at the most appropriate level. Through our stabilization case management, we reduced our 30-day all cause readmission rate from 15 percent in 2013 to 13 percent in 2014.</p> <p>We have also implemented focused areas of clinical intervention, including enhanced management of members with frequent ER utilization, health education for our members with chronic diseases, opportunities to redirect outpatient surgical procedures to ambulatory surgical centers as well as focused care management for our members with end stage renal disease.</p>				
i. h. Improvements in utilization trends and quality indicators	<p>Amerigroup Washington develops an annual quality work plan, including objectives for serving individuals with special health care needs and enrollees from diverse communities. It comprises goals and objectives for the year, including patient safety, and serving a culturally and linguistically diverse membership that includes individuals with special health care needs. Admissions per 1000 demonstrated a positive, declining trend since the fourth quarter of 2013. Throughout 2014, we worked to standardize UM processes and provide focused training to concurrent review staff. In addition, we strengthened UM/Case Management collaboration, thereby enabling members who would benefit from case management to be identified and promptly referred by the UM team. Decreases in utilization for TANF and Expansion are attributable to standardization of UM processes and UM/Case Management collaboration.</p> <p>The ABD membership showed an increase for first quarter 2014 and again in the third quarter of 2014. Admissions in this group had a significant decline in the second quarter. ER visits also demonstrated slight to moderate decreases for TANF and the Expansion</p>				

	<p>populations. ABD ER visits have been fairly stable over three quarters of 2014 with a more significant decrease from the fourth quarter of 2013. We put a program into place to address ER utilization with a vendor, Consistent Care Choice Network, to engage members with high utilization in three specific metropolitan areas to provide support and information on the use of an established PCP/Specialist network. We will expand this program in 2015.</p> <p>Amerigroup Washington participated in a collaborative project with all participating Medicaid health plans to address early term C-section rates. The project involved measurement of rates and interventions with specific outlier providers to achieve the target rate established by the State Health Care Authority. The target was exceeded and further work on this topic ceased.</p>
<p>i. Contract emphasis on member choice, access, safety, independence, and responsibility</p>	<p>As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.</p>
<p>j. Role of any Subcontractors:</p>	<p>Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.</p>

Capitated Payment:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No If No, describe: N/A				
h. Improvements in utilization trends and quality indicators	<p>UniCare’s Utilization Management Program includes activities related to inpatient and ambulatory care and collaborates with other departments within health care management services to meet the physical and behavioral healthcare needs of its members. The program adopts an integrated medical management model based on the physical, behavioral, and social needs of eligible members by evaluating medical necessity, appropriateness, and efficiency against nationally accepted clinical review criteria and medical policy guidelines, UniCare has successfully reduced admission days per thousand by 1.17 percent and has decreased total inpatient admits per thousand 1.26 percent in 2014. Our Short Length of Stay Initiative analyzes inpatient admissions versus observations for appropriate payment levels, which has resulted in a \$1.7 million savings in 2013. For 2015, UniCare has dedicated</p>				

	<p>additional resources for Intensive Case Management outreach and Care Planning to impact ER use. A report based on predictive modeling (the Chronic Illness Intensity Index) is generated monthly. UniCare is accredited by NCQA and has met rigorous requirements for service and clinical quality standards.</p> <p>Unicare has implemented initiatives to improve quality scores based on standard HEDIS measures, and has achieved a number of successes. Specifically, adolescent immunizations rates (Combo 1) increased 36 percentage points between 2012 and 2014. Contributing to this increase were improved access to adolescent immunization data through collaborative partnership with the state immunization registry, outreach educating members on the importance of recommended immunizations, and provider education on the immunization periodicity schedule.</p> <p>Adult BMI assessment rates increased 13.49 percentage points between 2012 and 2014. Provider education efforts and increased data capture enabled by electronic health records contributed to the increase in the adult BMI rate.</p> <p>The postpartum rate has remained stable over the past three years with UniCare exceeding the National Medicaid Average for each year. Increased, ongoing member outreach is expected to increase the rate of women receiving recommended postpartum care. Collaborative partnerships with pediatric and adolescent providers/providers groups are underway to increase well-child visit for three- to six-year-olds and adolescent well-care visits.</p> <p>Ongoing interventions designed to impact quality indicators include:</p> <ul style="list-style-type: none"> • Well-child and adolescent clinic days at large provider practices • Maternal Postpartum Outreach Program • Partnership with targeted school-based health centers to increase completed well-child and adolescent well-care visits • Technology to establish secure sites for providers to upload medical records for evidence of compliance with recommended care • Provider panel Gaps in Care reporting to identify those who are missing recommended care and services • Provider pharmacy reporting that alerts providers to members with asthma who have ER visits and claims for asthma rescue medications but lack maintenance medications • Member incentives for well-baby, well-child, prenatal, postpartum, and diabetic care and services • Provider incentive program focusing on access to care and specific HEDIS performance measures and quality indicators
<p>i. Contract emphasis on member choice, access, safety, independence, and responsibility</p>	<p>As the nation’s leader in state-sponsored and other publicly funded health programs, Amerigroup and its affiliate health plans embrace and promote a healthcare delivery system that emphasizes member choice, independence, and engagement in all aspects of care through a member-centered care model that is at the core of all we do. Through this model, an emphasis on member responsibility permeates our programs in everything from our most basic of member communications and outreach through our selection of value-added services and member incentive programs. We deliver member access to care through development and maintenance of robust provider networks that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of patient safety measures.</p>
<p>j. Role of any Subcontractors:</p>	<p>Each of our affiliate health plans uses subcontractors to deliver certain specialized covered services applicable for each individual state program. Some examples of these specialized services are pharmacy, vision, and dental services. Our affiliate health plans also use subcontractors for select applicable administrative services, such as nurse advice line administration and translation services.</p>

2. Identify and describe any debarment or suspension, regulatory action, or sanction, including both monetary and non-monetary sanctions imposed by any federal or state regulatory entity within the last five (5) years.

Amerigroup, our parent company Anthem, and our affiliate health plans have never been debarred, suspended, or otherwise prohibited from participating in federal or state health programs. Our affiliate health plans support commercial, federal, and state-sponsored contracts.

In our response to this question, we address regulatory actions, or sanctions, including both monetary and non-monetary sanctions imposed by any federal or state regulatory entity within the last five years for our commercial affiliate health plans.

In our response to Question 3, we provide information on regulatory actions, sanctions, letters of deficiency, and corrective actions requested or required by any federal or state regulatory entity within the last five years that relate to Medicare, Medicaid, or CHIP contracts, or the Substance Abuse Use Prevention and Treatment Block Grant.

Regulatory Actions or Sanctions

Amerigroup's affiliates provide commercial services across the country, including integrated health care plans and related services; a wide range of specialty products such as life and disability insurance benefits, dental, vision, and behavioral health benefit services; and long-term care insurance and flexible spending accounts. Medical membership is currently more than 30 million. None of these commercial affiliates will be providing services under the Iowa Initiative Contract.

Attachment 3.2.7.4.2-1 Commercial Affiliate Regulatory Actions and Sanctions, describes the regulatory actions and fines imposed on these commercial affiliates by state regulatory entities (primarily, the states' departments of insurance) in the last five years.

3. Identify and describe any letter of deficiency issued by or corrective actions requested or required by any federal or state regulatory entity within the last five (5) years that relate to Medicare, Medicaid, or CHIP contracts, or the Substance Abuse Use Prevention and Treatment Block Grant.

In our response to this section, we provide information about regulatory actions, sanctions, letters of deficiency, and corrective actions requested or required by any federal or state regulatory entity within the last five years that relate to Medicare, Medicaid, or CHIP contracts or the Substance Abuse Use Prevention and Treatment Block Grant for any of our affiliate health plans.

We believe that regulatory actions support a meaningful dialogue with our state partners and help strengthen our programs through efficiency of administration and oversight. Amerigroup will educate employees, develop policies and procedures, implement monitoring and audit mechanisms, and enforce strict guidelines to comply with all of the Iowa Initiative program requirements.

Parent Company and Affiliate Regulatory Actions, Sanctions, Letters of Deficiency, and Corrective Actions

Amerigroup has operational affiliates in 19 other states delivering services to Medicare, Medicaid, CHIP, and other state-sponsored program enrollees. In the regular course of business, these affiliates have received notices, sanctions, and other regulatory actions related to the numerous requirements of any public program contract. We provide information about these actions in Attachment 3.2.7.4.2-2, Affiliate Regulatory Actions and Sanctions. None of these affiliates will provide services for the Iowa Initiative program.

Our Investment in Compliance

Our National Medicaid Division and affiliate health plans operating state-sponsored health programs across the country have one of the most proactive regulatory compliance programs in the industry. Amerigroup will implement this program for our Iowa operations.

The program maintains a robust system of processes and controls to prevent, identify, and mitigate potential risks, which is founded on the principles of the U.S. Department of Justice's (USDOJ) Seven Fundamental Elements of an Effective Compliance Program:

- Implementing written policies, procedures, and standards of conduct
- Designating a compliance officer and compliance committee
- Conducting effective training and education
- Conducting internal monitoring and auditing
- Reporting and investigating
- Enforcing standards through well-publicized disciplinary guidelines
- Responding promptly to detected offenses and undertaking corrective action

IA_6_COE_1.1

Our commitment to compliance and establishing a culture that encourages our employees to embrace this commitment is reflected in one of our company's core values: **Trustworthy**. We believe that being *trustworthy* and fostering open communication and dialogue across our health plan and with our state partners is at the core of our ability to meet the expectations and goals of the state, our providers, and our members.

In support of our commitment to being trustworthy, our Iowa health plan will invest in dedicated compliance resources that maintain a singular focus on not only contract compliance, but education, monitoring and oversight, and risk identification and mitigation. Our Iowa compliance resources will be supported by national compliance resources that provide oversight, guidance, and the sharing of best practices across all affiliate health plans. The components of our Iowa compliance program and national support resources are outlined below using the USDOJ framework.

1. Implementing Written Policies, Procedures, and Standards of Conduct

Policies and Procedures. Amerigroup will maintain a robust library of policies and procedures that address our regulatory, contractual, and other program obligations and requirements. Functional managers throughout the organization will develop our policies, in consultation with our dedicated Regulatory Oversight Manager and the Iowa Plan Compliance Officer. These policies will play a major role in guiding Iowa health plan activities and operations. We monitor and review policies and procedures regularly and publish them on an internal website accessible to all employees.

Standards of Ethical Business Conduct (Code). All Amerigroup employees must acknowledge and agree to comply with the Code as a condition of employment. The Code is applicable to Amerigroup and all of our affiliates and is designed to help employees understand and comply with our legal, regulatory, and contractual responsibilities and act in a way that supports our national principles.

2. Designating a Compliance Officer and Compliance Committee

Iowa Plan Compliance Officer. Amerigroup will maintain a full-time, dedicated Plan Compliance Officer. This individual partners with our health plan leadership to provide more extensive and focused engagement across the Iowa health plan on issues, including compliance education and training, risk identification and mitigation, and the development and oversight of corrective actions. The Plan

Compliance Officer provides Amerigroup with executive-level compliance oversight and management and works collaboratively across all functional areas to infuse compliance into everything we do.

Iowa Regulatory Oversight Manager. We will maintain a dedicated Regulatory Oversight Manager for the Iowa Initiative. This individual will be our primary liaison with DHS for day-to-day contract management and oversight issues, will manage the submission of all required regulatory reporting, and will serve as our internal subject matter expert and resource regarding Amerigroup’s contractual and regulatory obligations under the Iowa Initiative.

Iowa Medicaid Health Plan Compliance Committee. Chaired by our Plan Compliance Officer, our local Iowa Medicaid Compliance Committee will comprise our executive-level leadership, including our Contract Administrator/CEO and the Regulatory Oversight Manager. The Compliance Committee will meet monthly and provide a forum for health plan leadership to review and discuss emerging issues and upcoming activities, assess potential compliance risks, and provide input into mitigation activities and corrective action plans. The Compliance Committee receives and reviews reporting about compliance monitoring activities and provides necessary oversight for our Iowa Compliance Program.

3. Conducting Effective Training and Education

Extensive Compliance Training. All employees within the Anthem family of companies receive mandatory compliance training, including two hours of initial compliance training and annual required compliance training, which cover education on the requirements of any current agreements or corrective action; fraud, abuse, and waste; HIPAA; and other aspects of the compliance program (including the Code and policies and procedures). Additionally, Iowa health plan employees must participate in annual Medicaid-specific compliance training. We track and monitor completion of all required training through our online learning systems.

On-going Education and Awareness. We will conduct additional education and awareness activities throughout the year to reinforce the role that all Iowa health plan employees play in compliance. Our national Medicaid Compliance Program Services Department sponsors an annual “Ethics and Compliance Week” celebration that includes activities and information that highlight how employee commitment to compliance supports overall success.

4. Conducting Internal Monitoring and Auditing

Iowa Medicaid Compliance Program and Work Plan. Our Plan Compliance Officer will develop and maintain an Iowa Medicaid Compliance Program and Work Plan. The Compliance Committee will review and approve the Work Plan each year and receive regular progress updates. The core functions of the Work Plan track the seven elements of an effective compliance program: written standards, structured compliance program, training and education, auditing and monitoring, reporting and investigation, enforcement and discipline, and response and prevention.

National Medicaid Compliance Officer. As part of Anthem’s National Medicaid Division, Amerigroup can access the resources of our national Medicaid Compliance Officer and the Medicaid Compliance Program Services Department. Collectively, this team manages and assures the ongoing operation and effectiveness of national Medicaid Compliance Program initiatives, including compliance program effectiveness reviews, standardized risk identification, prioritization and mitigation framework, and overall direction and guidance through the sharing of best practices to local Medicaid health plan compliance officers and committees.

Partnership with Internal Audit. Our compliance resources and national Internal Audit Department work together to help ensure that master audit plans include key compliance issues and risks for detailed review, evaluation, monitoring, and corrective action as needed.

5. Reporting and Investigating

Speaking Up. In our Iowa health plan and nationally across our affiliate companies, we work to establish a culture that encourages employees to “speak up” to identify any potential compliance concerns or issues through multiple reporting avenues. We maintain a strict and highly publicized policy of nonretaliation for any employee who proactively comes forward to identify potential compliance risks and/or concerns.

Confidential Compliance Hotline. Our national Compliance Hotline supports confidential (anonymous as requested) and secure reporting of potential violations. All hotline reports are investigated and results reported to the national Medicaid Compliance Officer.

6. Enforcing Standards through Well-publicized Disciplinary Guidelines

National Ethics and Compliance Office. The national Ethics and Compliance Office administers and advises employees on the Standards of Ethical Business Conduct (described previously), serves as an independent resource to receive and investigate allegations of employee misconduct, provides employees with training on ethics and compliance issues, and provides high-level oversight of compliance programs across the Anthem enterprise.

7. Responding Promptly to Detected Offenses and Undertaking Corrective Action

Corrective Action. When we learn of any deficiency, whether identified by the State, by a provider, or internally, our Plan Compliance Officer, in collaboration with other internal stakeholders and business owners, investigates the root cause of the problem and develops an action plan to prevent a recurrence.

Taken together, these Iowa compliance program components and national support resources represent a comprehensive and proactive approach to program monitoring and enforcement that helps promote full compliance with all state and federal requirements, provides the fullest protection of our members’ rights, and fully supports the goals and objectives of DHS’s mission in providing high-quality health care services at a reasonable and predictable cost.

Compliance 360

Amerigroup is committed to maintaining high performance and compliance with the State’s expectations and requirements under the Iowa Initiative Contract. To augment our compliance program and activities, Amerigroup will use the Compliance 360 application to comply with new or revised regulatory requirements. Whenever there is a new or revised regulatory or contractual requirement, such as a health plan advisory or informational bulletin issued by DHS, our Iowa Regulatory Oversight Manager will create an alert and disseminate it to all affected employees and stakeholders who serve as “assessors.” Assessors must evaluate alerts to determine whether the regulatory content affects their unit. If the alert content affects the assessor’s unit, the assessor must list planned tasks to comply and document the completion of such tasks. Our Plan Compliance Officer will monitor timely assessments and task completion. Assistance from a dedicated project management team within our National Medicaid Division is available for medium- to large-scope Compliance 360 alerts such as large, cross-functional Contract amendments.

4. Description of all contracts and projects currently undertaken by the bidder. This shall include all contracts that have not expired, have not been completed, or have not been terminated. Descriptions of similar services (above) do not need to be repeated again in this section. If a Bidder does not have current contracts and projects, it may include those of its parent company if it includes a parent guarantee with its proposal.

Please see the response provided in Q3.2.7.4.2 for a table listing all publicly funded contracts and projects currently undertaken by Anthem and its affiliate health plans. A parent guarantee is included on the following page.

Date	State	Description	CAP?	Corrective Action Plan Description	Fine
2/3/11	TX	Member complaint report submitted late.	No		1,500
2/3/11	TX	Failed to meet out of network standards.	No		25,000
2/2/11	GA	Deficiencies with dental vendor included Q3 2010 GeoAccess reports, appointment wait times, and online provider directory.	Yes	The CAP identified the dental vendor's success in significantly increasing the number of participating providers, thereby resulting in full (100%) access to health plan membership within required access standards. The increased number of participating providers (over 100 new providers and 100 new locations) resolved the concern with appointment wait time.	–
2/2/11	NJ	Benchmark for EPSDT Screenings and lead screening in 2008 not met.	No		36,616
1/31/11	TN	Nov 2010 enrollee record review benchmarks not met.	Yes	Implemented a member confirmation screening process, added a field to tracking process, conducted internal training to reiterate referral requirements, and implemented an internal quality auditing process.	–
1/27/11	FL	Audit identified grievance and appeals process inadequacies.	Yes	Added the state's current approved letter in the plan's letter inventory. Created an Operational Guideline to ensure that notices regarding appeals are provided to both members and providers and distributed an internal memo to all appeal review nurses.	–
1/25/11	FL	Late filing of Q4 2010 grievance and appeals report.	No		200
1/25/11	FL	Late filing of Q4 2010 grievance and appeals report.	No		200
1/25/11	TN	Claims payment accuracy for Dec 2010 did not meet performance standard.	Yes	Implemented claims staff education and confirmed that incorrectly processed audit sample claims were correctly processed.	–
1/24/11	GA	Deficiencies in provider network listing with incorrect addresses, untimely appointment wait times, and non-par providers in provider directory.	Yes	Changed survey vendors and worked to ensure that the vendor and their survey teams are educated and modified the questions for clarity.	–
1/24/11	GA	Timey access 4Q10 indicated provider types that did not meet appoint request waiting time standards.	Yes	The CAP included the following actions: modify GeoAccess reports to differentiate members' access to dental providers by type and include total number of providers. Clarified information about the online provider directory. Provided secret shopper list to the state with written responses to each.	–
1/18/11	TN	4Q10 provider data survey results identified deficiencies.	Yes	Outreach to providers refusing to participate, communication about obligation to participate in surveys, research using vendor to improve provider data, and provider website change to facilitate provider update of demographic information.	5,000
1/14/11	NY	Marketing monitoring identified lack of presentations at scheduled sites and failure to communicate all required information.	Yes	Retrained and coached employee on marketing procedures. The compliance department conducted a secret shopper survey to confirm that the issue was corrected.	–

Damages, Penalties, Disincentives and Withholds	
State	Contract and Comments
GA	Georgia Families 360 - The contract includes a quality program implemented in 2014, the outcome of which will not be known until sometime in 2015
IN	Hoosier Healthwise - From 2009 to 2013, we retained over 1/3 of withhold or premium at risk. Losses or disincentives range from approximately \$1.3 to \$3.5 M.*
IN	Healthy Indiana Plan - From 2011 to 2013, we retained on average 60% of the withhold or premium at risk under the quality program with the exception of 2012 at lower %. Losses or disincentives range from approximately \$500K to \$750K.*
KS	KanCare - Since the contract began in 2013, we retained over 2/3 of the withhold program. The disincentive was approximately \$7.5M.*
LA	CCN - 2013 was the first year of the quality program. We retained 80% of the withhold or premium at risk. The disincentive was approximately \$152K.*
MD	For 2009 and 2011-2013, we earned a net incentive under the quality program of our Maryland contracts. In 2010, our performance resulted in a net disincentive resulting in a loss of approximately \$1.4M
NY	TANF/SSI/LTSS - The quality program is administered through a bonus inside the premium rates. Additional premium is awarded based on a tiered structure, with no inherent disincentive. In 2010, we were in the 4th tier out of 4; in 2011, in the 4th tier out of 5; in 2012, in 3rd tier out of 5; and 2013, in 3rd tier out of 6.*
SC	Blue Choice - the quality incentive program began in 2012. Losses or disincentives for 2012 and 2013 were approximately \$845K and \$2.7M, respectively.*
TX	STAR, STAR+PLUS, CHIP - The quality program began in 2013 (prior, significant incentives/disincentives were not available under the program). We achieved a net incentive in 2013.*
WA	Apple Health - the quality incentive program began in 2014. Results are provided quarterly. We achieved a full incentive.
WV	The quality incentive for all of our contracts began in 2014. The outcome of 2014 will not be known until sometime in 2015.
WI	Community Connect - the quality incentive program began in 2011. From 2011-2013, we earned 75-95% of the withhold or premium at risk. Losses or disincentives range from approximately \$52-\$273K. The outcome of 2014 will not be known until sometime in 2015.

* the outcome of 2014 will not be known until sometime in 2015.

CAPITAL AND SURPLUS GUARANTEE

THIS CAPITAL AND SURPLUS GUARANTEE (hereinafter the "Guarantee") is made on the 18th day of May, 2015 by Anthem, Inc., a corporation formed under the laws of the State of Indiana (hereinafter "Anthem").

WHEREAS, Amerigroup Iowa, Inc., a corporation formed under the laws of the State of Iowa (hereinafter the "Company"), is an indirect, wholly-owned subsidiary of, and controlled by, Anthem;

WHEREAS, the Company is applying to the Iowa Insurance Division (hereinafter the "Division") for a certificate of authority to establish and operate a health maintenance organization;

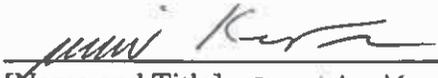

WHEREAS, Anthem desires that the Division exercise its discretion to, and continue to, grant the certificate of authority; and

WHEREAS, Anthem desires to give legal assurances to the Division that at all times its control of the Company will be or will have been exercised so that Company's capital and surplus meets or exceeds the requirements of the State of Iowa, as amended at any time.

WHEREFORE, Anthem guarantees that the Company shall have and maintain capital and surplus at no less than the minimum amount required, from time to time, by the applicable provisions of the Insurance Code of the State of Iowa, and Anthem agrees that this Guarantee shall remain in force until Anthem obtains a written release from the Division, which release shall not be unreasonably withheld.

Executed at Indianapolis, Indiana as of the date first set forth above.

ANTHEM, INC.

Executive Summary

Introduction

This report summarizes the evaluation activities conducted by the Institute for Child Health Policy (IHP) at the University of Florida to meet federal requirements for external quality review of Texas Medicaid Managed Care and the Children's Health Insurance Program (CHIP). IHP has been the external quality review organization (EQRO) for the Texas Health and Human Services Commission (HHSC) since 2002. The findings discussed in this report are based on EQRO activities conducted in Fiscal Year (FY) 2011 – September 1, 2010 to August 31, 2011. This report also presents trends in healthcare quality in Texas Medicaid and CHIP between FY 2009 and FY 2011.

The review is structured to comply with the Centers for Medicare and Medicaid Services (CMS) federal guidelines and protocols, and addresses care and services provided by managed care organizations (MCOs) participating in STAR, STAR+PLUS, STAR Health, NorthSTAR, and CHIP. The EQRO conducts ongoing evaluation of quality of care primarily using MCO administrative data, including claims and encounter data. The EQRO also reviews MCO documents and provider medical records, conducts interviews with MCO administrators, and conducts surveys of Texas Medicaid and CHIP members, caregivers of members, and providers.

The findings presented in this summary are based on previously approved EQRO reports to HHSC. The summary concludes with a listing of the most relevant recommendations made by the EQRO in FY 2011 for improving quality of care in Texas Medicaid and CHIP.

Summary of Findings

Demographic Characteristics

- *Enrollment.* In 2011, the STAR program had the largest number of members (1,746,595), followed by Primary Care Case Management (PCCM) (804,327) and CHIP (562,647). The membership in STAR, STAR+PLUS, and NorthSTAR increased by at least 20 percent over the three-year period. STAR+PLUS Medicaid-only enrollment increased by more than three-fourths from 2009 to 2011 (76 percent), following the Medicaid managed care expansion in September 2011.
- *Member age.* The average age of members in Texas Medicaid and CHIP ranged from 8 to 14 years old, with the exception of STAR+PLUS, in which the average age of the Medicaid-only population was 43 years old and the average age of dual-eligible members was 65 years old.
- *Member race/ethnicity.* Hispanic members were the largest group in every program, with the exception of STAR+PLUS, ranging from 43 percent in STAR Health to 65 percent in CHIP. In STAR+PLUS, Black, non-Hispanics represented the largest racial/ethnic group, at 38 percent in December 2011.

Health Status

- Child members with special health care needs (MSHCN) prevalence (administrative).* The prevalence of child MSHCN was determined using the Clinical Risk Group (CRG) classification system in STAR, CHIP, and PCCM in 2011. The PCCM program had the highest percentage of child MSHCN across all programs, at 27 percent in 2011. STAR and CHIP both had similar rates (16 percent and 15 percent, respectively), with the percentage in STAR remaining constant over the three-year period and the percentage in CHIP increasing marginally.
- Child MSHCN prevalence (survey).* The prevalence of child MSHCN was also determined by parent-report using the CSHCN screener in STAR, CHIP, and PCCM in 2011, and in STAR Health in 2012. The rates in STAR (18 percent) and CHIP (20 percent) were comparable to the national average (reported by the National Survey of CSHCN), while the rate in STAR Health was considerably higher (48 percent).
- Child MSHCN characteristics (survey).* The characteristics of child MSHCN were determined using the parent-report CSHCN screener in STAR, CHIP, and PCCM in 2011 and in STAR Health in 2012. The most common special health care need among child MSHCN was dependence on prescription medications in STAR (15 percent), CHIP (16 percent), and PCCM (18 percent). In STAR Health, the most common special health care needs were dependence on medications (35 percent) and problems that require mental health treatment or counseling (36 percent). The distribution of special needs among child MSHCN was relatively constant in STAR and CHIP across the three-year period.
- Caregiver-reported child member health status.* Approximately 70 percent of caregivers rated their child's health status as excellent or very good for all programs. Both STAR and CHIP had an increase in reported child health status from 2009 to 2011.
- Childhood obesity.* The PCCM and STAR Health programs had the highest reported obesity rates, with nearly one-third of members classified as obese (31 percent and 30 percent, respectively). STAR and CHIP both showed a decrease in the rate of child/adolescent obesity from 2009 to 2011, with CHIP having the lowest obesity rate at 25 percent.
- Member-reported health status in STAR+PLUS.* Overall, member self-rated health status in STAR+PLUS was low, with over 60 percent of Medicaid-only and dual-eligible members reporting being in "fair" or "poor" health. Only 15 percent of Medicaid-only STAR+PLUS members and 16 percent of STAR+PLUS dual-eligible members rated their health as "excellent" or "very good". Self-reported mental health status was generally higher, with more than one-quarter of members in both eligibility groups reporting their mental health as "excellent" or "very good".

- *Activities of daily living in STAR+PLUS.* Approximately two-thirds of STAR+PLUS members in both eligibility groups reported having a condition that interferes with their quality of life. Approximately half of STAR+PLUS members reported needing assistance with *routine needs*, and approximately one-third of members reported needing assistance with *personal needs*.
- *Obesity in STAR+PLUS.* For the STAR+PLUS Medicaid-only and dual-eligible populations, nearly one-half of all members were considered obese, and one-fourth of all members were considered overweight.

Pediatric Preventive Care

- *Access to primary care.* Across programs, child and adolescent members had good access to primary care practitioners, with over 90 percent of members visiting a PCP during the measurement period.
- *Well-care visits.* Rates of well-child and well-care visits increased slightly over the three-year period for all programs. Rates of increase were especially pronounced in STAR Health. All programs met HHSC Dashboard standards for well-child/well-care visits in all age groups across the three-year period.
- *Childhood immunization.* Less than one-half of two-year-olds in STAR received the appropriate vaccinations by their second birthday (45 percent), exceeding the 2011 HEDIS[®] national mean of 32 percent. The rate in CHIP was 39 percent.
- *Access to dental care.* Overall, the rate of annual dental visits in CHIP Dental increased from 59 percent in 2009 to 66 percent in 2011, exceeding the 2011 HEDIS[®] national average of 48 percent.

Adult Preventive Care

- *Access to ambulatory health services.* STAR+PLUS members over 45 years of age generally had good access to preventive care. Eighty-seven percent of members in both older age cohorts (45 to 64 years and 65 years and older) had an ambulatory or preventive care visit in CY 2011. Preventive care was lower among 20- to 44-year-old STAR+PLUS members than among older members (72 percent).
- *Prenatal care.* The rate of timely prenatal care in STAR (83 percent) was comparable to the national HEDIS[®] mean of 84 percent. It should be noted that this sub-measure follows HEDIS[®] specifications with the exception of provider constraints; therefore, comparisons to the HEDIS[®] national means are approximate and for illustrative purposes only. Rates of timely prenatal care increased in STAR, STAR+PLUS and STAR Health between 2009 and 2011. Despite the increase in STAR+PLUS, the 2011 rate remained below the HHSC Dashboard standard. Nearly two-thirds of deliveries in STAR had ≥ 81 percent of the expected number of prenatal visits (63 percent), which is slightly higher than the HEDIS[®] mean of 61 percent for this performance threshold. This rate was lower in CHIP (40 percent) and STAR Health (47 percent).

- *Postpartum care.* Fifty-nine percent of deliveries in STAR received a postpartum visit, which is lower than the national HEDIS® mean of 64 percent. The percentage of deliveries receiving a postpartum visit in STAR+PLUS increased slightly across the three-year period, while remaining fairly consistent in STAR and STAR Health. The rate in STAR+PLUS was below the HHSC Dashboard standard, despite increasing between 2009 and 2011.
- *Breast cancer screening.* Forty-six percent of eligible women in STAR+PLUS had a mammogram to screen for breast cancer during the measurement period.
- *Cervical cancer screening.* Rates of cervical cancer screening increased very slightly during the three-year period in STAR (to 59 percent in 2011), but were still lower than the 2011 HEDIS® national mean of 67 percent. Rates in STAR+PLUS also showed a very slight increase over the three-year period (to 40 percent in 2011).
- *Chlamydia screening in women.* Approximately half of eligible women in STAR (51 percent) and one-third in CHIP (31 percent) received Chlamydia screening in CY 2011. Fifty-eight percent of eligible female members in STAR Health received Chlamydia screening in CY 2011.

Ambulatory Care

- *Emergency department visits.* The rate of emergency department visits per 1,000 member-months ranged from 21 in CHIP to 114 in STAR+PLUS.
- *Outpatient visits.* The rate of outpatient visits per 1,000 member-months ranged from 231 in CHIP to 565 in STAR+PLUS.

Pediatric Quality Indicators

- *Asthma PDI.* Over the three-year period, pediatric inpatient admissions (PDIs) for asthma declined in STAR, CHIP, and STAR Health, and fluctuated considerably in STAR+PLUS.
- *Diabetes short-term complications PDI.* Pediatric inpatient admissions for diabetes short-term complications remained fairly constant in STAR, CHIP, and STAR+PLUS, and declined considerably in STAR Health.
- *Gastroenteritis PDI.* Pediatric inpatient admissions for gastroenteritis declined for all programs during the three-year period, particularly in STAR+PLUS.
- *Urinary tract infection PDI.* Pediatric inpatient admissions for UTI decreased slightly in STAR and CHIP, fluctuated in STAR+PLUS, and increased in STAR Health.

Prevention Quality Indicators

- *Diabetes short-term complications PQI.* Over the three-year period, adult inpatient admissions for diabetes short-term complications remained relatively constant in STAR and declined in STAR+PLUS.

- *Diabetes long-term complications PQL.* Adult inpatient admissions for diabetes long-term complications remained constant in STAR and declined in STAR+PLUS.
- *Bacterial pneumonia PQL.* Adult inpatient admissions for bacterial pneumonia remained fairly constant in STAR and declined in STAR+PLUS.
- *Urinary tract infection PQL.* Adult inpatient admissions for UTI remained constant in STAR and decreased in STAR+PLUS.

Potentially Preventable Readmissions (3M)

- In CY 2011, rates of potentially preventable readmissions were 2 percent in STAR, 5 percent in CHIP, 13 percent in STAR+PLUS, and 16 percent in STAR Health.

Behavioral Health Service Utilization

- *Use of mental health services.* Use of outpatient or ED mental health services was considerably greater in STAR Health (78 percent) than in STAR (9 percent), STAR+PLUS (32 percent), or NorthSTAR (9 percent).
- *Use of alcohol and other drug (AOD) services.* Use of ambulatory AOD services was higher in STAR+PLUS (11 percent) than in STAR (1 percent) or NorthSTAR (2 percent).

Health Plan Information

- *Encounter data validation.* Match rates for date of service, diagnosis, and procedure were over 90 percent for all programs. Match rates for date of service and procedure were over the desired 95 percent in the STAR, CHIP, STAR+PLUS, and STAR Health programs.
- *Electronic health records.* Nine out of 18 health plans monitored whether providers implemented electronic health records (EHR) during FY 2011. ValueOptions reported the highest percentage of providers implementing EHR (70 percent). Evercare and UnitedHealthcare-Texas reported that none of their providers had implemented EHR during FY 2011.
- *Data certification.* The EQRO conducted the following analyses to certify claims data for all programs: (1) Volume analysis based on service category; (2) Data validity and completeness analysis; (3) Consistency analysis between encounter data and financial summary reports provided by the MCOs; and (4) Validity and completeness analysis of provider information. Volume data were found to be consistent for all plan codes based on overall volumes. All critical fields were found to be present in the data. Overall, the results of these analyses were positive and suggest that completeness of MCO administrative data has improved.

Disease Management (DM) Programs

- *Asthma DM participation rates.* In 2011, rates of participation in MCO asthma DM programs in STAR, CHIP, and STAR+PLUS were 59 percent, 69 percent, and 90 percent, respectively.

- *Diabetes DM participation rates.* In 2011, rates of participation in MCO diabetes DM programs were 43 percent in STAR, 74 percent in CHIP, and 86 percent in STAR+PLUS.

Quality Assessment and Performance Improvement (QAPI) Evaluation Summaries

- *Overall QAPI scores.* The average score for all MCOs was 92 percent. A majority of health plans scored above average, with the exception of five MCOs scoring below average. Delta Dental and Seton were the only two health plans that scored significantly lower than average.

Performance Improvement Projects (PIPs)

- *Overall PIP scores.* The average score of the year-end review of all the PIPs was 57 percent. Eight of the 15 MCOs scored above average. HealthSpring was the only health plan that scored below 50 percent, with a score of 14 percent. The “Real” Improvement Activity of the PIPs had the greatest opportunity for improvement, with only 15 percent of the PIPs resulting in a statistically significant improvement in the baseline rate.

Satisfaction with Timeliness of Care

- *CAHPS® Getting Care Quickly.* Scores for *Getting Care Quickly* among child members ranged from 83 percent in STAR to 90 percent in STAR Health, and were similar to those reported for children in Medicaid and CHIP nationally. Scores for this measure among adult members ranged from 71 percent in STAR to 80 percent among STAR+PLUS dual-eligible members, falling below the applicable national averages.
- *Good Access to Urgent Care.* Performance on this HHSC Dashboard indicator was fairly good for children, ranging from 86 percent in STAR to 96 percent in STAR Health. Among adults, performance ranged from 74 percent in STAR (below standard) to 81 percent among STAR+PLUS dual-eligible members (equal to standard).
- *Good Access to Routine Care.* Performance on this HHSC Dashboard indicator among children ranged from 78 percent in CHIP to 84 percent in STAR Health (above standard). Among adults, performance ranged from 67 percent in STAR (below standard) to 80 percent among STAR+PLUS dual-eligible members (equal to standard).
- *No Delays for Health Plan Approval.* Performance on this HHSC Dashboard indicator was below the standard for all programs, with the exception of STAR Health, which had a rate equal to its Dashboard standard. Scores ranged from 63 percent to 69 percent among children and from 38 percent to 50 percent among adults.
- *No Wait to be Taken to the Exam Room Greater than 15 Minutes.* Performance on this HHSC Dashboard indicator was considerably below the standard for all members, ranging from 24 percent to 30 percent among children and from 21 percent to 33 percent among adults.

Satisfaction with Primary and Specialist Care

- *CAHPS® Getting Needed Care.* Scores for *Getting Needed Care* among child members ranged from 72 percent in STAR to 80 percent in STAR Health, and were lower than those reported for children in Medicaid and SCHIP nationally. Scores for this measure among adult members ranged from 60 percent for STAR+PLUS Medicaid-only members to 74 percent for STAR+PLUS dual-eligible members, also below the national averages.
- *Good Access to Specialist Referral.* Performance on this HHSC Dashboard indicator among children ranged from 69 percent in STAR (below standard) to 84 percent in STAR Health (above standard). The rate in STAR Health increased notably between 2009 and 2012. Among adults, performance ranged from 61 percent for STAR+PLUS Medicaid-only members (below standard) to 78 percent for STAR+PLUS dual-eligible members (above standard).
- *Good Access to Special Therapies.* Performance on this HHSC Dashboard indicator among adults in STAR was 62 percent (above standard). Rates were lower in STAR+PLUS, for both Medicaid-only members (52 percent) and dual-eligible members (53 percent) – both below the HHSC Dashboard standard. Furthermore, rates of good access to special therapies in STAR+PLUS dropped notably over the period between 2009 and 2012 – particularly in Molina (by 20 percentage points) and Superior (by 15 percentage points).

Satisfaction with the Patient-Centered Medical Home

- The percentage of members who had a personal doctor ranged from 68 percent among adults in STAR to 93 percent among children in STAR Health. Member ratings of their personal doctor generally exceeded the national averages.
- *CAHPS® How Well Doctors Communicate.* Scores for *How Well Doctors Communicate* were high among child members, ranging from 88 percent in STAR to 94 percent in STAR Health. Scores among adult members were also high, ranging from 82 percent for STAR+PLUS Medicaid-only members to 90 percent for STAR+PLUS dual-eligible members.
- *Good Access to Service Coordination.* Performance on this HHSC Dashboard indicator for STAR+PLUS was slightly above standard for Medicaid-only members (67 percent). The rate among dual-eligible members was 64 percent.

Satisfaction with Customer Service

- *CAHPS® Health Plan Information and Customer Service.* Scores for *Health Plan Information and Customer Service* among child members ranged from 75 percent in STAR Health to 84 percent in STAR. The rate in STAR Health dropped from 85 percent in 2010 to 75 percent in 2012. Scores among adult members were slightly lower, ranging from 69 percent for STAR+PLUS Medicaid-only members to 78 percent for STAR members.

Acute Respiratory Care

- *Appropriate treatment for children with URI.* The percentage of children in STAR who received appropriate treatment for URI was 83 percent, which is lower than the national HEDIS[®] mean of 87 percent. In all eligible programs, performance on this measure showed slight increases from 2009 to 2011; however, rates for this measure are generally low and have changed little over the three-year period.
- *Appropriate testing for children with pharyngitis.* Rates of appropriate testing for pediatric pharyngitis were low for all eligible programs from 2009 to 2011. Furthermore, rates in STAR were lower than the HEDIS[®] mean across all three years. In 2011, the rate for STAR was 58 percent, compared to 65 percent of children in Medicaid nationally.
- *Avoidance of antibiotic treatment in adults with acute bronchitis.* In STAR+PLUS, the rate of members with bronchitis who were not dispensed an antibiotic increased slightly from 18 percent in 2010 to 20 percent in 2011.

Care for Chronic Conditions

- *Use of appropriate medications for people with asthma.* For members 5 to 11 years old, rates of appropriate asthma medication use in STAR exceeded the HEDIS[®] national mean of 92 percent. In addition, rates in all programs exceeded the HHSC Dashboard standard of 92 percent for this age group. For members 12 to 50 years old, the rate in STAR (93 percent) also exceeded the national HEDIS[®] mean of 86 percent. For this age group, STAR+PLUS was the only program that fell below the HHSC Dashboard standard of 86 percent. In addition, the rate among adults in STAR+PLUS has declined from 91 percent in 2009 to 80 percent in 2011.
- *Comprehensive diabetes care.* For adults with diabetes in STAR, CY 2011 results for all sub-measures were below their respective HEDIS[®] national means and HHSC Dashboard standards – suggesting a general need for improvement in diabetes care for this population. The rates for eye exams (36 percent), LDL-C control (18 percent), and HbA1c control (29 percent) were particularly low in comparison to the national means. For adults in STAR+PLUS, rates on all sub-measures were generally higher than in STAR, but also indicated need for improvement – particularly for eye exams (37 percent) and HbA1c control (26 percent). For both programs, three-year trends among sub-measures saw a net increase in rates from 2009 to 2011.
- *Controlling high blood pressure.* Rates of adequate blood pressure control for the STAR program (44 percent) and STAR+PLUS program (40 percent) were lower than the HHSC Dashboard standard of 54 percent for both programs. The rates for STAR and STAR+PLUS were also lower than the national HEDIS[®] mean of 56 percent.
- *Annual monitoring for patients on persistent medications.* The vast majority of eligible STAR+PLUS members received annual medication monitoring, with a rate of 88 percent for all medications combined.

Behavioral Health Care

- *Follow-up after hospitalization for mental illness.* STAR results were similar to the national HEDIS[®] means for 7-day and 30-day follow-up. It should be noted that this measure follows HEDIS[®] specifications with the exception of provider constraints; therefore, comparisons to the HEDIS[®] national means are approximate and for illustrative purposes only. All programs performed well in comparison to their respective HHSC Dashboard standards, STAR Health in particular. Rates for STAR+PLUS and STAR Health increased consistently from 2009 to 2011.
- *Follow-up for children prescribed ADHD medication.* Results among programs for the initiation phase ranged from 29 percent in NorthSTAR to 86 percent in STAR Health. Results among programs for the continuation and maintenance phase ranged from 42 percent in NorthSTAR to 90 percent in STAR Health. For the initiation phase, the STAR rate (50 percent) was higher than the HEDIS[®] mean of 38 percent. For the continuation and maintenance phase, the STAR rate (66 percent) was higher than the HEDIS[®] mean of 44 percent. It should be noted that this measure follows HEDIS[®] specifications with the exception of provider constraints; therefore, comparisons to the HEDIS[®] national means are approximate and for illustrative purposes only.
- *Antidepressant medication management.* In STAR+PLUS, the rate for the acute phase of treatment was 53 percent, which is higher than the HHSC Dashboard standard of 43 percent. The rate for the continuation phase of treatment was 36 percent, which is higher than the HHSC Dashboard standard of 24 percent. In NorthSTAR, the rate for the acute phase of treatment was 58 percent, and the rate for the continuation phase of treatment was 42 percent. Overall, rates for NorthSTAR decreased from 2010 to 2011.
- *Initiation and engagement of alcohol and other drug dependence treatment.* Results for treatment initiation ranged from 25 percent in NorthSTAR to 39 percent in STAR, and results for treatment engagement ranged from five percent in NorthSTAR to 11 percent in STAR. The STAR rates for treatment initiation and engagement were lower than their respective HEDIS[®] means (43 percent and 14 percent, respectively).

Preventive Care

- *Adult BMI assessment.* In 2011, 57 percent of STAR+PLUS members had their BMI documented. From 2010 to 2011, the rate of BMI assessment increased by 11 percentage points.
- *Weight assessment and counseling for nutrition and physical activity for children/adolescents.* Approximately one-third of STAR and CHIP members had their BMI percentile documented. Regarding counseling for children in STAR and CHIP, about half received counseling for nutrition, and about 42 percent received counseling for physical activity. STAR performed below the HEDIS[®] mean of 38 percent for the BMI percentile documentation sub-measure, above the HEDIS[®] mean of 46 percent for counseling for nutrition, and above the HEDIS[®] mean of 37 percent for counseling for physical activity. STAR performance across all three measures increased from 2010 to 2011.

EQRO Recommendations for FY 2011

This report concludes with a list of recommendations made by the EQRO in FY 2011 and FY 2012, compiled from quality of care reports and member survey reports to improve the quality of care delivered to Texas Medicaid and CHIP members. The list of recommendations focuses on those that address common issues in quality of care across programs, and HHSC's overarching goals for STAR, STAR+PLUS, CHIP, and STAR Health. Recommendations are reported in the following domains:

- 1) Effectiveness of outpatient/ambulatory care for chronic conditions;
- 2) Acute respiratory care for children;
- 3) Obesity screening and management; and
- 4) Service coordination in STAR+PLUS.

Moving forward, the EQRO, in consultation with HHSC, will be conducting more in-depth analyses on a subset of quality of care indicators, which will be the focus of the pay-for-quality initiatives in Texas.

Introduction

The delivery of affordable, high-quality health care is a challenge the U.S. health care system has faced for decades, and has become increasingly important in a political climate that seeks to address federal and state budget deficits while also improving access to health care. A recent study by the Commonwealth Fund found that the United States spends more on health care per capita than 12 other industrialized countries, yet at the same time performs poorly on many quality indicators, including cervical cancer survival rates, asthma-related deaths, and amputations resulting from diabetes.¹

Much of the effort to improve the affordability and quality of healthcare focuses on services delivered through state public insurance programs, such as Medicaid and the Children's Health Insurance Program (CHIP), which will expand in some states in 2014 through the Patient Protection and Affordable Care Act.² Concerns about the efficiency of health services have led many states to turn to managed care as the predominant delivery model for these programs. In contrast to the fee-for-service model, managed care is distinguished by a number of practices intended to improve access to care and control health care costs, including:³

- 1) Ensuring that members have a *medical home* – a primary care provider (PCP) or team of professionals that follows a person-based approach to provide comprehensive and continuous preventive and primary care.
- 2) Establishing a network of providers under contract with the managed care organization (MCO), which is obligated to maintain access standards established by the state.
- 3) Conducting utilization review and utilization management to monitor and evaluate the appropriateness, necessity, and efficacy of health services.
- 4) Implementing quality assessment and performance improvement (QAPI) programs, which assess performance using objective standards to lead to improvements in the structure and functioning of health services delivery.

Currently, about 66 percent of Medicaid beneficiaries receive services through managed care nationally.⁴ This proportion is expected to rise as more states expand their Medicaid managed care programs. In 2012, all states except Alaska, New Hampshire, and Wyoming operated comprehensive Medicaid managed care programs, either through MCOs or Primary Care Case Management (PCCM) programs.⁵ Many of these states also had risk-based PHP arrangements or other "limited benefit plans" for services such as behavioral health, dental care, or non-emergency medical transportation. Cost-containment continued to be a strong emphasis in state Medicaid programs, although small improvements in the economy allowed many states to implement targeted program improvements, such as continued expansion of community-based long-term care options. These program improvements are part of a larger initiative by many Medicaid programs to reform managed care practices and care coordination strategies.

The state of Texas conducted its first Medicaid managed care pilot programs in 1991, and passed legislation in 1995 to enact a comprehensive restructuring of the Medicaid program, incorporating a managed care delivery system.⁶ In 2011, the number of Texas Medicaid

members enrolled in a managed care program had reached 71 percent.⁷ During the summer of 2011 the Texas Legislature passed Senate Bill 7, mandating a statewide expansion of Medicaid managed care, which previously was limited to large urban areas.⁸ In August 2011, the state awarded \$10 billion in Medicaid managed care contracts, following the largest request for proposals in the history of such contracting.⁹ Since this time, the following managed care expansions have occurred:

- February 2011: Due to the termination of operations of the Integrated Care Management (ICM) program in the Dallas and Tarrant service areas, the STAR+PLUS program expanded into these service areas in February 2011 to provide acute and long-term services to blind, aged, and disabled Medicaid members.
- September 2011: The STAR program expanded into 28 counties contiguous to six of the current Medicaid managed care service areas. The expansion of STAR included combining the Harris and Harris Expansion Service Areas into one service area, and forming the new Jefferson Service Area. The STAR+PLUS program expanded into 21 counties contiguous to six of the current Medicaid managed care service areas. The expansion of STAR+PLUS included combining the Harris and Harris Expansion Service Areas into one service area, expanding most of the existing service areas to cover new counties, and forming the Jefferson Service Area.
- March 2012: A major expansion of Medicaid managed care included the addition of one county to the El Paso service area and six counties to the Lubbock service area; creation of the new Hidalgo service area, which covers ten counties; and the expansion of STAR into 164 counties in the Rural Service Area (RSA), previously served by PCCM.¹⁰ In addition, members in STAR, STAR+PLUS, and CHIP began receiving pharmacy benefits through managed care, and most children and young adults in Medicaid began receiving dental benefits through managed care. Previously only CHIP members received their dental services through managed care; Medicaid enrollees received fee-for-service (FFS) dental services.

External Quality Review in Texas Medicaid and CHIP

When states and health plans make changes to the structure of health care delivery to control spending, the result can compromise the quality of health care. The Institute of Medicine defines health care *quality* as “the degree to which health services for individuals and populations increase the likelihood of desired health outcomes and are consistent with current professional knowledge.”¹¹ High quality of care requires that health care delivery be safe, effective, patient-centered, timely, efficient, and equitable. Given the recent cost-containment and managed care expansion strategies being implemented nationwide, evaluation research into the quality of care delivered to Medicaid members is of particular and timely importance.

Federal regulations require external quality review of Medicaid managed care programs to ensure compliance of state programs and their contracted MCOs with established standards.¹² States are required to validate MCO performance improvement projects (PIPs), validate MCO performance measures, and assess MCO compliance with member access to care and quality

of care standards. In addition to these required activities, states may also validate member-level data; conduct consumer surveys, provider surveys, or focus studies; assess performance improvement projects; and calculate performance measures. The Centers for Medicare and Medicaid Services (CMS) provides guidance for these mandatory and optional activities through protocols for evaluating the state's quality assessment and improvement strategy.¹³

Through a contract with the Texas Health and Human Services Commission (HHSC), the Institute for Child Health Policy (IHP) at the University of Florida has served as the Texas External Quality Review Organization (EQRO) since 2002. Following CMS protocols, IHP measures access, utilization, and quality of care for members in Texas Medicaid and CHIP, and produces an annual summary of evaluation activities conducted during the prior year. This report summarizes the findings of EQRO activities conducted during fiscal year (FY) 2011 (September 1, 2010 to August 31, 2011), as well as activities using FY 2011 or calendar year (CY) 2011 data, providing an annual profile of Texas Medicaid and CHIP MCO performance.¹⁴

To further assist Texas HHSC and participating MCOs in the development and implementation of future quality improvement strategies, this report shows performance trends for selected quality of care measures from 2009 through 2011. Most of the trends presented in this report are at the program level (e.g., STAR, CHIP). The report includes a separate appendix of profiles of each MCO participating in Texas Medicaid and CHIP during FY 2011, showing each MCO's available FY/CY 2011 results on HHSC Performance Indicator Dashboard measures and presenting the MCO's three-year trends for selected performance measures.

A summary of the EQRO's recommendations to Texas HHSC in its FY 2011 activities is listed in **Appendix A**. The recommendations for Texas Medicaid and CHIP should be considered for future quality improvement initiatives in the coming year.

Managed Care Programs and Participating MCOs

In FY 2011, Texas Medicaid and CHIP benefits were administered through the following programs:

- **STAR** – The State of Texas Access Reform (STAR) program is a managed care program established to reduce service fragmentation, increase access to care, reduce costs, and promote more appropriate use of services. In FY 2011, services were provided to STAR members through 14 MCOs and in nine service areas, as listed in **Table 1**.
- **PCCM** – The Primary Care Case Management (PCCM) program combined elements of fee-for-service and managed care models, consisting of a non-capitated network of PCPs and hospitals under contract with HHSC. In FY 2011, services were provided to PCCM members in 202 Texas counties, primarily in rural areas. As part of the Texas Medicaid managed care expansion, PCCM was phased out in FY 2012, and members in these counties began receiving care through STAR and STAR+PLUS. In light of this change, the CY 2011 findings and trends presented for PCCM in this report provide

needed information for quality improvement in STAR and STAR+PLUS MCOs that have moved into former PCCM areas.

- **STAR+PLUS** – The STAR+PLUS program integrates acute health services with long-term care services using a managed care delivery system. STAR+PLUS serves members who are elderly or who have a physical or mental disability, and who qualify for Supplemental Security Income (SSI) benefits or for Medicaid due to low income. The program also serves non-SSI adults who qualify for Medicaid because they receive home and community-based services. In FY 2011, services were provided to STAR+PLUS members through five MCOs operating in seven service areas (**Table 1**). The HealthSpring MCO began operation in STAR+PLUS in May 2011. As many of the quality measures presented in this report require at least one full year of data, HealthSpring is not represented in all results.
- **STAR Health** – STAR Health is a managed care program for children in state conservatorship and young adults previously in state conservatorship. Implemented in April 2008, the program offers an integrated medical home where each member has access to PCPs, dentists, behavioral health clinicians, and other specialists. In FY 2011, the exclusive MCO for STAR Health was Superior HealthPlan Network.
- **NorthSTAR** – NorthSTAR is a carve-out program available to STAR and STAR+PLUS members living in the Dallas service area who need behavioral health services. These members receive behavioral health services through ValueOptions, which is contracted with the Texas Department of State Health Services (DSHS) as the exclusive behavioral health organization for NorthSTAR. This contract is separate from the direct contracts between HHSC and the STAR and STAR+PLUS health plans. NorthSTAR provides an innovative approach to behavioral health service delivery, including: (1) blended funding from state and local agencies; (2) integrated treatment in a single system of care; (3) care management; (4) data warehouse and decision support for evaluation and management; and (5) services provided through a fully capitated contract with a licensed behavioral health organization (BHO).
- **CHIP** – The Children's Health Insurance Program is designed for families whose income is too high to qualify for Medicaid but who cannot afford private insurance for their children. CHIP provides eligible children with coverage for a full range of health services, including regular checkups, hospital visits, immunizations, prescription drugs, lab tests, and X-rays. In FY 2011, services were provided to CHIP members through 15 health plans operating in nine service areas – including the CHIP Rural Service Area (RSA) (**Table 1**).
 - *CHIP Dental* – CHIP Dental provides dental services to members through a single, state-wide managed care plan. In FY 2011, the sole dental benefit contractor for CHIP Dental was Delta Dental Insurance Company.
 - *CHIP Perinate* – CHIP Perinate expands CHIP services to unborn children of low-income women who earn too much money to qualify for Medicaid. Benefits

and eligible services are limited to prenatal care, labor and delivery, and postpartum care associated with the birth of the child. After birth, the newborn receives full CHIP benefits.

^a STAR Health was served by one MCO – Superior HealthPlan Network – and operated statewide. NorthSTAR was served by ValueOptions (a BHO), and operated in the Dallas service area. CHIP Dental was served by Delta Dental, and operated statewide.

^b Throughout certain sections of the report, the UnitedHealthcare-Texas MCO is referred to as Evercare in the context of its performance in STAR+PLUS.

^c STAR+PLUS expanded into the Dallas and Tarrant service areas in February 2011.

The listed service areas account for the merging of the Harris and Harris Expansion service areas, as well as the creation of the Jefferson service area in September 2011. As many of the quality measures discussed in this report require at least one full year of data, the Jefferson service area is not represented in all results.

EQRO Activities

The EQRO annually conducts the following activities to address the mandatory and optional external quality review functions for evaluating Medicaid Managed Care and CHIP:

1. Ongoing Monitoring and Improvement of Data Quality
 - a. MCO Data Submission
 - b. Claims and Encounter Data Quality Certification
 - c. Encounter Data Validation (EDV)
2. Evaluation of MCO Structure and Processes
 - a. MCO Administrative Interviews
 - b. Evaluation of MCO QAPI Programs
 - c. Evaluation of MCO PIPs
 - d. Provider Office Surveys
3. Quality of Care Assessment
 - a. Member Satisfaction Surveys
 - b. Calculation of Performance Measures
 - c. Focus Studies
4. Health-Based Risk Analysis
5. Resources and Guidance for MCOs
 - a. Training/Continuing Education Sessions
 - b. Tools for Disseminating Quality of Care Results

EQRO survey projects are specific to particular populations, and their content can vary from year to year. Member satisfaction surveys conducted in FY 2012 for adults in STAR and STAR+PLUS and for children in STAR Health were completed prior to the publication of this report; therefore, results from these studies are available and summarized where appropriate. In FY 2011, the EQRO conducted member surveys with parents of children enrolled in CHIP, STAR, and PCCM, and with adults enrolled in STAR+PLUS. In addition, behavioral health surveys were conducted in FY 2012 with adults in STAR, and in FY 2011 with parents of

children in STAR and with adults in STAR+PLUS. Results are also available for dual-eligible members in STAR+PLUS from surveys conducted in FY 2011 and 2010. Changes in survey results were assessed across the four-year period from 2009 through 2012.

Results of administrative measures, such as the Healthcare Effectiveness Data and Information Set (HEDIS[®]), were reported using CY 2011 data for STAR, CHIP, STAR+PLUS, STAR Health, NorthSTAR, and CHIP Dental. The set of measures for each program varies, with measures being selected according to the demographic and health profile of the program's members. There are a number of measures specific to adults (e.g., HEDIS[®] Comprehensive Diabetes Care, HEDIS[®] Antidepressant Management, and others) that were not calculated for CHIP or STAR Health because the vast majority of members in these programs do not meet the age criteria for the adult measures. For CHIP Dental, the EQRO calculated a single administrative measure – HEDIS[®] Annual Dental Visit. In addition, the measure set for STAR Health was more limited than the measure sets for STAR and CHIP.¹⁵ For more information, readers can consult the EQRO's Quality of Care reports for these programs.¹⁶

It is important to note that, while the STAR Health program includes young adults (up to age 23), only six percent of STAR Health members were 19 years or older in CY 2011 (n = 1,792). Due to the relatively small group of adult members in STAR Health, HEDIS[®] measures specific to adults were not run for STAR Health, and no adult surveys in STAR Health were conducted.

The EQRO conducted one focus study in FY 2011 (the STAR+PLUS Long-Term Care Focus Study), which used member survey data to assess the health and functional status of STAR+PLUS dual-eligible members who need long-term services and supports. Baseline data for this study were collected using the Medicare Health Outcomes Survey (MHOS), and will be compared with data to be collected from the same members in the coming year. The EQRO also conducts special quarterly studies on health care quality topics of importance to the state (the Quarterly Topic Reports). In FY 2011 and FY 2012, the EQRO's Quarterly Topic Reports used 3M Health Information Systems (HIS) measures to calculate rates and expenditures associated with potentially preventable events (PPEs), such as potentially preventable hospital admissions (PPAs) and readmissions (PPRs).

To promote continued improvements in quality of care for Texas Medicaid and CHIP members, the EQRO also provides resources and guidance for MCOs, such as training and continuing education sessions, and the development of tools to assist in the dissemination of quality of care results to health plans and members. In FY 2011, the EQRO held two MCO Quality Forums in Austin, Texas, which were attended by state and MCO stakeholders, including health plan quality improvement staff. In FY 2012, the EQRO began two initiatives to develop tools for disseminating quality of care information: (1) the Texas Healthcare Learning Collaborative web portal – an online resource for health plans to access and analyze their results on important quality of care measures, including PPE measures; and (2) the MCO Report Cards, which

summarize quality of care information in a way that is accessible to Medicaid members, allowing members to make informed decisions when selecting their health plans.

Detailed methodologies for the EQRO activities are available in previous reports approved by HHSC, many of which are available online through the HHSC publications website.¹⁷

Conceptual Framework

Quality is defined, measured, and improved across three elements of health care: (1) *structure* – the organization of health care; (2) *process* – the clinical and non-clinical practices that comprise health care; and (3) *outcomes* – the effects of health care on the health and well-being of the population.^{18,19} Within this framework, structure and process can affect outcomes of care independently, and measurement of one element can lead to quality improvements in another. To these three aspects are added individual-level factors (e.g., demographic characteristics) and environmental factors (e.g., neighborhood poverty) that are not part of the health care system, but which nevertheless have an important impact on outcomes of care.

Following the aims for quality improvement outlined by the Institute of Medicine, improvements in structure, process, and outcomes are realized through addressing six general characteristics of quality health care: (1) efficiency; (2) effectiveness; (3) equity; (4) patient-centeredness; (5) timeliness; and (6) safety.²⁰ Furthermore, in evaluating quality of care in Texas Medicaid and CHIP, the EQRO assesses a number of more specific dimensions of care, including access and utilization, member satisfaction, and health plan and provider compliance with evidence-based practices.

This report follows a framework based on these concepts to present findings in a way that is both useful and meaningful for readers. The report is divided into six sections:

Section 1 addresses the demographic and health characteristics of Texas Medicaid and CHIP members using data from MCO claims and encounters, as well as from member surveys.

Section 2 addresses access and utilization of care in Texas Medicaid and CHIP. Using administrative measures from the Healthcare Effectiveness Data and Information Set (HEDIS[®]) and the Agency for Healthcare Research and Quality (AHRQ), the EQRO assesses access to and utilization of pediatric and adult preventive care, ambulatory care, inpatient services, and mental health services.

Section 3 addresses the structure and process of Medicaid managed care in Texas. Using encounter data validation studies, administrative interviews with MCOs, data certification, and evaluation of MCO QAPI programs and PIPs, the EQRO assesses MCO data management capabilities and data quality, disease management programs, and quality improvement practices.

Section 4 addresses Texas Medicaid and CHIP member satisfaction with care. Findings include results from the Consumer Assessment of Healthcare Providers and Systems (CAHPS[®]) survey and the Experience of Care and Health Outcomes (ECHO) behavioral health survey, assessing members' experiences and satisfaction with timeliness of care, access to primary and specialist care, the patient-centered medical home, customer service, and care coordination.

Section 5 addresses the effectiveness of care in Texas Medicaid and CHIP. Using a number of HEDIS[®] and HEDIS[®]-based administrative measures, the EQRO assesses provider compliance with evidence-based practices and member compliance with treatment regimens regarding acute respiratory care, care for chronic conditions, behavioral health care, and preventive care.

Section 6 summarizes special studies and projects conducted by the EQRO in FY 2011 or using FY/CY 2011 data, including the STAR+PLUS Long-Term Care Focus Study, development of the Texas Healthcare Learning Collaborative web portal, and development of MCO Report Cards.

Each of the sections presents CY 2011 results for all Texas programs for which the measures were calculated. Although the report shows results for these programs together, it is important to note that each program serves a different population with unique demographic and health status characteristics. Therefore, in many cases differences in process and outcome measures between the programs are to be expected. Readers should exercise caution when comparing results across the programs.

In addition, for many of the administrative HEDIS[®] measures, the 2011 HEDIS[®] national means for state Medicaid programs are available for comparison with results for the Texas STAR program. All other programs discussed in this report represent populations that are not directly comparable with the national HEDIS[®] means. For measures where HHSC Performance Indicator Dashboard standards are available, these standards are the preferred benchmarks for assessing performance, as they more closely reflect the Texas Medicaid and CHIP populations.

Percentages shown in most figures and tables in this report are rounded to the nearest whole number; therefore, percentages may not add up to 100 percent.

1 – The Texas Medicaid and CHIP Populations

1.1 – Demographic Characteristics

Assessing demographic characteristics of Medicaid and CHIP members is crucial for defining health service needs and targeting appropriate interventions that are population-specific.

Table 2 shows enrollment trends in Texas Medicaid and CHIP using MCO administrative data for the months of August 2009, August 2010, and December 2011. All programs increased in membership each year, with the exception of PCCM, which declined in membership from 2010 to 2011, following the Medicaid managed care expansion in September 2011. A slight decrease in STAR Health membership was also seen between 2010 and 2011.

Table 2. Enrollment Trends in Texas Medicaid and CHIP, 2009-2011

Number of Members	2009	2010	2011	3-year trend
STAR	1,264,763	1,477,897	1,746,595	+38.1%
PCCM	742,144	849,444	804,327	+8.4%
CHIP	490,646	522,769	562,647	+14.7%
STAR+PLUS (Medicaid-only)	78,245	80,259	137,372	+75.6%
STAR+PLUS (Dual-eligible)	NR	89,152	144,092	+61.6% ^a
STAR Health	30,251	32,523	32,242	+6.6%
NorthSTAR	372,434	421,202	454,565	+22.1%

^a STAR+PLUS enrollment for dual-eligible members was not reported in 2009; therefore the reported trend represents the change in enrollment since 2010.

STAR, STAR+PLUS, and NorthSTAR had the greatest increases in membership over the three-year period, with each program showing an increase of at least 20 percent:

- STAR enrollment increased by more than one-third between 2009 and 2011 (38 percent), to 1,746,595 members in December 2011. Among the programs, STAR had the highest overall increase in enrollment, by more than 480,000 members.
- STAR+PLUS Medicaid-only enrollment increased by more than three-fourths between 2009 and 2011 (76 percent), to 137,372 members in December 2011. Among the programs, STAR+PLUS had the highest increase in relation to its 2009 membership; most of this increase occurred following the Medicaid managed care expansions in February and September 2011.
- STAR+PLUS dual-eligible enrollment increased by nearly two-thirds between 2010 and 2011 (62 percent), to 144,092 in December 2011. Most of this increase also occurred following the Medicaid managed care expansions in February and September 2011.
- NorthSTAR enrollment increased by more than one-fifth between 2009 and 2011 (22 percent), to 454,565 members in December 2011.

Table 3 shows the sex and age distribution of members for each program in December 2011. All programs exhibited a fairly even distribution of male and female members, with the exception of dual-eligible members in STAR+PLUS, among whom nearly two-thirds were female (65 percent).

Table 3. Sex and Age Distribution in Texas Medicaid and CHIP, December 2011

Distribution of Members	Mean Age (yrs.)	Male	Female
STAR	9 (SD=8.0)	47%	53%
PCCM	11 (SD=12.1)	47%	53%
CHIP	10 (SD=4.6)	51%	49%
STAR+PLUS (Medicaid-only)	43 (SD=15.5)	47%	53%
STAR+PLUS (Dual-eligible)	65 (SD=17.0)	35%	65%
STAR Health	8 (SD=6.1)	51%	49%
NorthSTAR	14 (SD=17.8)	48%	52%

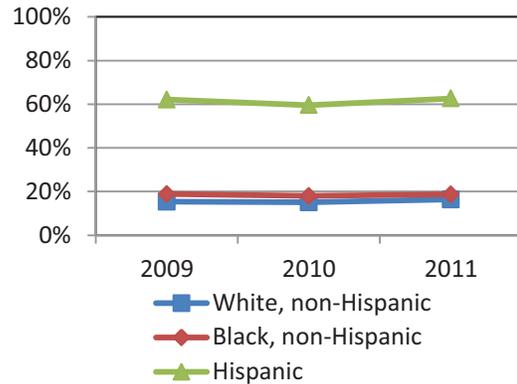

- The mean age in STAR was nine years old, with 36 percent of the population below four years of age and 27 percent of the population between five and nine years old.
- The mean age in PCCM was 11 years old, with 75 percent of the population below 15 years of age.
- The mean age in CHIP was ten years old, with 17 percent of the population below the age of five and 61 percent of the population between 6 and 14 years old.
- The mean age of STAR+PLUS Medicaid-only members, was 43 years old, with 53 percent of the population between 45 and 64 years old. Among dual-eligible members in STAR+PLUS, the mean age was 65 years old, with 53 percent of the population between 45 and 74 years old.
- The mean age in STAR Health was eight years old, with 37 percent of the population between one and five years old and 37 percent between 6 and 14 years old.
- The mean age in NorthSTAR was 14 years old, with 55 percent below the age of ten and 25 percent between 10 and 17 years old.

Figures 1 through 6 present three-year trends in the distribution of members by race/ethnicity in each program. Trends are shown for White, non-Hispanics; Black, non-Hispanics; and Hispanic members (the three most populous groups). Hispanic members were the largest group in every program across all three years, with the exception of STAR+PLUS, where the Hispanic member population dropped below the White, non-Hispanic and Black, non-Hispanic populations following the Medicaid managed care expansion in September 2011. Asian and American Indian members accounted for less than five percent of members in all programs during the

three-year period and are not shown in the figures. Percentages exclude members listed as “unknown” race/ethnicity in the enrollment data.

In STAR, the distribution of members by race/ethnicity was constant from 2009 to 2011. In December 2011, Hispanic members represented 63 percent of the STAR population, followed by Black, non-Hispanic members (19 percent), and White, non-Hispanic members (16 percent). Asian members accounted for about two percent, and American Indian members accounted for less than one percent of the STAR population.

Figure 1. STAR Members by Race/Ethnicity, 2009-2011

In CHIP, the distribution of members by race/ethnicity changed slightly from 2009 to 2011. In December 2011, Hispanic members represented 61 percent of the CHIP population, which decreased from 65 percent in 2009. The next largest group was White, non-Hispanic members, who increased minimally from 20 percent in 2009 to 23 percent in 2011. The percentage of Black, non-Hispanic members remained at about 12 percent across the three-year period. Asian members accounted for about four percent, and American Indian members accounted for less than one percent of all CHIP members during the three-year period.

In STAR+PLUS, the distribution of Medicaid-only members by race/ethnicity changed considerably following the Medicaid managed care expansion in September 2011. In December 2011, Black, non-Hispanics represented 38 percent of the STAR+PLUS population, following an increase from 31 percent in 2010. The next largest group was White, non-Hispanic members, with an increase from 26 percent in 2010 to 33 percent in 2011. The proportion of Hispanic members decreased from 33 percent in 2010 to 26 percent in 2011. Asian members accounted for about three percent, and American Indian members accounted for less than one percent of all STAR+PLUS Medicaid-only members during the three-year period.

Figure 2. CHIP Members by Race/Ethnicity, 2009-2011

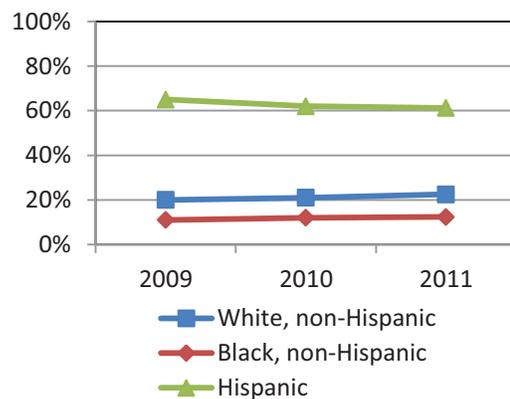

Figure 3. STAR+PLUS Medicaid-only Members by Race/Ethnicity, 2009-2011

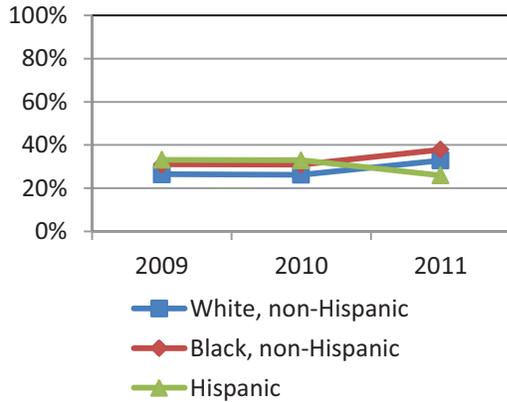

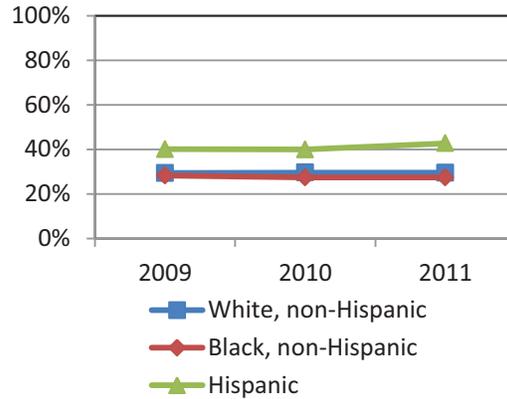

Figure 4. STAR Health Members by Race/Ethnicity, 2009-2011

In STAR Health, the distribution of members by race/ethnicity was primarily constant from 2009 to 2011, with Hispanic membership increasing slightly from 40 percent to 43 percent during the three-year period. The next largest group was White, non-Hispanic members (29 percent), followed by Black, non-Hispanic members (27 percent). Asian and American Indian members together accounted for less than one percent of all STAR Health members.

In NorthSTAR, the distribution of members by race/ethnicity remained constant from 2009 to 2011. In December 2011, Hispanic members accounted for 51 percent of the NorthSTAR population, following a slight increase from 48 percent in 2009. The next largest group was Black, non-Hispanic members (29 percent), followed by White, non-Hispanic members (16 percent). Asian members accounted for about three percent, and American Indian members accounted for less than one percent of all NorthSTAR members.

Figure 5. NorthSTAR Members by Race/Ethnicity, 2009-2011

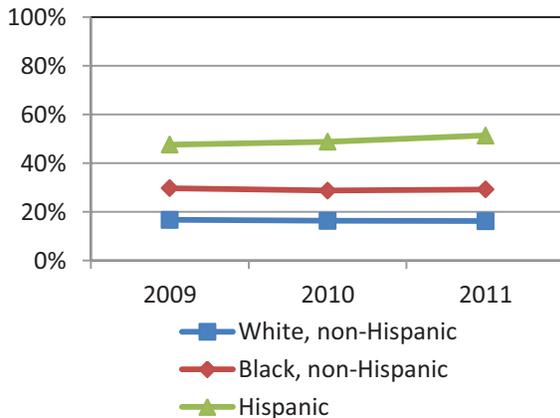

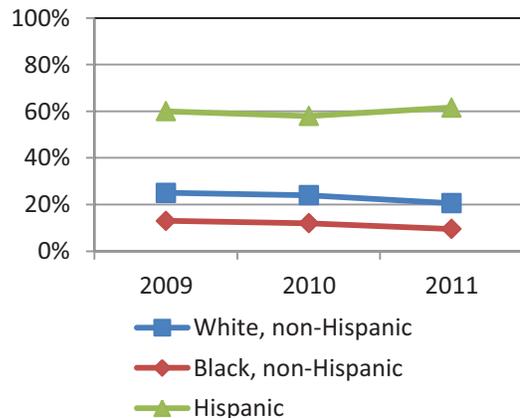

Figure 6. PCCM Members by Race/Ethnicity, 2009-2011

In PCCM, the distribution of members by race/ethnicity changed slightly for all groups following the Medicaid managed care expansion in September 2011. In December 2011, Hispanic members represented 62 percent of the PCCM population, following a slight increase from 58 percent in 2010. The next largest group was White, non-Hispanic members, who decreased from 24 percent in 2010 to 21 percent in 2011, followed by Black, non-Hispanic members, who also decreased slightly from 12 percent in 2010 to 10 percent in 2011. Asian and American Indian members together accounted for less than one percent of all PCCM members during the three-year period.

1.2 – Health Status

Health is a multi-dimensional concept that includes the absence of physical conditions, the absence of pain and/or disability, emotional well-being, and satisfactory social functioning. There is no single standard measurement of health status for individuals or population groups; methods used to assess health can draw from administrative data on health care claims and encounters or from member-reported health status collected in surveys.

Rating health status is important for several reasons. First, knowing the health of a member population allows the program or health plan to determine its health care needs and anticipated utilization. Second, the regular monitoring of health status measurements over time helps to inform an MCO's efforts toward quality improvement (QI), allowing QI staff to determine the effects of interventions on the health outcomes of its members.

This section examines member health status in STAR, CHIP, STAR+PLUS, and PCCM using administrative and survey data collected between SFY 2009 and 2011, and in STAR Health using survey data collected in 2012. Specifically, this section presents findings on: (1) the percentage of child members with special health care needs (MSHCN) in STAR, CHIP, and PCCM, using both Clinical Risk Groups (CRGs) and surveys, and the most common types of special needs among child MSHCN in STAR, CHIP, PCCM, and STAR Health (using surveys); (2) caregiver-reported health status of child members in STAR, CHIP, PCCM, and STAR Health; (3) self-reported health status and activities of daily living (ADL) of adult members in STAR+PLUS; and (4) obesity rates among children in STAR, CHIP, PCCM, and STAR Health, and adults in STAR+PLUS.

Child Member Health Status

To ensure quality of care for children in Medicaid and CHIP, it is important to identify children with special health care needs (CSHCN) in programs and health plans.

The Federal Maternal and Child Health Bureau defines *CSHCN* as:²¹

- children who have or are at an increased risk for a chronic physical, developmental, behavioral, or emotional condition, and
- who also require health and related services of a type or amount beyond that required by children generally.

In this report, CSHCN are referred to as child “MSHCN” – “members with special health care needs” – to be consistent with terminology used in the Texas Medicaid program.

The EQRO uses two methods for identifying child MSHCN: (1) CRG classification using International Classification of Diseases, 9th Revision (ICD-9-CM) and Current Procedural Terminology (CPT) codes from health care claims and encounter data;^{22,23} and (2) survey-based classification using the CSHCN Screener[®].²⁴

Clinical Risk Group (CRG) categories

- 1) Healthy
- 2) Significant Acute Conditions
- 3) Minor Chronic Conditions
- 4) Moderate Chronic Conditions
- 5) Major Chronic Conditions

This report presents findings on the percentage of child MSHCN in STAR, CHIP, and PCCM using the CRG classification system. Five CRG categories are reported, ranging from healthy children to children with major chronic conditions. The *Significant Acute Conditions* category includes

illnesses or injuries, such as head injury with coma or meningitis, which could place a child at risk for developing a chronic condition. *Minor Chronic Conditions* include illnesses that can usually be managed effectively with few complications, such as hearing loss or attention deficit/hyperactive disorder (ADHD). *Moderate Chronic Conditions* include illnesses that vary in their severity and progression, can be complicated, and require extensive care, such as asthma, epilepsy, or major depression. *Major Chronic Conditions* are serious illnesses that often result in progressive deterioration, debilitation, and death, such as active malignancies or cystic fibrosis. Children in the three chronic conditions categories together are classified as MSHCN.

Percentage of Child MSHCN

Table 4 presents the percentage of child MSHCN in the STAR, CHIP, and PCCM populations in 2011 (assessed using both CRGs and surveys), and in STAR Health in 2012 (assessed by survey only). STAR Health had a considerably higher percentage of child MSHCN than the other programs (48 percent), at more than double the rates observed in STAR (18 percent) or CHIP (20 percent) using the survey.

- When CRGs were used to classify children, the PCCM program showed an increase in the percentage of child MSHCN from 23 percent in 2010 to 27 percent in 2011. Both STAR and CHIP members had similar rates of child MSHCN in 2011 (16 percent and 15 percent, respectively). Rates have remained constant for STAR and increased nominally for CHIP during the three-year period.
- Use of the survey-based CSHCN Screener produced slightly higher rates than CRG-based rates in STAR and CHIP, and a lower rate in PCCM. The proportion of child MSHCN in STAR and CHIP was slightly above the national average of 14 percent for the general population, estimated by the 2009/2010 National Survey of CSHCN.²⁵

Table 4. Percentage of Child Members with Special Health Care Needs, by Program

Program	Year of study	% MSHCN (CRG)	% MSHCN (survey)
STAR	2011	16%	18%
PCCM	2011	27%	23%
CHIP	2011	15%	20%
STAR Health	2012	-	48%

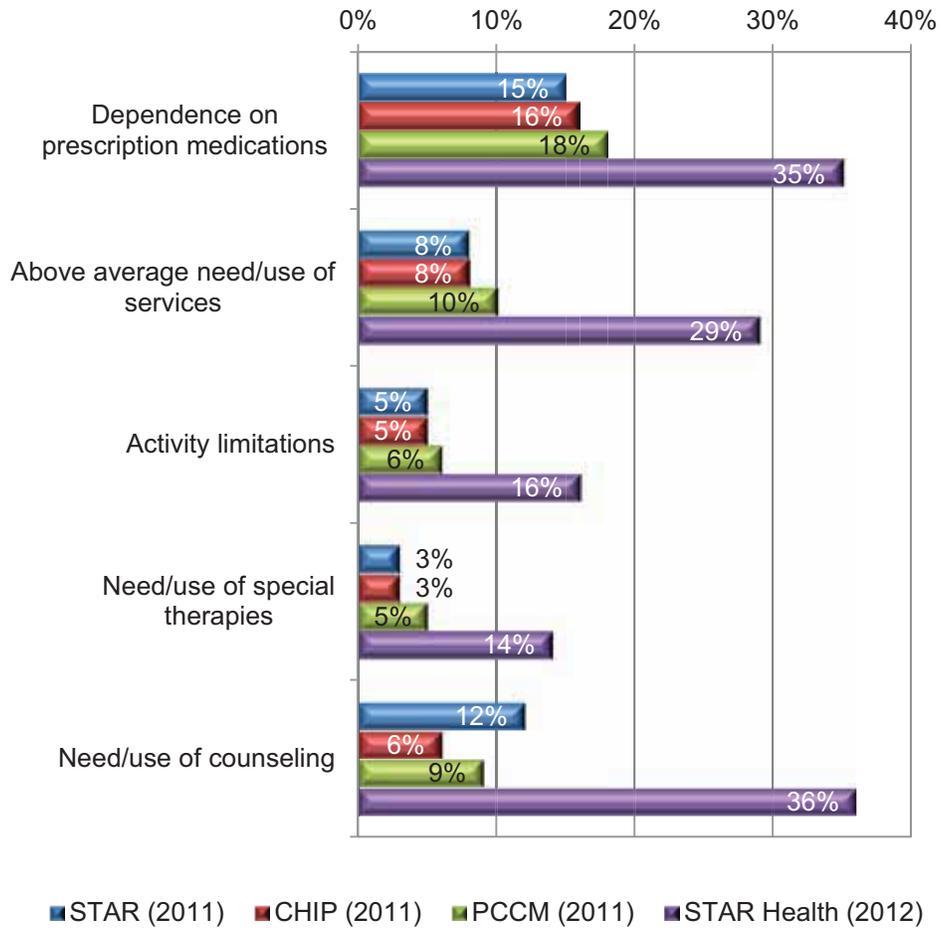

Child MSHCN Characteristics

Caregiver surveys administered by the EQRO include questions regarding five types of special needs among child MSHCN: (1) Dependence on medication; (2) Greater than routine use of health and educational services; (3) Functional/ability limitations (compared with other children their age); (4) Need for/use of special therapies; and (5) Need for/use of mental health treatment or counseling.

Figure 7 provides the percentage of members in STAR, CHIP, and PCCM who met the criteria for each of the five child MSHCN categories in FY 2011, and the percentage of members in STAR Health who met these criteria in FY 2012.²⁶ In STAR, CHIP, and PCCM, the most common special health care need was dependence on prescription medications (15 percent for STAR, 16 percent for CHIP, 18 percent for PCCM). The second most common special health care need varied across the programs. In STAR, need for/use of mental health treatment or counseling was the second-most common special health care need (12 percent). In CHIP and PCCM the second-most common special need was use of more medical care, mental health, or education services than is usual for most children (8 percent and 10 percent, respectively). Across the three-year period, the distribution of special needs among child MSHCN was relatively constant in STAR and CHIP, with STAR reporting an increase in need for counseling from seven percent in 2009 to 12 percent in 2011.

The prevalence of special needs was considerably higher in STAR Health, based on the FY 2012 STAR Health Caregiver Survey. In STAR Health, more than one-third of members were dependent on medications (35 percent) or had problems that required mental health treatment or counseling (36 percent). More than one-fourth of STAR Health members also had use of more medical care, mental health, or educational services than is usual for most children (29 percent). The percentage of STAR Health members who had functional/ability limitations or need/use of special therapies in 2012 was 16 percent and 14 percent, respectively. The higher rates of special needs in STAR Health are expected, as this program serves the population of children in foster care.

Figure 7. Characteristics of Child MSHCN in STAR, CHIP, PCCM, and STAR Health

Caregiver-Reported Child Member Health Status

Figure 8 shows parent-reported child member health status in STAR, CHIP, and PCCM for 2011, and in STAR Health in 2012. Both STAR and CHIP had an increase in child member health status from previous years. In STAR, parent-reported child health status (“excellent” or “very good”) increased from 65 percent in 2009 to 71 percent in 2011. In CHIP, this rate increased from 68 percent in 2010 to 73 percent in 2011.

Childhood Obesity Rate

BMI values were calculated using caregiver-reported height and weight data for children enrolled in STAR, CHIP, PCCM, and STAR Health. For children and adolescents less than 18 years old, BMI classification depends on the child's sex and age, and is determined using the CDC's BMI-for-age growth charts.²⁷ **Figure 9** displays the reported obesity rate in STAR, CHIP and PCCM. PCCM had the highest rate of child/adolescent obesity, with 31 percent of members classified as obese. STAR showed a decrease in the rate of child/adolescent obesity from 33 percent in 2009 to 28 percent in 2011. CHIP had the lowest child/adolescent obesity rate among the programs, and also showed a decrease over two years, from 28 percent in 2010 to 25 percent in 2011.

Figure 8. Percent of Caregivers who Reported Their Child's Health was "Excellent" or "Very Good" in STAR, CHIP, PCCM, and STAR Health

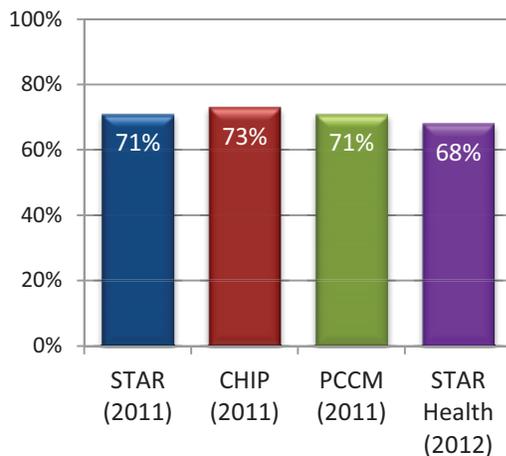

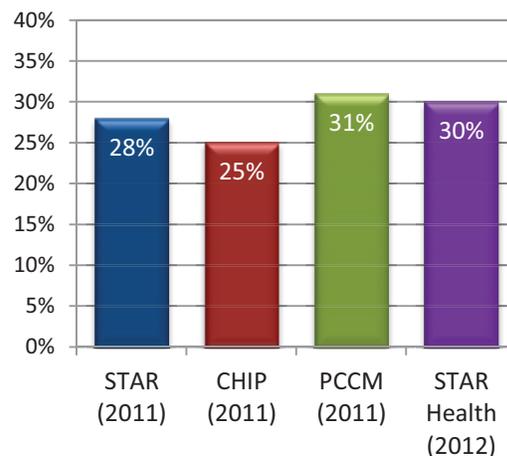

Figure 9. Reported Child/Adolescent Obesity Rates in STAR, CHIP, PCCM, and STAR Health

STAR+PLUS Member Health Status

Each year, STAR+PLUS members are asked a series of questions about their health status, ranging from general health to specific domains such as mental health and role and activity limitations due to physical or emotional problems. Rating health status is important for two major reasons. First, this information forms a baseline to track changes in health status over time. Second, such information can assist in program planning and financing. Assessing the percentage of members who are in poor health or who have chronic conditions is important to ensure adequate provider access, appropriate range of services, and financing for health services.

Member-Reported Health Status

Overall, STAR+PLUS member self-rated health status was low, with over 60 percent of Medicaid-only and dual-eligible members reporting “fair” or “poor” health across the three-year period. In 2009 and 2011, only 14 percent of Medicaid-only STAR+PLUS members rated their health as “excellent” or “very good”. This rate increased negligibly to 15 percent in 2012. Among STAR+PLUS dual-eligible members, 16 percent reported being in “excellent” or “very good” health in both 2010 and 2011. Low health status rates are generally expected for the STAR+PLUS population due to higher rates of chronic illness and disability in this program.

<u>STAR+PLUS Member Self-Reported Health Status</u>		
	STAR+PLUS Medicaid-only	STAR+PLUS Dual-eligible
	2012	2011
Overall health		
“Excellent” or “Very Good”	15%	16%
“Good”	22%	23%
“Fair or Poor”	64%	62%
Mental health		
“Excellent” or “Very Good”	26%	27%
“Good”	24%	29%
“Fair or Poor”	50%	44%

Note: Percentages shown in most figures and tables are rounded to the nearest whole number; therefore, percentages may not add up to 100 percent.

Self-reported mental health status among STAR+PLUS members was generally higher, with more than one-fourth of Medicaid-only members in 2012 and dual-eligible members in 2011 reporting their mental health as “excellent” or “very good” (26 percent and 27 percent, respectively).

Activities of Daily Living

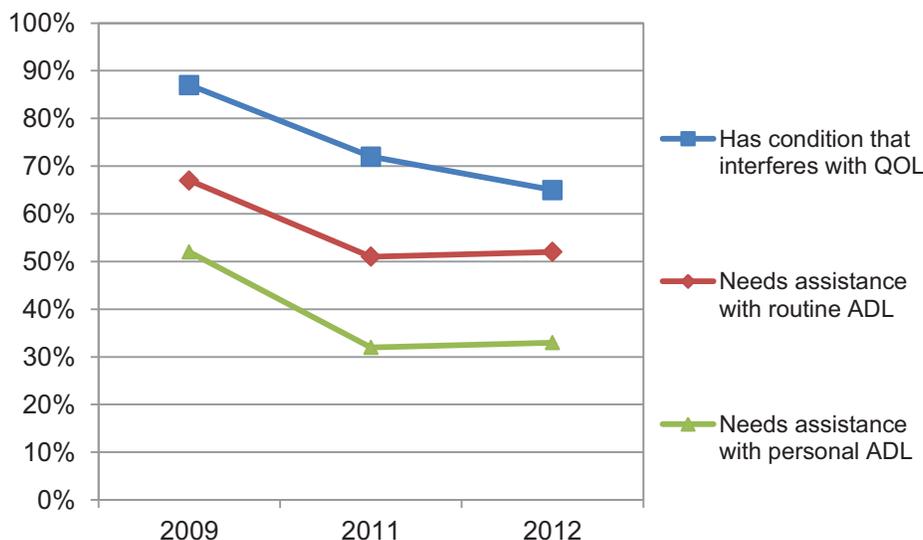

An important component of health status involves a person’s independence and ability to perform specific tasks of daily living, in which low levels of functioning indicate disability and dependence on others.

Medicaid-only and dual-eligible STAR+PLUS members generally had high levels of need for assistance with their activities of daily living (ADLs). Approximately two-thirds of members in both eligibility groups reported having a condition that interferes with their quality of life (QOL) – at 65 percent for Medicaid-only members in 2012, and 68 percent for dual-eligible members in

2011. During these same reporting years, 52 percent of Medicaid-only members and 53 percent of dual-eligible members reported needing assistance with *routine needs*, such as everyday household chores, doing necessary business, shopping, or getting around for other purposes. Approximately one-third of members in both eligibility groups reported needing assistance with *personal needs*, such as eating, dressing, or getting around the house (33 percent and 37 percent, respectively).

In the STAR+PLUS Medicaid-only population, some changes were observed in the percentage of members needing assistance with ADLs following the Medicaid managed care expansion in September 2011. **Figure 10** displays the percentage of Medicaid-only members who had a condition that interfered with their QOL, needed assistance with routine ADL, and needed assistance with personal ADL in 2009, 2011, and 2012. For all three rates, a considerable decrease occurred between the 2009 and 2011 reporting periods, suggesting that the expansion that occurred in 2011 added members with higher functional status. It should be noted, however, that similar increases were not observed in self-reported overall or mental health status.

Figure 10. Activities of Daily Living for STAR+PLUS Medicaid-Only Members in 2009, 2011, and 2012

Obesity Rate

BMI values were calculated using self-reported height and weight data for members enrolled in STAR+PLUS. Men and women 18 years of age and older are grouped into one of four clinically relevant BMI categories, which are recognized by the Centers for Disease Control and Prevention (CDC): (1) Underweight (below 18.5); (2) Healthy weight (18.5 to 24.9); (3) Overweight (25.0 to 29.9); and Obese (30.0 and above).²⁸ For the STAR+PLUS Medicaid-only and dual-eligible populations, nearly one-half of all members were considered obese across the three years.

<u>STAR+PLUS Member BMI Classification</u>		
	STAR+PLUS Medicaid-only	STAR+PLUS Dual-eligible
	2012	2011
Underweight	3%	4%
Healthy weight	23%	26%
Overweight	25%	25%
Obese	50%	45%

These findings show a notably high rate of obesity among members in the STAR+PLUS program, suggesting that STAR+PLUS MCOs should continue efforts to monitor, document, and implement interventions for healthy weight.

2 – Access and Utilization of Care

The Institute of Medicine defines *access to health care* as “the timely use of personal health services to achieve the best possible outcomes.”²⁹ Many quality of care metrics evaluate quality only for individuals who actually interacted with the health care system, which can overstate the quality of care received by the general population. Measures of access are therefore critical for understanding whether *all* members in public insurance programs are receiving the care they need, and whether it is being delivered quickly enough to meet their health care needs. Similarly, monitoring the utilization of health services by program can reveal whether members are receiving appropriate levels of care.

2.1 – Preventive Care

Preventive services are crucial for both detecting early signs of disease and for addressing modifiable risk factors of disease. Without timely diagnosis and treatment, risk factors such as obesity, high blood pressure, and high blood glucose levels can lead to chronic diseases.³⁰ Lifestyle choices can also contribute to chronic disease; at least one-third of annual mortality in the United States can be linked to preventable factors such as poor diet, physical inactivity, and cigarette smoking.^{31,32} Regular and effective implementation of preventive efforts for these factors can limit the development of chronic diseases³³ and, in turn, reduce the incidence of preventable deaths.³⁴ Preventive services include screening patients for risk factors and counseling them on healthy lifestyle decisions.

Pediatric Preventive Care

The EQRO uses several measures that assess pediatric preventive care in Texas Medicaid and CHIP, including: (1) *Children and Adolescents’ Access to Primary Care Practitioners*; (2) *Well-Child Visits in the First 15 Months of Life*; (3) *Well-Child Visits in the Third, Fourth, Fifth, and Sixth Years of Life*; (4) *Adolescent Well-Care Visits*; (5) HEDIS[®] *Childhood Immunization Status*; and (6) HEDIS[®] *Annual Dental Visit*.

Access to Primary Care Practitioners

Children and adolescents need access to primary care practitioners (PCPs) in order to receive the care that is necessary for their health and well-being.³⁵ However, at the national level many children do not have access to a PCP.^{36,37} (In Texas, Medicaid MCOs are required to provide a PCP to each of their members.) It is important to identify the children and adolescents who experience barriers to primary care to ensure that they receive the health care services they need.

The EQRO examines PCP accessibility in Texas Medicaid and CHIP using the HEDIS[®]-based measure: *Children and Adolescents’ Access to Primary Care Practitioners*. This measure reflects the percentage of members 12 months to 19 years of age who had a PCP visit during the measurement period (defined as one year for children up to six years old and two years for children and adolescents older than six). The EQRO calculates this measure for STAR, CHIP, and STAR Health. At HHSC’s request, the EQRO lifted provider constraints for this measure,

which may result in inflation of rates. The name “HEDIS®” was removed from discussion of this measure, as it does not conform precisely to NCQA specifications.

<u>Children and Adolescents’ Access to Primary Care Practitioners</u>				
	CY 2011 results 12 to 24 mo.	CY 2011 results 25 mo. to 6 yrs.	CY 2011 results 7 to 11 years	CY 2011 results 12 to 19 years
STAR	98 percent	93 percent	96 percent	95 percent
CHIP	95 percent	90 percent	93 percent	91 percent
STAR Health	99 percent	96 percent	98 percent	98 percent

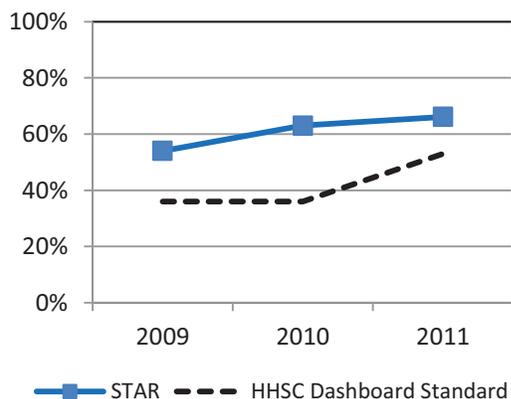

For each of the three programs, members in all age cohorts generally had good access to primary care in CY 2011. Access to PCPs is slightly lower among children 25 months to 6 years old than among members in other age groups. However, all rates were 90 percent or greater.

Well-Child Care

Pediatric well-child visits play an essential role in monitoring a child’s health and development.³⁸ Well-child visits facilitate the identification of childhood illnesses and developmental delays, and provide the opportunity for early intervention at a crucial point in the child’s life.³⁹ Standards regarding the frequency of such visits vary depending upon the age of the child. The American Academy of Pediatrics recommends six well-child visits in the first year of life, and an annual well-child visit for children three to six years of age.⁴⁰ The EQRO uses items that track well-care at three unique stages of development.

To assess whether infants received the recommended level of well-child care, the EQRO uses the HEDIS®-based measure: *Well-Child Visits in the First 15 Months of Life*. This measure reveals the percentage of members who turned 15 months old during the measurement year and who had at least six well-child visits during their first 15 months of life. At HHSC’s request, the EQRO lifted provider constraints for this measure, which may result in inflation of rates. The name “HEDIS®” was removed from discussion of this measure, as it does not conform precisely

Figure 11. Well-Child Visits in the First 15 Months of Life in STAR, 2009-2011

to NCQA specifications. In both STAR and STAR Health, performance on this measure improved from 2009 to 2011.

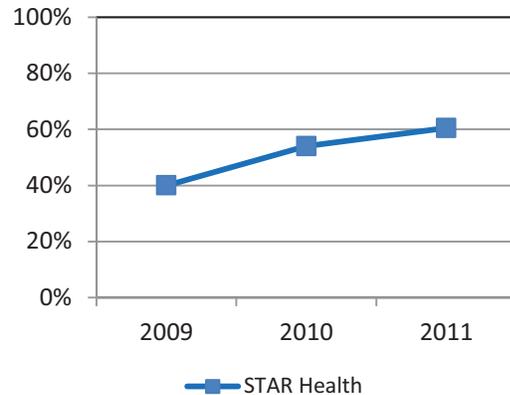

Figure 11 displays rates for this measure in STAR from 2009 to 2011, along with the corresponding HHSC Dashboard standards. The percentage of infants in the STAR program receiving the appropriate number of well-child visits surpassed the HHSC Dashboard standard during all three years. In 2011, two-thirds of eligible STAR members had six or more well-child visits within the first 15 months of life (66

7 – 2009 - 2011

percent), exceeding the HHSC Dashboard standard of 53 percent.

Figure 12 shows rates in STAR Health over the same three-year period. In 2011, 60 percent of eligible children received at least six well-child visits in the first 15 months of life, exceeding the HHSC Dashboard standard of 53 percent. (Note that STAR Health Dashboard standards for this measure were first established in 2011.) Between 2009 and 2011, the rate of well-child visits for infants in STAR Health increased by 20 percentage points.

Figure 12. Well-Child Visits in the First 15 Months of Life in STAR Health, 2009-2011

To measure access and utilization of well-child care among young children, the EQRO uses the HEDIS®-based measure:

Well-Child Visits in the Third, Fourth, Fifth, and Sixth Years of Life. This measure provides the percentage of members three to six years of age who received one or more well-child visits with a PCP during the measurement year. At HHSC’s request, the EQRO lifted provider constraints for this measure, which may result in inflation of rates. The name “HEDIS®” was removed from discussion of this measure, as it does not conform precisely to NCQA specifications.

Figure 13. Well-Child Visits in the Third, Fourth, Fifth, and Sixth Years of Life in STAR, CHIP, STAR+PLUS, and STAR Health, 2009-2011

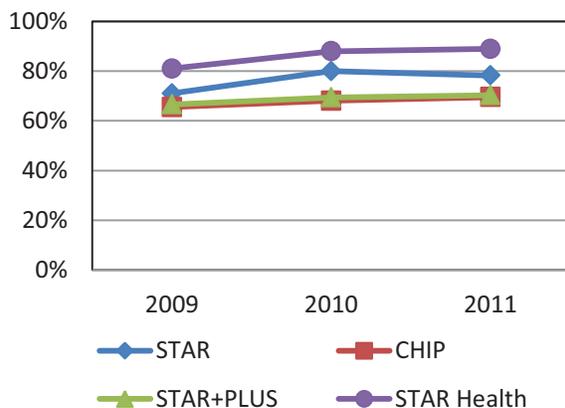

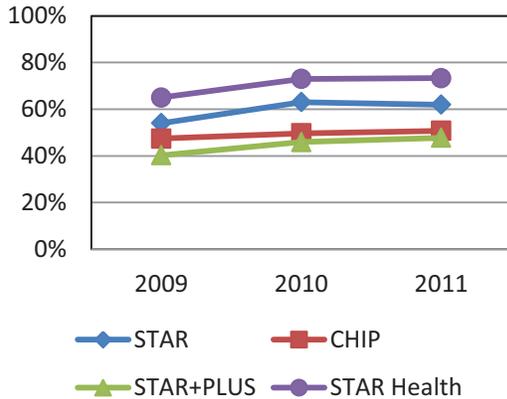

Figure 13 displays program-level results for this measure from 2009 to 2011 for STAR, CHIP, STAR+PLUS, and STAR Health. In general, all four programs demonstrated slight improvements over the three year period.

In 2011, 78 percent of STAR members in this age group had one or more well-child visits within the measurement year. This percentage exceeded both the national HEDIS® mean and HHSC Dashboard standard (72 percent and 71 percent, respectively). In addition, CHIP, STAR+PLUS, and STAR Health all outperformed the HHSC Dashboard standards associated with their programs by five percentage points each.

Well-care visits are also important for adolescents, whose health-related issues are often associated with lifestyle factors such as risky sexual behaviors, unhealthy diet, and use of

alcohol, tobacco, or recreational drugs.⁴¹ The American Medical Association recommends that adolescents have at least one well-care visit annually.⁴²

Figure 14. Adolescent Well-Care Visits in STAR, CHIP, STAR+PLUS, and STAR Health, 2009-2011

The EQRO uses the HEDIS[®]-based measure *Adolescent Well-Care Visits*, which assesses the percentage of members 12 to 21 years of age who had at least one comprehensive well-care visit with either a PCP or an OB/GYN practitioner during the measurement year. At HHSC’s request, the EQRO lifted provider constraints for this measure, which may result in inflation of rates. The name “HEDIS[®]” was removed from discussion of this measure, as it does not conform precisely to NCQA specifications. **Figure 14** shows program-level trends in adolescent well-care from 2009 to 2011. Results for all four programs slightly improved over this time frame.

In 2011, 62 percent of adolescents in STAR had at least one comprehensive well-care visit within the measurement year. This percentage surpasses both the HHSC Dashboard standard of 51 percent and the national HEDIS[®] mean of 48 percent. Rates in CHIP (51 percent), STAR+PLUS (48 percent), and STAR Health (73 percent) also exceeded the HHSC Dashboard standards for these programs (42 percent, 42 percent, and 45 percent, respectively).

Childhood Immunization

Childhood vaccination is a basic method of disease prevention. Immunizations prevent the spreading of dangerous diseases and ultimately save billions of dollars in direct and societal costs.⁴³ Certain vaccine-preventable illnesses, such as hepatitis, measles, and pertussis, can lead to severe complications, including death.⁴⁴ Infants are especially vulnerable and often have a more severe reaction to infections because their immune systems are still developing.⁴⁵

The Centers for Disease Control and Prevention (CDC) recommends an immunization schedule in a child’s first two years of life against chickenpox, diphtheria, hepatitis (A and B), influenza, measles, mumps, pertussis, polio, pneumococcus, rotavirus, rubella, and tetanus.⁴⁶

The EQRO uses the HEDIS[®] *Childhood Immunization Status* measure to assess whether children in Medicaid and CHIP are receiving these vaccines. This measure represents the percent of two-year-old children who received the recommended series of vaccinations by their second birthday.⁴⁷ In both STAR and CHIP, less than one-half of eligible members had been given the recommended series of vaccinations by their second birthday in CY 2011. However, the STAR program rate for

<u>HEDIS[®] Childhood Immunization Status</u>	
CY 2011 results	
STAR	45 percent
CHIP	39 percent

Childhood Immunization Status exceeded the national HEDIS[®] mean of 32 percent. Among CHIP members, 39 percent of eligible two-year olds received the appropriate immunizations, an improvement of four percent over the previous year's rate.

Access to Dental Care

Good oral health is integral to a child's overall physical well-being. Inadequate dental care during childhood can have negative impacts on speech, growth and social development, nutrition, and quality of life.^{48,49} Yet, millions of children in the United States have insufficient access to needed dental treatment and preventive oral health care.⁵⁰ Children from impoverished families are particularly vulnerable to experiencing problems related to poor dental health, including oral disease and untreated tooth decay.^{51, 52} However, compared to the general population, children from low-income households receive fewer dental services^{53, 54} and are less likely to have routine dental checkups.⁵⁵

<u>HEDIS[®] Annual Dental Visit</u>	
CHIP Dental CY 2011 results	
2 to 3 years old	60 percent
4 to 6 years old	71 percent
7 to 10 years old	73 percent
11 to 14 years old	66 percent
15 to 18 years old	56 percent
19 to 21 years old	48 percent
All members	66 percent

The EQRO evaluates access to dental care and services among members enrolled in CHIP Dental using the HEDIS[®] *Annual Dental Visit* measure. This measure calculates the percentage of members 2 to 21 years of age who had at least one dental visit during the measurement year. Specifications for this measure allow for the calculation of separate rates across six age cohorts, as well as an overall rate. Overall, the rate of annual dental visits in CHIP Dental rose from 59 percent in SFY 2009 to 66 percent in CY 2011, greatly exceeding the 2011 HEDIS[®] national average of 48 percent.

Adult Preventive Care

The EQRO uses six measures to assess adult preventive care in Texas Medicaid: (1) HEDIS[®] *Adults' Access to Preventative/Ambulatory Health Services*; (2) *Prenatal and Postpartum Care*; (3) *Frequency of Ongoing Prenatal Care*; (4) HEDIS[®] *Breast Cancer Screening*; (5) HEDIS[®] *Cervical Cancer Screening*; and (6) HEDIS[®] *Chlamydia Screening in Women*.

Adults' Access to Preventive/Ambulatory Health Services

<u>HEDIS[®] Adults' Access to Preventive/Ambulatory Health Services</u>
STAR+PLUS CY 2011 results

The HEDIS® *Adults' Access to Preventive/Ambulatory Health Services* measure examines the percentage of members who had an ambulatory or preventive care visit during the measurement year. In CY 2011, rates in STAR+PLUS were calculated separately for three age groups: 20 to 44 years old, 45 to 64 years old, and 65 years and older.

20 to 44 years old	72 percent
45 to 64 years old	87 percent
65 years and older	87 percent

In the STAR+PLUS program, members 45 years of age and older generally had good access to preventive care. Eighty-seven percent of members in both older age cohorts (45 to 64 years and 65 years and older) had an ambulatory or preventive care visit in CY 2011. Preventive care was lower among 20- to 44-year-old STAR+PLUS members than among older members. Seventy-two percent of members 20 to 44 years of age had an ambulatory or preventive care visit in CY 2011.

Prenatal and Postpartum Care

Timely prenatal and postpartum care provides the opportunity to screen for health conditions that affect mother and child during and after pregnancy. Depression, diabetes, and anemia are all prenatal and postpartum conditions that can lead to adverse consequences if they are not detected early.^{56,57} The American College of Obstetricians and Gynecologists recommends a prenatal evaluation within the first trimester and a postpartum evaluation on or between 21 days and 56 days after delivery.⁵⁸

<u>Prenatal and Postpartum Care</u>		
CY 2011 results	Prenatal Care	Postpartum Care
STAR	83 percent	59 percent
STAR+PLUS	68 percent	38 percent
STAR Health	72 percent	45 percent

The EQRO uses the *Prenatal and Postpartum Care* measure to analyze two aspects of perinatal care for live births that occurred during the measurement period: (1) *Timeliness of Prenatal Care*: the percentage of deliveries that received a prenatal care visit in the first trimester or within 42 days of enrollment; and (2) *Postpartum*

Care: the percentage of deliveries that had a postpartum visit on or between 21 and 56 days after delivery. This measure follows HEDIS® specifications with the exception of provider constraints for Prenatal Care; this should be taken under consideration when making comparisons to HEDIS® national means.

Eighty-three percent of STAR program deliveries received a prenatal visit, and 59 percent of deliveries received a postpartum visit within the specified time periods. These percentages fell slightly short of their corresponding national HEDIS® means (84 percent and 64 percent, respectively), but met their HHSC Dashboard standards (83 percent and 59 percent, respectively).

Figures 15 and 16 show results for the *Prenatal and Postpartum Care* measure from 2009 to 2011 in the STAR+PLUS program. Sixty-eight percent of STAR+PLUS deliveries received a prenatal visit in 2011. Although this rate represented an increase over previous years' performances, STAR+PLUS failed to meet the HHSC Dashboard standard for the third consecutive year.

A similar trend was observed in STAR+PLUS for the *Postpartum Care* sub-measure. The percentage of deliveries receiving a postpartum visit in STAR+PLUS increased slightly across the three-year period (from 31 percent in 2009 to 38 percent in 2011), but failed to meet the HHSC Dashboard standard during all three years.

Figure 15. Timeliness of Prenatal Care in STAR+PLUS, 2009-2011

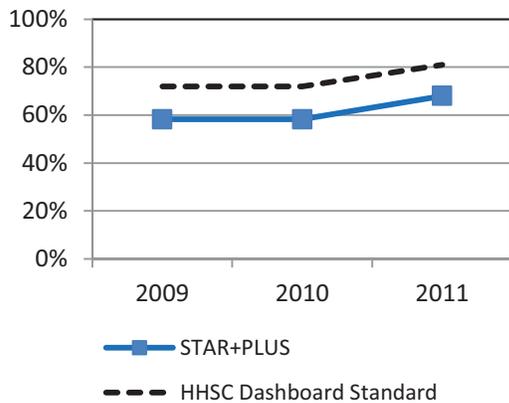

Figure 16. Postpartum Care in STAR+PLUS, 2009-2011

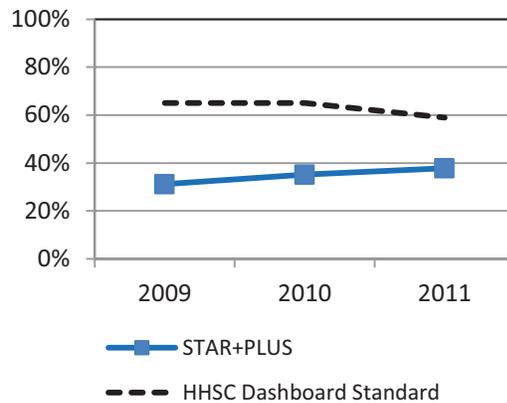

Figure 17. Timeliness of Prenatal Care in STAR Health, 2009-2011

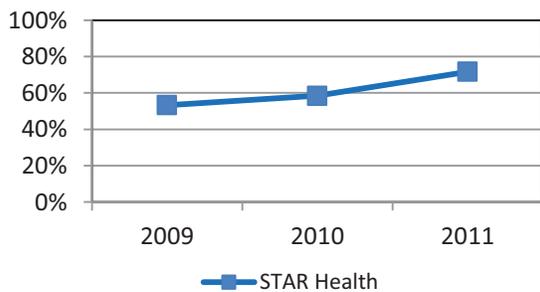

Figure 17 shows results for the *Timeliness of Prenatal Care* sub-measure from 2009 to 2011 in STAR Health. Seventy-two percent of deliveries in STAR Health received a prenatal visit in 2011, which was approximately a 20 percent increase over the 2009 outcome of 53 percent for this measure. Forty-five percent of STAR Health deliveries received a postpartum visit.

Frequency of Ongoing Prenatal Care

The EQRO uses the HEDIS[®]-based measure *Frequency of Ongoing Prenatal Care* to examine women's use of prenatal care services relative to the recommended guidelines of the American College of Obstetricians and Gynecologists for frequency/scheduling of prenatal care. This

measure represents the percentage of deliveries between November 6 of the year prior to the measurement year and November 5 of the measurement year that had the following number of prenatal visits (in reference to the recommended number of visits): (1) <21 percent of expected visits; (2) 21-40 percent of expected visits; (3) 41-60 percent of expected visits; (4) 61-80 percent of expected visits; and (5) ≥81 percent of expected visits. At HHSC’s request, the EQRO lifted provider constraints for this measure, which may result in inflation of rates. The name “HEDIS®” was removed from discussion of this measure, as it does not conform precisely to NCQA specifications.

Figure 18. Frequency of Ongoing Prenatal Care in STAR and STAR Health, 2009-2011

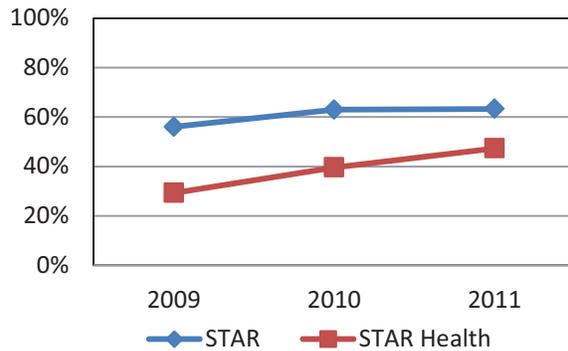

Figure 18 shows the percentage of deliveries in STAR and STAR Health that had greater than 80 percent of the expected prenatal care visits in CY 2011. Sixty-three percent of STAR deliveries had ≥81 percent of expected visits (representing good performance), which exceeded the HEDIS® mean of 61 percent. Forty-seven percent of STAR Health deliveries had ≥81 percent of expected visits, while 40 percent of CHIP deliveries had ≥81 percent of expected visits.

Breast Cancer Screening

Nearly one of every eight women in the U.S. will develop breast cancer during her lifetime.⁵⁹ Screening for breast cancer can reduce the risk for breast cancer mortality by about 20 percent,⁶⁰ and the American Academy of Family Physicians (AAFP) recommends that women between the ages of 50 and 74 get a mammogram every two years.⁶¹

<u>HEDIS® Breast Cancer Screening</u>	
CY 2011 results	
STAR+PLUS	46 percent

The EQRO examines breast cancer screening rates in STAR+PLUS using the HEDIS® *Breast Cancer Screening* measure, which assesses the percentage of women who received a mammogram during the measurement period.

In CY 2011, 46 percent of eligible women in STAR+PLUS had a mammogram to screen for breast cancer during the measurement period. This rate falls below the HEDIS® mean of 51 percent, but is six percentage points higher than the program-level results from 2009.

Cervical Cancer Screening

Pap tests are an effective way to detect cervical cancer, and have helped to reduce the prevalence of cervical cancer by 67 percent in the past 30 years.⁶² Women who receive Pap tests and detect cancer early have a survival rate of nearly 100 percent. Despite the effectiveness of screening for cervical cancer, approximately three out of four women with

<u>HEDIS[®] Cervical Cancer Screening</u>	
CY 2011 results	
STAR	59 percent
STAR+PLUS	40 percent

advanced cervical cancers have not had a Pap test in the past five years.⁶³

The EQRO assesses rates of cervical cancer screening in STAR and STAR+PLUS using the HEDIS[®] *Cervical Cancer Screening* measure, which provides the percentage of women between 21 and 64 years of age

who had at least one Pap test to screen for cervical cancer during the measurement year. In the STAR program, 59 percent of women eligible for this measure had a Pap test to screen for cervical cancer during the CY 2011 measurement period. Of the women eligible for this measure in STAR+PLUS, 40 percent had a Pap test to screen for cervical cancer. The results in both programs fell short of both the HEDIS[®] mean of 67 percent and the HHSC Dashboard standard of 65 percent.

Chlamydia Screening in Women

Over one million Americans are diagnosed with Chlamydia each year,⁶⁴ and an estimated two million additional cases go undiagnosed and untreated. Chlamydia can lead to a number of serious health problems if not treated properly, often causing irreversible damage to women's reproductive organs.^{65,66} The CDC recommends annual screening for Chlamydia in all women under the age of 25 who are sexually active.⁶⁷

The EQRO uses the HEDIS[®] *Chlamydia Screening in Women* measure for young women in STAR, CHIP, and STAR Health. This measure provides the percentage of sexually active female members between ages 16 and 24 who had at least one test for Chlamydia during the measurement period.

<u>HEDIS[®] Chlamydia Screening in Women</u>	
CY 2011 results	
STAR	51 percent
CHIP	31 percent
STAR Health	58 percent

In 2011, the percentage of eligible women in the STAR program who received Chlamydia screening during the measurement period (51 percent) was lower than the national HEDIS[®] mean of 58 percent. When STAR results were broken down by age group, program-level performance on this measure fell below the HEDIS[®] mean for members 16 to 20 years of age (49 percent, compared to the HEDIS[®] mean of 55 percent), while exceeding the HEDIS[®] mean for members 21 to 24 years of age (66 percent, compared to the HEDIS[®] mean of 62 percent).

In 2011, 58 percent of all eligible women in STAR Health received at least one test for Chlamydia during the measurement period, which was six percentage points higher than the

STAR Health rate reported in 2009. The rate among eligible members 16 to 20 years of age was also 58 percent. By contrast, the rate among eligible STAR Health members 21 to 24 years of age was 53 percent, which falls short of the HEDIS® mean of 62 percent for this age group.

Results for the CHIP program were reported only for the younger age cohort (16- to 20-year olds) because the older age cohort is not applicable to the CHIP population. In CY 2011, fewer than one in three eligible women in CHIP received Chlamydia screening (31 percent).

2.2 – Ambulatory Care and Inpatient Utilization

The HEDIS® *Ambulatory Care* measure summarizes utilization of two types of ambulatory care: (1) outpatient care, showing the rate of outpatient visits per 1,000 member months; and (2) emergency department (ED) visits, showing the rate of ED visits per 1,000 member months.

<u>HEDIS® Ambulatory Care</u>		
CY 2011 results	Outpatient visits per 1,000 member months	Emergency department visits per 1,000 member months
STAR	387	54
CHIP	231	21
STAR+PLUS	565	114
STAR Health	466	51

Potentially Avoidable Inpatient Use

Potentially avoidable health care events are costly and represent a particularly important challenge for the effective delivery of health services in state Medicaid programs. One way to evaluate the occurrence of potentially avoidable health care events is to analyze inpatient admissions for various ambulatory care sensitive conditions (ACSCs), which the Agency for Healthcare Research and Quality (AHRQ) defines as "conditions for which good outpatient care can potentially prevent the need for hospitalization or for which early intervention can prevent complications or more severe disease."⁶⁸

Emergency department visits and hospital admissions for ACSCs function as indicators of access to and quality of outpatient care. These healthcare events and their associated expenditures potentially could have been avoided with accessible, effective outpatient care. Thus, unlike most other performance measures referenced throughout this report, higher values represent poorer performance.

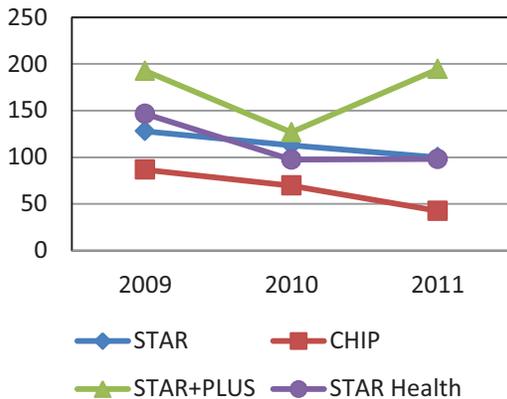

To assess potentially avoidable inpatient use, the EQRO uses the AHRQ Pediatric Quality Indicators (PDIs) and Prevention Quality Indicators (PQIs), as well as measures of potentially preventable readmissions (PPRs) developed by 3M.

Pediatric Quality Indicators (children)

The EQRO uses the Pediatric Quality Indicators (PDIs) to analyze pediatric admissions for five ambulatory care sensitive conditions among members 17 years of age and younger: (1) *Asthma*; (2) *Diabetes Short-Term Complications*; (3) *Gastroenteritis*; (4) *Perforated Appendix*; and (5) *Urinary Tract Infection*. **Figures 19 to 22** show trends in AHRQ PDIs for asthma, diabetes short-term complications, gastroenteritis, and urinary tract infection among children in STAR, CHIP, STAR+PLUS, and STAR Health, from 2009 to 2011. Rates are expressed per 100,000 eligible members. It should be noted that in smaller programs, such as STAR Health and STAR+PLUS, the number of pediatric admissions for a particular indicator is very small. For measures where the number of admissions in these programs was less than 20, observed year-to-year changes may not reflect true differences in quality of care. Changes in PDI rates in these cases should be interpreted with caution. Measures where the number of admissions

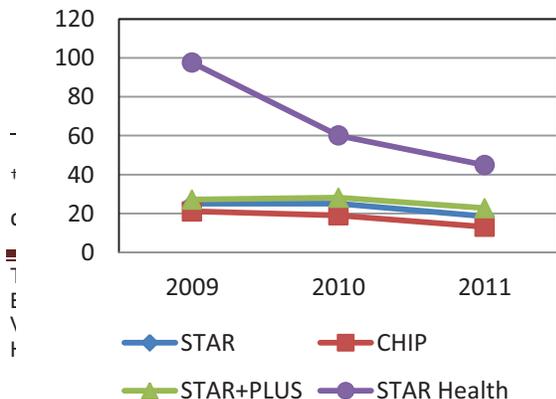

were below 20 have been noted with footnotes (e.g., “†”) in the narrative of this section.

Figure 19. AHRQ Asthma PDI Rates in STAR, CHIP, STAR+PLUS, and STAR Health, 2009-2011

Asthma: Pediatric inpatient admissions for asthma showed a slight decline in STAR, CHIP, and STAR Health between 2009 and 2011. In 2011, *Asthma PDI* rates in STAR (100 per 100,000) were below both the HHSC Dashboard standard of 181 per 100,000 and the AHRQ national average of 147 per 100,000. As shown in **Figure 19** rates in STAR+PLUS fluctuated over the three-year period, decreasing from 193 to 127 per 100,000 between 2009 and 2010, and then returning to 194 per 100,000 in 2011.[†]

Figure 20. AHRQ Diabetes Short-Term Complications PDI Rates in STAR, CHIP, STAR+PLUS, and STAR Health, 2009-2011

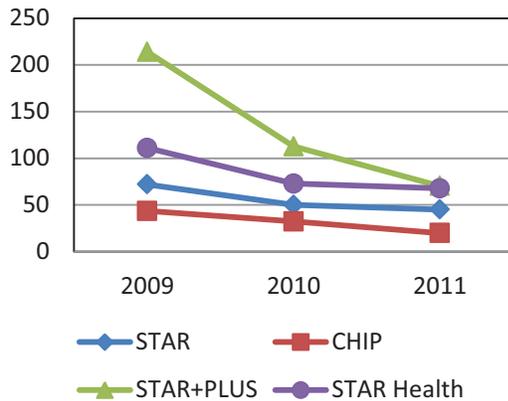

Diabetes: Inpatient admissions for diabetes short-term complications remained fairly consistent from 2009 to 2011 in STAR, CHIP, and STAR+PLUS. PDI rates for diabetes short-term complications declined in STAR Health during the three-year period, dropping from 98

asthma was 16 in 2009, 10 in 2010, and 19 in 2011. This rate and should be interpreted with caution.

– 2009 - 2011

per 100,000 in 2009 to 45 per 100,000 in 2011, as depicted in **Figure 20**.[‡]

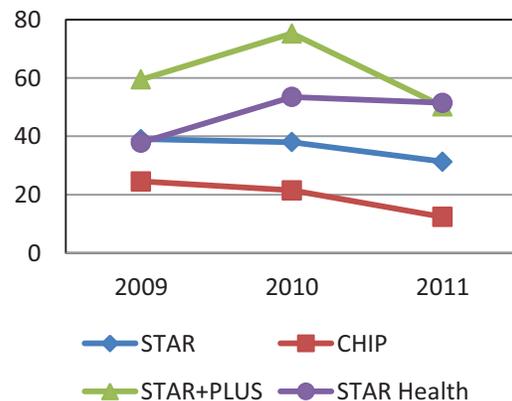

Figure 21. AHRQ Gastroenteritis PDI Rates in STAR, CHIP, STAR+PLUS, and STAR Health, 2009-2011

Gastroenteritis: Pediatric inpatient admissions for gastroenteritis declined in all programs over the three-year period, particularly in STAR+PLUS (**Figure 21**). In 2011, PDI rates in STAR (45 per 100,000) and CHIP (20 per 100,000) were considerably lower than the HHSC Dashboard standards (146 and 42 per 100,000, respectively).[§]

Urinary tract infection: Pediatric inpatient admissions for urinary tract infection showed a slight decline in STAR and CHIP from 2009 to 2011, while fluctuating considerably in STAR+PLUS and increasing considerably in STAR Health (**Figure 22**).[†] Rates were lower than the HHSC Dashboard standard of 53 per 100,000 in STAR. In CHIP and STAR Health, rates were lower than the HHSC Dashboard

Figure 22. AHRQ Urinary Tract Infection PDI Rates in STAR, CHIP, STAR+PLUS, and STAR Health, 2009-2011

[‡] In STAR Health, the number of admissions for diabetes showed a slight increase in 2011. In STAR+PLUS, there were only two admissions for diabetes in 2011. These estimates may not represent true changes in quality of care.

[§] In STAR+PLUS, the number of admissions for gastroenteritis decreased from 20 in 2009 to 7 in 2011. This change may not represent true changes in quality of care and should be interpreted with caution.

[†] In STAR Health, the number of admissions for UTI increased from 15 in 2009 to 22 in 2011. In STAR+PLUS the number of admissions for UTI was 5 in 2009, 6 in 2010, and 5 in 2011. Due to the small numbers of admissions, these changes may not represent true changes in quality of care and should be interpreted with caution.

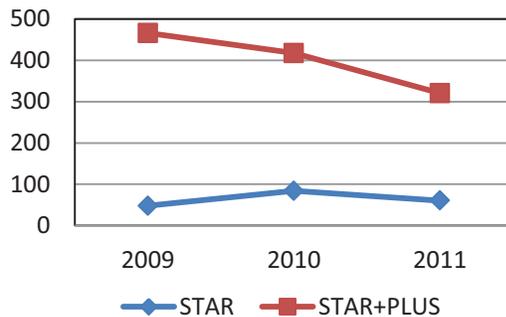

standards of 26 per 100,000 and 53 per 100,000, respectively.

Perforated appendix: PDI rates for perforated appendix were higher than the HHSC Dashboard standard of 31 per 100 admissions for appendicitis in STAR (43 per 100), CHIP (35 per 100), and STAR Health (59 per 100).

Prevention Quality Indicators (adults)

The EQRO uses the Prevention Quality Indicators (PQIs) to assess adult admissions for the following ambulatory care sensitive conditions: (1) *Diabetes Short-Term Complications*, (2) *Perforated Appendix*, (3) *Diabetes Long-Term Complications*, (4) *Chronic Obstructive Pulmonary Disease (COPD) or Asthma in Older Adults*, (5) *Low Birth Weight*, (6) *Hypertension*, (7) *Congestive Heart Failure*, (8) *Dehydration*, (9) *Bacterial Pneumonia*, (10) *Urinary Tract Infection*, (11) *Angina without Procedure*, (12) *Uncontrolled Diabetes*, (13) *Asthma in Younger Adults*, and (14) *Rate of Lower Extremity Amputation among Patients with Diabetes*. Members ages 18 or older are eligible for these measures.

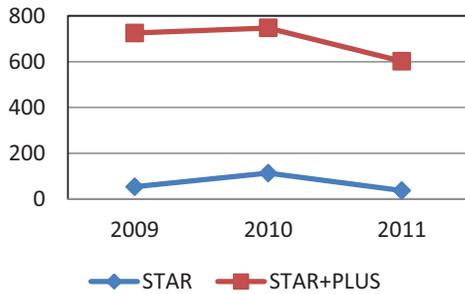

Figure 23. AHRQ Diabetes Short-Term Complications PQI Rates in STAR and STAR+PLUS, 2009-2011

The PQIs are calculated for adults in STAR and STAR+PLUS, with three-year trends available for most indicators.⁶⁹ **Figures 23 to 26** depict trends in AHRQ PQIs for diabetes short-term complications, diabetes long-term complications, bacterial pneumonia, and urinary tract infections among adults in STAR and STAR+PLUS, for 2009, 2010, and 2011. While other PQIs also exhibited dramatic shifts in rates over this time, some of these changes may have resulted from modifications to the methodological specifications that occurred with the release of version 4.3 of the AHRQ PQIs. This report focuses on PQIs for which

measurement specifications remained consistent over the three-year period. Rates are per 100,000 eligible members. While none of the rates presented here involved numerators less than 20 members (as for certain PDIs), these trends should still be interpreted with caution. In future reports, the EQRO will conduct statistical significance testing for the time trends.

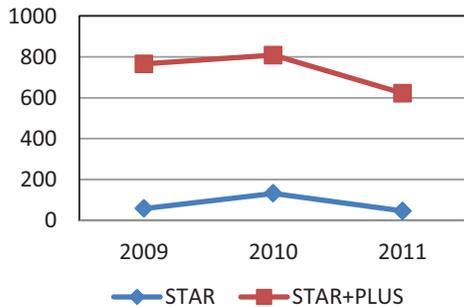

Figure 24. AHRQ Diabetes Long-Term Complications PQI Rates in STAR and STAR+PLUS, 2009-2011

Diabetes short-term complications: Adult inpatient admissions for diabetes short-term complications dropped considerably from 2009 to 2011 in STAR+PLUS (Figure 23). During this period, PQI rates for diabetes short-term complications showed a very slight net increase in the STAR program, rising from 48 per 100,000 in 2009 to 61 per 100,000 in 2011, which was roughly equivalent to both the AHRQ national average of 62 per 100,000 and the HHSC Dashboard standard of 56 per 100,000.

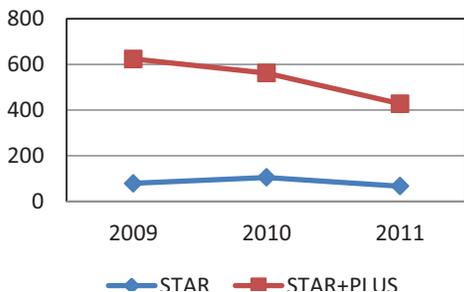

Diabetes long-term complications: Adult inpatient admissions for diabetes long-term complications dropped considerably from 2009 to 2011 in STAR+PLUS (Figure 24). Rates in STAR fluctuated over the three-year period, increasing from 53 to 113 per 100,000 between 2009 and 2010, before dropping back down to 36 per 100,000. In 2011, rates in STAR were noticeably better than the HHSC Dashboard standard of 64 per 100,000, and all MCOs had rates lower than the AHRQ national average of 122 per 100,000.

Figure 25. AHRQ Bacterial Pneumonia PQI Rates in STAR and STAR+PLUS, 2009-2011

Bacterial pneumonia: Adult inpatient admissions for bacterial pneumonia showed a net decline from 2009 to 2011 in both programs analyzed for this measure. *Bacterial Pneumonia* PQI rates in STAR+PLUS fell from 765 per 100,000 in 2009 to 622 per 100,000 in 2011, while STAR rates decreased from 58 to 46 per 100,000 (Figure 25). The STAR rates were also substantially lower than the HHSC Dashboard standard for this measure (174 per 100,000).

Figure 26. AHRQ Urinary Tract Infection PQI Rates in STAR and STAR+PLUS, 2009-2011

Urinary tract infection: Adult inpatient admissions for urinary tract infection showed a steady decline in STAR+PLUS from 2009 to 2011, while fluctuating somewhat in the STAR program during that timeframe where rates peaked in 2010 (Figure 26). In 2011, the STAR PQI rate of 67 per 100,000 for UTIs was far

- 2009 - 2011

below the HHSC Dashboard standard of 177 per 100,000 for the STAR program.

Potentially Preventable Readmissions (PPRs)

Potentially preventable readmissions (PPRs) are return hospitalizations that may arise from factors such as poor coordination of services at the time of discharge and during follow-up (such as incomplete discharge planning or inadequate access to care after discharge), or deficiencies in the process of care and treatment, including actions taken or omitted during the initial hospital stay.⁷⁰ Patient-level factors associated with readmissions include poor health status, co-morbidities, and increasing severity of illness.⁷¹ Some studies have also found associations between various health care structure and process factors and readmissions. As with other forms of avoidable health care events, potentially preventable readmissions tend to be more common among patients insured by Medicaid or self-pay.⁷² Possible reasons for these associations include greater financial barriers to medications and access barriers to primary care, as well as reliance on hospitals as the most convenient or preferred source of primary care by Medicaid and self-pay patients.^{73,74}

<i>3M Potentially Preventable Readmissions</i>				
CY 2011 results	Candidate admissions	Admissions that resulted in a PPR	PPR rate	PPR cost per 1,000 member-months
STAR	139,381	2,979	2.1%	\$1,127.32
CHIP	7,680	388	5.1%	\$494.67
STAR+PLUS	30,086	3,876	12.9%	\$26,661.17
STAR Health	4,536	703	15.5%	\$11,195.93

The EQRO calculated PPR rates and expenditures using the 3M Health Information Systems (HIS) software. The 3M measure for PPRs uses hospital inpatient discharge data to calculate rates of readmissions that could have been prevented with better outpatient care. PPRs are produced using a combination of All Patient Refined Diagnosis Related Groupings (APR-DRGs) and severity of illness categories within each APR-DRG. The 3M HIS software assigns APR-DRGs to every initial hospital admission and then compares APR-DRGs for all subsequent admissions for the same person within the measurement period to identify potentially preventable readmissions.

2.3 – Behavioral Health Service Utilization

Mental Health Service Utilization

Each year nearly 60 million people in the United States are diagnosed with mental disorders.⁷⁵ Patients with mental disorders utilize health care services less efficiently than those without mental health disorders. For example, patients with mental disorders visit the emergency department more frequently than those without mental disorders, which can lead to lower quality of care for those in need of urgent medical attention. Inappropriate health care utilization may indicate deficiencies in the health care system, including lack of care coordination.⁷⁶ Information on what types of services patients utilize can help identify areas of behavioral health care delivery that need improvement.⁷⁷

The EQRO uses a modified version of the HEDIS[®] *Mental Health Utilization* measure to assess utilization of mental health services in STAR, STAR+PLUS, NorthSTAR, and STAR Health.⁷⁸ This measure identifies the percentage of members who received a mental health service during the one-year measurement period, in the following categories: (1) inpatient services; (2) intensive outpatient or partial hospitalization services; and (3) outpatient or emergency department (ED) services. At HHSC's request, the EQRO lifted provider constraints for this measure, which may result in inflation of rates. The name "HEDIS[®]" was removed from discussion of this measure, as it does not conform precisely to NCQA specifications. For all programs in CY 2011, the vast majority of services utilized by members were outpatient mental health services.

<u><i>Mental Health Utilization</i></u>			
CY 2011 results	Inpatient services	Intensive outpatient or partial hospitalization services	Outpatient or ED services
STAR	0.3 percent	0.1 percent	8.7 percent
STAR+PLUS	3.9 percent	0.7 percent	32.3 percent
STAR Health	7.0 percent	1.6 percent	78.1 percent
NorthSTAR	0.5 percent	0.0 percent	9.4 percent

Utilization of Drug and Alcohol Services

In the United States, over 22 million people are classified as having a drug or alcohol disorder.⁷⁹ Each year nearly five million ED visits are drug- and alcohol-related visits that may be associated with decreased quality of care and indicate deficiencies in the health care system.⁸⁰

The HEDIS[®] *Identification of Alcohol and Other Drug (AOD) Services* measure represents the percentage of members receiving one of the following AOD-related services during the measurement period: (1) inpatient services; (2) intensive outpatient or partial hospitalization services; and (3) ambulatory services. The EQRO calculates this measure for STAR, STAR+PLUS, and NorthSTAR.⁸¹ In all three programs in CY 2011, the chemical dependency

services most utilized by members were ambulatory services, while intensive outpatient or partial hospitalization services were very rare.

Identification of Alcohol and Other Drug Services

CY 2011 results	Inpatient services	Intensive outpatient or partial hospitalization services	Ambulatory services
STAR	0.2 percent	0.0 percent	0.7 percent
STAR+PLUS	3.0 percent	0.2 percent	11.0 percent
NorthSTAR	0.3 percent	0.0 percent	1.6 percent

3 – Managed Care Organization Structure and Process

3.1 – Health Plan Information

Producing and maintaining valid, complete, and up-to-date health care claims and encounter data is critical for ensuring high quality of care in state Medicaid and CHIP MCOs. These data are necessary for: (1) implementing timely and comprehensive care coordination based on member diagnostic and health care use profiles; and (2) calculating and validating numerous quality of care measures that are based on administrative data. Following recommendations made by the Institute of Medicine (IOM) in 2001, MCOs have worked toward implementing electronic health records (EHRs), permitting the automation of clinical, financial, and administrative information, and the electronic sharing of this information.⁸² More recently, the American Recovery and Reinvestment Act of 2009 includes an incentive program to encourage Medicaid and Medicare providers to implement EHR technology, with incentive payments of up to \$63,750 over six years, beginning in 2011.^{83,84}

As part of its mandatory and optional review activities, the EQRO annually conducts:

- Encounter data validation (EDV) studies, in which elements of MCO claims and encounter data are validated using provider health records⁸⁵
- Studies of MCO data systems capabilities and processes, including MCO-reported electronic claims submission rates, using the annual MCO Administrative Interviews
- Data certification to assess the completeness and validity of claims and encounter data maintained by Texas Medicaid and CHIP MCOs
- Studies of MCO disease management (DM) programs, evaluating the elements of the DM programs using the annual MCO Administrative Interviews
- Evaluations of MCO Quality Improvement Programs through review of the annual MCO Quality Assessment and Performance Improvement (QAPI) Evaluation Summaries
- Evaluations of MCO Performance Improvement Projects (PIPs)

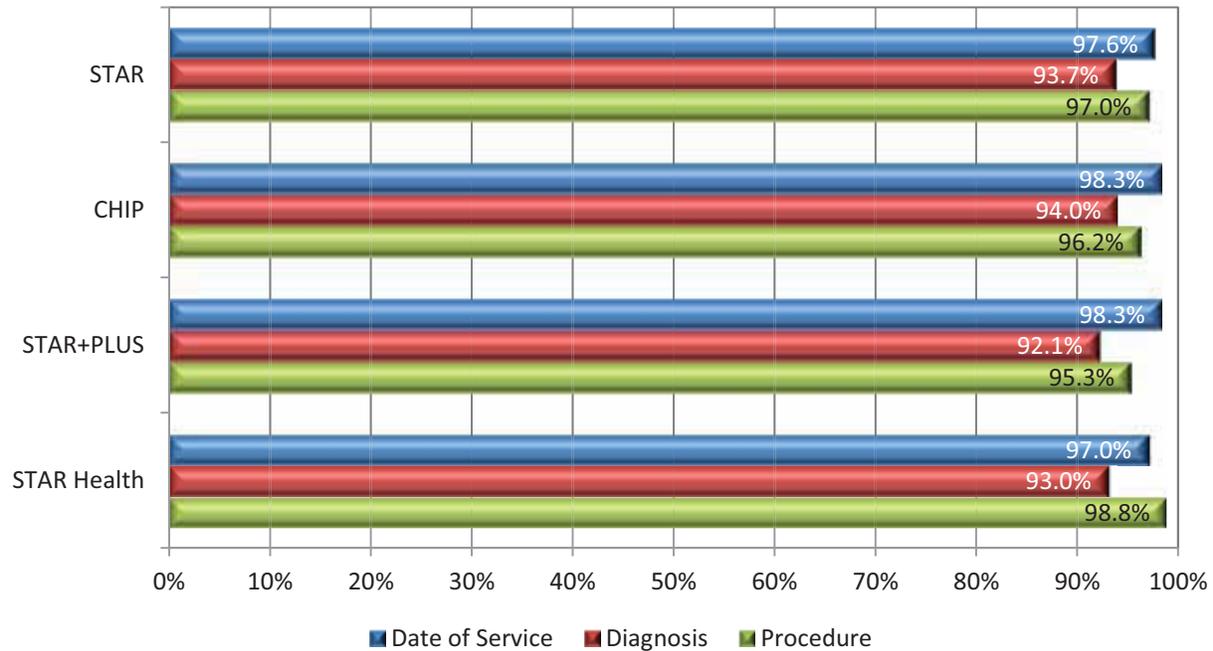

This section presents trends in EDV results, electronic claims submissions, and data certification findings at the program level from 2009 to 2011. In addition, the section provides a summary of the MCO DM programs, QAPIs, and PIPs for the FY 2011 measurement period.

Encounter Data Validation

According to CMS guidelines for Medicaid MCOs, states can set a targeted match rate between information found in an MCO's claims and encounter data and information found in the members' health records.⁸⁶ A match rate of 95 percent or greater between the two data sources is desired, and states are encouraged to work toward that goal. To determine Texas Medicaid and CHIP MCO compliance with standards for encounter data completeness and quality, the EQRO conducts biannual EDV studies using provider health records to calculate match rates for a random sample of encounters, focused on the validation of three data elements: (1) date of service; (2) diagnosis; and (3) procedure.

Figure 27 provides match rates for date of service, diagnosis, and procedure data elements in STAR, CHIP, STAR+PLUS, and STAR Health for CY 2011, with match rates for all programs and data elements exceeding 90 percent.

Figure 27. Encounter Data Validation Match Rates for CY 2011

Match rates in STAR, CHIP, STAR+PLUS, and STAR Health exceeded the desired rate of 95 percent for both the date of service and procedure data elements. The match rates for the diagnosis data element for all programs were below the desired 95 percent rate, but exceeded 90 percent.

Provider response rates for the EDV study ranged from 57 percent in the El Paso SA to 65 percent in the Travis SA. It is possible that various provider characteristics contributed to these differences in response rates. Therefore, results of the EDV study should be interpreted with the understanding that non-response bias may have occurred.

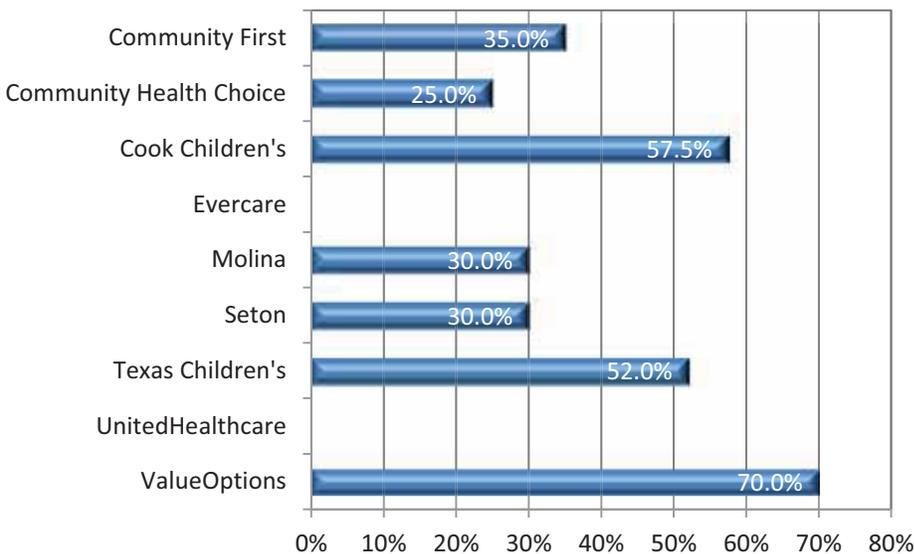

Electronic Health Records

Electronic health records are becoming more widespread in the United States. Changes in health care are requiring a shift in the medical record system from paper records to electronic health records (EHRs). The widespread use of EHRs will result in more accessible records for providers and improved outcomes for patients. In 2009, to overcome barriers to implementing an EHR system, Congress passed the Health Information Technology for Economic and Clinical Health Act (HITECH), which endorses incentive payments for the private and secure use of EHRs by Medicare and Medicaid providers and hospitals.⁸⁷ Efforts by the Centers for Medicare & Medicaid Services (CMS) to employ the concept of “meaningful use” of EHRs are based on improving health outcomes and the quality of care while engaging patients and their families in a secure, protected manner.

The CMS initiative to encourage utilization of certified EHRs is a three-phased approach: (1) data capture and sharing by 2011; (2) advanced clinical practices by 2013; and (3) improved health outcomes by 2015. Participation in the program is incentivized and voluntary. Eligible providers and hospitals, however, will receive negative adjustments in their Medicare/Medicaid payments if they do not adopt the initiative by 2015.⁸⁸

Only half of the MCOs monitored the percentage of their providers who implemented EHRs during FY 2011. **Figure 28** presents the percentage of providers who implemented EHRs during FY 2011 by health plan (for health plans that reported this information). ValueOptions had the highest percentage of providers who implemented EHR (70 percent). Evercare and UnitedHealthCare-Texas reported that none of their providers implemented EHRs. The remaining six health plans varied in the percentage of providers who implemented EHRs, ranging from 25 percent to 58 percent. None of the MCOs offered incentives to providers for implementing EHRs during FY 2011.⁸⁹

Figure 28. Percentage of Providers who Implemented EHRs during FY 2011

Data Certification

The EQRO annually certifies key data elements in claims and encounter data that the Texas Medicaid and CHIP MCOs maintain, and provides separate data certification reports for each Texas Medicaid program and CHIP. Annual data certification includes four types of analysis: (1) Volume analysis based on service category; (2) Data validity and completeness analysis; (3) Consistency analysis between encounter data and financial summary reports (FSRs); and (4) Validity and completeness analysis of provider information.

Key data elements assessed during data certification include those that are critical for proper care coordination and quality of care measurement, such as:

- Place of service code
- Admission date
- Primary diagnosis code
- Procedure code
- Discharge date
- Discharge status
- Billing provider National Provider Identifier (NPI)
- Billing provider taxonomy code
- Rendering provider NPI
- Rendering provider taxonomy code

For FY 2011 data certification, the EQRO's analysis was guided by: (1) Texas Government Code § 533.0131, Use of Encounter Data in Determining Premium Payment Rates; and (2) Department of Health and Human Services, CMS – *Validating Encounter Data: A Protocol for Use in Conducting External Quality Review Activities*.^{90,91} The EQRO used these documents to develop procedures for certifying the Texas STAR, STAR+PLUS, STAR Health, CHIP, CHIP Dental, CHIP Perinate, and NorthSTAR encounter data. For managed care programs served by multiple MCOs (e.g., STAR, CHIP, and STAR+PLUS), analyses were conducted at the plan code level (MCO and service area combined).

Volume analysis based on service category: For each plan code within each program, the EQRO determined the number of records for facility, physician, dental (where present), and total services for each month of FY 2011. The EQRO examined the monthly totals to determine whether the number of records for each of the service categories and the total number of records varied significantly from month to month. The results were found to be consistent for all plan codes based on overall volumes.

Data validity and completeness analysis: For each plan code, the EQRO examined the presence and validity of critical data elements in the claims extracts submitted by the MCOs. The EQRO derived data validity standards from accepted lists of valid information taken from a variety of sources, including data dictionaries supplied by HHSC, CPT manuals, and ICD-9-CM manuals.^{92,93} The EQRO performed the analysis on the final image of all FY 2011 claims it received from Texas Medicaid and Healthcare Partnership (TMHP) through December 2011. All critical fields were present in the data as specified in the CMS Data Validation Protocol.

Consistency analysis between encounter data and FSRs provided by the MCOs: The EQRO compared payment dollars documented in the claims data to payment dollars in the MCOs' self-reported FSRs, which HHSC provided to the EQRO for FY 2011. According to the standard set by HHSC, the claims data and the FSR must agree within three percent for the data to be certifiable.

Validity and completeness analysis of provider information: Adequate provider identification is critical to the EQRO's efforts to calculate HEDIS[®] measures, to conduct provider surveys, and to obtain medical records for the purposes of validating encounter data and calculating hybrid HEDIS[®] measures. When provider identification numbers and/or taxonomy (provider specialty) codes are missing in the encounter data, the EQRO is hindered in its ability

to provide HHSC with accurate and complete information about Texas Medicaid and CHIP. Overall, the results of these analyses are positive and suggest an improvement in the completeness of MCO administrative data.

3.2 – Disease Management Programs

Although approximately three-quarters of the national Medicaid population are children, parents, and pregnant women, about two-thirds of Medicaid expenditures go to care for elderly and disabled adults.⁹⁴ These members use more long-term care services, which account for more than one-third of Medicaid spending. Many states are adopting Medicaid disease management (DM) programs as a way to improve health care quality and reduce costs for these members.

HHSC requires that all MCOs participating in STAR, STAR+PLUS, CHIP, and STAR Health provide DM services covering asthma and diabetes.^{95,96} In addition to asthma and diabetes, HHSC requires MCOs participating in STAR+PLUS to offer DM services for chronic obstructive pulmonary disease (COPD), congestive heart failure (CHF), and coronary artery disease (CAD). Finally, all MCOs are required by HHSC to provide DM services for other chronic diseases based upon an evaluation of disease prevalence within each MCO's membership.⁹⁷

This section presents findings from the FY 2011 MCO Administrative Interview on the structure and practices of DM programs operating in Texas Medicaid and CHIP MCOs, focusing on programs that are required by the state. All STAR and CHIP MCOs had the required asthma and diabetes DM programs, in addition to various DM programs focused on the needs of their populations. These included programs for depression, high-risk perinatal, HIV/AIDS, hypertension, and obesity. All STAR+PLUS MCOs had the required asthma, diabetes, COPD, CHF, and CAD DM programs.

In some cases, DM functions were administered through an externally contracted disease management organization. Four STAR MCOs delegated asthma and diabetes DM functions fully or in part to a DM organization in 2011.⁹⁸ In STAR+PLUS, only Superior delegated DM functions to a DM organization, while Amerigroup, Evercare, and Molina administered DM programs in-house. Across Medicaid and CHIP, Parkland and UnitedHealthcare-Texas consistently delegated all DM functions, and FirstCare, Seton, and Superior used a combination of in-house and delegated programs. Community Health Choice and Cook Children's delegated behavioral health DM functions. Behavioral health DM programs were the most common type of DM program to be delegated to a DM organization, with 7 out of the 13 MCOs delegating behavioral health DM programs.

Fourteen of 16 MCOs operating in Texas Medicaid and CHIP in FY 2011 assigned members participating in their DM programs to risk groups, which allowed for more appropriate care according to the members' health status, disease severity, and special needs.⁹⁹ **Table 5** shows details on asthma and diabetes DM program participation in STAR, CHIP, and STAR+PLUS. For asthma DM, STAR had both the highest number of eligible members (92,211) and the highest number of participating members (54,539). However, the resulting participation rate of 59 percent was the lowest among the programs. STAR also had the lowest participation rate for

diabetes DM (43 percent). In CHIP, more than two-thirds of eligible members were enrolled in asthma DM (69 percent) and three-fourths were enrolled in diabetes DM (74 percent). For diabetes DM, STAR+PLUS had the highest number of eligible members (30,852), the highest number of participating members (26,456), and the highest participation rate (86 percent).

Table 5. Member Participation in Asthma and Diabetes DM Programs in FY 2011

	Asthma DM			Diabetes DM		
	Members eligible	Members enrolled	Participation rate	Members eligible	Members enrolled	Participation rate
STAR	92,211	54,539	59.1%	5,355	2,295	42.9%
CHIP	21,602	14,833	68.7%	1,319	974	73.8%
STAR+PLUS	8,048	7,212	89.6%	30,852	26,456	85.8%

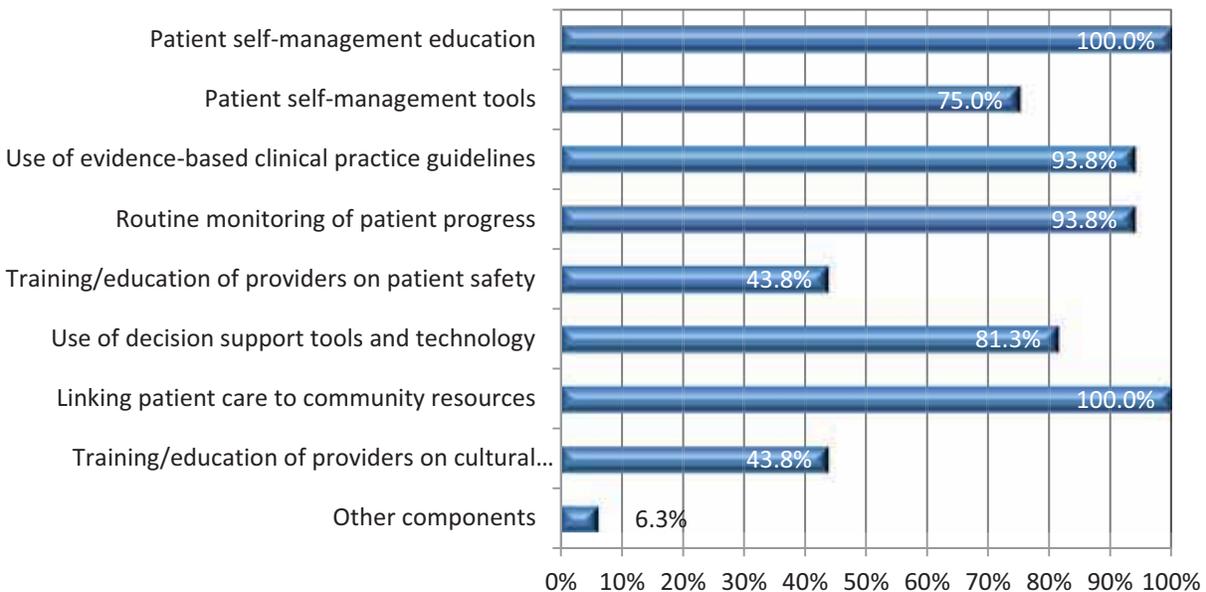

In STAR+PLUS, DM participation rates were high for CAD (89 percent), COPD (94 percent) and CHF (90 percent). It should be noted that these rates are calculated from MCO Administrative Interview responses from Amerigroup, Evercare, HealthSpring, Molina, and Superior.

Definitions for “participation” in DM programs vary among the MCOs, which limits interpretations that can be made when comparing participation rates. Four out of 15 health plans have ‘opt-in’ DM programs, where eligible members must agree to participate in the program to be considered enrolled.^{100,101} El Paso First and HealthSpring have ‘opt-out’ DM programs, although El Paso First requires a completed assessment for enrollment and HealthSpring does not enroll members who cannot be reached.

ICHHP identifies specific components of the health plans’ DM programs using the Administrative Interview tool. **Figure 29** presents the percentage of health plans that have incorporated the following as formal components of their DM programs: (1) Patient self-management education; (2) Patient self-management tools (e.g., glucose meter); (3) Use of evidence-based clinical practice guidelines; (4) Routine monitoring of patient progress; (5) Training/education of providers on patient safety; (6) Use of decision support tools and technology; (7) Linking patient care to community resources; (8) Training/education of providers on cultural competency; and (9) Other components.

All of the MCOs offer patient self-management education to members and link patient care to community resources as formal components of their DM programs. Only 44 percent, however, offer provider training/education on patient safety and cultural competency. Cook Children’s was the only MCO that indicated ‘other’ formal components are included in the DM programs. The additional components offered by Cook Children’s are geared toward improving health literacy.

Figure 29. Percentage of MCOs Incorporating Selected Formal Components of DM programs in FY 2011

3.3 – Quality Improvement

The EQRO annually reviews the Texas Medicaid MCO Quality Improvement Programs (QIPs) to evaluate aspects of structure and process that contribute to the success of these programs. This section discusses the EQRO's evaluation of FY 2011 MCO QAPI and PIP submissions.

Quality Assessment and Performance Improvement Evaluations

The QAPI evaluations follow CMS guidelines to evaluate both Quality Assurance and Quality Improvement practices of the Texas Medicaid MCOs. According to CMS, there are five essential elements to a QAPI program: (1) Design and Scope; (2) Governance and Leadership; (3) Feedback, Data Systems, and Monitoring; (4) Performance Improvement Projects (PIPs); and (5) Systematic Analysis.¹⁰² The EQRO QAPI evaluation reviews the first three elements and partially reviews the fifth element. The EQRO reviews the fourth and fifth elements as part of its annual PIP evaluation, which is discussed in the next section. The fifth element is reviewed in both the QAPI and PIP evaluations when determining whether a root cause analysis was conducted.

Using documentation submitted by the MCOs, the QAPI evaluation reviews the health plans' performance improvement structure and their assessment of the effectiveness of their QAPI program.

This evaluation captures the structure and process of the QIP and MCO quality activities through review of the following sections:

- **Documentation** (maximum 12 points) of the MCO's Work Plan, QI Organizational Chart, PIPs, and completed QAPI evaluation.
- **Assessment of QAPI Effectiveness** (maximum 16 points), including the MCO's statement of purpose, scope, goals and objectives, methodology (whether or not the MCO utilizes the Plan-Do-Study-Act model or something similar), the method by which MCOs identify and address barriers to implementation, and program effectiveness.
- **Global Quality Goals** (maximum 2 points), including the MCO's goals and objectives for FY 2011.
- **Role of the Governing Body** (maximum 8 points), covering the level and type of governance and leadership within the organization.
- **Structure of Quality Improvement Committee(s)** (maximum 14 points), including the role, structure, and function of the QI Committee(s), and level of provider and member representative involvement.
- **Identification of Adequate Resources** (maximum 4 points), including human and material resources available for the implementation of the QAPI program.
- **Provider Credentialing** (maximum 2 points), including the processes of credentialing and re-credentialing health plan providers.
- **Identification of Improvement Opportunities** (maximum 8 points), including actions taken to effect improvement at the system, process, and outcome levels.
- **Clinical Practice Guidelines** (maximum 12 points), including a review of current clinical practice guidelines to ensure they are evidence-based, relevant to member needs, and support care of members and services for members.
- **Availability and Accessibility** (maximum 12 points), including results of MCO monitoring of member access to care indicators, goals for all indicators, the MCO's actions to improve rates of accessibility and availability of care for members, and the effectiveness of actions taken.
- **QI Activities and Quality Indicators** (maximum 12 points), including results of MCO monitoring of clinical and service indicators, goals for all indicators, the MCO's actions to improve rates of clinical and service indicators, and the effectiveness of actions taken.
- **Credentialing** (maximum 16 points), summarizing the number of providers and facilities credentialed/re-credentialed, the number who requested or were denied credentialing, reasons for denials, the number of providers/facilities that were reduced, suspended, or had privileges terminated during FY 2011, and the reasons for these reductions, suspensions, or terminations.
- **Delegation** (maximum 10 points) of QAPI activities, including procedures for monitoring and evaluating delegated functions, results of evaluation of delegated activities, and how the results are incorporated into quality improvement.

- **Corrective Action Plans** (maximum 10 points), including any corrective actions required following a Texas Department of Insurance (DOI) audit and the MCO actions taken.

Each section includes different components that target key elements of quality improvement, as described above. The overall evaluation of health plan responses focuses on whether the MCO satisfied the requirements of a strong, comprehensive QIP and complied with specific Code of Federal Regulations (CFR) policies.^{103,104} Full credit is awarded when all components for each section are met, with a maximum achievable score of 138 points. The scoring system also allows for partial credit.

Figure 30 provides the overall score for each MCO, calculated as the percentage of maximum achievable points earned. The average score of all MCOs was 92 percent. Most health plans scored above average, with only five MCOs scoring below the average score. Delta Dental and Seton had scores that were significantly lower than the average (64 percent and 80 percent, respectively).¹⁰⁵ Scores were lower for both health plans due to the absence of necessary documentation needed for a thorough review of their QIPs.

The EQRO also evaluated the MCO QAPIs by section to identify areas of high performance and opportunities for improvement across all the health plans combined. **Figure 31** presents the average health plan score by QAPI section, calculated as the percentage of maximum achievable points earned. Overall, the health plans scored highest in the Documentation and Corrective Action Plan sections, at approximately 100 percent. The section with the greatest opportunity for improvement was the Assessment of QAPI Effectiveness, with an average score of 85 percent.

Figure 30. Overall QAPI Score by Health Plan in FY 2011

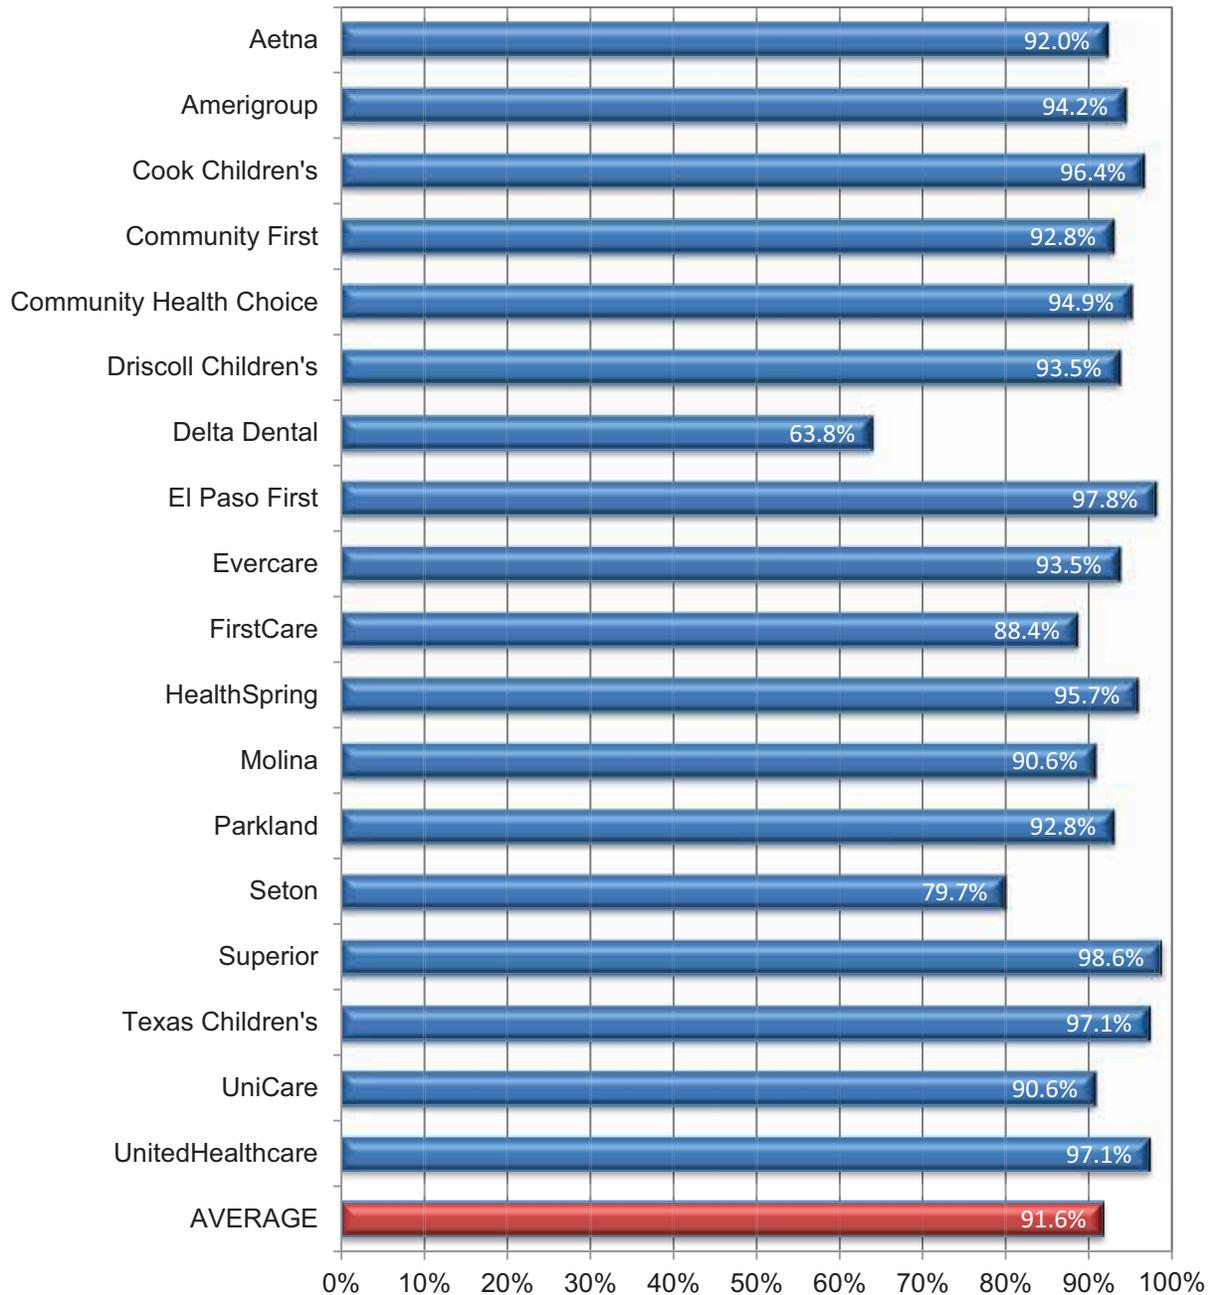

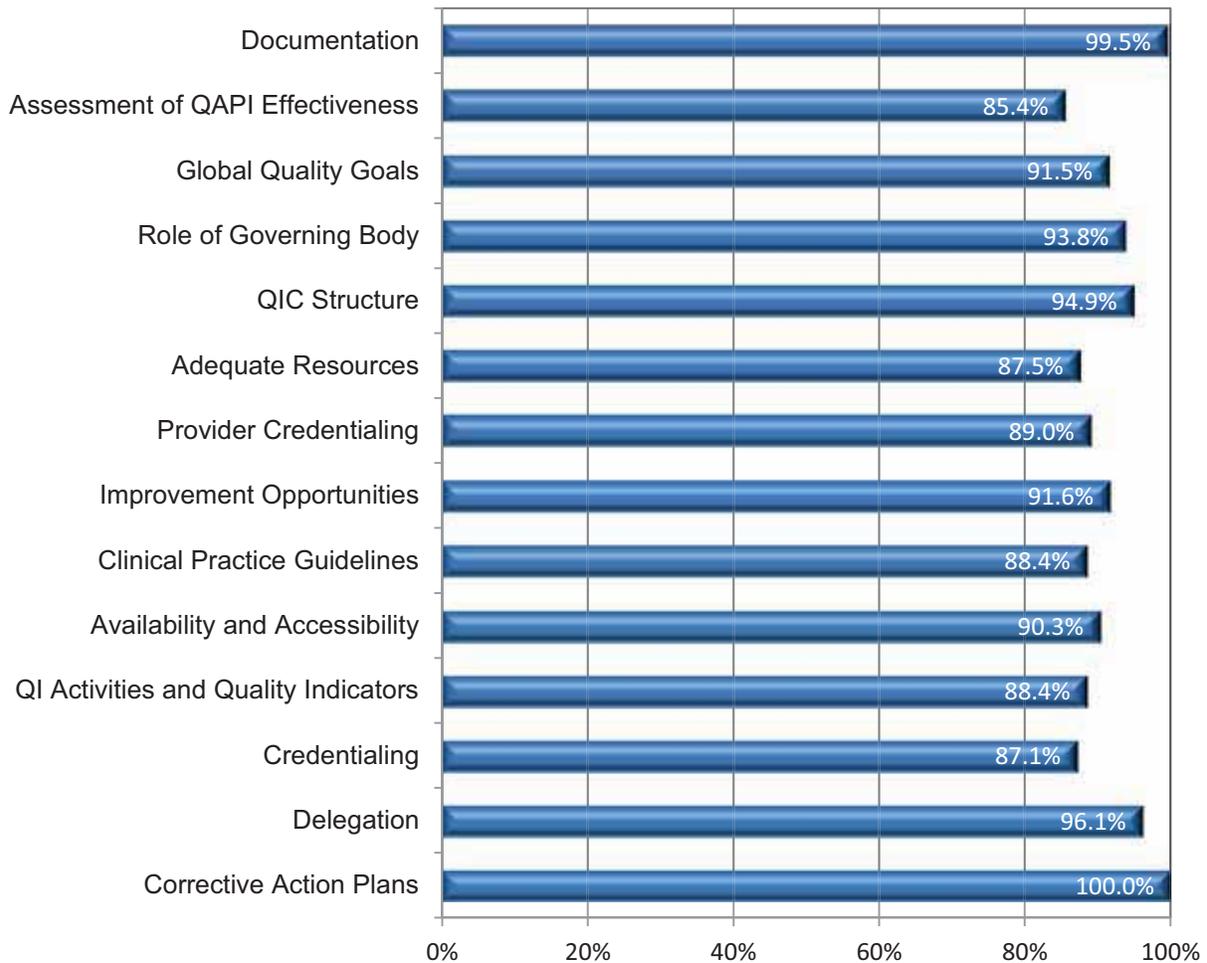

Figure 31. Overall QAPI Score by Section in FY 2011

Performance Improvement Projects

Performance Improvement Projects (PIPs) are the fourth essential element of a Quality Improvement Program. The purpose of a PIP is to develop a project with interventions that target a specific problem with the aim of improving quality of care and health outcomes.¹⁰⁶ Key components of a PIP include the topic, study indicators, and interventions. Topic selection should be based on the results of monitoring and evaluating clinical and service indicators. Once an opportunity for improvement is identified, health plans should conduct a root cause analysis in order to identify the underlying cause of the problem, and appropriate study indicators should be selected. Interventions should be developed to target the root cause of the problem at the member, provider, and system levels.

The EQRO's PIP evaluation addresses these three components and evaluates the following ten activities:

1. **Study Topic(s)** – In this section, health plans report the topic of the PIP and provide supporting evidence for why the topic was selected.
2. **Study Question(s)** – The MCOs pose the question they would like to answer with the PIP. For example, “does X result in Y?”
3. **Study Indicator(s)** – This section should include the measures or study indicators the health plan will use to measure change. Many health plans use HEDIS[®] measures with standardized numerators and denominators.
4. **Study Population** – This section should describe the population the PIP is targeting. For example, all STAR members, or only STAR members age 3 to 6 years. The study population should be representative and generalizable.
5. **Sampling Techniques (if sampling is used)** – This section describes the frequency of occurrence of the problem in the study population and the number of members needed in the sample in order to produce valid and reliable results. If HEDIS[®] measures are used, sampling is not required. (This does not apply to hybrid HEDIS[®] measures, which do require sampling.)
6. **Data Collection** – The data to be collected should be included in this section, in addition to identification of data sources, instruments used to collect data, and who will collect the data.
7. **Interventions and Improvement Strategies** – The MCO should describe the interventions and improvement strategies that will be taken to improve the measures indicated in Activity 3.
8. **Data Analysis and Interpretation of Results** – Baseline and follow-up measurements should be presented in this section. All data analyses should be summarized and supported by a test of statistical significance. The MCO should discuss factors that affect the comparability of baseline and follow-up measures and factors that threaten internal and external validity of the findings.
9. **“Real” Improvement** – This section summarizes whether or not the PIP resulted in a statistically significant improvement. The MCO should address how the interventions resulted in a statistically significant improvement.
10. **Sustained Improvement** – If there was a statistically significant improvement, this section should report whether the improvement was sustained over time.

The EQRO conducted a qualitative evaluation of PIP Activities 1-6 in July of 2011, and reported recommendations to the MCOs for strengthening study topics and designs. Following a full year of implementation, in November 2012 the EQRO conducted a quantitative analysis to score MCO performance on PIP Activities 7-10. This summary presents the results of the year-end review of the FY 2011 PIPs, focusing on Activities 7-10. Each section includes different

components that target key elements of a PIP, as described above. The overall evaluation of health plan responses focuses on whether the MCO: (1) described the interventions in detail; (2) developed and implemented interventions that were based on a root cause analysis; (3) implemented interventions that had adequate reach; (4) clearly presented baseline and follow-up measurements; (5) provided the level of statistical significance in the change in rates from baseline to follow-up; (6) accurately interpreted the results; (7) achieved statistically significant improvement; and (8) described sustained improvement and future plans, if applicable. Full credit is awarded when all components for each section are met, with a maximum achievable score of 14 points for Activities 7-10. The scoring system also allows for partial credit.

A variety of topics were selected by the health plans for the FY 2011 PIPs, based on state-specified Overarching Goals and goals specific to the MCOs. A total of 100 PIPs were reported by 15 health plans. **Figure 32** presents the percentage of PIPs conducted within each of seven common categories. PIPs that addressed issues related to access and utilization of care, such as preventive care, prenatal and postpartum care, and well-child visits were most common (35 percent). PIPs targeting the rate of emergency department (ED) visits were the second most common (29 percent). Among PIPs focused on the general category of ED visits, the most common topic was reduction of the rate of ED visits for ambulatory care sensitive conditions (ACSCs), such as otitis media, rash, and upper respiratory infections, comprising 18 percent of all topics in the FY 2011 PIPs.

Figure 32. FY 2011 PIPs, by Specific Topic Categories

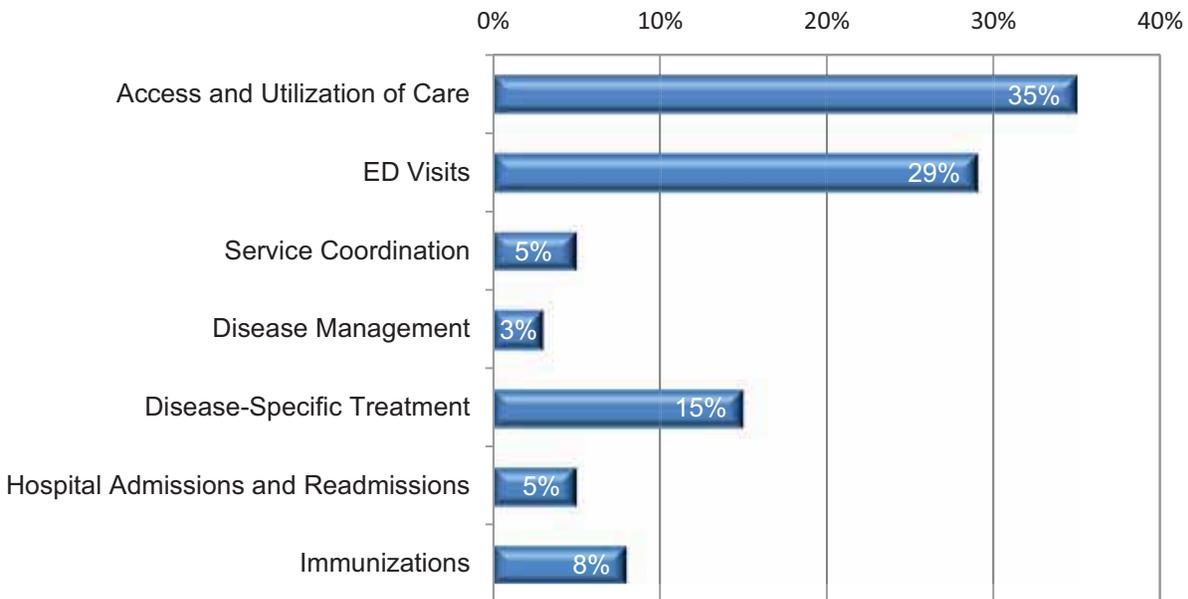

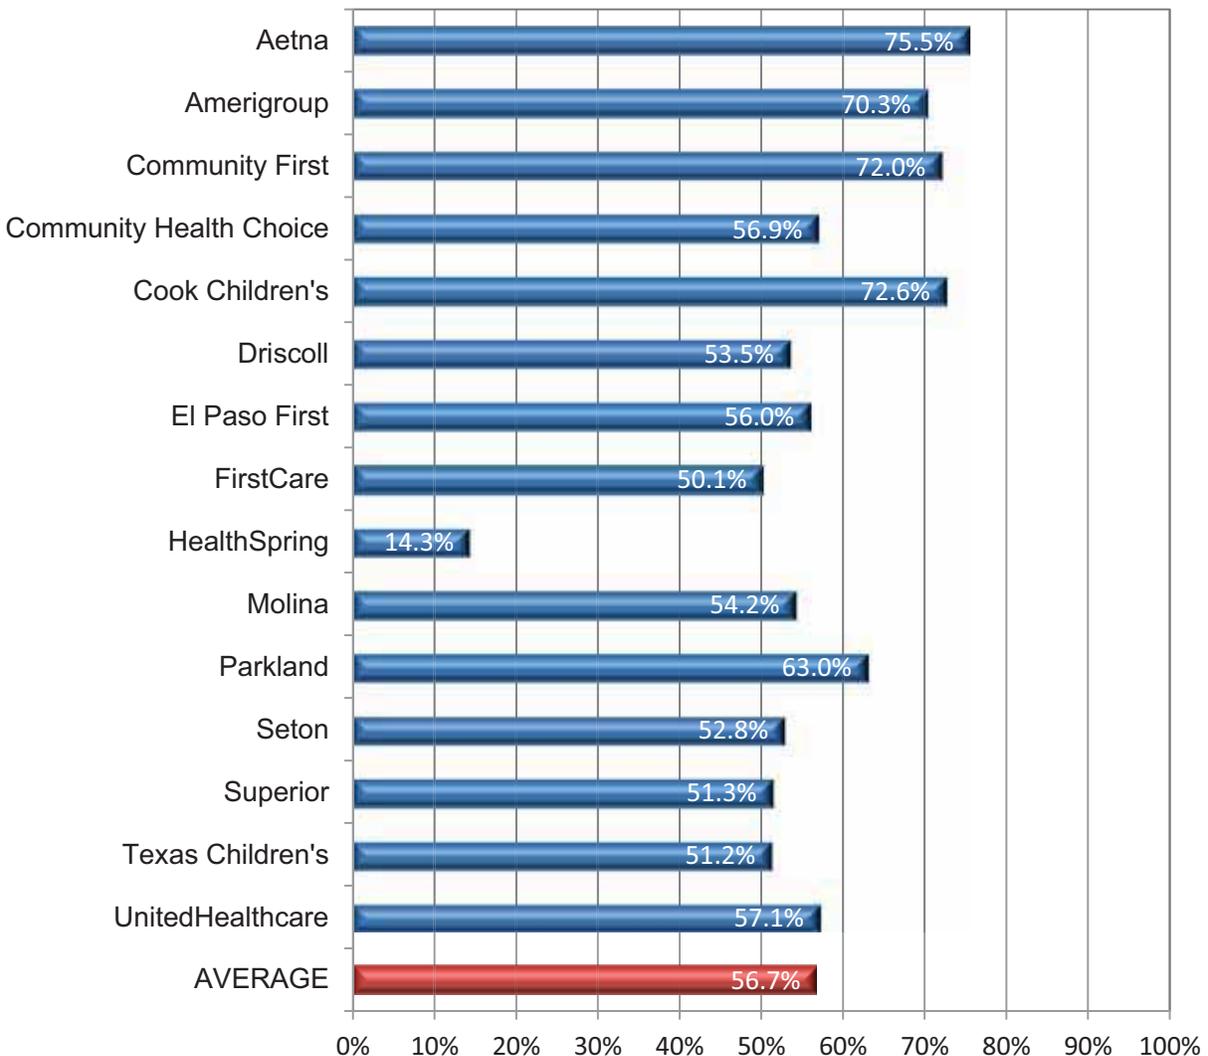

Figure 33 presents the overall year-end review scores for the FY 2011 PIPs, showing the percentage of maximum achievable points earned by each health plan across the different managed care programs. Aetna had the highest overall score (76 percent), and HealthSpring had the lowest score (14 percent). HealthSpring’s score was low because the MCO reported only baseline data, which affected the scores for Activities 8-10 (analyzing and interpreting results, improvement and sustained improvement); furthermore, the MCO’s interventions mostly consisted of mail-outs, which historically reach a small percentage of members and when used alone are not robust enough to effect change. The average score was 57 percent, with only 8 out of the 15 health plans scoring at or above the average. Aetna, Amerigroup, Community First, and Cook Children’s scored over 70 percent. Factors that contributed to higher scores included strong interventions that were described in detail and results of data analysis that were clearly presented.

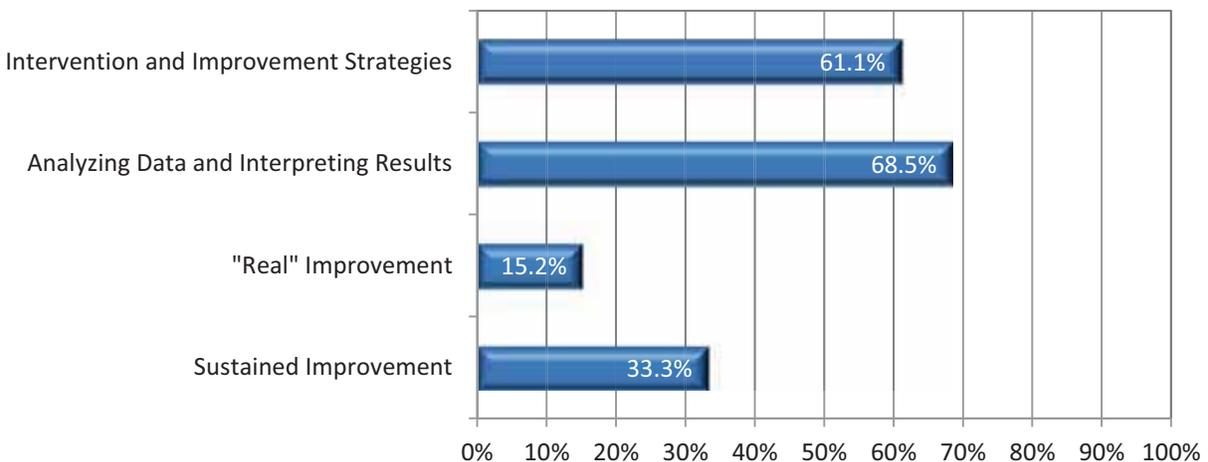

Figure 33. FY 2011 Performance Improvement Projects - Overall Score by MCO

Several health plans lost points on the evaluation for not describing how the cultural and linguistic needs of the members were addressed – a component included in the evaluation of PIP interventions. Points were also deducted for not reporting the level of statistical significance of the results. **Figure 34** presents the overall score for each activity (7-10) for all of the PIPs. The activity with the overall lowest score was the “Real” Improvement activity, with only 15 percent of the PIPs resulting in a statistically significant improvement in the baseline rate. Because the FY 2011 PIPs were the first in which MCOs fully implemented Activities 1-10, the evaluations were based on interventions that had been in place for only one year. Greater time is often needed for a new intervention to become fully implemented and show improvement in selected outcomes. The sustained improvement activity, which had the second-lowest overall score (33 percent), was not applicable to PIPs for which statistically significant improvement was not observed. Many of these cases involve longer-term PIPs that require greater than one year of implementation.

In cases where improvement is not observed, or where results on selected indicators demonstrate a reduction in quality, MCOs should conduct root cause analyses as part of their PIP assessment. For future PIP evaluations, the EQRO has modified reporting forms to assist the MCOs in measuring and reporting results of their interventions, including a section for reporting results of root cause analyses and instructions on the level of detail necessary for describing interventions.

Figure 34. FY 2011 Performance Improvement Projects - Overall Activity Scores

4 – Member Satisfaction with Care

Measuring patients' satisfaction with the health care they receive has long been an important component of health care quality evaluation. Positive patient satisfaction ratings have been associated with positive health outcomes and positive health behaviors, such as adherence to treatment plans and appropriate use of preventive health care services.^{107,108} Surveys with parents about the health care their children receive can also reveal deficiencies in access and utilization that may not otherwise be detected, as low parental satisfaction has been associated with shorter length of well-child visits and missed or delayed care.¹⁰⁹ Satisfaction measures provide implicit ratings of patients' judgments about the delivery of health services, and have been found to reflect parents' expectations of their children's health care.^{110,111,112,113}

The practice of assessing patient satisfaction has become even more relevant in recent years, with the increasing policy emphasis on patient-reported outcomes.¹¹⁴ There is evidence that individuals are more likely to have better health outcomes, higher satisfaction and well-being, and better treatment adherence when they are able to help define what is important to them.¹¹⁵ Therefore, decisions on the comparative effectiveness of treatment options should take into account the patient's perspective, reflecting the outcomes that patients care about.¹¹⁶

This section presents findings from the EQRO's telephone surveys with adult members and parents of child members in Texas Medicaid and CHIP, focusing on the most recent results from FY 2011 and FY 2012 surveys, and presenting trends in cases where satisfaction ratings have changed notably over the years.

4.1 – Timeliness of Care

One of the most important determinants of positive member satisfaction is timeliness of care. Long waits to receive care result in emotional distress for patients, and can increase the risk for physical harm when delays in diagnosis or treatment result in preventable complications.¹¹⁷ The EQRO assesses member-reported timeliness of care using items from the CAHPS[®] Health Plan Survey, which include the CAHPS[®] *Getting Care Quickly* composite, as well as questions regarding the timeliness of urgent care, routine care, health plan approval, and exam room visits that have been incorporated into the HHSC Performance Indicator Dashboard.

CAHPS[®] *Getting Care Quickly*

The CAHPS[®] *Getting Care Quickly* composite combines members' responses to questions about the timeliness of: (1) care needed right away for an illness, injury, or condition (urgent care); and (2) appointments for health care at a doctor's office (routine care). This core composite is calculated for adult members and parents of child members. Following AHRQ specifications, the score represents the percentage of members who "usually" or "always" had positive experiences with timeliness of care, which can be compared to national estimates for the Medicaid and CHIP populations reported by AHRQ.¹¹⁸ In addition, the EQRO follows a modified NCQA scoring methodology to calculate *Getting Care Quickly* scores on a 1- to 3-point scale, which allows for statistical comparisons between population sub-groups and reporting years.

Scores for *Getting Care Quickly* among child members are similar to those reported for children in Medicaid and SCHIP nationally. Scores for children on this composite were:

- 83 percent for children in STAR (in 2011), which is slightly lower than the Medicaid national average of 87 percent.
- 84 percent for children in CHIP (in 2011), which is slightly lower than the SCHIP national average of 86 percent.
- 90 percent for children in STAR Health (in 2012), which is higher than scores in STAR or CHIP.

CAHPS [®] <i>Getting Care Quickly</i>	
Child – 2011/2012	
STAR ^a	83%
CHIP ^a	84%
STAR Health ^b	90%
Adult – 2011/2012	
STAR ^b	71%
STAR+PLUS Medicaid-only ^b	75%
STAR+PLUS Dual-eligible ^a	80%

^a 2011, ^b 2012

Scores for *Getting Care Quickly* among adult members were generally lower than for children, and fell below the applicable national averages. Adult scores for this composite were:

- 71 percent for adults in STAR (in 2012), which is notably lower than the Medicaid national average of 81 percent.
- 75 percent for STAR+PLUS Medicaid-only members (in 2012).
- 80 percent for STAR+PLUS dual-eligible members (in 2011), which is higher than that reported for Medicaid-only adults in STAR+PLUS.

Since 2009, few observable trends were seen in scores for this composite. Children in CHIP had a moderate increase in *Getting Care Quickly*, from 79 percent in 2010 to 84 percent in 2011. Over the four-year period, STAR+PLUS Medicaid-only members had a moderate decrease for this measure, from 79 percent in 2009 to 75 percent in 2012.

HHSC Performance Indicator Dashboard – Survey-based Timeliness Measures

The HHSC Performance Indicator Dashboard includes the following four survey-based measures of timeliness of care, each with standards set by the state for Texas Medicaid and CHIP MCO performance:

- 1) *Good Access to Urgent Care* – based on responses to a CAHPS[®] 4.0 item assessing how often the member (or their child) received urgent care as soon as it was needed. Members who answer “usually” or “always” to this question are considered to have good access to urgent care.
- 2) *Good Access to Routine Care* – based on responses to a CAHPS[®] 4.0 item assessing how often the member (or their child) received an appointment for routine care as soon as it was needed. Members who answer “usually” or “always” to this question are considered to have good access to routine care.

- 3) *No Delays for Health Plan Approval* – based on responses to a modified CAHPS® 3.0 item assessing how often the member (or their child) experienced delays in their health care while waiting for approval from their health plan. Members who answer “never” to this question are considered to have no delays for health plan approval.
- 4) *No Wait to be Taken to the Exam Room Greater than 15 Minutes* – based on responses to a CAHPS® 3.0 item assessing how often the member (or their child) was taken to the exam room within 15 minutes of their appointment. Members who answer “always” to this question are considered to have no wait greater than 15 minutes.

HHSC Performance Dashboard Indicators – Timeliness of Care for Children						
	STAR 2011		CHIP 2011		STAR Health 2012	
	Rate	Dashboard standard	Rate	Dashboard standard	Rate	Dashboard standard
<i>Good Access to Urgent Care</i>	86%	88%	89%	89%	96%	88%
<i>Good Access to Routine care</i>	79%	84%	78%	86%	84%	76%
<i>No Delays for Health Plan Approval</i>	63%	65%	67%	91%	69%	69%
<i>No Wait to be Taken to Exam Room > 15 min.</i>	24%	35%	24%	68%	30%	50%

Program-level rates on timeliness indicators were generally below state-specified standards for children in STAR and CHIP, and met or exceeded standards for children in STAR Health (with the exception of waiting to be taken to the exam room):

- In 2011, children in STAR had rates slightly below the HHSC Dashboard standards for *Good Access to Urgent Care* (standard = 88 percent), *Good Access to Routine Care* (standard = 84 percent), and *No Delays for Health Plan Approval* (standard = 65 percent). The rate for *No Wait to be Taken to the Exam Room Greater than 15 Minutes* was more than 10 percentage points below the HHSC Dashboard standard of 35 percent.
- In 2011, children in CHIP had rates equal to the HHSC Dashboard standard for *Good Access to Urgent Care* (standard = 89 percent), slightly below the standard for *Good Access to Routine Care* (standard = 86 percent), and considerably below the standards for *No Delays for Health Plan Approval* (standard = 91 percent) and *No Wait to be Taken to the Exam Room Greater than 15 Minutes* (standard = 68 percent).
- In 2012, children in STAR Health had rates that exceeded the HHSC Dashboard standards for *Good Access to Urgent Care* (standard = 88 percent) and *Good Access to Routine Care* (standard = 76 percent). The STAR Health rate for *No Delays for Health Plan Approval* was equal to the HHSC Dashboard standard of 69 percent, while the rate for *No Wait to be Taken to the Exam Room Greater than 15 Minutes* was 20 percentage points below the standard of 50 percent.

HHSC Performance Dashboard Indicators – Timeliness of Care for Adults					
	STAR		STAR+PLUS		
	2012	Dashboard standard	Medicaid 2012	Dual 2011	Dashboard standard
<i>Good Access to Urgent Care</i>	74%	81%	77%	81%	81%
<i>Good Access to Routine care</i>	67%	80%	73%	80%	80%
<i>No Delays for Health Plan Approval</i>	50%	57%	38%	49%	57%
<i>No Wait to be Taken to the Exam Room > 15 Min.</i>	21%	42%	28%	33%	42%

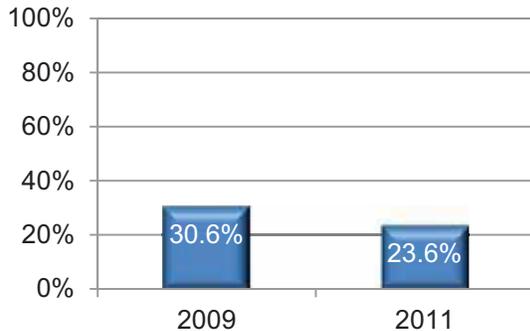

Program-level rates on timeliness indicators were below 2012 state-specified standards for adults in STAR and STAR+PLUS Medicaid-only members – particularly for delays in health plan approval and waiting to be taken to the exam room. STAR+PLUS dual-eligible members had rates equal to 2011 standards for timeliness of urgent and routine care, and rates below the standards for delays in health plan approval and waiting to be taken to the exam room:

- In 2012, adults in STAR had rates below the HHSC Dashboard standard for *Good Access to Urgent Care* (standard = 81 percent), and 13 percentage points below the standard for *Good Access to Routine Care* (standard = 80 percent). The rate for *No Delays for Health Plan Approval* was seven percentage points below the standard of 57 percent, while the rate for *No Wait to be Taken to the Exam Room Greater than 15 Minutes* was more than 20 percentage points below the HHSC Dashboard standard of 42 percent.
- In 2012, STAR+PLUS Medicaid-only members had rates slightly below the HHSC Dashboard standard for *Good Access to Urgent Care* (standard = 81 percent) and seven percentage points below the standard for *Good Access to Routine Care* (standard = 80 percent). The rate for *No Delays for Health Plan Approval* was 19 percentage points below the standard of 57 percent, while the rate for *No Wait to be Taken to the Exam Room Greater than 15 Minutes* was 14 percentage points below the standard of 42 percent.
- In 2011, STAR+PLUS dual-eligible members had rates that were equal to the HHSC Dashboard standards for *Good Access to Urgent Care* (standard = 81 percent) and *Good Access to Routine Care* (standard = 80 percent). The STAR+PLUS dual-eligible rate for *No Delays for Health Plan Approval* was eight percentage points below the standard of 57 percent, while the rate for *No Wait to be Taken to the Exam Room Greater than 15 Minutes* was 9 percentage points below the standard of 42 percent.

Overall, the most recent survey findings on timeliness of care show that improvements in timeliness are warranted for health plan approval and waiting times at doctors' offices for both children and adults.

Few observable trends were seen for any of the HHSC Dashboard timeliness indicators. As shown in **Figure 35**, children in STAR had a notable decrease in performance for *No Wait to be Taken to the Exam Room Greater than 15 Minutes* between 2009 (31 percent) and 2011 (24 percent) – a change that was statistically significant.¹¹⁹ Most STAR MCOs saw a decrease in performance on this indicator between 2009 and 2011, with the greatest decreases observed for Amerigroup (-12 percent), Molina (-12 percent), and Unicare (-11 percent).¹²⁰ Based on this finding, STAR MCOs should explore possible reasons for this decline and implement focused efforts to improve the timeliness of care in clinical settings.

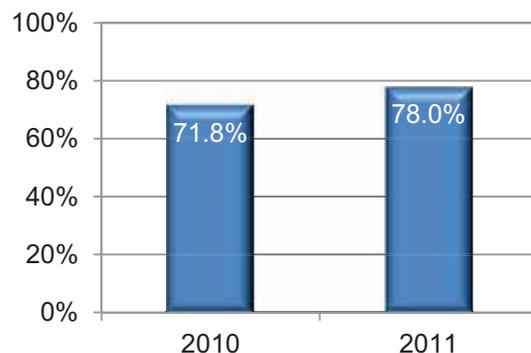

Figure 35. No Wait to be Taken to the Exam Room > 15 Minutes for Children in STAR, 2009-2011

Taken to the Exam Room Greater than 15 Minutes between 2009 (31 percent) and 2011 (24 percent) – a change that was statistically significant.¹¹⁹ Most STAR MCOs saw a decrease in performance on this indicator between 2009 and 2011, with the greatest decreases observed for Amerigroup (-12 percent), Molina (-12 percent), and Unicare (-11 percent).¹²⁰ Based on this finding, STAR MCOs should explore possible reasons for this decline and implement focused efforts to improve the timeliness of care in clinical settings.

As shown in **Figure 36**, children in CHIP had a notable increase in performance for *Good Access to Routine Care* between 2010 (72 percent) and 2011 (78 percent) – a change that was statistically significant.¹²¹ Most CHIP MCOs saw an increase in performance on this indicator over the two-year period, with the greatest increases observed in Molina (+20 percent), Parkland Community (+18 percent), and Aetna (+15 percent).¹²² Although this finding suggests that efficiencies may have been successfully implemented in CHIP provider offices during the one-year period, continued monitoring of this indicator is important to ensure that rates will continue to improve.

Figure 36. Good Access to Routine Care for Children in CHIP, 2010-2011

4.2 – Primary and Specialist Care

The EQRO uses a number of questions from the CAHPS® Health Plan Survey to assess member-reported access to primary and specialist care. These include: (1) three composite measures – *Getting Needed Care* (which is a core composite for adults and children), *Getting Specialized Services* and *Prescription Medicines* (which are composites specifically for children); and (2) three items dealing with access to specialist referrals, behavioral health treatment and counseling, and special therapies that have been incorporated into the HHSC Performance Indicator Dashboard.

Scores for the three CAHPS® composites follow AHRQ specifications, which represent the percentage of members who “usually” or “always” had positive experiences with access to care.

In addition, the EQRO follows a modified NCQA scoring methodology to calculate these scores on a 1- to 3-point scale, which allows for statistical comparisons between population sub-groups and reporting years.

Getting Needed Care

The CAHPS® *Getting Needed Care* composite combines responses to questions about how often it was easy for members to get: (1) appointments with specialists; and (2) care, tests, or treatment they needed through their health plan. For both adults and children, scores for *Getting Needed Care* can be compared to national estimates for the Medicaid and SCHIP populations reported by AHRQ.¹²³

Getting Needed Care scores for both child and adult members are below those reported for Medicaid and SCHIP nationally. Scores on this composite were:

- 72 percent for children in STAR (in 2011), which is lower than the Medicaid national average of 79 percent.
- 72 percent for children in CHIP (in 2011), which is lower than the SCHIP national average of 80 percent.
- 67 percent for adults in STAR (in 2012), which is notably lower than the Medicaid national average of 78 percent.

CAHPS® <i>Getting Needed Care</i>	
Child – 2011/2012	
STAR ^a	72%
CHIP ^a	72%
STAR Health ^b	80%
Adult – 2011/2012	
STAR ^b	67%
STAR+PLUS Medicaid-only ^b	60%
STAR+PLUS Dual-eligible ^a	74%

^a 2011, ^b 2012

The score for *Getting Needed Care* among members in STAR Health (80 percent) was greater than among child members in STAR or CHIP. STAR+PLUS Medicaid-only members had the lowest score for this composite (60 percent), although the score among STAR+PLUS dual-eligible members was notably higher (74 percent).

Since 2009, a negative trend was observed for this composite in STAR+PLUS (Medicaid-only), and a positive trend was observed in STAR Health. As shown in **Figure 37**, scores for *Getting Needed Care* in STAR+PLUS declined by almost nine percentage points over the four-year period, from 69 percent in 2009 to 60 percent in 2012. While scores in all STAR+PLUS MCOs declined during this period, these decreases were statistically significant in Molina and Superior.^{124,125} Furthermore, the program mean for this composite decreased with the addition of the HealthSpring MCO in 2012, which had a low NCQA-scaled score for *Getting Needed Care* (1.91). These findings suggest the need for improved access to primary and specialist care in STAR+PLUS, particularly for Medicaid-only members and those in the Molina and Superior health plans.

Figure 37. CAHPS® Getting Needed Care in STAR+PLUS, 2009-2012

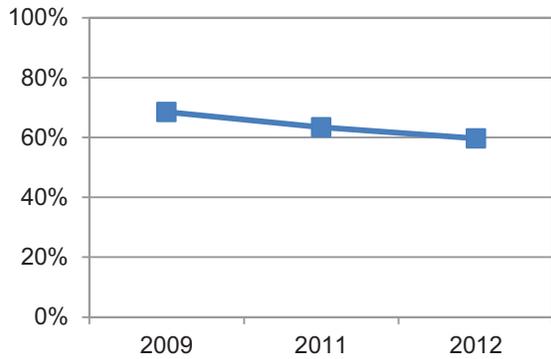

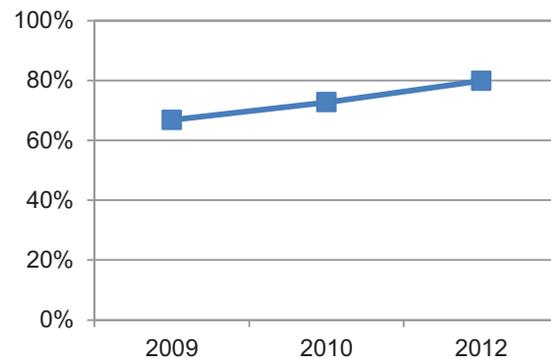

Figure 38. CAHPS® Getting Needed Care in STAR Health, 2009-2012

As shown in **Figure 38**, scores for *Getting Needed Care* in STAR Health increased by over 13 percentage points over the four-year period, from 67 percent in 2009 to 80 percent in 2012. Much of this increase may be explained by improvements in access to network providers in STAR Health since its implementation in 2008.

Getting Specialized Services

The CAHPS® *Getting Specialized Services* composite, which is calculated for children in Medicaid and CHIP, combines responses to questions about access to: (1) special medical equipment or devices; (2) special therapies such as physical, occupational, or speech therapy; and (3) treatment or counseling for emotional, developmental, or behavioral problems.

CAHPS® Getting Specialized Services	
Child – 2011/2012	
STAR ^a	66%
CHIP ^a	64%
STAR Health ^b	72%

^a 2011, ^b 2012

In 2011, approximately two-thirds of parents in STAR (66 percent) and CHIP (64 percent) usually or always had positive experiences getting specialized services for their child. Although no national standards are available for comparison, these scores are considered low, and suggest the need to improve access to specialized services for children in STAR and CHIP.

Among the three items in this composite, the lowest rates of access were observed for behavioral health treatment or counseling, with 61 percent of parents in STAR and 59 percent of parents in CHIP saying it was “usually” or “always” easy to get treatment or counseling for their child. When NCQA-scaled means were compared across the MCOs, the lowest rates in CHIP were seen in Aetna (1.87) and Texas Children’s (1.85), while the lowest rates in STAR were seen in Molina (1.86) and UnitedHealthcare-Texas (1.92).^{126,127}

No observable trends were seen in scores for *Getting Specialized Services* between 2009 and 2012.

Prescription Medicines

The CAHPS® *Prescription Medicines* measure is based on a single item that assesses how often it was easy for parents to get prescription medicines through their child’s health plan. Although no national comparisons are available for this measure, scores in STAR (88 percent), CHIP (88 percent), and STAR Health (93 percent) are considered high, indicative of good access to prescription medication for children. No observable trends were seen for this measure between 2009 and 2012

CAHPS® <i>Prescription Medicines</i>	
Child – 2011/2012	
STAR ^a	88%
CHIP ^a	88%
STAR Health ^b	93%

^a 2011, ^b 2012

HHSC Performance Indicator Dashboard – Survey-based Access Measures

The HHSC Performance Indicator Dashboard includes the following three survey-based measures of access to primary and specialist care, each with standards set by the state for Texas Medicaid and CHIP MCO performance:

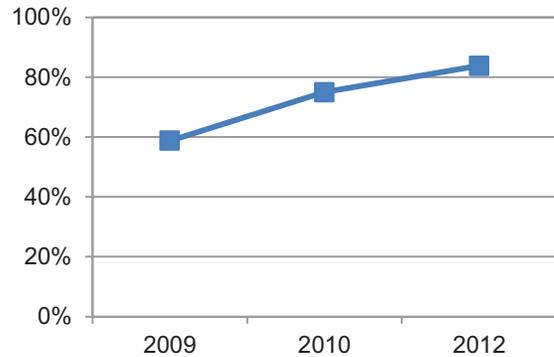

- 1) *Good Access to Specialist Referral* – based on responses to a CAHPS® 4.0 item assessing how often it was easy for the member (or their child) to get a specialist referral. Members who answer “usually” or “always” to this question are considered to have good access to specialist referrals.
- 2) *Good Access to Behavioral Health Treatment or Counseling* – based on responses to a CAHPS® 4.0 item assessing how often it was easy for the parent of a child member to get treatment or counseling for their child for a behavioral health problem. Parents who answer “usually” or “always” to this question are considered to have good access to behavioral health treatment or counseling for their child. This indicator is used only in child surveys.
- 3) *Good Access to Special Therapies* – based on responses to a CAHPS® 4.0 item assessing how often it was easy for the member to get special therapies, such as physical, speech, or occupational therapy. Members who answer “usually” or “always” to this question are considered to have good access to special therapies. This indicator is only used in adult surveys.

HHSC Performance Dashboard Indicators – Access to Care for Children						
	STAR 2011		CHIP 2011		STAR Health 2012	
	Rate	Dashboard standard	Rate	Dashboard standard	Rate	Dashboard standard
<i>Good Access to Specialist Referral</i>	69%	74%	73%	77%	84%	75%
<i>Good Access to BH Treatment/Counseling</i>	61%	76%	59%	76%	78%	79%

Program-level rates for *Good Access to Specialist Referral* were lower than 2011 HHSC Dashboard standards for children in STAR (standard = 74 percent) and CHIP (standard = 77 percent). Rates for *Good Access to Behavioral Treatment or Counseling* were notably lower than 2011 HHSC Dashboard standards for children in STAR (standard = 76 percent) and CHIP (standard = 76 percent). Denominators at the MCO-level for this measure were not sufficient for statistically comparing results among the health plans in STAR or CHIP.

The rate for *Good Access to Specialist Referral* in STAR Health notably exceeded the HHSC Dashboard standard of 75 percent, while the rate for *Good Access to Behavioral Treatment or Counseling* in STAR Health was approximately equal to the standard of 79 percent. Between 2009 and 2012, a considerable increase was observed in access to specialist referrals for members in STAR Health (**Figure 39**). The rate for this indicator increased by 25 percentage points over the four-year period, from 59 percent in 2009 to 84 percent in 2012 – potentially as a result of improvements in access to specialist network providers since the implementation of STAR Health in 2008.

Figure 39. Good Access to Specialist Referral in STAR Health, 2009-2012

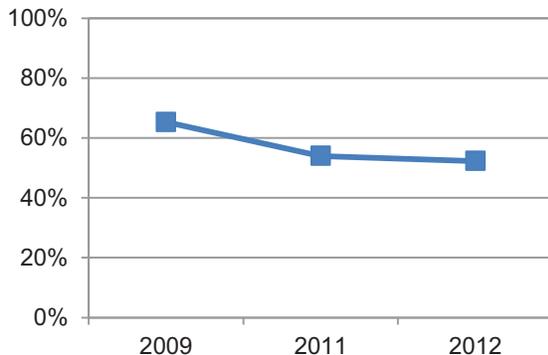

HHSC Performance Dashboard Indicators – Access to Care for Adults					
	STAR		STAR+PLUS		
	2012	Dashboard standard	Medicaid 2012	Dual 2011	Dashboard standard
<i>Good Access to Specialist Referral</i>	64%	73%	61%	78%	73%
<i>Good Access to Special Therapies</i>	62%	58%	52%	53%	66%

Program-level rates for *Good Access to Specialist Referral* were lower than 2012 HHSC Dashboard standards for adults in STAR and STAR+PLUS Medicaid-only members (standard = 73 percent for both programs). Among the STAR MCOs, the lowest rates for this indicator were observed in Parkland Community (48 percent) and Aetna (57 percent). Among the STAR+PLUS MCOs, the lowest rates were seen in Molina and HealthSpring (both at 57 percent). However, differences among the MCOs were not statistically significant in either program.

Among dual-eligibles in STAR+PLUS, access to specialist referrals was considerably better, having increased from 71 percent in 2010 to 78 percent in 2011, and exceeding the 2011 standard for this indicator by five percentage points.

The rate for *Good Access to Special Therapies* among adults in STAR exceeded the 2012 HHSC Dashboard standard of 58 percent. However, in STAR+PLUS, the rate for this indicator was considerably below the standard of 66 percent for both Medicaid-only members (by 14 percentage points) and dual-eligible members (by 13 percentage points).

Figure 40. Good Access to Special Therapies in STAR+PLUS (Medicaid-only), 2009-2012

Furthermore, both groups in STAR+PLUS saw considerable declines in access to special therapies. As shown in **Figure 40**, the rate among STAR+PLUS Medicaid-only members dropped from 65 percent in 2009 to 52 percent in 2012.¹²⁸ Most of this decrease occurred between 2009 and 2011, suggesting that the negative trend in access to special therapies is not explained by the Medicaid managed care expansion that occurred in September 2011. Rates in all STAR+PLUS MCOs declined during this period, particularly in Molina (by 20 percentage points) and Superior (by 15

percentage points).^{129,130} The program mean for this indicator also decreased with the addition of the HealthSpring MCO in 2012, which had a rate of 49 percent. A similar decline in access to special therapies was seen for STAR+PLUS dual-eligible members, from 66 percent in 2010 to 53 percent in 2011. To understand and correct these trends, STAR+PLUS MCOs should examine changes that may have occurred in their specialist provider networks during the period between 2009 and 2011.

4.3 – Patient-Centered Medical Home

The American Academy of Family Physicians defines the patient-centered medical home (PCMH) as a “system of comprehensive coordinated primary care for children, youth and adults.”¹³¹ In the PCMH model, patients have a personal physician who coordinates care within a team, ensures that patients’ needs are being met, and respects patients’ preferences. In a joint statement released in 2007, the American Academy of Pediatrics, the American Academy of Family Physicians, the American College of Physicians, and the American Osteopathic Association identified seven principles of the patient-centered medical home model:¹³²

- Personal physician
- Physician-directed medical practice
- Whole person orientation
- Care that is coordinated and/or integrated across settings and providers
- Quality and safety
- Enhanced access (e.g., open scheduling, extended hours)
- Payment structure that promotes coordination, health information technology, and quality incentives

The PCMH may improve not only outcomes of care and patient satisfaction, but also utilization and costs of care. A demonstration project in Washington State found that after one year of implementation, use of the PCMH model in a health care system resulted in higher patient experience ratings, lower emotional exhaustion among staff, increased use of e-mail, phone, and specialist visits, and decreased emergency department visits.¹³³

The EQRO member satisfaction surveys include a number of CAHPS® core and supplemental items that address the presence and quality of the PCMH for members in Texas Medicaid and CHIP, including: (1) the percentage of members with a personal doctor; (2) member ratings of their personal doctor (on a scale of 0 to 10); and (3) CAHPS® composite scores for *How Well Doctors Communicate*; *Shared Decision-Making*; *Personal Doctor*; *Getting Needed Information*; and *Care Coordination*. In addition, STAR+PLUS members' experiences with care coordination are assessed using the HHSC Performance Dashboard indicator, *Good Access to Service Coordination*.

Presence of a Usual Source of Care

The majority of Texas Medicaid and CHIP members report having a personal doctor whom they see when they need a checkup, want advice about a health problem, or get sick or hurt (**Table 6**). Among children, rates of having a personal doctor were higher in the STAR Health program (93 percent) than in STAR (84 percent) or CHIP (85 percent). Among adults, rates were higher for STAR+PLUS Medicaid-only (82 percent) and dual-eligible members (85 percent) than for STAR members (68 percent). No observable trends were seen in the percent of members with a personal doctor over the four-year period.

Table 6. Percent of Members with a Personal Doctor in Texas Medicaid and CHIP

STAR Child 2011	CHIP 2011	STAR Health 2012	STAR Adult 2012	STAR+PLUS	
				Medicaid 2012	Dual-eligible 2011
84%	85%	93%	68%	82%	85%

Member Ratings of their Personal Doctor

For members who report having a personal doctor, the CAHPS® Health Plan Survey also asks them to rate their personal doctor on a scale from 0 to 10. **Figure 41** shows the percentage of parents of child members who gave their child's personal doctor a rating of "9" or "10", along with the corresponding national averages for 2011. Three-quarters of parents of children in STAR rated their child's personal doctor a "9" or "10" (75 percent), which is greater than the Medicaid national average of 70 percent. The rate for children in CHIP (72 percent) was also greater than the SCHIP national average of 69 percent, while the rate for children in STAR Health (74 percent) was comparable. Overall, these findings show that parents of children in Texas Medicaid and CHIP are satisfied with their children's personal doctors.

Between 2009 and 2012, a positive trend was observed in personal doctor ratings for caregivers of children in STAR Health. The percent of caregivers who gave their child’s personal doctor a rating of “9” or “10” increased by over ten percentage points, from 63 percent in 2009 to 74 percent in 2012.

Figure 41. Percent of Parents Rating their Child’s Personal Doctor a “9” or “10”

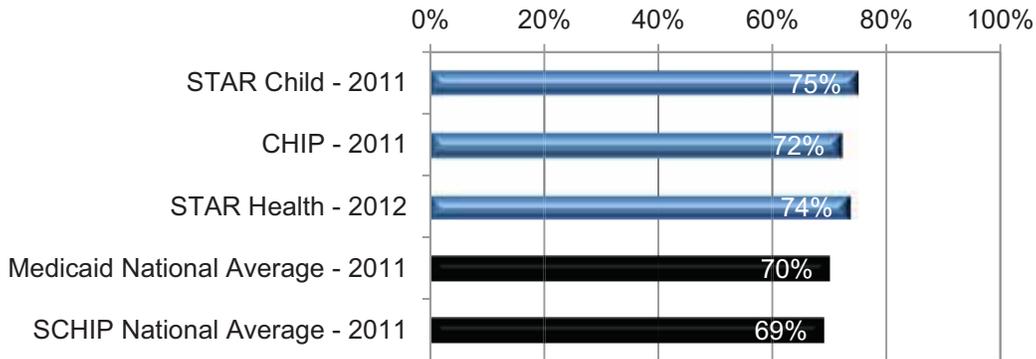

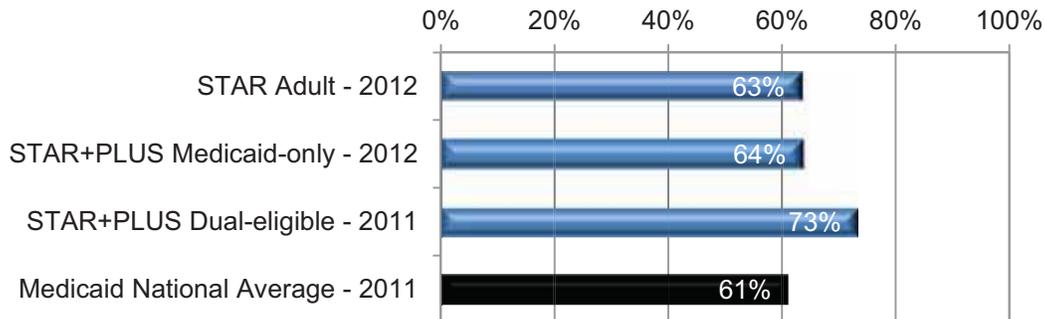

Figure 42 shows the percentage of adult members who rated their own personal doctor a “9” or “10”, along with the corresponding national averages for 2011. Although ratings for personal doctors among adult members were slightly lower than among parents of child members (with the exception of STAR+PLUS dual-eligible members), they generally exceeded the Medicaid national average of 63 percent. The percent of STAR+PLUS members who rated their personal doctor a “9” or “10” was considerably higher among dual-eligibles (73 percent) than among Medicaid-only members (64 percent).

Figure 42. Percent of Members Rating their Personal Doctor a “9” or “10”

How Well Doctors Communicate

Good doctor-patient communication is an important determinant of patient satisfaction and outcomes of care. Patients who report good communication with their doctors are more likely to be satisfied with their care, to share information for accurate diagnosis of their problems, and to adhere to prescribed treatment.¹³⁴ The EQRO uses the CAHPS® composite *How Well Doctors Communicate* to assess member- and parent-reported experiences and satisfaction communicating with their personal doctors. This composite combines responses to questions about how often personal doctors: (1) explained things in a way that was easy for members to

understand; (2) listened carefully to members; (3) showed respect for what members had to say; and (4) spent enough time with members. *How Well Doctors Communicate* is a core CAHPS® composite for both adults and children. Scores follow AHRQ specifications, representing the percentage of members who “usually” or “always” had positive experiences communicating with personal doctors.

The most recent EQRO surveys found that members and parents of child members are generally satisfied with communication with their personal doctors. The score for *How Well Doctors Communicate* among children in STAR (88 percent) was slightly lower than the Medicaid national average of 92 percent, while the score for children in CHIP (91 percent) was comparable to the SCHIP national average of 92 percent.

Eighty-nine percent of adults in STAR had positive experiences communicating with their personal doctors, which is equal to the Medicaid national average for 2011. In STAR+PLUS, *How Well Doctors Communicate* was lower among Medicaid-only members (82 percent) and higher among dual-eligible members (90 percent). No observable trends were seen in scores for this composite over the four-year period.

CAHPS® <i>How Well Doctors Communicate</i>	
Child – 2011/2012	
STAR ^a	88%
CHIP ^a	91%
STAR Health ^b	94%
Adult – 2011/2012	
STAR ^b	89%
STAR+PLUS Medicaid-only ^b	82%
STAR+PLUS Dual-eligible ^a	90%

^a 2011, ^b 2012

Shared Decision-Making

An important component of the patient-centered medical home is the involvement of patients in decisions about their health care. The process of shared decision-making, in which doctors inform patients of available options and elicit patients’ treatment preferences, is particularly suited for long-term decisions, such as those made in the context of chronic illness.¹³⁵

CAHPS® <i>Shared Decision-Making</i>	
Child – 2011/2012	
STAR ^a	88%
CHIP ^a	91%
STAR Health ^b	89%

^a 2011, ^b 2012

To assess parents’ experiences with this process for their children in Texas Medicaid and CHIP, the EQRO uses the CAHPS® composite *Shared Decision-Making*. This composite combines responses to questions about whether the child’s doctor or other health providers: (1) talked with the parent about the pros and cons for each choice for their child’s health care; and (2) asked the parent which choice they thought was best for their child.

Overall, parents reported positive experiences with shared decision-making for their child’s care. Although no national averages are available for comparison, the scores in STAR (88 percent), CHIP (91 percent), and STAR Health (89 percent) are considered high, and indicative of effective shared decision-making practices in the clinical setting. No observable trends were seen in scores for this composite over the four-year period.

Personal Doctor

The CAHPS® composite *Personal Doctor*, which is calculated for children in Medicaid and CHIP, combines responses to questions about whether the child’s personal doctor: (1) talked with the parent about how their child was feeling, growing, or behaving; and (2) understood how the child’s medical, behavioral, or other health conditions affected the child’s and family’s day-to-day life.

CAHPS® <i>Personal Doctor</i>	
Child – 2011/2012	
STAR ^a	86%
CHIP ^a	87%
STAR Health ^b	90%

^a 2011, ^b 2012

Overall, parents reported positive experiences with these aspects of their interactions with their child’s personal doctor. Although no national averages are available for comparison, the scores in STAR (86 percent), CHIP (87 percent), and STAR Health (90 percent) are considered high, and indicate that personal doctors in Medicaid and CHIP are attentive to the broader impacts associated with children’s physical and emotional development. No observable trends were seen in scores for this composite over the four-year period.

Getting Needed Information

CAHPS® <i>Getting Needed Information</i>	
Child – 2011/2012	
STAR ^a	92%
CHIP ^a	92%
STAR Health ^b	90%

^a 2011, ^b 2012

The CAHPS® composite *Getting Needed Information*, which the EQRO also calculates for children in Medicaid and CHIP, is based on a single item about how often parents had their questions answered by their child’s doctors or other health providers.

Although no national averages are available for comparison, scores for this composite in STAR (92 percent), CHIP (92 percent), and STAR Health (90 percent) are considered high, and indicate that parents are adequately having their questions answered by providers. A slight increase in the score for this measure was observed for children in STAR, from 86 percent in 2009 to 92 percent in 2011.

Care Coordination

To assess parents’ experiences with care coordination for their children in Texas Medicaid and CHIP, the EQRO uses the CAHPS® composite *Care Coordination*. This composite combines responses to questions asking: (1) whether the child’s doctors or other health providers helped the parent in contacting their child’s school or daycare; and (2) whether anyone from the child’s health plan, doctor’s office, or clinic helped the parent coordinate their child’s care among different providers and health care services.

CAHPS® <i>Care Coordination</i>	
Child – 2011/2012	
STAR ^a	71%
CHIP ^a	71%
STAR Health ^b	74%

^a 2011, ^b 2012

Although no national averages are available for comparison, scores for this composite in STAR (71 percent), CHIP (71 percent), and STAR Health (74 percent) suggest that there is room for improvement in care coordination practices for children in these programs. It should be noted that the *Care Coordination* score in STAR Health increased by approximately six percentage points, from 68 percent in 2010 to 74 percent in 2012.

HHSC Dashboard Indicator	
<i>Good Access to Service Coordination</i>	
STAR+PLUS – 2010/2012	
Medicaid-only ^b	67%
Dual-eligible ^a	64%
Dashboard standard ^b	63%

Members in STAR+PLUS have the option to receive assistance from a service coordinator through their health plan, who helps to arrange their care and find the services that they need. For these members, the HHSC Dashboard indicator, *Good Access to Service Coordination*, represents the percentage of members who “usually” or “always” received service coordination help as soon as they needed it.

^a 2010, ^b 2012

Results for this indicator are available for Medicaid-only members in 2012 and dual-eligible members in 2010.¹³⁶ Among Medicaid-only members who had a service coordinator, 67 percent had good access to service coordination, which exceeds the 2012 HHSC Dashboard standard of 63 percent. The result for this indicator among dual-eligible members was slightly lower (64 percent), although no 2010 HHSC Dashboard standard is available for comparison. No observable trends were seen for this indicator during the four-year period.

4.4 – Customer Service

Customer service is an important component of managed care that impacts member satisfaction, member compliance with treatment, performance improvement, and ultimately, the size of an MCO's overall membership. Better service translates to higher member satisfaction, which in turn means that members are more likely to return to the same providers, ensuring their continuity of care. Conversely, dissatisfaction with customer service generates potential new costs, lowers treatment compliance, and leads to worse health outcomes.

To assess member satisfaction with health plan customer service in Texas Medicaid and CHIP, the EQRO uses the CAHPS® composite *Health Plan Information and Customer Service*. This is a core composite for both adults and children, and combines responses to questions regarding how often health plan customer service staff: (1) gave members the information or help they needed; and (2) treated members with courtesy and respect. Scores follow AHRQ specifications, which represent the percentage of members who “usually” or “always” had positive experiences with health plan customer service. In addition, the EQRO follows a modified NCQA scoring methodology to calculate these scores on a 1- to 3-point scale, which allows for statistical comparisons between population sub-groups and reporting years.

CAHPS [®] Health Plan Information and Customer Service	
Child – 2011/2012	
STAR ^a	84%
CHIP ^a	82%
STAR Health ^b	75%
Adult – 2011/2012	
STAR ^b	78%
STAR+PLUS Medicaid-only ^b	69%
STAR+PLUS Dual-eligible ^a	74%

^a 2011, ^b 2012

Results for this composite reveal that Texas Medicaid and CHIP members have generally positive experiences with health plan customer service. The score for children in STAR (84 percent) was higher than the Medicaid national average of 80 percent, while the score for children in CHIP (82 percent) was comparable to the CHIP national average of 81 percent.

Among adults in STAR, the score for this composite (78 percent) was slightly below the Medicaid national average of 80 percent. Scores were generally lower in STAR+PLUS, for both Medicaid-only members (69 percent) and dual-eligible members (74 percent).

Among caregivers of children in STAR Health, 75 percent usually or always had positive experiences with health plan customer service. This score is lower than that reported for children in the other programs, and represents a considerable decline from 85 percent in 2010. This finding suggests that the STAR Health MCO (Superior Health Plan) should explore possible reasons for the lower ratings in customer service among caregivers of children in foster care.

4.5 – Behavioral Health Care

In response to recommendations made by the Texas Legislative Budget Board Staff, the EQRO began conducting behavioral health satisfaction surveys for Texas Medicaid members in FY 2010.¹³⁷ These surveys use the CAHPS[®] Experience of Care and Health Outcomes (ECHO) tool, which assesses members' experiences and satisfaction with the behavioral health services they receive through their managed care organization or behavioral health organization. The EQRO has conducted this survey twice for children in STAR (in 2010 and 2011), twice for adults in STAR (in 2010 and 2012), and once for adults in STAR+PLUS (in 2011).

The ECHO behavioral health survey includes four reporting composites that combine responses to closely related survey items:¹³⁸

- 1) *Getting Treatment Quickly*, which assesses how often members got professional counseling over the phone, urgent counseling and treatment, and routine counseling appointments. Scores are calculated on a scale ranging from 1.00 to 3.00.
- 2) *How Well Clinicians Communicate*, which assesses how often clinicians listened carefully to members, explained things in a way members could understand, showed respect for what members had to say, spent enough time with members, made members feel safe, and involved members as much as they wanted. Scores are calculated on a scale ranging from 1.00 to 3.00.

3) *Information About Treatment Options*, which assesses whether members were told about self-help or support groups, and whether they were given information about different kinds of counseling options available to them. Scores are calculated on a scale ranging from 0.00 to 1.00.

4) *Perceived Improvement*, which assesses how members would rate their ability to deal with daily problems, ability to deal with social situations, ability to accomplish things they want to, and their problems or symptoms compared to six months prior to the survey. Scores are calculated on a scale ranging from 1.00 to 4.00.

<u>ECHO Behavioral Health Survey Composites^a</u>						
	STAR Child 2011		STAR Adult 2012		STAR+PLUS 2011	
	Mean	95% CI	Mean	95% CI	Mean	95% CI
<i>Getting Treatment Quickly</i> (1.00 – 3.00)	2.15	2.05-2.24	1.96	1.86-2.07	2.15	2.06-2.23
<i>How Well Clinicians Communicate</i> (1.00 – 3.00)	2.52	2.47-2.56	2.26	2.18-2.29	2.47	2.43-2.51
<i>Information About Treatment Options</i> (0.00 – 1.00)	NR	NR	0.50	0.46-0.53	0.60	0.57-0.63
<i>Perceived Improvement</i> (1.00 – 4.00)	3.09	3.02-3.13	2.78	2.73-2.86	2.60	2.55-2.65

^a 95% CI = 95% Confidence Interval

Findings from the EQRO's most recent behavioral health surveys in STAR and STAR+PLUS showed adequate scores for *Getting Treatment Quickly* and *Perceived Improvement*, and good scores for *How Well Clinicians Communicate*. Scores for *Information About Treatment Options* among adults in STAR (0.50) and STAR+PLUS (0.60) suggest there is room for improvement in the quality of information that behavioral health providers give to members.

5 – Effectiveness of Care

The Institute of Medicine (IOM) defines *effectiveness* as a quality of care that uses “systematically acquired evidence to determine whether an intervention, such as a preventive service, diagnostic test, or therapy, produces better outcomes than alternatives – including the alternative of doing nothing.”¹³⁹ Ensuring that care is effective is one of six aims outlined by the IOM for improving the 21st-century health care system, and requires that services based on scientific knowledge are provided to all who could benefit.

To evaluate effectiveness of care in Texas Medicaid and CHIP, the EQRO uses HEDIS[®] process measures that assess: (1) provider compliance with evidence-based practices; and (2) patient compliance with follow-up and treatment regimens. These measures address the appropriate and effective management of a number of acute and chronic conditions, including pediatric upper respiratory tract infection and pharyngitis; bronchitis in adults; asthma; diabetes; hypertension; and behavioral conditions such as attention deficit-hyperactivity disorder (ADHD), depression, and alcohol or drug dependence. This section also presents preventive care measures related to the promotion of healthy weight and diet in children and adults. Many of these measures are also HHSC Dashboard indicators for STAR, CHIP, STAR Health, or STAR+PLUS.

5.1 – Acute Respiratory Care

Acute respiratory conditions, such as upper respiratory infections (URIs) in children and acute bronchitis in adults, account for a large proportion of outpatient visits in the United States. Children typically experience six to eight URIs each year, with common infections including laryngitis, pharyngitis, otitis media, and the common cold.^{140,141} Pharyngitis, in particular, results in more than seven million pediatric outpatient visits each year – approximately one-third of which are due to a bacterial infection caused by group A streptococcus, which can be treated with antibiotics.^{142,143} However, antibiotics are prescribed as a treatment in 68 percent of respiratory infection cases, which may lead to an increase in drug-resistant bacteria.^{144,145}

Acute bronchitis is a common reason for ambulatory care visits among adults in the United States, although its diagnostic requirements and treatment vary widely in clinical practices.¹⁴⁶ As with pediatric URIs, most cases of acute bronchitis in adults are caused by viruses; however, prescription of antibiotics is a frequent practice and has contributed to the emergence of antibiotic-resistant bacteria.¹⁴⁷

The Centers for Disease Control and Prevention (CDC) and the American Academy of Pediatrics (AAP) recommend against antibiotic prescriptions for most types of pediatric URIs, including otitis media, rhinitis, viral pharyngitis, cough, and bronchitis.¹⁴⁸ Evidence-based practice guidelines by the CDC also recommend against the routine use of antibiotics for cases of acute bronchitis in adults.¹⁴⁹ The EQRO uses three HEDIS[®] measures to assess the compliance of Texas Medicaid and CHIP providers with treatment guidelines for acute respiratory infections:

- HEDIS[®] *Appropriate Treatment for Children with Upper Respiratory Infection*
- HEDIS[®] *Appropriate Testing for Children with Pharyngitis*
- HEDIS[®] *Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis*

Appropriate Treatment for Children with Upper Respiratory Infection

The HEDIS® *Appropriate Treatment for Children with Upper Respiratory Infection* measure assesses the percentage of children three months to 18 years old who received a diagnosis of upper respiratory infection (URI) and who *were not* dispensed an antibiotic prescription. As pediatric clinical guidelines do not recommend antibiotic treatment for most URIs, high percentages on this measure indicate good performance. The EQRO calculates this measure annually for STAR, CHIP, and STAR Health.

<u>HEDIS® Appropriate Treatment for Children with URI</u>	
CY 2011 results	
STAR	83 percent
CHIP	76 percent
STAR Health	79 percent

In CY 2011, the percentage of children who received appropriate treatment for URI was 83 percent in STAR, which was lower than the national HEDIS® mean of 87 percent. Rates for this measure were lower in CHIP (76 percent) and STAR Health (79 percent).

Trends in performance on this measure showed very slight increases since 2009, with a net increase of 2.6

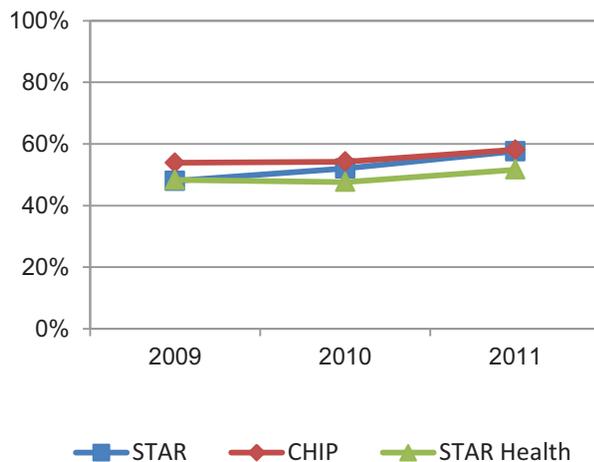

percent in STAR, 1.0 percent in CHIP, and 0.7 percent in STAR Health. Overall, rates of appropriate treatment for pediatric URI in Texas Medicaid and CHIP were generally low and changed little over the three-year period, highlighting the need for efforts to improve MCO network provider compliance with practice guidelines.

Appropriate Testing for Children with Pharyngitis

The HEDIS® *Appropriate Testing for Children with Pharyngitis* measure assesses the percentage of children 2 to 18 years of age who were diagnosed with pharyngitis and dispensed an antibiotic, and who also received a group A streptococcus test for the episode. Because an antibiotic prescription for pharyngitis *without* a positive test for group A streptococcus is not recommended, high percentages on this measure indicate good performance. The EQRO calculates this measure annually for STAR, CHIP, and STAR Health.

Figure 43 shows trends in HEDIS® *Appropriate Testing for Children with Pharyngitis* in STAR, CHIP, and STAR Health from 2009 to 2011. Rates of appropriate testing for pediatric pharyngitis were low for all three programs, ranging from approximately 50 to 60 percent during the three-year period. Rates in STAR were lower than the HEDIS® national means in all three years.

Figure 43. HEDIS® Appropriate Testing for Children with Pharyngitis in STAR, CHIP, and STAR Health, 2009-2011

In 2011, 58 percent of children in STAR received appropriate testing for pharyngitis, compared to 65 percent of children in Medicaid nationally. Rates for this measure were approximately the same in CHIP (58 percent), and slightly lower in STAR Health (52 percent). However, rates of appropriate testing for pharyngitis did increase for all three programs over the three-year period, particularly for children in STAR (from 48 percent in 2009 to 58 percent in 2011). These findings suggest that performance on this measure has seen improvement in Texas Medicaid and CHIP. Health plans should continue efforts to encourage MCO network providers to follow the most up-to-date guidelines for the appropriate prescription of antibiotics in children.

Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis

The HEDIS® *Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis* measure assesses the percentage of adults 18 to 64 years of age with a diagnosis of acute bronchitis who were *not* dispensed an antibiotic prescription. As with other measures in this section, high percentages represent good performance. The EQRO calculates this measure annually for STAR+PLUS.

HEDIS® *Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis* in STAR+PLUS

2010	18 percent
2011	20 percent

Results for this measure in STAR+PLUS are available for 2010 (18 percent) and 2011 (20 percent), showing a slight increase by two percentage points over the two-year period. Findings show low performance on this measure at the program level. Continued monitoring of this measure is important for adults in STAR+PLUS, who are more vulnerable to adverse outcomes related to antibiotic-resistant bacterial infections.

5.2 – Care for Chronic Conditions

Use of Appropriate Medications for People with Asthma

Asthma is one of the most common conditions that affect children and adults in Texas Medicaid and CHIP. When improperly managed, the condition can lead to asthma attacks that contribute to potentially avoidable emergency department and hospital admissions, missed school days for children, and missed work days for adults.¹⁵⁰ The National Asthma Education and Prevention Program (NAEPP) recommends that patients with persistent asthma be prescribed long-term control medications for daily use to maintain control of their symptoms and reduce the occurrence of adverse events due to asthma attacks.¹⁵¹

To assess the appropriateness of asthma medication use in Texas Medicaid and CHIP, the EQRO uses the HEDIS® *Use of Appropriate Medications for People with Asthma* measure, which is also an HHSC Performance Dashboard indicator. This measure assesses the percentage of members who were identified as having persistent asthma and who were appropriately prescribed medication during the measurement period.

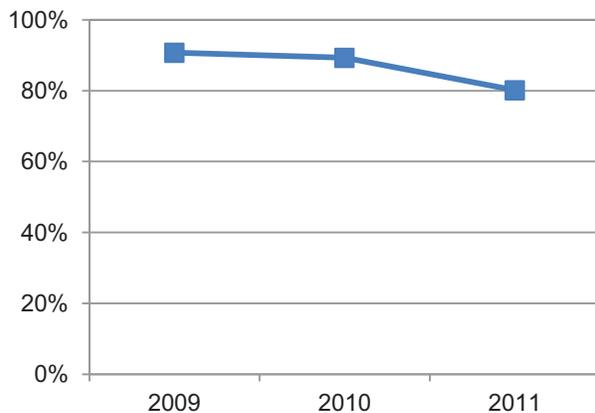

The 2012 HEDIS® specifications for this measure provide rates for four age cohorts: 5 to 11 years, 12 to 18 years, 19 to 50 years, and 51 to 64 years. Following the age cohorts specified in the 2011 HEDIS® specifications and the HHSC Performance Indicator Dashboard, this report

shows results for the 5- to 11-year age group in STAR, CHIP, and STAR Health; and for members 12 to 50 years old in STAR, STAR+PLUS, CHIP, and STAR Health (representing the 12- to 18-year and 19- to 50-year age groups combined).¹⁵²

HEDIS® Use of Appropriate Medications for People with Asthma					
Age 5 to 11 years			Age 12 to 50 years		
	CY 2011 results	Dashboard standard		CY 2011 results	Dashboard standard
STAR	95%	92%	STAR	93%	86%
CHIP	96%	92%	CHIP	93%	86%
STAR+PLUS	95%	None	STAR+PLUS	80%	86%
STAR Health	94%	92%	STAR Health	91%	86%

For members 5 to 11 years old, rates of appropriate asthma medication use exceeded the HHSC Dashboard standard of 92 percent for all programs, suggesting a high level of compliance on this measure for children in Texas Medicaid and CHIP.¹⁵³ The rate in STAR (95 percent) also exceeded the HEDIS® national mean of 92 percent. Although findings show good performance at the program level, continued monitoring of this measure for children is warranted, given the high prevalence of asthma in these populations and its association with potentially preventable hospital admissions and ED visits.

Figure 44. HEDIS® Use of Appropriate Medication for People with Asthma in STAR+PLUS, 2009-2011

For members 12 to 50 years old, rates exceeded the HHSC Dashboard standard of 86 percent in STAR, CHIP, and STAR Health. The rate in STAR (93 percent) also exceeded the national HEDIS® mean of 86 percent. In STAR+PLUS, 80 percent of eligible members in this age group had appropriate asthma medication, which is lower than the HHSC Dashboard standard. Furthermore, the rate of appropriate asthma medication use for adults in STAR+PLUS declined by over 10 percentage points over the three-year period, from 91 percent in 2009 to 80 percent in 2011 (**Figure 44**).¹⁵⁴

Among the five STAR+PLUS health plans, Superior had the highest rate (86 percent) – performing equal to the HHSC Dashboard standard. Rates were below the HHSC Dashboard standard in Evercare (72 percent), Molina (74 percent) and Amerigroup (82 percent). As this measure requires two years of continuous enrollment, a rate was not calculated for HealthSpring (for which only eight months of data were available in CY 2011).

Comprehensive Diabetes Care

Diabetes is a very prevalent chronic condition among adults in Texas Medicaid. Inappropriate management of diabetes can lead to serious complications, including blindness, kidney damage, and lower extremity amputation resulting from neuropathy. Diabetes also makes it difficult to control blood pressure and cholesterol, which can lead to heart attacks or strokes.¹⁵⁵ Complications resulting from the improper treatment of diabetes frequently result in potentially preventable emergency department and hospital admissions.

To prevent the development of these serious complications, the American Diabetes Association (ADA) recommends that people with diabetes receive: (1) an annual eye examination; (2) routine testing of their hemoglobin levels (HbA1c); (3) routine screening of low-density lipoprotein (LDL) cholesterol levels; and (4) routine screening and medical attention for kidney disease (nephropathy).¹⁵⁶ In addition, the ADA recommends that diabetes patients have adequate control of HbA1c levels and LDL-C levels. The monitoring and treatment of diabetes-related complications can reduce the adverse effects that arise from this disease.¹⁵⁷

To assess the effectiveness of diabetes care for adults in STAR and STAR+PLUS, the EQRO uses the HEDIS[®] *Comprehensive Diabetes Care* measure, which is also an HHSC Dashboard indicator for these programs. This measure provides the percentage of members 18 to 75 years of age with diabetes (type 1 or 2) who had HbA1c testing, eye exams, LDL-C screening, medical attention for diabetic nephropathy, adequate HbA1c control, and adequate LDL-C control during the measurement period. HEDIS[®] technical specifications for the *Comprehensive Diabetes Care* measures include the use of both administrative and medical record review data. The measures for adequate hemoglobin control and adequate cholesterol control are hybrid measures, assessed through medical record reviews.

HEDIS [®] <i>Comprehensive Diabetes Care</i>				
	STAR		STAR+PLUS	
	CY 2011 Results	Dashboard standard	CY 2011 Results	Dashboard standard
<i>HbA1c Testing</i>	73%	77%	78%	77%
<i>Eye Exam</i>	36%	50%	37%	50%
<i>LDL-C Screening</i>	70%	71%	76%	71%
<i>Medical Attention for Nephropathy</i>	73%	74%	81%	81%
<i>LDL-C Control < 100 mg/dL</i>	18%	37%	26%	37%
<i>HbA1c Control < 8%</i>	29%	48%	26%	48%

STAR: For adults with diabetes in STAR, CY 2011 results for all sub-measures were below their respective HEDIS[®] national means and HHSC Dashboard standards – suggesting a general need for improvement in diabetes care for this population. The rates for *Eye Exam* (36 percent), *LDL-C Control* (18 percent), and *HbA1c Control* (29 percent) were particularly low in comparison to the national means.

Specific comparisons of HEDIS® *Comprehensive Diabetes Care* results in STAR with the national HEDIS® means and HHSC Dashboard standards are shown below:

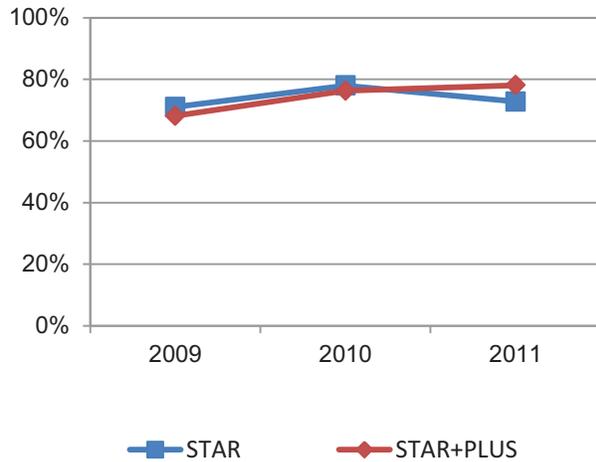

- For *HbA1c Testing*, STAR performed 9 percentage points below the national HEDIS® mean of 82 percent, and 4 percentage points below the HHSC Dashboard standard of 77 percent.
- For the diabetic *Eye Exam* measure, STAR performed 17 percentage points below the national HEDIS® mean of 53 percent, and 14 percentage points below the HHSC Dashboard standard of 50 percent.
- For *LDL-C Screening*, STAR performed 5 percentage points below the national HEDIS® mean of 75 percent, and 1 percentage point below the HHSC Dashboard standard of 71 percent.
- For *Medical Attention for Nephropathy*, STAR performed 5 percentage points below the national HEDIS® mean of 78 percent, and 1 percentage point below the HHSC Dashboard standard of 74 percent.
- For *LDL-C Control*, STAR performed 17 percentage points below the national HEDIS® mean of 35 percent, and 19 percentage points below the HHSC Dashboard standard of 37 percent.
- For *HbA1c Control*, STAR performed 18 percentage points below the national HEDIS® mean of 47 percent, and 19 percentage points below the HHSC Dashboard standard of 48 percent.

STAR+PLUS: For adults with diabetes in STAR+PLUS, rates on all sub-measures were generally higher, but also indicated need for improvement – particularly for *Eye Exam* (37 percent) and *HbA1c Control* (26 percent). Specific comparisons of HEDIS® *Comprehensive Diabetes Care* results in STAR+PLUS with the HHSC Dashboard standards are shown below:

- For *HbA1c Testing*, STAR+PLUS performed 1 percentage point above the HHSC Dashboard standard of 77 percent.
- For the diabetic *Eye Exam* measure, STAR+PLUS performed 13 percentage points below the HHSC Dashboard standard of 50 percent.
- For *LDL-C Screening*, STAR+PLUS performed 5 percentage points above the HHSC Dashboard standard of 71 percent.
- For *Medical Attention for Nephropathy*, performance in STAR+PLUS was equal to the HHSC Dashboard standard of 81 percent.
- For *LDL-C Control*, STAR+PLUS performed 11 percentage points below the HHSC Dashboard standard of 37 percent.
- For *HbA1c Control*, STAR+PLUS performed 22 percentage points below the HHSC Dashboard standard of 48 percent.

Three-year trends could be assessed for the four administrative sub-measures in both STAR and STAR+PLUS. For all four administrative sub-measures, both programs saw a net increase in rates between 2009 and 2011. These increases were most pronounced for *HbA1c Testing* (Figure 45) and *LDL-C Screening* (Figure 46).

Figure 45. HEDIS® Comprehensive Diabetes Care – HbA1c Testing in STAR and STAR+PLUS, 2009-2011

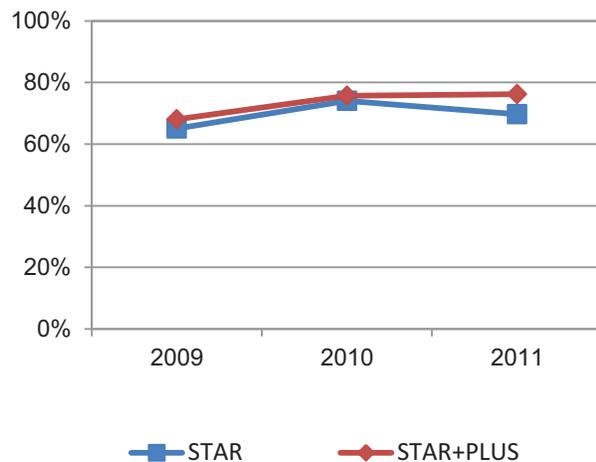

For *HbA1c Testing*, the rate in STAR+PLUS increased by 10.0 percentage points over the three-year period. In STAR, the rate increased notably in 2010 (by 7.0 percentage points), then dropped back to prior levels in 2011, for a net increase of only 1.8 percentage points.

For *LDL-C Screening*, the rate in STAR+PLUS increased by 8.2 percentage points over the three-year period. In STAR, the rate increased notably in 2010 (by 9.0 percentage points), then dropped back in 2011, for a net increase of 4.7 percentage points.

Based on these findings, the EQRO recommends that any MCO interventions to improve diabetes care implemented during this time frame be continued in the coming year, and improved upon using established quality improvement methodologies. Furthermore, STAR+PLUS MCOs should identify factors that contributed to success in increasing rates of *HbA1c Testing* and *LDL-C Screening* in particular, and increase the scope of their implementation to encourage further improvement.

Figure 46. HEDIS® Comprehensive Diabetes Care – LDL-C Screening in STAR and STAR+PLUS, 2009-2011

Controlling High Blood Pressure

The Mayo Clinic states that uncontrolled high blood pressure can result in disabilities and lower quality of life, as well as more life-threatening complications.¹⁵⁸ Consequently, uncontrolled hypertension could ultimately result in higher rates of potentially preventable events and health care costs for the community as a whole. The rate of controlled hypertension serves as an important indicator of quality of care and can reveal member or health plan sub-populations with room for improvement in this area.

The HEDIS[®] *Controlling High Blood Pressure* measure assesses the percentage of members 18 to 85 years old who had a diagnosis of hypertension and whose blood pressure (BP) was adequately controlled (<140/90) during the measurement year. This measure is used by the EQRO to assess blood pressure control in the STAR and STAR+PLUS populations and is also an HHSC Dashboard indicator. Adequate control is defined as having both a representative systolic BP <140 mm Hg and a representative diastolic BP <90 mm Hg (BP in the normal or high-normal range), with the representative BP being the most recent reading during the measurement year. HEDIS[®] technical specifications for the *Controlling High Blood Pressure* measure allows for the use of both administrative and medical record review data. Results presented in this report are based on hybrid studies using medical record review. Results for the hybrid studies are not available at the service area level.

HEDIS[®] Controlling High Blood Pressure

CY 2011 results

STAR	44 percent
STAR+PLUS	40 percent
Dashboard standard	54 percent

In CY 2011, rates of adequate blood pressure control for the STAR program (44 percent) and STAR+PLUS program (40 percent) were lower than the HHSC Dashboard standard of 54 percent for both programs. In addition, STAR fell below the national HEDIS[®] mean of 56 percent.

In STAR+PLUS, the rate for Superior (62 percent) was substantially higher than that of the other MCOs; furthermore, Superior was the only MCO to meet the HHSC Dashboard standard for this measure.

A hybrid study for this measure was also conducted in 2009 for STAR+PLUS, with a rate of 37 percent for the program.. The increase from 2009 to 2011 was only 3.0 percentage points. However, at the MCO-level, the rate for Superior increased substantially, with a net increase of 18.2 percentage points.

Annual Monitoring for Patients on Persistent Medications

Long-term medication use is common among patients with chronic conditions, such as hypertension, congestive heart failure, kidney disease, and epilepsy. Patients who take persistent medications for these conditions are at increased risk of adverse drug events, requiring monitoring and follow-up by prescribing physicians to assess side-effects and modify pharmaceutical treatment decisions accordingly.¹⁵⁹

The HEDIS® *Annual Monitoring for Patients on Persistent Medications* measure assesses the percentage of members 18 years of age and older with at least 180 treatment days of ambulatory medication therapy who received at least one therapeutic monitoring event during the measurement year. The measure includes four rates, depending on the type of persistent medication, providing the percentage of members who received annual monitoring for:

- 1) *Angiotensin Converting Enzyme (ACE) Inhibitors or Angiotensin Receptor Blockers (ARBs)*
- 2) *Digoxin*
- 3) *Diuretics*
- 4) *Anticonvulsants*

The EQRO calculates this measure for STAR+PLUS members because long-term medication use is common in this population. Overall, results for STAR+PLUS were good – 88 percent for all medications combined – indicating that the vast majority of eligible STAR+PLUS members received annual medication monitoring.

STAR+PLUS MCOs performed equally well on this measure. In addition, rates varied little among STAR+PLUS service areas.

HEDIS® Annual Monitoring for Patients on Persistent Medications

STAR+PLUS - CY 2011 results

<i>ACE or ARB</i>	92 percent
<i>Anticonvulsants</i>	67 percent
<i>Digoxin</i>	92 percent
<i>Diuretics</i>	92 percent
<i>Combined Rate</i>	88 percent

5.3 – Behavioral Health Care

Follow-up After Hospitalization for Mental Illness

Annually, approximately 600,000 youths and two million adults are hospitalized for mental health disorders.¹⁶⁰ Follow-up after hospitalization for mental illness is an important component of ongoing post-discharge care. Patients have a lower probability of being readmitted to the hospital if they are in contact with a mental health provider after being discharged from the hospital.¹⁶¹ However, one study found that only 16 percent of patients hospitalized for mental health disorders receive follow-up care, and 13 percent of patients are readmitted within six months of discharge.¹⁶²

The EQRO uses the *Follow-Up after Hospitalization for Mental Illness* measure to assess follow-up care in Texas STAR, CHIP, STAR+PLUS, STAR Health, and NorthSTAR. This measure provides the percentage of members six years of age or older who were hospitalized for treatment of mental health disorders and who had an outpatient visit, an intensive outpatient encounter, or a partial hospitalization with a provider during the measurement period. This measure follows HEDIS® specifications with the exception of provider constraints; therefore, comparisons to the national HEDIS® means are approximate and are for illustrative purposes only. Two sub-measures comprise this modified HEDIS® measure: (1) The percentage of members who received follow-up care within 7 days of discharge; and (2) The percentage of members who received follow-up care within 30 days of discharge. This measure is also an HHSC Performance Indicator for the Texas Medicaid and CHIP programs.

<i>Follow-up After Hospitalization for Mental Illness</i>					
7-Day Follow-Up			30-Day Follow-Up		
	CY 2011 results	Dashboard standard		CY 2011 results	Dashboard standard
STAR	43 percent	43 percent	STAR	71 percent	66 percent
CHIP	44 percent	43 percent	CHIP	71 percent	71 percent
STAR+PLUS	48 percent	43 percent	STAR+PLUS	74 percent	64 percent
STAR Health	69 percent	55 percent	STAR Health	91 percent	63 percent
NorthSTAR*	24 percent	---	NorthSTAR*	51 percent	---

*This measure is not an HHSC Performance Indicator for NorthSTAR.

Results among programs for *7-Day Follow-Up* ranged from 24 percent in NorthSTAR to 69 percent in STAR Health. Results among programs for *30-Day Follow-Up* ranged from 51 percent in NorthSTAR to 91 percent in STAR Health.

STAR results were similar to the national HEDIS[®] means for the sub-measures. For follow-up care within seven days, the STAR rate was two percentage points below the HEDIS[®] mean of 45 percent. For follow-up care within 30 days, the STAR rate was seven percentage points above the HEDIS[®] mean of 64 percent.

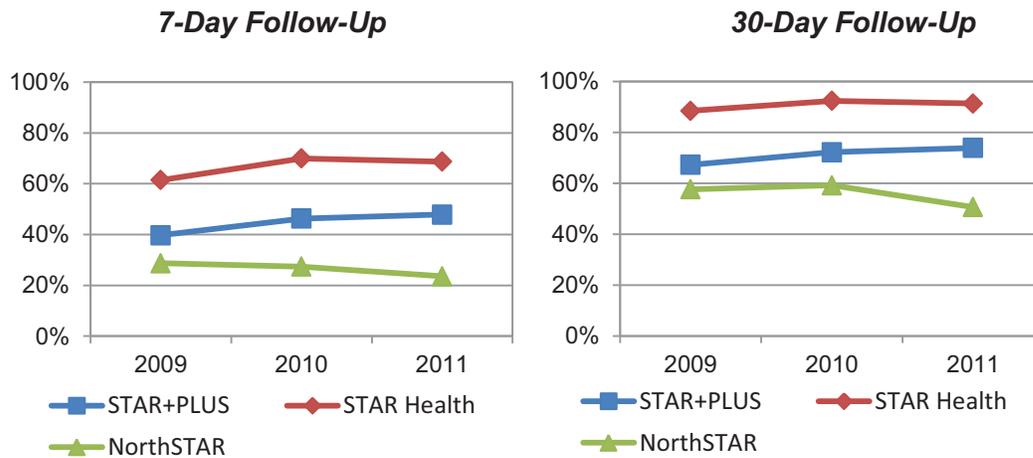

All programs performed well in comparison to their respective HHSC Dashboard standards. STAR Health performed exceptionally well in comparison to its respective Dashboard standards.

In general, trends in performance on this measure changed little between 2009 to 2011 for STAR and CHIP. Specifically, for *7-Day Follow-Up*, STAR had a net increase of 2.8 percent and CHIP had a net increase of 0.6 percent. For *30-Day Follow-Up*, STAR had a net increase of 1.7 percent and CHIP had a net decrease of 0.6 percent. **Figure 47** shows trends in *Follow-up After Hospitalization for Mental Illness* in STAR+PLUS, STAR Health, and NorthSTAR from 2009 to 2011.

STAR+PLUS: Rates for STAR+PLUS increased consistently over the three-year period. For *7-Day Follow-Up*, the net increase from 2009 to 2011 was 8.1 percent. For *30-Day Follow-Up*, the net increase was 6.7 percent.

Among STAR+PLUS MCOs, Evercare had the greatest increase in rates across the three-year period, with a net increase of 19.3 percentage points for *7-Day Follow-Up* and 16.3 percentage points for *30-Day Follow-Up*. Evercare also had the highest rates among STAR+PLUS MCOs for 2011 across both sub-measures. Conversely, rates for Molina decreased across the three-year period, with a net decrease of 23.7 percentage points for *7-Day Follow-Up* and 12.5 percentage points for *30-Day Follow-Up*.

Figure 47. Follow-up After Hospitalization for Mental Illness – Results for STAR+PLUS, STAR Health, and NorthSTAR, 2009-2011

Among the STAR+PLUS service areas, Harris had the greatest increase across the three-year period, with a net increase of 14.5 percentage points for *7-Day Follow-Up*, and a net increase of 12.0 percentage points for *30-Day Follow-Up*. The Travis service area had the highest rates across the three-year period; however, performance in Harris has increased such that both service areas had similar rates in 2011.

STAR Health: Rates for STAR Health also increased from 2009 to 2011. For *7-Day Follow-Up*, the net increase over the three-year period was 7.3 percent, with a peak of 70 percent in 2010. For *30-Day Follow-Up*, rates followed a similar trend, with a net increase of 2.9 percent, and a peak of 92 percent in 2010.

NorthSTAR: Rates for NorthSTAR generally decreased from 2009 to 2011. For *7-Day Follow-Up*, rates decreased from 29 percent in 2009 to 24 percent in 2011, with a net decrease of 5.2 percentage points. For *30-Day Follow-Up*, rates decreased from 58 percent to 51 percent in 2011, with a net decrease of 7.0 percentage points.

Overall, performance on this measure has improved in STAR+PLUS and STAR Health, but has steadily declined for NorthSTAR across the three-year period.

Follow-up Care for Children Prescribed ADHD Medication

Over five million children in the United States have Attention Deficit Hyperactivity Disorder (ADHD), which is a problem with inattentiveness or impulsivity that can affect a child's functioning.^{163,164} Children with this disorder often have trouble socializing with other children, experience difficulties with school work, and are more prone to injuries due to impulsive behavior.^{165,166} Medication is an effective primary treatment for ADHD. However, children prescribed medication should be monitored to ensure that they are receiving the care they need. Specifically, the AAP recommends follow-up visits at regular intervals to assess the

effectiveness of pharmacological treatment and to adjust the treatment plan accordingly.¹⁶⁷ Children who attend follow-up visits and adhere to medication treatment show improvement in symptoms and are less likely to experience adverse events such as emergency department visits.^{168,169}

The *Follow-up for Children Prescribed ADHD Medication* measure provides the percentage of children who were newly prescribed ADHD medication and who had at least three follow-up care visits within a 10-month period. Two sub-measures comprise this modified HEDIS[®] measure:

- *Initiation Phase*: The percentage of members 6 to 12 years of age with an ambulatory prescription dispensed for ADHD medication who had one follow-up visit with a practitioner within the first 30 days.
- *Continuation and Maintenance (C&M) Phase*: The percentage of members 6 to 12 years of age with an ambulatory prescription dispensed for ADHD medication, who remained on the medication for at least 210 days, and who, in addition to the visit in the *Initiation Phase*, had at least two follow-up visits with a practitioner within 270 days (9 months) after the *Initiation Phase* ended.

At HHSC’s request, the EQRO lifted provider constraints for this measure, which may result in inflation of rates. The name “HEDIS[®]” was removed from discussion of this measure, as it does not conform precisely to NCQA specifications. The EQRO calculates this measure annually for STAR, CHIP, STAR Health, and NorthSTAR.¹⁷⁰ This measure is also an HHSC Performance Indicator for these programs, with the exception of NorthSTAR.

Results among programs for the *Initiation Phase* ranged from 29 percent in NorthSTAR to 86 percent in STAR Health. Results among programs for the *Continuation and Maintenance Phase* ranged from 42 percent in NorthSTAR to 90 percent in STAR Health.

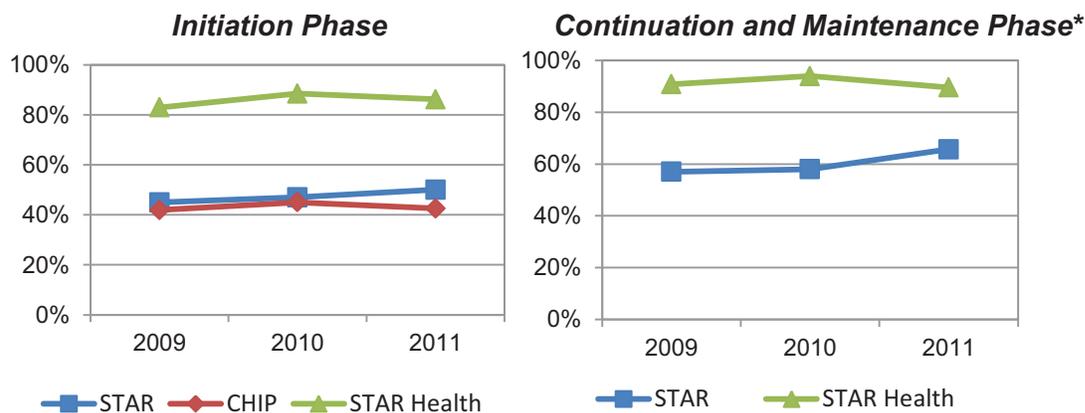

<i>Follow-up Care for Children Prescribed ADHD Medication</i>					
<i>Initiation Phase</i>			<i>Continuation and Maintenance Phase</i>		
	CY 2011 results	Dashboard standard		CY 2011 results	Dashboard standard
STAR	50 percent	41 percent	STAR	66 percent	50 percent
CHIP	43 percent	40 percent	CHIP	58 percent	46 percent
STAR Health	86 percent	35 percent	STAR Health	90 percent	42 percent
*NorthSTAR	29 percent	---	*NorthSTAR	42 percent	---

*This measure is not an HHSC Performance Indicator for NorthSTAR.

STAR results were higher than national HEDIS® means for both sub-measures. For the *Initiation Phase*, the STAR rate was 12 percentage points above the HEDIS® mean of 38 percent. For the *Continuation and Maintenance Phase*, the STAR rate was 22 percentage points above the HEDIS® mean of 44 percent. All programs performed well in comparison to their respective HHSC Dashboard standards. STAR Health performed exceptionally well in comparison to its respective HHSC Dashboard standards.

Figure 48 shows trends in *Follow-up for Children Prescribed ADHD Medication* in STAR, CHIP and STAR Health from 2009 to 2011. NorthSTAR results were only reported for CY 2011; therefore, results for this program are not included in this figure. CHIP results for the *Continuation and Maintenance Phase* are not included due to denominators less than 30 (low denominators) for 2009 and 2010.

Figure 48. Follow-up for Children Prescribed ADHD Medication – Results for STAR and STAR Health 2009-2011

*Results for CHIP are not included in this graph due to denominators less than 30 (low denominators).

In general, trends in performance on this measure changed little between 2009 to 2011 for CHIP and STAR Health. For the *Initiation Phase*, CHIP had a net increase of 0.7 percentage points and STAR Health had a net increase of 3.2 percentage points. For the *Continuation and Maintenance Phase*, STAR Health had a net decrease of 1.3 percentage points.

Rates for STAR across the three-year period increased. Specifically, for the *Initiation Phase*, STAR had a net increase of 5.1 percentage points, and for the *Continuation and Maintenance Phase*, STAR had a net increase of 8.7 percentage points.

Among STAR MCOs, Amerigroup and Parkland had a large increase in rates for both sub-measures. From 2009 to 2011, Amerigroup had a net increase of 9.3 percentage points for the *Initiation Phase*, and a net increase of 21.0 percentage points for the *Continuation and Maintenance Phase*. Parkland had a net increase of 15.9 percentage points for the *Initiation Phase*, and a net increase of 30.5 percentage points for the *Continuation and Maintenance Phase*.

Among STAR service areas, Dallas had the largest increase in rates for both sub-measures. From 2009 to 2011, the rate for the *Initiation Phase* increased by 19.1 percentage points, and the rate for the *Continuation and Maintenance Phase* increased by 37.7 percentage points.

Antidepressant Medication Management

Approximately 15 million adults in the United States suffer from depression.¹⁷¹ Depression impairs an individual's quality of life and is a leading cause of disability. In addition, people who have depression are at an increased risk of suicide if they do not undergo treatment.¹⁷² Medication is recognized as an effective treatment for depression.¹⁷³ Medication is administered during the acute and continuation phases of treatment, which are meant to cause remission of the disease and prevent relapse. It is often necessary to stay on medication to maintain its therapeutic effect. Because half of patients stop medication prematurely, it is necessary to assess the percentage of patients who stay on antidepressant medication for the duration of the treatment period.¹⁷⁴

The HEDIS® *Antidepressant Medication Management* measure assesses the percentage of members 18 years or older who were diagnosed with a new episode of major depression and were treated with antidepressant medication.

This measure is comprised of two sub-measures that address both the acute and continuation phases of treatment:

- The *Effective Acute-Phase Treatment* sub-measure shows the percentage of adults newly diagnosed with major depression who were treated with an antidepressant medication and remained on the medication for at least 84 days (12 weeks).
- The *Effective Continuation-Phase Treatment* sub-measure shows the percentage of adults newly diagnosed with major depression who were treated with an antidepressant medication and remained on the medication for at least 180 days (6 months).

The EQRO calculated this measure for 2010 and 2011 for STAR, STAR+PLUS, and NorthSTAR.¹⁷⁵ This measure is also an HHSC Performance Indicator for these programs, with the exception of NorthSTAR. The CY 2011 STAR results are not presented due to denominators less than 30 (low denominators).

HEDIS® <i>Antidepressant Medication Management</i>					
<i>Effective Acute-Phase Treatment</i>			<i>Effective Continuation-Phase Treatment</i>		
	CY 2011 results	Dashboard standard		CY 2011 results	Dashboard standard
STAR+PLUS	53 percent	43 percent	STAR+PLUS	36 percent	24 percent
*NorthSTAR	58 percent	---	*NorthSTAR	42 percent	---

*This measure is not an HHSC Performance Indicator for NorthSTAR.

In STAR+PLUS, the rate for *Effective Acute -Phase Treatment* was 10 percentage points higher than the HHSC Dashboard standard of 43 percent, and the rate for *Effective Continuation-Phase Treatment* was 12 percentage points higher than the HHSC Dashboard standard of 24 percent.

In NorthSTAR, the rate for *Effective Acute-Phase Treatment* was 58 percent, and the rate for *Effective Continuation-Phase Treatment* was 42 percent.

From 2010 to 2011, performance on this measure in STAR+PLUS changed little. The rate for the acute phase increased by 3.2 percentage points and the rate for the continuation phase decreased by 0.2 percentage points. However, rates for NorthSTAR increased considerably across the two-year period – by 12.5 percentage points for the acute phase and 11.7 percentage points for the continuation phase.

Initiation and Engagement of Alcohol and Other Drug Dependence Treatment

Approximately 21 million people in the United States have a substance use disorder, which includes dependence on or abuse of alcohol, illicit drugs, and prescription drugs (used for non-medical purposes).¹⁷⁶ Individuals who have substance use disorders have an increased risk of experiencing negative health consequences, legal problems, homelessness, and interpersonal violence.¹⁷⁷ Despite the negative impact of substance use disorders, only 10 percent of Americans who need treatment receive it each year.¹⁷⁸ Among individuals receiving treatment, research suggests that as many as one-half may leave treatment prematurely.¹⁷⁹ Treatment engagement, defined as the period between an individual’s initiation and completion of substance abuse treatment, is an important indicator of access to alcohol or other drug (AOD) treatment.

The HEDIS® *Initiation and Engagement of Alcohol and Other Drug Dependence Treatment* measure assesses the percentage of adolescent and adult members newly diagnosed with AOD dependence who received the following:

- 1) *Initiation of AOD Dependence Treatment* – the percentage of members who received inpatient or outpatient treatment within 14 days. Specifically, inpatient or outpatient treatment includes an AOD dependence admission, outpatient visit, intensive outpatient encounter, or partial hospitalization.
- 2) *Engagement of AOD Dependence Treatment* – the percentage of members who initiated treatment and received two or more additional services within 30 days of the initiation visit.

<u>HEDIS® <i>Initiation and Engagement of Alcohol and Other Drug Dependence Treatment</i></u>		
CY 2011 results		
	Initiation	Engagement
STAR	39 percent	11 percent
STAR+PLUS	35 percent	6 percent
NorthSTAR	25 percent	5 percent

The EQRO calculated this measure for CY 2011 for the STAR, STAR+PLUS, and NorthSTAR programs.¹⁸⁰ Results for treatment initiation ranged from 25 percent in NorthSTAR to 39 percent in STAR, and results for treatment engagement ranged from 5 percent in NorthSTAR to 11 percent in STAR.

STAR results were similar to the national HEDIS[®] means for this measure. Specifically, the rate for treatment initiation was four percentage points lower than the HEDIS[®] mean of 43 percent, and the rate for treatment engagement was three percentage points lower than the HEDIS[®] mean of 14 percent.

5.4 – Preventive Care

Approximately 17 percent of the pediatric population and 36 percent of the adult population in the United States are classified as obese.^{181,182} Obesity substantially increases the risk of morbidity from several conditions, including coronary artery disease, type 2 diabetes, cancer, and stroke.^{183, 184} In addition, obese individuals are at an increased risk of developing conditions such as asthma, sleep apnea, and arthritis.¹⁸⁵ A person’s body mass index (BMI) is calculated from measurements of height and weight, and can be used in conjunction with other diagnostic criteria to identify risk factors for adverse health consequences.^{186,187} Screening for BMI provides the opportunity to implement treatment plans for individuals who are overweight or obese. In the pediatric population, screening for BMI also provides the opportunity to counsel at-risk children and their parents about nutrition and physical activity. Counseling for nutrition and physical activity is important for early intervention in this population, lessening the negative impact of obesity and its complications in adulthood.^{188,189}

Adult BMI Assessment

The HEDIS[®] *Adult BMI Assessment* measure represents the percentage of members age 18 to 74 who had an outpatient visit and whose BMI was documented during the measurement year or one year prior. The EQRO calculated this measure for CY 2010 and CY 2011 for STAR+PLUS. This is a hybrid measure, with results based on medical record review. Results for hybrid studies are not available at the service area level.

<u>HEDIS[®] Adult BMI Assessment in STAR+PLUS</u>	
2010	46 percent
2011	57 percent

In CY 2011, 57 percent of STAR+PLUS members had their BMI documented. From 2010 to 2011, the rate of BMI assessment increased by 11 percentage points.

Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents

The HEDIS[®] *Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents* measure represents the percentage of members 3 to 17 years of age who had an outpatient visit with a primary care provider (PCP) or obstetrics/gynecology provider (OB/GYN) and who had the following during the measurement year: (1) *BMI Percentile Documentation*; (2) *Counseling for Nutrition*; and (3) *Counseling for Physical Activity*. Each sub-measure is reported separately, for all age groups combined. This is a hybrid measure that was conducted in CY 2011 for STAR and CHIP, with results based on medical record review. Results for hybrid studies are not available at the service area level.

Approximately one-third of STAR and CHIP members had their BMI percentile documented (36 and 33 percent, respectively). For both programs, the rate of counseling for nutrition was higher than the rate of counseling for physical activity. Specifically, in STAR, 56 percent of members received counseling for nutrition, while 42 percent of members received counseling for physical activity. In CHIP, 46 percent of members received counseling for nutrition, while 36 percent of members received counseling for physical activity.

HEDIS® *Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents in CY 2011*

	<i>BMI Percentile Documentation</i>	<i>Counseling for Nutrition</i>	<i>Counseling for Physical Activity</i>
STAR	36 percent	56 percent	42 percent
CHIP	33 percent	46 percent	36 percent

STAR performance was similar to the HEDIS® mean for the *BMI Percentile Documentation* sub-measure and above the HEDIS® mean for both counseling sub-measures. Specifically:

- The STAR rate for *BMI Percentile Documentation* was 1 percentage point below the HEDIS® mean of 37 percent.
- The STAR rate for *Counseling for Nutrition* was 10 percentage points above the HEDIS® mean of 46 percent.
- The STAR rate for *Counseling for Physical Activity* was 5 percentage points above the HEDIS® mean of 37 percent.

A hybrid study for this measure was also conducted in 2010 for STAR. In comparison to 2010, STAR performance improved across all three sub-measures. Specifically, STAR had a net increase of 9.2 percentage points for *BMI Percentile Documentation*, 3.4 percentage points for *Counseling for Nutrition*, and 3.7 percentage points for *Counseling for Physical Activity*.

Among the STAR MCOs, FirstCare had the greatest improvement from 2010 to 2011, with a net increase of 16.8 percentage points for *BMI Percentile Documentation*, 27.5 percentage points for *Counseling for Nutrition*, and 26.3 percentage points for *Counseling for Physical Activity*. Although FirstCare did not have the highest rates among MCOs for this measure in 2011, its level of improvement across the two-year period is notable.

6 – Focus Studies and Special Projects

6.1 – STAR+PLUS Long-Term Care Focus Study

With the passage of the Patient Protection and Affordable Care Act, there has been increased national policy attention focused on dual-eligible beneficiaries – low-income seniors and adults with disabilities – enrolled in both the Medicare and Medicaid programs. Nationwide, there are approximately 9 million dual-eligible beneficiaries, who are among the most chronically ill and costly individuals in these programs.¹⁹⁰ To address the complexity of care for this high-cost, high-need population, the Affordable Care Act established the Federal Coordinated Health Care Office within the CMS (Duals Office) to improve care coordination for dual-eligible beneficiaries.¹⁹¹ The Duals Office and the CMS Innovations Center are currently providing funding to states to design person-centered service delivery models that fully integrate primary, acute, mental health, and long-term services for dual-eligible beneficiaries.

Texas is one of the states that submitted a proposal to implement a Dual-Eligibles Care Demonstration Project.¹⁹² As Texas moves toward an integrated care model for dual-eligible beneficiaries, a greater understanding of health needs in this population will provide the foundation for improved integration and care management to improve members' health and quality of life, and reduce costs associated with preventable inpatient and nursing home admissions.

In FY 2011, the EQRO began a longitudinal focus study of STAR+PLUS dual-eligible members using the Medicare Health Outcomes Survey (M-HOS), which provides a comprehensive description of the health characteristics and needs of dual-eligible populations.¹⁹³ Survey participants were selected from a stratified random sample of dual-eligible members enrolled in STAR+PLUS for 12 months or longer between November 2010 and October 2011. The EQRO set a target sample of 4,800 completed telephone interviews with members, representing 1,200 respondents for each MCO participating in STAR+PLUS in FY 2011 -- Amerigroup, Molina, Superior, and UnitedHealthcare-Texas.

The Survey Research Center (SRC) at the University of Florida conducted the survey using computer-assisted telephone interviewing (CATI) between November 2011 and June 2012. The targeted number of surveys was met for all four quotas. Twenty-eight percent of surveys were completed by a proxy respondent (e.g., family members, caregivers) because the member was physically or mentally unable to participate in the telephone survey. The response rate for the survey was 53 percent (calculated out of all verified, eligible households that could be contacted) and the cooperation rate was 67 percent (calculated out of only those members who either participated or refused).

A summary of results from the baseline survey is provided below:

- **Body mass index.** Forty-one percent of dual-eligible members were classified as obese.
- **Smoking.** Eighteen percent of members reported smoking cigarettes or using tobacco.

- **Self-reported health and functional status.** Using the Veterans RAND-12 items, two-thirds of members reported their health as “fair” or “poor” (66 percent). The majority of members had problems with their work or activities as a result of their physical health (79 percent to 82 percent) or emotional problems (53 percent to 60 percent). One-third of members said their health problems interfered with their social life most or all of the time (35 percent).
- **General and comparative health.** Nearly two-thirds of members said their health was “fair” or “poor” compared to people their own age (64 percent). Compared to one year ago, 42 percent reported their physical health was worse, and 29 percent reported their emotional health was worse.
- **Chronic medical conditions.** The five most prevalent chronic medical conditions observed in the dual-eligible population were hypertension (72 percent), arthritis of the hip or knee (51 percent), arthritis of the hand or wrist (41 percent), diabetes (39 percent), and osteoporosis (31 percent). There was also a high prevalence of comorbidities, with nearly two-thirds of members having three or more medical conditions (64 percent).
- **Activities of daily living.** The most common daily activity impairments reported by members were related to walking (52 percent) and bathing (48 percent).
- **Healthy days measures.** Members reported that their physical health was “not good” an average of 14 days in the past month, and that their emotional health was “not good” an average of 11 days in the past month. Members reported that poor health prevented them from doing their usual activities an average of 13 days in the past month.
- **Depression.** Three-quarters of members had a positive screen for depression and were considered at-risk for a depressive disorder (74 percent).
- **Arthritis and back pain.** Approximately half of members reported experiencing moderate or severe arthritis pain in the past month (53 percent). Thirty-nine percent of members reported that back pain interfered with their daily activities most or all of the time.
- **HEDIS® Physical Activity in Older Adults.** Fifty-five percent of members discussed their level of exercise or physical activity with their doctor, and 58 percent were advised by their doctor to start, increase, or maintain their level of exercise or physical activity.
- **HEDIS® Fall Risk Management.** Fifty-seven percent of members reported problems with balance and walking, and 37 percent had fallen to the ground in the past year. Among these members, 50 percent discussed these issues with their doctor, and 72 percent reported their doctor provided an intervention (e.g., cane or walker, exercise program) to prevent future falls.
- **HEDIS® Urinary Incontinence in Older Adults.** Almost half of members had a urine leakage problem (48 percent), of whom 69 percent discussed the problem with their doctor, and 37 percent received treatment.

- **HEDIS® Osteoporosis Testing.** Fifty-six percent of women had a bone density test to check for osteoporosis, compared to 72 percent nationally.

The STAR+PLUS Dual-Eligible Long-Term Care baseline results are based on cross-sectional data and provide a snapshot of the physical and mental health status and functioning of dual-eligible members at a single point in time. This data can be used by STAR+PLUS MCOs to identify opportunities for quality improvement, specifically in regard to health promotion programs, screening and treatment for depression, effective treatment and management of pain, and improving functional status.

The EQRO will conduct a follow-up survey in 2013 to determine how health and functional status has changed among these members over the two-year period.

6.2 – Risk-Adjustment and Case-Mix Studies

The EQRO conducted a variety of case-mix analyses and risk-adjustment simulations in FY 2011 and 2012. Using the latest Chronic Illness Disability Payment System (CDPS), the EQRO calculated case-mix ratios and spending ratios for MCOs in the STAR and STAR+PLUS programs at the service area (SA) level and by eligibility group. Based on risk-adjustment workgroup meetings held with HHSC and the MCOs, several variables were added to represent diagnostic categories for low birth weight infants, improving the appropriateness of the risk-adjustment models for this important population. For STAR, the EQRO calculated Texas-specific risk-adjustment models to obtain regression weights based on actual Texas experience, which were then applied to member encounter data to estimate the case-mix and spending ratios for each MCO by SA and eligibility group.

In addition to CDPS updates, the EQRO also simulated numerous scenarios for the Texas At-Risk Recoupment and Quality Challenge (QC) programs. These simulations used different point assignments, recoupment strategies, and risk-adjustment approaches to estimate the likely impact of different design options for both the At-Risk and QC programs. Because no single risk-adjustment approach is necessarily correct for all quality measures, the EQRO conducted several meetings with MCOs to obtain their input on appropriate risk adjustors for the various measures comprising these QC programs. Results of different simulations were reported to HHSC continuously throughout the year, and revisions were made to the simulations based on their input.

The EQRO addressed a number of analytic concerns inherent in the quality measures used in these programs, including the imputation of missing values for HEDIS® measures with low denominators and the use of strict or relaxed provider constraints used for determining HEDIS® compliance. Numerous risk-adjustment simulations used the AHRQ PQIs and PDIs, as well as 3M measures of Potentially Preventable Events (PPEs), including Potentially Preventable Admissions (PPAs), Readmissions (PPRs), Emergency Department Visits (PPVs), and Complications (PPCs). This work involved close collaboration with 3M to ensure the correct calculation, application, and interpretation of these measures. The EQRO also applied varying definitions to estimate the excess expenditures associated with PPEs.

In addition to these activities, a number of economic analyses were performed at HHSC's request. The EQRO has undertaken literature reviews of various approaches to: (1) risk-adjustment of long-term care payments under Medicaid; and (2) pay-for-quality initiatives nationwide. Current projects include an analysis of FFS/PCCM and STAR expenditures to determine the relative contributions of health status, costs per member per month, and utilization to the observed cost differences between these programs for members transitioning into STAR. The EQRO is also in the process of calculating the NCQA Relative Resource Use (RRU) measures using Texas-specific risk-adjustment calculations, allowing for comparison of quality measures with resource use to determine the relative value provided by different MCOs.

6.3 – Texas Health Learning Collaborative (THLC)

In FY 2011, programming staff in the ICHP Information Services Group began developing several web-based applications for researchers and stakeholders to distribute, exchange, and discuss health care data. As part of this initiative, the EQRO developed the Texas Health Learning Collaborative (THLC) – a secure web portal that allows Texas HHSC and Medicaid provider organizations to access and share important and timely information on key quality of care metrics.

The THLC portal provides up-to-date, provider-level reporting on measures of potentially preventable events, access, and effectiveness using millions of Medicaid performance records. The interface includes interactive maps, charts, and figures, which allow users to customize views and reports by time period, service type, line of business, geographic area, and other factors. The portal also includes features that allow users to distribute videos and other multi-media resources, deliver webinars, participate in discussion forums, and exchange files. Web development by ICHP is fully HIPAA compliant, and utilizes a variety of application-appropriate platforms.

6.4 – STAR+PLUS Outcomes Study

Implementing home and community-based service (HCBS) alternatives to institutional care has been a priority for many state Medicaid programs over the last three decades. An increasing number of these programs provide care to older and disabled Medicaid members through managed care delivery systems and provider choice limits (1915(b) waivers) combined with provision of long-term care services in the home and community rather than institutional settings (1915(c) waivers). However, little is known about the quality of care associated with these programs. The current literature on outcomes associated with HCBS waiver programs is limited and primarily focuses on health care expenditures for adults 60 years and older and/or the dual-eligible population.^{194,195,196} There is limited information about the quality of care provided within 1915(b) and (c) HCBS waiver programs, particularly for the disabled Medicaid population.¹⁹⁷

As of 2009, there were 33 1915(c) waiver programs administered by 25 states. These programs provide care for approximately 1.4 million Medicaid members with annual expenditures of \$8.9 billion.¹⁹⁸ In June 2012, the Department of Health and Human Services, Office of the Inspector

General (DHHS OIG) released a report noting that “the beneficiaries served by these programs (1915(c) HCBS waivers) are among Medicaid’s most vulnerable, and the nature of these programs puts beneficiaries at risk for receiving inadequate care.”¹⁹⁹ Moreover, the DHHS OIG found that quality of care in these programs was not consistently monitored.

The Texas STAR+PLUS program provides acute and long-term services and supports to beneficiaries meeting an institutional level of care (LOC) in the home or community through a 1915(c) waiver. The EQRO is in the process of conducting a comprehensive, longitudinal examination of the quality of care for Medicaid members with disabilities in STAR+PLUS. Enrollment in STAR+PLUS is mandatory for disabled Medicaid members 21 years and older who reside in counties where the program is offered and who qualify for Supplemental Security Income (SSI) benefits, for Medicaid because of low income, or for STAR+PLUS HCBS waiver services.

The STAR+PLUS program was phased into different service areas throughout Texas over more than a decade, beginning with Harris County in 1998. This phased approach provides a unique opportunity to longitudinally examine the effects of the STAR+PLUS program on the quality and outcomes of care for disabled Medicaid members.

In 2013, the EQRO will examine outcomes for Medicaid members over 21 years of age with disabilities in the Texas STAR+PLUS program.²⁰⁰ The comparison group consists of disabled Medicaid members in either Medicaid fee-for-service (FFS) or primary care case management (PCCM) who met the criteria for enrollment in STAR+PLUS but lived in service areas where STAR+PLUS was not offered at the time. To accommodate the lag in receiving claims and encounter data, these analyses focus on the time period from 2006 through 2010.

Mixed models will be used to examine the effects of the STAR+PLUS program on quality of primary and chronic care, within racial and ethnic subgroups, and within areas of varying levels of socioeconomic disadvantage both before and after the STAR+PLUS program implementation.^{201,202} In addition to race/ethnicity and socioeconomic status, the gender, age and health status of members are included as covariates, with age measured in years and health status measured using the Clinical Risk Groups (CRGs).

The outcome measures will consist of ten HEDIS[®] indicators: (1) HEDIS[®] *Adults' Access to Preventive/Ambulatory Health Services*; (2) HEDIS[®] *Initiation and Engagement of Alcohol and Other Drug Dependence Treatment*; (3) HEDIS[®] *Use of Appropriate Medication for People with Asthma*; (4) HEDIS[®] *Medication Management for People with Asthma*; (5) HEDIS[®] *Cholesterol Management for People with Cardiovascular Conditions* (testing only); (6) HEDIS[®] *Comprehensive Diabetes Care* (administrative data only); (7) HEDIS[®] *Antidepressant Medication Management*; (8) HEDIS[®] *Follow-Up After Hospitalization for Mental Illness*; (9) HEDIS[®] *Persistence of Beta-Blocker Treatment After a Heart Attack*; and (10) HEDIS[®] *Pharmacotherapy Management of COPD Exacerbation*.

6.5 – MCO Report Cards Study

With the implementation of the Patient Protection and Affordable Care Act in 2014, Medicaid beneficiaries will face an increasing number of choices – in particular, the choice of which health plan to join. New members in Texas Medicaid and CHIP could have up to five health plans to choose from, depending on their service area. In FY 2013, to assist new members in their selection of a health plan, HHSC developed MCO report cards showing how the health plans in each service area compare on areas of health care quality that are important to members. Report cards that compare physicians, physician groups, hospitals, and health plans are becoming increasingly more common as state agencies and health care institutions seek to increase the involvement of patients in more of their health care decisions.^{203,204}

To support this initiative and ensure that development of MCO report cards follows a patient-centered approach, in FY 2012 the EQRO conducted a preliminary, qualitative study with adult Medicaid members and parents of child members. This study was comprised of two phases: (1) development of MCO report card mock-ups, including the selection of appropriate quality of care measures to be included on the cards, devising a scientifically valid method for scoring the health plans on selected measures, and designing the mock-ups using professional techniques and tools for layout and graphical content; and (2) focus groups to test the MCO report card mock-ups with members, collecting members' input regarding the content and design of the report cards.

Three versions of the MCO report cards were developed, focusing on quality of care for children in STAR and CHIP, adults in STAR, and adults in STAR+PLUS. The EQRO used three criteria in selecting appropriate quality of care measures for the report cards. Specifically, the measures must: (1) be appropriate to the population of Medicaid or CHIP members to which they pertain; (2) be high-impact, having relevance to the majority, if not all, members in the program; and (3) represent an adequate number of members and show a wide distribution of scores at the MCO level. **Table 7** shows the quality of care measures selected for each of the three MCO report card versions.

On each card, the measures were grouped into three domains – Preventive Care, Effectiveness of Care, and Patient Satisfaction. Ratings in the report card mock-ups were prepared using FY 2010 data for health plans in the Bexar service area, which has three health plans in STAR, CHIP, and STAR+PLUS. The health plans were scored on each measure using a five-star rating system, which reflected the health plan's performance on the measure in relation to the state average and allowed differences in performance across health plans to be more readily apparent. Stars were assigned to health plans following the statewide quintiles of distribution on each measure. For example, plan code performance in the 20th percentile or lower would assign one star to the health plan, while plan code performance in the 81st percentile or higher would assign five stars to the health plan.

Table 7. Quality of Care Measures Selected for MCO Report Cards ^a

Quality of Care Measure	Report Card Version		
	STAR/CHIP Child	STAR Adult	STAR+PLUS Adult
Preventive care measures (HEDIS[®])			
<i>Well-child Visits in the First 15 Months of Life</i>	✓		
<i>Well-child Visits in the 3rd, 4th, 5th, and 6th Years</i>	✓		
<i>Adolescent Well-care Visits</i>	✓		
<i>Prenatal Care</i>		✓	
<i>Postpartum Care</i>		✓	
<i>Adults' Access to Preventive/Ambulatory Services</i>			✓
<i>Breast Cancer Screening</i>			✓
Effectiveness measures (HEDIS[®])			
<i>Follow-up for Children Prescribed ADHD Medication</i>	✓		
<i>Comprehensive Diabetes Care – HbA1c Testing</i>			✓
<i>Antidepressant Medication Management</i>			✓
Effectiveness measures (AHRQ PDI/PQI)			
<i>Asthma PDI</i>	✓		
<i>Asthma PQI</i>		✓	✓
<i>Diabetes PQI</i>		✓	
<i>Hypertension PQI</i>			✓
Satisfaction with Care (CAHPS[®])			
<i>Getting Care Quickly composite</i>	✓	✓	✓
<i>How Well Doctors Communicate composite</i>	✓	✓	✓
<i>Health Plan Rating</i>	✓	✓	✓

^a This list represents measures that were tested in the focus groups; not all of these measures were chosen for the final report cards.

To ensure that this study included full representation of the diversity of members in Texas Medicaid and CHIP, the EQRO developed a quota sampling approach for the focus groups. Twenty-four focus groups were planned, stratified according to:

- Four program/eligibility categories: STAR/CHIP parent, STAR adult, STAR+PLUS Medicaid-only, and STAR+PLUS dual-eligible
- Three racial/ethnic groups: White, non-Hispanic; Black, non-Hispanic; and Hispanic
- Two geographic categories – urban and rural

One focus group was conducted for each unique set of characteristics. All urban focus groups took place in Houston. Rural focus groups were conducted in Lubbock, Longview, and McAllen. The focus groups were conducted with women in the selected programs by two experienced moderators during October 2012 and January 2013. The moderator's guide addressed the following topics: (a) participants' process of choosing a health plan, (b) definitions of good and bad quality health care, (c) impressions of the health care report cards, (d) understanding of the report cards, (e) usefulness of report cards, (f) helpfulness of the instruction sheet, (g) feelings on culturally tailored messaging, (h) preferred grading system for health plans, and (i) preferred way to receive the report card. The appropriate report card mock-ups and culturally tailored instruction sheets were distributed to focus group participants during the session.

Overall, women faulted the report card on two major themes: (1) they believed the report card should primarily serve as a conduit to a better doctor (or specialist) and disliked that the card contained no doctor ratings or contacts; and (2) they thought many of the items on the report card reflected the actions of patients rather than the quality of plans. Based on findings from the focus groups, the EQRO made the following recommendations for revising the MCO report cards:

- **Only include relevant information from relevant sources.** Women in the groups responded quickly to report card items that spoke directly to conditions they personally experienced. If participants saw a number of items that were not personally relevant, they had a tendency to dismiss the entire report card. The measures related to patient satisfaction were of greatest relevance to most participants, in large part because they addressed the timeliness of care, which was of great interest to most women in the groups.
- **Define the measures clearly and meaningfully.** Participants said many of the items were less about the health plans than about doctors or people covered by the plans. For example, the AHRQ *Asthma PQI* and *PDI* measures were listed as reflecting how many people avoided hospitalization for treatment. While this is accurate from the perspective of measure specifications, it was an inadequate description according to some participants because it had little to do with the health plan and more to do with people's dedication to their treatment.
- **Duplication.** In communities with a large number of people with reading difficulties, the duplication of information in visual and verbal forms is ideal. For example, participants were almost unanimous in their favorable evaluation of visuals that accompanied each item on the report card (e.g., a picture of a blood pressure cuff to indicate blood pressure, a picture of an inhaler to indicate asthma). When group members had weaker or no reading skills, they preferred health plan ratings depicted using visual scales with stars or faces. Thus, it would benefit these hard-to-reach audiences to offer both verbal and non-verbal scales whenever possible.

These strategies for improving the MCO report cards were used in their re-design in FY 2013, in preparation for final versions to be published and made publicly available to new members.

Appendix A. CY 2011 Recommendations

Domain: Effectiveness of outpatient/ambulatory care for chronic conditions		
Program/s	Recommendation	Rationale
STAR+PLUS	<p>In order to improve the effectiveness of outpatient and ambulatory care for chronic conditions, health plans should implement or improve upon efforts to:</p> <ul style="list-style-type: none"> • Utilize disease management programs that: <ul style="list-style-type: none"> ○ Incorporate components of the Chronic Care Management Model, including: (1) patient education and behavioral support; (2) advanced access to care and use of a health care team; (3) guideline-based therapy; and (4) a clinical registry system.²⁰⁵ ○ Incorporate culturally competent self-management training and practices,²⁰⁶ as well as the use of web-based applications to monitor symptoms.²⁰⁷ 	<p>Potentially avoidable inpatient admissions for chronic conditions such as diabetes, COPD, asthma, and hypertension may reflect reduced effectiveness in outpatient/ambulatory care for these conditions.^{208,209}</p> <p>In STAR+PLUS, the rates of inpatient admissions for diabetes short-term and long-term complications improved between 2009 and 2011, yet remained high. Furthermore, measures of effectiveness of diabetes care found deficiencies in numerous areas, including rates of eye exams, and adequate control of HbA1c and LDL-C levels.</p> <p>The rate of inpatient admissions for COPD or adult asthma in STAR+PLUS was also very high, and has doubled since the prior reporting period.</p>
STAR Health	<ul style="list-style-type: none"> • Increase patient participation in shared decision-making and education to promote self-management, such as implementing group consultations and assistance with preparation for doctor visits.^{210,211} 	<p>STAR Health also had high rates of admission for diabetes short-term complications.</p>
STAR STAR+PLUS	<ul style="list-style-type: none"> • Emphasize the patient-centered medical home, which will improve the transmission of crucial patient information between patients with chronic conditions and their providers, and lead to fewer instances of preventable inpatient admissions.²¹² 	<p>Several MCOs in STAR and STAR+PLUS had PPA rates that were significantly higher than expected given the case-mix of their members experiencing hospitalizations. Furthermore, in both programs, the average excess expenditures associated with PPAs were considerable.</p>

<p>STAR STAR+PLUS</p>	<ul style="list-style-type: none"> • Use information from the Texas Health Learning Collaborative web portal (as it becomes available), to develop profiles of members at greatest risk of having a PPE that can be used in utilization management efforts, as well as in more focused interventions and performance improvement projects. 	<p>Health status and age are important individual factors predicting PPE expenditures and number of events. For all PPEs, members with chronic conditions had greater risk. The association with health status was greatest for PPRs.</p>
<p>STAR+PLUS</p>	<ul style="list-style-type: none"> • Incorporate use of telehealth care (often as part of a more complex intervention). Telehealth care enables patients with chronic conditions to communicate with providers from home when symptoms arise.²¹³ • Incorporate use of walking interventions and other interventions involving pulmonary rehabilitation for patients with COPD.²¹⁴ 	<p>COPD is a prevalent condition among adults in STAR+PLUS, and was the most common condition leading to PPAs in STAR+PLUS – representing 14 percent of all PPAs.</p>
<p>NorthSTAR</p>	<ul style="list-style-type: none"> • Consider innovative strategies to connect members with follow-up care, such as medication management coordinators,²¹⁵ trained patient navigators,²¹⁶ and home care visits for at-risk patients.²¹⁷ 	<p>Rates of follow-up after hospitalization for mental illness in NorthSTAR were below the HEDIS® national rates.</p> <p>Hospitalization for mental illness affects a large number of NorthSTAR members. Inadequate follow-up increases the risk of subsequent, potentially avoidable readmissions.</p>

Domain: Acute respiratory care for children		
Program/s	Recommendations	Rationale
STAR CHIP STAR Health	<p>To reduce inappropriate prescription of antibiotics for children with upper respiratory infections, health plans should implement or improve upon:</p> <ul style="list-style-type: none"> Interventions that direct educational efforts to parents and guardians through printed materials such as posters, brochures, and newsletters that take into account lower health literacy in this population.^{218,219,220} Physician-directed behavior change strategies, including guideline dissemination, small-group education, frequent updates, educational materials, and feedback about antibiotic prescribing by practice and provider.^{221,222} 	<p>Almost all STAR MCOs and service areas failed to meet the national HEDIS[®] means for appropriate testing for pharyngitis and appropriate treatment for URI.</p> <p>In STAR Health and CHIP, the rates of appropriate testing/treatment for pharyngitis and URI were also lower than national HEDIS[®] means.</p> <p>These results suggest that STAR, STAR Health, and CHIP providers are inappropriately prescribing antibiotics, which can lead to the emergence of antibiotic-resistant strains, such as <i>Streptococcus pneumoniae</i>.^{223,224}</p>

Domain: Obesity screening and management		
Program/s	Recommendations	Rationale
STAR CHIP STAR+PLUS STAR Health	<p>Texas Medicaid MCOs/BHOs and CHIP should implement or improve upon efforts to measure and manage members' obesity. Potential strategies include:</p> <ul style="list-style-type: none"> Implementing/modifying an electronic health record (EHR) system with prompts that include: (1) Automatic BMI calculation based on height and weight recorded on patient intake forms; (2) Alerts of unhealthy BMI percentile; and (3) Interactive growth chart plotting for children.^{225,226,227} Health plans should work with providers to consider the EHR Incentive Program for those without EHRs. Initiating unobtrusive interventions such as keeping food and exercise diaries to increase awareness and accountability.²²⁸ Use of standardized programs of health risk monitoring for youths and adults with psychiatric conditions, such as those implemented by the New York State Office of Mental health, to monitor the weight of patients in outpatient settings.^{229,230} 	<p>Half of STAR+PLUS members were obese, a percentage much higher than that of the Texas or national adult population.</p> <p>The STAR and CHIP programs fell short of the HEDIS[®] mean for <i>BMI Percentile Documentation</i>.</p> <p>EHR systems and similar methods have been shown to increase documentation of BMI, which is positively associated with obesity diagnosis and getting dieting counseling and treatment.^{231,232,233}</p> <p>Nearly half of child, adolescent, and adult members in the STAR BH surveys were overweight or obese. Research has shown that adults with mental disorders die, on average, 25 years earlier than adults in the general population, and obesity is a likely contributor.²³⁴</p>

Domain: Service coordination in STAR+PLUS		
Program	Recommendations	Rationale
STAR+PLUS	<p>To improve service coordination in STAR+PLUS, health plans should adopt more stringent standards regarding the frequency and means of contact between service coordinators and members. New standards may include:</p> <ul style="list-style-type: none"> • In-home visits by service coordinators • Proactive telephone contact with members by service coordinators on a regular schedule (quarterly or monthly) • Use of telehealth technology to ensure that service coordination is patient-centered and tailored to members' needs^{235,236} • Protocols for improving communication that involve all stakeholders – service coordinators, nurses, providers, members, and their families <p>To improve shared decision-making in service coordination, HHSC should encourage MCOs to ensure that members are involved more fully in the development of their service plans. Research has found that models which emphasize patients' agreement with their service plans are associated with lower rates of functional decline and higher satisfaction with services.²³⁷</p>	<p>Findings from the STAR+PLUS HCBS Waiver Study qualitative interviews show that STAR+PLUS members often do not know who to call to get help. Many do not have contact information for their service coordinators, and many cannot name someone at their health plan who coordinates their care.</p> <p>For STAR+PLUS members who do not have a nurse who visits them regularly (often those with less severe conditions), low levels of contact with service coordinators translate to unmet needs for care.</p> <p>In addition, only two-thirds of members in STAR+PLUS survey said that their service coordinator involved them in making decisions about their services (64 percent).</p>

Appendix B. Positive Findings and Improvement Areas

Table B1. Positive Findings for Quality of Care in Texas Medicaid/CHIP

Pediatric preventive care	
Quality Indicator	Findings
<i>Children and Adolescents' Access to Primary Care Practitioners</i>	Across programs, child and adolescent members had good access to primary care practitioners, with over 90 percent of members visiting a PCP during the measurement period.
<i>Well-Child Visits and Adolescent Well-Care</i>	Rates of well-child and well-care visits increased slightly over the three-year period for all programs. Rates of increase were especially pronounced in STAR Health. All programs met HHSC Dashboard standards for well-child/well-care visits in all age groups across the three-year period.
<i>HEDIS® Annual Dental Visit</i>	Overall, the rate of annual dental visits in CHIP Dental increased from 59 percent in 2008 to 66 percent in 2010, exceeding the 2011 HEDIS® national average of 48 percent.
Pediatric Quality Indicators	
<i>Asthma PDI</i>	Over the three-year period, pediatric inpatient admissions for asthma decreased in STAR, CHIP, and STAR Health. In 2011, <i>Asthma PDI</i> rates in STAR (100 per 100,000) were below both the HHSC Dashboard standard of 181 per 100,000 and the AHRQ national average of 147 per 100,000.
<i>Gastroenteritis PDI</i>	Pediatric inpatient admissions for gastroenteritis decreased for all programs during the three-year period, particularly in STAR+PLUS.
Prevention Quality Indicators	
<i>Diabetes Short-Term Complications PQI</i>	Adult inpatient admissions for diabetes short-term complications dropped considerably from 2009 to 2011 in STAR+PLUS. The STAR rate for <i>Diabetes Short-Term cComplications PQI</i> was 61 per 100,000 in 2011, which was roughly equivalent to both the AHRQ national average of 62 per 100,000 and the HHSC Dashboard standard of 56 per 100,000.

Table B1 – Positive Findings (continued)

Prevention Quality Indicators	
Quality Indicator	Findings
<i>Diabetes Long-Term Complications PQI</i>	Adult inpatient admissions for diabetes long-term complications dropped considerably from 2009 to 2011 in STAR+PLUS. In 2011, rates in STAR were noticeably better than the HHSC Dashboard standard of 64 per 100,000, and all MCOs had rates lower than the AHRQ national average of 122 per 100,000.
<i>Bacterial Pneumonia PQI</i>	<i>Bacterial Pneumonia PQI</i> rates in STAR+PLUS fell from 765 per 100,000 in 2009 to 622 per 100,000 in 2011, while STAR rates decreased from 58 to 46 per 100,000 during that span. The STAR rates were also substantially lower than the HHSC Dashboard standard for this measure (174 per 100,000).
<i>Urinary Tract Infection PQI</i>	Adult inpatient admissions for urinary tract infection showed a steady decline in STAR+PLUS from 2009 to 2011. In 2011, the STAR <i>UTI PQI</i> rate of 67 per 100,000 was far below the HHSC Dashboard standard of 177 per 100,000 for the STAR program.
Health plan information	
Encounter data validation	Match rates for date of service and procedure were over the desired 95 percent target in all programs, while match rates for diagnosis were over 90 percent in all programs.
Disease management (DM) programs	
DM participation rates	In 2011, the rate of member participation in asthma and diabetes DM programs in STAR+PLUS was 90 percent and 86 percent, respectively.
Satisfaction with timeliness of care, primary, and specialist care	
<i>Good Access to Urgent Care</i>	The rate for STAR Health (96 percent) was higher than the HHSC Dashboard standard of 88 percent for <i>Good Access to Urgent Care</i> .
<i>Good Access to Routine Care</i>	The rate for STAR Health (84 percent) was higher than the HHSC Dashboard standard of 76 percent for <i>Good Access to Routine Care</i> .
<i>Good Access to Specialist Referral</i>	The rate for STAR Health (84 percent) was notably higher than the HHSC Dashboard standard of 75 percent for <i>Good Access to Specialist Referral</i> . The rate among dual-eligible STAR+PLUS members (78 percent) was also higher than the HHSC Dashboard standard of 73 percent.

Table B1 – Positive Findings (continued)

Satisfaction with the patient-centered medical home	
Quality Indicator	Findings
Percent of members with a personal doctor	Greater than 80 percent of Texas Medicaid and CHIP members reported having a personal doctor, with the exception of adult members in STAR (68 percent). Member ratings of their personal doctor generally exceeded the national averages.
CAHPS [®] <i>How Well Doctors Communicate</i>	Scores for <i>How Well Doctors Communicate</i> were high among parents of child members, ranging from 88 percent in STAR to 94 percent in STAR Health. Scores among adult members were also high, ranging from 82 percent for STAR+PLUS Medicaid-only members to 90 percent for STAR+PLUS dual-eligible members.
Care for chronic conditions	
HEDIS [®] <i>Use of Appropriate Medications for People with Asthma</i>	For members 5 to 11 years old, rates of appropriate asthma medication use in STAR exceeded the HEDIS [®] national mean of 92 percent. In addition, rates in all programs exceeded the HHSC Dashboard standard of 92 percent for this age group. For members 12 to 50 years old, the rate in STAR (93 percent) also exceeded the national HEDIS [®] mean of 86 percent.
HEDIS [®] <i>Annual Monitoring for Patients on Persistent Medications</i>	The vast majority of eligible STAR+PLUS members received annual medication monitoring, with a rate of 88 percent for all medications combined.
Behavioral health care	
<i>Follow-up After Hospitalization for Mental Illness</i>	STAR results were similar to the national HEDIS [®] means for 7-day and 30-day follow-up after hospitalization for mental illness. It should be noted that, at HHSC's request, the EQRO lifted provider constraints for this measure. Lifting provider constraints may result in inflation of rates. All programs performed well in comparison to their respective HHSC Dashboard standards, STAR Health in particular. Rates for STAR+PLUS and STAR Health increased consistently from 2009 to 2011.

Table B1 – Positive Findings (continued)

Behavioral health care	
Quality Indicator	Findings
<i>Follow-up for Children Prescribed ADHD Medication</i>	For the <i>Initiation Phase</i> , the STAR rate (50 percent) was higher than the HEDIS [®] mean of 38 percent. For the <i>Continuation and Maintenance Phase</i> , the STAR rate (66 percent) was higher than the HEDIS [®] mean of 44 percent. It should be noted that, at HHSC's request, the EQRO lifted provider constraints for this measure. Lifting provider constraints may result in inflation of rates.
HEDIS [®] <i>Antidepressant Medication Management</i>	In STAR+PLUS, the rate for <i>Effective Acute-Phase Treatment</i> was 53 percent, which is higher than the HHSC Dashboard standard of 43 percent. The rate for <i>Effective Continuation-Phase Treatment</i> was 36 percent, also higher than the HHSC Dashboard standard of 24 percent.

Table B2. Improvement Areas for Quality of Care in Texas Medicaid/CHIP

Health Status	
Quality Indicator	Findings
Childhood obesity	The PCCM program had a high reported obesity rate, with nearly one-third of members classified as obese (31 percent). This finding is relevant for STAR and STAR+PLUS MCOs that have moved into former PCCM counties.
Obesity in STAR+PLUS	For the STAR+PLUS Medicaid-only and dual-eligible populations, nearly one-half of all members were considered obese, and one-fourth of all members were considered overweight.
Adult preventive care	
<i>Timeliness of Prenatal Care</i>	Rates of timely prenatal care increased in STAR+PLUS between 2009 and 2011. Despite the increase in STAR+PLUS, the 2011 rate (68 percent) remained below the HHSC Dashboard standard of 81 percent.
<i>Postpartum Care</i>	The percentage of deliveries receiving a postpartum visit in STAR+PLUS increased slightly across the three-year period; however, the rate in 2011 (38 percent) was still considerably below the HHSC Dashboard standard of 59 percent.
HEDIS [®] <i>Cervical Cancer Screening</i>	The results for cervical cancer screening in STAR (59 percent) and STAR+PLUS (40 percent) fell short of both the HEDIS [®] mean of 67 percent and the HHSC Dashboard standard of 65 percent.

Table B2 – Improvement Areas (continued)

Adult preventive care	
Quality Indicator	Findings
<p>HEDIS[®] <i>Chlamydia Screening in Women</i></p>	<p>In 2011, the percentage of eligible women in the STAR program who received Chlamydia screening during the measurement period (51 percent) was lower than the national HEDIS[®] mean of 58 percent. In addition, the rate among eligible STAR Health members 21 to 24 years of age was 53 percent, which fell short of the HEDIS[®] mean of 62 percent for this age group.²³⁸ In CHIP, less than one in three eligible women received Chlamydia screening (31 percent).</p>
Disease management (DM) programs	
<p>DM participation rates</p>	<p>In 2011, STAR rates for member participation in asthma and diabetes DM programs were the lowest among the programs, with rates of 59 percent and 43 percent, respectively.</p>
Satisfaction with timeliness of care	
<p>CAHPS[®] <i>Getting Care Quickly</i></p>	<p>The adult rate in STAR (71 percent) fell below the national Medicaid average of 81 percent for <i>Getting Care Quickly</i>.</p>
<p><i>Good Access to Urgent Care</i></p>	<p>The adult rate in STAR (74 percent) fell below the HHSC Dashboard standard of 81 percent for <i>Good Access to Urgent Care</i>.</p>
<p><i>Good Access to Routine Care</i></p>	<p>Scores on <i>Good Access to Routine Care</i> for members in CHIP (78 percent), child and adult members in STAR (79 percent and 67 percent, respectively), and Medicaid-only adults in STAR+PLUS (73 percent) were below their respective HHSC Dashboard standards.</p>
<p><i>No Delays for Health Plan Approval</i></p>	<p>Performance on <i>No Delays for Health Plan Approval</i> was below the HHSC Dashboard standards for all members, with the exception of STAR Health, which had a rate equal to its HHSC Dashboard standard. Scores ranged from 63 percent to 69 percent among children and from 38 percent to 50 percent among adults.</p>
<p><i>No Wait to be Taken to the Exam Room Greater than 15 Minutes</i></p>	<p>Performance was considerably below the HHSC Dashboard standards for <i>No Wait to be Taken to the Exam Room Greater than 15 Minutes</i> for all members, ranging from 24 percent to 30 percent among children and from 21 percent to 33 percent among adults.</p>

Table B2 – Improvement Areas (continued)

Satisfaction with primary and specialist care	
Quality Indicator	Findings
CAHPS® <i>Getting Needed Care</i>	Scores for <i>Getting Needed Care</i> among child members ranged from 72 percent in STAR and CHIP to 80 percent in STAR Health, and were lower than those reported for children in Medicaid and SCHIP nationally. Scores for this measure among adult members ranged from 60 percent for STAR+PLUS Medicaid-only members to 74 percent for STAR+PLUS dual-eligible members, also below the national averages.
<i>Good Access to Specialist Referral</i>	Program-level rates for <i>Good Access to Specialist Referral</i> for children in STAR (69 percent) and CHIP (73 percent) were below their respective HHSC Dashboard standards. Rates for adults in STAR and Medicaid-only STAR+PLUS members were also lower than their respective standards.
<i>Good Access to Special Therapies</i>	In STAR+PLUS, the rate for <i>Good Access to Special Therapies</i> was considerably below the HHSC Dashboard standard of 66 percent for both Medicaid-only members (52 percent) and dual-eligible members (53 percent).
Satisfaction with customer service	
CAHPS® <i>Health Plan Information and Customer Service</i>	Among caregivers of children in STAR Health, 75 percent usually or always had positive experiences with health plan customer service. This score is lower than that reported for children in the other programs, and represents a considerable decline from 85 percent in 2010.
Acute respiratory care	
HEDIS® <i>Appropriate Treatment for Children with URI</i>	The percentage of children in STAR who received appropriate treatment for URI was 83 percent, which is lower than the national HEDIS® mean of 87 percent. Rates for this measure are generally low and have changed little over the three-year period
HEDIS® <i>Appropriate Testing for Children with Pharyngitis</i>	Rates of appropriate testing for pediatric pharyngitis were low in all programs from 2009 to 2011. Furthermore, rates in STAR were lower than the HEDIS® mean across all three years. In 2011, the rate for STAR was 58 percent, compared to 65 percent of children in Medicaid nationally.

Table B2 – Improvement Areas (continued)

Care for chronic conditions	
Quality Indicator	Findings
HEDIS® <i>Use of Appropriate Medications for People with Asthma</i>	In STAR+PLUS, the rate of use of appropriate medications for members 12 to 50 years old with asthma (80 percent) fell below the HHSC Dashboard standard of 86 percent. In addition, the rate among adults in STAR+PLUS declined from 91 percent in 2009 to 80 percent in 2011.
HEDIS® <i>Comprehensive Diabetes Care</i>	For adults with diabetes in STAR, CY 2011 results for all sub-measures were below their respective HEDIS® national means and HHSC Dashboard standards – suggesting a general need for improvement in diabetes care for this population. The rates for <i>Eye Exam</i> (36 percent), <i>LDL-C Control</i> (18 percent), and <i>HbA1c Control</i> (29 percent) were particularly low in STAR in comparison to the national means. For adults in STAR+PLUS, rates on all sub-measures were generally higher, but also indicated need for improvement – particularly for the <i>Eye Exam</i> (37 percent) and <i>HbA1c Control</i> sub-measures (26 percent).
HEDIS® <i>Controlling High Blood Pressure</i>	Rates of adequate blood pressure control for the STAR program (44 percent) and STAR+PLUS program (40 percent) were lower than the HHSC Dashboard standard of 54 percent for both programs. The rate for STAR was also lower than the national HEDIS® mean of 56 percent.

⁹⁶ The 2011 AI tool for Superior did not specifically collect DM participation rates for STAR Health. Moving forward, the EQRO will modify the AI tool to permit a separate assessment of STAR Health.

⁹⁷ HHSC. 2008.

⁹⁸ FirstCare, Parkland, Superior, and UnitedHealthcare contracted with DMOs.

⁹⁹ Only Driscoll, FirstCare, and Parkland did not report assigning DM participants to risk groups.

¹⁰⁰ This information is drawn from the Administrative Interview Conference Calls with the health plans. ICHP does not have this information available for the DM programs in Delta Dental, Parkland, or ValueOptions.

¹⁰¹ Community First members can ‘opt-in’ to the DM programs if an assessment is completed. Otherwise, the DM programs are ‘opt-out’.

¹¹⁷ IOM. 2001.

¹¹⁸ At the time of this report, the most recent AHRQ national results available for CAHPS® composites in Medicaid and CHIP were from 2011.

¹¹⁹ Significance tests are run on unweighted data. Chi-square = 34.108, $p < 0.001$.

¹²⁰ The result for this indicator increased in Community First, from 22 percent in 2009 to 29 percent in 2011.

¹²¹ Significance tests are run on unweighted data. Chi-square = 30.209, $p < 0.001$.

¹²² Driscoll and UnitedHealthcare-Texas saw no change in this indicator between 2010 and 2011; the El Paso First rate dropped by one percentage point.

¹²³ At the time of this report, the most recent AHRQ national results available for CAHPS® composites in Medicaid and CHIP were from 2011.

¹²⁴ The NCQA-scaled score for *Getting Needed Care* in Molina decreased from 2.19 to 1.95: $F = 10.828$, $p < 0.001$.

¹²⁵ The NCQA-scaled score for *Getting Needed Care* in Superior decreased from 2.26 to 2.04: $F = 9.782$, $p = 0.002$.

¹²⁶ The NCQA-scaled scores for *Getting Specialized Services* in the 2011 STAR Child Survey were significantly different among the STAR MCOs: $F = 3.113$, $p < 0.001$.

¹²⁷ The NCQA-scaled scores for *Getting Specialized Services* in the 2011 CHIP Survey were significantly different among the CHIP MCOs: $F = 1.708$, $p = 0.046$.

¹²⁸ Chi-square = 12.779, $p < 0.001$.

¹²⁹ Molina: Chi-square = 7.785, $p = 0.005$.

¹³⁰ Superior: Chi-square = 3.716, $p = 0.054$.

¹⁵¹ NAEPP (National Asthma Education and Prevention Program). 2007. *Expert panel report 3: guidelines for the diagnosis and management of asthma*. Bethesda, MD: National Heart, Lung, and Blood Institute.

¹⁵² Because most members in CHIP and STAR Health are no longer eligible after age 18, the 12- to 50-year age group for HEDIS[®] *Use of Appropriate Medications for People with Asthma* more accurately

represents members 12 to 18 years old in these programs. Therefore, comparisons with the HEDIS[®] 2011 national mean for the 12- to 50-year age group should be made with caution.

¹⁵³ The 2011 HHSC Dashboard standard of 92 percent for HEDIS[®] *Use of Appropriate Medications for People with Asthma* in the 5- to 11-year age group applies to STAR, CHIP, and STAR Health. There is no HHSC Dashboard standard for this age group in STAR+PLUS.

¹⁵⁴ Although the STAR+PLUS program expanded in 2011, the decline in HEDIS[®] *Use of Appropriate Medications for People with Asthma* is not explained by the addition of the new Jefferson service area, which had low denominators for this measure.

**AMERIGROUP IOWA, INC.
PROVIDER AGREEMENT**

WITH

(NAME OF PROVIDER)

**AMERIGROUP IOWA, INC.
PROVIDER AGREEMENT**

This Provider Agreement (hereinafter "Agreement") is made and entered into by and between Amerigroup Iowa, Inc. (hereinafter "Amerigroup") and _____ (hereinafter "Provider"), effective as of the date set forth immediately below Amerigroup's signature (the "Effective Date").

**ARTICLE I
DEFINITIONS**

"Affiliate" means any entity that is: (i) owned or controlled, either directly or through a parent or subsidiary entity, by Amerigroup, or any entity which is under common control with Amerigroup, and (ii) that is designated as an Affiliate on Amerigroup's commonly available web site. Unless otherwise set forth in the Participation Attachment(s) for Government Program(s), Affiliate may access the rates, terms and conditions of this Agreement.

"Agency" means a federal, state or local agency, administration, board or other governing body with jurisdiction over the governance or administration of a Health Benefit Plan.

"Audit" means a review of the Claim(s) and supporting clinical information submitted by Provider to ensure payment accuracy. The review ensures Claim(s) comply with all pertinent aspects of payment including, but not limited to, contractual terms, Regulatory Requirements, Coded Service Identifiers (as defined in the Plan Compensation Schedule ("PCS")) guidelines and instructions, Amerigroup medical policies and clinical utilization management guidelines, reimbursement policies, and generally accepted medical practices. Audit does not include medical record review for quality and risk adjustment initiatives.

"Claim" means either the uniform bill claim form or electronic claim form in the format prescribed by Plan submitted by a provider for payment by a Plan for Health Services rendered to a Member.

"CMS" means the Centers for Medicare & Medicaid Services, an administrative agency within the United States Department of Health & Human Services ("HHS").

"Amerigroup Rate" means the lesser of Provider's Charges for Covered Services, or the total reimbursement amount that Provider and Amerigroup have agreed upon as set forth in the PCS. The Amerigroup Rate includes applicable Cost Shares, and shall represent payment in full to Provider for Covered Services.

"Cost Share" means, with respect to Covered Services, an amount which a Member is required to pay under the terms of the applicable Health Benefit Plan. Such payment may be referred to as an allowance, coinsurance, copayment, deductible, penalty or other Member payment responsibility, and may be a fixed amount or a percentage of applicable payment for Covered Services rendered to the Member.

"Covered Services" means Medically Necessary Health Services, as determined by Plan and described in the applicable Health Benefit Plan, for which a Member is eligible for coverage. Covered Services do not include the preventable adverse events as set forth in the provider manual(s).

"Government Contract" means the contract between Amerigroup and an applicable party, such as an Agency, which governs the delivery of Health Services by Amerigroup to Member(s) pursuant to a Government Program.

"Government Program" means any federal or state funded program under Title XVIII, Title XIX or Title XXI of the Social Security Act, and any other federal or state funded program or product as designated by Amerigroup.

"Health Benefit Plan" means the document(s) that set forth Covered Services, rules, exclusions, terms and conditions of coverage. Such document(s) may include but are not limited to a Member handbook, a health certificate of coverage, or evidence of coverage.

"Health Service" means those services, supplies or items that a health care provider is licensed, equipped and staffed to provide and which he/she/it customarily provides to or arranges for individuals.

"Medically Necessary" or "Medical Necessity" means the definition as set forth in the applicable Participation Attachment(s).

"Member" means any individual who is eligible, as determined by Plan, to receive Covered Services under a Health Benefit Plan. For all purposes related to this Agreement, including all schedules, attachments, exhibits, provider manual(s), notices and communications related to this Agreement, the term "Member" may be used interchangeably with the terms Insured, Covered Person, Covered Individual, Enrollee, Subscriber, Dependent Spouse/Domestic Partner, Child, Beneficiary or Contract Holder, and the meaning of each is synonymous with any such other.

"Network" means a group of providers that support, through a direct or indirect contractual relationship, one or more product(s) and/or program(s) in which Members are enrolled.

"Other Payors" means persons or entities, pursuant to an agreement with Amerigroup or an Affiliate, that access the rates, terms or conditions of this Agreement with respect to certain Network(s), excluding Government Programs unless otherwise set forth in any Participation Attachment(s) for Government Programs. Other Payors include, without limitation, other Blue Cross and/or Blue Shield Plans that are not Affiliates, and employers or insurers providing Health Benefit Plans pursuant to partially or wholly insured, self-administered or self-insured programs.

"Participating Provider" means a person or entity, or an employee or subcontractor of such person or entity, that is party to an agreement to provide Covered Services to Members that has met all applicable Plan credentialing requirements or standards of participation for the services the Participating Provider provides, and that is designated by Plan to participate in one or more Network(s).

"Participation Attachment(s)" means the document(s) attached hereto and incorporated herein by reference, and which identifies the additional duties and/or obligations related to Network(s), Government Program(s), Health Benefit Plans, and/or Plan programs such as quality and/or incentive programs.

"Plan" means Amerigroup, an Affiliate, and/or an Other Payor. For purposes of this Agreement, when the term "Plan" applies to an entity other than Amerigroup, "Plan" shall be construed to only mean such entity.

"Plan Compensation Schedule" ("PCS") means the document(s) attached hereto and incorporated herein by reference, and which sets forth the Amerigroup Rate(s) and compensation related terms for the Network(s) in which Provider participates. The PCS may include additional Provider obligations and specific Amerigroup compensation related terms and requirements.

"Regulatory Requirements" means any requirements, as amended from time to time, imposed by applicable federal, state or local laws, rules, regulations, guidelines, instructions, Government Contract, or otherwise imposed by an Agency or government regulator in connection with the procurement, development or operation of a Health Benefit Plan, or the performance required by either party under this Agreement. The omission from this Agreement of an express reference to a Regulatory Requirement applicable to either party in connection with their duties and responsibilities shall in no way limit such party's obligation to comply with such Regulatory Requirement.

ARTICLE II SERVICES/OBLIGATIONS

- 2.1 Member Identification. Amerigroup shall ensure that Plan provides a means of identifying Member either by issuing a paper, plastic, electronic, or other identification document to Member or by a telephonic, paper or electronic communication to Provider. This identification need not include all information necessary to determine Member's eligibility at the time a Health Service is rendered, but shall include information necessary to contact Plan to determine Member's participation in the applicable Health Benefit Plan. Provider acknowledges and agrees that possession of such identification document or ability to access eligibility information telephonically or electronically, in and of itself, does not qualify the holder thereof as a Member, nor does the lack thereof mean that the person is not a Member.
- 2.2 Provider Non-discrimination. Provider shall provide Health Services to Members in a manner similar to and within the same time availability in which Provider provides Health Services to any other individual. Provider will not differentiate, or discriminate against any Member as a result of his/her enrollment in a Health Benefit Plan, or because of race, color, creed, national origin, ancestry, religion, sex, marital status, age, disability, payment source, state of health, need for Health Services, status as a litigant, status as a Medicare or

Medicaid beneficiary, sexual orientation, gender identity, or any other basis prohibited by law. Provider shall not be required to provide any type, or kind of Health Service to Members that he/she/it does not customarily provide to others. Additional requirements may be set forth in the applicable Participation Attachment(s).

- 2.3 Publication and Use of Provider Information. Provider agrees that Amerigroup, Plans or their designees may use, publish, disclose, and display, for commercially reasonable general business purposes, either directly or through a third party, information related to Provider, including but not limited to demographic information, information regarding credentialing, affiliations, and performance data.
- 2.4 Use of Symbols and Marks. Neither party to this Agreement shall publish, copy, reproduce, or use in any way the other party's symbols, service mark(s) or trademark(s) without the prior written consent of such other party. Notwithstanding the foregoing, the parties agree that they may identify Provider as a participant in the Network(s) in which he/she/it participates.
- 2.5 Submission and Adjudication of Claims. Provider shall submit, and Plan shall adjudicate, Claims in accordance with the applicable Participation Attachment(s), the PCS, the provider manual(s) and Regulatory Requirements.
- 2.6 Payment in Full and Hold Harmless.
- 2.6.1 Provider agrees to accept as payment in full, in all circumstances, the applicable Amerigroup Rate whether such payment is in the form of a Cost Share, a payment by Plan, or a payment by another source, such as through coordination of benefits or subrogation. Provider shall bill, collect, and accept compensation for Cost Shares. Provider agrees to make reasonable efforts to verify Cost Shares prior to billing for such Cost Shares. In no event shall Plan be obligated to pay Provider or any person acting on behalf of Provider for services that are not Covered Services, or any amounts in excess of the Amerigroup Rate less Cost Shares or payment by another source, as set forth above. Consistent with the foregoing, Provider agrees to accept the Amerigroup Rate as payment in full if the Member has not yet satisfied his/her deductible.
- 2.6.2 Except as expressly permitted under Regulatory Requirements, Provider agrees that in no event, including but not limited to, nonpayment by applicable Plan, insolvency of applicable Plan, breach of this Agreement, or Claim payment denials or adjustment requests or recoupments based on miscoding or other billing errors of any type, whether or not fraudulent or abusive, shall Provider, or any person acting on behalf of Provider, bill, charge, collect a deposit from, seek compensation from, or have any other recourse against a Member, or a person legally acting on the Member's behalf, for Covered Services provided pursuant to this Agreement. This section does not prohibit Provider from collecting reimbursement for the following from the Member:
- 2.6.2.1 Cost Shares, if applicable;
- 2.6.2.2 Health Services that are not Covered Services (other than preventable adverse events). However, Provider may seek payment for a Health Service that is not Medically Necessary or is experimental/investigational only if Provider obtains a written waiver that meets the following criteria:
- a) The waiver notifies the Member that the Health Service is likely to be deemed not Medically Necessary, or experimental/investigational;
 - b) The waiver notifies the Member of the Health Service being provided and the date(s) of service;
 - c) The waiver notifies the Member of the approximate cost of the Health Service;
 - d) The waiver is signed by the Member, or a person legally acting on the Member's behalf, prior to receipt of the Health Service.
- 2.6.2.3 Any reduction in or denial of payment as a result of the Member's failure to comply with his/her utilization management program pursuant to his/her Health Benefit Plan, except when Provider has been designated by Amerigroup to comply with utilization management for the Health Services provided by Provider to the Member.

- 2.7 Recoupment/Offset/Adjustment for Overpayments. Amerigroup shall be entitled to offset and recoup an amount equal to any overpayments or improper payments made by Amerigroup to Provider against any payments due and payable by Amerigroup to Provider under this Agreement. Provider shall voluntarily refund all duplicate or erroneous Claim payments regardless of the cause, including, but not limited to, payments for Claims where the Claim was miscoded, non-compliant with industry standards, or otherwise billed in error, whether or not the billing error was fraudulent, abusive or wasteful. Upon determination by Amerigroup that any recoupment, improper payment, or overpayment is due from Provider, Provider must refund to the Amerigroup within thirty (30) days of when Amerigroup notifies Provider. If such reimbursement is not received by Amerigroup within the thirty (30) days following the date of such notice, Amerigroup shall be entitled to offset such overpayment against other amounts due and payable by Amerigroup to Provider in accordance with Regulatory Requirements. Amerigroup reserves the right to employ a third party collection agency in the event of non-payment.
- 2.8 Use of Subcontractors. Provider and Plan may fulfill some of their duties under this Agreement through subcontractors. For purposes of this provision, subcontractors shall include, but are not limited to, vendors and non-Participating Providers that provide supplies, equipment, staffing, and other services to Members at the request of, under the supervision of, and/or at the place of business of Provider. Provider shall provide Amerigroup with thirty (30) days prior notice of any Health Services subcontractors with which Provider may contract to perform Provider's duties and obligations under this Agreement, and Provider shall remain responsible to Plan for the compliance of his/her/its subcontractors with the terms and conditions of this Agreement as applicable, including, but not limited to, the Payment in Full and Hold Harmless provisions herein. Amerigroup shall not be liable for any reimbursement in addition to the applicable Amerigroup Rate as a result of Provider's use of a subcontractor. Provider shall be solely responsible to pay subcontractors for any Health Services, and shall via written contract, contractually prohibit such subcontractors from billing, collecting or attempting to collect from Amerigroup, Plan or Members. Notwithstanding the foregoing, if Amerigroup has a direct contract with the subcontractor ("direct contract"), the direct contract shall prevail over this Agreement and the subcontractor shall bill Amerigroup under the direct contract for any subcontracted services, unless otherwise agreed to by the parties.
- 2.9 Compliance with Provider Manual(s) and Policies, Programs and Procedures. Provider agrees to abide by, and comply with, Amerigroup's provider manual(s), and all other policies, programs and procedures (collectively "Policies") established and implemented by Plan. Amerigroup or its designees may modify the provider manual(s) and Policies by making a good faith effort to provide notice to Provider at least thirty (30) days in advance of the effective date of material modifications thereto.
- 2.10 Referral Incentives/Kickbacks. Provider represents and warrants that Provider does not give, provide, condone or receive any incentives or kickbacks, monetary or otherwise, in exchange for the referral of a Member, and if a Claim for payment is attributable to an instance in which Provider provided or received an incentive or kickback in exchange for the referral, such Claim shall not be payable and, if paid in error, shall be refunded to Amerigroup.
- 2.11 Programs and Provider Panels. Provider acknowledges that as of the Effective Date, he/she/it participates only in those Networks designated on the Provider Networks Attachment of this Agreement. Provider acknowledges that Plan may have, develop, or contract to develop, various networks or programs that have a variety of provider panels, program components and other requirements, and that Plan may discontinue, or modify such networks or programs. In addition to and separate from Networks that support some or all of Plan's product(s) and/or program(s) (e.g., HMO, PPO and Indemnity products), Provider further acknowledges that certain Health Services, including by way of example only, laboratory services, may be provided exclusively by designated Participating Providers (a "Health Services Designated Network"), as determined by Plan. Provider agrees to refer Members to Participating Providers in a Health Services Designated Network for the provision of certain Health Services, even if Provider performs such services. Notwithstanding any Out of Network Compensation provision of this Agreement, if Provider provides a Health Service to a Member for which Provider is not a designated Participating Provider in a Health Services Designated Network, then Provider agrees that he/she/it shall not be reimbursed for such services by Amerigroup, Plan or the Member, unless Provider was authorized to provide such Health Service by Plan. In addition to those Networks designated on the Provider Networks Attachment, Amerigroup may also identify Provider as a Participating Provider in additional Networks and/or products designated in writing from time to time by Amerigroup. The terms and conditions of Provider's participation as a Participating Provider in such Networks and/or products shall be on the terms and conditions as set forth in this Agreement unless otherwise agreed to in writing by Provider and Amerigroup.

- 2.12 Change in Provider Information. Provider shall immediately send written notice, in accordance with the Notice section of this Agreement, to Amerigroup of:
- 2.12.1 Any change in Provider's business address;
- 2.12.2 Any legal, governmental, or other action or investigation involving Provider which could affect Provider's credentialing status with Plan, or materially impair the ability of Provider to carry out his/her/its duties and obligations under this Agreement, except for temporary emergency diversion situations; or
- 2.12.3 Any change in accreditation, provider affiliation, hospital privileges (if applicable), insurance, licensure, certification or eligibility status, or other relevant information regarding Provider's practice or status in the medical community.
- 2.13 Provider Credentialing. Provider warrants that he/she/it meets all applicable Plan credentialing requirements or any other applicable standards of participation for Networks in which Provider participates. A description of the credentialing program or applicable standards of participation, including any applicable accreditation requirements, is set forth in the provider manual(s). Provider acknowledges that until such time as Provider has been determined to have fully met Plan's credentialing requirements or applicable standards of participation, Provider shall not be entitled to the benefits of participation under this Agreement, including without limitation the Amerigroup Rates set forth in the PCS attached hereto.
- 2.14 Adjustment Requests. If Provider believes a Claim has been improperly adjudicated for Covered Service for which Provider timely submitted a Claim to Plan, Provider must submit a request for an adjustment to Plan in accordance with the provider manual(s).
- 2.15 Supervision of Services. ProviderAncillary Provider agrees that all Health Services provided to MembersCoveredIndividual under this Agreement shall be provided by ProviderAncillary Provider or by a qualified person under Provider's direct supervision direction. ProviderAncillary Provider warrantsmaintain that any nurses or other health professionals employed by or providing services for ProviderAncillary Provider shall be duly licensed or certified under applicable law.
- 2.16 Coordination of Benefits/Subrogation. Subject to Regulatory Requirements, Provider agrees to cooperate with Plan regarding subrogation and coordination of benefits, as set forth in Policies and the provider manual(s), and to notify Plan promptly after receipt of information regarding any Member who may have a Claim involving subrogation or coordination of benefits.
- 2.17 Preventable Adverse Events. Notwithstanding any provision in this Agreement to the contrary, when any preventable adverse event as set forth in the provider manual(s) occurs with respect to a Member, the Provider shall neither bill, nor seek to collect from, nor accept any payment from Plan or Member for such event. If Provider receives any payment from Plan or Member for such event, it shall refund such payment within ten (10) days of becoming aware of such receipt. Further, Provider shall comply with any applicable Regulatory Requirements with respect to reporting preventable adverse events, and shall cooperate with Amerigroup, to the extent reasonable, in any Amerigroup initiative designed to help analyze or reduce such preventable adverse events.
- 2.18 Cost Effective Care. Provider shall provide Covered Services in the most cost effective, clinically appropriate setting and manner.

ARTICLE III CONFIDENTIALITY/RECORDS

- 3.1 Proprietary Information. Except as otherwise provided herein, all information and material provided by either party in contemplation of or in connection with this Agreement remains proprietary to the disclosing party. This Agreement, including but not limited to the Amerigroup Rates, is Amerigroup's proprietary information. Neither party shall disclose any information proprietary to the other, or use such information or material except: (1) as otherwise set forth in this Agreement; (2) as may be required to perform obligations hereunder; (3) as required to deliver Health Services or administer a Health Benefit Plan; (4) to Plan or its designees; (5) upon the express written consent of the parties; or (6) as required by Regulatory Requirements. Notwithstanding the foregoing, either party may disclose such information to its legal advisors, lenders and business advisors, provided that such legal advisors, lenders and business advisors agree to maintain confidentiality of such information. Provider and Amerigroup shall each have a system in place that meets all applicable Regulatory Requirements to protect all

records and all other documents relating to this Agreement which are deemed confidential by law. Any disclosure or transfer of confidential information by Provider or Amerigroup will be in accordance with applicable Regulatory Requirements. Provider shall immediately notify Amerigroup if Provider is required to disclose any proprietary information at the request of an Agency or pursuant to any federal or state freedom of information act request.

- 3.2 Confidentiality of Member Information. Both parties agree to comply with the Health Insurance Portability and Accountability Act of 1996 ("HIPAA") and the Health Information Technology for Economic and Clinical Health Act ("HITECH Act"), and as both may be amended, as well as any other applicable Regulatory Requirements regarding confidentiality, use, disclosure, security and access of the Member's personally identifiable information ("PII") and protected health information ("PHI"), (collectively "Member Information"). Provider shall review all Member Information received from Amerigroup to ensure no misrouted Member Information is included. Misrouted Member Information includes but is not limited to, information about a Member that Provider is not currently treating. Provider shall immediately destroy any misrouted Member Information or safeguard the Member Information for as long as it is retained. In no event shall Provider be permitted to misuse or re-disclose misrouted Member Information. If Provider cannot destroy or safeguard misrouted Member Information, Provider must contact Amerigroup to report receipt of misrouted Member Information.
- 3.3 Network Provider/Patient Discussions. Notwithstanding any other provision in this Agreement and regardless of any benefit or coverage exclusions or limitations associated with a Health Benefit Plan, Provider shall not be prohibited from discussing fully with a Member any issues related to the Member's health including recommended treatments, treatment alternatives, treatment risks and the consequences of any benefit coverage or payment decisions made by Plan or any other party. Nothing in this Agreement shall prohibit Provider from disclosing to the Member the general methodology by which Provider is compensated under this Agreement, such as for example, whether Provider is paid on a fee for service, capitation or Percentage Rate basis. Plan shall not refuse to allow or to continue the participation of any otherwise eligible provider, or refuse to compensate Provider in connection with services rendered, solely because Provider has in good faith communicated with one or more of his/her/its current, former or prospective patients regarding the provisions, terms or requirements of a Health Benefit Plan as they relate to the health needs of such patient. Nothing in this section shall be construed to permit Provider to disclose Amerigroup Rates or specific terms of the compensation arrangement under this Agreement.
- 3.4 Plan Access to and Requests for Provider Records. Provider and its designees shall comply with all applicable state and federal record keeping and retention requirements, and, as set forth in the provider manual(s) and/or Participation Attachment(s), shall permit Plan or its designees to have, with appropriate working space and without charge, on-site access to and the right to perform an Audit, examine, copy, excerpt and transcribe any books, documents, papers, and records related to Member's medical and billing information within the possession of Provider and inspect Provider's operations, which involve transactions relating to Members and as may be reasonably required by Plan in carrying out its responsibilities and programs including, but not limited to, assessing quality of care, Medical Necessity, concurrent review, appropriateness of care, accuracy of payment, compliance with this Agreement, and for research. In lieu of on-site access, at Plan's request, Provider or its designees shall submit records to Plan, or its designees via photocopy or electronic transmittal, within thirty (30) days, at no charge. Provider shall make such records available to the state and federal authorities involved in assessing quality of care or investigating Member grievances or complaints in compliance with Regulatory Requirements. Any examination or Audit of Provider records shall be performed using generally accepted, statistically valid or industry standard methodology. Provider acknowledges that failure to submit records to Plan in accordance with this provision and/or the provider manual(s), and/or Participation Attachment(s) may result in a denial of a Claim under review, whether on pre-payment or post-payment review, or a payment retraction on a paid Claim, and Provider is prohibited from balance billing the Member in any of the foregoing circumstances.
- 3.5 Transfer of Medical Records. Following a request, Provider shall transfer a Member's medical records in a timely manner, or within such other time period required under applicable Regulatory Requirements, to other health care providers treating a Member at no cost to Amerigroup, Plan, the Member, or other treating health care providers.

ARTICLE IV INSURANCE

- 4.1 Amerigroup Insurance. Amerigroup shall self-insure or maintain insurance as required under applicable Regulatory Requirements to insure Amerigroup and its employees, acting within the scope of their duties.

- 4.2 Provider Insurance. Provider shall self-insure or maintain insurance in types and amounts acceptable to Amerigroup as set forth in the provider manual(s), or as required under applicable Regulatory Requirements.

**ARTICLE V
RELATIONSHIP OF THE PARTIES**

- 5.1 Relationship of the Parties. For purposes of this Agreement, Amerigroup and Provider are and will act at all times as independent contractors. Nothing in this Agreement shall be construed, or be deemed to create, a relationship of employer or employee or principal and agent, partnership, joint venture, or any relationship other than that of independent entities contracting with each other for the purposes of effectuating this Agreement. In no way shall Amerigroup or Plan be construed to be providers of Health Services or responsible for, exercise control, or have direction over the provision of such Health Services. Provider shall be solely responsible to the Member for treatment, medical care, and advice with respect to the provision of Health Services. Nothing in this Agreement shall, or shall be construed to, create any financial incentive for Provider to withhold Covered Services.
- 5.2 Contracting Party. If Provider is a partnership, corporation, or any other entity other than an individual, all references herein to "Provider" shall also mean and refer to each individual within such entity who Provider certifies is owned or employed by Provider, and who has applied for and been accepted by Plan as a Participating Provider.

**ARTICLE VI
INDEMNIFICATION AND LIMITATION OF LIABILITY**

- 6.1 Indemnification. Amerigroup and Provider shall each indemnify, defend and hold harmless the other party, and his/her/its directors, officers, employees, agents, Affiliates and subsidiaries, from and against any and all losses, claims, damages, liabilities, costs and expenses (including without limitation, reasonable attorneys' fees and costs) arising from third party claims resulting from the indemnifying party's or his/her/its failure to perform the indemnifying party's obligations under this Agreement, and/or the indemnifying party's or his/her/its agent's violation of any law, statute, ordinance, order, standard of care, rule or regulation. The obligation to provide indemnification under this Agreement shall be contingent upon the party seeking indemnification providing the indemnifying party with prompt written notice of any claim for which indemnification is sought, allowing the indemnifying party to control the defense and settlement of such claim, provided however that the indemnifying party agrees not to enter into any settlement or compromise of any claim or action in a manner that admits fault or imposes any restrictions or obligations on an indemnified party without that indemnified party's prior written consent which will not be unreasonably withheld, and cooperating fully with the indemnifying party in connection with such defense and settlement. Notwithstanding the foregoing, if a claim is brought by a governmental entity against Plan, and Plan seeks indemnification from Provider pursuant to this section, then Provider shall not engage in any direct communication with such governmental entity regarding such claim without Plan's prior consent.
- 6.2 Limitation of Liability. Regardless of whether there is a total and fundamental breach of this Agreement or whether any remedy provided in this Agreement fails of its essential purpose, in no event shall either of the parties hereto be liable for any amounts representing loss of revenues, loss of profits, loss of business, the multiple portion of any multiplied damage award, or incidental, indirect, consequential, special or punitive damages, whether arising in contract, tort (including negligence), or otherwise regardless of whether the parties have been advised of the possibility of such damages, arising in any way out of or relating to this Agreement. Further, in no event shall Plan be liable to Provider for any extracontractual damages relating to any claim or cause of action assigned to Provider by any person or entity. Notwithstanding the foregoing, if a claim is brought by an Agency against Plan, the foregoing limitations of liability shall not apply.
- 6.3 Period of Limitations. Unless otherwise provided for in this Agreement, a Health Benefit Plan, the provider manual(s), Policies, Participation Attachment(s), and excluding fraud, waste, or abuse, neither party shall commence any action at law or equity, including but not limited to, an arbitration demand, against the other to recover on any legal or equitable claim arising out of this Agreement more than two (2) years after the events which gave rise to such claim. The deadline for initiating an action shall not be tolled by the appeal process, provider dispute resolution process or any other administrative process. To the extent a dispute is timely commenced, it will be administered in accordance with Article VII of this Agreement.

**ARTICLE VII
DISPUTE RESOLUTION AND ARBITRATION**

- 7.1 Dispute Resolution. All disputes between Amerigroup and Provider arising out of or related in any manner to this Agreement shall be resolved using the dispute resolution and arbitration procedures as set forth below. Provider shall exhaust any other applicable provider appeal/provider dispute resolution procedures under this Agreement and any applicable exhaustion requirements imposed by Regulatory Requirements as a condition precedent to Provider's right to pursue the dispute resolution and arbitration procedures as set forth below.
- 7.1.1 In order to invoke the dispute resolution procedures in this Agreement, a party first shall send to the other party a written demand letter that contains a detailed description of the dispute and all relevant underlying facts, a detailed description of the amount(s) in dispute and how they have been calculated and any other information that the Amerigroup provider manual(s) may require Provider to submit with respect to such dispute. If the total amount in dispute as set forth in the demand letter is less than two hundred thousand dollars (\$200,000), exclusive of interest, costs, and attorneys' fees, then within twenty (20) days following the date on which the receiving party receives the demand letter, representatives of each party's choosing shall meet to discuss the dispute in person or telephonically in an effort to resolve the dispute. If the total amount in dispute as set forth in the demand letter is two hundred thousand dollars (\$200,000) or more, exclusive of interest, costs, and attorneys' fees, then within ninety (90) days following the date of the demand letter, the parties shall engage in non-binding mediation in an effort to resolve the dispute unless both parties agree in writing to waive the mediation requirement. The parties shall mutually agree upon a mediator, and failing to do so, Judicial Arbitration and Mediation Services ("JAMS") shall be authorized to appoint a mediator.
- 7.2 Arbitration. Any dispute within the scope of subsection 7.1.1 that remains unresolved at the conclusion of the applicable process outlined in subsection 7.1.1 shall be resolved by binding arbitration in the manner as set forth below. Except to the extent as set forth below, the arbitration shall be conducted pursuant to the JAMS Comprehensive Arbitration Rules and Procedures, provided, however, that the parties may agree in writing to further modify the JAMS Comprehensive Arbitration Rules and Procedures. The parties agree to be bound by the findings of the arbitrator(s) with respect to such dispute, subject to the right of the parties to appeal such findings as set forth herein. No arbitration demand shall be filed until after the parties have completed the dispute resolution efforts described in section 7.1 above. If the dispute resolution efforts described in section 7.1 cannot be completed within the deadlines specified for such efforts despite the parties' good faith efforts to meet such deadlines, such deadlines may be extended as necessary upon mutual agreement of the parties. Enforcement of this arbitration clause, including the waiver of class actions, shall be determined under the Federal Arbitration Act ("FAA"), including the FAA's preemptive effect on state law. The parties agree that the arbitration shall be conducted on a confidential basis pursuant to Rule 26 of the JAMS Comprehensive Arbitration Rules and Procedures. Subject to any disclosures that may be required or requested under Regulatory Requirements, the parties further agree that they shall maintain the confidential nature of the arbitration, including without limitation, the existence of the arbitration, information exchanged during the arbitration, and the award of the arbitrator(s). Nothing in this provision, however, shall preclude either party from disclosing any such details regarding the arbitration to its accountants, auditors, brokers, insurers, reinsurers or retrocessionaires.
- 7.2.1 Location of Arbitration. The arbitration hearing shall be held in the city and state in which the Anthem office identified in the address block on the signature page of this Agreement is located, except that if there is no address block on the signature page, then the arbitration hearing shall be held in the city and state in which the Anthem entity that is a party to this Agreement has its principal place of business. Notwithstanding the foregoing, both parties can agree in writing to hold the arbitration hearing in some other location.
- 7.2.2 Selection and Replacement of Arbitrator(s). If the total amount in dispute is less than four million dollars (\$4,000,000), exclusive of interest, costs, and attorneys' fees, the dispute shall be decided by a single arbitrator selected, and replaced when required, in the manner described in the JAMS Comprehensive Arbitration Rules and Procedures. If the total amount in dispute is four million dollars (\$4,000,000) or more, exclusive of interest, costs, and attorneys' fees, the dispute shall be decided by an arbitration panel consisting of three (3) arbitrators, unless the parties agree in writing that the dispute shall be decided by a single arbitrator.
- 7.2.3 Appeal. If the total amount of the arbitration award is five million dollars (\$5,000,000) or more,

inclusive of interest, costs, and attorneys' fees, or if the arbitrator(s) issues an injunction against a party, the parties shall have the right to appeal the decision of the arbitrator(s) pursuant to the JAMS Optional Arbitration Appeal Procedure. A decision that has been appealed shall not be enforceable while the appeal is pending. In reviewing a decision of the arbitrator(s), the appeal panel shall apply the same standard of review that a United States Court of Appeals would apply in reviewing a similar decision issued by a United States District Court in the jurisdiction in which the arbitration hearing was held.

- 7.2.4 Waiver of Certain Claims. The parties, on behalf of themselves and those that they may now or hereafter represent, each agree to and do hereby waive any right to join or consolidate claims in arbitration by or against other individuals or entities or to pursue, on a class basis, any dispute; provided however, if there is a dispute regarding the applicability or enforcement of the waiver provision in this subsection 7.2.3, that dispute shall be decided by a court of competent jurisdiction. If a court of competent jurisdiction determines that such waiver is unenforceable for any reason with respect to a particular dispute, then the parties agree that section 7.2 shall not apply to such dispute and that such dispute shall be decided instead in a court of competent jurisdiction.
- 7.2.5 Limitations on Injunctive Relief. The parties, on behalf of themselves and those that they may now or hereafter represent, each agree that any injunctive relief sought against the other party shall be limited to the conduct relevant to the parties to the arbitration and shall not be sought for the benefit of individuals or entities who are not parties to the arbitration. The arbitrator(s) are not authorized to issue injunctive relief for the benefit of an individual or entity who is not a party to the arbitration. The arbitrator shall be limited to issuing injunctive relief related to the specific issues in the arbitration.
- 7.3 Attorney's Fees and Costs. The shared fees and costs of the non-binding mediation and arbitration (e.g. fee of the mediator, fee of the independent arbitrator) will be shared equally between the parties. Each party shall be responsible for the payment of its own specific fees and costs (e.g. the party's own attorney's fees, the fees of the party selected arbitrator, etc.) and any costs associated with conducting the non-binding mediation or arbitration that the party chooses to incur (e.g. expert witness fees, depositions, etc.). Notwithstanding this provision, the arbitrator may issue an order in accordance with Federal Rule of Civil Procedure Rule 11.

ARTICLE VIII TERM AND TERMINATION

- 8.1 Term of Agreement. This Agreement shall commence at 12:01 AM on the Effective Date for a term of one (1) year, and shall continue in effect thereafter unless otherwise terminated as provided herein.
- 8.2 Termination Without Cause. Either party may terminate this Agreement without cause at any time by giving at least one hundred eighty (180) days prior written notice of termination to the other party.
- 8.3 Breach of Agreement. Except for circumstances giving rise to the Immediate Termination section, if either party fails to comply with or perform when due any material term or condition of this Agreement, the other party shall notify the breaching party of its breach in writing stating the specific nature of the material breach, and the breaching party shall have thirty (30) days to cure the breach. If the breach is not cured to the reasonable satisfaction of the non-breaching party within said thirty (30) day period, the non-breaching party may terminate this Agreement by providing written notice of such termination to the other party. The effective date of such termination shall be no sooner than sixty (60) days after such notice of termination.
- 8.4 Immediate Termination.
- 8.4.1 This Agreement or any Participation Attachment(s) may be terminated immediately by Amerigroup if:
- 8.4.1.1 Provider commits any act or conduct for which his/her/its license(s), permit(s), or any governmental or board authorization(s) or approval(s) necessary for business operations or to provide Health Services are lost or voluntarily surrendered in whole or in part; or

- 8.4.1.2 Provider commits fraud or makes any material misstatements or omissions on any documents related to this Agreement which Provider submits to Amerigroup or to a third party; or
 - 8.4.1.3 Provider files for bankruptcy, or makes an assignment for the benefit of its creditors without Amerigroup's written consent, or if a receiver is appointed; or
 - 8.4.1.4 Provider's insurance coverage as required by this Agreement lapses for any reason; or
 - 8.4.1.5 Provider fails to maintain compliance with Plan's credentialing standards or other applicable standards of participation; or
 - 8.4.1.6 Amerigroup reasonably believes based on Provider's conduct or inaction, or allegations of such conduct or inaction, that the well-being of patients may be jeopardized; or
 - 8.4.1.7 Provider has been abusive to a Member, a Amerigroup employee or representative; or
 - 8.4.1.8 Provider and/or his/her/its employees, contractors, subcontractors, or agents are identified as ineligible persons who are terminated, barred, suspended, ineligible, or otherwise excluded from participation on the General Services Administration list of Parties Excluded from Federal Programs and/or HHS/OIG List of Excluded Individuals/Entities, and/or on an applicable state list of excluded providers, and in the case of an employee, contractor, subcontractor or agent, Provider fails to remove such individual from responsibility for, or involvement with, the Provider's business operations related to this Agreement, or if Provider has voluntarily withdrawn his/her/its participation in any program under Titles VXIII, XIX or XX of the Social Security Act as the result of a settlement agreement; or
 - 8.4.1.9 Provider is convicted or has been finally adjudicated to have committed a felony or misdemeanor, other than a non-DUI related traffic violation.
- 8.4.2 This Agreement may be terminated immediately by Provider if:
- 8.4.2.1 Amerigroup commits any act or conduct for which its license(s), permit(s), or any governmental or board authorization(s) or approval(s) necessary for business operations are lost or voluntarily surrendered in whole or in part; or
 - 8.4.2.2 Amerigroup commits fraud or makes any material misstatements or omissions on any documents related to this Agreement which it submits to Provider or to a third party; or
 - 8.4.2.3 Amerigroup files for bankruptcy, or if a receiver is appointed.
- 8.5 Termination of Individual Providers. If applicable, Amerigroup reserves the right to terminate individual providers under the terms of this Article VIII while continuing the Agreement for one or more providers in a group.
- 8.6 Transactions Prior to Termination. Except as otherwise set forth in this Agreement, termination shall have no effect on the rights and obligations of the parties arising out of any transaction under this Agreement occurring prior to the date of such termination.
- 8.7 Continuation of Care Upon Termination. Unless otherwise set forth in the Health Benefit Plan, or required by Regulatory Requirements, Provider shall, upon termination of this Agreement for reasons other than the grounds set forth in the Immediate Termination section, continue to provide and be compensated for Covered Services rendered to Members under the terms and conditions of this Agreement until the earlier of ninety (90) days or such time that: (1) the Member has completed the course of treatment and if applicable, was discharged; or (2) reasonable and medically appropriate arrangements have been made for a Participating Provider to render Health Services to the Member. Notwithstanding the foregoing, for Members who: (i) have entered the second or third trimester of pregnancy at the time of such termination, or (ii) are defined as terminally ill under § 1861 (dd) (3) (A) of the Social Security Act at the time of such termination, this continuance of care section and all other provisions of this Agreement shall remain in effect for such pregnant Members through the provision of postpartum care directly related to their delivery, and for such terminally ill Members for the remainder of their life for care directly related to the treatment of the terminal illness.

- 8.8 Survival. The provisions of this Agreement set forth below shall survive termination or expiration of this Agreement:
- 8.8.1 Publication and Use of Provider Information;
 - 8.8.2 Payment in Full and Hold Harmless;
 - 8.8.3 Recoupment/Offset/Adjustment for Overpayments;
 - 8.8.4 Confidentiality/Records;
 - 8.8.5 Indemnification and Limitation of Liability;
 - 8.8.6 Dispute Resolution and Arbitration;
 - 8.8.7 Continuation of Care Upon Termination; and
 - 8.8.8 Any other provisions required in order to comply with Regulatory Requirements.

**ARTICLE IX
GENERAL PROVISIONS**

- 9.1 Amendment. Except as otherwise provided for in this Agreement, Amerigroup retains the right to amend this Agreement, the Amerigroup Rate, any attachments or addenda by making a good faith effort to provide notice to Provider at least thirty (30) days in advance of the effective date of the amendment. Except to the extent that Amerigroup determines an amendment is necessary to effectuate Regulatory Requirements, if Provider objects to the amendment, then Provider has the right to terminate this Agreement, and such termination shall take effect on the later of the amendment effective date identified by Amerigroup or one hundred eighty (180) days from the date Provider has provided notice of his/her/its intention to terminate the Agreement pursuant to this section. Failure of Provider to provide such notice to Amerigroup within the time frames described herein will constitute acceptance of the amendment by Provider.
- 9.2 Assignment. This Agreement may not be assigned by Provider without the prior written consent of Amerigroup. Any assignment by Provider without such prior consent shall be voidable at the sole discretion of Amerigroup. Amerigroup may assign this Agreement in whole or in part. In the event of a partial assignment of this Agreement by Amerigroup, the obligations of the Provider shall be performed for Amerigroup with respect to the part retained and shall be performed for Amerigroup's assignee with respect to the part assigned, and such assignee is solely responsible to perform all obligations of Amerigroup with respect to the part assigned. The rights and obligations of the parties hereunder shall inure to the benefit of, and shall be binding upon, any permitted successors and assigns of the parties hereto.
- 9.3 Scope/Change in Status.
- 9.3.1 Amerigroup and Provider agree that this Agreement applies to Health Services rendered at the Provider's location(s) on file with Amerigroup. Amerigroup may, if in Amerigroup's judgment the circumstances require such, limit this Agreement to Provider's locations, operations or business or corporate form, status or structure in existence on the Effective Date of this Agreement and prior to the occurrence of any of the following events:
 - 9.3.1.1 Provider sells all or substantially all of his/her/its assets; or
 - 9.3.1.2 Provider transfers control of his/her/its management or operations to any third party, including Provider entering into a management contract with a physician practice management company which does not manage Provider as of the Effective Date of this Agreement, or there is a subsequent change in control of Provider's current management company; or
 - 9.3.1.3 Provider acquires or controls any other medical practice or entity or is in any manner otherwise acquired or controlled by any other party, whether by purchase, merger, consolidation, alliance, joint venture, partnership, association or expansion; or

- 9.3.1.4 Provider otherwise changes his/her/its locations, business or operations, or business or corporate form or status; or
- 9.3.1.5 Provider creates or otherwise operates a licensed health maintenance organization or commercial health plan (whether such creation or operation is direct or through a Provider affiliate).
- 9.3.2 Notwithstanding the termination provisions of Article VIII, and without limiting any of Amerigroup's rights as set forth elsewhere in this Agreement, Amerigroup shall have the right to terminate this Agreement upon thirty (30) days written notice to Provider if Amerigroup determines, that as a result of any of the transactions listed in subsection 9.3.1, Provider cannot satisfactorily perform the obligations of Provider hereunder, or cannot comply with one or more of the terms and conditions of this Agreement, including but not limited to the confidentiality provisions herein; or Amerigroup elects in its reasonable business discretion not to do business with Provider, the successor entity or new management company, as a result of one or more of the events as set forth in subsection 9.3.1.
- 9.3.3 Provider shall provide Amerigroup with thirty (30) days prior written notice of:
- 9.3.3.1 A change in providers who are part of the group, if applicable. Any new providers must meet Plan's credentialing requirements or other applicable standards of participation prior to being designated as a Participating Provider; or
- 9.3.3.2 Any new physical location, tax identification number, mailing address or similar demographic information; or
- 9.3.3.3 A change in operations, business or corporate form as set forth in subsections 9.3.1.1 through 9.3.1.5 above.
- 9.4 Definitions. Unless otherwise specifically noted, the definitions as set forth in Article I of this Agreement will have the same meaning when used in any attachment, the provider manual(s) and Policies.
- 9.5 Entire Agreement. This Agreement, exhibits, attachments and amendments hereto, together with any items incorporated herein by reference, constitute the entire understanding between the parties and supersedes all prior oral or written agreements between them with respect to the matters provided for herein. If there are any conflicts between any of the provisions of this Agreement and the provider manual(s), this Agreement will take precedence.
- 9.6 Force Majeure. Neither party shall be deemed to be in violation of this Agreement if such party is prevented from performing any of his/her/its obligations hereunder for any reason beyond his/her/its reasonable control, including without limitation, acts of God, natural or man-made disasters, acts of any public enemy, statutory or other laws, regulations, rules, orders, or actions of the federal, state, or local government or any agency thereof.
- 9.7 Compliance with Regulatory Requirements. Amerigroup and Provider agree to comply with all applicable Regulatory Requirements, as amended from time to time, relating to their obligations under this Agreement, and maintain in effect all permits, licenses and governmental and board authorizations and approvals as necessary for business operations. Provider warrants that as of the Effective Date, he/she/it is and shall remain licensed and certified for the term of this Agreement in accordance with all Regulatory Requirements (including those applicable to utilization review and Claims payment) relating to the provision of Health Services to Members. Provider shall supply evidence of such licensure, compliance and certifications to Amerigroup upon request. If there is a conflict between this section and any other provision in this Agreement, then this section shall control.
- 9.7.1 In addition to the foregoing, Provider warrants and represents that at the time of entering into this Agreement, neither he/she/it nor any of his/her/its employees, contractors, subcontractors or agents are ineligible persons identified on the General Services Administrations' List of Parties Excluded from Federal Programs (available through the internet at <http://www.epls.gov/> or its successor), on the HHS/OIG List of Excluded Individuals/Entities (available through the internet at <http://www.oig.hhs.gov/fraud/exclusions.asp> or its successor), on an applicable state list of excluded providers, or as otherwise designated by federal or state authorities. Provider shall remain

continuously responsible for ensuring that its employees, contractors, subcontractors or agents are not ineligible persons. If Provider or any employees, subcontractors or agents thereof becomes an ineligible person after entering into this Agreement or otherwise fails to disclose his/her/its ineligible person status, Provider shall have an obligation to (1) immediately notify Amerigroup of such ineligible person status and (2) within ten (10) days of such notice, remove such individual from responsibility for, or involvement with, Provider's business operations related to this Agreement.

- 9.8 Governing Law. This Agreement shall be governed by and construed in accordance with the laws of the state where Amerigroup has its primary place of business, unless such state laws are otherwise preempted by federal law. However, coverage issues specific to a Health Benefit Plan are governed by the state laws where the Health Benefit Plan is issued, unless such state laws are otherwise preempted by federal law.
- 9.9 Intent of the Parties. It is the intent of the parties that this Agreement is to be effective only in regards to their rights and obligations with respect to each other; it is expressly not the intent of the parties to create any independent rights in any third party or to make any third party a third party beneficiary of this Agreement, except to the extent specified in the Payment in Full and Hold Harmless section of this Agreement, or in a Participation Attachment(s).
- 9.10 Non-Exclusive Participation. None of the provisions of this Agreement shall prevent Provider or Plan from participating in or contracting with any provider, preferred provider organization, health maintenance organization/health insuring corporation, or any other health delivery or insurance program. Provider acknowledges that Plan does not warrant or guarantee that Provider will be utilized by any particular number of Members.
- 9.11 Notice. Any notice required to be given pursuant to the terms and provisions of this Agreement shall be in writing and shall be delivered by hand, facsimile, electronic mail, or mail. Notice shall be deemed to be effective: (a) when delivered by hand, (b) upon transmittal when transmitted by facsimile transmission or by electronic mail, (c) upon receipt by registered or certified mail, postage prepaid, (d) on the next business day if transmitted by national overnight courier, or (e) if sent by regular mail, five (5) days from the date set forth on the correspondence. Unless specified otherwise in writing by a party, Amerigroup shall send Provider notice to an address that Amerigroup has on file for Provider, and Provider shall be send Amerigroup notice to Amerigroup's address as set forth on the signature page. Notwithstanding the foregoing, Amerigroup may post updates to its provider manual(s) and Policies on its web site.
- 9.12 Severability. In case any one or more of the provisions of this Agreement shall be invalid, illegal, or unenforceable in any respect, the remaining provisions shall be construed liberally in order to effectuate the purposes hereof, and the validity, legality and enforceability of the remaining provisions shall not in any way be affected or impaired thereby. If one or more provisions of the Agreement are invalid, illegal or unenforceable and an amendment to the Agreement is necessary to maintain its integrity, the parties shall make commercially reasonable efforts to negotiate an amendment to this Agreement and any attachments or addenda to this Agreement which could reasonably be construed not to contravene such statute, regulation, or interpretation. In addition, if such invalid, unenforceable or materially affected provision(s) may be severed from this Agreement and/or attachments or addenda to this Agreement without materially affecting the parties' intent when this Agreement was executed, then such provision(s) shall be severed rather than terminating the Agreement or any attachments or addenda to this Agreement.
- 9.13 Waiver. Neither the waiver by either of the parties of a breach of any of the provisions of this Agreement, nor the failure of either of the parties, on one or more occasion, to enforce any of the provisions of this Agreement, shall thereafter be construed as a waiver of any subsequent breach of any of the provisions of this Agreement.
- 9.14 Construction. This Agreement shall be construed without regard to any presumption or other rule requiring construction against the party causing this Agreement to be drafted.
- 9.15 Counterparts and Electronic Signatures.
- 9.15.1 This Agreement and any amendment hereto may be executed in two (2) or more counterparts, each of which shall be deemed to be an original and all of which taken together shall constitute one and the same agreement.
- 9.15.2 Either party may execute this Agreement or any amendments by valid electronic signature, and such signature shall have the same legal effect of a signed original.

Each party warrants that it has full power and authority to enter into this Agreement and the person signing this Agreement on behalf of either party warrants that he/she has been duly authorized and empowered to enter into this Agreement.

PROVIDER NETWORKS ATTACHMENT

As of the Effective Date of this Agreement, Provider will be designated as Participating Provider in the following:

Government Programs:

Health Benefit Plans issued pursuant to an agreement between Plan and Agency in which Members have access to a network of providers and receive an enhanced level of benefits when they obtain Covered Services from Participating Providers regardless of product licensure status. Provider participates in the following Networks which support such Health Benefit Plans:

Iowa Medicaid, Iowa Health and Wellness Plan and Healthy and Well Kids in Iowa (hawk-i)

**MEDICAID
PARTICIPATION ATTACHMENT TO THE
AMERIGROUP IOWA, INC.
PROVIDER AGREEMENT**

This is a Medicaid Participation Attachment ("Attachment") to the Amerigroup Provider ("Agreement"), entered into by and between Amerigroup and Provider and is incorporated into the Agreement.

**ARTICLE I
DEFINITIONS**

The following definitions shall apply to this Attachment. Terms not otherwise defined in this Attachment shall carry the meaning set forth in the Agreement.

"Clean Claim" means a claim that has no defect or impropriety (including any lack of required substantiating documentation) or particular circumstance requiring special treatment that prevents timely payment of the claim. It does not include a claim from a provider who is under investigation for fraud or abuse or a claim under review for medical necessity.

"Functionally Necessary" and "Functional Necessity" mean reasonable and necessary services to enable independent living such as assistance with activities of daily living and instrumental activities of daily living.

"Medicaid Program(s)" means, for purposes of this Attachment, a medical assistance provided under a Health Benefit Plan approved under Title XVI, Title XIX and/or Title XXI of the Social Security Act or any other federal or state funded program or product as designated by Amerigroup.

"Medicaid Covered Services" means, for purposes of this Attachment, only those Covered Services provided under Plan's Medicaid Program(s).

"Medicaid Member" means, for purposes of this Attachment, a Member who is enrolled in Plan's Medicaid Program(s).

"Medically Necessary/Medical Necessity" means those Covered Services that are, under the terms and conditions of the Government Contract, determined through Plan utilization management to be:

- (1) Appropriate and necessary for the symptoms, diagnosis or treatment of the condition of the Member;
- (2) Provided for the diagnosis or direct care and treatment of the condition of Member enabling the Member to make reasonable progress in treatment;
- (3) Within standards of professional practice and given at the appropriate time and in the appropriate setting;
- (4) Not primarily for the convenience of the Medicaid Member, the Medicaid Member's physician or other Participating Provider; and
- (5) The most appropriate level of Medicaid Covered Services, which can safely be provided. This definition is also expanded to include Functionally Necessary and Functional Necessity services and products that will keep a Medicaid Member as independent and living in their own environment. Historically, such services have been considered social services, community based services or local access resources. In an effort to maintain individuals in the community and not in licensed facilities, the term Medically Necessary will now include non-medical services, products and resources.

"State Agency" means the Iowa Department of Public Health (IDPH), the Iowa Department of Human Services (DHS) or other duly authorized state agency.

**ARTICLE II
SERVICES/OBLIGATIONS**

- 2.1 Participation-Medicaid Network. As a participant in Amerigroup's Medicaid Network, Provider will render Medicaid Covered Services to Medicaid Members enrolled in Amerigroup's Medicaid Network in accordance with the terms and conditions of the Agreement and this Attachment. Such Medicaid Covered Services provided shall be within the scope of Provider's licensure, expertise, and usual and customary range of services pursuant to the terms and conditions of the Agreement and this Attachment, and Provider shall be responsible to Amerigroup for his/her/its performance hereunder. Except as set forth in this Attachment or the Plan Compensation Schedule ("PCS"), all terms and conditions of the Agreement will apply to Provider's

participation in Amerigroup's Medicaid Network. The terms and conditions set forth in this Attachment are limited to the provision of and payment for Health Services provided to Medicaid Members.

- 2.2 Duties and Obligations to Medicaid Members. All of Provider's duties and obligations to Members set forth in the Agreement shall also apply to Medicaid Members. To the extent mandated by Regulatory Requirements, Provider shall ensure that Medicaid Members have access to 24 hour-per-day, 7 day-per-week urgent and Emergency Services, as defined in the PCS. Provider shall not discriminate in the acceptance of Medicaid Members for treatment, and shall provide to Medicaid Members the same access to services, including but not limited to, hours of operation, as Provider gives to all other patients. Provider shall furnish Amerigroup with at least ninety (90) days prior written notice if Provider plans to close its practice to new patients or ceases to continue in Provider's current practice.
- 2.3 Provider Responsibility. Amerigroup shall not be liable for, nor will it exercise control or direction over, the manner or method by which Provider provides Health Services to Medicaid Members. Provider shall be solely responsible for all medical advice and services provided by Provider to Medicaid Members. Provider acknowledges and agrees that Amerigroup may deny payment for services rendered to a Medicaid Member which it determines are not Medically Necessary, are not Medicaid Covered Services under the applicable Medicaid Program(s), or are not otherwise provided or billed in accordance with the Agreement and/or this Attachment. A denial of payment or any action taken by Amerigroup pursuant to a utilization review, referral, discharge planning program or claims adjudication shall not be construed as a waiver of Provider's obligation to provide appropriate Health Services to a Medicaid Member under applicable Regulatory Requirements and any code of professional responsibility. However, this provision does not require Provider to provide Health Services if Provider objects to such service on moral or religious grounds.
- 2.4 Reporting Fraud and Abuse. Provider shall cooperate with Amerigroup's anti-fraud compliance program. If Provider identifies any actual or suspected fraud, abuse or misconduct in connection with the services rendered hereunder in violation of Regulatory Requirements, Provider shall promptly report such activity directly to the compliance officer of Amerigroup or through the compliance hotline in accordance with the provider manual(s). In addition, Provider is not limited in any respect in reporting other actual or suspected fraud, abuse, or misconduct to Amerigroup.
- 2.5 Plan Marketing/Information Requirements. Provider agrees to abide by Plan's marketing/information requirements. Provider shall forward to Plan for prior approval all flyers, brochures, letters and pamphlets Provider intends to distribute to Medicaid Members concerning its payor affiliations, or changes in affiliation or relating directly to the Medicaid population. Provider will not distribute any marketing or recipient informing materials without the consent of Plan or the applicable State Agency.
- 2.6 Schedule of Benefits and Determination of Medicaid Covered Services. Amerigroup shall make available upon Provider's request schedules of Medicaid Covered Services for applicable Medicaid Program(s), and will notify Provider in a timely manner of any material amendments or modifications to such schedules.
- 2.7 Revocation of Delegated Activities. Amerigroup may revoke delegation of any activities and reporting responsibilities or impose other sanctions if Provider's performance is inadequate. Such revocation shall be consistent with the termination provisions of this Attachment.
- 2.8 Reporting Requirements. Provider agrees to comply with the reporting requirements listed in 42 CFR § 447.26(d) as a condition of payment from Amerigroup.
- 2.9 Third Party Liability. Provider agrees to identify third party liability coverage, including Medicare and long-term care insurance as applicable, and except as otherwise required, seek such third party liability payment before submitting claims to Amerigroup.
- 2.7 Medicaid Member Verification. Provider shall establish a Medicaid Member's eligibility for Medicaid Covered Services prior to rendering services, except in the case of an Emergency Medical Condition, as defined in the PCS, where such verification may not be possible. In the case of an Emergency Medical Condition, Provider shall establish a Medicaid Member's eligibility as soon as reasonably practical. Plan shall provide a system for Providers to contact Plan to verify a Medicaid Member's eligibility 24 hours a day, 7 days per week. Nothing contained in this Attachment or the Agreement shall, or shall be construed to, require advance notice, coverage verification, or pre-authorization for Emergency Services, as defined in the PCS, provided in accordance with the federal Emergency Medical Treatment and Active Labor Act ("EMTALA") prior to Provider's rendering such Emergency Services.

- 2.10 Hospital Affiliation and Privileges. To the extent required under Plan's credentialing requirements, Provider or any Participating Providers employed by or under contract or subcontract with Provider shall maintain privileges to practice at one or more of Amerigroup's participating hospitals. In addition, in accordance with the Change in Provider Information Provider Section of the Agreement, Provider shall immediately notify Amerigroup in the event any such hospital privileges are revoked, limited, surrendered, or suspended at any hospital or health care facility.
- 2.11 Participating Provider Requirements. If Provider is a group provider, Provider shall require that all Participating Providers employed by or under contract subcontract with Provider comply with all terms and conditions of the Agreement and this Attachment. Notwithstanding the foregoing, Provider acknowledges and agrees that Amerigroup is not obligated to accept as Participating Providers all providers employed by or under contract or subcontract with Provider.
- 2.12 Coordinated and Managed Care. Provider shall participate in utilization management and care management programs designed to facilitate the coordination of services as referenced in the applicable provider manual(s).
- 2.13 Representations and Warranties. Provider represents and warrants that all information provided to Amerigroup is true and correct as of the date such information is furnished, and that Provider is unaware of any undisclosed facts or circumstances that would make such information inaccurate or misleading. Provider further represents and warrants that Provider: (i) is legally authorized to provide the services contemplated hereunder; (ii) is qualified to participate in all applicable Medicaid Program(s); (iii) is not in violation of any licensure or accreditation requirement applicable to Provider under Regulatory Requirements; (iv) has not been convicted of bribery or attempted bribery of any official or employee of the jurisdiction in which Provider operates, nor made an admission of guilt of such conduct which is a matter of record; (v) is capable of providing all data related to the services provided hereunder in a timely manner as reasonably required by Amerigroup to satisfy its internal requirements and Regulatory Requirements, including, without limitation, data required under the Health Employer Data and Information Set ("HEDIS") and National Committee for Quality Assurance ("NCQA") requirements; and (vi) is not, to Provider's best knowledge, the subject of an inquiry or investigation that could foreseeably result in Provider failing to comply with the representations set forth herein. In accordance with the Change in Provider Information Section of the Agreement, Provider shall immediately provide Amerigroup with written notice of any material changes to such information.

ARTICLE III COMPENSATION AND AUDIT

- 3.1 Submission and Adjudication of Medicaid Claims. Unless otherwise instructed, or required by Regulatory Requirements, Provider shall submit Claims to Plan, using appropriate and current Coded Service Identifier(s), within ninety (90) days from the date the Health Services are rendered or Plan may refuse payment. If Plan is the secondary payor, the ninety (90) day period will not begin until Provider receives notification of primary payor's responsibility.
- 3.1.1 Provider agrees to provide to Amerigroup, unless otherwise instructed, at no cost to Amerigroup, Plan or the Medicaid Member, all information necessary for Plan to determine its payment liability. Such information includes, without limitation, accurate and Clean Claims for Covered Services. Once Amerigroup determines Plan has any payment liability, all Clean Claims will be paid in accordance with the terms and conditions of the Medicaid Member's Health Benefit Plan, the PCS, and the provider manual(s).
- 3.1.2 Provider agrees to submit Claims in a format consistent with industry standards and acceptable to Plan either (a) electronically through electronic data interchange ("EDI"), or (b) if electronic submission is not available, utilizing paper forms as defined by the National Uniform Claim Committee ("NUCC").
- 3.1.3 If Amerigroup or Plan asks for additional information so that Plan may process the Claim, Provider must provide that information within sixty (60) days, or before the expiration of the ninety (90) day period referenced in section 3.1 above, whichever is longer.

- 3.1.4 Amerigroup shall adjudicate a Clean Claim, in accordance with, and within the time frames under, the Regulatory Requirements applicable to Plan's Medicaid Program(s).
- 3.2 Medicaid Affiliate Services. Provider acknowledges that Amerigroup is affiliated with health plans that offer similar benefits under similar programs as the programs covered hereunder ("Medicaid Affiliates"). The parties acknowledge that Provider is not a Participating Provider in Medicaid Affiliate's Network for purposes of rendering services to Medicaid Members. However, in the event Provider treats a Medicaid Member of a Medicaid Affiliate, subject to Regulatory Requirements, Provider shall accept as payment in full the rates established by the Medicaid Affiliate's state program governing care to Medicaid Members. Such services must be Medicaid Covered Services under the Medicaid Affiliate's state program, and shall require prior authorization, except for Emergency Services and services for which a Medicaid Member is entitled to self-refer. Upon request, Amerigroup shall coordinate and provide information as necessary between Provider and Medicaid Affiliate for services rendered to Medicaid Member.
- 3.3 Audit for Compliance with CMS Guidelines. Notwithstanding any other terms and conditions of the Agreement, this Attachment, or the PCS, Plan has the same rights as CMS, to review and/or Audit and, to the extent necessary recover payments on any claim for Medicaid Covered Services rendered pursuant to this Attachment and the Agreement to ensure compliance with CMS Regulatory Requirements.
- 3.3.1 Provider agrees to cooperate with Amerigroup audits and monitoring of Provider's data, data submission and performance as well as any additional oversight mechanisms which monitor performance and compliance with Government Contract requirements on an ongoing basis. Provider further agrees to cooperate with formal reviews which shall be conducted at least quarterly.
- 3.3.2 Provider agrees to cooperate with DHS audits of Provider's data. Whenever deficiencies or areas of improvement are identified, Amerigroup and Provider shall take corrective action. Amerigroup shall provide to DHS the findings of all Provider performance monitoring and reviews upon request and shall notify the DHS any time Provider is placed on corrective action.
- 3.4 Physician-Hospital Organizations. If Provider is a physician-hospital organization or another entity that accepts financial risk for services that Amerigroup does not directly provide, Provider must monitor the financial stability of subcontractor(s) whose payments are equal to or greater than five percent (5%) of premium/revenue. Provider must provide Amerigroup at least quarterly with requested information which shall be used to monitor Provider's performance including but not limited to the following: (i) a statement of revenues and expenses; (ii) a balance sheet; (iii) cash flows and changes in equity/fund balance; and (iv) incurred but not received (IBNR) estimates.
- 3.5 Quality Improvement. Provider shall implement quality improvement goals and performance improvement activities specific to the types of services provided by Provider.
- 3.6 Encounter Data. If Provider is paid on a capitated basis, Provider shall submit encounter data within ninety (90) days of the date of service.
- 3.7 Critical Incident Reporting. Provider agrees to: (i) report critical incidents; (ii) respond to critical incidents; (iii) document critical incidents; and (iv) to cooperate with any investigation conducted by the Amerigroup or an outside agency.
- 3.8 Enforcement of §6032 of the 2005 Deficit Reduction Act (DRA). If Provider receives one million (\$1,000,000) dollars or more in Medicaid payments in a federal fiscal year, Provider shall have written policies for all employees, including management, and for all employees of any contractor or agent, that provide all detailed information required by the DRA.

ARTICLE IV COMPLIANCE WITH FEDERAL REGULATORY REQUIREMENTS

- 4.1 Federal Funds. Provider acknowledges that payments Provider receives from Plan to provide Medicaid Covered Services to Medicaid Members are, in whole or part, from federal funds. Therefore, Provider and any of his/her/its subcontractors are subject to certain laws that are applicable to individuals and entities receiving federal funds, which may include but are not limited to, Title VI of the Civil Rights Act of 1964 as implemented by 45 CFR Part 84; the Age Discrimination Act of 1975 as implemented by 45 CFR Part 91; the Americans with Disabilities Act; the Rehabilitation Act of 1973, lobbying restrictions as implemented by

45 CFR Part 93 and 31 USC 1352, Title IX of the Educational Amendments of 1972, as amended (30 U.S.C. sections 1681, 1783, and 1685-1686) and any other regulations applicable to recipients of federal funds.

- 4.2 Surety Bond Requirement. If Provider provides home health services or durable medical equipment, Provider shall comply with all applicable provisions of Section 4724(b) of the Balanced Budget Act of 1997, including, without limitation, any applicable requirements related to the posting of a surety bond.
- 4.3 National Provider Identifier (NPI) Number. Provider shall maintain an NPI number which shall be consistent with 45 CFR 162.410.
- 4.4 Laboratory Compliance. If Provider renders lab services in the office, it must maintain a valid Clinical Laboratory Improvement Amendments ("CLIA") certificate for all laboratory testing sites and comply with CLIA regulations at 42 CFR Part 493 for all laboratory testing sites performing Health Services pursuant to this Attachment.

ARTICLE V COMPLIANCE WITH STATE REGULATORY REQUIREMENTS

- 5.1 Indemnification of State. In addition to the Indemnification provision of the Agreement, Provider shall indemnify and hold harmless the State, its agencies, officers, and employees from all claims and suits, including court costs, attorney's fees, and other expenses, brought because of injuries or damages received or sustained by any person, persons, or property that is caused by any act or omission of Provider.
- 5.2 Medicaid Hold Harmless. Provider agrees that Plan's payment constitutes payment in full for any Medicaid Covered Services rendered to Medicaid Members. Provider agrees it shall not seek payment from the Medicaid Member, his/her representative or the State for any Health Services rendered pursuant to this Attachment, with the exception of Cost Shares, if any, or payment for non-Medicaid Covered Services otherwise requested by, and provided to, the Medicaid Member if the Medicaid Member agrees in writing to pay for the service prior to the service being rendered. The form of agreement must specifically state the admissions, services or procedures that are non-Medicaid Covered Services and the approximate amount of out of pocket expense to be incurred by the Medicaid Member. Provider agrees not to bill Medicaid Members for missed appointments while enrolled in the Medicaid Program(s). This provision shall remain in effect even in the event Plan becomes insolvent.
- 5.3 State Agency Contract. Provider shall comply with the terms applicable to providers set forth in the Iowa Department of Human Services Request for Proposal Iowa High Quality Healthcare Initiative RFP# MED-16-009RFP (RFP), the Government Contract, including incorporated documents, between Plan and the Agency, which applicable terms are incorporated herein by reference. Plan agrees to provide Provider with a description of the applicable terms upon request.
- 5.4 Mental Health Information. Provider agrees to maintain the confidentiality of mental health information by cooperating with and implementing policies which allow release of mental health information only as allowed by Iowa Code §228.
- 5.5 Substance Abuse Information. Provider shall protect and maintain the confidentiality of substance abuse information, allowing the release of substance abuse information only in compliance with policies set forth in 42 CFR Part 2 and other applicable Regulatory Requirements.
- 5.6 I-SMART Data. If Provider provides substance abuse services, Provider shall report I-SMART data on all Medicaid Members receiving substance abuse services regardless of source of payment .
- 5.7 Dual Eligibles. Provider agrees to provide Medically Necessary Covered Services to Members who are also eligible for Medicare if the service is not covered by Medicare. Provider agrees that Covered Services provided under this Agreement are delivered without charge to Members who are dually eligible for Medicare and Medicaid.
- 5.8 Nursing Facility Providers.

If Provider is a nursing facility, Provider shall:

- 5.8.1 Promptly notify Amerigroup of a Medicaid Member's admission or request for admission to the nursing facility as soon as Provider has knowledge of such admission or request for admission;
- 5.8.2 Notify Amerigroup immediately if Provider is considering discharging a Member and agrees to consult with the Medicaid Member's care coordinator;
- 5.8.3 Notify the Medicaid Member and/or the Medicaid Member's representative (if applicable) in writing prior to discharge in accordance with Regulatory Requirements;
- 5.8.4 Collect all applicable patient liability amounts from Medicaid Members;
- 5.8.5 Notify Amerigroup of any change in a Medicaid Member's medical or functional condition that could impact the Medicaid Member's level of care eligibility for the currently authorized level of nursing facility services;
- 5.8.6 Comply with federal Preadmission Screening and Resident Review (PASRR) requirements to provide or arrange to provide specialized services and all applicable Iowa Law governing admission, transfer and discharge policies; and
- 5.8.7 Provider agrees that if Provider is involuntarily decertified by the State of Iowa or CMS, the Agreement and this Attachment will automatically be terminated in accordance with federal requirements.
- 5.9 Home and Community Based Services (HCBS) Providers:
- If Provider is an HCBS Provider, Provider agrees:
- 5.9.1 To provide at least thirty (30) days advance notice to Amerigroup when Provider is no longer willing or able to provide services to a Medicaid Member and to cooperate with the Medicaid Member's care coordinator to facilitate a seamless transition to alternate providers;
- 5.9.2 In the event that a HCBS provider change is initiated for a Medicaid Member, regardless of any other provision in the Agreement, Provider shall continue to provide Medicaid Covered Services to the Medicaid Member in accordance with the Medicaid Member's plan of care until the Medicaid Member has been transitioned to a new provider, as determined by Amerigroup, or as otherwise directed by Amerigroup, which may exceed thirty (30) days from the date of notice to Amerigroup;
- 5.9.3 To immediately report any deviations from a Medicaid Member's service schedule to the Medicaid Member's care coordinator; and
- 5.9.4 To comply with all child and dependent adult abuse reporting requirements.
- 5.10 Medical Records. In addition to the Plan Access to and Requests for Provider Records Section of the Agreement, Provider shall comply with Amerigroup's policies and procedures for maintaining medical records content and documentation in compliance with the provisions of Iowa Admin. Code 441 Chapter 79.3 and all other applicable Regulatory Requirements. Provider shall assure that its records document all medical services that the Medicaid Member receives in accordance with Regulatory Requirements. Provider shall maintain Medicaid Members' medical records in a detailed and comprehensive manner that conforms to good professional medical practice, permits effective professional medical review and medical audit processes, and facilitates an accurate system for follow-up treatment. Medical records must be legible, signed, dated and maintained as required by Regulatory Requirements. Provider agrees to provide a copy of a Medicaid Member's medical record upon reasonable request by the Medicaid Member at no charge.
- 5.11 Provider Availability. Provider shall be available to Medicaid Members twenty-four (24) hours-a-day, seven (7) days-a-week, and shall comply with corrective actions implemented by Amerigroup if Provider is identified through an audit as failing to meet this standard.
- 5.12 Cultural Competency. Provider shall ensure that Medicaid Covered Services rendered to Medicaid Members, both clinical and non-clinical, are accessible to all Medicaid Members, including those with limited English proficiency or reading skills, with diverse cultural and ethnic backgrounds, the homeless, and Medicaid Members with physical and mental disabilities. Provider must provide information regarding

treatment options in a culturally-competent manner, including the option of no treatment. Provider must ensure that Medicaid Members with disabilities have effective communications with participants throughout the health system in making decisions regarding treatment options.

- 5.13 Background Checks. Providers shall comply with state requirements for employee background checks and shall disclose any staff providing services who have ever had a founded child or dependent adult abuse report, or been convicted of a felony. Staff providing services shall include anyone having contact with Medicaid Members or Medicaid Member data. Provider shall disclose any such report in a timely manner in a written statement to Amerigroup within ten (10) days from the date of conviction, regardless of appeal rights.

ARTICLE VI TERMINATION

- 6.1 Termination of Medicaid Participation Attachment. Either party may terminate this Attachment without cause by giving at least one hundred and eighty (180) days prior written notice of termination to the other party.
- 6.2 Termination of Government Contract. If a Government Contract between Agency and Amerigroup terminates or expires or ends for any reason or is modified to eliminate a Medicaid Program, this Attachment shall have no further or effect with respect to the applicable Medicaid Program.
- 6.3 Effect of Termination. Following termination of this Attachment, the remainder of the Agreement shall continue in full force and effect, if applicable.

ARTICLE VII GENERAL PROVISIONS

- 7.1 Regulatory Amendment. Notwithstanding the Amendment Section in the Agreement, this Attachment shall be automatically modified to conform to required changes to Regulatory Requirements related to Medicaid Program(s) without the necessity of executing written amendments.
- 7.2 Inconsistencies. In the event of an inconsistency between terms and conditions of this Attachment and the terms and conditions in the Agreement, the terms and conditions of this Attachment shall govern. Except as otherwise set forth herein, all other terms and conditions of the Agreement remain in full force and effect.
- 7.3 Subcontractor Requirements. In addition to the Provider Subcontractors Section in the Agreement, Provider certifies that neither it nor its principals nor any of its subcontractors are presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from entering into this Attachment by any Federal agency or by any department, agency or political subdivision of the State. For purposes of this Attachment, "principal" means an officer, director, owner, partner, key employee, or other person with primary management or supervisory responsibilities, or a person who has a critical influence or substantive control over Provider's operations (42 CFR 438.610). Provider agrees to comply with requirements set forth in 42 CFR 455.100 through 455.106 regarding disclosure by providers of ownership and control information and disclosure of information on a provider's owners' and other persons' conviction of criminal offenses against Medicare, Medicaid, or Title XX services program ("Disclosures") and will agree to provide required disclosures at the time of initial contract, upon contract renewal, and/or upon request by the Amerigroup. Provider further agrees to notify Amerigroup within fourteen (14) days of any changes to the Disclosures.
- 7.4 Survival of Attachment. Provider further agrees that: (1) the hold harmless and continuation of care sections shall survive the termination of this Attachment or disenrollment of the Medicaid Member; and (2) these provisions supersede any oral or written contrary agreement now existing or hereafter entered into between Provider and an Medicaid Member or persons acting on their behalf that relates to liability for payment for, or continuation of, Medicaid Covered Services provided under the terms and conditions of these provisions.

PLAN COMPENSATION SCHEDULE ("PCS")

**ARTICLE I
DEFINITIONS**

"Capitation" means the amount of pre-payment made by Amerigroup to a provider or management services organization on a per member per month basis for either specific services or the total cost of care for Covered Services. Individual services billed shall not be reimbursed separately.

"Case Rate" means the all-inclusive Amerigroup Rate for an entire admission or one outpatient encounter for Covered Services. Individual services billed shall not be reimbursed separately.

"Coded Service Identifier(s)" means a listing of descriptive terms and identifying codes, updated from time to time by CMS or other industry source, for reporting Health Services on the CMS 1500 claim form or its successor. The codes include but are not limited to, American Medical Association Current Procedural Terminology ("CPT[®]-4"), CMS Healthcare Common Procedure Coding System ("HCPCS"), International Classification of Diseases, 9th Revision, Clinical Modification ("ICD-9-CM"), and National Drug Code ("NDC") or their successors.

"DRG" means Diagnosis Related Group or its successor as established by CMS or other grouper, including but not limited to, a state mandated grouper or other industry standard grouper.

"DRG Rate" means the all-inclusive dollar amount which is multiplied by the appropriate DRG Weight to determine the Amerigroup Rate for Covered Services. Individual services billed shall not be reimbursed separately.

"DRG Weight" means the CMS weight for each DRG as published in the Federal Register or other weights used by Amerigroup, including but not limited to, weights for the specific DRG grouper methodology that is utilized.

"Eligible Charges" means charges billed by Provider subject to conditions and requirements which make the service eligible for reimbursement. Eligibility for reimbursement of the service is dependent upon application of the following conditions and requirements: Member program eligibility, Provider program eligibility, benefit coverage, authorization requirements, provider manual guidelines, Amerigroup administrative, clinical and reimbursement policies, and code editing logic. The allowed amount reimbursed for the eligible charge is based on the Amerigroup Rate after application of Cost Shares and coordination of benefits. Amerigroup shall not reimburse Provider for services or items Provider receives and/or provides free of charge.

"Emergency Condition" means a medical condition manifesting itself by acute symptoms of sufficient severity (including severe pain) such that a prudent layperson, with an average knowledge of health and medicine, could reasonably expect the absence of immediate medical attention to result in serious jeopardy to the health of the individual, or in the case of a pregnant woman, the health of the woman or her unborn child; serious impairment to bodily functions; or serious dysfunction of any bodily organ or part.

"Emergency Services" means those Covered Services furnished by a provider qualified to furnish emergency services, and which are needed to evaluate or treat an Emergency Condition.

"Encounter Data" means Claims information submitted by Provider under capitated or risk-sharing arrangements, for rendered to Members for Covered Services.

"Fee Schedule(s)" means the complete listing of Amerigroup Rate(s) for specific services that is payment for each unit of service allowed based on applicable Coded Service Identifier(s) for Covered Services.

"Global Case Rate" means the all-inclusive Amerigroup Rate which includes facility, professional and physician services for specific Coded Service Identifier(s) for Covered Services. Individual services billed shall not be reimbursed separately.

"Percentage Rate" means the Amerigroup Rate that is a percentage of Eligible Charges billed by Provider for

Covered Services.

"Per Diem Rate" means the Amerigroup Rate that is the all-inclusive fixed payment for Covered Services rendered on a single date of service. Individual services billed shall not be reimbursed separately.

"Per Hour Rate" means the Amerigroup Rate that is payment based on an increment of time for Covered Services.

"Per Unit Rate" means the Amerigroup Rate that is payment for each unit of service allowed based on applicable Coded Service Identifier(s) for Covered Services.

"Per Visit Rate" means the Amerigroup Rate that is the all-inclusive fixed payment for one encounter for Covered Services. Individual services billed shall not be reimbursed separately.

"Provider Charges" means the regular, uniform rate or price Provider determines and submits to Amerigroup as charges for Health Services provided to Members. Such Provider Charges shall be no greater than the rate or price Provider submits to any person or other health care benefit payor for the same Health Services provided, regardless of whether Provider agrees with such person or other payor to accept a different rate or price as payment in full for such services.

ARTICLE II GENERAL PROVISIONS

Billing Form and Claims Reporting Requirements. Provider shall submit all Claims on a CMS 1500 claim form or its successor. Provider shall report all Health Services in accordance with the Coded Service Identifier(s) reporting guidelines and instructions. Plan audits that result in identification of Health Services that are not reported in accordance with the Coded Service Identifier(s) guidelines and instructions, will be subject to recovery through remittance adjustment or other recovery action as may set forth in the provider manual(s).

Claim Submissions for Pharmaceuticals. Each Claim submitted for a pharmaceutical product must include standard Coded Service Identifier(s), a National Drug Code ("NDC") number of the covered medication, a description of the product, and dosage and units administered.

Coding Updates. Coded Service Identifier(s) used to define specific rates are updated from time to time to reflect new, deleted or replacement codes. Amerigroup shall use commercially reasonable efforts to update all applicable Coded Service Identifiers within sixty (60) days of release by CMS or other applicable authority. If an update is delayed beyond the sixty (60) days, Amerigroup shall notify Provider. If Provider bills a revised code prior to the effective date of the revised code, the Claim will be rejected and Provider shall resubmit Claim with correct code. Claims processed prior to the implementation of the revised codes shall not be reprocessed. In addition, Claims with codes which have been deleted will be rejected.

Coding Software. Updates to Amerigroup's Claims processing filters, code editing software, any edits related thereto, as a result of changes in Coded Service Identifier(s) reporting guidelines and instructions, shall take place automatically and do not require any notice, disclosure or amendment to Provider.

Modifiers. All appropriate modifiers must be used in accordance with standard billing guidelines, if applicable.

New/Expanded Service or New/Expanded Technology. In accordance with the Change in Scope and Status provision of the Agreement, as of the Effective Date of this Agreement, any New/Expanded Service or New/Expanded Technology (defined below) is not reimbursable under this Agreement. Notwithstanding the foregoing, Provider may submit the following documentation to Amerigroup at least sixty (60) days prior to the implementation of any New/Expanded Service or New/Expanded Technology for consideration as a reimbursable service: (1) a description of the New/Expanded Service or New/Expanded Technology; (2) Provider's proposed charge for the New/ Expanded Service or New/ Expanded Technology; (3) such other reasonable data and information required by Amerigroup to evaluate the New/Expanded Service or New/Expanded Technology. In addition, Amerigroup may also need to obtain approval from applicable Agency prior to Amerigroup making determination that New/Expanded Service or New/Expanded Technology can be considered a reimbursable service. If Amerigroup agrees that the New/Expanded Service or New/ Expanded Technology may be reimbursable under this

Agreement, then Amerigroup shall notify Provider, and both parties agree to negotiate in good faith, a new Amerigroup Rate for the New/Expanded Service or New/Expanded Technology within sixty (60) days of Amerigroup's notice to Provider. If the parties are unable to reach an agreement on a new Amerigroup Rate for the New/Expanded Service or New/Expanded Technology before the end of the sixty (60) day period, then such New/Expanded Service or New/Expanded Technology shall not be reimbursed by Amerigroup, and the Payment in Full and Hold Harmless provision of this Agreement shall apply.

a) "New/Expanded Service" shall be defined as a Health Service: (a) that Provider was not providing to Members as of Effective Date of this Agreement and; (b) for which there is not a specific Amerigroup Rate as set forth in this PCS.

b) "New/Expanded Technology" shall be defined as a technological advancement in the delivery of a Covered Service which results in a material increase to the cost of such service. New/ Expanded Technology shall not include a new device, or implant that merely represents a new model or an improved model of a device or implant used in connection with a service provided by Provider as of the Effective Date of this Agreement.

Non-priced Codes for Covered Services. Amerigroup reserves the right to price non-priced codes for Covered Services, including but not limited to, Not Otherwise Classified Codes ("NOC"), Not Otherwise Specified ("NOS"), Miscellaneous, and Individual Consideration Codes ("IC"). If a code for a Covered Service (i) does not have a published dollar amount on the then current applicable Plan, State or CMS Fee Schedule, (ii) has a zero dollar amount listed, or (iii) requires manual pricing, then such code shall be reimbursed at a rate established by Amerigroup for such Covered Service. Amerigroup may require the submission of medical records, invoices, or other documentation prior to the adjudication of such Claim(s). Notwithstanding the foregoing, any Covered Services not specified in this PCS or in the Fee Schedule(s) are not reimbursable.

Updates to Amerigroup Rate(s) Based on External Sources. Unless otherwise required by Regulatory Requirements, Amerigroup shall use commercially reasonable efforts to update the Amerigroup Rate(s) based on any Agency, vendor, or other entity ("External Sources") no later than sixty (60) days after Amerigroup's receipt of the final rate change(s) from such External Sources, or on the effective date of such final rate change(s), whichever is later. Examples include, but are not limited to, Medicare fee schedules and rates, state Medicaid fee schedules and rates. Notwithstanding the foregoing, Amerigroup shall use commercially reasonable efforts to load such payment system changes as quickly as practicable following the release date of such changes. Claims processed prior to the implementation of the new Amerigroup Rate(s) in Amerigroup's payment system shall not be reprocessed. In the event that reprocessing of Claims is required by Regulatory Requirements, and such reprocessing could result in a potential under and/or over payment to a Provider, Plan may reconcile the Claim adjustments to determine the remaining amount Provider owes Plan, or that Plan owes to Provider. Any resultant overpayment recoveries (i.e. Provider owes Plan) shall occur automatically without advance notification to Provider.

Tax Assessment and Penalties. The Amerigroup Rates in this Agreement include all sales and use taxes and other taxes on Provider revenue, gross earnings, profits, income and other taxes, charges or assessments of any nature whatsoever (together with any related interest or penalties) now or hereafter imposed against or collectible by Provider with respect to Covered Services, unless otherwise required by Agency pursuant to Regulatory Requirement. Neither Provider nor Plan shall add any amount to or deduct any amount from the Amerigroup Rates, whether on account of taxes, assessments, tax penalties or tax exemptions.
