RE: Response to MED-16-009 Iowa High Quality Healthcare Initiative

Dear Ms. Lindgren:

Amerigroup Iowa, Inc. (Amerigroup) is pleased to submit this proposal in response to MED-16-009, the Iowa High Quality Healthcare Initiative (Iowa Initiative). Amerigroup is a wholly owned subsidiary of Anthem, Inc. (Anthem). All references throughout this proposal to “Anthem” refer to this parent entity. Please note that our parent organization underwent a legal name change on December 3, 2014. As such, attachments for requested documents related to our parent organization may also reference the prior legal name of this entity, WellPoint, Inc. (WellPoint).

As requested, we have provided one original and six identical copies of the original, along with a USB Drive containing an electronic copy of the Bid Proposal and a separate USB Drive containing the financial reports. We have also provided a redacted copy of the Bid Proposal labeled as a “public copy.”

In submitting this proposal, we provide the following assurances:

1. Amerigroup will furnish the services required by enrollees as promptly as is appropriate, and the services will meet the Agency’s quality standards.
2. Amerigroup acknowledges that the capitation rates will cover all services required by enrollees and meet the Medical Loss Ratio requirements as listed in Attachment 1: Scope of Work, Section 2.7.
3. Amerigroup acknowledges that liquidated damages, as described in Exhibit E to Attachment 1: Scope of Work, may be imposed for failure to perform as set forth in this RFP.
4. Amerigroup acknowledges that the contract will be performance based, and both incentives and disincentives may apply to the Contractor’s performance as set forth in this RFP.

In addition, Amerigroup has enclosed the required certifications, executed by the undersigned. In executing these certifications, Amerigroup has relied upon the completeness and accuracy of information provided by the Agency through the RFP and subsequent amendments received as of May 18, 2015.

Executive Summary

Amerigroup is part of an organization that is the nation’s leading provider of healthcare solutions for state-sponsored programs. Together with our affiliate health plans, we serve more than 5.2 million people in state-sponsored health plans across 19 states. We bring deep organizational expertise and passion for serving individuals with complex needs through a variety of state-sponsored programs. The following are some of our additional qualifications for providing high-quality healthcare in Iowa:

- **Experience launching new programs with minimal disruption to participants and stakeholders.** During the last 24 years, Amerigroup’s affiliate health plans have implemented more than 100 publicly funded healthcare programs, service area expansions, and program enhancements. In this time, we have never missed an operational start date. Indeed, in our last four implementations, we went live an average of less than six months after kickoff, with two of the implementations within four months. ***For this reason, based upon these and other successful implementation experiences, we are confident that we can meet a January 1, 2016, go-live timeframe in Iowa.*** We analyze each

implementation and apply those learnings in our next opportunity, continually improving our processes. Moreover, we have been particularly successful in transitioning complex programs and populations from fee-for-service to a managed care environment and look forward to bringing this expertise to the Iowa Initiative, as we have recently done in Kansas, Indiana, Tennessee, and Kentucky.

- **Expertise in implementation of large initiatives that support multiple and diverse membership populations.** As an organization, Amerigroup is one of the few managed care organizations with the experience, capacity, infrastructure, and proven processes to tackle an initiative the size and complexity of the Iowa Initiative. In one 15-month period, our affiliates managed the start-up of three Medicaid health plans—Kansas, Louisiana, and Washington—representing more than 256,000 new members, and these three implementations were completed without any disruption in service within our existing health plans. In fact, our call center abandonment rate during those 15 months of intense activity was just 1.04 percent.
- **Fully integrated care coordination with a holistic and member-centric focus.** Our integrated care and service models and systems deliver superior quality through superior coordination. Outside of potential ACO partnerships, *Amerigroup* will directly provide all case management and care coordination for Iowa Initiative members, allowing us to fully integrate case management to address each individual’s holistic needs through one care plan and a carefully synchronized team of case management experts by leveraging technology tools that link all team members and organize activities and interventions. As such, the physical health, behavioral health, and long term services and supports (LTSS) needs of our members are managed by an interdisciplinary team of people. Our person-centered approach addresses member preferences and goals regarding their quality of life and life stressors including employment, housing, community inclusion and family supports. Our provider network includes specialized clinicians and non-clinicians utilize best practices with field based practices to meet the unique physical health, behavioral health, and social support needs of each of our members. This holistic approach is designed to increase integration and decrease fragmentation across systems of care improving member outcomes and quality of life.
- **Expertise across all Medicaid populations, including those traditionally considered complex.** Amerigroup operates best-in-class programs for each population from many years’ experience. Our affiliates successfully manage all populations and services referenced in this RFP in multiple states in a capitated environment. Our affiliates’ national experience with populations requiring specialized services includes, but is not limited to:
 - 17 years of experience as *LTSS experts*, coordinating the services and supports for more than 200,000 members in eight states.
 - Currently serving more than 160,000 *dual-eligible members* across 11 states.
 - Recently implementing *home and community-based services*, training, and supported employment services in Kansas for individuals with intellectual and/or developmental disabilities.
 - Managing Indiana’s HIP 2.0, an *ACA Medicaid expansion alternative* that includes 19 different benefit packages.
 - Managing *all behavioral health services in-house* as an integrated function. The programs in 16 of our 19 affiliate health plans include behavioral health services, and we will add two more that include behavioral health by the beginning of 2016. These services range from crisis services and outpatient therapy for families and children, to intensive psychiatric rehabilitation, to peer support services.
 - Understanding that health outcomes improve more dramatically when care and services are fully integrated, we have been a *proponent of integration* since we began serving state customers 24 years ago.

- **Member-centered care and support are a foundational value.** Amerigroup and our affiliate health plans embrace and promote a system that emphasizes member informed choice, independence, and engagement in all aspects of care and services. Our care coordination emphasizes member responsibility comprehensively from our member communications and outreach through our person-centered planning process to our selection of value-added services and member incentive programs. Member access to care and services is guided through development and maintenance of robust Provider Networks and self-direction of personal care and services that reflect the diversity, geographic location, and preferences of our membership. Our quality programs and provider collaboration programs incorporate monitoring and oversight of member satisfaction, well-being and quality of life measures. In addition, we promote independent and community living in the least restrictive and most integrated manner. In 2007, we created the National Advisory Board (NAB) to provide continued guidance and innovations to promoting services and supports that foster living independently, choice, recovery, and quality of life for older adults and people with disabilities.
- **Strong local presence and connections promote local accountability, service delivery, and relationships.** Amerigroup understands the value of and need for strong community connections. Amerigroup has more than 150 local letters of intent or support and has met with in excess of 500 local provider organizations, associations, community organizations, and other local stakeholders. We have already met with the leadership of most of the physicians, physician groups, hospitals and other institutional providers, safety net providers (Federally Qualified Health Centers [FQHC], Rural Health Clinics, and critical access hospitals), Community Mental Health Centers (CMHC), Community Developmental and Disability Organizations, Centers for Independent Living, Area Agencies on Aging, ancillary service providers and networks, and providers of waiver services to begin the contracting process. Some of the marquee providers that we have already engaged include Iowa Clinic, Catholic Health Initiatives, Mercy Health Networks, Unity Point, and University of Iowa Health Alliance. Additionally, we have reached out to all, have letters of intent with many and intend to contract with every FQHC and CMHC in Iowa. Hallmarks of our model of care are understanding the community needs and assets and tailoring our care and services to address these needs and leverage local and state assets.
- **Robust network development by on-the-ground Provider Services Staff.** Amerigroup and our affiliate health plans are an industry leader in building robust network solutions for our state partners: Solutions that recognize and support the needs of some of the most vulnerable citizens of the state while offering geographic accessibility. We have 10 associates on our national Network Development Team who are committed to building networks in Iowa. They have built 12 unique state Medicaid networks (including networks for many specialized populations) in the last 36 months. In our last three builds (Kentucky, Tennessee, and Virginia), we contracted more than 72,000 providers. Additionally, we have partnered with Wellmark Blue Cross and Blue Shield, the leader in ACO initiatives in Iowa, to assist Amerigroup in developing collaborative relationships with Wellmark's existing providers, which include more than 2,000

"...Amerigroup shares the State and Wellmark's commitment to work in innovative ways to transform health care and improve the health of Iowans. Evidence of this commitment is the high level of support and interest Amerigroup has shown in continuing the ACO and State Innovation Model Grant initiatives pioneered by Wellmark in Iowa. We believe Amerigroup will be an accountable, innovative partner with the Iowa Medicaid Enterprise as the Initiative is implemented and as it matures."

Laura Jackson,
Executive Vice President,
Health Care Innovation and
Business Development,
Wellmark Blue Cross
and Blue Shield

IA_322_COB_12.J

Iowa primary care providers and cover 525,000 Wellmark members. Laura Jackson, Wellmark's EVP of Health Care Innovation and Business Development, attests to Amerigroup's support of the ACO and SIM Grant initiatives.

- **Superior value combining quality health care with financial predictability.** Amerigroup and our affiliate health plans generate significant savings for our state customers by providing high-quality care in the most appropriate setting and at the right time. We do this through a variety of approaches, including strong care coordination, developing programs and utilizing advanced technologies to reduce re-hospitalizations and preventable emergency room use, and by offering pay-for-performance incentives to providers and facilities for efficient, evidence-based quality care delivery. Currently, across all of our affiliate health plans, approximately 54 percent of members in our state-sponsored programs receive their healthcare from providers participating in a value-based reimbursement program. The result is improved access to higher quality care and services resulting in cost efficiencies and better health outcomes.
- **Strong stewardship with nationally recognized program integrity results and savings.** As an organization, we pride ourselves on being a good steward of public funds. We are focused on program integrity and have systems in place to detect and address unnecessary or wasteful practices and/or fraudulent activities. In calendar year 2014 alone, these programs produced more than \$210 million in savings across our state-sponsored programs in 19 states.
 - Our affiliate health plans opened 1,200 fraud, waste, and abuse cases and identified \$28.9 million in net savings. This equates to a return on investment of approximately 9-1, as compared to the national average of 8-1.
 - Provider code editing solutions strengthen our program integrity by utilizing sophisticated claim payment logic (post-service, pre-payment) to identify unbundled services, overpayments (for example, duplicates or components of a global service) and implement National Correct Coding Initiative (CCI) logic. These code editing solutions produced \$184.6 million in savings.
- **Developing real solutions for publicly funded healthcare programs.** When a solution does not exist, we invent one. Our proposal to Iowa includes a wide array of innovative programs that will drive improvements in member and provider engagement, improve quality, and reduce the cost of healthcare in Iowa. One such program, LiveHealth Online, allows our members to communicate with physicians through web-based consultations. We are also excited to introduce CareMore, an Anthem affiliate, to Iowa, starting with Des Moines. CareMore offers a breakthrough model of care delivery that combines wellness, medical supervision, and a revolutionary approach to coordinating care for at-risk members who require higher levels of clinical intervention due to complex and/or chronic conditions. Our real solutions in healthcare have been noted by Letters of Support from some of Iowa's most prominent leaders, including Julianne Beckett, mother of Katie Beckett, an Iowan and the first Medicaid home and community-based waiver person in the country; from Jessica Reiter-Flax,

"I am impressed with Amerigroup Iowa's early investment in better understanding the new populations you seek to serve in Iowa. I believe that [Amerigroup's] innovations (child obesity, prenatal care, asthma, etc.) will make a significant contribution to improving the lives of Iowans who participate in the State's Medicaid program. I view this as an opportunity to advance coordinated and meaningful access to long-term services and supports and promote community-based, self-directed and person-centered services and supports for Iowans with disabilities and their families."

Julianne Beckett,
Advocate for Children
with Disabilities and Mother
of Katie Beckett

IA_322_COB_12J

Executive Director of the Communities Health Charities of Iowa, and Carol Sipfle, Executive Director of the Alzheimer Association (Greater Iowa Chapter). These letters, and others, can be found in Attachment 1.1-1.

- **Commitment to quality and improved health outcomes for Iowans.** Our comprehensive quality programs drive improvements in many areas, including but not limited to chronic disease management and prevention, behavioral health, patient safety, and community health for all members. In Iowa, our quality management program will serve as a central source of quality data, coordination, and performance improvement. As evidence of our commitment to quality, the National Committee for Quality Assurance (NCQA) ranks seven Amerigroup affiliate health plans in the Top 100 of its ranking of 1,000 Medicaid health plans in the country. Additionally, our members will benefit from our eight accredited NCQA Disease Management Programs developed through our National Medicaid Division.
- **Experienced leadership coupled with managed care expertise.** A Transition Team will get the Iowa Initiative off to a strong start. As President of the Amerigroup North Region–Medicaid Government Business Division, I will lead the Iowa Transition Team. I will oversee all Iowa health plan operations until a local leader is hired as the Contract Administrator/CEO. A pediatrician by training with extensive senior leadership experience in managed care, I have been a strong advocate of ensuring access to healthcare for vulnerable populations for my entire career. Mr. John Crowley will serve as COO for the Transition Team. He currently serves as Staff Vice President of Medicaid Provider Networks and has a solid track record in successful network development, management, and operations execution within government programs for more than 20 years. In those 20 years, he has developed an extensive expertise in transitioning states from fee-for-service programs to managed care and in developing as well as implementing suites of provider collaboration programs with proven results in improving member access to higher quality and more efficient healthcare.

Throughout this letter, we highlight some of our solutions. You will find more in-depth answers in the attached proposal where we provide detailed responses to the questions in Attachment 5, describe our approach, and outline tasks in meeting the Scope of Work. These solutions are the product of our affiliates' 24 years of experience in 19 states in establishing state-sponsored healthcare programs. We have performed this work very successfully, learned many lessons along the way, and believe that we have communicated this knowledge and experience in the details of this proposal. There are several keys to a successful implementation:

1. **Development and adherence to a detailed implementation plan.** Our plan will include our task list, staff responsibilities, timelines, and processes that we will use to ensure services begin on the contract effective date. If awarded, we fully intend to faithfully carry out this work in the timeframes described. Amerigroup's affiliate health plans have never failed a readiness review or missed an operational start date.
2. **Identification of Iowa-based staffing and leadership.** Amerigroup will be using a highly experienced and capable Transition Team to initiate services in Iowa. These individuals are already identified and ready to serve upon notification of contract award. The Transition Team will hire highly qualified Iowa-based individuals to carry out proposal activities.
3. **Creation of a robust Provider Network.** Amerigroup and its affiliate health plans have a strong track record in developing broad-based Provider Networks that are tailored to the needs of the communities we serve. We are already in the process of building this network.
4. **Development of policies and procedures.** Amerigroup, in accordance with Agency rules and requirements and using our affiliates' 24 years' experience in 19 other markets, will develop and

maintain Iowa-specific policies and procedures for each functional area, including physical health, behavioral health, LTSS, and quality management policies.

Through participation in the Iowa High Quality Healthcare Initiative, Amerigroup looks forward to joining DHS in continuing Iowa's transformation of its publicly funded healthcare system into a model of efficiency, effectiveness, and quality. We have broad and extensive experience from other localities in coordinating services that meet these goals, and we intend to apply this knowledge in Iowa. Moreover, we will bring to bear our experience serving specialized populations, including adults and children with physical disabilities, traumatic brain injuries, intellectual and/or developmental disabilities, serious mental illness, severe emotional disturbances, and substance use disorders. That said, through the extensive experience of our affiliates, we know that one size does not fit all when it comes to the delivery of high-quality care and services across systems of care. For this reason, we will work closely with DHS, members, providers, and other partners to make sure our programs, systems, and services are tailored to reflect Iowa's needs, concerns, and aspirations.

We embrace the four goals of the Iowa Initiative. For each one, we provide information on our approach to meet and exceed these goals and some of the experience, expertise, and achievement we bring to our work.

Goal 1. Improve the quality of care and health outcomes

We drive improvements in quality and health outcomes in many ways. Here, we provide three examples of our approaches to enhancing quality of care and services aimed to improve health status and well-being.

A Focus on Prevention - We applaud Iowa's participation and progress in the Healthiest State Initiative and drive to incorporate wellness and prevention principles into its programs. In our response, we detail our plans to work collaboratively with DHS and other partners to address tobacco use, healthy eating and active living, and diabetes. In Iowa, as one of our many value-added services, we will implement our "Healthy Families" program to address childhood obesity.

Assuring Quality - Our comprehensive quality programs drive improvements in many areas, including but not limited to chronic disease management and prevention, behavioral health, patient safety, and community health for all members. In Iowa, our quality management program will serve as a central source of quality data, coordination, and performance improvement.

Pay-for-Performance - We will be implementing our proven pay-for-performance provider incentive model in Iowa. This program offers shared savings to ACOs, providers, hospitals, nursing homes, and behavioral health providers, providing financial incentives to providers for high-quality performance in areas including, but not limited to, children's health, adult preventive and chronic condition management, birth outcomes, and avoidable hospitalizations. Our Pay-for-Performance models have demonstrated success: in our most mature primary care incentive program, participating provider groups have shown a 3 percent favorable difference in quality and an 8.6 percent favorable difference in total medical cost.

Goal 2: Emphasize member choice, access, safety, independence, a recovery focus, and responsibility and services delivered in the least restrictive manner appropriate to a member's health and functional status

Amerigroup's strong focus on quality improvement and experience supporting diverse populations comparable to Iowans has led refinement of our processes to better serve our members maximizing informed choice and self-determination. Our person-centered approach and practices facilitate member driven and family services and supports that are responsive and meaningful to evolving preferences, health and functional support needs and personal goals. Our community-based case management and care coordination models involve a continuous process of communicating, coordinating, delivering,

monitoring and assessing services and supports and progress toward achieving member goals to optimize person-centered service delivery.

Outstanding Care Coordination and Community-Based Case Management – Our approach utilizes regional care management teams with multifunctional expertise to assist community-based case managers, members, families, representatives, and members’ interdisciplinary teams in the development of person-centered service plans and serve as an ongoing resource to meet the varying needs of members.. *No matter what we do, we emphasize the member, not the process.* We engage members as active participants in their healthcare decisions and address their biopsychosocial strengths and needs through quality services and supports, care coordination and management, and health promotion. Our Care Coordinators meet with members to develop individualized service plans that span the service delivery systems of physical health, behavioral health, and LTSS and, as indicated, maximize member independence and facilitate care in the least restrictive setting possible while promoting member responsibility for their health and wellbeing.

Telehealth Services – Amerigroup will deploy innovative solutions to enhance the already existing telehealth platforms to increase access and reduce barriers to care for Iowa Initiative members. We will work with the substantial telehealth services currently in place in Iowa, such as those provided by the University of Iowa, and partner with providers to expand existing services as needed to meet the needs of our members.

Breakthrough Technologies – We will partner with Breakthrough, a telehealth platform for behavioral health, and we will explore other methods to deliver one-on-one consultations with board-certified clinicians either through personal computers or other strategically located community locations.

LiveHealth Online – Amerigroup will provide a variety of options for Iowa members to access physical and behavioral health consultations. Our LiveHealth Online program supports members to connect with physicians virtually. Iowa members will also have access to our Behavioral Health Services Hotline through a single toll-free Member Services call center. Callers who do not speak English or Spanish will be provided free, immediate interpretation services in more than 200 languages through a language line. Interpreters will be available to join a call 24 hours a day, 7 days a week, and can also support members calling from a provider’s office.

Goal 3: Provide physical health, behavioral health, and long-term services and supports in a highly coordinated manner

We believe in holistic, whole-person care. In full recognition of the inseparability of physical health and behavioral health, we directly manage physical and behavioral healthcare networks ourselves rather than outsourcing these services to a subcontractor. This allows us to better integrate these services into our members’ care and assure that our approach is recovery focused and strengths based. We leverage specialized clinicians, clinical practices, and guidelines that address the unique physical, behavioral health, and social support needs of each of our members, aiming for reduced fragmentation of care and improved member outcomes.

Our affiliate health plan in New York has been selected by the state to participate in the launch of a comprehensive and innovative program to support members with severe mental illness (SMI). Our care management model for this program, significant elements of which will be replicated in Iowa, has been commended by New York for its “appreciation of the unique needs of individuals with serious behavioral health conditions.”

Goal 4: Decrease healthcare costs through the reduction of unnecessary, inappropriate, and duplicative services

Amerigroup uses a variety of methods to efficiently provide high-quality care, including developing programs to reduce re-hospitalizations and preventable emergency room use and by detecting and

ameliorating unnecessary or wasteful practices and/or fraudulent activities. The result is higher quality care and better health outcomes for less per-member cost and better value for Iowa's taxpayers.

HomeConnect Program – Avoidable hospital readmissions are primarily driven by a lack of appropriate follow-up care. The greatest risk occurs within the first 48 hours post-hospitalization. To reduce this, our HomeConnect Program engages members before discharge to create a transition plan with appropriate follow-up care. To complement this, we reconnect members with their primary care providers to improve access to follow-up care and increase member contact through face-to-face interactions during the inpatient stay.

Program Integrity – Amerigroup and our affiliates have one of the most proactive regulatory compliance programs in the industry. We maintain a robust system of processes and controls to prevent, identify, and mitigate inappropriate, duplicative, and unnecessary payments. As shared earlier, these programs produced in excess of \$210 million in 2014 savings in our state-sponsored programs across 19 states. Our commitment to compliance and to establishing a culture that encourages our employees to embrace this commitment and demands that providers as well as other vendors embrace it is reflected in one of our company's core values: being trustworthy.

We believe the Iowa Initiative is a closely aligned to the way Amerigroup and our affiliate health plans are successfully delivering high quality, strong value managed care across the country today. In short, we believe we are very well suited to partner with the State of Iowa and the Iowa Department of Human Services to transform Iowa Medicaid to higher quality of care for its membership and stronger value for Iowa's dollar.

I am authorized to legally bind Amerigroup Iowa and able to respond to the Department about the confidential nature of the information. Please do not hesitate to contact me using the information below:

BOND AMOUNT: \$ 100,000 One Hundred Thousand Dollars and 00/100

PROJECT:

(Name, location or address, and Project number, if any)

Iowa High Quality Healthcare Initiative RFP #MED-16-009

The Contractor and Surety are bound to the Owner in the amount set forth above, for the payment of which the Contractor and Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, as provided herein. The conditions of this Bond are such that if the Owner accepts the bid of the Contractor within the time specified in the bid documents, or within such time period as may be agreed to by the Owner and Contractor, and the Contractor either (1) enters into a contract with the Owner in accordance with the terms of such bid, and gives such bond or bonds as may be specified in the bidding or Contract Documents, with a surety admitted in the jurisdiction of the Project and otherwise acceptable to the Owner, for the faithful performance of such Contract and for the prompt payment of labor and material furnished in the prosecution thereof; or (2) pays to the Owner the difference, not to exceed the amount of this Bond, between the amount specified in said bid and such larger amount for which the Owner may in good faith contract with another party to perform the work covered by said bid, then this obligation shall be null and void, otherwise to remain in full force and effect. The Surety hereby waives any notice of an agreement between the Owner and Contractor to extend the time in which the Owner may accept the bid. Waiver of notice by the Surety shall not apply to any extension exceeding sixty (60) days in the aggregate beyond the time for acceptance of bids specified in the bid documents, and the Owner and Contractor shall obtain the Surety's consent for an extension beyond sixty (60) days.

If this Bond is issued in connection with a subcontractor's bid to a Contractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

When this Bond has been furnished to comply with a statutory or other legal requirement in the location of the Project, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

This Power of Attorney is made and executed pursuant to and by authority of the following By-laws and Authorizations of American Fire and Casualty Company, The Ohio Casualty Insurance Company, Liberty Mutual Insurance Company, and West American Insurance Company which resolutions are now in full force and effect reading as follows:

ARTICLE IV – OFFICERS – Section 12. Power of Attorney. Any officer or other official of the Corporation authorized for that purpose in writing by the Chairman or the President, and subject to such limitation as the Chairman or the President may prescribe, shall appoint such attorneys-in-fact, as may be necessary to act in behalf of the Corporation to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations. Such attorneys-in-fact, subject to the limitations set forth in their respective powers of attorney, shall have full power to bind the Corporation by their signature and execution of any such instruments and to attach thereto the seal of the Corporation. When so executed, such instruments shall be as binding as if signed by the President and attested to by the Secretary. Any power or authority granted to any representative or attorney-in-fact under the provisions of this article may be revoked at any time by the Board, the Chairman, the President or by the officer or officers granting such power or authority.

ARTICLE XIII – Execution of Contracts – SECTION 5. Surety Bonds and Undertakings. Any officer of the Company authorized for that purpose in writing by the chairman or the president, and subject to such limitations as the chairman or the president may prescribe, shall appoint such attorneys-in-fact, as may be necessary to act in behalf of the Company to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations. Such attorneys-in-fact subject to the limitations set forth in their respective powers of attorney, shall have full power to bind the Company by their signature and execution of any such instruments and to attach thereto the seal of the Company. When so executed such instruments shall be as binding as if signed by the president and attested by the secretary.

Certificate of Designation – The President of the Company, acting pursuant to the Bylaws of the Company, authorizes David M. Carey, Assistant Secretary to appoint such attorneys-in-fact as may be necessary to act on behalf of the Company to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations.

Authorization – By unanimous consent of the Company's Board of Directors, the Company consents that facsimile or mechanically reproduced signature of any assistant secretary of the Company, wherever appearing upon a certified copy of any power of attorney issued by the Company in connection with surety bonds, shall be valid and binding upon the Company with the same force and effect as though manually affixed.

I, Gregory W. Davenport, the undersigned, Assistant Secretary, of American Fire and Casualty Company, The Ohio Casualty Insurance Company, Liberty Mutual Insurance Company, and West American Insurance Company do hereby certify that the original power of attorney of which the foregoing is a full, true and correct copy of the Power of Attorney executed by said Companies, is in full force and effect and has not been revoked.

IN TESTIMONY WHEREOF, I have hereunto set my hand and affixed the seals of said Companies this 5th day of May, 2015.

By: Gregory W. Davenport
Gregory W. Davenport, Assistant Secretary

Not valid for mortgage, note, loan, letter of credit, currency rate, interest rate or residual value guarantees.

To confirm the validity of this Power of Attorney call 1-610-832-8240 between 9:00 am and 4:30 pm EST on any business day.

Purpose (1.1)

Amerigroup Iowa, Inc.'s (Amerigroup) experience, expertise, and resources perfectly align with the mission and goals of the Iowa High Quality Healthcare Initiative, and we are extremely excited to respond to this Request for Proposal. With our organization's extensive experience in implementing and managing administratively complex managed care programs comprised of individuals who have diverse and specialized healthcare needs, we look forward to working with the Department of Human Services (DHS), plan members, providers, stakeholders, and other partners to deliver high-quality healthcare to Iowans.

Of the more than 5.2 million individuals our affiliate health plans serve in state-sponsored programs throughout the nation, *nearly 1 million have specialized needs, such as foster care youth, individuals with intellectual and/or developmental disabilities (ID/DD), persons with dual eligibility, individuals with physical/functional disabilities, and those requiring Long Term Services and Supports (LTSS)*. We are proud of our leadership position among managed care organizations in effectively serving these individuals through our locally led and managed affiliate health plans in 19 states as shown in Table 1.1-1.

¹ Membership numbers presented above are inclusive of membership as of December 31, 2014, for our parent company Anthem, Inc. and its state sponsored health plans. Members may be counted in more than one category and numbers may not be exact. In addition, in February 2015, our parent company completed the acquisition of two Florida managed care organizations, Simply Healthcare Plans, Inc. (Simply) and Better Health, Inc. (Better).

This proposal will describe in detail how Amerigroup will deliver high quality healthcare and improve health outcomes while decreasing cost. We will present our disciplined and systematic approach to implementing best practices, testing new strategies, and leveraging the experience of our affiliate health plans. Most of all, we will demonstrate how we build care systems with local communities, local providers, and local organizations to achieve member choice, access, safety, independence, and responsibility; reduce gaps in care and services; integrate services across the delivery system; address chronic health conditions; support care and treatment in the least restrictive setting appropriate; link resources enhancing independent living; eliminate duplicative services; and promote wellness. In short, we will provide evidence of our commitment to supporting Iowa in becoming the nation’s healthiest state, starting with the Iowa High Quality Healthcare Initiative.

Expertise in Launching New Programs

One of our core competencies is the ability to successfully implement new programs in a manner that seamlessly transitions members, providers, and stakeholders and avoids disruption to care. Across Amerigroup and our affiliate health plans operating state-sponsored programs, we have successfully executed more than 100 program implementations, encompassing new program start-ups, service area expansions, and new products. ***Our organization has never missed an operational start date nor had a contract involuntarily terminated by a state partner.*** Indeed, in our last four implementations, we went live an average of six months from kick off, with two of the implementations occurring within four months. ***Based upon these and other successful implementation experiences, we are confident that we can meet a January 1, 2016, go-live timeframe in Iowa.***

In particular, we have been extremely successful in transitioning specialized services from the fee-for-service to managed care environment with wholesale changes for members, providers, and stakeholders. For example, our Kansas affiliate collaborated with the state to launch a redesign of the state’s Medicaid program. The program, which went live in 2013, includes the full range of populations and services, including LTSS, waiver programs, individuals with ID/DD, and members of all ages with disabilities.

Figure 1.1-1. Demonstrated Success with Aggressive Timelines

Short implementation periods can prove challenging, but when our state partners make strategic decisions that require them, we have stepped up to the task each and every time as shown in Figure 1.1-1. We have learned from the challenges that short implementations invariably experience and apply those lessons in our implementation efforts going forward. We make sure we offer our informed insights to our state partners to help each transition take place as seamlessly as possible. In fact, our affiliate plan president from Kansas has been involved in the Iowa plan development to help Iowa mitigate risk and implement best practices.

Seamless transitions require multiple complementary strategies: an extensive Provider Network that supports existing provider-member relationships and minimizes disruption; rapid identification of and outreach to members who have acute or chronic care needs; careful analysis of members’ ongoing health service needs and preferences; and a framework of comprehensive care planning, coordination, and

execution to help providers meet those needs. Additionally, when we implement a new program, we focus on ensuring continuity of care and the seamless transitions to ensure needed services for our new members are received without disruption. This attention to detail and commitment to member health and

wellbeing minimizes overall implementation risk and demonstrates good stewardship for our members, state partners, providers, and all stakeholders.

Amerigroup will collaborate with DHS both before and after the program effective date. Our implementation team will meet regularly with DHS staff to review progress, respond to and escalate as necessary any concerns, and resolve operational issues. *New program success is more than just Amerigroup's success—it is Iowa's success.*

Focus on Members, Quality, Outcomes and Cost

Our proposal includes a wide array of programs that will help improve member health outcomes and access to higher quality, less costly health care. These programs will also help enhance member experiences and choice while promoting member responsibility, and provider engagement, all while helping reduce the cost of healthcare in Iowa. Our programs have been designed to:

- **Engage Iowa's provider community to deliver higher quality, lower cost healthcare.** Amerigroup's affiliates have experience in value-based reimbursement as a tool to help improve outcomes while decreasing cost. Currently, across all of our affiliates, 54 percent of state-sponsored program members are served by providers participating in a value-based reimbursement program. Amerigroup applies a data-driven model to help providers manage their patients' health at the population level and employs best practices to increase the quality and reduce the cost of health care.
- **Provide integrated care.** Our interdisciplinary teams, provider partners, and other extended members of the team use technology tools to support integration. This includes our multifaceted, bi-directional care coordination and a single member information system platform that enables us to drive improved communication, care efficiency, and outcomes, as well as a seamless member experience across the delivery system. Amerigroup does not subcontract any essential part of our care coordination model beyond its family of companies. Instead, our model facilitates a seamless member experience across the delivery system, including physical health, behavioral health, and LTSS. When we do utilize vendor partners, they are thoroughly vetted and proactively managed by Amerigroup through our proprietary integrated platform.
- **Facilitate access to services.** Members need access to care delivered at the right time and in the right place. We have developed innovative programs such as Live Health Online, which is a convenient alternative for members needing non-emergent care. When members call the Nurse Helpline, via a direct toll-free telephone number, licensed nurses determine if a virtual physician consultation would be beneficial in helping resolve the member's inquiry, based on the member's condition and video streaming capabilities. In addition, we will enhance existing telemedicine and telehealth capabilities, with a particular emphasis on behavioral health services as a means to expand member access to services, particularly in rural areas.
- **Ensure rural access to services.** We have substantial experience delivering care in rural areas: across our affiliate health plans, approximately 65 percent of the areas served are comprised of counties designated as "rural" by the U.S. Census Bureau. Using GeoAccess to identify Network adequacy gaps, we will partner with local providers and create incentives to open offices in rural areas. We will assist members in accessing transportation to appointments as a covered benefit where applicable and as a Value-Added Service for eligible members as well. Additionally, just as we have done in other markets, we plan to promote in-home clinical service delivery by board-certified physicians and nurse practitioners. Finally, we will also expand utilization of telehealth services for both primary and specialty care, to improve access to care in rural areas or for homebound individuals.
- **Deliver best-in-class programs to individuals with specialized needs.** Through our extensive experience, we have become experts in serving members with specialized needs, including but not limited to individuals with disabilities, out-of-home youth, and pregnant women. Additionally, we are

excited to introduce our CareMore program—an innovative solution focused on members with complex and/or chronic conditions—starting with a central location in Des Moines to be accessible to the highest density of appropriate members in the Iowa Initiative.

- **Encourage member responsibility.** Our “Healthy Rewards” program offers incentives for members to seek preventive services and screenings and manage their chronic conditions. Additionally, we have designed rewards for members to achieve their service plan goals, take their medications and learn about potential risks to maintaining their independence. The incentives provide a tool to enhance personal responsibility and self-management as a critical component of improving member health outcomes and satisfaction.

A Culture of Compliance and Ethics

Amerigroup takes the role of protecting public funds and complying with program requirements and obligations very seriously. While we adhere to our own time-tested compliance procedures, we will review and enhance them based on the needs of Iowa. Furthermore, we also incorporate new best practices from our affiliate health plans as the need for changes becomes apparent—nationally or locally.

We will have a local Iowa Compliance Officer who will report directly to the National Compliance Officer for our Medicaid line of business, while maintaining a day-to-day matrix reporting relationship with our local plan Contract Administrator and a close relationship with DHS. Our national Medicaid Compliance Program Services Department oversees a variety of programs that comply with federal and state laws and regulations. It administers all aspects of the compliance program, including training required of each Amerigroup employee in the areas of contract requirements, ethics, member rights, privacy and HIPPA, cultural diversity, disability awareness, and fraud, waste, and abuse.

A Commitment to Innovation & Customization

Amerigroup continuously improves our care model by seeking out innovative approaches to providing high quality health care that offers strong economic value to our state partners. From our use of technology to guard against fraud and abuse, to our utilization of data to aid providers in their delivery of care, to developing community based services for long term services and supports, to employing ancillary care centers through our CareMore clinics, Amerigroup is committed to seeking out new and better ways to improve member health outcomes and access to high quality, cost efficient health care.

Each Amerigroup affiliate health plan is unique and develops customized approaches for the state it serves. *The ability to draw from the experience of all our affiliate plans and leverage a centralized infrastructure that offers broad knowledge, cost-efficiency and scale, creates a perfectly balanced local health plan positioned to meet the needs of the many specialized member populations being served.* It's a model that delivers customized service, but with the benefit of deep and varied experience, and the strength and resources only a national leader in managed care can offer.

Our Purpose in Iowa

We look forward to partnering with DHS, the Iowa provider community and the many other community stakeholders in Iowa in effecting Medicaid Modernization. To this work, Amerigroup brings our track record in establishing large, multi-population implementations and its associated experience in assisting states with transitions from fee-for-service to managed care delivery systems. We also bring our proven model for care coordination and service integration and the resultant improvements in

healthcare quality, value, cost and outcomes. We look forward to fashioning delivery and support systems that emphasize member choice, independence, responsibility, safety, and engagement in all aspects of care through a member-centered care model that is at the core of all we do.

Nearly 1 million of our more than 5.2 million members have specialized needs, such as foster care youth, ID/DD, dual eligibles and LTSS.

IA_1_COB_1

Goals (1.2)

Health care across the United States is moving toward fully integrated delivery systems that emphasize quality, efficiency and improved health outcomes. Through participation in the Iowa High Quality Healthcare Initiative, Amerigroup Iowa (“Amerigroup”) looks forward to joining DHS in continuing Iowa’s transformation of its publicly funded health care system into a managed care model that embraces wellness, efficiency, and innovation.

With health plan affiliates operating state-sponsored programs in 19 states, we have extensive experience in delivering high quality health care, based on three principal objectives we believe are the building blocks for exemplary health care with superior value. ***These three objectives are: driving improvement of outcomes and quality of care; decreasing the overall cost of care; and improving the member experience.*** We feel these core tenets of our business approach align perfectly with the goals of the Iowa Initiative as demonstrated in Table 1.2-1.

Table 1.2-1. Amerigroup’s Objectives Match Iowa’s Health Care Goals

Principle Objectives of Amerigroup	Iowa Initiative Goals
Improve care quality and health outcomes	<ul style="list-style-type: none"> Improve the quality of care and health outcomes Provide physical health, behavioral health, and long-term services and supports in a highly coordinated manner
Decrease the cost of healthcare	<ul style="list-style-type: none"> Decrease health care costs through the reduction of unnecessary, inappropriate, and duplicative services
Enhance the member care experience	<ul style="list-style-type: none"> Emphasize member choice, access, safety, independence, and responsibility Provide services in the least restrictive manner appropriate to a member’s health and functional status Provide physical health, behavioral health, and long-term services and supports in a highly coordinated manner

Amerigroup will bring our vast affiliate experience in serving a wide range of individuals with specialized needs, including adults and children with physical disabilities, brain injuries, intellectual and developmental disabilities, serious mental illness, and substance use disorders. We also realize that one size does not fit all when it comes to the delivery of high quality health care. For this reason, we intend to work closely with DHS, providers, members and other partners to make sure our programs, systems, and services are tailored to reflect Iowa’s needs, concerns, and aspirations. Amerigroup’s locally focused, custom approach is central to how these principles have been accomplished in our affiliate plans and how Iowa’s goals will be met under the Iowa Initiative.

We drive improvements in care quality and health outcomes through care coordination, a focus on prevention, and strong quality management. We control costs through programs focused on preventing readmissions and emergency room visits among high risk individuals, through shared savings with providers and facilities, and through processes to reduce unnecessary, inappropriate, and/or duplicative procedures and tests. Finally, we pride ourselves on putting the needs and concerns of members first. This includes engaging members and their families where they are, empowering them to take responsibility and self-directing their care where at all possible. We emphasize independence and care in the least restrictive setting, and provide technology solutions and superior coordination of all events across the delivery system. The detail below demonstrates a few of our accomplishments and programs that support these three foundational objectives:

Objective 1: Improve Care Quality and Health Outcomes

Amerigroup takes great pride in driving measurable improvements in care quality and health outcomes. We adhere to the belief that “that which gets measured gets done.” A few of our affiliate health plans’ accomplishments:

These are but a few examples of our effectiveness in quality and outcomes, and we fully expect to create new standards in Iowa. We attribute these improvements to the following actions:

- Listening to and understanding our stakeholders, members, and providers
- Providing full care coordination across services
- Tracking quality of care and population health indicators
- Creating cross-sector partnerships to address health problems
- Implementing innovative solutions that address the holistic needs of our populations
- Identifying and developing quality program improvement opportunities

Following are a few programs and approaches that exemplify our passion for and excellence in improving health care quality and outcomes.

Outstanding Care and Service Coordination

Our successful cross-disciplinary care and service coordination model, honed over many years serving diverse and complex Medicaid and other populations across the U.S., emphasizes a member-centric focus: ***No matter what we do, we emphasize the member, not the process.*** We engage members as active participants in their health care decisions and address their biopsychosocial strengths and needs through quality services and supports, care coordination and management, a recovery focus, and health promotion. Our case managers meet with members to develop individualized service plans that span the service delivery systems of physical health, behavioral health, and LTSS and, as indicated, maximize member independence and offer care in the least restrictive setting possible.

In addition, we support the development of health homes, patient-centered medical homes (PCMHs), and other models that facilitate strong care coordination and improved care access on a systems level. Our efforts have resulted in improvements in provider compliance with evidence-based clinical practice guidelines and a reduction in avoidable, unnecessary inpatient admissions and emergency room (ER) visits, including measured improvements in the quality of health care delivery. Through these models, our affiliate health plans have successfully served:

- Expectant mothers
- Young children
- HCBS waiver populations
- Members who are hospitalized and those transitioning place of service
- Nursing home patients
- Persons with behavioral health needs
- Children and youth with special health care needs
- Other persons with chronic care or complex care needs

A Focus on Prevention: Healthy Families

We applaud Iowa's participation and progress in the Healthiest State Initiative and the emphasis DHS has placed on wellness and prevention in the Iowa Health and Wellness Plan. In Section 10.2.3, Healthiest State Initiative, we detail our plans to work collaboratively with DHS and other partners to address tobacco use, healthy eating and active living, and diabetes. We understand that what happens in the community can be as important to a person's health as what happens in the doctor's office or hospital. For this reason, we place a focus on community-based health promotion programs. In response to high rates of obesity in Iowa, particularly among low-income residents (CDC, 2013), Amerigroup will be rolling out our "Healthy Families" program. This Value-Added Service is a free, six-month telephonic coaching program for children and adolescents who are overweight, obese, or at risk for being overweight or obese. The program promotes making lifestyle changes such as healthier eating and increased physical activity.

Quality Improvement

Our comprehensive quality programs drive improvements in many areas, including but not limited to chronic disease management and prevention, behavioral health, patient safety, and community health for all members. In Iowa, our quality management program will serve as a central source of quality data, coordination, and performance improvement.

In 2014, our quality management program at our affiliate health plan in New Jersey generated the following improvements for our members:

- Increased their customer service ranking from the 25th to the 90th percentile
- Increased their "Getting Care Quickly" ranking from the 25th to the 75th percentile
- Increased their "Health Plan Overall" ranking from the 25th to the 50th percentile

Innovation through the CareMore Model

Amerigroup will bring to Iowa the unique capabilities of CareMore, an Anthem company and Amerigroup affiliate. If Amerigroup is awarded a Contract, CareMore will open at least one care center, starting with a centrally located to be accessible to the low-income residents in Des Moines, to serve the members of the Iowa Initiative who require higher levels of clinical intervention due to complex and/or chronic conditions. CareMore offers a ground-breaking model of care delivery that combines wellness, medical supervision, and a revolutionary approach to member engagement and participation. Our PCPs, acting as primary care team leaders, and our Extensivists guide members through every step of an integrated health care journey, regardless of the setting – facility-based, within the home, or outpatient – thereby managing acute and chronic events from beginning to end to ensure continuity of care. We utilize the expertise of physicians, nurse practitioners, behavioral health and other specialty clinicians, and social support experts adept in managing the experience of our members in body, mind, and spirit. ***CareMore outcomes include a 78 percent lower rate of amputation among individuals with diabetes compared to the national average and a 30-day readmission rate of 13.6 percent, compared to 20 percent nationally.***

Objective 2: Decrease the Cost of Care

Amerigroup generates savings for our state customers by providing high quality care in the most appropriate setting and at the right time. We do this through a variety of approaches, including developing programs and utilizing advanced technologies to reduce re-hospitalizations and preventable ER use, by offering training and pay-for-performance incentives to providers and facilities for efficient, evidence-based care delivery and by detecting and ameliorating unnecessary or wasteful practices and/or fraudulent activities. The result is higher quality care and better health outcomes for less per-member cost.

Home Connect Program

Avoidable hospital readmissions are primarily driven by a lack of appropriate follow-up care. The greatest risk occurs within the first 48 hours post-hospitalization. To reduce this, our HomeConnect Program engages members before discharge to create a transition plan with appropriate follow-up care. To complement this, we reconnect members with their PCP to improve access to follow-up care and increase member contact through face-to-face interactions during the inpatient stay.

We will implement the Home Connect Program in Iowa. The program will consist of the following activities to enhance a seamless transition for the member into the community:

- Discharge planning
- Daily census reports
- Educational letters to members
- Care manager engagement with members during hospital stay
- Member visits, including transitional facility visits and bridge on discharge visits
- Provider outreach during admission and for verification of follow up after hospitalization
- Member outreach calls within one business day of discharge
- Stabilization care management
- Readmission rounds
- Facility feedback presentations to share performance data with high volume providers

Pay for Performance: Rewarding Quality and Efficiency

We will implement our proven pay-for-performance provider incentive model in Iowa. ***This model offers a suite of incentives programs that can be applied to PCPs, OB /GYNs, other specialists, hospitals, nursing homes, behavioral health providers, and ACOs.*** This suite of incentive programs helps to drive improvement on measures relating to children's health, adult preventive and chronic condition management, birth outcomes, nursing facility and ICF/ID days of care, and avoidable hospitalizations. In fact, in our most mature primary care incentive program, participating provider groups have shown a 3 percent favorable difference in quality and an 8.6 percent favorable difference in total medical cost.

Amerigroup is in a unique position to be able to capitalize on a strong relationship with Wellmark in designing and implementing this model in Iowa. Wellmark has begun and will continue to assist Amerigroup in developing deep relationships with Wellmark's existing ACO provider partners, which includes over 2,000 Iowa primary care providers and covers 525,000 Wellmark members. We also intend to incorporate the 3M Treo Solution composite scoring methodology into the ACO Shared Savings/Shared Risk program in a manner consistent with the Wellmark ACO VIS approach, modified as required to be most applicable to our members.

One incentive program that we want to highlight is our PCP Quality and Population Health Management Program. Nationally, our organization has deployed this incentive model across 11 affiliate health plans, encompassing PCPs who care for 414,000 members. For full-year 2013 results (the most recent available), providers who were in this model showed a year-over-year quality and cost improvement rate that was better than providers who were not.

Tele-Connect Program: Keeping Members Safe

Many of our affiliate plans have significant experience and success in leveraging remote tele-monitoring tools to help reduce avoidable hospitalizations and emergency room visits. This program, particularly effective for members with targeted chronic illnesses and disabilities, will also be implemented in Iowa. Our Tele-Connect program links members at home to their PCP and care manager with easy-to-use

equipment. Members with targeted conditions, such as chronic obstructive pulmonary disease, diabetes, and congestive heart failure, are monitored remotely through blood pressure cuffs, weight scales, glucometers, pulse oximeters, and pedometers. This advance warning system enables the case manager and provider to act swiftly if a member's vital signs fall outside the predetermined range.

Amerigroup will offer an innovative telehealth system tailored to monitor members with chronic conditions. In partnership with an experienced vendor, we will watch for falls, exceptions to client's vital signs, and medication adherence 24 hours a day, 7 days a week, 365 days a year for members referred into this program. We have found telehealth to be an effective tool in improving health outcomes and promoting member safety, while preventing avoidable, expensive hospital admissions.

Reducing Fraud, Waste and Abuse

The increasingly complex Medicaid marketplace and interconnected programs require diligent monitoring and oversight to safeguard against fraud, waste, and abuse. Amerigroup maintains sophisticated detection tools and systems that we apply prior to claim payment; during post-payment claim review, systematic data mining, and referral follow-up. Systems such as iHealth Technologies and McKesson's ClaimCheck® are employed as a "final filter" before professional and outpatient facility claims are paid - all while maintaining prompt payment to providers. Proactive post-payment review resources include EDIWatch, a retrospective, rules-based system that detects anomalies in data using thousands of statistics, rules, and patterns. Amerigroup's experience managing and integrating these tools has been very effective in preventing fraud, waste and abuse in addition to recovering inappropriate payments.

Across our national organization, we are focused on program integrity and have systems in place to detect and address unnecessary or wasteful practices and/or fraudulent activities. In calendar year 2014, these programs produced in excess of \$210 million in savings in our 19 state-sponsored programs.

- Our affiliate health plans opened 1,200 fraud, waste, and abuse cases and identified \$28.9 million in net savings. This equates to a return on investment of approximately 9-1; the national average is 8-1.
- Provider code editing solutions strengthen our program integrity by utilizing sophisticated claim payment logic (post-service, pre-payment) to identify unbundled services, overpayments (for example, duplicates or components of a global service) and implement National Correct Coding Initiative (CCI) logic. These code editing solutions produced \$184.6 million in savings.

Objective 3: Improve the Member Care Experience

Amerigroup continuously identifies opportunities to improve member choice, protections, and access to services. Related to member choice, our affiliates have a solid history of rapidly establishing a geographically broad provider network and, just as importantly, have high provider satisfaction ratings. To ensure optimal choice in providers, we will require providers to retain open member panels.

Cultural accessibility is emphasized through requisite staff cultural competency training. Our staff is specifically trained to work with diverse individuals, respecting their cultural differences and providing comprehensive supports, including interpretation and translation services and solutions focused on persons with speaking, hearing, or visual impairments. Our affiliates' voluntary abandonment rates are extremely low, and our member satisfaction ratings are very high. Provided below are some of the approaches and programs we intend to utilize in Iowa to optimize our members' care experience.

Effective Care Integration.

We believe in holistic, whole-person care. In full recognition of the inseparability of physical and behavioral health, we directly manage physical and behavioral health care networks ourselves, rather than outsourcing these services to a subcontractor. This allows us to better integrate them in our members' care. We leverage specialized clinicians, clinical practices, and guidelines that address the unique physical, behavioral health, and social support needs of each of our members.

For example, our affiliate health plan in New York is implementing a comprehensive and innovative program called Health and Recovery Plans (HARPs) to support members with severe mental illness (SMI). The State of New York has commended our efforts in this regard, noting our “...appreciation of the unique needs of individuals with serious behavioral health conditions.” Our program in Iowa will replicate significant elements of this program, and facilitate cross-communication between outpatient and inpatient systems of care; promote evidence-based practices across settings; and provide a more seamless, holistic, and recovery-focused experience for the member.

Electronic Access – Any Time, Any Language

Amerigroup will be providing a variety of options for Iowa members to access physical and behavioral health resources 24 hours a day, 7 days a week. Members will always have access to our Nurse HelpLine, a part of our Amerigroup On Call program for nonemergent medical questions, and may be referred for a web-based physician consultation through our LiveHealth Online program. Iowa members will also have access to our Behavioral Health Services Hotline through a single toll-free member Services call center. Recognizing that more than 80 languages are spoken in Des Moines alone, callers who do not speak English or Spanish will be provided free, immediate interpretations services in more than 200 languages through a language line. Interpreters will be available to join a call 24/7 and can also support members calling from a provider’s office.

Telemedicine/Telepsychiatry Services

Amerigroup is very interested in working with DHS to expand Iowa’s telemedicine and telehealth capabilities as a means to expand member access and choice – particularly in rural and remote areas. Indeed, in conversations with Iowa providers and stakeholders, we have consistently heard a need expressed for telehealth solutions related to member access, especially as it relates to specialty care. As such, Amerigroup will deploy telehealth platforms to further increase access and reduce barriers to care for Iowa members. We will work with the substantial telehealth services currently in place in Iowa, such as those provided by the University of Iowa, and partner with providers to expand existing services as needed to meet the needs of our members. We will also provide LiveHealth Online, our telehealth platform for primary care, and partner with Breakthrough, a telehealth platform for behavioral health, as additional avenues to deliver one-on-one consultations with board-certified clinicians either through personal computers or at kiosks

installed at strategic community locations. Breakthrough’s overall member satisfaction is 87 percent, while 50 percent of members report they would not have had access to a Behavioral Health provider without Breakthrough’s technology. Amerigroup will continuously work to identify appropriate locations for both of these platforms, so this technology will be easily accessible to our members in a private setting. Further, since our LTSS staff currently uses iPad technology in the field today to support care coordination, they will also be able to facilitate telehealth sessions throughout Iowa when necessary for members who do not have access to a computer or smartphone. We believe this multipronged telehealth strategy will help us eliminate gaps in care for members in both rural and urban areas by disaggregating healthcare from its traditional locale, empowering homebound or otherwise inconvenienced members to access required care and consultation.

Member Responsibility: Healthy Rewards

Our Healthy Rewards program provides incentives for members to seek preventive services and screenings and to manage their chronic conditions. This free program serves to enhance personal responsibility and self-management. We have an established and proven platform in place supporting

program administration (card issuance and financial management of incentive accounts) in our Kansas, Louisiana, and Texas affiliates. This platform enables us to tailor Healthy Rewards to reflect the unique needs of our State customers and members. Early data from Kansas suggest that Healthy Rewards has had a powerful positive impact in areas such as adolescent well-care visits, well-child visits, cervical cancer screening, diabetes care, and postpartum appointment rates. As the Iowa program develops and matures, we will continually re-evaluate its impact and make modifications as necessary to reflect evolving State priorities and member behaviors.

Achieving the Goals of the Iowa High Quality Healthcare Initiative

In summary, Amerigroup is extremely excited to work with DHS in further transforming the publicly funded health care system in Iowa into a model for delivering high quality health care in a manner that improves health outcomes and addresses the needs of a wide variety of populations. We believe we bring a depth of experience and expertise unparalleled in the industry, well-documented effectiveness and value, and a passion for innovation that will serve Iowa well in its new initiative. ***Our goals are aligned, and Amerigroup's experience and capabilities position us to help achieve each of these goals –from a seamless transition to a successful, comprehensive implementation.***

Reserved (1.3)

The State has marked this requirement as “Reserved” in the RFP.

General Contractor Responsibilities (1.4)

Federal and State Laws and Regulations (1.4.1)

Question 1.4, #1

1. Indicate your ability to comply with all Federal and State Laws and Regulations that may affect this Contract.

Our affiliates' extensive experience operating health plans that are built to comply with the unique state and federal requirements that accompany state sponsored health programs gives us confidence in our ability to comply with all laws and regulations. Amerigroup agrees to meet all Federal and State laws and regulations including title VI of the Civil Rights Act of 1964; title IX of the Education Amendments of 1972 (regarding education programs and activities); the Age Discrimination Act of 1975; the Rehabilitation Act of 1973; and the Americans with Disabilities Act; and Section 1903(m) and 1932 of the Social Security Act, as well as the implementing regulations set forth in 42 CFR 438, as may be amended. Furthermore, we will observe and comply at all times with all, then current, Federal and State Laws related to or affecting this RFP or Contract, including any Law that may be enacted during the term of this RFP or Contract. We affirm that we will be compliant with all applicable Federal and State Laws pertinent to member rights and assure that our staff, network providers, and subcontractors take those rights into account when furnishing services to members. We understand that it is our responsibility to remain aware of changes in Federal and State Laws and Regulations as they affect our duties and responsibilities under this RFP or the Contract.

Qualifications (1.4.2)

Question 1.4, #2

2. Summarize how you are qualified to provide the services listed in Section 1.4.2

Diversity, Track Record, and Partnership (1.4.2.1)

Amerigroup can draw from the experience, diversity, and track record of our affiliate health plans. We understand that providing a comprehensive array of services requires a diverse and substantial network of providers, partners, and stakeholders. In new markets, our affiliates have a track record of quickly building broad and robust provider networks to assure a wide range of service availability to our members and their families.

In addition, we understand and value of the resources available through Iowa State government. We will work closely with State agencies such as DHS (for example, TANF and child protection), the Iowa Department of Public Health (for example, WIC and Iowans Fit for Life programs) and the Iowa Department of Corrections. We are already reaching out to local agencies such as federally qualified health centers, rural health clinics, hospitals (including Critical Access Hospitals), community mental health centers, substance use disorder agencies, county health departments, nursing facilities, home and community-based service agencies, rehabilitation providers, centers for independent living, and emergency medical services. We will take a leadership role in creating and coordinating a robust network that combines the integrated delivery of a broad base of health and social services with geographic, cultural, and linguistic accessibility.

Moreover, we know the importance of strong connections with community-based organizations, and we look forward to building relationships with agencies such as school districts, area education agencies, decategorization boards, job placement and vocational service agencies, and judicial districts. In fact, Amerigroup has already begun efforts to engage with these and other agencies. An example is that our behavioral health experts have been in discussions with the 15 regional mental health agencies to understand commonalities and nuances of their operations and how we can work with them effectively to:

- Promote integration of behavioral and physical health
- Improve access to behavioral health services in the program
- Another example is that on March 25, 2015, Amerigroup representatives participated in a general meeting with county administrators of the Iowa Counties Public Health Association (ICPHA). We are in discussions with ICPHA to explore use of an **enhanced telehealth network** that will expand access to specialty care and behavioral health services. We have also met with additional Iowa community-based organizations including National Alliance on Mental Illness Iowa, Iowa Association of Area Agencies on Aging, Statewide Independent Living Council, Iowa Behavioral Health Association, Orchard Place, Iowa Health Care Association, and LeadingAge Iowa, among others.

"Throughout the readiness process, launch, early implementation and operation, Amerigroup has been a strong and responsive partner with us on the KanCare program. They proactively learned the Kansas system, providers, members, advocates and other stakeholders... They are always solution-focused and responsive, extremely organized with strong administrative staff and processes, and consistently good communicators and collaborators."

**Elizabeth Phelps,
Program Finance and
Informatics – Public Service
Executive III,
Kansas Department of
Health and Environment**

IA_322_COB_12.J

Kansas: A Complex, Multi-faceted Program

One of our core competencies is successfully implementing new programs, including those involving broad scale changes across a delivery system, in a manner that smoothly transitions members, providers, and stakeholders and avoids disruption to care.

Our affiliates' recent expansions include transitioning specialized services from a fee-for-service system to managed care environment with wholesale changes for members, providers, and stakeholders. As illustrated in one of our many letters of support found in Attachment 1.1-1, our organization and affiliate health plan was a "strong and responsive" partner that "proactively learned the Kansas system, providers, members, and other stakeholders..." Amerigroup will bring that same level of commitment to Iowa.

Our Kansas affiliate recently collaborated with the State to launch a significant redesign of its Medicaid program. Launched in 2013, the new program includes the full range of populations and services, including Long Term Services and Supports (LTSS), waiver programs, individuals with intellectual or developmental disabilities, and members of all ages with disabilities.

Our affiliate has developed an innovative array of expanded services to meet the needs of this unique program: healthy living coaching for families with kids 7–14 years, up to \$100 in special bedding for members with allergies, pest control, dental care for adults, and member and caregiver transportation. The Kansas implementation was compressed, similar to the timeline required by the Iowa Initiative, and offers many lessons for navigating a complex and fast-paced implementation.

Managing All Statewide (1.4.2.2)

Amerigroup affirms that we will manage all statewide physical health, behavioral health, and LTSS, for Iowa residents who meet Iowa Initiative eligibility requirements and are enrolled in our health plan. As illustrated in Table 1.4-1, Amerigroup's affiliates have considerable experience coordinating statewide care that offers integrated physical health, behavioral health, and LTSS. Our overall philosophy is that integration of these services offers the most efficient and effective care model.

In each of our affiliate, Amerigroup's integrated team **directly administers** physical health, behavioral health, and LTSS benefits in-house. Direct management aligns all teams and allows us to remain nimble in responding to changing needs and market conditions. We will bring integrated care model to Iowa.

Our **Quality Management Work Plan spans all benefits and functional areas**—medical health, behavioral health, and LTSS—and includes initiatives that strengthen integration. For example, our Tennessee affiliate developed a program to improve screening rates for members receiving LTSS who have cardiovascular disease. In its first year, this program boosted low-density lipoprotein screening rates by more than 120 percent.

We train for success in integrated care. Case managers and clinical employees receive both classroom- and field-based education in care integration. At the center of our curriculum is full integration of physical, behavioral, functional, and social health. All case managers must demonstrate the requisite skills to assist individuals with co-occurring disorders. Once they demonstrate competency, they are tested annually.

Table 1.4-1. Amerigroup Affiliates Integrate Care Across Systems

State	Membership	Medical	Behavioral Health	LTSS	Pharmacy	Substance Use Disorder
CA	1,081,270	•	•	•	•

WI	79,378	•	•			•
VA	272,004	•	•		•	•

This systematic and intentional approach has borne fruit. *Our New York affiliate, which coordinates physical, behavioral, and LTSS services, is ranked by the National Committee for Quality Assurance (NCQA) in the top 10 nationally among all Medicaid health plans, based on consumer satisfaction, prevention, and treatment.*

New York: Fully Integrated Program Success

Amerigroup and its affiliate plans promote fully integrated healthcare systems that incorporate the behavioral health benefit into mainstream managed care. As part of this construct, our New York affiliate is supporting the State of New York in fully integrating the behavioral health benefit into managed care and creating specialized Health and Recovery Plans (HARP) to meet the needs of individuals with severe mental illness (SMI). HARPs will offer eligible members additional intensive supports and recovery-focused benefits through a separate product line. *Our affiliate designed a program that the State of New York commended during the design and qualification process for its “appreciation of the unique needs of individuals with serious behavioral health conditions.”*

Through the HARP, our New York health plan will facilitate cross-communication between outpatient and inpatient systems of care; promote evidence-based practices across settings; and provide a more seamless, holistic, and recovery-focused experience for the member. It requires dedicated, comprehensive, recovery-focused processes and systems; highly trained and skilled staff; and ongoing collaboration with health homes, physical and behavioral health service providers, and other community stakeholders. In collaboration with community partners, our New York health plan is working to expand awareness of and access to services and will be part of determining the capacity and overall system needed for growth of these services.

Reducing Problems, Maximizing Member Functioning and Improving Quality of Life (1.4.2.3)

Amerigroup agrees to operate in a manner that results in timely, culturally relevant, and effective statewide services. Our goal is to reduce problems and symptoms stemming from physical or behavioral health issues, maximize functioning, and improve quality of life. We will partner with the State and the community to assure delivery of effective services that sustains individual functional gains.

With 24 years of experience coordinating care for low-income populations and currently serving more than 5.2 million members in Medicaid and other state-sponsored programs across 19 states, Amerigroup and our affiliate plans have vast experience providing integrated, member-centric care coordination to all populations included in the Iowa Initiative. We serve our members through a “whole person” approach that supports their physical, behavioral, cognitive, functional, and social strengths and needs across the full spectrum of healthcare settings. Our member-centered model helps members optimize their benefits and available services to get the high quality care and support they need. Our care model incorporates health promotion and preventive care services, coordinating care among treating providers and including social supports that reinforce positive health and quality of life outcomes.

We will bring to Iowa our years of experience and hard-earned lessons, national expertise, specialized programs, and innovative technology to give our Iowa members voice and choice in receiving the support they need to access the services that enable their health, wellness, and quality of life.

In compliance with 42 CFR §438.208 and all the requirements outlined in the Scope of Work, our integrated care coordination program drives the processes, policies, procedures, and tools that support the following activities:

- Identification of members with potential or actual care coordination needs through early screening, comprehensive assessments, and periodic reassessments
- Stratification of risk level for each member based on a multi-faceted consideration of available information for each individual
- Placement of members into care coordination programs based on needs assessment
- Development of an integrated care plan that addresses physical health, behavioral health, and LTSS needs for members as they transition across all settings
- Reciprocal referrals and information sharing
- Formation of an interdisciplinary team to support the member, providing consistency and continuity of contact with a familiar support system, as well as the expertise of a broader team of specialists as members' needs evolve over time
- Care coordination support for the member in accessing needed services, including scheduling appointments; arranging transportation; conducting appointment reminders; following up to verify service initiation, member progress, and need for service and care plan adjustment
- Ongoing evaluation of our care coordination program, including reviewing, tracking, monitoring, adjusting, and analyzing for outcomes, quality metrics, and performance improvement
- Emphasis on disease prevention and member wellness, chronic condition management, and increasing member compliance with recommended treatment protocols
- Member education to enhance understanding of healthcare conditions and prescribed treatment
- Member empowerment through comprehensive communications, equipping members with information about their care, providing multiple communications channels, and encouraging member communication with providers.

In addition, we support the development of health homes, patient-centered medical homes, and other tested models that facilitate strong care coordination and improved care access on a systems level. Our affiliates’ efforts in these areas have resulted in improvements in provider compliance with evidence-based clinical practice guidelines and a reduction in avoidable, unnecessary inpatient admissions and emergency room visits, including measured improvements in the quality of health care delivery.

We strive to achieve the combined high rates of member satisfaction with improved functioning and quality of life, and we are confident that we will be successful in Iowa.

Establishing a Comprehensive, Accessible Provider Network in All Areas of the State (1.4.2.4)

Amerigroup and our affiliate plans are industry leaders in building robust network solutions for state partners: solutions that recognize and support the needs of some of the most vulnerable citizens while offering geographic accessibility. Our provider network development and management is based on the experience we gain by being on-the-ground; collaborating with providers, community leaders and advocacy groups; and listening to our potential members’ and their families’ describe the challenges they face as they maneuver the health care system. Building our network strategies around this feedback creates a strong foundation for the repeatable and sustainable success of our networks. Table 1.4-2 demonstrates that we contracted more than 72,000 providers in our last three significant affiliate builds.

Table 1.4-2. Amerigroup and Our Affiliate Health Plans Build Solid Provider Networks

Network Builds			
Provider Type	Kentucky*	Tennessee*	Virginia*
Primary Care	5,672	2,167	7,765
Behavioral Health	2,452	1,348	5,783
Specialists	23,176	5,068	14,202
Federally Qualified Health Centers/Rural Health Centers	207	101	87
Urgent Care	482	246	51
Hospitals (including Critical Access Hospitals)	113	52	74
Nursing Facilities	10	166	159
LTSS/Ancillary	985	763	1,352
TOTALS	33,097	9,911	29,473

**Products in Kentucky were TANF/CHIP/BH; in Tennessee for east and west territory expansion products were TANF/CHIP/LTSS/BH/DSNP; in Virginia product was MMP.*

In Iowa, we will deliver a statewide provider network that meets or exceeds all State adequacy standards. But just as importantly focus on addressing underlying member access to care issues that may not be addressed fully within the States adequacy standards. Our network will include providers who traditionally serve the population covered by the Iowa Initiative, including community mental health centers, community developmental disabilities organizations, centers for independent living, local area agencies on aging, substance use disorder providers, federally qualified health centers, nursing facilities, and other safety net providers. It will also include providers who offer specialized services for those with disabilities, chronic conditions, and unique or specialized healthcare and service needs such as the populations with home- and community-based service waivers. We do not restrict access to specialty services and do not require referrals to network specialists.

Amerigroup promotes access to quality care by maintaining a network capacity that exceeds the level required for our expected enrollment. We have a proactive outreach and contracting plan to fill out our target provider network in advance of the readiness review. ***Amerigroup and our affiliates take pride in never having failed a readiness review.*** Additionally, we understand the extra attention it takes to build

and maintain a successful LTSS network in the rural areas of the State where providers are unaccustomed to managed care and need extra attention or face-to-face interactions. This knowledge will allow us to fully leverage our experience and collaborate with providers to improve the delivery of services in Iowa.

Offering a Coordinated Array of Services (1.4.2.5)

Amerigroup is committed to providing members with services addressing a wide range of physical, social, functional, behavioral, and LTSS needs. This breadth of services, particularly for individuals with complex care needs, demands strong care coordination practices and systems.

We know the importance of precise care coordination across the entire delivery system. Using the knowledge we have gained through the overwhelmingly positive experiences we have had with such programs in the past, we have a solid foundation for implementing comprehensive care coordination across the care continuum for the Iowa Initiative. We have found that many members who received multiple diagnoses and various treatment regimens have been unable to attain their recovery goals because, prior to Amerigroup administering the coordination of care, there was no open line of communication between physical and behavioral health providers, facilities, and community resources.

Once we establish coordination and communication across providers, hospitals, and other community supports and stakeholders in the delivery system, we are able to decrease re-admissions and recurring, unnecessary emergency room visits, while increasing the quality and completeness of care. Using this approach, we were able to impact care for high risk mothers and children that were part of our Indiana Plan membership, driving a 17.4 percent decrease in inpatient admissions, a 15.0 percent reduction in emergency room visits, and a 10.9 percent decrease in re-admission rates from 2012 to 2013.

We are committed to driving improved health outcomes one member at a time, by doing the right thing for every member every time. We engage members where they are to help them achieve their health goals. Our model is member-centric and provider-focused – our strong relationships with PCPs enable us to utilize our member's health home as the hub of the care delivery system.

Tennessee Recognizes Successful LTSS Implementation

In 2010, our Tennessee affiliate health plan successfully implemented CHOICES, Tennessee's program serving members requiring LTSS. Through that implementation, our affiliate successfully assumed coordination and coverage responsibilities for LTSS services for 3,902 seniors and people with physical disabilities living in the community or in nursing facilities and contracted with 217 LTSS providers.

In 2011, our Tennessee health plan received the overall CHOICES implementation award from the Tennessee, citing the high quality of our processes, policies, and procedures; knowledgeable approach; and implementation readiness. Following program implementation, our affiliate provided services to LTSS members who are aging, blind or disabled members that resulted in a decrease in members residing in a nursing facility from 81 to 65 percent, and transitioned more than 200 members from a nursing facility to a community-based alternative, potentially saving the state of Tennessee \$3.6 million annually.

Additionally, our Tennessee affiliate collaborated closely with the state in the design and launch of the Population Health Program, a comprehensive disease management initiative. From its initial planning in 2011 through implementation in July 2013, our leadership team worked closely with the state and other managed care entities to lend our expertise and understanding of members and providers in Tennessee, as well as the opportunities and challenges of a new model. The health plans' Population Health Program also won a "Case in Point Platinum Award" in 2014 in the category of Integrated Disease Management Programs from Dorland Health. This unique awards program recognizes the most successful and innovative case management programs working to improve healthcare across the care continuum.

Improving Quality of Care (1.4.2.6)

At Amerigroup, quality is embedded in everything we do. Our multilevel strategy to improve quality indicators sets goals at the organization level, the department level, and even at the individual employee level. We individualize health plan and regional goals according to each area we serve.

Our comprehensive quality programs improve quality of care with initiatives that target chronic disease and prevention, behavioral health, patient safety, care coordination, community health, service quality, and care management for all members. Amerigroup will deliver quality health care services and drive health outcome improvements for Iowa Initiative members.

We will meet or exceed the standards for Quality Assessment and Improvement (QAPI) programs required by CMS, NCQA, and the State of Iowa. Our commitment to these standards is evident in our affiliates' widespread NCQA accreditations, strong HEDIS and CAHPS performance measures, innovative quality programs that are responsive to the identified needs of our members, and effective continuous improvement processes. As evidence of our commitment to quality, NCQA includes seven Amerigroup affiliate health plans in its list of the Top 100 Medicaid health plans in the country. Other key achievements include:

- NCQA accreditation in 13 states
- Exceeding the NCQA 90th percentile on critical performance measures such as timeliness of postpartum care, use of appropriate medications for members with asthma, follow-up after discharge for members hospitalized for mental illness, breast cancer screening, HbA1c screening, and adult body-mass index assessment
- Widespread improvement across our affiliates in Follow-Up After Hospitalization, Well Care, and Annual Dental Visit HEDIS rates
- Innovative and effective quality strategies that capitalize on technology and community partnerships
- Rigorous and methodical performance improvement projects

To achieve quality goals, we embrace QAPI as a workplace culture and philosophy, not simply a separate function within the health plan. All of our employees participate in improving processes, services, and the culture in which we work. We implement cross-functional approaches that include representation from local health plan operational areas to work with national leaders in their functional areas. Representatives from Quality Management, Utilization Management, Case Management, Disease Management, Behavioral Health, Credentialing, Network, Communication, Technology, Compliance, and our specialty organizations come together to solve problems and identify quality best practices. Our College of Quality provides a Quality 101 orientation for our employees, as well as ongoing training on continuous clinical quality improvement structure. Our quality management philosophy extends to every level of management in the organization, and we embed quality goals into every employee's performance plans for success. Amerigroup's Culture of Quality is embedded in every aspect of our organization. Every employee is a quality advocate, and quality is the number one priority in every functional area.

In Iowa, we will implement creative, proven member and provider incentive strategies to drive performance improvement and favorable outcomes, as detailed in our response to 10.3 below. ***This includes partnering with Wellmark to implement the 3M Treo Solution as a consistent measure of value across ACO providers.*** We will use ongoing assessment, tracking, and work plans based on measurable goals to promote member outcomes, drive provider quality and efficiency, and decrease negative outcomes and incidents. We will also design special programs and partnerships in support of Iowa's specific goals, such as the Healthiest State Initiative (see Section 10.2).

Our Quality Management leadership evaluates our performance measures periodically to assess their continued significance. For example, Table 1.4-3 illustrates a sample set of reduction in ER visits, as well

as inpatient admissions, across our health plan affiliates that offer disease management programs. The sample set shows improved outcomes for members in our disease management program. *Claims analysis showed that between 2012 and 2013, our affiliates experienced an overall reduction in their disease management programs of 19.6 percent in ER visits and 25.3 percent for inpatient admissions.*

Table.1.4-3. Effectiveness of Amerigroup Disease Management Programs

Affiliate Medicaid Health Plans’ Disease Management Results for Emergency Room Visits and Inpatient Admissions: 2012 – 2013 Year-Over-Year Comparison		
Disease Management Program	ER Visits per 1,000 Members	Inpatient Admissions per 1,000 Members
Asthma	-27.2%	-39.5%
Congestive Heart Failure	-12.5%	-10.6%
Diabetes	-14.7%	-8.2%
Major Depressive Disorder	-16.5%	-9.9%
All Disease Management Programs	-19.6%	-25.3%

At Amerigroup we believe “that which gets measured gets done.” Our Quality Management Program is at the core of our success in optimizing health outcomes, decreasing the cost of care, and increasing quality of care and services. We look forward to working with DHS to advance quality outcomes for the Iowa Initiative and using our tools to help achieve improvement in its priority measures.

Improving Outcomes (1.4.2.7)

We are intensely proud of our achievements related to improved health outcomes, and we look forward to working shoulder to shoulder with DHS and other partners to help achieve optimal outcomes for our members and other groups affected by health disparities. Indeed, we are excited to work with Iowa in its bid to become the nation’s healthiest state. To make this happen, we will appoint a local Amerigroup team led by a senior plan executive to work directly with key constituents (e.g., DHS, Iowa Department of Public Health, Healthiest State Initiative workgroups, local businesses, community organizations, providers, other MCOs, other State agencies, and, of course, our members) to tailor our market-leading programs to address key state performance gaps and lead by example. We are committed not only to help drive superior health and wellness performance, but to improving quality and cost-effectiveness across the entire healthcare delivery system.

We believe our willingness to collaborate is at the heart of our success. For instance, our Tennessee affiliate worked closely with the state of Tennessee in designing and launching the Population Health Program, a comprehensive disease management initiative. From its initial planning in 2011 through implementation in July 2013, our leadership team worked closely with the state and other health plans to lend our expertise and understanding of members and providers in Tennessee as well as the opportunities and challenges of a new model.

The Population Health Program uses an integrated care management model that has delivered results. In one quality improvement initiative, we measured the impact of integrated case management for TennCare members diagnosed with both severe mental illness (SMI) and diabetes. Between 2008 and 2012, behavioral health visits increased by 116 percent in the participating population, emergency room visits decreased by 59 percent, and inpatient admissions decreased by 15 percent. Additionally, clinical improvements in the diabetes standard of care for retinal eye exams increased by 17 percent.

Other data validate our integrated model. In 2012, 69 percent of members enrolled in case management reported an improvement in their quality of life, and 99 percent of members were satisfied with their case management. Additionally, 73 percent reported that they are either much more or more confident in their ability to handle their healthcare needs after receiving case management services. Table 1.4-4 provides additional data regarding our effectiveness in outcomes in our New York and Tennessee affiliates.

Table 1.4-4. Amerigroup’s Effectiveness in Well Child Visits and ADHD Care

Well Child Visit, 3 – 6 Years of Age			
	HEDIS 2012	HEDIS 2013	HEDIS 2014
NCQA 90 th percentile	83.04	82.08	82.69
New York	82.27	84.58	86.23
ADHD Initiation Phase			
NCQA 90 th percentile	52.48	51.86	53.03
Tennessee	61.33	60.54	60.59

This year, the NCQA ranked more than 1,000 commercial, Medicaid, and Medicare health plans based on clinical performance, member satisfaction, and NCQA accreditation. The annual NCQA rankings are based on a weighted score for each plan, combining scores from: NCQA Accreditation Standards (15 percent); HEDIS measures (60 percent); and CAHPS (patient-satisfaction measures) (25 percent)

Our New York affiliate ranked eighth nationally and did so in its first year of reporting. In addition, our affiliate health plans managing Medicaid programs in *Georgia, New Jersey, Tennessee, and Nevada* were ranked in the Top 50. Tennessee ranked 23rd and has been in the Top 50 for three consecutive years.

Accessible Services (1.4.2.8)

As outlined in Section 1.4.2.3, our case managers, as part of an interdisciplinary team, work directly with members to develop an integrated care plan that addresses physical health, behavioral health, LTSS and other member needs across all service settings. Case managers support the member in accessing the services, including scheduling appointments, arranging transportation, conducting appointment reminder calls, following up to verify service initiation, member progress, and need for service adjustment and incorporation into the care plan. Within this service provision, Amerigroup respects and appreciates the Independent Living movement and philosophy. Our organization created a National Advisory Board, a volunteer panel of family members and persons with disabilities which advises, promotes services and supports models that foster independent living and quality of life for people who are aging or have disabilities. We are working continuously to assure that services are readily accessible for *all* members.

Access to Providers & Member Choice

Recognizing our responsibility to provide members with accessible services and a choice of providers, we strive to be proactive in network development and management – carefully identifying and planning for potential network gaps before they become an issue. Most network gaps are the result of providers ceasing to do business, leaving the service area, closing their panel to additional members, or losing their credentials. *Across our affiliate plans, voluntary turnover rate for providers disenrolling from the network is less than one percent.* When we identify network gaps, we use a variety of integrated and comprehensive intervention strategies to quickly fill these gaps. When disruptions in care do occur, we have systems in place to ensure affected members are communicated with as soon as possible and made aware of their options, in addition to regular review of those members’ utilization of care to make sure they receive all necessary care.

Based on an analysis of current and future needs, we develop and maintain work plans that identify specific network development activities. The work plans will be developed and managed in accordance with DHS network requirements, company policies, specific staff positions and/or department responsibilities, and the anticipated timeframes for completion. Our senior network development leadership will review the work plans with applicable staff and other departments, will monitor progress, and will update and/or revise activities as necessary. Specific assignments will be made to the appropriate staff to oversee the filling of the identified network gaps.

Easy, extended access to care positively impacts member satisfaction. We believe when members are able to choose providers with convenient appointments, the likelihood of positive health outcomes and

adherence to treatment plans and follow-up is increased. Our provider agreement in Iowa will require providers to abide by all appointment standards specified in the RFP. We will educate all providers on access standards through provider orientation, ongoing training, our provider manual (incorporated by reference as part of the provider agreement), and frequent reminders in newsletters and fax blasts.

To further expand the accessibility of our provider network, we will use the latest proven technology to offer telemedicine applications, web-based physician access, and remote monitoring to improve access for members in rural areas and for individuals with challenges in accessing traditional care and services.

Linguistic and Cultural Accessibility

We maintain our level of dedication to culturally appropriate care by regularly reviewing and analyzing our network and staff structure so that there is a diverse representation of providers and staff to members. We understand the Native American and Alaskan Native populations tend to choose providers based off of word of mouth. This is important to recognize when maintaining continuity of care within these populations. To that end, Amerigroup works to recruit additional culturally diverse providers, employees, and community advocates and/or liaisons to maintain a robust network of care.

We have established processes, policies, and procedures for capturing a member's preferred language in our integrated care management system, which is readily accessible by health plan employees who have direct contact with our members. We will connect members to providers who speak their language of choice and make health plan employees and/or resources available in the member's language twenty-four hours a day, seven days a week (24/7), providing members with the ability to change providers based on their cultural preferences and need. This includes the availability of bilingual employees and our 24/7 language interpreter services as described in detail in Section 8, Member Services.

We have learned from our affiliate plans to pay close attention to our members' distinct needs and to make immediate adjustments as needed. As we continue to connect with local members, providers, and community organizations like Iowa's Native American and Alaskan Native populations, we know it may be necessary to find ways to specifically address the needs we may discover.

24/7 Electronic Access

We offer programs that complement the urgent care services network, offering an additional opportunity to avoid an inappropriate ER visit. When a member calls our Nurse HelpLine, the nurse can advise the member on appropriate care options. Based on the member's condition, the nurse can refer the member for a web-based physician consultation through our LiveHealth Online program. This intervention often resolves the member's issue and avoids an unnecessary ER visit.

- **Nurse HelpLine.** Nurses, guided by sophisticated decision tree software, assess each caller's needs and recommend next steps, based on symptoms and severity. Nurses can route behavioral health emergencies to a tele-behavioral health provider, and alert case managers who coordinate follow-up care.
- **Amerigroup On Call.** Nurse HelpLine callers can speak to nurses with physician oversight through Amerigroup On Call. Amerigroup On Call offers translation services for over 200 languages and guides members on appropriate next steps for non-emergent medical conditions.
- **Web-based Consultations.** Amerigroup is bringing additional capabilities and innovations to Iowa. With LiveHealth Online, we will offer members another alternative to visiting the ER. We will offer online physician visits, when appropriate, given members' conditions and ability to secure online services. LiveHealth Online completes the continuum of options for members, enhancing their access to emergency room-alternative services.

Providing Covered Benefits and Administration, and Promoting Efficiency & Highest Quality (1.4.2.9 - 1.4.2.10)

Amerigroup and its affiliate health plans have a history of strong service delivery with proper administrative oversight and financial stewardship. ***Our organization has never had a state-sponsored contract terminated for performance.*** We affirm that we will provide all covered benefits and administrative functions as required in the RFP.

Amerigroup generates superior value for our State customers by providing high quality care in the right setting and at the right time. We do this through a variety of approaches, including implementing programs to reduce re-hospitalizations and preventable emergency room use; by offering pay-for-performance incentives to providers and facilities for efficient, evidence-based care delivery; and by detecting and ameliorating unnecessary or wasteful practices and/or fraudulent activities. The result is higher quality care and better health outcomes for less per member cost.

Decreasing Avoidable ER Use

To address the causes for unnecessary and frequent emergency room utilization, Amerigroup's affiliates have developed programs that connect members with the services and supports they need. One such program, Georgia's ER Case Management Program, has proven very effective. The goal is to assist members and their families/caregivers in managing the member's symptoms in alternative settings, avoiding unnecessary ER visits. Through this program, care coordinators outreach and inform members on proper utilization of services, enhance access to care, and improve care coordination. They also provide members with appropriate alternatives to emergency room use so that members receive services in the community.

Coordination, Integration, and Accountability (1.4.2.11)

Amerigroup acknowledges the requirement to coordinate, integrate, and be accountable for all services proposed. We embrace accountability and transparency. ***Amerigroup, our parent organization, Anthem, and its affiliate health plan organizations have never had a state-sponsored health program contract involuntarily terminated for performance.***

This proposal outlines in specific detail all of our methods to ensure accountability to the State in the delivery of Contract services, including maintaining financial and medical records (Sections 2.4.1 and 2.4.2), responsiveness to records requests (Section 2.4.3), disclosures (Sections 2.5.1 – 2.5.4), responsiveness to State inquiries and requests for information (Section 2.16), processing grievance and appeals (Section 8.15), program integrity activities (Section 12), State review (Section 10.2), and reporting (Sections 14.1 – 14.11).

IA_1.2_COE_1.3

Effects of the Federal Waiver (1.5)

Amerigroup Iowa (Amerigroup) agrees to comply with any modifications to this RFP and subsequent Contract resulting from the waiver approval process. In the event that CMS denies the waiver request(s), the State shall be under no obligation to award a Contract(s). We understand that if CMS denies the waiver request(s) following Contract award, DHS may terminate the Contract immediately without penalty. We acknowledge that in the event of a termination under this section, DHS shall not be liable or required to compensate Amerigroup for any work performed or expenses incurred. At the behest of the State, Amerigroup offers broad expertise in the waiver application and approval process.

Licensure/Accreditation (2.1)

Licensure/Qualified Health Plan (2.1.1)

Question 2.1, #1 - #2

1. Indicate if you are currently licensed as an HMO in the State of Iowa. If you are not currently licensed, describe your plan to achieve licensure.
2. Indicate whether you are currently a qualified health plan (QHP) issuer certified by the Iowa Healthcare Exchange.

Amerigroup Iowa (Amerigroup) is a new entrant to the Iowa market and is currently in the process of obtaining an HMO license from the Iowa Insurance Division. Amerigroup submitted our application on April 6, 2015, and fully expects to be licensed as an HMO within five business days of the State's notice of intent to award.

Amerigroup is currently not a qualified health plan (QHP) issuer certified by the Iowa Healthcare Exchange. Upon award and after the implementation and transition period for the Iowa Initiative, Amerigroup will consider pursuing certification by the Iowa Healthcare Exchange.

Accreditation (2.1.2)

Question 2.1, #3

3. Indicate whether you are currently accredited by the NCQA. If you are not currently accredited, describe your plan to achieve accreditation.

As a new entrant to the Iowa market, Amerigroup is not currently accredited by the NCQA; however, we agree to attain accreditation at the earliest date allowed by NCQA. Our affiliate health plans are NCQA-accredited in 13 states across the nation, are experienced in operating according to the standards for accreditation, and can adeptly navigate the process of achieving accreditation without delay. ***Our affiliates have never failed to achieve accreditation in any state in which they have applied.***

Recognition for our commitment and results in the Quality realm are evidenced by these facts:

- NCQA includes seven Amerigroup affiliate health plans in its list of the Top 100 Medicaid health plans in the country
- Five Amerigroup affiliate health plans are in the top 50 of this ranking, and one has been included at this level for three consecutive years
- Relative to our competitors in various markets, three of our affiliate health plans maintain the number one position in their market

Amerigroup and our affiliates will leverage our organization's **eight NCQA-accredited disease management programs**, for asthma, diabetes mellitus, major depressive disorder, congestive heart failure, chronic obstructive pulmonary disease, coronary artery disease, HIV/AIDS, and schizophrenia. ***In 2012, these programs earned a three-year NCQA renewal accreditation at the highest level possible.*** Our Iowa members will benefit from our intense focus on the full spectrum of disease management, from health education for a single condition to comprehensive management of all member conditions.

Our partnerships with local community programs, investment in emerging technologies, and strategies to drive member engagement, take our quality strategies beyond traditional health plan case management into a full delivery system approach to health care management.

In order to keep the State apprised of our accreditation progress, we will provide the following information at the following times:

1. Status update to include, at a minimum, the proof of application and all supporting documents as of the effective date of the Contract; and
2. Status update to include, at a minimum, the projected date for the on-site reviews 12 months after the first day of the effective date of the Contract. We understand that if we fail to meet the applicable requirements stated above, we will be considered to be in breach of the Contract terms and may be subject to remedies for violation, breach, or noncompliance of contract requirements.

Subcontracts (2.2)

Subcontractor Qualifications (2.2.1)

Question 2.2, #1

1. Summarize your proposed subcontracts, including any with parent companies, and key work to be delegated under the subcontracted relationship.

Amerigroup Iowa (Amerigroup) will leverage the experience of our affiliate health plans and our parent company, Anthem, Inc. (Anthem), who has established operations, practices, and processes to engage the services of subcontractors when we determine that they will improve the quality, efficiency, and/or value of services we deliver to our members, providers, and the State. Outside of potential Accountable Care Organization partnerships, ***Amerigroup does not subcontract any essential part of our care model beyond its family of companies.***

Before we contract with any subcontractor, we will thoroughly assess all aspects of the organization, including financial stability, history of compliance, and demonstrated ability to perform the functions or services proposed in accordance with State and Amerigroup standards, requirements, and expectations. We will also review subcontractor staff for applicable licensure and conduct a comprehensive readiness assessment to validate the subcontractor's ability to perform the required tasks.

As specified by 42 CFR 438.230, Amerigroup will maintain oversight and be fully accountable to DHS for all activities and processes of our healthcare service subcontractors. We will hold them to all Contract requirements, and certify and warrant all of their work. Our written subcontractor agreements will also explicitly state our expectations that each vendor will comply with all Contract requirements, including any amendments, requirement changes, and/or State initiatives that take effect at any time, and will include provisions for revoking delegation or imposing other sanctions if the subcontractor's performance is inadequate.

Amerigroup will submit any material subcontract changes in writing to DHS 60 days before the effective date of the amendment. We will also provide any subcontracts DHS requests within 24 hours. In addition, Amerigroup understands that DHS may waive its right to review subcontracts and that such does not constitute waiver of any subcontract requirements. We also agree that DHS holds the right to request removal of a subcontractor for good cause.

Amerigroup intends to use the following subcontractors to provide services to meet the requirements of the Iowa High Quality Healthcare Initiative. Table 2.2-1 and 2.2-2 lists proposed subcontractors and services they will provide under the Contract.

Table 2.2-1. Subcontractors Providing Limited, specific functional area support as noted

Name	Description of service
Anthem Inc. and it’s subsidiaries	Administrative and support services including finance, claims administration, call center activities, information technology, legal, regulatory, treasury and compliance
American Imaging Management, Inc. (AIM Specialty Health)	Utilization management support activities specific to cardiology, radiology, and sleep-testing services
Express Scripts, Inc. (ESI)	Pharmacy Benefits Management
Logisticare Solutions, LLC	Non-emergent transportation services
Audiology Distribution, LLC (HearUSA)	Hearing care programs and access to professionals, latest technology
McKesson Technologies, Inc.	24-hour Nurse helpline for physical and behavioral health consultation
Superior Vision Benefit Management, Inc.	Vision Benefits Management

Table 2.2-2. Subcontractors Providing Added quality and/or value to our members

Name	Description of service
Careticker, Inc.	Web-based platform for in-home caregiver documentation and real-time sharing of information, and incentives for caregivers
Breakthrough Behavioral, Inc.	Video-based tele-behavioral health consulting for enhanced remote access
My Support, Inc.	Web-based platform that helps older adults, and those with chronic health conditions and disabilities connect with direct support workers with the skills that match their individual needs, preferences, and values
National Disability Institute	Financial education and training
Remind Technologies, Inc.	Web-based platform to support medication reminders and adherence
PCG Public Partnerships, LLC (PPL)	Participant-directed financial service model enabling members to choose which services they receive, how they are delivered, and by whom, within their budgets.
Telligen, Inc.	Services may include Minimum Data Set transmission support, onsite MDS validation, automation and education, quality review and oversight, core standardized assessments, level of care determinations for nursing facility, waiver programs.

As stated in Section 2.2.1, Question 1, Amerigroup will comply with all DHS requirements governing subcontractor qualifications and use.

Question 2.2, #2

2. Indicate if any of the subcontracts are expected to be worth at least five percent (5%) of capitation payments under this contract.

Amerigroup subcontractors projected to receive payments equal or greater than five percent of capitation rates are Express Scripts, Inc., the pharmacy benefit manager, and Anthem, Inc., our ultimate parent company, which, in conjunction with its subsidiaries, will provide administration and support services. We will submit those subcontractor agreements for DHS review and approval.

Subcontractor Oversight (2.2.2)

Question 2.2, #3

3. Describe the metrics used to evaluate prospective subcontractors’ abilities to perform delegated activities prior to delegation.

As stated in Section 2.2.1, Question 2, Amerigroup understands that it will have full legal responsibility for all activities under the Contract, including those performed by subcontractors, as required by 42 CFR 438.230. We will hold our subcontractors to those same requirements.

We will use subcontractors only after a thorough evaluation process to determine that they have the demonstrated capabilities and overall responsiveness to improve the quality, efficiency, and/or value of services we deliver to our members, providers, and the State. We use a thorough audit process to evaluate prospective subcontractors, incorporating among other things a review of the entity for compliance with all State Contract requirements, State and Federal requirements, NCQA standards, financial solvency measures, and any additional regulatory and accreditation standards for each market. Once we determine the preferred vendor, we request a pre-delegation audit – a comprehensive onsite review to evaluate the vendor’s readiness, applicable licensure, and compliance, including Office of the Inspector General screenings.

Question 2.2, #4

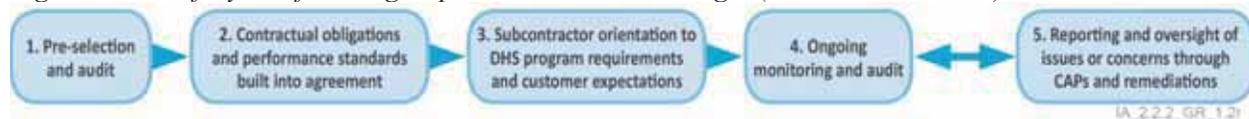

4. Describe the policies and procedures used for auditing and monitoring subcontractors’ performance.

Monitoring and Evaluating Subcontractors’ Performance

Amerigroup will continuously monitor its subcontractors to verify compliance with our standards and all Contract requirements. We will retain full legal responsibility for all activities under the Contract, including those performed by subcontractors. Our national Medicaid Delegation and Oversight policy, described more fully below, outlines processes for monitoring subcontractors, including procedures for the required annual audit.

Figure 2.2-1 depicts the lifecycle of the subcontractor oversight process we will put in place. Please note that monitoring and audit, followed by corrective action, will continue for the duration of the subcontractor’s relationship with Amerigroup.

Figure 2.2-1. Lifecycle of Amerigroup Subcontractor Oversight (Local and National)

Our subcontractor oversight will begin approximately four months before go-live. We will assemble a team from different areas of the company and subcontractor representatives who will meet weekly. During these implementation meetings, we will address various components of the program, including specifics for each subcontractor, such as membership, benefit coverage, and local infrastructure, as well as reporting, eligibility file, encounter data, claims processing, network adequacy, call center, complaint/grievance, and UM and compliance requirements. After go-live, we will continue to hold quarterly Joint Operations Committee meetings with subcontractors and representatives of the local health plan. During these meetings, we will discuss operational issues, HEDIS[®], and other program improvements, and provide updates and education on any changes in the program.

Amerigroup's Iowa-based local leaders will oversee and review subcontractor services to verify compliance. We will monitor performance through reports specific to the types of services our subcontractors provide, such as access and service quality indicators. These performance reports will enable us to quickly identify and address issues as soon as they arise. We will provide performance monitoring reports and reviews upon request, and will notify DHS when a subcontractor is placed on corrective action.

We will also leverage centralized national resources and processes to oversee and manage certain subcontractors' services. While we will subcontract for certain services, Amerigroup will be solely responsible for meeting the State's requirements, and we will hold our subcontractors to those same requirements. Our subcontractor agreements will clearly state our expectations, as applicable, for licensure and accreditation; eligibility verification; covered services and benefits; care coordination; record reviews; compliance with credentialing, utilization management, quality assurance, coordination of benefits, third-party liability, and other rules, regulations, policies, and procedures; insurance coverage; HIPAA compliance; and claims submission. We will also require subcontractors to comply with all contractual requirements, including any amendments, changes, and/or State initiatives enacted at any time during the Contract. We specifically include compliance with all regulatory requirements related to the agreement.

Local Oversight

At the local level, Amerigroup's Vendor Compliance Workgroup (VCW) and Quality Management and Improvement Committee (QM/QI) will work together to see that subcontractors comply with all applicable requirements and expectations. Their goal will be promptly identifying and mitigating potential risks. This workgroup will be a collaboration between our Compliance and Quality Management teams, and will include Department Leads and Account Managers for subcontractors that also serve our affiliate health plans. This is the cornerstone of our local subcontractor oversight program that includes:

- **Monthly Workgroup Meetings** with health plan leadership to formally review subcontractor performance metrics and data obtained through our attendance at quarterly national Vendor Selection and Oversight Committee (VSOC) and Delegated Workgroup (DWG) meetings. Examples of reviews will include vendor rosters to identify adequacy of service coverage and access; call center reports to monitor call volume and resolution; customer complaint reports to identify quality and compliance issues; and claims payment reports to monitor payment accuracy, timeliness, and service utilization.
- **Quarterly Meetings with Subcontractors** to discuss performance benchmarked against Contract provisions and customer expectations.
- **Monthly Reporting** including review of subcontractor information, such as performance metrics and grievance and appeals data.

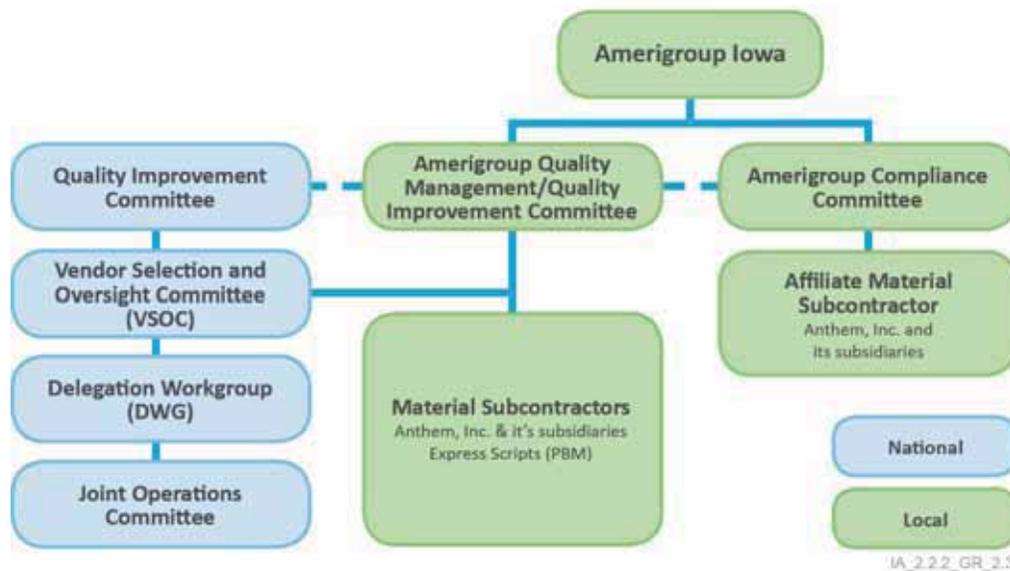

We will also routinely monitor the performance of our primary Administration and Support Services subcontractor, Anthem, and our National Medicaid Division through our VCW and other local committees, including the QM/QI, Compliance, and Medical Advisory Committees. Each quarter, we will review service-level standards and management reports such as claims processing timeliness and accuracy; Member Call Center and Provider Helpline statistics; and Fraud, Waste, and Abuse program activity and results.

At the national level, for vendors that also serve affiliate health plans, Amerigroup will leverage the following **oversight** functions and governance structures to select, monitor, and regulate subcontractor activities and performance (See Figure 2.2-2):

- The **Quality Improvement and Compliance Committees** meet quarterly and are responsible for reporting any quality or compliance-related issues to Amerigroup's local committees.

- **Vendor Selection and Oversight Committee (VSOC)** has primary responsibility for overseeing subcontractors who serve multiple health plans. It is responsible for subcontractor compliance with State, federal, NCQA, CMS, and individual program requirements, standards and expectations, as well as any other applicable regulatory or accreditation standards. VSOC reports to the national Quality Improvement Committee. Iowa’s compliance team will attend these quarterly meetings.
- **Joint Operations Committee (JOC) meetings** blend local and national oversight functions. Amerigroup’s quality management staff and key affiliate health plan personnel and staff attend quarterly JOC meetings to discuss subcontractors’ performance across markets and present issues and concerns to the DWG. Iowa’s local Medical Advisory and QM/QI Committees will receive a summary of each JOC meeting.
- **DWG reports to VSOC monthly.** Each Amerigroup affiliate health plan has voting members in the DWG. It is responsible for seeing that we follow established policies and procedures in accordance with State, federal, NCQA, and any other applicable regulatory and accreditation standards. The DWG has collaborative relationships with, and representation from, internal departments. As a governing body comprising local health plan representatives, DWG will also review results of the annual audits required by DHS, and will support corrective actions, as needed.

Figure 2.2-2. Amerigroup’s National and Local Governance Structure for Material Subcontractors

Compliance Audits for Subcontractors

Once contracted, Amerigroup will closely monitor subcontractor performance to verify continued compliance with all applicable standards and requirements, including Contract requirements. Our local VCW and QM/QI Committee monitoring and auditing activities will include:

- Conducting formal reviews specific to the types of services provided at least quarterly
- Reviewing performance management reports
- Conducting audits of subcontractor performance against the requirements in the subcontractor agreement
- Identifying and communicating deficiencies or areas for improvement
- Enforcing correction of any identified performance deficiencies, or termination if deficiencies cannot be corrected

Reporting Requirements

Monthly, Amerigroup's VCW will review reports that include subcontractor information, such as performance metrics and grievance and appeals data. If we identify any performance issues, we will address them through formal written Corrective Action Plans (CAPs), and we will work closely with subcontractors to investigate and take appropriate steps to promptly resolve them.

We will track and document progress on corrective action every 30 days until all items are addressed and the CAP is closed. Anthem's Quality Improvement and Compliance Committees also track and monitor all active CAPs – on both the local and national level. We will notify DHS whenever a subcontractor is placed on a CAP.

Question 2.2, #5

5. Describe the enforcement policies used for non-performance, including examples.

Amerigroup will routinely monitor the performance of our subcontractors through our local committees, including the VCW, QM/QI and Medical Advisory Committees. Each quarter, we will formally review service level standards and management reports, including, but not limited to:

- Overview of fraud, waste, and abuse activity
- Quality initiatives and HEDIS[®] scores
- Outreach initiatives conducted or planned for the following quarter

Every month, our VCW will review reports that include subcontractor information, such as performance metrics and grievance/appeals data. Reports are specific to the types of services subcontractors provide.

If any subcontractor is not meeting established performance metrics or goals, we will work closely with the vendor to investigate and take appropriate steps to resolve issues, including, but not limited to:

- Reviewing report results with the subcontractor and implementing a formal, written Corrective Action Plan (CAP) that includes oversight and monitoring
- Arranging site visits and/or accessibility calls to corroborate results, which will determine whether additional corrective action is necessary
- Terminating the subcontractor agreement if the vendor fails to implement or follow an acceptable CAP

Our local and national quality teams track and document corrective actions every 30 days until all items are addressed and the CAP is closed.

For example, in the first quarter of 2014, our Texas affiliate health plan's dental vendor was placed on a CAP for not meeting call timeliness standards. We discovered that the root cause was extended periods of inclement weather that created staff shortages. Its employees now have the ability to work from home during inclement weather, which has resolved the staffing issues and minimized problems with call timeliness standards.

Another example – our Louisiana affiliate health plan placed a transportation subcontractor on a CAP in October 2012, when it observed an increase in the number of complaints related to transportation. The affiliate health plan worked with the subcontractor to improve member service through increased training for customer service representatives, a revised call script that included warm transfers to the health plan, unannounced rides to promote compliance with vehicle and driver standards, and warnings and terminations to drivers who did not adhere to these standards. As a result, the subcontractor demonstrated marked improvement in customer service.

Subcontractor Financial Stability (2.2.3)

Amerigroup will closely monitor the financial stability of any subcontractors, including prepaid hospital plans, physician-hospital organizations, or other entities that accept financial risk for services we do not directly provide, and whose payments equal or exceed five percent of premium/revenue. We will evaluate their ability to fulfill their Contract financial obligations through contractually mandated reports demonstrating their solvency. We will require that subcontractors to our Iowa program submit the following documents quarterly to the VSOC, which has primary responsibility for overseeing vendors that serve multiple health plans, as well as the local VCW and QM/QI Committee, for review:

- A statement of revenues and expenses
- A balance sheet
- Cash flows and changes in equity/fund balance
- Incurred But Not Received (IBNR) estimates

We will also require subcontractors to submit the following documents at least annually:

- Audited financial statements, including statement of revenues and expenses
- A balance sheet
- Cash flows and changes in equity/fund balance
- Actuarial opinion of the IBNR estimates

The Vendor Selection and Oversight Committee may also review other documents, such as tax returns or financial review questionnaires, to verify the subcontractor's ability to continue meeting its contractual obligations.

Amerigroup understands that DHS reserves the right to require additional financial reporting on subcontractors and will make those documents available upon request.

Excluded Subcontractors (2.2.4)

Amerigroup will comply with all Scope of Work Section 2.2.4 requirements that prohibit subcontracting with providers that have been excluded from participation by the Department of Health and Human Services, the Office of the Inspector General (OIG) under section 1128 of the Social Security Act, or by DHS from participating in the Iowa Medicaid program for fraud and abuse.

In addition to all contractually required databases, Amerigroup will also initially screen all potential providers through the General Services Administration Excluded Parties List. We will not contract or employ parties appearing in any of those databases.

Amerigroup will also exclude providers or individuals from our network if they are identified as having OIG sanctions, have failed to renew license or certification registration, have revoked professional licenses or certifications, or have been terminated by DHS.

We will maintain monthly protocols to process exclusions and disbarments that occur after the initial screening or credentialing process and before mandatory periodic screenings or re-credentialing. We will also use the databases identified above for monthly monitoring of providers that we contract, employ, or include in our network.

We will not contract for, or otherwise pay for, any items or services furnished, directed, or prescribed by any provider excluded from participation in federal health care programs by the OIG under Sections 1128 or 1128A of the Social Security Act, except as permitted under 42 CFR 1001.1801 and 1001.1901.2.32.6.c.

Amerigroup will terminate its relationship with any provider identified by DHS as being in continued violation of law within 30 calendar days.

Integrated Subcontracting (2.2.5)

Question 2.2, #6

6. Describe how subcontracting relationships will provide a seamless experience for members and providers.

Amerigroup is committed to promoting a quality, seamless provider and member experience across all programs and services. We use subcontractors only after determining that they will improve the quality, efficiency, and/or value of services we deliver to our members, providers, and the State. In those instances, we integrate them into our infrastructure so that neither providers nor members notice a difference between contacting our employees or designated vendors’ staffs regarding high quality services. For example, across all of our affiliate health plans, all of our subcontractors, such as those who provide vision or pharmacy benefits, completely manage their delegated services. But their data warehouses interface with Amerigroup’s management information system. That means providers seeking pre-authorizations or checks on claims for vision services still call the same provider service hotline. It also means that members with questions about their prescriptions receive the same answer at the pharmacy or on their customer service hotline.

Nationally, our affiliate health plans that serve state-sponsored programs have an outstanding history of establishing and maintaining high-quality standards of service that result in improved health outcomes, as well as member and provider satisfaction. They use best practice methodologies to continuously evaluate data and processes; implement interventions; and re-examine our clinical, management, and operational processes to identify improvement opportunities and set quality improvement activities for our subcontractors. We will specifically incorporate these methodologies into our subcontractor agreements to support an integrated, seamless experience for our members and providers.

To accomplish that, we will work directly with each subcontractor to create a suite of reports that capture its performance on State and regulatory requirements, as well as against Amerigroup’s internal standards. We will use some of these reports to monitor performance of delegated functions, including verification that our subcontractors’ day-to-day business operations meet our expectations and provide quality service to our providers and members. We will hold quarterly Joint Operations Committee meetings to review these reports and discuss operational and performance issues. We will also monitor subcontractors’ performance monthly through our DWG and VSOC – two committees comprising both health plan and national staff who oversee the performance of all delegated functions. If we determine that a subcontractor’s performance has fallen below the required standards, we will issue a recommendation for a correction to the vendor.

We will collaborate with DHS to identify, design, and conduct annual programmatic reviews to assess the experience of providers and members in Iowa’s program, as well as the quality of services they receive. We will routinely analyze clinical and non-clinical data to identify proposed areas for review, including:

- Member and provider complaints
- Risk management adverse-incident results
- Member and provider satisfaction surveys
- Performance measure data
- HEDIS® data

We will review these data in our QM/QI Committee, which will be responsible for identifying issues and proposing improvements. We will identify those areas based on factors, including:

- Results of objective performance measures, such as HEDIS data
- Prevalence of the issue across the program
- Member, caregiver, stakeholder, and provider input
- Impact on member care and/or provider services

The cornerstone of fostering a seamless provider and member experience will be Amerigroup's comprehensive training and education program, which is grounded in our affiliate health plans' experience in state-sponsored health programs across 19 states. That experience has taught us what types and methods of training work best and how to offer multiple sources and touch-points to accommodate different needs.

All of our subcontractors will have initial/ongoing training and access to extensive educational materials. We will also make sure that all subcontractors are fully aware of their individual responsibilities and the responsibilities of others. Some of the ways we accomplish this is through:

- Contractual subcontractor agreements
- Standards of ethical business conduct
- Initial and ongoing training
- Orientations and in-service training
- Specific training for subcontractors with direct member contact
- Collaboration with our subcontractors to align training goals
- Educational materials, such as our member handbook, provider manual, newsletters, and website
- Training on fraud, waste, and abuse

Amerigroup will implement established education and training protocols in Iowa, and employ a customized approach and strategies to address local trends and issues within Iowa's communities.

Throughout the Contract, our Iowa Vendor Compliance Workgroup and QM/QI Committee will oversee subcontractors' performance, regularly review their performance reports, and monitor member and provider feedback to promptly identify and address issues when they arise.

We will continually monitor and act on information obtained through our Provider Relations, Medical Management, Quality Management, and Member Services departments. In addition, our Quality Management employees will review grievance trends over time to identify ongoing patterns of noncompliance and address them with quality improvement plans or Corrective Action Plans (CAPs).

Amerigroup will also enhance the seamless provider and member experience through annual satisfaction surveys administered by an independent third-party vendor. Initially, we will request our subcontractors to perform a satisfaction survey after the first six months of operation. We will require subcontractors to score equal or higher than an 80 percent overall positive response.

Those surveys will provide data on member and provider satisfaction with access, availability, and quality of services. We will assess year-over-year improvements in survey results and compare our performance to that of the industry overall. The results will provide us with valuable benchmark information and enable us to focus on areas needing improvement.

Financial Stability (2.3)

Question 2.3. #1

1. Provide verification of the financial requirements described in the subsections of Section 2.3.

Amerigroup Iowa (Amerigroup) is a new entrant to the Iowa market and is currently in the process of obtaining an HMO license from the Iowa Insurance Division. Amerigroup submitted its application on April 6, 2015, and fully expects to be licensed as an HMO within five business days of the State's notice of intent to award.

Additionally, we will comply with all requirements of Section 2.3 and Subsections 2.3.1 – 2.3.7 of the Scope of Work (SOW), including deposit requirements at Iowa Admin. Code 191 Chapter 40.12(514B) and reporting requirements established by DHS and at 191 Chapter 40.14(514B). We agree to copy DHS on all required filings with the Iowa Insurance Division. Amerigroup understands and agrees that DHS will continually monitor its financial stability and provide financial reporting requirements through the Reporting Manual.

As a newly formed company, we provide verification of the financial requirements described in subsections of Section 2.3 from our ultimate parent company, Anthem, Inc. (Anthem), in Attachments 3.2.7.2-1 that demonstrate our ability to maintain a fiscally solvent operation and protect against insolvency in accordance with federal and Iowa Insurance Division requirements for minimum net worth.

Solvency (2.3.1)

Amerigroup will comply with all requirements of SOW Section 2.3.1 to maintain a fiscally solvent operation and protect against insolvency in accordance with federal and Iowa Insurance Division requirements for minimum net worth.

Amerigroup is a wholly owned subsidiary of our ultimate parent company, Anthem, Inc. (Anthem). Anthem subsidiaries currently operate state-sponsored health programs that serve more than 5.2 million members in 19 states across the country. All references throughout this proposal to "Anthem" refer to this entity. Please note that our parent organization underwent a legal name change on December 3, 2014. As such, attachments for requested documents related to our parent organization may also reference the prior legal name of this entity, WellPoint, Inc. (WellPoint). Amerigroup, Anthem, and its affiliate health plans have never filed, or had filed against it, any bankruptcy or insolvency proceeding, voluntary or involuntary, or undergone the appointment of a receiver, trustee, or assignee for the benefit of creditors.

Anthem, is ranked 38th on the 2014 Fortune 500 list, and its insurance and HMO subsidiaries are well funded at levels above the minimum threshold of 200 percent of Authorized Control Level Risk-Based Capital (ACL RBC) set by the Code of Federal Regulations. In 2014, Anthem's combined ACL RBC across its insurance and HMO operating subsidiaries was 563 percent, almost three times the federal and state requirements. Similarly, Anthem has guaranteed it will provide financial resources to Amerigroup Iowa sufficient to maintain a 200 percent or higher RBC ratio as defined by NAIC. The guarantee is in writing, effective for the term of the Contract, and a copy will be delivered to DCH prior to Contract signature date. If additional capital is needed, Anthem maintains cash and/or investments that can be contributed. As of December 31, 2014, Anthem held \$2.7 billion of cash and investments.

Anthem will fund Amerigroup's required minimum capital upon incorporation and licensure, according to standards of the Iowa Department of Insurance.

Reinsurance (2.3.2)

Question 2.3. #2

2. Describe how you will comply with the requirements for reinsurance. Will you obtain reinsurance contracts or submit a plan of self-insurance?

Amerigroup will comply with all reinsurance requirements at Iowa Admin. Code r. 191-40.17(514B), as stipulated in SOW Section 2.3.2. Amerigroup will self-fund catastrophic losses associated with the Iowa High Quality Healthcare Initiative members rather than purchase commercial reinsurance. This is consistent with our ultimate parent company, Anthem's, practice of self-funding, where allowable, catastrophic HMO Medicaid losses for its subsidiary health plans. This decision is largely based on the financial and operational strength of Anthem, which has a long record of strong quarterly profits going back to the company's inception.

As of December 31, 2014, Anthem held approximately \$2.7 billion of cash and investments and equity of almost \$25 billion. Anthem has consistently been profitable for more than a decade.

Risk Adjustment (2.3.3)

Amerigroup understands and agrees to all specifications of SOW Section 2.3.3, including the State's risk adjustment methodology and right to change its risk adjustment models and tools. We also agree that total payments by the State will be risk score neutral and that adjustment will be calculated separately for the Long-Term Services and Supports (LTSS) and non-LTSS populations.

LTSS and Non-LTSS Populations (2.3.3.1-2.3.3.2)

Amerigroup understands that the State plans to blend the institutional and Home and Community-Based Services into one rate cell as a financial incentive to delivering LTSS in the least restrictive environment, and that the blending percentage will be updated at least annually, as stipulated in SOW Section 2.3.3.1.

Amerigroup also understands and agrees to all guidelines and stipulations in SOW Section 2.3.3.2 regarding assigning risk to non-LTSS individuals through claims data, provided services, and possibly pharmacy data. We understand that we will also be assigned a risk score, based on the total risks of the entire population, and how that will be applied to adjust capitation payments based on the availability of enrollment information. Amerigroup also understands and agrees that, after the first six months, rates will be adjusted every 12 months, based on member data. We understand that the State reserves the right to adjust rates prospectively or retrospectively.

Reserved (2.3.4)

The State has reserved this section in the RFP.

Annual Independent Audit (2.3.5)

Amerigroup understands and will comply with all requirements for financial reporting as stipulated in SOW Section 2.3.5. We agree to submit an annual audited financial report comprising our financial activities under the Contract within six months of the end of each calendar year. We agree that the report will be prepared according to Statutory Accounting Principles designated by NAIC by an independent Certified Public Accountant who is on the list of Iowa Insurance Division's approved auditors. We understand that Amerigroup is responsible for the cost of the audit.

Amerigroup agrees to negotiate the format and contents of that audit with DHS, and it will include at a minimum: (i) third party liability payments made by other third-party payers; (ii) receipts received from

other insurers; (iii) a breakdown of the costs of service provision, administrative support functions, plan management, and profit; (iv) assessment of Amerigroup's compliance with Contract requirements for insolvency protection, surplus funds, working capital, and any additional requirements established in Administrative Rules for organizations licensed as HMOs; and (v) a separate letter from the independent Certified Public Accountant addressing non-material findings, if any.

Quarterly Financial Reporting (2.3.6)

Amerigroup will comply with requirements for quarterly NAIC financial reports, as specified in SOW Section 2.3.6. We agree that the independent auditing firm that conducts the annual audit will complete a final reconciliation within required timeframes.

Insurance Requirements (2.3.7)

Amerigroup will comply with all requirements of SOW Section 2.3.7 throughout the term of the contract, including applicable insurance laws of the State and Federal government, and will maintain in force a fidelity bond on employers and officers in accordance with Iowa Admin. Code 191 Chapter 40.13.

Amerigroup will also maintain, with insurance companies licensed by the State of Iowa, specified types and levels of insurance. We have provided proof of the Auto Insurance Umbrella as Attachment 2.3.4-1, the Insurance Requirements Fidelity Bond as Attachment 2.3.7-1, the Certificate of Liability Insurance as Attachment 2.3.7-2, and the Commercial Property Insurance as Attachment 2.3.7-3. Additionally, we will provide evidence of our continued compliance with the insurance requirements in this section upon execution of the Contract.

Maintenance of Records (2.4)

Amerigroup Iowa (Amerigroup) will maintain financial and medical records pertaining to the Contract, including all claims records, for seven years following the later of the end of the federal fiscal year during which the Contract is terminated, or when all State and federal audits of the Contract have been completed.

Financial Records (2.4.1)

Question 2.4, #1

1. Describe your system for maintaining financial and medical records that fully disclose the extent of provided to members

We will respond to Question 2.4 #1 in two parts, under subheadings 2.4.1 and 2.4.2.

Amerigroup will retain accounting records pertaining to the Contract until final resolution of all pending audit questions and for one year following the termination of any litigation relating to the Contract if the litigation has not terminated within the seven-year period. We understand that the financial records in question address matters of ownership, organization, and operation of our financial, medical, and other record keeping systems.

Amerigroup's Comprehensive Records Systems

Amerigroup's system for maintaining records that fully disclose the extent of services provided to our members consists of our comprehensive Medicaid Management Information System (MMIS) that stores electronic data and a set of detailed policies and procedures

Our MMIS maintains the history of member claims processed for all services - medical, behavioral health, pharmacy, vision, dental, and transportation.

IA_241_COB_12

that govern the maintenance of records across our entire operations. Amerigroup complies with 42 CFR part 455 and 45 CFR 164.530(j)(2) and maintains records that disclose the extent of services provided to our members for six years or for the duration of contested case proceedings, whichever is longer.

Amerigroup's MMIS stores a significant amount of information about the services provided to our members through the claims submitted by their providers. ***Our MMIS maintains the history of member claims processed for all services—medical, behavioral health, pharmacy, vision, dental, and transportation.*** Amerigroup maintains backup and recovery plans and disaster recovery plans that protect our MMIS in case of day-to-day occurrences that could temporarily interrupt operations or catastrophic events. Please see our response to Section 13.2 for more information.

Our national Records Management Program provides a consistent and effective approach to managing company records from their creation to destruction. The program provides each business unit with direction and support for managing the life cycle of its records, including appropriate retention, storage, retrieval, and disposal. The Records Management Policy applies to all employees, as well as subcontractors and consultants.

A *record* is a document created, received, or maintained in the course of business operations, regardless of media. Record media include electronic records, written and printed documents, letters, reports, worksheets, and email.

The Records Management Program works toward meeting the following objectives:

- Records stored in an appropriate, safe, and accessible manner
- Records efficiently retrieved for legal, audit, or other business purposes
- Records maintained in compliance with applicable laws and regulations
- Provision for the identification and preservation of records relevant to pending or reasonably foreseeable legal or administrative proceedings or audits
- Appropriate disposal of records when retention periods are satisfied

The Records Management Program is managed by a national Records Management team that oversees the entire program, including compliance, security, and access. The team initiates and manages the quarterly destruction review process and the periodic review of on-site records. They monitor compliance and applicable laws and regulations and modify the program as needed. The national Records Management Committee provides oversight and helps confirm consistent, company-wide compliance with and implementation and enforcement of the Records Management Program. The Records Management Committee meets regularly and includes representatives from a number of areas, including Regulatory Services, Ethics and Compliance, Information Security, Information Technology, Operations, and Legal.

All employees receive annual training on Amerigroup's Records Management Program. Training includes modules about:

- Their need to comply with policies, requirements, and laws related to the retention, destruction, storage, and maintenance of information
- Local desktop procedures, including following the Record Retention Schedule for their department
- Where to go and who to contact for additional information

As an additional resource, our company-wide intranet houses a number of documents related to the Records Management Program; they are available to all employees for easy access and review. These documents include information related to overall policies and procedures, storage and access, confidentiality, retention schedules and approved methods for destruction of information when appropriate.

Medical Records (2.4.2)

Amerigroup's policies and procedures relating to medical records are intended to facilitate effective patient care and quality review while maintaining confidentiality. Amerigroup has electronic record-keeping system procedures in place to help verify patient confidentiality, prevent unauthorized access, authenticate electronic signatures, and maintain upkeep of our computer systems. Security systems are in place to provide backup storage and file recovery, to provide a mechanism to copy documents, and to make sure that recorded input is unalterable. To that end, Amerigroup ensures that our retention practices align with the requirements outlined in the Scope of Work (SOW) Section 6.1.9.1 Medical Records Retention, including:

- Identifying each medical record by State identification number
- Identifying the location of every medical record
- Placing medical records in a given order and location
- Maintaining the confidentiality of medical records information and releasing the information only in accordance with SOW Section 6.1.9.4 Confidentiality of Medical Records
- Maintaining inactive medical records in a specific place
- Permitting effective professional review in medical audit processes
- Facilitating an adequate system for follow-up treatment, including monitoring and follow-up of offsite referrals and inpatient stays

In addition, in compliance with DHS rules, Amerigroup will maintain records:

- During the time the member is receiving services from the provider
- For a minimum of seven years from the date when a claim for the service was submitted to the medical assistance program for payment, or in the case of contested court proceedings, for the duration of the court proceedings or seven years, whichever is longer
- As may be required by any licensing authority or accrediting body associated with determining the provider's qualifications

Response to Records Requests (2.4.3)

Amerigroup will cooperate fully in the provisions of records upon request as outlined in this RFP. We agree to furnish duly authorized and identified agents or representatives of the State and federal governments, including but not limited to the DHS, the Secretary of DHHS, the DHHS Office of the Inspector General (OIG) or the Iowa Medicaid Fraud Control Unit (MFCU), with such information as they may request regarding payments claimed for Medicaid services. We will provide copies of the requested records to DHS, DHHS, OIG, or MFCU within 10 business days from the date of the request. If such original documentation is not made available as requested, we agree to provide transportation, lodging, and subsistence at no cost for all State and/or federal representatives to carry out their audit functions at the principal offices of the Contractor or other locations of such records.

Additionally, we agree to grant the DHS, DHHS, OIG, and/or MFCU access during our regular business hours to examine health service and financial records related to a health service billed to the program.

Disclosures (2.5)

Information on Persons Convicted of Crimes (2.5.1)

Question 2.5, #1

1. Provide disclosures as described in the subsections of Section 2.5

Amerigroup Iowa (Amerigroup) conducts an in-depth background screening for all employees and those who perform work for it on a contract basis. Specifically, we conduct a robust criminal background check at the federal, State and local county levels, and also abide by all OFCCP requirements to verify that individuals we hire meet stringent criteria relating to providing services to our government-contracted business. Our screening process also includes adherence to Section 1033 of the Violent Crime Control and Law Enforcement Act of 1994, which prohibits any individual with certain felony convictions from working in the business of insurance without a waiver from the respective State regulatory body.

Individuals who are excluded, suspended, debarred, sanctioned, or otherwise ineligible from participating in a Federal or State healthcare program (such as Medicare or Medicaid); or from contracting with the Federal government or a State government; or who have been convicted of a felony involving fraud, embezzlement, theft, dishonesty, or breach of trust are not eligible for employment with Amerigroup.

To the best of our knowledge, no persons with an ownership or control interest in, or who is an agent or managing employee of Amerigroup, have been convicted of a criminal offense related to their involvement in any program under Medicare or Medicaid.

Information Related to Business Transactions (2.5.2)

Amerigroup will comply with all requirements of SOW Section 2.5.2 regarding business transactions. Amerigroup has not operated previously in commercial or Medicaid/Medicare markets, so there are no significant business transactions to report at this time.

Upon contract award, Amerigroup agrees to provide, within 35 days of a request from DHS, full disclosure of significant business transactions, as set forth in 42 CFR 455.105, including full and complete information about the ownership of any subcontractor with business transactions totaling more than \$25,000 over a DHS-specified 12-month period and significant transactions between Amerigroup, any wholly owned supplier, and subcontractors over the DHS-specified five-year period. Amerigroup understands that there are financial penalties for failure to respond to requests for information by the Secretary or DHS.

Ownership Disclosures (2.5.3)

Amerigroup is a wholly owned subsidiary of Amerigroup Corporation. Amerigroup Corporation is a wholly owned subsidiary of ATH Holding Company, LLC (ATH). ATH is a wholly owned subsidiary of Anthem, Inc. (Anthem). Shares of Anthem's common stock are publicly traded on the New York Stock Exchange under the symbol ANTM. As such, Anthem common stock may be acquired in the ordinary course of business through open market purchases. Based upon the most recent SEC filings, Anthem is aware of the following entity, listed below, that owns beneficially five percent or more of the outstanding shares of Anthem's common stock. It should be noted that beneficial ownership is determined in accordance with the SEC's rules and regulations.

Table 2.5-1. Vanguard Group Identified its Holdings as an Institutional Investment Manager

Company Name	Address	FEIN	Percent Owned	Shares Owned	Company Description	Shares Owned as of Date
Vanguard Group (Vanguard)	PO Box 2600 Valley Forge, PA 19842	231945930	5.4%	14,399,568	Vanguard is one of the world’s largest investment management companies offering services to individual and institutional investors.	12/31/14

The entity listed in Table 2.5-1 has filed a Form 13F and/or Schedule 13G with the SEC to identify its holdings as an institutional investment manager. If any entity had acquired five percent or more of Anthem’s common stock other than for investment purposes, such entity would be required to file a Form 13D with the SEC within 10 days of such acquisition. Therefore, to our knowledge, the entity listed above has acquired Anthem’s common stock for investment purposes only.

Officers and Directors identified in Table 2.5-2 will be responsible for the conduct of the affairs of Amerigroup Iowa, Inc.

The most recent consolidated holding company financial statement for Anthem, Inc., the ultimate parent company of Amerigroup Iowa, is included as Attachment 3.2.7.2-1.

Reporting Transactions with Parties in Interest (2.5.4)

Amerigroup shall report to DHS all transactions with a party in interest, as defined in 42 USC sec 300e-17(b).

Amerigroup is not a federally qualified HMO; therefore, we will disclose information on certain types of business transactions with parties of interest. The Iowa High Quality Healthcare Initiative will be our initial Contract with DHS. Amerigroup has not operated previously in commercial or Medicaid/Medicare markets, so there are no transactions to be disclosed between Amerigroup Iowa and parties of interest.

Amerigroup intends to become party to a master administrative services agreement where under Anthem and its subsidiaries will provide certain administrative, consulting, and other support services to one another from time to time. These services are intended to enhance organizational and administrative capacity and augment the abilities of one another. Examples of the services provided include, but are not limited to payroll, banking, legal support, compliance support, technology support, call center services, and claims processing. Amerigroup will disclose information regarding this transaction once executed.

Definition of a Party in Interest (2.5.4.1)

Amerigroup understands and accepts the definition of a party in interest, as defined in 42 USC sec 300e-17(b).

Appropriate Disclosures (2.5.4.2 – 2.5.4.4)

Amerigroup agrees to disclose (i) any property sale, exchange, or lease of any property, (ii) any loan of money or credit extension, and (iii) any furnishing for consideration of goods, services, or facilities between Amerigroup and a party of interest, as required by SOW Section 2.5.4.2.

Amerigroup agrees to disclose all financial terms and arrangements for remuneration, once executed, between Amerigroup and our PBM subcontractor, Express Scripts (ESI), and specified vendors, as specified in RFP Section 2.5.4.3. We understand that DHS or State auditors may audit that information at any time and that DHS will maintain confidentiality of that information under Iowa or federal law.

The Iowa High Quality Healthcare Initiative will be Amerigroup's initial Contract with DHS. Amerigroup Iowa has not operated previously in commercial or Medicaid/Medicare markets, so there are no transactions to be disclosed between Amerigroup Iowa and parties of interest.

Amerigroup intends to become party to a master administrative services agreement where under Anthem and its subsidiaries may provide certain administrative, consulting, and other support services to one another from time to time. These services are intended to enhance organizational and administrative capacity and augment the abilities of one another. Examples of the services provided include, but are not limited to payroll, banking, legal support, compliance support, technology support, call center services, and claims processing. Amerigroup will disclose information regarding this transaction once executed.

Debarred Individuals (2.6)

Question 2.6, #1

1. Describe mechanisms to ensure compliance with requirements surrounding debarred individuals.

In accordance with 42 CFR 438.610, Amerigroup Iowa (Amerigroup) certifies to the State that we do not knowingly have a relationship with (i) an individual who is debarred, suspended, or otherwise excluded from participating in procurement activities under the Federal Acquisition Regulation or from participating in non-procurement activities under regulations issued under Executive Order No. 12549 or under guidelines implementing Executive Order No. 12549 or (ii) an individual who is an affiliate, as defined in the Federal Acquisition Regulation, of a person described above. The relationships include directors, officers, or partners of Amerigroup; persons with beneficial ownership of five percent or more of Amerigroup's equity; or persons with an employment, consulting, or other arrangement with Amerigroup for the provision of items and services that are significant and material to Amerigroup's obligations under the Contract. Amerigroup will make sure that relationships are checked against exclusion databases monthly (see below). We understand that, in accordance with 42 CFR 438.610, if DHS finds that Amerigroup is in violation of this regulation, DHS will notify the Secretary of noncompliance and recommend appropriate action, including termination of the agreement.

Screening for Debarred Individuals

Amerigroup will initially screen all potential contractors, employees, or network providers through the following entities:

- Office of Inspector General (OIG) List of Excluded Individuals/Entities (LEIE)
- Iowa Department of Public Health — Bureau of Professional Licensure
- Other applicable sites as may be determined by DHS

In addition to the OIG list and State-initiated termination databases, Amerigroup also conducts searches using the General Services Administration (GSA) Excluded Parties List (EPL). Amerigroup will not contract or employ parties appearing on any of the databases we use. Amerigroup also maintains monthly protocols to process exclusions and disbarments that occur after the initial screening or credentialing process and before mandatory periodic screenings or credentialing. We also use the databases identified above to monitor entities that we currently contract, employ, or include in our network on a monthly basis.

Medical Loss Ratio (2.7)

In accordance with SOW requirement 2.7, Amerigroup Iowa agrees to maintain, at a minimum, an annual Medical Loss Ratio (MLR) of 85 percent. We understand that DHS shall define how the MLR will be calculated and, in the event the MLR falls below this target, that DHS reserves the right to recoup excess capitation.

Organizational Structure (2.8)

Question 2.8, #1

1. Describe your proposed organizational structure and indicate which operational functions will be conducted in Iowa and which functions will be conducted out-of-state.

Amerigroup Iowa's (Amerigroup) organizational and operational structure reflects our belief that our healthcare solutions are most effective when developed and delivered locally while leveraging our vast network of national resources and expertise provided by our parent company, Anthem, and our affiliate health plans in 19 other states. Through our local and field-based staffing program, as well as our proven service operations delivery systems, our organizational structure allows us to be directly accountable to our State partner and our members and providers. Our people, combined with our organizational and operational structure, are the foundation to effectively deliver highly integrated physical health, behavioral health, and long-term services and supports to serve all Iowa High Quality Healthcare Initiative members while improving quality of care and health outcomes and decreasing healthcare costs through the reduction of unnecessary, inappropriate, and duplicative services.

Local Presence, National Expertise

We will rely on our proven *Local Health Plan Staffing Model*, currently operating successfully in our 19 state sponsored health program markets. This model consists of a comprehensively staffed *Iowa-based team* responsible for, and accountable to, meeting and exceeding major job objectives for all key member- and provider facing functions, as well as vital operations that support the overall program, the community, and the State. Our Iowa-based team will work and communicate with DHS on a daily, ongoing basis, to foster the development of a strong collaborative relationship between our staff and State staff. With senior Amerigroup personnel living and working in Iowa, we will work closely with DHS and make sure that we implement and manage all program components effectively, that members have access to all medically necessary services in a timely manner, and—in collaboration with network and community-based providers—that our services meet the highest standards of quality. Our affiliates have helped state agencies in other markets build solutions to various healthcare and service challenges, and we will work with DHS to do so in Iowa as well. Our team will also be responsible for continuously reviewing program performance and enhancing the program as needed.

Table 2.8-1 below shows which operational areas will be based in Iowa and those which will be handled by our national team (out-of-state):

Table 2.8-1. Location of Operational Areas

Operational Area	Iowa-Based	National
Administrative and Fiscal Management	x	
Member Services		x
Provider Services*	x	x
Care Coordination*	x	x
Marketing	x	
Provider Enrollment*	x	x
Network Development and Management	x	
Quality Management and Improvement	x	x
Case Management	x	
Utilization Management	x	x
Behavioral and Physical Health, including Disease Management	x	x
Information Systems		x
Performance Data Reporting and Encounter Claims Submission		x
Claims Payments		x
Grievance and Appeals*	x	x

* In addition to the primary responsibility and full accountability for this function residing with the local health plan staff, this area is supported by additional Iowa-dedicated national support services staff to supplement Iowa staff resources and leverage economies of scale to meet programmatic requirements.

This list is based on the Scope of Work requirements. Later in this section, we list additional operational and administrative Iowa-dedicated resources provided by our National Support Services team.

We will employ staff who fully understand the DHS program and needs of Iowans across the State, especially diverse highly complex populations we will serve through the Iowa Initiative. We also fully appreciate the importance of continuity and tenure within our staffing to ensure that the State, members, and providers have access to employees who have Iowa-specific expertise and are consistently available to address their specific support needs. Our employees will be highly qualified and experienced to perform the duties for which they have been hired and will have sufficient training to provide exemplary, culturally competent, and timely services. Amerigroup uses a well-structured and methodical staffing and training process that we have successfully implemented with repeatable results in past and recent public sector contracts, and we will do the same for the DHS program.

The local, Iowa-based team will have full ownership of the program and help assure that decisions regarding service delivery and administration are made at the local level. The team will also work closely with providers, community programs, State and local agencies, and other stakeholders to help assure Iowa’s program objectives are achieved. Additionally, we drive accountability through shared goals that are built into each employee’s annual performance evaluation, which drives a highly collaborative and team approach in meeting the goals and objectives of the Iowa program.

The local team is anticipated to be approximately 346 full-time equivalents (FTEs), supplemented by Iowa-dedicated support, expertise, and resources provided by our National Support Services teams. More than 206 additional individuals will be hired by our National Support Services areas to serve as Iowa specialists. In total, 552 FTEs will support our program in Iowa. Section 2.9 contains the Iowa Health Plan Organizational Chart.

National Support Services

Our National Support Services group provides specialized, centrally delivered services that *complement local employees* in the functional areas that we strategically determined create both better value and results for our state partners and members. The group is composed of national experts designated to Amerigroup and the Iowa Initiative. In addition to bringing the State increased efficiency and economies of scale, the national team will actively support Iowa-based health plan employees, and they, too, will be accountable to the Iowa Initiative through shared goals that drive continued and effective cross-functional collaboration.

This team leverages lessons learned from our Amerigroup affiliate health plans and will facilitate the sharing and use of best practices in state-sponsored program administration with the local team. They will also create a *peer-mentoring program* that allows our health plan employees to access national support resources to collaboratively develop and implement best practices across the Iowa program in a seamless manner. Together, they will continuously evaluate and enhance the program with up-to-date insights and experiences from their national exposure. This program has been successfully implemented most recently in Indiana.

Some of the key National Support Services functions that will be provided include:

- State Customer Implementation
- National Care Management, Disease Management, and Quality Programs
- Pharmacy Program
- Member Services
- Information Technology
- Healthcare Economics
- Member and Provider Communications
- Actuarial services
- Legal advisory and oversight
- National compliance advisory and oversight
- Regulatory advisory and oversight
- Government affairs advisory
- Human Resources

The combined strengths of this model will allow Iowa to benefit not only from a fully accountable local team, but also from the years of cumulative institutional and customer knowledge and experience our national teams possess. All designated employees will be knowledgeable about and follow all Iowa program requirements, and ***their functions will be fully accountable to the local leadership team.*** As we have proven consistently across the 19 states in which we operate state-sponsored programs, the local health plan employees and their national support services counterparts will collaborate closely to make sure that we provide all services in a seamlessly integrated, effective, and transparent manner and meet or exceed the State's expectations.

This model will deliver to Iowa the best of what Amerigroup has to offer: exceptional and high-quality services, built on local accountability and control, and an Iowa employee base, coupled with an array of supplementary national support services. The combination of local expertise and national best practices will promote operational continuity and seamless experience and enable Iowa to cultivate the kind of Medicaid program performance to which it aspires. We are extremely excited to work with the State of Iowa in this area. Amerigroup's health plan organizational table is discussed in greater detail and shown in Section 2.9.

Question 2.8, #2

2. Describe how your administrative structure and practices will support the integration of the delivery of physical health, behavioral health and LTSS.

Through our affiliate health plans in 19 other markets, we have 24 years of experience serving members with chronic illnesses who receive their healthcare from government-sponsored programs across the nation. In addition, these plans have 17 years of experience supporting more than 200,000 members living in their communities and those residing in facilities. ***Amerigroup has a depth and breadth of LTSS expertise that few other health plans can bring to Iowa.*** That experience has allowed us to develop an organizational and operational structure that supports the collection and integration of data across our service delivery system. We have performance metrics in place across all key functional areas that are monitored and evaluated by the local health plan leadership on a regular basis to assess the performance and effectiveness of our delivery system of physical health, behavioral health and LTSS.

Amerigroup's organizational and operational structure represents our belief that healthcare is best delivered locally and in an integrated and highly coordinated manner through an interdisciplinary team approach. Therefore, our role in the delivery system for the Iowa Initiative's members includes a highly integrated physical health, behavioral health, and long-term services and supports structure. This allows us to effectively serve all members while improving quality of care and health outcomes, as well as decreasing healthcare costs through the reduction of unnecessary, inappropriate, and duplicative services.

A key feature of Amerigroup's care coordination program is our member-centered focus and approach. We realize our members often must make significant changes to their lifestyles and daily living behaviors to achieve sustainable progress in health outcomes related to chronic conditions. ***Amerigroup achieves positive outcomes by providing individualized services via screening, assessing, and developing tailored member interventions while working collaboratively with the member, family, caregivers, providers, and others involved in the member's care.***

To do so, Amerigroup's locally based LTSS, behavioral and medical leadership provides oversight of the staff that perform the day to day execution of the contractual requirements to coordinate the delivery of medical and behavioral health care, long term services and supports to our members. The organizational structure of these teams allows Amerigroup to operate in a cross functional and seamless manner to ensure that the delivery, coordination and oversight to actively collaborate across interdisciplinary care coordination teams to engage with providers, community organizations and resources (as applicable), members, and their families and others to ensure integrated delivery and reduce the duplication of services.

Our organizational model allows us to incorporate both LTSS and clinical case rounds with an interdisciplinary team of professionals. Weekly chronic condition rounds include our medical and Behavioral Health Medical Directors; Community-Based Case Managers; Utilization Management Nurse-s; subject matter experts on issues with children, the field of behavioral health, individuals who are aged, or with disabilities; a pharmacist; and Case Managers. Case Manager for physical and behavioral health prepare and present cases at rounds for validation of the care plan and to obtain suggestions on how to better manage the member. In addition, community based case managers prepare and present cases at the rounds for validation of LTSS care and service plans, review of the member's physical health and behavioral health conditions and obtain suggestions on how better to provide support to the member The teams discusses available community resources and receives input from the medical directors regarding medical management, medications, and suggested modifications to the treatment plan.

Our organizational model allows us to incorporate both LTSS and clinical case rounds with an interdisciplinary team of professionals.

IA_28_COB

In addition to our care coordination program, Amerigroup’s team of Nurse HelpLine, Community-Based Case Manager teams, and Amerigroup clinical staff partners seamlessly together in addressing members’ health needs telephonically. The Nurse HelpLine nurses will have access to Care Compass, our care coordination and management information system, so they can review the member’s Individual Service Plan (ISP), provider, and clinical history to inform their assessment of the member’s support needs and provide individualized assistance to the caller. While Nurse HelpLine nurses will be trained to handle crisis calls, a licensed behavioral health clinician will be available 24/7 to assist via a warm transfer to the Behavioral Health Hotline. If additional clinical assistance is needed, the Nurse HelpLine nurse can connect members to board-certified, Iowa-licensed physicians through our innovative LiveHealth Online feature. In addition, the nurse will be able to engage our Amerigroup clinical staff, such as a pharmacist, or refer the member to our State-level interdisciplinary experts. If the caller requests or requires assistance from a Community-Based Case Manager, the Nurse HelpLine nurse will warm transfer the caller to the Community-Based Case Manger or to the on-call Community-Based Case Manager after-hours.

Another crucial component of our operational model is addressing the needs of our Network Providers, both traditional and non traditional providers, to ensure that the integrations of delivery of care and services operate in an optimal manner. Our organizational structure also includes local claims resolutions specialists and provider relations staff working together in cross functional teams to make sure that the spectrum of all provider needs is met—from assisting a provider looking to join our Network, to updating a provider’s information, to helping a provider with their claims payment questions. Our team of provider services staffing will also include subject matter experts trained to address the needs of providers serving our specialized populations. These employees will be colocated with our LTSS, behavioral and medical clinical teams—allowing for highly effective and tightly coordinated issues resolution management for the provider and, ultimately, the member.

Our organization’s long history of delivering both LTSS and high-quality healthcare solutions for members in a cost-effective manner for State partners is premised upon our ability to deliver care locally and in an integrated manner. This success is due to our ability of effectively managing the functional linkages between major operational areas through our organizational and operational structure.

Staffing (2.9)

Staffing Requirements (2.9.1)

Question 2.9, #1

1. Describe in detail your staffing plan and expected staffing levels.

Amerigroup will leverage our affiliate health plans’ 24 years of experience building and operating precisely the type of local, community-based health plan that Iowa requires. Our staffing model reflects our belief that the most effective healthcare delivery system is locally based. Through our field-based staffing program, we will hire qualified individuals who live and work in the Iowa communities they serve, allowing us to adequately serve members located throughout the entire State, regardless of bricks-and-mortar office locations. We understand that regional variations affect our members’ and our providers’ behaviors. Rural conditions, cultural differences, demographics, and many other regional characteristics have a profound effect on the availability of services and access to those services and how they are utilized. Nationwide, approximately 65 percent of our affiliates’ covered counties are located in areas defined as “rural” by the Census Bureau. Our organization has a proven track record of hiring qualified employees who serve on interdisciplinary teams that seamlessly blend physical, behavioral, and

long-term services and supports to achieve optimal health outcomes. Staffing the health plan based on Iowa’s specific requirements, cultural and geographic nuances, and member population health and social needs are our priority.

Staffing Levels

Amerigroup will hire talented, qualified employees to fill positions to meet the requirements of the contract in addition to designated national support services positions to further support Iowa operations. We continually evaluate and adjust our staffing to maintain and exceed quality service for our members. Table 2.9-1 outlines our anticipated staffing levels based on current membership assumptions and projections for the Iowa Initiative. We anticipate hiring 552 employees – 346 employees who will be locally based and additional 206 who will be located elsewhere in Amerigroup’s national support facilities. We will continually adjust based on membership volume and/or type.

Staffing Plan

To meet our staffing levels, we engage in a robust staffing plan/recruitment strategy. Through our experience and in preparation for implementation of the Iowa Initiative, we have gained a comprehensive understanding of successful strategies to recruit and acquire qualified employees to serve Iowa Medicaid programs. We use a multipronged approach to attract and retain quality staff as well as address staffing changes. More information about how Amerigroup effectively manages staffing changes to continually meet service level requirements is provided in Section 2.9.4.

Our recruitment cycle begins with determining the skills and qualifications required by each position and how the position factors into our overall staffing plan. Amerigroup and our affiliate health plans use a centralized recruiting system to post job openings internally and externally. We employ succession planning strategies to recruit from within and conduct behavioral interviewing techniques as a means of screening internal and external candidates. Our carefully honed and tested recruitment cycle, described in Figure 2.9-1, results in matching highly qualified candidates with the requisite skills and experience needed to meet the needs and preferences of our members in an operationally efficient manner.

Figure 2.9-1. Recruitment Cycle

Recruitment methods include an associate referral program, using job postings on job search engines and networks, social media campaigns, newspaper ad campaigns when appropriate, and job fairs as shown in Table 2.9-2. We often collaborate with professional organizations and community stakeholders to promote job openings.

Table 2.9-2. Job Posting on Job Search Engines and Networks

Media	Overview	Reach
Local Newspapers	When appropriate to bolster regional recruitment and target rural areas, we may advertise in local newspapers. Examples of such newspapers include the Des Moines Register (Polk), Cedar Rapids Gazette (Linn), Quad-City Times (Scott), Waterloo-Cedar Falls Courier (Black Hawk), Sioux City Journal (Woodbury), Council Bluffs Daily Nonpareil (Pottawattamie), Iowa City Daily Iowan (Johnson), Iowa City Press-Citizen (Johnson), Mason City Globe Gazette (Cerro Gordo) and Dubuque Telegraph Herald (Dubuque).	Readership and reach vary by county
Local Job Fairs	When appropriate to bolster regional recruitment and target rural areas, we engage in job fairs in local communities.	Attendance and reach vary by location
Indeed	Indeed is a job search aggregator, a search engine that collects job postings from all over the Internet and allows users to search for them in one location. Indeed is the largest job aggregator and uses a sponsored search model similar to Google’s.	20,565,000 unique visitors per month (comScore)
Health Callings	HealthCallings is a healthcare job bank encompassing medical jobs in nursing, allied health, pharmacy, physician employment, executive, rehabilitation, and laboratory. It is the top healthcare media recommendation.	224,000 unique visitors per month (comScore)
HealthECareers	The HealthECareers Network includes more than 100 associations and hundreds of local chapters with a total reach of four million healthcare professionals and a quality controlled database of more than 130,000 job seeker résumés.	300,000 unique visitors per month (comScore)
SocialService.com	SocialService.Com is a job site for social work, counseling, psychology, mental health, care management, EAP, volunteer management, substance abuse treatment, domestic violence, community development, youth development, child welfare, developmental disabilities, and all other areas of social services.	69,000 unique visitors per month (comScore)
Beyond.com	Beyond.com offers a broad network of niche online job sites, including several healthcare sites. Their Talent Communities consist of more than 500 channels and 25 million members and attract and connect job seekers and employers based upon their needs and interests. Communities include various local sites and sites targeted specifically by industry. The Healthcare community features healthcare Jobsite, which receives 840,000 unique visitors per month.	3,177,000 unique visitors per month (comScore)
CareerBuilder	CareerBuilder provides labor market intelligence, talent management software, and other recruitment solutions such as online career search services for more than 1,900 partners, including 140 newspapers and portals such as AOL and MSN. CareerBuilder also owns and operates several niche job search sites, including Sologig.com, Headhunter.com, CareerRookie.com, MiracleWorkers.com, WorkinRetail.com, and JobsInMotion.com.	More than 24 million unique visitors each month[3] and a 34% market share of help-wanted web sites in the United States
LinkedIn	LinkedIn allows users to research companies with which they may be interested in working. When typing the name of a given company in the search box, statistics about the company are provided. These may include the ratio of female to male employees, the percentage of the most common titles/positions held within the company, the location of the company’s headquarters and offices, or a list of present and former employees.	33.9 million unique visitors per year

Our Iowa-designated Talent Acquisition Team includes in-house recruiters, sourcing specialists, administrators, and managers who are well equipped to support the hiring of local talent. This staff is supplemented with a sophisticated outsourcing component (ADP), which will allow our recruiters to flex quickly to meet our staffing plan goals. ADP has been an able partner and has never missed a Service Level Metric throughout our business partnership. We have a manager dedicated to this relationship who runs a seamless organization, combining the in-house and external recruiters. *In 2014, our Recruitment Team filled approximately 15,000 positions in support of the business across our affiliate health plans.* There are 16 recruiters specifically designated to our state-sponsored business programs.

We employ a Talent Acquisition Lead or Manager with a team of recruiters to work with the local health plan leadership and Human Resources partners to achieve the goal of appropriate staffing levels to support the need. Some examples of staffing projects for our state-sponsored business organization from 2014 include:

- Texas Medicaid Expansion: over 300 FTEs hired
- Tennessee Medicaid Service Area Expansion: over 550 FTEs hired
- Texas Medicare-Medicaid Duals Demonstration Program: 170 hired (ongoing)

Amerigroup is expert at successfully addressing the unique staffing requirements necessary to effectively support Iowa's members. We understand the distinct local labor market of experts and experienced individuals needed to make the program successful and work with the local communities that we serve to find the best talent in support of our business goals.

Staffing Plan (2.9.2)

Question 2.9, #2

2. For staffing positions proposed in your staffing plan, provide job descriptions that include the responsibilities and qualifications of the position, including the number of years of experience.

An integral part of our staffing plan is to hire the staff necessary to provide the highest level of quality services to Iowa members and carry out our member-centric philosophy in managing their care. This mirrors the approach our organization has taken in other markets. For example, our affiliate health plan in Indiana is in the process of completing a successful implementation for a statewide contract in the State of Indiana where more than 200 local employees are being hired who bring a wealth of knowledge of the populations served (which include individuals who are aged, blind or disabled (ABD), children enrolled in CHIP, and people receiving home and community based waiver services.). Their knowledge is being effectively applied through our organizational and operational model that supports our proven interdisciplinary approach to care coordination. In Iowa, Amerigroup will also be hiring highly qualified local staff for the following position classifications per Table 2.9-1, as suggested by DHS, to provide comprehensive Iowa Initiative services. Nearly 70 percent of the employees hired will be Iowa-based. Table 2.9-3 provides *job descriptions* for our proposed staff.

Table 2.9-3. Job Descriptions of Proposed Staffing Positions, Nearly 70% of Which Will Be Based in Iowa

Position	Responsibilities	Qualifications
Prior Authorization and Concurrent Review Staff	Responsible for making sure that the delivery of healthcare services is available, accessible, timely, and medically necessary. Assesses clinical information to promote appropriate use of resources and quality care. Responsible for activities such as consulting with providers, reviewing clinical guidelines annually, monitoring of clinical issues and trends (for example, over/underutilization of services), identifying and implementing initiatives to improve member health outcomes, and conducting policy evaluations and programmatic studies.	Requires current active unrestricted RN license to practice as a health professional in applicable state(s) or territory of the United States and 3-5 years acute care clinical experience or case management, utilization management, or managed care experience, which would provide an equivalent background. Must have knowledge of medical management process and ability to interpret and apply member contracts, member benefits, and managed care products. Prior managed care experience strongly preferred. Requires strong oral, written and interpersonal communication skills, problem-solving skills, facilitation skills, and analytical skills.
Member Services Staff	Responds to inquiries from members, providers, and/or others for information and assistance. Performs research to respond to inquiries and complaints and interprets policy provisions to determine most effective response, including assisting members to locate providers. Also responsible for providing non-clinical support, which includes handling more complex file reviews and inquiries from members and providers. Responds to requests, calls, or correspondence within scope. Provides general program information to members and providers as requested. Acts as liaison between the member and other internal departments to support ease of administration of medical benefits. Has access to real-time data on members, including eligibility and service and utilization data.	Requires a HS diploma or GED: 1 to 3 years of the company's experience in an automated customer service environment; or any combination of education and experience, which would provide an equivalent background.
Provider Services Staff	Responsible for building lasting and trusting relationships with providers to offer our members the right size, the right composition, best quality, and most efficient network. Collaborates with providers to systematically improve health outcomes through strategic partnerships with our providers. Responsible for responding to provider inquiries and complaints through the Provider Helpline. Researches, analyzes, and suggests solutions to issues related to disputes and participates in network development. Provides technical assistance to providers about operations and innovations. Refers difficult or complex issues to higher levels. Reports issues that may impact Provider Relations. Develops reports to aid in the identification of network access and deficiencies. Assists in developing and implementing the recruitment and contracting plan. Drafts training materials and assists in training. Conducts provider outreach and refresher training using a variety of modalities, including on-site at provider locations, via WebEx, in central locations, or by telephone.	Requires a high school diploma; 1-3 years of customer service experience; for staffing dedicated to behavioral health or LTSS providers then 1-3 years experience in the applicable field is highly preferable; or any combination of education and experience that would provide an equivalent background.
Claims	Responsible for processing HIPAA-compliant electronic and	Requires a high school diploma or GED;

Position	Responsibilities	Qualifications
Processing Staff	paper claims in a timely and accurate manner, processing claims correction letters, processing claims resubmissions, and addressing overall disposition of all claims per State and federal guidelines.	1 to 3 years of claims processing experience; previous experience using PC, database system, and related software (word processing, spreadsheets, etc.); or any combination of education and experience that would provide an equivalent background.
Reporting and Analytics Staff	Responsible for the maintenance of information technologies and ensures the timely and efficient production of reports and processing of data requests. Maintains thorough knowledge of the data dictionary, data structures, and data warehouses in the MMIS. Proficient in the use of reporting and data access tools. Understands Medicaid and healthcare terminology. Analyzes requests for reports and information, designs solutions, and meets deadlines.	Requires a BS/BA degree, 3-5 years related business analysis experience, or any combination of education and experience that would provide an equivalent background.
Quality Management Staff	Responsible for developing, coordinating, implementing, and evaluating the continuous quality improvement activities throughout the health plan according to the established Quality Management program and annual work plan. In collaboration with other departments, conducts barrier analyses; designs targeted interventions for provider, member, health plan, and system barriers; implements interventions across the health plan system; and monitors for effectiveness.	Requires an AS/BS in nursing; 5 years of managed care experience; 2 years of clinical experience; 2 years of professional presentations to small and large audiences; or any combination of education and experience that would provide an equivalent background. Current, unrestricted clinical license appropriate to field of specialty (LVN/LPN, RN, NP, PA, LCSW, LSW, etc.) as required. BSN or MSN preferred.
Marketing and Outreach Staff	Responsible for community-level marketing and outreach in assigned regions. Talks with people in the community to provide information about important health messages, and how Amerigroup will help them address their healthcare needs. Seeks additional avenues and partners to reach new member populations. Works daily with community organizations, senior centers, statewide aging and disability organizations, faith-based organizations, and public health departments to conduct joint outreach. May assist in developing member materials and providing member outreach and education.	Requires an AS; 4 years of experience in managed care/healthcare or sales/marketing environment; or any combination of education and experience that would provide an equivalent background. BA/BS preferred. Valid driver’s license and access to a motor vehicle with valid motor vehicle insurance required. State health insurance licensure preferred.
Compliance Staff	Responsible for ensuring that health plan functions are in compliance with State and federal laws and regulations, the State’s policies and procedures, and contractual requirements.	Requires a BA/BS in a related field, 3-5 years of compliance, regulatory, and/or customer service experience; or any combination of education and experience that would provide an equivalent background. Previous healthcare and policy interpretation experience preferred.
Community-Based Case Managers –	Ensures member support needs are met, manages resources effectively, and ensures member’s health, safety, and welfare are met. Assists the members in gaining access to appropriate	<i>Physical Health:</i> Requires a BA/BS in a health-related field; 3 years of clinical experience; or any combination of

Position	Responsibilities	Qualifications
Physical Health, Behavioral Health and Long-Term Care	resources.	<p>education and experience that would provide an equivalent background. Current, unrestricted RN license in applicable state(s) required. Certification as a Case Manager is preferred.</p> <p><u>Behavioral Health:</u> Requires a BS in a related field; 2 years of direct psychiatric and/or substance abuse experience; or any combination of education and experience that would provide an equivalent background. Current unrestricted license as an RN, LBSW (as allowed by applicable state laws), LPC (as allowed by applicable state laws), LCSW, LMSW, or LMHC, in applicable state(s) required.</p> <p><u>Long-Term Care:</u> Requires an RN, LPN/LVN, LSW, LCSW, or LMSW; 2-4 years of experience in working with individuals with chronic illnesses, co-morbidities, and/or disabilities in a Service Coordinator/Community-Based Case Manager, Case Management, or similar role; or any combination of education and experience that would provide an equivalent background. Current, unrestricted RN, LPN/LVN, LSW, LCSW, or LMSW license in applicable state(s) required. Masters in health/nursing preferred. May require state-specified certification based on state law and/or contract. Travel required. <i>For Non-Clinical Service Coordinators / Community-Based Case Manager (where clinical licensure is not required):</i> BA/BS in a health-related field preferred; 2 years of experience working with a social work agency; or any combination of education and experience that would provide an equivalent background. Travel required.</p>

In addition to the State’s suggested staff above, in Table 2.9-4, we list the additional staff positions that will support Iowa Initiative services not listed above. These employees are key to the delivery of fully integrated and highly coordinated care and services to our members, and we will employ sufficient staff in each area to meet the needs of the Iowa Initiative’s beneficiaries.

Table 2.9-4. Additional Staff Positions

Position	Responsibilities	Years & Type of Experience
Operations Manager	Responsible for health plan dashboards, operations policies, best practices, and regulatory compliance. Identifies and prioritizes health plan opportunities for improvement in the areas of efficiency and effectiveness. Partners and supports leadership across the health plan on assigned projects. Participates in operational process improvement initiatives and facilitates collaborative effort between health plan and National Anthem functional support areas for implementation. Serves as primary contact to health plan leaders to ensure appropriate key operational indicators are in place for monitoring and analysis. Resolves operational issues to include enrollment, benefit configuration, call metrics, authorizations, high dollar claims, pended claims, appeals, adjustments, customer service, and policy issues. Assists health plan Provider Relations with contracting process and resolution.	7 years of related experience, including 3 years of management experience and 2 years of experience in data assimilation; BA degree, or any combination of education and experience that would provide an equivalent background.
Health Promotions Coordination Staff	Responsible for designing and implementing health promotion initiatives, including identifying and communicating services, and implementing health promotion-related recruitment and enrollment activities. Develops and maintains strong relationships with local health departments, schools, and community-based organizations to promote access to appropriate health promotion programs and services.	2 years of related experience; BA degree, or any combination of education and experience that would provide an equivalent background.
Member-Centered Care Coordination Staff	Responsible for providing support to providers to improve the effectiveness and efficiencies of provider practices. Obtains and analyzes quality metrics and reports for care opportunities; supports practice implementation of care coordination and care management; identifies action plans for providers to implement to improve cost, quality, and the patient experience; and participates in design, development, and implementation of community learning forums. Collaborates with other health plan provider and operations staff to meet provider and practice service needs. Supports the efforts of providers and practice teams on office-based care delivery interventions resulting in cost of care savings and improved health outcomes for patients. Promotes practice transformation to team-based member-centered care delivery. Provides education for practices to develop expertise with metrics and data review for quality improvement. Maintains up-to-date knowledge on Patient Centered Medical Home, Care Delivery System Redesign, and Accountable Care Organizations.	3 years healthcare experience; or any combination of education and experience that would provide an equivalent background. Physician environment experience in practice transformation/quality improvement, ambulatory care setting quality and efficiency metrics, and electronic health records preferred.
Behavioral Health Peer Support &	Responsible for assisting in the development, implementation, evaluation, and expansion of Amerigroup’s Recovery and	4 years of experience in health services, a managed care

Position	Responsibilities	Years & Type of Experience
Recovery Staff	Resiliency program and service delivery system for members with Serious Mental Illness (SMI) or Substance Use Disorder (SUD). Identifies opportunities for developing and expanding a Wellness and Recovery network to support member needs. Acts as a resource for staff and functional departments to ensure decision-making and problem-solving is in accordance with established principles. Determines and recommends changes for increased efficiencies and improved outcomes; determines training needs and assists in development of training materials. Collaborates with the community and key stakeholders to expand and promote the development and value of wellness and recovery. Establishes working relationships with provider networks and community stakeholders.	organization, or the behavioral health field, including a peer support services role, knowledge of care coordination and case management concepts. Peer Specialist Certification required.
Substance Abuse Specialist - UM Staff	Responsible for collaborating with healthcare providers and members to promote quality member outcomes, to optimize member benefits, and to promote effective use of behavioral health resources. Ensures appropriate, high- quality, cost-effective behavioral healthcare through assessing the necessity of inpatient admissions, outpatient services, out-of-network services, and appropriateness of treatment setting by utilizing the applicable medical policy, clinical criteria, and industry standards, accurately interpreting benefits and managed care products, and steering members to appropriate providers, programs or community resources. Ensures members access medically necessary, quality behavioral healthcare in a cost-effective setting according to contract. Consults with clinical reviewers and/or medical directors to ensure medically appropriate, high-quality, cost-effective care throughout the medical management process. Collaborates with providers to assess member support needs for early identification of and proactive planning for discharge planning. Facilitates member care transition through the healthcare continuum and refers treatment plans/plan of care to clinical reviewers as required and does not issue non-certifications.	Requires a BS in a related field; 2 years of direct psychiatric and/or substance abuse experience; or any combination of education and experience that would provide an equivalent background. Current active unrestricted license as an RN, LBSW (as allowed by applicable state laws), LPC (as allowed by applicable state laws), LCSW, LMSW, or LMHC, to practice as a health professional within the scope of licensure in applicable state(s) or territory of the United States required.
Health Homes Staff	Responsible for managing members who are experiencing complex or catastrophic illness, ensuring that these members receive cost-effective and efficient utilization of health services by providing education, guidance, and support concerning our Health Home model of care. Acts as a member advocate, seeking and coordinating creative solutions to member healthcare needs without compromising the quality of outcomes.	Requires a BS in a related field; 2 years of direct psychiatric and/or substance abuse experience; or any combination of education and experience that would provide an equivalent background. Current unrestricted license as an RN, LBSW (as allowed by applicable state laws), LPC (as allowed by applicable state laws), LCSW, LMSW, or LMHC, in applicable state(s) required.
Practice Consultant Staff – Quality Management	Responsible for creating a partnership relationship with providers and other initiatives and implementing the concept of a Medical Home for our members to achieve this fully integrated and accountable system of care. Assesses current	5 years of managed care experience; 2 years of clinical experience; 2 years of professional presentations to small and large

Position	Responsibilities	Years & Type of Experience
	<p>practice patterns, assets, and challenges utilizing Medical Home Index, NCQA Standards, HEDIS audits, site reviews, and medical records reviews. In partnership with the PCP, evaluates results of the initial assessment. Establishes a project plan with the practice that establishes goals and objectives for improvement. Provides ongoing practice support and sustains the partnership. Establishes regular meetings to track progress. Identifies and facilitates at least one practice in each MPC region to become SSB Physician Champions by obtaining NCQA certification as a Member-Centered Medical Home. Improves the understanding and sensitivity to the unique support needs of this population and the caregivers.</p>	<p>audiences; AS/BS in nursing, or any combination of education and experience that would provide an equivalent background. Current, unrestricted clinical license appropriate to field of specialty (LVN/LPN, RN, NP, PA, LCSW, LSW, etc.) as required. BSN or MSN preferred.</p>
<p>Medical Director Associates – Family Practice, Geriatrics and Psychiatry</p>	<p>Responsible for providing day-to-day guidance, support, and leadership for the clinical and quality activities and supporting the Medical Director in ensuring the clinical integrity of broad and significant clinical programs (behavioral health, long-term care, etc.), and identifies and develops opportunities for innovation to increase effectiveness and quality. Provides support to clinicians in daily tasks and ensuring timely and consistent responses to members and providers, conducts peer-to-peer clinical reviews with attending physicians or other ordering providers to discuss review determinations, office visits with providers and external physicians as necessary. Assists in the practitioner appeal reviews, appropriateness criteria reviews, medical policy and technology assessments, setting and implementing QM initiatives, and practitioner/provider credentialing.</p>	<p>5 years of clinical experience; M.D.; Board certification approved by the American Board of Medical Specialties required where applicable to duties being performed. Must possess an active unrestricted medical license to practice medicine or a health profession; or any combination of education and experience that would provide an equivalent background.</p>

In addition to these staff, we will engage and leverage our in-house support services experts across a broad range of functional areas to achieve high-quality healthcare solutions for Iowa members in a cost-effective and carefully integrated manner.

Key Personnel (2.9.3)

Question 2.9, #3

3. Confirm that a final staffing plan, including a resume for each Key Personnel member, will be delivered within ten (10) calendar days after notice of award.

Amerigroup confirms that it will deliver its final staffing plan, including a resume for each Key Staff member to the DHS within ten calendar days after notice of Award. Amerigroup will staff the Iowa health plan in a manner that complies with all DHS requirements and positions us to deliver high-quality services to Iowans from Day One. Because Amerigroup is new to the Iowa Initiative, we do not currently have individuals fulfilling the Key Personnel roles. However, in preparing to implement operations in Iowa, Amerigroup has identified a seasoned Transition Team comprised of our national functional leaders with extensive Medicaid and state-sponsored program experience and a deep understanding of the care and service needs of these members. The Transition Team will be responsible for overseeing initial operations of the contract, which includes hiring highly qualified, Iowa-based staff to fill these key roles, and will have ultimate accountability and responsibility for the success of Iowa health plan on a go forward basis, as well as being able to easily step in on an interim basis (having knowledge of the Iowa operating landscape without any disruption to members, providers, and other stakeholders) in the event of a Key Personnel vacancy at any point during the life of the contract. More information regarding our well-documented history of successful large-scale Medicaid plan implementations can be found in Section 1.1.

Our Transition Team will be led by Dr. Tunde Sotunde, who is the President of the North Region–Anthem’s Medicaid Business Division. He will oversee all Iowa health plan operations until a local leader is hired as the Contract Administrator/CEO, and he will maintain ongoing oversight of the market. Dr. Sotunde will have responsibility for every aspect of the program during implementation. Our Transition Team is listed below in Table 2.9-5. We provide résumés for these individuals in Tab 6.

Table 2.9-5. Key Personnel List

Title	Required/Additional Key Staff Position	Name
Contract Administrator	Required – 2.9.3.1	Tunde Sotunde, MD
Chief Operating Officer (COO)	Required – 2.9.3.17*	John Crowley
Medical Director	Required – 2.9.3.2	John Chang, MD
Chief Financial Officer (CFO)	Required – 2.9.3.3	Aimee Dailey
Compliance Officer	Required – 2.9.3.4	Georgia Dodds-Foley
Government Relations Officer	Additional	Pamela Perry
Pharmacy Director	Required – 2.9.3.5	Patrick Convey
Human Resources Manager	Additional	Bradley D. Soto
Grievance & Appeals Manager	Required – 2.9.3.6	Tamera Lathan
Quality Management Manager	Required – 2.9.3.7	Barbara Kupferman
Utilization Management Manager	Required – 2.9.3.8	Lisa McCormick

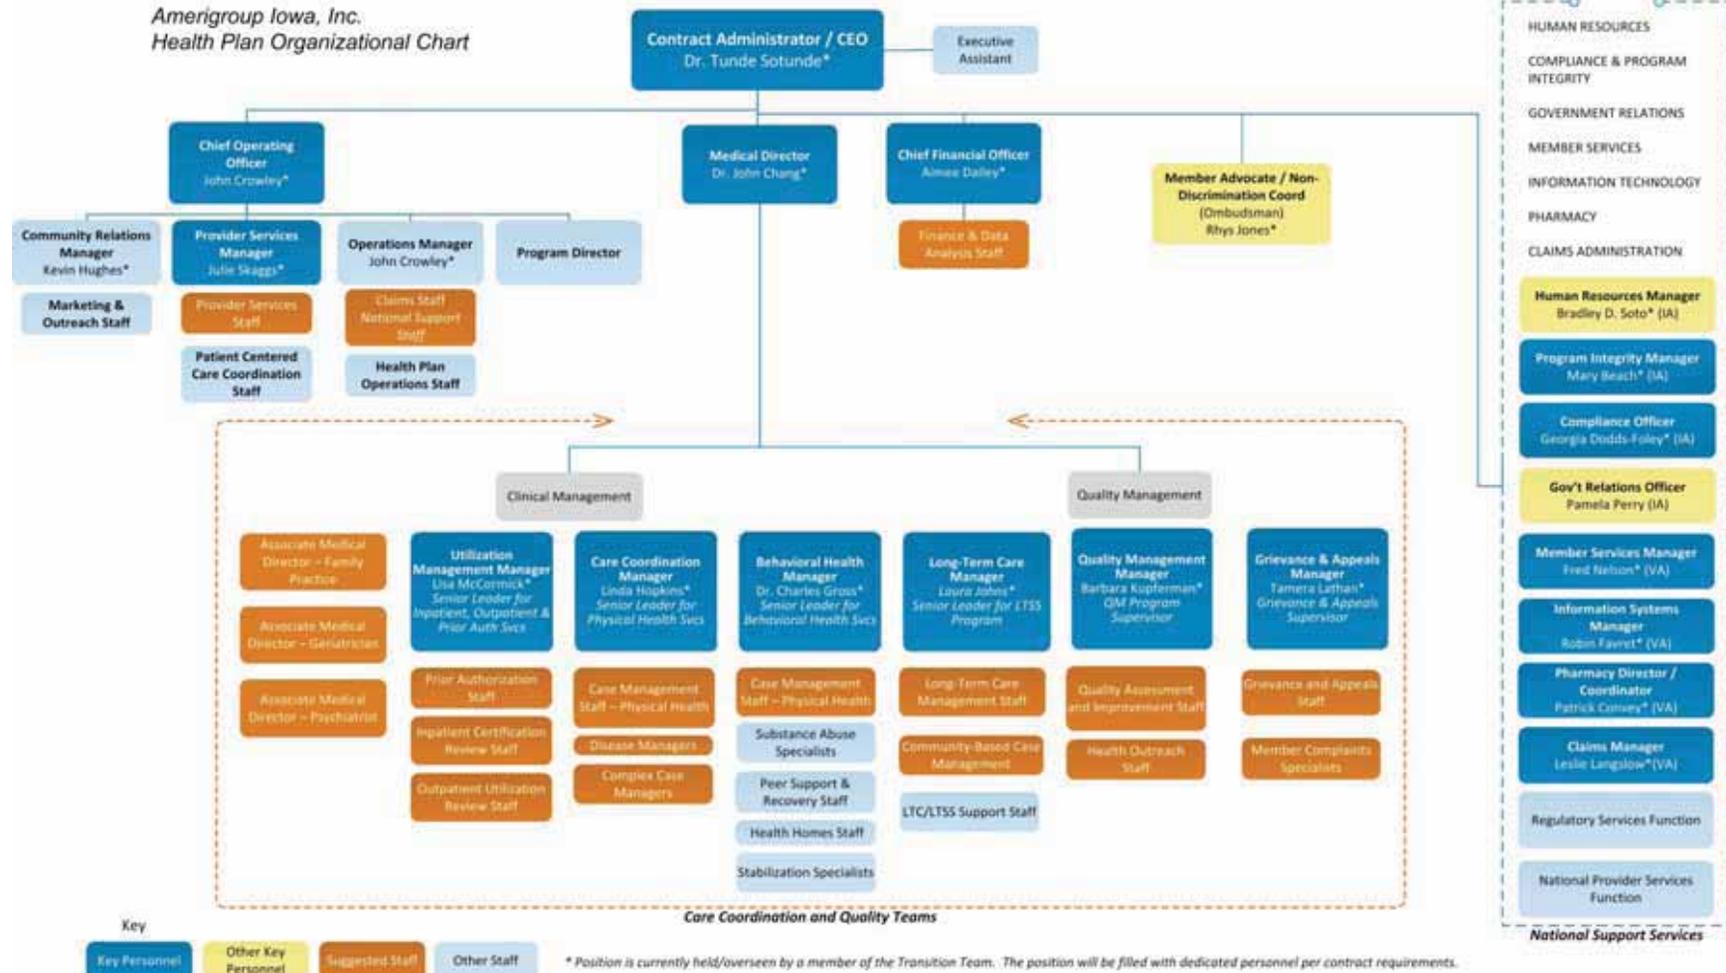

Title	Required/Additional Key Staff Position	Name
Behavioral Health Manager	Required – 2.9.3.9	Charles Gross, PhD
Member Services Manager	Required – 2.9.3.10	Fred Nelson
Provider Services Manager	Required – 2.9.3.11	Julie Skaggs
Information Systems Manager	Required – 2.9.3.12	Robin Favret
Claims Administrator	Required – 2.9.3.13	Leslie Langslow
Care Coordination Manager	Required – 2.9.3.14	Linda Hopkins
Program Integrity Manager	Required – 2.9.3.15	Mary Beach
Long-Term Care Manager	Required – 2.9.3.16	Laura Johns
Community Relations Manager	Additional	Kevin Hughes
Member Advocate/Non-Discrimination Manager (Ombudsman)	Additional	Rhys Jones

** The COO will serve as the primary point of contact for delivery system reform activities and will be supported in execution of those activities by a dedicated Program Director fully accountable to the COO for managing all project management activities and represent the COO as a liaison between Amerigroup and the various stakeholders as identified in SOW 2.9.3.17.*

Organizational Chart

Amerigroup health plans offer a Care Coordination Team (CCT) approach to member clinical care delivery, where we leverage the different skill sets provided by our community-based nurses, social workers, in-house physicians, and specially trained staff in the areas of LTSS, behavioral health, and physical health. These teams also regularly engage in interdisciplinary collaboration efforts with other areas such as Quality and Provider Services to offer an integrated member-centric approach to care. The below table illustrates the Amerigroup health plan structure for Iowa. Our local staff has ready access to collaborate and share best-practices, not only with one another but with our national support services teams without compromising local authority and control on health plan operations. Figure 2.9-2 illustrates the local health plan organizational model.

Figure 2.9-2. Iowa Health Plan Organizational Chart

Staffing Changes (2.9.4)

Question 2.9, #4

4. Describe your back up personnel plan, including a discussion of the staffing contingency plan for:
- The process for replacement of personnel in the event of a loss of Key Personnel or others.
 - Allocation of additional resources in the event of an inability to meet a performance standard.
 - Replacement of staff with key qualifications and experience and new staff with similar qualifications and experience.
 - The time frame necessary for obtaining replacements.
 - The method of bringing replacement or additions up to date regarding the Contract

The success of Amerigroup Iowa's operations depends on qualified and stable staffing at all levels of the organization and flexible policies and procedures that allow us to scale up or scale down resources as the circumstances dictate. It also allows us to replace Key Personnel and other management staff quickly and efficiently. Amerigroup plans for change.

Replacement of Key Personnel

When a Key Personnel or management staff member departs, we are prepared. Amerigroup policy is to maintain an ongoing list of qualified candidates for various key positions. This is in addition to the Transition Team's functional leadership who can easily step in on an interim basis without any disruption to health plan operations. These qualified replacements are identified through a number of modalities, including:

- Short-listed candidates for each position
- Amerigroup and affiliate employees in similar positions who are interested in making a change
- Qualified individuals referred to Amerigroup by providers, community leaders, the State, and other stakeholders
- Known subject matter experts who may be interested in working within the managed care field

In addition, we rely on national resources to assist in the search process. Amerigroup has a robust Talent Management and Succession Management process, and we are working to identify successors to all key positions with individuals who are either internal to Amerigroup, its affiliate health plans, our parent company, or external in the community. Succession planning allows us to identify and develop future leaders. Having a strong pipeline of talent in place helps us fill critical leadership positions with individuals who have the necessary skills to take our company into the future.

With Succession Management, we are creating a pipeline of leadership talent to allow us to:

- Execute our business strategies
- Minimize the disruption to the business, as well as our customers
- Invest proactively in our leadership talent so that we have readily available talent at the right time and in the right role

To facilitate this, we use an online tool with which directors, executives, and key leadership in our organization describe their job preferences that best align with their experience and aspirations. In addition, leaders complete a career summary where they may outline their experience, education, achievements, and competencies. This information is utilized to complete a succession plan for a variety of leadership positions within the organization.

Our Talent Acquisition Department uses the completed succession plans to develop a pool of internal talent. Upon review of position-appropriate succession plans with the hiring manager and Human Resources business partner, a successor can be identified. This then allows us to have a robust talent pool of qualified employees across both the enterprise and health plan who are available to us for potential leadership opportunities.

As part of the overall staffing plan, we identify potential replacements for all key positions and positions with direct member contact. As needed, we provide these individuals with any additional training. We also offer shadowing, stretch assignments, and collaborative and interdepartmental project work to increase employee competencies. In addition to this plan, we use a comprehensive approach to recruitment that includes assignment of professional recruiters, advertising, job fairs, word of mouth, employee referrals, and community referrals. Similar to the way we recruit employees for implementation, we deploy our resources to fill any Key Personnel vacancies within 60 days.

Many of Amerigroup's management personnel have strong and active ties within the healthcare community, and we are able to attract highly qualified individuals who are often eager to join an organization with a stellar reputation for quality care. In addition, we maintain a list of eligible and highly qualified internal and external individuals who can be expeditiously recruited and interviewed for any of the key staff positions. As soon as any key employee submits his or her resignation, we mobilize and review this list and begin reaching out to, recruiting, and interviewing those who are most qualified. We have used this process successfully; most recently, in our affiliate health plans in the States of Indiana, New York, Maryland, New Jersey, and Wisconsin.

When a person in a Key Personnel position resigns, we will notify the State and provide information on the process for replacing Key Personnel. We will immediately begin the process of contacting possible qualified candidates, posting the position, and identifying qualified Amerigroup and affiliate employees as well as qualified individuals working for the prior contract holder. We will begin an aggressive recruitment and interviewing process to fill the position with a qualified replacement as expeditiously as possible. In doing so, we will consider the following:

- Replacement employee must demonstrate the same or higher qualifications and experience as the departing employee.
- The search for a replacement must begin immediately and must continue until such time a replacement is found.
- The State must be updated on the need for a replacement and Amerigroup's efforts in finding a qualified replacement.

As we conduct the search process, we ask departing key employees to document detailed information on their ongoing activities and projects. This facilitates a transfer of knowledge between the departing employee and the new employee. We will also ask the key employee to attempt to complete any deadline-specific activities before their departure.

We work to identify and hire replacement employees before the departing employee leaves so as to allow for as much shadowing and knowledge sharing as possible. If this is not possible, we will ensure that detailed information and documents about each of the activities and services provided by the departing key employee are shared with the individual's supervisor or the interim replacement employee to minimize any transition issues.

Allocating Additional Resources When Necessary

We continually review our staffing numbers and quality and service standards to determine whether we need additional employees to adequately support members and providers. Each manager and department routinely reviews their specific responsibilities and determines whether sufficient numbers of employees are committed to the department to meet staffing needs. *Changes in volume, service delivery, and*

products are reviewed, and staffing is adjusted based on these changes. In addition, we use lessons learned from our other programs to determine whether best practices within a specific service will require additional staff. Based on the information we identify, managers refine existing staffing plans, identify additional resources that can be rapidly mobilized, continue to provide required training, and work with other departments to streamline any cumbersome processes.

Supervisors and other key management members also work closely with their counterparts in other programs to share best practices, review new processes and programs, and determine whether global or systemic changes may be required to enhance service delivery.

In the unlikely event that Amerigroup Iowa is unable to meet performance standards or our staffing model does not accurately predict our staffing needs, we will immediately deploy additional resources to correct the deficiency. Our plan for back-up staffing will include temporarily re-allocating resources within the State as necessary, taking care to not negatively impact our other programs. Our Iowa employees are our first line of defense because they know Iowa and understand the local population.

Our bench strength allows us to quickly deploy resources and provide any necessary training to these individuals while we work to acquire additional qualified employees. By using cross-trained local staff, we are able to seamlessly transition functions, minimizing the impact on member care and daily operations. We are also able to temporarily fill vacant positions with employees from our national offices or affiliate health plans in nearby states, if necessary.

Our well tested and proven approach to adequately staff for our programs includes:

- Identifying at least one backup for each key position and for positions with direct member contact
- Quickly mobilizing backups to provide needed services
- Training managers to provide the same services as the functional employees and provide services in cases of crisis or unexpected changes such as changes in volume
- Requiring employees to have detailed documentation of service and activities that can be easily followed by other employees as needed
- Identifying employees in our national offices and other health plans who are able to provide backup
- Working with contract agencies that can quickly augment the regular full-time employees as needed; our parent company, Amerigroup, has a large-scale temporary services organization available to our management to fill short-term needs

Assuring Continuity during Replacement of Key Staff

When Key Personnel are hired, Amerigroup facilitates a knowledge transfer between the departing employee and the new employee. This is an important step in ensuring continuity of services and minimizing any disruptions in member care. Key Personnel participate in a variety of meetings, including “meet and greets,” Leadership Committee, Town Halls, and other activities that allow them to spend time with other Key Personnel one-on-one and in group settings to review burning issues and learn about other functional areas. Each new Key Personnel employee is presented with a copy of the applicable State contract, and they are expected to familiarize themselves with contractual requirements as part of their on-boarding. In addition, we have policies and procedures that require the departing employee to document all relevant and essential detailed information to help assure a smooth transition. Supervisors and managers also play an important role in the transition by facilitating communication between the two employees, especially if there is no other opportunity for knowledge transfer between them due to other job demands.

Newly hired Key Personnel will receive extensive training and education as described in our Training section. To quickly get new staff in key positions acclimated, we pair each new employee with a mentor

possessing the same requisite skills and credentials to provide the guidance and assistance necessary to assist the staff in being successful.

It is also important to point out that Amerigroup is committed to retaining its employees and our organization has created an engaging and supporting working environment across all of our 19 state-sponsored program health plans. We live this commitment daily through our internal processes and programs. Maintaining a positive and productive work environment is a priority, and we have robust menu of programs available to our employees and managers that drives employee commitment and retention. Through our selection, development, wellness, recognition, promotion, and transfer policies and day-to-day processes, we strive to be the best employer possible to our employees and retain a highly qualified workforce that reflects the availability of the talent in the communities we serve.

In 2014, Amerigroup's affiliates retained nearly 90 percent of their employees across our state-sponsored program health plans, and we continue to see a high level of employee commitment in 2015 with an employee retention rate of nearly 90 percent year-to-date. Most recently, Forbes and Statista.com polled more than 20,000 workers at companies employing more than 2,500 associates across several industries, including ours. The result was Forbes naming our parent company, Anthem, as one of America's Best Employers for 2015. Our employees are at the heart of what we do for our members every day in the communities that we are proud to serve.

Notifications and Assurances

Amerigroup understands the need to notify the State of Key Personnel transitions. We assure the State that we will:

- Report Key Personnel departures to the State staff within five (5) business days of receiving notification of intent to terminate employment or within five business days before the employee's last day of employment, whichever occurs first. Our Compliance Officer will be responsible for communicating this information to the appropriate individual at DHS.
- Notify the State in advance of any plans to change, hire, or re-assign designated Key Personnel. The Contract Administrator or designee will notify the State immediately by phone, email, or in writing of any plans to change, hire, or re-assign designated key personnel. We will do so at least 30 calendar days in advance of any such plans, wherever possible. Notification will include our interim plan to cover the responsibilities created by the vacancy.
- Provide DHS with the name and résumé of the candidate filling a Key Personnel vacancy within ten business days after a candidate's acceptance to fill a Key Personnel position or ten business days prior to the candidate's start date, whichever occurs first.
- Fill all Key Personnel positions within 60 calendar days of departure, unless a different timeframe is approved by the State.

Business Locations (2.9.5)

Question 2.9, #5

5. Describe which staff will be located in Iowa, and where other staff will be located:
- Describe how out-of-state staff will be supervised to ensure compliance with Contract requirements and how Iowa-based staff shall maintain a full understanding of the operations conducted out-of-state.
 - Indicate the location of the Iowa office from which key staff members will perform their duties and responsibilities

Our organizational structure, as discussed in Section 2.8, will deliver to Iowa the best of what Amerigroup has to offer: exceptional and high-quality services, built on local accountability, control, and robust community-focused staffing, coupled with an array of supplementary national support services. The combined strengths of this model will ensure that Iowa benefits not only from a fully accountable local team, but also from the years of cumulative institutional and customer knowledge and experience our national teams possess.

All designated out-of-state employees will be knowledgeable about (and follow) all Iowa Initiative program requirements, and *their functions will be fully accountable to the local, Iowa-based leadership team. To be specific, either the CEO or a direct report to the CEO will have oversight responsibility for any function performed by any out-of-state personnel. As explained further below, this person or their designee will regularly receive information regarding the performance of these duties and will also meet regularly with the leadership of these teams to oversee performance and ensure they are meeting the needs of our Iowa based team and the members they serve.* The teams will collaborate closely to make sure that we provide all services in a seamlessly integrated, effective, and transparent manner and meet or exceed the State's expectations.

In Exhibit 2.9.1 we outline, by position, which employees will be locally Iowa-based or will be located out-of-state. As shared earlier, nearly 70 percent of the anticipated hiring associated with the Iowa Initiative will be Iowa-based and we have secured a location for our Iowa health plan headquarters in Des Moines. However, based on the geographic location of our members, we likely will open additional office locations (as we have in most of our other states) to serve those members. Furthermore, we will highlight that we anticipate that several members of our clinical and provider services teams will work from their home offices in rural parts of the State in order to serve that population. They will regularly travel to one of our office locations for team building, member / provider coordination and training activities.

Additionally in Exhibit 2.9.6 we indicate if Key Personnel will be Iowa-based. At this time we anticipate that all Iowa-based Key Personnel (17 out of the 20 people listed in the exhibit) will be located in our Des Moines State health plan headquarters.

Oversight of Out-of-State Employees

Amerigroup has an established communication strategy and oversight structure that promotes coordination, collaboration, and accountability between in-state and out-of-state employees. We employ the use of technology, reporting capabilities, workgroups, committees, sub-committees, and other routine meetings to assure that every functional area of the health plan has a regularly scheduled time to communicate with other related areas. As discussed in Section 2.8, regardless of position, all employees hired to support the Iowa Initiative are aligned to specific goals and metrics on an annual basis to further drive our culture of accountability and operational excellence.

Additionally, our health plan senior leaders meet on a routine basis with the national support services leadership to discuss operational issues, process changes and/or enhancements, and priority issues. For example, our Member Services call center staff located in Virginia Beach, Virginia, will have access to Iowa-specific policies and procedures at their fingertips with the use of our internal database systems, as well as direct access to local Iowa staff to coordinate information exchange and remain current on DHS requirements and member benefits. This national support function is accountable to the Iowa health plan leadership—with frequent service level updates provided to, and reviewed with, the health plan's leadership team. Our Claims Administration team, also located in Virginia Beach, Virginia, operates in a similar manner, whereby local member and provider data are housed in a central database that facilitates information-sharing across teams and is coupled with access to a dedicated Claims Resolution team that is locally based in Iowa and fully accountable to the health plan leadership.

Our organizational structure, information-sharing and coordination processes, along with our strong local accountability model support a seamless Iowa member and provider experience with Amerigroup.

A Solid Iowa Presence

Amerigroup is excited to confirm its company headquarters will be located at:

5550 Wild Rose Lane
West Des Moines, IA 50266

Upon contract award, we will be prepared to quickly identify additional office location(s), as needed, based on the membership, provider, and community-based stakeholder dispersion within Iowa to best serve their needs. Notwithstanding, our office location(s) will house key staff within case management, provider relations, quality management, local business, information technology, finance, strategy, compliance, medical management, provider contracting, community relations, government relations, and human resources.

For positions within Amerigroup that support community-based interactions and face-to-face contact with members, providers, and stakeholders, we will use regionally based staff who will be fully accountable to the local health plan leadership, allowing us to adequately serve all counties, regardless of our office location(s). Our regionally based staff will be supported by statewide resources (further discussed in Sections 2.9.7 and 2.9.8) and employees in our Iowa office(s), supplemented by our national support services team.

Assurances

Amerigroup further acknowledges that it will be responsible for all costs related to securing and maintaining the facility for interim start-up support and the subsequent operational facility, including, but not limited to, hardware and software acquisition and maintenance, leasehold improvements, utilities, telephone service, office equipment, supplies, janitorial services, security, storage, transportation, document shredders, and insurance. Amerigroup will also provide toll-free communications with DHS staff to conduct business operations if activities are performed off-site and to provide meeting space to DHS as requested when on-site at Amerigroup Iowa headquarters. Additionally, Amerigroup is strongly committed to providing the best possible office working environment for our employees and will, therefore, apply to become a Blue Zone certified workplace as we already meet the program's criteria. Details about our commitment to becoming Blue Zone certified are provided in Section 10.2.

Out-of-State Operations (2.9.6)

Amerigroup understands that all staff functions conducted outside the State of Iowa are readily reportable to DHS at all times to make sure such location does not hinder the State's ability to monitor the contractor's performance and compliance with contract requirements. Section 2.9.1 Staffing Requirements describes which contract functions are to be conducted outside of Iowa, and Section 2.9.5 Business Location describes how out-of-state staff will be supervised to ensure contract compliance.

Staff Training and Qualifications (2.9.7)

Question 2.9, #6

6. Describe your process for ensuring all staff have the appropriate credentials, education, experience and orientation to fulfill the requirements of their position (including subcontractors' staff).

Amerigroup's employees and those of our subcontractors are essential to providing quality services to our members. It is necessary to consider both the quality and suitability of potential employees to further the mission and goals of the Iowa Initiative. The decision to hire an employee begins with an informed assessment. Amerigroup's hiring practices and policies establish the expected level of employment verification and background investigation and provide tools and resources to assist us in appropriately selecting qualified candidates. Our hiring practices include employment verification through reference checks, confirmation of academic credentials and licenses, and investigation of criminal histories to include reviewing information from the Office of the Inspector General's exclusion database.

Our recruitment, interviewing, and hiring decisions focus on vetting candidates to be sure that they have the skills, credentials, education, and experience necessary to be successful. Our Human Resources team confirms the academic, certifications, and experience credentials of all candidates selected for a position. For any position that requires or prefers a license or certification, Amerigroup shall confirm that such license or certification is current and in good standing. For employees whose driving is a requirement for their position, we will confirm with the Iowa Department of Motor Vehicles their safety and driving records.

Amerigroup applies the same diligence to maintain oversight and accountability for all subcontractor activities and their hired staff. In turn, we leverage our national support team to aid us in obtaining and managing the services of high-quality subcontractors. The selection and management process assigns responsibilities in a way that drives authority to the appropriate organizational level, particularly at the local level, and creates a system of checks and balances. When we determine that a service will be best delivered by subcontracting to a vendor, we engage the support of our experienced national support team that has extensive experience and relationships with a wide variety of vendors.

Question 2.9, #7

7. Describe how you will ensure that all staff is knowledgeable in Iowa-specific policies and operations.

We understand the important role that community- and faith-based organizations play in the lives of our members and how these organizations offer a wealth of information that is specific to the state in which they fulfill their missions. In every state that our affiliates operate in, we have a rich history of actively engaging community agencies and stakeholders to educate both ourselves and our members about available services, such as with our 211/The United Way of Southeast Louisiana/Amerigroup Partnership. This is an information and referral system that was developed through a significant knowledge transfer between United Way and our Louisiana affiliate staff to better understand and support the member populations served in Southeast Louisiana. This referral system provides a cost-effective, efficient communications system linking citizens, service providers, and government for daily use and in times of disaster or crisis; and the information learned during the knowledge transfer process was incorporated into the Louisiana-specific training on cultural competency for employees. Through this knowledge transfer process, health plan leadership and local community and faith-based organizations meet to review and discuss programs and services and develop plans to integrate these available services into the care management process and, subsequently, our staff training programs.

In Iowa, Amerigroup has actively engaged with key agencies and stakeholders to identify gaps in services and cultural issues that may influence our members with various conditions, disabilities, or life situations. Examples include: The Iowa Family Child Care Association, The National Alliance on Mental Illness (NAMI) of Iowa, The Iowa Behavioral Health Association, The Brain Injury Alliance of Iowa, The Iowa Developmental Disabilities Council, ARC of Eastern Iowa, The University Centers for Excellence in Developmental Disabilities, The University of Iowa Center for Child Health Improvement, the Area Agencies on Aging, The Centers for Independent Living, Alzheimer's Association of Iowa, and the Iowa Foster and Adoptive Parents Association. In our experience, maintaining a visible community presence through local partnerships with community-based agencies promotes a clear understanding of the needs of our members but also fosters information-sharing, extending the reach of the health plan. This will be of particular importance when we are arranging for continuity of care during program implementation. We also engage national partners who support local Iowa organizations, such as the Autistic Self Advocacy Network, the Association of University Centers on Disabilities, Family Voices, and Parent to Parent USA. We will use input from these community-based organizations and incorporate it into employee training for our associates working for or supporting our Iowa plan.

Key collaborators in these efforts include the agencies administering the Home and Community-Based Services (HCBS) Waiver and providers of long-term services and supports (LTSS). Amerigroup affiliates have worked closely and successfully with these organizations and providers in other states such as Kansas, Tennessee, and Texas. We are in the process of developing a long-term partnership with Telligen, a current contractor with DHS that will allow Amerigroup to combine Telligen's robust and extensive expertise and experience with the State's waiver programs and populations with Amerigroup's innovative care model. Through this partnership, we intend to learn from and leverage the most impactful elements of Telligen's Iowa experience, enhancing our ability to fully understand the programs and processes that have served these Members historically. Telligen's experience in contributing to the development of the state assessment tool criteria for waiver and LTSS benefits will complement and inform Amerigroup's existing care model, and allow us to more effectively provide seamless continuity of care for our most vulnerable members on day one. Additionally, we are exploring opportunities to utilize Telligen resources to support Amerigroup's care coordinators and their activities under our proposed care model and programs. Additional information regarding this collaboration with Telligen can be found in Section 3.3.

Question 2.9, #8

8. Describe in detail your staff training plans (including subcontractors' staff) and ongoing policies and procedures for training all staff.

Our organization is experienced in the development and implementation of employee training plans when entering new markets as well as when responding to programmatic changes. We collaborate with clinical training experts in the industry and at leading academic institutions, such as Georgetown University. In fact, local clinical and training team leaders in our affiliate health plan in Georgia are now collaborating with the Georgetown University Center for Child and Human Development to develop Georgia-specific trainings for our employees and providers.

We provide employees with job-related training for safe, efficient, and effective program operations from initial orientation through their entire tenure with us. We will offer initial and ongoing training to our employees on the major components of the contract, as well as policies, procedures, and the tools necessary to make sure all employees in all departments are aware of programmatic changes, when they occur, and how those changes impact their daily activities.

New Employee Training

Our new hire training consists of two major components: orientation and job-specific training. We have designed our new hire orientation to help employees fully understand Amerigroup and the importance of our role as the Iowa Initiative program administrator. The orientation includes an in-depth introduction to our mission and vision, so that each new employee gains an immediate sense of our company culture. We emphasize understanding the importance of diversity and inclusion and acquaint new employees with our philosophy, specific strategies, and programs. We make sure that new employees are equipped with all the information they need to be successful. Even for our most experienced new employees, this initial training includes, at a minimum, the modules listed in Table 2.9-6, which meet and exceed the Scope of Work requirements outlined in the Contract.

Table 2.9-6. Initial Training Modules

Training Module	Scope of Work Requirement Met and/or Exceeded	Trainee Audience
Concepts of managed care	X	All employees
System of Care Model	X	All employees
Introduction to Amerigroup and Iowa health plan operations	X	All employees
Introduction to Iowa Medicaid	X	All employees
The Iowa Initiative	X	All employees
Covered populations	X	All employees
General contract provisions	X	All employees
Covered services and benefits	X	All employees
Compliance orientation	X	All employees
Ethics, Privacy, Information Security, and Compliance (including HIPAA)	X	All employees
Records and Information Security	X	All employees
Introduction to Fraud and Abuse (including False Claims Act)	X	All employees
Cultural Competency	X	All employees
2013 National CLAS Standards	X	All employees
Iowa health plan Cultural Competency Strategic Plan	X	All employees
Emergency Response Procedures	X	Member-Facing employees
Customer Service	X	Member- and Provider-Facing employees
Basic position-specific training	X	All employees
Basic system tools for communications and data search	X	All employees
Utilization Management principles, processes, and tools (including systems)	X	Clinical Staff
Care Coordination and Case Management theory and practice under a System of Care model (including predictive modeling tools for case stratification)	X	Clinical Staff
Care Coordination and Case Management processes and tools (including core processing systems and mobile technology to support field work, case documentation, and information sharing)	X	Clinical Staff
Quality Management Program	X	Clinical Staff

Training Module	Scope of Work Requirement Met and/or Exceeded	Trainee Audience
Legal and Ethical Issues in Care Coordination and Case Management (abuse, neglect, exploitation, and prevention including the detection, reporting, investigation, and remediation procedures and requirements)	X	Clinical Staff

During the first 60 days of employment, all employees receive in-services and department-specific training and education. It is the responsibility of each department head, as the subject matter expert, to work with national Learning and Development resources, and local experts, to develop and implement the training programs their employees need to be successful

The Iowa Clinical Team

Our clinical team is at the core of what we do. For new or existing employees who join the Iowa clinical team, we offer a variety of intensive training opportunities. All of our clinical employees undergo a 90-day orientation and training period during which they learn the basic functions of their job and the policies and procedures that govern the Iowa Initiative’s program operations. Employees receive both classroom and field-based education to make our policies and procedures “come alive” and to foster opportunities for discussion and questions.

At the center of this comprehensive curriculum is our interdisciplinary team approach—the full integration of physical, behavioral, functional, and social health; and all clinical employees must master the requisite skills to manage cases with co-occurring disorders. For example, the 11-day *initial* training for new employees who will join our Care Coordination Teams (CCTs) as case managers follows the extensive new hire orientation and covers the topics listed in the Table 2.9-6 above.

This initial training includes skills practice sessions throughout to embed the didactic transfer of knowledge and information. Following the classroom instruction and skills practice, trainees receive ongoing, on-the-job training for at least the remainder of the 90-day training period, from the clinical management team, and from senior team members. This includes a systematic phase-in approach to assigning live cases during the 90-day period where the case manager is partnered with a “buddy” (a seasoned case manager or team leader) to support them through the transition to live case management while providing superior quality care to our members. *It is important to note that we are not training novices. We recruit and hire clinical employees who already have multiple years of working with populations similar to those we serve, in programs similar to the ones we administer. They also have established relationships with many of the providers, state agencies, and community organizations with whom we collaborate under our System of Care approach to care coordination.*

Ongoing Training

Ongoing training and professional development is part of the Amerigroup culture. This is especially important to the experienced and seasoned employees who staff our clinical teams. Our employees receive training throughout their career, beginning with orientation on their first day at work through intensive job-specific training to prepare them to assume their new responsibilities, and including refresher and enhancement training to maintain and further develop their skills. This includes training to support programmatic changes. As they do for new hire training, each of our department leaders partners with our corporate Learning and Development Department *and local vendors in Iowa* such as The Public Consulting Group and Andres Gallegos of Robbins, Salomon & Patt, Ltd. to assist with designing and developing training programs to meet both DHS and our own internal standards and requirements. These programs make sure we continue to meet or exceed the specific requirements of the Iowa Initiative and Medicaid.

We will collaborate with clinical training experts in the industry and at leading academic institutions, such as the University of Iowa. In fact, *local Amerigroup leaders are now collaborating with a number of local Iowa organizations—as specified in Section 2.9.7—to develop Iowa-specific training for our employees and providers.*

All employees have access to an online catalog of resources on the company intranet, maintained by our national Learning and Development team, which helps employees further hone hard skills, soft skills, and professional development in a wide variety of knowledge areas. As part of this ongoing development program, our managers work with employees to identify, plan, and meet individual employee training needs.

Amerigroup also strongly supports educational opportunities outside the company. We offer employees tuition assistance and paid time off to attend training that will enhance professional development and provide for the continuing education needs of licensed employees.

Training Methods and Formats

We offer and deliver our new hire and existing employee training programs using a range of different delivery methods and formats, including:

- Instructor-led training. This is the method we use for most of our clinical team training, such as for care coordination and case management training.
- Self-directed or web-based training. For example, our on-line Compliance Training program is required by all new employees to complete and pass within their first 30 days of employment.
- 1:1 focused training. This approach works well when a manager or one of our more senior employees is paired with either a new hire, or an employee ready for career advancement, in a mentor relationship. It also is a valuable tool to provide short-term support to an employee who needs more intense support.
- Training bulletins published and distributed by our national Learning and Development Department. These include training offerings and listings on a dedicated intranet learning site. We also include feature highlights of new training offerings on the enterprise-wide intranet and in the weekly briefing communications sent through our parent company.

Additionally, our employees have access to trainers who are certified in specific professional development courses that require trainer certification, such as Meyers & Briggs, Unconscious Bias, and Discovery Insights.

Finally, there is no formal training program that can substitute for the experience and skills our staff gain from each encounter with members and their families or caregivers, providers, community organizations, and other stakeholders they work with every day. What we can do is maximize opportunities for such encounters in ways that go beyond their usual daily activities. As an example, in many of our health plans, such as Indiana, we include as a Major Job Objective for all staff eight hours of community service and eight hours of participating in marketing activities, annually. This serves to develop and maintain a broader perspective and understanding of state program goals and objectives, and how we, as an organization of individuals, can make a difference in the lives of those we are committed to serving.

Program Updates

The Iowa Initiative will continue to evolve. Amerigroup has established a communication strategy and reporting structure that make sure all employees are aware of, and know what to do about, programmatic changes, regardless of how or through whom Amerigroup receives the new information. This strategy and reporting structure promotes coordination and collaboration among all employees, regardless of location. We use informal workgroups, committees, subcommittees, and other routine meetings to make sure that every functional area of the health plan has a regularly scheduled time to communicate with other related

areas. Our Leadership Committee, which meets on a monthly basis, provides operational oversight for all health plan functions. The Committee establishes the direction for operational effectiveness and oversees supportive committees and workgroups. As we described briefly earlier in this response, it is through these organizational mechanisms that we will identify impacted functions and departments and plan the necessary implementation activities and accountabilities for any programmatic change.

We will alert employees to changes through our regular Amerigroup town hall meetings, formal and informal department meetings, on each department's dedicated page on our website, in the health plan newsletter, in email blasts, and during one-on-one meetings that each Amerigroup manager has with direct reports. We will notify our employees as soon as possible after we receive new information, with each manager advising employees of the effective date of the changes that will impact their activities.

Monitoring for Completion and Comprehension

As we described above, we have the processes and resources to make sure every employee in every department receives the training needed to implement a programmatic change. And we will make sure that every employee receives this training, and that this training is effective. Trainees demonstrate their competency throughout the training process, and after they have joined their work teams, through regular audits that are specific to their position and level of responsibility. The same applies to the training needed to implement programmatic changes. All training programs and training plans include timeframes for completion and tests for individual and organizational comprehension (learning). Depending on the particular training and mode of delivery, monitoring mechanisms for completion may include one or more of the following:

- Completed training schedules from managers who maintain records of associate adherence to required training
- System records of web-based trainings that are kept in our training database
- Reports/status updates from Classroom Trainers to managers on the progress of trainees in the class
- We also have various methods and tools for monitoring and assessing comprehension after a particular training or course of training. These may include one or more of the following, depending on the topic and the characteristics of the training process:
- Pre- and Post-test scores. For example, we use these for some of our web-based Compliance and Cultural Competency trainings.
- In-process audits during and after training. For example, we conduct ongoing audits of a newly trained Nurse Case Manager to measure the frequency of any given errors made during the opening of a member's case management record with the goal of correcting the issue early on.
- Process audits. For example, we conduct monthly audits of our Nurse Case Managers' activities through a review of their case notes in our case management system applying NCQA criteria.
- System edits such as claims and authorizations
- Member and Provider complaints, appeals, and grievances
- Referrals to Ombudsman
- Member and Provider satisfaction surveys

Amerigroup is committed to providing employees with ongoing opportunities to enhance their skills, knowledge, and abilities in service to Iowa members. Preparing our employees for success in the duties that they perform is part of what we do every day to make sure each member receives the right care, in the right place, at the right time. It is what we do, what we have always done, and what we will do under the contract. We will be ready.

The Agency Meeting Requirements (2.10)

Amerigroup Iowa (Amerigroup) looks forward to partnering with DHS on the launch, implementation, and on-going operation of the Iowa High Quality Healthcare Initiative. We will comply with all meeting requirements established by DHS, including but not limited to preparation, attendance, participation, and documentation, and we will provide in-person presence at meetings as appropriate.

We understand that DHS reserves the right to cancel any regularly scheduled meetings, change the meeting frequency or format, or add meetings to the schedule as it deems necessary. DHS may also require the participation of subcontracted entities when determined necessary.

We acknowledge that all expenses for attendance at all meetings are considered to be included in the total bid price.

Coordination with Other State Agencies and Program Contractors (2.11)

Question 2.11, #1-2

1. Describe how you propose to work with other program contractors, subcontractors, state agencies and third-party representatives.
2. Describe how you propose to work with IDPH related to IDPH-funded substance abuse services.

Program Contractors (2.11.1)

Collaborative relationships with all system stakeholders are crucial to developing, implementing, and sustaining a successful health care delivery system, one that improves outcomes for members, streamlines processes and eases administrative burdens for providers, all while providing cost efficiency for the State. Through our parent company and affiliate health plans, we have demonstrated experience working with state and local agencies, managed care organizations, subcontractors, and other stakeholders across the publicly-funded programs we manage and coordinate in 19 states. We are adept at collaborating with stakeholders to develop policies, processes, and initiatives that will achieve the best possible outcomes for members. We bring to Iowa established protocols and an approach that supports integration of care and services for members, even if that care is delivered by another program contractor, subcontractor, or other external entity or State agency.

Amerigroup Iowa (Amerigroup) agrees to cooperate with and work with the other program, contractors, subcontractors, state agencies and third-party representatives and to support community-based efforts as requested by the agency.

Amerigroup will support and advance the collaboration among various State agencies and stakeholders who are working with our members. We will deliver an information-sharing and collaborative platform where interdisciplinary team participants can review and contribute to the care plan, as authorized by the member. The platform is operational today in several states serving members with disabilities and mental health and substance use conditions, including individuals with intellectual and developmental disabilities or those with a serious mental illness. Through our platform, we will strive to deliver the right information to each audience in a way that supports understanding, coordination, and action in the context of role-based authorization and access. Working together, we can help support our Iowa members in directing a meaningful plan with their desired health and quality-of-life outcomes.

We partner with organizations and work with stakeholders in the local communities we serve. Our regionally based Iowa staff will work to build relationships with all stakeholders and system partners involved in The Initiative. They will be supported by our statewide resources and Iowa leadership in the Des Moines office, as well as by our national resources. We have designated an Iowa Regulatory Market Manager who will serve as the primary liaison with DHS and with other State agencies for day-to-day contract management and oversight.

Working with Program Contractors

We acknowledge Iowa Department of Human Services' (DHS) right to mandate cross-contractor requirements to facilitate the development of streamlined provider and member processes. We consider State agencies, program contractors, subcontractors, health plans, and any other stakeholders involved in members' care to be partners in serving these members.

We will build relationships across the local communities we serve in Iowa to identify opportunities for improving the health and well-being of members and enhancing the overall delivery system. In Iowa, we will continuously look for opportunities to partner with stakeholders, including other program contractors, to streamline processes such as standardizing service codes, data field requirements for authorizations, and credentialing applications. This includes continuing our collaborative development with the University of Iowa in order to bring the full array of the University's services and programs to our membership. We will also work with program contractors through collaborative forums and meetings.

The following are examples of our affiliates' collaborations in other states that have helped streamline processes and improve outcomes:

- In Kansas, we worked collaboratively with other MCOs and the State to develop uniform credentialing applications for long-term care services and support and behavioral health providers to be used by all plans. By streamlining credentialing, we improved processes in a way that benefits both member and provider experience. We will encourage this same process for Iowa to help ease the transition for our provider partners to managed care.
- In Tennessee, we worked collaboratively with the State and other MCOs to launch TennCare's Population Health Program, a model that touches members across the care continuum, promoting healthy behaviors and disease management as well as providing a care coordination and management system supported by evidence-based and best practices. We will use this same collaborative approach in Iowa, including but not limited to working with the State and fellow health plans in developing a uniform initial health screening.
- In Louisiana, providers work with multiple MCOs and may be asked to comply with various practice guidelines across the different MCOs. To mitigate this, our CEO and a designated representative from our Provider Relations Department are members of the State's Administrative Simplification Committee. The goal of this committee is to reduce the administrative burden on providers and streamline processes by providing a vehicle for working with other MCOs to promote common practice guidelines.

Transitioning Members Seamlessly Via Coordination and Collaboration with Program Contractors and State Agencies

One of Amerigroup's core competencies is our ability to seamlessly support continuity of care during member and provider transitions. Our processes provide efficient member transition while assuring that continuity of care and services comply with all applicable State and federal requirements. We recognize that any type of transition can potentially be stressful for members, so we work with them every step of the way to make sure they have the information and supports in place to prevent disruption in care.

We work closely with the member's new or previous MCO, program administrator, and providers (in- or out-of-network) to facilitate a smooth transfer of medical records, prior authorization information, care plans, treatment plans, and other pertinent information.

When a member transfers from another MCO to Amerigroup, we will:

- Obtain State notification of the member's transfer from the MCO
- Evaluate the member's immediate health care needs through outreach and screening, then implement a care coordination and management system, as needed
- Coordinate with the MCO to obtain clinical information
- Contact the member's primary care provider (PCP) or specialty provider to coordinate care
- Document the member's information in our clinical management system

Coordinating care is a critical part of a member's treatment. When a member transitions from Amerigroup to another MCO, we work with the plan to provide a clinical summary of information that includes:

- The member's care plan, if he or she is enrolled in case or disease management
- A listing of prior authorized services
- The member's medication summary
- The member's PCP or any other specialty providers' contact information and treatment plan summary

Our clinical team coordinates benefits and services across managed care plans to verify that all gaps in care and services are identified and resolved, regardless of which plan pays. This includes coordination of shared case planning and regular care conferences to sync services for each member as needed. If we become aware that a member is transferring to another MCO, we will contact the other MCO within five business days of becoming aware of the member's transfer. We will share important member information and respond to questions regarding the member's care needs and services. When we are contacted by a new member's health plan requesting member information, we will provide that information within five business days of receiving the request.

Iowa Department of Public Health (2.11.2)

Public health departments are key partners for Amerigroup affiliate health plans managing state-sponsored health programs in a number of ways. We partner with WIC programs to provide education classes on how to access health care. These plans also participate on committees on overall health and provide personal and financial support to events. We offer written education modules on topics like how to access transportation to immunization services. In all the states we serve, we hold periodic meetings with behavioral health services and substance abuse services providers. We look forward to building on our collaboration with the leadership and staff who drive initiatives that serve individuals dealing with substance abuse. In addition, we will work with IDPH on other programs mentioned in the RFP for which IDPH holds authority including local public health services, family planning services, the Iowa Health Information Network (IHIN), Maternal and Child Health services (Iowa's Title V), and tobacco cessation services.

Amerigroup understands the Iowa Department of Public Health (IDPH) is a critical partner of DHS. Our local behavioral health and healthcare management leads will meet regularly with IDPH as the State authority over substance abuse services.

We will sign a standardized Memorandum of Agreement (MOA) with IDPH to establish a positive, cooperative effort with members, including representatives of behavioral health and substance use disorder service providers, representatives from the child welfare system, peer supports, families, and

Health Home leads. To address emergent and urgent behavioral health challenges, the MOA will support data sharing; service system planning; facilitation of linkages with social services and criminal justice or courts; coordination of provider and community training; and support to PCPs, emergency rooms, and local fire and police organizations. Amerigroup is committed to working closely with IDPH throughout the term of the contract and building our relationship with them for a successful partnership understanding that they hold the decision authority for IDPH-funded services in the contract.

Iowa Department of Education (2.11.3)

Amerigroup will work closely with the Iowa Department of Education to develop initiatives that will help assure children and adolescents under the Iowa Initiative receive the care needed to thrive. For example, we will partner with the Department of Education to assist schools that have a large population of subsidized lunch programs to assure members are informed of the coverage they can receive. In partnership with the Department of Education, as well as with advocacy groups such as the Iowa Library Association, we will explore opportunities to support work done by schools and the community assisting our members.

The Amerigroup Iowa Medical Director will work closely with schools to facilitate appropriate information-sharing and coordination for child and adolescent members who receive Individual Education Program (IEP) services. Our on-the ground, local Care Coordinators will work with school staff and the Department of Education to assure children and adolescents under the Iowa Initiative receive the physical and behavioral health services they need.

Through our person-centered care coordination model, members of local school systems involved with a member's IEP will be invited to participate on our multidisciplinary care planning team. We will develop a common care plan to coordinate covered services, IEP, and other available services to help assure the child's physical and behavioral health care needs are met and to avoid duplication of services.

We know there are many considerations in the coordination of our member's IEP and the services provided through that plan. We will work directly with the child's caregivers to identify areas for improved coordination to augment and enhance services to assist in meeting their goals.

Amerigroup affiliates work extensively with schools, and we will do so in Iowa. Amerigroup will use free and reduced-price lunch program data to determine which schools have the highest underserved populations. Once we determine this information, we will establish relationships with school boards and specific schools to support our activities. Examples of effective partnerships include:

- PTA/PTO Events—We will partner with community advocates or health care experts and bring them in to speak to the parents. The topics can range anywhere from how to access care to the importance of preventive care or topics of the month.
- School Nurses—School nurses have a tremendous amount of interaction with children in their schools and often know which kids don't have adequate access to care. We will train school nurses on how to help get members onto publicly-funded programs.
- Wellness Days—We will bring fitness and health days to schools to teach children and their parents about living healthy.
- Registration Roundup—We will partner with schools to have resources available to talk with parents during school registration about accessing care, immunizations, and other EPSDT measures.
- Back to School Drives—Many school children cannot afford school supplies. We will partner with public and community organizations to help hold and fund school supply events.

Iowa Division of Mental Health and Disability Services (2.11.4)

Amerigroup will work closely with the DHS Division of Mental Health and Disability Services (MHDS) to support its policies. We support MHDS through working closely and in collaboration with the broad array of stakeholders in the Iowa mental health and disability services system. We initiated engagement with Iowa behavioral health and disability services providers, consumers, advocates, and stakeholders to gain an understanding of the State's reformed behavioral health and disability system. We are applying the knowledge we are gaining to build a model and service delivery system that enhances the existing providers and mental health and disability system that has been built. To date, we have met with stakeholders such as NAMI Iowa, the Developmental Disabilities Council, the Child and Health Innovation Center, Disability Rights Iowa, and the MHDS Regional CEO Collaborative, as well as representation from the 15 regional mental health agencies; the Iowa Behavioral Health Association (IBHA), Iowa Association of Community Providers, and Orchard Place.

Our continued work with mental health and disability service providers and stakeholders is a primary component of our strategy to serve Iowans in a meaningful and informed approach through the Iowa Initiative. We will work collaboratively with MHDS to share best practices developed in Iowa through our affiliates and strong relationship with national consumer advocacy groups, trade associations, and other partners.

The Agency Child Welfare and Juvenile Justice Services (2.11.5)

Amerigroup brings significant experience to serving individuals receiving child welfare/juvenile justice services and individuals in states' foster care and subsidized adoption programs through our affiliate health plans. Our Georgia health plan currently serves as the single statewide foster care MCO for the State. Additionally, we serve similar populations across our affiliates in 10 states. As a result, we can leverage the keen understanding and experience across our organization in providing the range of physical and behavioral health services needed to assure the well-being of children in foster care and adoption programs. We recognize close coordination with a range of human service agencies assisting these children and adolescents is critical.

We will coordinate and collaborate with the Division of Adult, Family, and Children Services and with the DHS's field workers and juvenile court officers. We will coordinate with ACFS to meet goals for safety, permanency, and well-being of the child and will be responsible for authorizing appropriate healthcare services to complement CW/JJ services upon request from the Agency field workers or juvenile court officers. We have already engaged key stakeholders and providers within Iowa's Foster Care system. We have held discussions with a number of key providers, including Orchard Place, Lutheran Services in Iowa, Christian Home Association, Youth Homes of Mid-America, and Cornerstone Recovery. Additionally, we have engaged the Iowa Foster and Adoptive Parents Association to learn about their services and their role in supporting children in supporting foster and adoptive families. We will collaborate with the Association to develop services and supports to meet the specialized needs of children who have been adopted from Iowa's foster care system.

Ombudsman's Office (2.11.6)

Amerigroup Iowa agrees to work closely and cooperatively with any State Ombudsman's Office to help assure the satisfaction and safety of members and resolution of conflicts, complaints and grievances. We recognize the importance of the State's ombudsman programs as an important source of external input for our ongoing quality improvement efforts. We will also work closely with ombudsman offices in

coordinating responses to unusual events, such as arranging for transition of members during facility or provider closures.

Community Based Agencies (2.11.7)

We believe the best way to reach members and empower them to lead healthy lives is by partnering with local organizations in the communities that already serve them and have earned their trust. *All of our affiliates serving state-sponsored health programs have established partnerships with faith- and community-based organizations and service agencies that educate, advocate, and serve Amerigroup members. By educating our service partners about the health plan and resources available to our members, we promote true integration throughout the community.* We will work with DHS to prioritize our community-based efforts and will leverage the 24 years of affiliate experience to develop programs and initiatives for Iowa in conjunction with community-based agencies. We have engaged more than 50 community-based organizations (CBOs) in Iowa as shown in Table 2.11-1.

Table 2.11-1. More than 50 Community-based Organizations in Iowa Engaged

Engaged Community-Based Organizations	
1. AARP Iowa State Chapter	2. Iowa Chronic Care Consortium
3. Access 2 Independence	4. Iowa Counties Public Health Association (ICPHA)
5. Iowa Developmental Disabilities Council	6. ARC of Eastern Iowa
7. Iowa Disabilities and Aging Advocates Network (IDAAN)	8. Iowa Foster and Adoptive Parents Association
9. Alzheimer’s Association	10. Iowa Health Care Association / Iowa Center for Assisted Living
11. Iowa Hospital Association	12. Brain Injury Alliance
13. Iowa Medical Society	14. Caregivers Association
15. Iowa Primary Care Association	16. Center for Child Health Improvement and Innovation
17. Iowa Public Health Association	18. Central Iowa Center for Independent Living
19. Johnson County Case Management	20. LeadingAge Iowa and member organizations
21. Children’s Center for Therapy	22. League of Human Dignity
23. Coalition for Family and Children’s Services	24. Leukemia and Lymphoma Society
25. Community Action Association	26. March of Dimes Iowa
27. Community Health Charities of Iowa	28. NAMI Iowa
29. Orchard Place	30. Disabilities Resource Center of Siouxland
31. Disability Rights Iowa	32. South Central Iowa Center for Independent Living
33. Drake University Law School, Office of Clinical Programs	34. Statewide Independent Living Council
35. Easter Seals	36. Susan G. Komen Iowa
37. Evangelical Lutheran Good Samaritan Society	38. University Center for Excellence on Developmental Disabilities (UCEDD)
39. Homestead Center for Autism Service	40. Elderbridge Aging on Aging
41. Illinois/Iowa Center for Independent Living	42. Northeast Iowa Area Agency on Aging
43. Iowa Association of People Supporting Employment First	44. Aging Resources of Central Iowa
45. Iowa Alliance in Home Care	46. Connections Area Agency on Aging
47. Iowa Association of Area Agencies on Aging (I4A)	48. Heritage Area Agency on Aging
49. Iowa Association of Community Providers	50. Milestones Area Agency on Aging
51. Iowa Behavioral Health Association and member organizations	52. Youth Homes of Mid-America
53. Iowa Center for Independent Living	54. Iowa Library Association

Our outreach to CBOs includes designating locally based staff to regularly meet with these organizations and with system partners. We also invite CBOs to participate in our quality improvement initiatives, we sponsor community outreach activities (health fairs, back-to-school events), and we assist local community agencies with funding and grant opportunities. Our Iowa employees will work side-by-side

with CBOs at food banks and shelters, and we will partner with agencies to provide health education materials to our members with specialized needs, such as cooking classes for members with diabetes.

To promote integration of behavioral and physical health (and improved access to behavioral health services), our behavioral health experts have been in contact with the 15 regional mental health agencies. These relationships have increased our understanding of commonalities and nuances of their operations and how we can work with them effectively. We have also met with the member organizations of the IBHA, a number of which operate Integrated Health Homes.

To explore the use of an enhanced telehealth network to help expand access to specialty and behavioral health services, Amerigroup representatives participated in a general meeting in March 2015 with county administrators of the Iowa Counties Public Health Association (ICPHA).

We have also met with additional Iowa CBOs, including the National Alliance on Mental Illness (NAMI) Iowa, Iowa Association of Area Agencies on Aging (AAAs), Statewide Independent Living Council, IBHA, Orchard Place, Iowa Health Care Association (IHCA), and LeadingAge Iowa and the Iowa AARP state chapter. We continue dialogue and engagement with many of these organizations. Examples are listed below.

- We have had several meetings with the I4A and the regional AAAs to discuss potential contracting relationship and services the AAAs can provide, especially in the State's rural counties. The I4A signed a Letter of Intent to collaborate with Amerigroup on behalf of the six AAAs.
- At the March 18 Statewide Independent Living Council meeting, we met with directors of the Iowa centers for independent living to understand respective approaches and programs to support independence for people with disabilities. As a follow-up to that meeting, Amerigroup participated in the Iowa Disability and Aging Advocacy Network's managed care discussion on April 1, 2015.
- After meeting with IBHA leadership, we met with a group of IBHA member directors on April 14, 2015, to introduce them to Amerigroup, our approach to behavioral health, and integration with physical health services.
- Amerigroup met with the IHCA to discuss the Iowa Initiative, our respective approaches to balancing nursing home and home- and community-based services, and diversification of continuing care services. Subsequently, we sponsored the IHCA's Spring Education Conference on April 1.

Amerigroup will use this platform to help teach employers, particularly in low-wage industries, about the availability of public health insurance programs for their employees. We do this by participation on boards as well as through business expos. If invited, our employees will speak at individual businesses to provide education on access to care. Additionally, we will also work with ethnic chambers to help with the unique needs in their communities.

Iowa Department of Inspections and Appeals (2.11.8)

Amerigroup is committed to working closely with the Iowa Department of Inspections and Appeals (DIA) throughout the term of the contract. Amerigroup will collaborate with the DIA on initiatives related to credentialing and program integrity. In addition, Amerigroup will coordinate with DIA regarding:

- Administration of the appeals and grievance processes with the State fair hearing process processes
- Our program fraud, waste and abuse efforts

Media Contacts (2.12)

Amerigroup Iowa (Amerigroup) will comply with all requirements governing Media Contacts in SOW Section 2.12. We will not have contact with the media without the express consent of DHS and will refer all contacts by the media, other entities, or individuals not directly related to the program to DHS.

Written Policies and Procedures (2.13)

Question 2.13, #1

1. Describe your process for developing and maintaining written policies and procedures for each functional area.

Amerigroup Iowa (Amerigroup) will develop and maintain an extensive library of policies and procedures, subject to DHS review and approval, for each functional area. The appropriate Department Lead will sign, date, and approve all policies and procedures and the local Iowa Medical Director will sign, date and approve all medical and quality policies and procedures. We will maintain written guidelines for developing, reviewing, and approving all policies and procedures at least annually to verify that they reflect current practice and update them as necessary. We will submit all draft policies and procedures to DHS within 30 days of contract execution, and final versions, incorporating feedback from the Agency, will be submitted within 30 days of receiving comments on draft policies and procedures. Additionally, we acknowledge that if DHS determines that it lacks a policy or procedure or requests evidence that a policy or procedure has been fully implemented, Amerigroup shall comply with this request within the timeframes specified by DHS.

Through our affiliate health plans, we will be able to leverage an extensive set of existing policies and procedures for each functional area that represent best practices in state-sponsored managed care operations. These policies will help guide our activities and operations. Our Regulatory Oversight Manager and locally based, dedicated Iowa Compliance Officer will take the lead in collaborating across all functional areas to review, adapt, and develop policies and procedures that meet all DHS Contract requirements.

Our national Medicaid Compliance Operations Unit will oversee our policy and procedure management process. We will also maintain a central repository of our state-sponsored program policies and procedures on an internal website for ease of employee access.

Development of New Policies and Procedures

Amerigroup will develop and maintain an extensive library of policies and procedures that address our regulatory, contractual, and other requirements. Functional managers throughout the organization, in consultation with our Iowa Compliance Officer and Regulatory Oversight Manager, will develop policies and procedures as follows:

- We will create new policies as needed to comply with all State and federal regulations and legislation, new State Contract amendments, accreditation standards, or to satisfy any other business need.
- Business owners will submit the new policy, along with a Policies and Procedures Submission Form, to Medicaid Compliance Operations via the policy and procedure mailbox on our internal email system.

Medicaid Compliance Operations will create a database record, then obtain appropriate review, inclusive of a compliance review against contractual requirements, and signatures before posting the new policy or procedure on the internal website, which is accessible to all employees.

Review and Approval of Policies and Procedures

Amerigroup will adhere to an established written process for reviewing and approving policies and procedures. Unless a more stringent review timeframe is required, this process typically spans eight weeks. We understand that DHS will have the right to review all policies and procedures and request additional ones, if needed. Our process for review and approval follows:

- The Medicaid Compliance Operations Unit will notify the Business Owner in advance when a policy or procedure is due for a scheduled review.
- If a policy or procedure requires revisions outside of a scheduled review, the Medicaid Compliance Operations Unit is alerted to schedule an appropriate review.
- The Business Owner will be responsible for:
 - Reviewing the policy and procedure for accuracy
 - Making any necessary changes using the track changes feature in Microsoft Word®
 - Returning the revised electronic copy to the Medicaid Compliance Operations Unit
- Upon receiving the Business Owner's review, the Medicaid Compliance Operations Unit will prepare the policy or procedure for presentation to the appropriate committee(s) for review.
- The Medicaid Compliance Operations Unit will distribute the revised policy or procedure to the Compliance Officer, the Regulatory Oversight Manager, and any appropriate secondary departments for review and compliance with program requirements.
- Upon closing compliance and secondary reviews, the Medicaid Compliance Operations Unit will compile requested changes/comments and redirect the policy or procedure back to the Business Owner for final review.
- At any time during the review process, there may be occasion(s) to return to a prior step arising from concerns with accuracy.
- Upon completing these steps, the Medicaid Compliance Operations Unit will incorporate any changes and obtain Department Lead approval via signature. Amerigroup's Medical Director will approve, sign, and date all medical and quality management policies. All others are approved, signed, and dated by the senior executive of the functional area responsible for the policy or procedure.
- Upon approval, the new policy or procedure is posted in the internal website for employee access. The Business Owner will be alerted via email when it is posted.

An electronic copy is also distributed to the Business Owner of the policy and procedure when it is finalized. All updated policies and procedures will be provided to the Iowa Quality Management Manager via the Monthly Update Report. Upon request, additional employees are added to the distribution of the monthly update. Amerigroup will conduct formal reviews of medical and quality policies and procedures at least annually. Where necessary, we will promptly update them to align with new or revised standards. If DHS determines that a policy requires revision, Amerigroup will revise it within the specified timeframe. If DHS determines that Amerigroup lacks a policy or procedure necessary to fulfill the terms of the Contract, we will adopt that policy or procedure as directed.

Submitting Policies and Procedures to the State

Upon request, Amerigroup will provide evidence to DHS that all policies and procedures have been fully implemented. We will submit policies, procedures, and any associated documents to DHS as requested. We will deliver them and make any requested changes in the format and timeframes specified by DHS.

Participation in Readiness Review (2.14)

Question 2.14, #1

1. Submit a detailed implementation plan which identifies the elements for implementing the proposed services, including but not limited to:
 - a. Tasks;
 - b. Staff responsibilities;
 - c. Timelines; and
 - d. Processes that will be used to ensure contracted services begin upon the Contract effective date.

Amerigroup believes that a successful relationship is built on a strong implementation strategy. We recognize that transition from a fee-for-services (FFS) system to a risk-based managed care system requires careful, comprehensive, and competent implementation based on previous successes and lessons learned. We will leverage best practices built on over 100 successful managed care implementations, including more than 50 in the last 10 years, encompassing new health plan implementations, new program implementations, service area expansions, and new contract implementations. *None of our affiliate health plans has ever failed a readiness review.*

Implementation Plan

Amerigroup's Implementation Plan (presented in Attachment 3.2.7.5-2) identifies the elements for implementing the proposed services, including tasks to be completed prior to the January 1, 2016, Contract effective date:

- Tasks are included in the column entitled "Task Name"
- Staff responsible for the tasks are identified in the "Resources" column by business area
- Timelines are specified in the Start and Finish columns and include the duration of each task in the duration column
- Processes used to make sure contracted services begin upon the Contract effective date are described in rows 52 through 72; these tasks will be executed for each major task in the project plan and are included once to illustrate the quality control process

Our draft Implementation Plan has been developed to complete all significant tasks on or before the January 1, 2016, Contract effective date. All tasks that remain to be completed focus on operational monitoring and support, transitioning operations to local health plan staff, and typical project closeout activities, including conducting a lessons-learned survey. We expect to complete the following tasks after the January 1, 2016, Contract effective date:

- **Monitor/Support Go-live Operations.** The Transition and Implementation Teams will monitor and support the health plan after the Contract effective date to confirm that new processes and systems are functioning as planned, with a core national support team on-site in Iowa to assist health plan staff.
- **Project Transition to Operational Health Plan Owners.** The Transition and Implementation teams will transfer knowledge and operations to health plan staff for each functional area when operations are stable and outstanding issues are closed.
- **Lessons Learned.** We will conduct a formal survey and interview process to gather feedback (both positive and negative) from Implementation Team members and health plan staff and will then create an action plan of specific tasks that will strengthen future implementation efforts.

Experience

Our experience includes multiple implementations with aggressive timelines as displayed in Figure 2.14-1, **including our success in Kentucky with an implementation that moved from contract execution to member enrollment in just 131 days.** Each implementation is unique, and we take the time to understand and adapt our approach to meet the needs of members, providers, and State customers. Amerigroup affiliate experience includes successful implementation of comprehensive managed care programs that include long term services and supports (LTSS) in seven states based on:

- A thorough understanding of LTSS program goals and member needs
- Early and effective LTSS stakeholder engagement
- Engaging LTSS providers and providing specialized provider support

Figure 2.14-1. Demonstrated Success with Aggressive Timelines

A sample of more recent implementations is provided in Table 2.14-1.

Table 2.14-1. Other Recent Experience Implementing New Programs and Service Areas

State	Type of Implementation		
Tennessee	Service area expansion: managed LTSS for existing health plan	Y	4/1/2015
Texas	Service area expansion: managed LTSS for existing health plan	Y	9/1/2014
New Jersey	Existing health plan implemented managed LTSS	Y	7/1/2014
California	Duals demonstration, addition of managed LTSS to existing health plan	Y	7/1/2014
Kentucky	Added populations to existing health plan	N	7/1/2014
Florida	Added new managed long-term care program to existing health plan	Y	6/1/2014
Virginia	Duals demonstration for existing health plan and D-SNP	Y	4/1/2014
Georgia	Sole managed care plan selected for children in foster care, adoption assistance, and Department of Juvenile Justice youth	N	3/3/2014
Kansas	New managed HCBS for persons with I/DD for existing health plan	Y	2/1/2014
Wisconsin	Service area expansion for existing health plan	N	1/1/2014
California	Service area expansion into rural areas for existing health plan	N	11/1/2013
Florida	New managed long-term care program for existing health plan	Y	11/1/2013
New York	Implementation of health homes	N	10/1/2013
Virginia	Expansion of program to foster care children and adopted children for existing health plan	N	9/1/2013–12/1/2013
Louisiana	Pharmacy carve-in for existing health plan	N	11/1/2012
Florida	Service area expansion for existing health plan for Florida Healthy Kids	N	10/1/2012
Texas	Service area expansion, pharmacy carve-in, including managed LTSS	Y	3/1/2012
Kansas	All populations covered under Medicaid	Y	1/1/2013
Kentucky	One of 5 MCOs chosen to serve new ACA expansion populations	N	1/1/2014

IA_2.14_GRAPH_2.3

In addition, our implementation approach supports rapid response to a State’s changing needs. For example, our Texas affiliate stepped forward to help the State meet the needs of STAR+PLUS (managed LTSS) members when another health plan failed readiness review. *In 60 days, the Texas health plan hired and trained 19 professionals and staffed a special hotline exclusively assisting enrollees who were switching to Amerigroup, some of whom had complex medical needs.*

Staffing to Support Successful Implementation

We have assembled an executive leadership team to oversee and guide our Iowa implementation. Our Iowa Transition Team includes leadership with extensive Medicaid managed care experience and a deep understanding of the State’s objectives in launching the Iowa Initiative. As we launch the program, we will blend our highly skilled Transition Team with an Iowa-based staff. We will hire professionals who have established relationships and who understands the unique, local healthcare challenges. The Transition Team will oversee and monitor the new local staff and transition them to successful, ongoing administration and operation of the Contract.

Our Transition Team and local health plan staff will be supported by our national, award-winning Implementation Management Office (IMO) as indicated in Figure 2.14-2. The IMO is led by a certified Project Management Professional (PMP) with more than 20 years of health insurance industry experience. Our team of Project Management Professionals brings a disciplined approach to the implementation of new contracts, in accordance with the Project Management Institute’s (PMI) global standards for project management methodology. One of the IMO’s core competencies is its ability to successfully implement new Medicaid health plan business while seamlessly transitioning new members and providers into Amerigroup’s operations. We have a proven track record of successfully and effectively implementing programs within short timelines. We will use our proven model for implementing new business with our State partners. This includes the key components needed for a successful readiness review and seamless implementation, including:

- Thorough understanding of the State’s goals, Iowa provider landscape, and member needs
- Stable, predictable, and proven operating model
- Solid project management practices
- Skilled, dedicated, and experienced implementation team
- Experience successfully implementing new Medicaid programs that adhere to the implementation plan and requisite timelines

Transition Team Members

Since Amerigroup is new to the Iowa Initiative, we do not currently have individuals fulfilling the roles of Health Plan Administrator, Medical Director, Quality Assessment and Improvement and Utilization Management Coordinator, Special Programs Coordinator, Case Management Supervisor, Behavioral Health Coordinator, and Chief Financial Officer. We have included resumes for our experienced Transition Team behind tab 3.2.7.3: Résumés.

Figure 2.14-2. Our National IMO Was Awarded Project Management Office of the Year

In preparing to implement operations in Iowa, Amerigroup has identified a seasoned Transition Team with extensive Medicaid experience and a deep understanding of the needs of Medicaid members. The Transition Team will be responsible for overseeing initial operation of the Iowa Initiative Contract, which will include hiring highly qualified staff to fill the roles of the Contract Administrator, Medical Director, Chief Financial Officer, Compliance Officer, Pharmacy Director, Grievance and Appeals Manager, Quality Management Manager, Utilization Management Manager, Behavioral Health Manager, Member Services Manager, Provider Services Manager, Information Systems Manager, Claims Administrator, Care Coordination Manager, Program Integrity Manager, and Long Term Care Manager.

Our Transition Team will be led by Dr. Tunde Sotunde, who is the President of the North Region– Medicaid Government Business Division. He will oversee all Iowa health plan operations until a local leader is hired as the Contract Administrator/CEO and will maintain ongoing oversight of the market. He will have responsibility for every aspect of the program during implementation. Our Transition Team, led by Dr. Sotunde, is listed in Table 2.14-2.

Table 2.14-2. A Transition Team of Experienced and Highly Qualified Professionals Will Work with Local Health Plan Staff Throughout Implementation

Name of Key Personnel	Title	Experience and Qualifications
Dr. Tunde Sotunde, MD	Contract Administrator / CEO	Dr. Sotunde currently serves as President of the north region Medicaid business. Prior to this role, he was President/CEO of Amerigroup Georgia. Dr. Sotunde is a Pediatrician by training with extensive senior leadership experience in managed care spanning over a decade. He is a strong advocate of helping assure access to healthcare for vulnerable populations. Dr. Sotunde kept an active medical practice throughout most of his career, including providing pro bono pediatric services to the underserved, most recently with the Mercy Children’s Clinic in Franklin, Tennessee. Dr. Sotunde holds an MBA from the University of Memphis, received his Doctor of Medicine from the University of Ibadan in Nigeria, and completed his residency at the Howard University Pediatric Residency program.
John Crowley	Chief Operating Officer (COO)	John currently serves as Staff Vice President of Medicaid Provider Networks since 2014 with a solid track record in successful network development, management, and operations execution within government programs for more than 20 years. John holds a master’s degree in Economics from the University of South Carolina.
Dr. John Chang, MD	Medical Director	Dr. Chang is currently Staff Vice President and Chief Medical Officer for the Medicaid business since 2014. He is a seasoned professional with over 11 years’ experience in integrated healthcare delivery and strategic health plan management. Dr. Chang received his MBA from the University of Michigan and received his Doctor of Medicine from Hahnemann University School of Medicine.
Aimee Dailey	Chief Financial Officer	Aimee is Vice President of Medicaid Finance for the organization’s Government Business Division since 2013. She is a Certified Public Accountant with over 20 years of experience in progressively complex environments and has diverse experience in corporate finance, accounting, public company financial reporting, audit, management, and administration. Aimee holds a bachelor’s degree in Commerce from the University of Virginia.
Georgia Dodds-Foley	Compliance Officer	Georgia serves as Vice President and Medicaid Compliance Officer for the organization’s Government Business Division since 2011. A seasoned healthcare professional with 25 years experience in the legal and compliance arena, Georgia brings extensive executive leadership experience in Medicaid and Medicare managed care. She received her Juris Doctor from the University of Pittsburgh School of Law.

Name of Key Personnel	Title	Experience and Qualifications
Pamela Perry	Government Relations Officer	Pamela serves as Regional Vice President of Government Affairs Officer for the organization's Government Business Division since 2003. A Seasoned professional with over 20 years of government relations experience, Pamela brings extensive leadership experience in managed care. She received her Master of Public Administration and Public Finance degree from the University of Georgia.
Patrick Convey	Pharmacy Director	Patrick is Staff Vice President of Pharmacy Sales and Account Management for Medicaid business since 2013. A seasoned professional with over 20 years of healthcare experience in Customer Service, Account Management, Business Planning and Strategic Initiatives, Patrick brings significant senior pharmacy leadership experience in Medicaid managed care. He received his Doctorate of Pharmacy from the University of Southern California School of Pharmacy.
Bradley D. Soto	Human Resources Manager	Brad is Director of Human Resources for the organization's North Region Medicaid business. Prior to his current position, he served as Director of Human Resources for the HealthPlus Amerigroup New York health plan. Brad brings more than 10 years of human resources experience within managed care and operations. He received his master's degree in University Personnel Administration from New York University.
Tamera Lathan	Grievance & Appeals Manager	Tamera is Director of Grievances and Appeals within Clinical Quality Management for the organization's Government Business Division since 2012. She is a seasoned healthcare professional with over 17 years of experience in the commercial, government, and specialty managed care industry. Tamera brings extensive grievance and appeals leadership experience of Medicaid managed care. She holds an MBA from the University of Phoenix.
Barbara Kupferman	Quality Management Manager	Barbara currently serves as Staff Vice President of Medicaid Quality Management. Prior, she served as Director of Quality Management for HealthPlus Amerigroup New York. A seasoned RN professional with over 15 years of healthcare experience in Quality Management, Program Development and Implementation, Barbara brings significant quality programs senior leadership experience in managed care. She holds a master's degree in Healthcare Administration from St. Joseph's College of Maine.
Lisa McCormick	Utilization Management Manager	Lisa is Director of Healthcare Programs within the Clinical Operations group since 2004. A seasoned RN professional with over 25 years of healthcare experience in clinical and network operations, Lisa brings extensive senior leadership experience in managed care. She received her AASN from Thomas Nelson Community College in Virginia.
Dr. Charles Gross, PhD	Behavioral Health Manager	Dr. Gross currently serves as Vice President of Behavioral Health since 2014. A seasoned psychologist and healthcare leader with over 25 years of experience in Commercial, Medicaid, Medicare managed care, including all EAP and MBHO models, staff models, integrated, carve-out and carve-in models, and sub-capitated arrangements with an emphasis on behavioral health in various roles, Dr. Gross brings extensive behavioral health clinical leadership experience in managed care. Dr. Gross holds a Ph.D. in Clinical Psychology from Yeshiva University.
Fred Nelson	Member Services Manager	Fred is Director of National Customer Care within the organization's Government Business Division since 2011. A seasoned professional with over 35 years of business experience in Customer Service and Quality Measurement and Analysis, Fred brings extensive senior leadership experience in the member services and call center environments. He holds an associate's degree from Suffolk County Community College of New York.

Tab 3: Bidder’s Approach to Meeting the Scope of Work
2 General and Administrative Requirements

Name of Key Personnel	Title	Experience and Qualifications
Julie Skaggs	Provider Services Manager	Julie serves as Director of Health Plan Support and National Provider Relations since 2002. A seasoned professional with over 20 years of healthcare experience in building and enhancing provider networks, managing network operations, exceeding financial targets, formulation of health plan policy and the development of health plan accreditation programs, Julie brings extensive leadership experience in managed care. Julie attended the University of Texas.
Robin Favret	Information Systems Manager	Robin is currently Director of Business Relationship Management for Amerigroup’s Government Business Division since 2012. A seasoned professional with 30 years of healthcare experience in Customer Service, Account Management, Service Operations, and various other roles, Robin brings significant leadership experience in managed care. She holds a Bachelor of Science degree in Business Administration from Old Dominion University.
Leslie Langslow	Claims Administrator	Leslie serves as Director of Claims for Amerigroup’s Government Business Division since 2007. A seasoned professional with over 25 years of Medicaid and Medicare claims and appeals experience, Leslie brings extensive leadership experience in managed care. She attended Old Dominion and the University of Virginia.
Linda Hopkins	Care Coordination Manager	Linda is currently Staff Vice President of Healthcare Management Services since 2014. A highly seasoned professional with over 25 years of healthcare experience in Medical Cost Management, Provider Network Management, Consumer Outreach, and Clinical Evaluation and Health Management Operations within Medicaid, Linda brings extensive senior leadership experience in managed care. She received her MBA from the College of William and Mary.
Mary Beach	Program Integrity Manager	Mary serves as Director of the Medicaid Special Investigations Unit since 2007. A highly seasoned professional with over 25 years of healthcare experience in Healthcare Fraud, Investigations, Customer Reimbursement, and Auditing within Medicaid, she brings extensive leadership experience in managed care. She received her Bachelor of Science degree from Indiana University.
Laura Johns	Long-term Care Manager	Laura is currently the organization’s Director of Health Services/Long-term Services and Supports for the Government Business Division since 2014. A seasoned professional with over 30 years’ experience in staff management, case management, long-term care, home- and community-based waivers, assessment/evaluation, regulatory compliance, staff training, program development, and performance/quality improvement, Laura brings extensive leadership experience in managed care. She holds a master’s degree in Psychology from Stephen F. Austin State University in Texas.
Kevin Hughes	Community Relations Manager	Kevin serves as Staff Vice President of Medicaid Marketing Operations and Retention for the Government Business Division since 2007. With over 25 years of strategic and tactical experience in member and community engagement and operations management, Kevin brings extensive senior leadership experience in managed care. He received his Bachelor of Science degree in Business Administration from Old Dominion University.
Rhys Jones	Member Advocate/Non-discrimination Manager (Ombudsman)	Rhys is currently Senior Director of Medicaid Business Development for the Government Business Division since 2014. A seasoned professional with over 20 years of healthcare industry experience in Medicare, Medicaid, and commercial health plans; Medicare/Medicaid integration and dual eligible programs; long-term care, services, and supports; Big Four healthcare consulting; and hospital and outpatient care settings, Rhys brings extensive member and local advocacy knowledge to the healthcare industry. He holds a master’s degree in Public Health, Health Policy, and Administration from the University of California.

In addition to the aforementioned individuals, we will engage local and national experts across a broad range of functional areas to lead a thorough, high-quality implementation of all Contract requirements.

The local Iowa health plan staff will coordinate with the Implementation Project Team and our national Implementation Team throughout the project and will ultimately hold full accountability for meeting all requirements.

Early and Effective Stakeholder Engagement

When Amerigroup and our affiliates choose to enter a new program, we identify potential providers and other stakeholders well in advance of implementation and meet with them early and often. Our experience teaches us that early engagement creates collaborative partnerships and establishes trust, resulting in better outcomes for our members while addressing the needs of our providers and State customers. We form an Advisory Board of provider associations, providers, advocacy groups, and health plan staff, including care coordination, provider relations, and quality management employees. The meetings provide a forum for the open exchange of ideas to promote a smooth transition. Advisory Board input in other states has enabled us to:

- Incorporate advocate feedback into program development and refinement
- Enhance partnerships with providers
- Extend our reach to underserved communities
- Increase access to services in rural areas

Amerigroup has been meeting with key advocacy and provider groups and will form an Advisory Board to provide input during implementation. The Board will transition to the Stakeholder Advisory Board upon program implementation.

Question 2.14, #2

2. Confirm that you will revise the implementation plan and keep it updated throughout the readiness review process.

Amerigroup will maintain and continually update an Iowa implementation plan that contains the required elements specified in the Scope of Work and as subsequently required by DHS. The IMO updates the project plan weekly, and it is considered a living document that the work groups use to lead their discussions. The list of the requirements and the Project Plan, are the two documents that guide all implementation meetings and actions. There are weekly meetings with the stakeholders, and frequent meetings between the Project Team Meeting and the Steering Committee to go over progress on each deliverable and address any issues that come up. Amerigroup is prepared to submit a revised implementation plan as part of readiness review and are fully equipped to do so.

Confidentiality of Member Medical Records and Other Information (2.15)

Question 2.15, #1

1. Describe your plans to ensure that health and enrollment information is used in accordance with the requirements set forth in the Health Insurance Portability and Accountability Act and other applicable federal and state privacy laws and regulations.

Policies and Procedures to Maintain Confidentiality of Member Records and other Information

Amerigroup understands the sensitive nature of medical records and any other health and enrollment information we collect and maintain to conduct our business. We also understand the importance of securing this information to protect the privacy of our members and providers. We have policies, procedures, and infrastructure to maintain continued compliance with the requirements set forth in the HIPAA Privacy Rule, State and federal privacy and confidentiality requirements, and as outlined in *Scope of Work (SOW) Section 2.15, SOW Section 1.4.1, and SOW Section 13.1.7.*

Using Information in Compliance with HIPAA

Amerigroup will comply the HIPAA Privacy Rule, including designation of national Privacy and Security Officers through our national Privacy and Security Offices. Our policies and procedures are compliant with the HIPAA Privacy Rule, including the granting of the following individual rights:

- An individual's right to access his or her designated record set containing his or her own protected health information (PHI)
- The right to request an amendment to PHI contained in a designated record set
- The right to place a restriction on the use and disclosure of PHI for treatment, payment, and healthcare operations
- The right to authorize the use of PHI before its use in certain marketing activities
- The right to receive confidential communications at an alternate address or location
- The right to request an accounting of disclosures
- The right to voice a complaint about Amerigroup Iowa's privacy policies and procedures

Amerigroup will also maintain compliance with the provisions of the HIPAA Security Rule through our national Information Security Program by:

- Maintaining an information assurance risk management program
- Protecting the confidentiality, integrity, and availability of electronic PHI
- Using administrative, physical, and technical safeguards to address reasonably anticipated threats and hazards to electronic PHI
- Continually evaluating program effectiveness and adequacy

We are committed to protecting member and patient privacy and safeguarding related health information. As such, we maintain security policies and procedures designed to protect the confidentiality, integrity, and availability of electronic PHI collected, maintained, used, or transmitted. We use secure email

systems and encrypted file transfer protocols to protect PHI that is exchanged both within and outside of the organization.

Amerigroup will employ an encryption system to securely transfer files containing PHI using protocols such as SFTP, SSL/TLS, and IPsec. This will include automatic encryption of all email containing PHI to anyone outside of the Amerigroup network. In addition, we encrypt portable devices such as laptop computers and mobile devices and controls what can be saved to removable devices such as CDs and USB drives. Those who are authorized may save PHI to a portable device for business purposes, but it will automatically encrypt the data, protecting member privacy.

We maintain a national Medicaid-specific Privacy Officer and designated employees in the Member Privacy Unit who focus on the fulfillment of member privacy rights requests, investigate and resolve privacy incidents, and maintain Medicaid privacy procedures. The Privacy Officer is responsible for the procedures related to PHI and Individually Identifiable Health Information (IIHI), as well as follow-up for any incidents identified with either.

In addition, our transaction code sets and National Provider Identifier (NPI) are HIPAA-compliant. Our affiliate health plans have data interfaces with state partners, as required, and can support the interfaces with the State and its agents, such as the fiscal agent and enrollment broker. Current data interfaces include incoming and outgoing consumer information regarding enrollment and eligibility, claims and encounters, third-party liability data, provider data, and specialized extracts as required. Interface formats vary from negotiated proprietary formats to preferred HIPAA-standard transactions.

HIPAA Privacy and Security Infrastructure

Our national Privacy and Security Offices oversee, guide, and direct privacy and security programs that support compliance with all applicable privacy and security laws and regulations. Our privacy and security programs:

- Facilitate and coordinate development and approval of organization-wide privacy and security compliance policies
- Facilitate compliance with State-specific privacy and security guidelines in conjunction with the local health plan Compliance team
- Facilitate and coordinate privacy and security training and awareness programs and, when required, maintain training activity records
- Monitor Amerigroup Iowa's compliance with these policies
- Work to address privacy and security compliance risks and remediate any deficiencies
- Compliance is an essential part of the Amerigroup Iowa culture, and we work hard to educate our employees and monitor their adherence to policies and federal and State regulations.

Employee HIPAA Training

All employees receive initial and ongoing training on the overall requirements of the HIPAA Privacy and Security rules, as well as how these rules apply to their specific job functions. All new employees receive their HIPAA Privacy and Security training online within 30 days of their hire date. Each year thereafter, every employee must complete HIPAA online training and certification.

Ongoing Monitoring for Compliance

Amerigroup's local compliance program will deliver continued visibility and awareness regarding the obligation of each employee to maintain the confidentiality of member information. Our

national Privacy Office published a new "Privacy Site Inspection Procedure," which guides the health plans in conducting their own site inspections. We propose that the plan adopts this inspection process. To help assure compliance with Amerigroup Iowa's member confidentiality and privacy policies, we will:

- Educate, train, and remind employees about policies:
 - Frequently Asked Questions and resources related to confidentiality and privacy are readily available on our company intranet site
 - In addition to annually required training, Amerigroup Iowa departments routinely cover privacy and security during team meetings
- Provide a workspace designed to support member privacy:
 - Employees have locking cabinets and drawers at their desk
 - Multi-function printers allow for secure printing, which allows an employee to send a print job to the printer and release the job for printing after they physically log into the printer
 - Locked shred bins are readily available to securely dispose of information in accordance with Amerigroup Iowa's Record Retention Program
- Display visual aids throughout the office as reminders:
 - Colorful posters placed throughout the office remind employees about their responsibility to protect member information and address topics like "HIPAA Do's and Don'ts"
 - Employee computers have automatic screensaver messages that reinforce privacy policies
- Provide options for employees to report compliance concerns:
 - Speak with a manager or Human Resources representative
 - Contact the local Iowa Compliance Officer
 - Call the Ethics and Compliance HelpLine or send an email
- Have our Iowa Compliance Officer and compliance staff conduct regular walkthroughs to inspect for compliance with HIPAA and our policies and procedures to maintain the confidentiality of information. During this walkthrough, the compliance staff will:
 - Inspect office space, including desks, printers, conference rooms, and break areas
 - Discuss compliance with employees to confirm their understanding
 - Immediately address any concerns and, if necessary, initiate follow-up attention and action

Protecting Mental Health Information

To protect and maintain the confidentiality of mental health information and the release of mental health information, in accordance with Iowa Code §228, Amerigroup will maintain appropriate policies and procedures for our employees and through our network provider agreements. Amerigroup requires that all network providers maintain compliance with all relevant State and federal laws regarding privacy and confidentiality. The Provider Manual specifies the limitations on sharing member PHI as defined by HIPAA. All providers must follow HIPAA-compliant protocols when coordinating care with other providers (in-network or out-of-network) for all Amerigroup members.

Protecting Substance Use Disorder Information

In addition to protecting mental health information, Amerigroup Iowa is committed to protecting and maintaining the confidentiality of substance use disorder information. We agree to allow the release of substance use disorder information *only* in compliance with policies set forth in 42 CFR Part 2 and other applicable State and federal laws and regulations.

Breach Notification

In the event of a HIPAA-related breach, Amerigroup will notify the DHS in accordance with the terms of Section 1.5 of the Contract's Special Terms. Upon discovery of a non-HIPAA-related breach, we will notify the DHS within one business day.

Material Change to Operations (2.16)

Question 2.16, #1-3

1. Describe how you will inform DHS in advance of any material changes, and how far in advance DHS will be informed.
2. Confirm that DHS may deny or require modification to proposed material changes if, in its sole discretion, it determines that such changes will adversely impact quality of care or access.
3. Describe your ability to communicate material changes to members or providers at least thirty (30) days prior to the effective date of the change.

Amerigroup Iowa (Amerigroup) believes it is important to communicate any material change in business operations (that is, systems, policies, or processes) to our members, providers, and other stakeholders. We take this responsibility seriously and will comply with the requirements in Scope of Work Section 2.16 to inform Iowa Department of Human Services (DHS) of any material change expected to affect more than five percent of Iowa membership or our Network Providers.

When we make a material operational change driven internally, by program, or by contract requirement, we analyze the impact of the change to systems, processes, and stakeholder groups. Examples of material changes include:

- Updates to the scope of covered services as directed by the State
- Availability of additional approved Value-Added Services
- Information that assists in correct claims payment

When evaluating a material change, we assess the impact to all stakeholders—members, providers, Amerigroup employees, and State agencies—and develop appropriate communication and training plans. Our procedures already align with the DHS requirement to communicate any change affecting more than five percent of our members or providers at least 30 days prior to implementation.

Our experienced Iowa management team recognizes the impact of material changes and will be actively involved in making sure that the changes are minimized, but when necessary, implemented effectively. To that end, our Iowa leadership will engage and work directly with the State to communicate these changes. Our process for making and communicating a material change is described below.

Identifying a Material Change

The Amerigroup Regulatory Oversight Manager monitors events, such as contract amendments and policy notices, and works with business owners to evaluate the impact of the event on operations. Using our Compliance 360 software, the Regulatory Oversight Manager will prepare a high-level summary of the upcoming change in requirements or guidance and distribute it to Iowa stakeholders and across our national support functional areas.

Compliance 360 requires business owners to acknowledge receipt and review of the regulatory alert by indicating whether or not the change will require any action on their part to bring current operations into

compliance with the proposed changes. If a business owner provides an affirmative response, they are required to enter an Action Plan to document the steps that will be taken to implement the change.

Notifying Iowa DHS of a Material Change

Amerigroup will notify DHS of any proposed material changes to operations and associated member and provider communications at least 30 calendar days before the effective date of the material change. This allows for timely notification of the material change to members and providers. We will partner with DHS to submit proposed material changes using the DHS preferred method, including email, telephone, fax, or letter. We will provide DHS with a description of the material change, including the rationale, proposed effective date, impact on stakeholders, and draft member and provider communication materials for review and approval as required. We are willing and available to discuss all proposed material changes with DHS.

Communicating a Material Change

Communication and training are key components of system changes. Amerigroup recognizes that every change is different in the manner and extent to which it affects our members and providers. Depending on the nature of the change and its impact to members and providers, we determine the effective ways to communicate externally and train our call services staff for smooth continued operations and effective handling of questions. For example, a change impacting how all providers must submit claims requires a more extensive communication campaign than a change eliminating the prior authorization requirement for a particular service.

It is part of Amerigroup's commitment to our stakeholders to communicate a material change of operations to our members and providers. We realize that effective communication requires us to employ a variety of methods and media to thoroughly reach our intended audiences.

Communicating Material Changes to Members

We will communicate material changes to our members in several ways, including:

- Email messages that notify members of the nature, impact, and timing of the change (members may sign up voluntarily to receive information from us by email.)
- A print notification mailed to the member (for print materials, members may use Amerigroup's Translation on Demand service to request materials in alternate formats such as Braille, large print, audio CD, or in the member's preferred language.)
- Information and alerts posted on the member website, including member newsletters and updates to the member handbook
- Member Services Helpline employees who answer questions and provide information on how the change will impact members
- Audio messages through our member helpline to provide information on the change when the call is answered by the automated voice response system or during brief periods when members are on hold
- Outbound calls using an automated outreach vendor, whose employees make member calls from a carefully prepared script outlining the change, its impact, and how to get more information
- Direct member outreach by employees on our care coordination and management team to initiate discussion of a change during regular member visits and calls

Communicating Material Changes to Providers

Depending on the nature and significance of the material change, we use a variety of methods to communicate with our providers, including:

- Print notifications in provider bulletins/newsletters, emails, faxes, and mailings to identify the change, impact, and timing of the change
- Information and alerts posted on the provider website and updates to the provider manual
- Provider helpline employees who offer information about the impact of the change and where the provider can obtain additional information
- In-person or online training sessions specific to the change
- Provider Services Staff who initiate discussion on change during regular provider visits and calls

Our Process in Action

Our affiliate health plans applied the processes described above during implementation of the National Drug Codes (NDC) unit of measure to comply with health care reform legislation. Because the change impacted claims submission, the provider communication campaign was lengthy, extensive, and aggressive. We used multiple methods to notify providers of the material change and its impact to their operations. This included direct fax blasts to providers, provider workshop updates, and outreach (with FAQs) by our Provider Services Staff. We also trained our provider helpline employees to address provider questions, issues, and concerns.

Our communication strategy included multiple communications for more than nine months prior to NDC implementation and additional communication after the material change. Prior to the implementation, our communication was designed to educate providers that NDC material changes were coming, how material changes would impact their operations, and what steps they needed to take to be ready. As the implementation date neared, we formed a special team to address claim issues with providers who had not yet implemented the new NDC processes. After implementation, we continued additional education for eight months to confirm provider compliance and address any outstanding claim issues.

Denial or Modification of Material Changes

Amerigroup confirms that DHS may deny or require modification to proposed material changes if it determines that such changes will adversely impact quality of care or access. We will work proactively with DHS to have open lines of communication ahead of time to avoid such situations.

Ability to Communicate in Advance

Amerigroup's material change processes require that changes be communicated to members or providers at least 30 days prior to the change effective date. We understand and will comply with all Scope of Work Section 2.16 requirements concerning member notification of material changes to operations, State approval requirements, and compliance with State-specified content. We will communicate material changes to members or providers using the above-identified methods.

Response to State Inquiries and Requests for Information (2.16)

Amerigroup Iowa understands that DHS may, at any time during the term of the Contract, request financial or other information, and we will fully disclose all financial or other information requested in the specified DHS response time frames.

We understand that DHS may receive inquiries and complaints from external entities, including but not limited to providers, enrollees, legislators, or other constituents, that require our research, response, and resolution. Amerigroup will respond to all such inquiries and complaints specified by DHS when the inquiry or complaint is forwarded to us for resolution.

Dissemination of Information (2.17)

In compliance with the Scope of Work Section 2.17, Amerigroup Iowa will distribute information prepared by DHS, its designee, or the federal government to our members and provider networks. In Sections 8.2 and 6.1, we describe in detail our overall strategy and manner in which we will communicate with our members and providers, respectively, and our ability to build upon the proven success of our affiliate health plans that operate state-sponsored programs in 19 other states.

DHS Ongoing Monitoring (2.18)

We understand that the DHS will conduct ongoing monitoring of our operations to help assure our compliance with Contract requirements and performance standards. Furthermore, Amerigroup Iowa (Amerigroup) understands that the method and frequency of monitoring is at the discretion of DHS and may include but is not limited to both scheduled and unannounced on-site visits, review of policies and procedures, and performance reporting. Please refer to Section 14 for a detailed description of our approach to comply with the State's performance targets and reporting requirements.

Furthermore, Amerigroup will fully cooperate with planned and unannounced on-site reviews, provide requested documents, and be available during review activities.

Future Program Guidance (2.19)

Amerigroup Iowa (Amerigroup) will comply with the Policies and Procedures Manual that the State will publish prior to the Contract start date. In addition, we will comply with future program manuals, guidance, and policies and procedures, as well as any amendments to such materials, at no additional cost to DHS. We further understand that any future modifications that have a significant impact on Amerigroup's responsibilities, as set forth in this RFP, will be made through the Contract amendment process.

Scope (3.1)

As part of the Anthem family of companies, Amerigroup and our affiliate health plans have 24 years of experience in state-sponsored programs coordinating and providing integrated physical and behavioral healthcare services, pharmacy, and Long Term Services and Supports (LTSS) to more than 5.2 million members in 19 states. Our affiliate health plans have never missed a go-live date in more than 100 public-sector healthcare program implementations, service area expansions, and program enhancements in 24 years. We understand how to successfully enroll, transition, and manage all populations and services included in the Iowa Scope of Work, and we currently do so in multiple other states. We have a strong track record transitioning Medicaid members from fee-for-service (FFS) to managed care, and we have the infrastructure, processes, and expertise to rapidly operationalize the Iowa High Quality Healthcare Initiative across the entire State of Iowa.

Eligible Members (3.1.1)

Amerigroup and our affiliate health plans currently serve all populations and manage all benefits included in the Iowa Initiative across more than 5.2 million members in the 19 states where we operate state sponsored health programs (see Tables 3.1-1 and 3.1-2, below). ***This includes experience serving nearly one million members with specialized medical, behavioral, and/or social needs.*** Our affiliate health plans across the country have extensive experience as evidenced by the following:

- 17 years of organizational experience as LTSS experts, coordinating the services and supports for over 200,000 members in seven states
- 19 years' of organizational experience providing fully integrated physical health, behavioral health, and LTSS benefits to Aged, Blind, or Disabled (ABD) Medicaid populations across 16 states
- Our affiliate health plans currently serve more than 20,000 members with intellectual and/or developmental disabilities across 9 states
- Our Indiana affiliate manages Indiana's HIP 2.0, an Affordable Care Act (ACA) Medicaid expansion alternative that includes 19 different benefit packages

We currently manage behavioral health services as an in-house, integrated function of 16 of our 19 affiliate health plans. Two additional affiliates will manage behavioral health benefits by the beginning of 2016. Our affiliates are responsible for crisis services and outpatient therapy for families and children in 16 states, intensive psychiatric rehabilitation in 11 states, and peer support services in seven states.

IA_3.1_COB_1.5i

Our affiliates have extensive experience implementing multiple programs that transitioned directly to managed care from a FFS environment. For example, our Kansas affiliate collaborated with that State’s leadership to launch a significant redesign of their Medicaid program. It includes a full range of populations and services, including LTSS, home and community-based services(HCBS) waiver programs, individuals with ID/DD, and members of all ages with disabilities.

Our Louisiana affiliate participated in Louisiana’s 2012 move from FFS to managed care, successfully transitioning the care and services of more than 120,000 members, including Temporary Assistance for Needy Families (TANF), CHIP, and ABD populations.

Our Georgia affiliate worked with Georgia as the sole plan to serve children in foster care in their state-wide program launched in 2014.

Our Tennessee affiliate worked with Tennessee to roll out its TN CHOICES program, which transitioned full waiver services for HCBS waiver participants from FFS to managed care.

Our organization has an impeccable track record of meeting implementation milestones and deliverables while making sure transitions are smooth for enrollees and the state. In the 15 months that ended in January 2013, our organization managed the start-up of three Medicaid managed care health plans — Kansas, Louisiana, and Washington — representing more than 180,000 new members at go-live. ***These three implementations were completed without any disruption in service within our existing health plans. In fact, our call center abandonment rate during those 15 months of intense activity was just 1.04 percent.***

Iowa Department of Public Health Participants (3.1.1.1)

Amerigroup affiliates have extensive experience partnering with states to administer publicly funded substance use disorder (SUD) programs and services. In Iowa, we will coordinate with DHS and IDPH to identify eligible persons for these services, and deliver, coordinate, track, and monitor their care and services. These services will include, among others, outpatient treatment, day treatment, clinically managed low- to high-intensity residential treatment, medically monitored intensive inpatient treatment, intake, assessment, diagnosis services, evaluation, treatment planning, and service coordination.

We have extensive experience partnering with states to administer publicly funded substance use disorder programs and services. Currently, our affiliate health plans provide SUD benefits in 13 states. By first quarter 2016, we will provide substance use disorder benefits in 14 states.

To make sure high-quality services are provided to IDPH participants, we will:

- Establish relationships and work closely with designated, contracted IDPH SUD providers; we have already begun meeting with SUD providers, such as the Iowa Behavioral Health Association, to discuss our approach to behavioral health and SUD treatment and to explore how we can work together
- Work closely with the courts regarding court-ordered substance use disorder treatment for IDPH-covered beneficiaries
- Work closely with IDPH-funded Women and Children service providers to provide substance use disorder services to women who are pregnant
- Use the IDPH data system and data to understand IDPH service levels and complete required documentation

Our collaboration with designated IDPH substance use disorder providers will include outreach and engagement strategies for specific populations such as intravenous (IV) drug users and pregnant women. See Section 3.2.8 on Behavioral Health for more detail on these strategies.

By Q1 2016, we will provide substance use disorder benefits in 16 states; this includes outpatient treatment and court-ordered evaluation for SUD in 15 states, medically monitored intensive inpatient treatment in 13 states, and intake, assessment and diagnosis services in 14 states.

IA_3.1_COB_22

Excluded Populations (3.1.1.2)

We understand that excluded populations will not be enrolled in the Iowa Initiative. Our organization is experienced using data elements from incoming 834 files to categorize members into distinct populations within our system. We will extend this capability to the excluded populations and configure our system specifically for Iowa. If the data elements driving population categorizations change so that a given member is categorized in an excluded population, our system will flag the member as not covered. We will coordinate with the State to address members whose categorization changes to an excluded population. This includes undocumented immigrants receiving time-limited coverage of certain emergency medical conditions, beneficiaries who have a Medicaid eligibility period that is retroactive, persons eligible for the Program of All-Inclusive Care for the Elderly (PACE) who voluntarily elect PACE coverage, persons enrolled in the Health Insurance Premium Payment program (HIPP), and persons eligible only for the Medicare Savings Program.

We will coordinate with the State to enroll Alaskan Native and American Indian populations who elect to enroll in The Iowa Initiative voluntarily. We have experience partnering with Indian Health Service (IHS) and Tribal 638 health facilities in other states.

Effective Date of Contractor Enrollment (3.1.2)

Our affiliates have extensive experience managing enrollment processes in other states, and we will be prepared for the Iowa Initiative's intended go-live date of January, 2016. Our processes are proven. For example, in 2013, after implementing three new health plans, our member load automation accuracy rate was 99.4 percent overall across all markets covered by our organization. Eligibility reconciliation was completed within 48 hours (our internal service level agreement) 100 percent of the time.

We will coordinate with the State of Iowa to accept enrollment assignments and changes to aid type on a prospective basis. We will only cover retroactive Medicaid eligibility periods in the case of babies born to Medicaid-enrolled women who are retroactively eligible to the month of birth. We will align with the State's definition of a retroactive Medicaid eligibility period as up to three months prior to the Medicaid application month.

Geographic Service Area (3.1.3)

We will provide statewide access to covered benefits for members in all Iowa counties on day one of the Contract period. Our affiliates have extensive experience establishing robust provider networks quickly in other markets around the country and currently count more than 118,000 providers in our government program networks. We have ten employees on our national Network Development team who are committed to building networks in Iowa. They have built 12 different state sponsored program networks (including networks for many specialized populations) in the last 36 months.

We have already begun a multifaceted provider outreach strategy in Iowa, aided by a close partnership with Wellmark, Inc., that includes a particular focus in the area of Accountable Care Organization (ACO) relationship development. We have met with numerous physicians, physician groups, hospitals and other institutional providers, safety net providers (Federally Qualified Health Centers (FQHCs), Rural Health Clinics (RHCs), and critical access hospitals), Community Mental Health Centers, Community Developmental and Disability Organizations, Centers for Independent Living, Area Agencies on Aging (AAAs), ancillary service providers and networks, and HCBS providers to begin the contracting process. Some of the marquee providers that we have already engaged include Catholic Health Initiatives, Mercy Health Network, Unity Point, and University of Iowa Health Alliance. See our response to 6.1.1 for more detail on the number of provider organizations with which we have met and executed letters of intent. We expect that these relationships exceed 80 percent of the FFS payment volume within the current Iowa Medicaid program.

CareMore. We are also excited to introduce CareMore to Iowa, starting with the Des Moines market. CareMore, an Anthem affiliate, is a ground-breaking model of care delivery that combines wellness, medical supervision, and a revolutionary approach to care coordination for at-risk members who require higher levels of clinical intervention due to complex and/or chronic conditions.

Additionally, we have developed a plan to provide care in Iowa's rural areas. Across our affiliate health plans operating state-sponsored health programs, 65 percent of the counties in our plans' service areas consist of rural counties, so we are experienced addressing gaps in access and will deploy the best practices we have developed in other states to help assure all Iowans can access the care and services they need as easily as possible. Using GeoAccess® to identify network adequacy gaps, we will partner with strong local providers and create incentives to open offices in rural areas. We will also assist eligible members in accessing transportation to appointments. We also provide enhanced transportation benefits for members eligible for the Children's Mental Health Waiver as a value added service. We plan to promote in-home clinical service delivery by board-certified physicians and nurse practitioners to

improve access in rural areas or for individuals who have a difficult time visiting traditional provider offices.

Another network innovation is our plan to deploy expanded telehealth platforms to further increase access and reduce barriers to care and services. We will work with the substantial telehealth services currently in place in Iowa, such as those provided by the University of Iowa, and partner with providers to expand existing services as needed to meet the needs of our members.

CONTAINS CONFIDENTIAL INFORMATION

Currently, *more than 50 percent of members enrolled in our affiliates' state-sponsored health programs across 19 states are impacted by some form of payment incentive*. Once the Iowa program is mature, we expect similar, if not superior, results.

Covered Benefits (3.2)

General (3.2.1)

We will provide all benefits and services deemed medically necessary that are covered under the Contract as outlined in Exhibit D of the RFP. We have experience providing all benefits and services included in the Scope of Work through our affiliate health plans in 19 states (see Figure 3.2-1). We will leverage our experience in these states to apply the appropriate Utilization Management (UM) processes and medical necessity or other applicable criteria to furnish benefits and services according to Iowa's policies. We will build robust Provider Networks, develop innovative Provider Network solutions, and support members in selecting their preferred providers. We will leverage primary care providers (PCPs) as a key partner in

delivering covered benefits and will utilize tools, information, and incentives to empower PCPs as well as other provider types to improve the access, quality, and cost of healthcare.

Figure 3.2-1. Our Health Plan Affiliates Have Extensive Experience Delivering All Benefits Covered Under the Iowa Contract to Medicaid Members in Other States

We will not arbitrarily deny or reduce the amount, duration, or scope of a required service solely because of diagnosis, type of illness, or condition of the member. We will not deny reimbursement of covered services based on the presence of a pre-existing condition. ***UM decision-making is based only on appropriateness of care or service and existence of benefit coverage.*** We do not reward practitioners or other individuals for issuing denials of coverage. We do not base decisions about hiring, promoting, or terminating practitioners or other staff on the likelihood or perceived likelihood that they support, or tend to support, denials of benefits. We do not structure compensation to individuals or entities that conduct UM activities to provide incentives for the individual or entity to deny, limit, or discontinue medically necessary covered services to any member in accordance with regulations.

We will use nationally accepted, evidence-based criteria to promote appropriate utilization of covered services. We will implement criteria and guidelines that are objective and provide a rules-based system for screening proposed care and services based on member-specific, best practice processes and consistently match services to member needs. We will coordinate with DHS and local stakeholders to align with Iowa-specific criteria and processes.

- For **medical State plan benefits**, UM nurses will review the members’ conditions and compare to the appropriate medical necessity criteria. We will use nationally accepted, evidence-based medical necessity criteria, unless superseded by State requirements or regulatory guidance

- For **behavioral health State plan benefits and substance use disorder services**, we will utilize Anthem Behavioral Health Medical Necessity Criteria and American Society of Addiction Medicine (ASAM) Criteria, unless superseded by State requirements or regulatory guidance. We will also develop psychosocial medical necessity criteria specific to the Iowa Initiative
- For **Early Periodic Screening, Diagnosis, and Treatment (EPSDT) services** for members under 21, we will comply with State requirements to provide any services that could correct or ameliorate physical or behavioral health
- For **emergency services**, we will not impose restrictions on coverage that are more restrictive than those permitted by the prudent layperson standard. We will not deny emergency services when a prudent layperson who possesses an average knowledge of health and medicine could reasonably expect the absence of immediate medical attention to result in placing the health of the individual (or unborn child) in serious jeopardy, serious impairment to bodily functions, or serious dysfunction of any bodily organ or part
- For **Long Term Services and Supports (LTSS)**, we will determine functional necessity based on the member's assessment/re-assessment and needs. We will determine and approve the provision of LTSS and related durable medical equipment (DME) through our person-centered care planning process in consultation between the member, their family/legal representative (if applicable) or caregiver, Community-Based Case Manager and the integrated health home care coordinator (as appropriate). Spending on covered services must fall within the budget cap.

Additionally, we are in the process of developing a long-term partnership with Telligen, a current contractor with DHS, which will allow Amerigroup to combine Telligen's robust and extensive expertise and experience with the State's HCBS waiver programs and populations with Amerigroup's innovative care model. Through this partnership we intend to learn from and leverage the most impactful elements of Telligen's Iowa experience, enhancing our ability to fully understand the programs and processes that have served State Medicaid members historically. Telligen's experience in the State's implementation of standardized needs based assessment tools and administering the InterRAI-HC and the Supports Intensity Scale to determine level of care for member enrolled in HCBS waiver programs will complement and inform Amerigroup's existing care coordination model, and allow us to more effectively provide seamless continuity of care for our most vulnerable members on day one. Additionally, we are exploring opportunities to utilize Telligen resources to support Amerigroup's care coordinators and their activities under our proposed care model and programs.

We will work collaboratively with Iowa providers and community resources to provide cost-effective, quality-driven care. We do not refer members to publicly supported healthcare resources in an effort to avoid costs. We will build a robust Provider Network to meet member needs and outreach with education and reporting to partner with providers to address gaps in care, incentivize high-quality and value-based care, and help assure members access covered services appropriately.

We support enrollees to choose their healthcare professional and LTSS providers and provide support in making informed decisions. We recognize that members and their families will look for providers who have specialized expertise to meet their needs. We will implement a credentialing application that would include a profile for PCPs and for specialty care, behavioral health, and LTSS providers, which will make it easier to identify who has experience working with members who have specific conditions or implementing specific evidence-based modalities or promising practices. This information will be available to members on the member website, in the member handbook, and through calls to the Member Services Department to provide members with choice and access in self-directing their care.

Benefit Packages Overview (3.2.2)

As outlined in Figures 3.2-1 and 3.2-2, we deliver all covered benefits to all populations in the Scope of Work through our affiliates across 19 states. Through our affiliates’ experience matching benefit packages to specialized member eligibility groups, such as HCBS waiver populations, foster care children, individual dually eligible for Medicaid/Medicare, the Medicaid Expansion population, and others, we have established trusted systems and processes to consistently configure and deliver benefits as specified by the contract. Nationally, our affiliate health plans configured our systems to administer varying Medicaid and other state-sponsored program benefit packages for more than 600 eligibility groups. Given the customization of benefits for different eligibility groups in different states, over 8,000 plan configurations are managed by our systems and staff every day. We will combine our best practices and infrastructure for benefit configuration with our local approach to the Iowa market to assure a seamless experience for members accessing covered benefits.

Question 3.2.2, #1

1. Describe your proposed approach to ensure benefit packages will be delivered in accordance with a member’s eligibility group.

Benefit Configuration

To make sure that the Iowa benefit packages are delivered in accordance with member eligibility group, we will leverage internal technology and follow a robust process that will seamlessly coordinate multiple benefits based on members’ eligibility group. Our process follows these primary steps:

1. The Iowa Business Plan Analyst will determine the benefit requirements, using the State Contract, provider manuals, Exhibit D, Iowa Admin Code r.441-78, State plan and publications, and all CMS-approved waivers as a point of reference. These requirements will include coverage, restrictions, limitations, exclusions, and other State- and program-specific parameters. This information will be documented in a requirements document in standard format.
2. An internal national Implementation Benefit Committee will review and approve the requirements documentation prior to system configuration. This group will include health plan representatives, clinical, medical coding, and contract/methodology and other subject matter experts and include final sign off by officials from the Iowa Health Plan.
3. Based on approved requirements, a Configuration Analyst will create the design and map the unique coverage properties, limits, exclusions, and restrictions for each specific benefit product and membership eligibility group category to help assure the proper product differentiation
4. After the approved design is configured in a development environment of our core operations systems, several levels of peer review, quality testing, and user acceptance testing will occur to confirm that benefits will pay correctly and according to all requirements. The Health Plan will make a final review prior to completion. The resulting benefit grid will delineate benefits based on member classification/group, as determined by the 834 file provided by the State.

5. The Benefit Principal Architect will review the benefit grid design against the Amerigroup MMIS standards and approved requirements to confirm full compliance.
6. The Iowa Benefit Configuration Analyst will systematically and manually configure, or build, the approved design in the development environment of our core operations system. Once this is completed, a second benefit analyst conducts a peer review for each benefit category and member eligibility group.
7. Our internal national Provider Data Quality team will conduct a full audit of the build against the approved requirements and design.
8. Amerigroup health plan operations, configuration, and quality teams will conduct user acceptance testing to make sure that the benefits will pay correctly, according to the requirements. Upon completion, Amerigroup Iowa's Health Plan leadership will sign off on the configuration prior to the benefit build being migrated to the production environment.
9. The Iowa Benefit Analyst validates migration by reviewing the core operations production system and sends a notification of completion to the health plan and business owners.

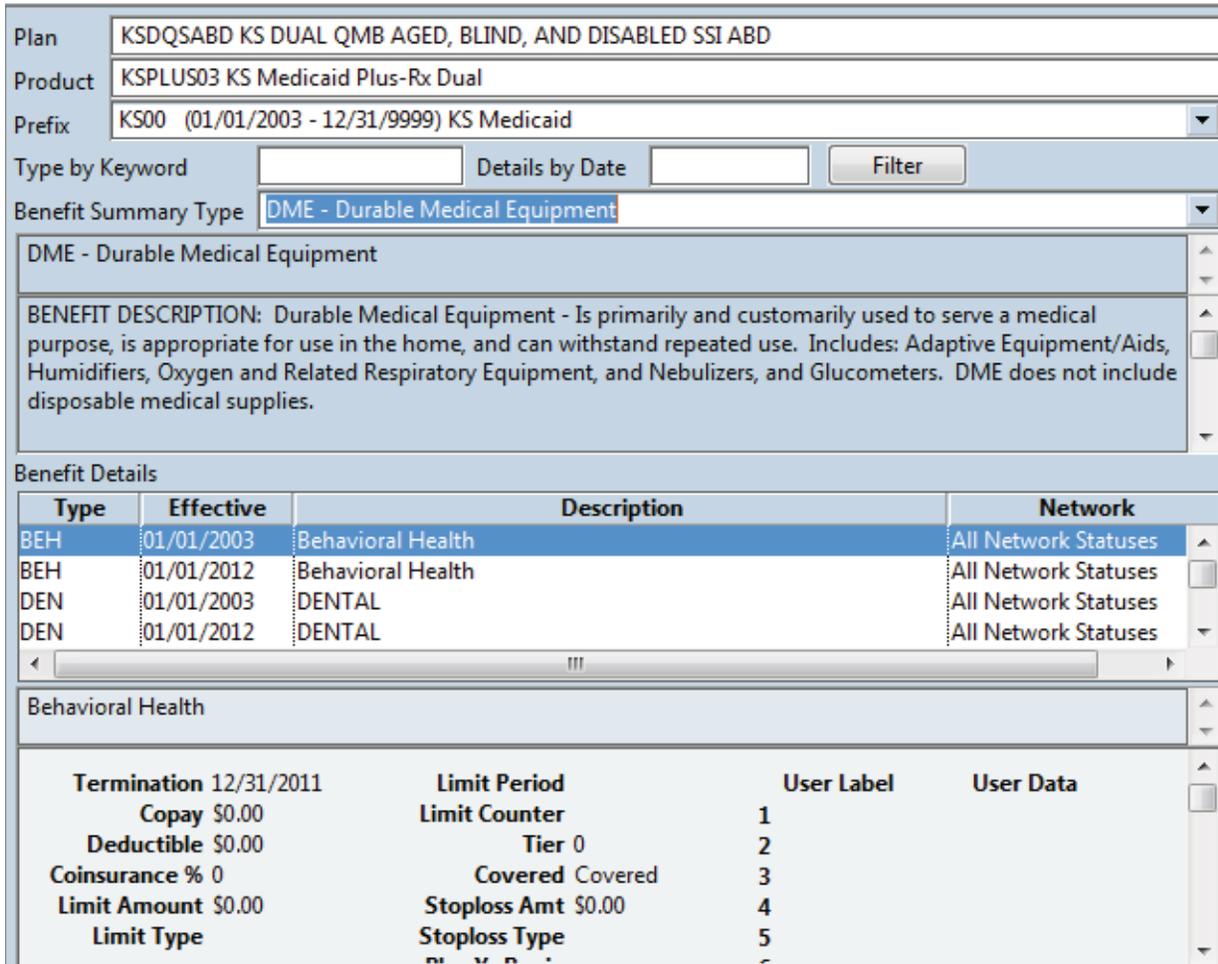

Figure 3.2-2. Amerigroup Systematically Implements the Attributes of Each Benefit Package

There will be a single member handbook and a single provider manual for Iowa, each delineating the different benefit packages available for each eligibility group, including waivers. Our health plan Utilization Management (UM) nurses and Member Services call center and Provider Helpline staff have constant, easy access to this information. We also configure and regularly update our member eligibility system to reflect the covered medical, behavioral health and LTSS services in the comprehensive benefit package for each member as of the effective date of coverage. Starting with a baseline benefit package, we will manage customizations for all eligibility groups, and our system will reflect the unique benefits, coverage properties, limits, exclusions, and restrictions applicable to each member.

Our technology will seamlessly coordinate multiple benefits based on members' eligibility group. The system denotes in the member profile what population the member is a part of, and the system configures to match the benefits for which the member is eligible as seen in Figure 3.2-3. For example, if a benefit is only allowed for members age 21 and younger, we would establish business rules that check the member's age on the date of services for the assigned member's eligibility group.

Figure 3.2-3. Relevant Amerigroup Staff Have Easy Access to Benefit Package Information for Each Member

Plan: KSDQSABD KS DUAL QMB AGED, BLIND, AND DISABLED SSI ABD
 Product: KSPLUS03 KS Medicaid Plus-Rx Dual

Deductible \$0.00	Covered Covered	3	
Coinsurance % 0	Stoploss Amt \$0.00	4	
Limit Amount \$0.00	Stoploss Type	5	

We configure and regularly update our member eligibility system to reflect the covered medical and behavioral health services and LTSS in the comprehensive benefit package for each member as of the effective date of coverage. The scope of our physical health and behavioral health services is designed to support robust service availability and accessibility for eligible members and includes activities related to HCBS, facility-based, and ambulatory care. Our UM staff work closely with other departments in care coordination, discharge planning, and Case Management to meet the physical and behavioral healthcare needs of our members. Our UM Department, in collaboration with other departments such as our national Disease Management Centralized Care Unit and Case Management, facilitates delivery of the most appropriate medically necessary medical and behavioral healthcare and services to eligible members in the most appropriate setting.

Question 3.2.2, #2

2. Describe your ability to provide covered benefits and services.

Benefit Packages

Amerigroup's extensive experience in providing benefits and services in 19 states positions us to make sure members have access to the quality care and services they need while considering the full picture of their health situation. We will provide comprehensive benefit coverage, specific to each eligibility group, for all relevant Iowa Initiative populations. We are prepared to administer all benefit packages in Iowa, which will be a program of similar magnitude to our affiliate's recent implementation in Kansas. We will use best practices from other states and localized Iowa strategies to assure access to covered benefits through a robust Provider Network as well as transportation, extended provider visit options, and telehealth to reduce barriers to access.

We will manage customizations for all eligibility groups, and our system will reflect the unique benefits, coverage properties, limits, exclusions, and restrictions applicable to each member.

The benefit system will include, but is not limited to the following variations:

- **Iowa Health and Wellness Plan.** Members enrolled in the Iowa Health and Wellness Plan who have not been identified as Medically Exempt will be eligible for the Alternative Benefit Plan benefits outlined in the State Plan. Members enrolled in the Iowa Health and Wellness Plan who have been identified as Medically Exempt will be eligible for services in the State Plan and will have the option to change coverage to the Alternative Benefit Plan known as the Iowa Wellness Plan.
- **Iowa Family Planning Network.** Members enrolled in the Iowa Family Planning Network will be eligible for services that are either primary or secondary to family planning services as described in the Iowa Family Planning Network 1115 waiver.
- **Presumptive eligibility for pregnant women.** Members eligible under the presumptive eligibility for pregnant women Medicaid coverage group will qualify for ambulatory prenatal care services during the presumptive period. This will include all Medicaid-covered services except inpatient hospital or institutional care and charges associated with delivery of the baby, including miscarriage or termination of a baby.
- **CHIP and hawk-i.** Members of the CHIP and hawk-i programs will be eligible for the CHIP and hawk-i benefit packages as outlined in Exhibit D.
- **Waiver populations.** Members enrolled in any of the seven waivers will be eligible for specific incremental benefits according to the waiver stipulations.

We will use best practices from other states and localized Iowa strategies to assure access to covered benefits through a robust provider network as well as transportation, extended provider visit options, and telehealth to reduce barriers to access.

IA_3.2.2_COB_42

Access to Covered Benefits

We will operate a comprehensive provider network that includes specialized medical, behavioral, and LTSS and other providers with experience serving all Iowa Initiative populations. Our local provider relations employees will assist in ongoing support and contracting providers as it may be necessary. Where there is insufficient local provider capacity, we will provide innovative solutions, including transportation, home visits, and telehealth, to resolve access issues.

In addition to our core provider contracting strategies, we will conduct an array of supplemental activities to assure the full range of covered services is readily available to members. For example, we will work to:

- Engage local child welfare stakeholders, advocates, and provider associations to identify potential providers for Network participation and collaborating on solutions to access to care and services
- Encourage PCPs to provide after-hours coverage, on a regular basis where possible, or minimally as non-recurring events where necessary to help fill care gaps. We encourage providers to have extended hours at least a few days a week to better accommodate the schedules of members assigned to their panel. We also work with specific providers on a targeted basis to have extended hours as a one-time event where we help the provider office schedule members to come in for services that will help fill care gaps, such as clinic days during school vacations for EPSDT, as detailed in Section 3.2.7
- Encourage strong providers to expand their office footprint into more rural areas by providing incentives to open offices in underserved communities and leverage telehealth capabilities
- Promote in-home clinical services and rotate specialty/mobile clinics by board-certified physicians and nurse practitioners to improve access in rural areas or for individuals who are homebound
- Leverage reporting from Member 360, which provides Case Managers with a member dashboard that displays HEDIS care alerts, prescriptions, lab results, and more, to conduct outreach to providers and members to promote access to preventive care, identify and address barriers to accessing care and services, and deploy education and incentives to close gaps in care
- Engage in member outreach and education to assist in scheduling appointments and obtaining preventive care services
- Assist with provision of transportation to appointments as a covered benefit

We will staff our local Iowa office with Community-Based Case Managers, Case Managers, member advocates in order to communicate effectively with our members and support optimal access and choice of providers. We go beyond minimum network access standards to seek our providers who bring high quality, comprehensive, and specialized service to our members, when and where they need it the most.

Changes in Covered Services (3.2.3)

We are fully prepared to update our benefit systems upon notification of changes in covered services from DHS within the prescribed 90 days. We have extensive experience processing benefit and rate changes across our affiliate health plans. **From March 2014 to March 2015, our organization processed 1,144 benefit change orders.** On average, we completed these changes within 34 days of receiving notice.

Following the proven process we have developed through our experience in other states, benefit changes in Iowa will be handled as follows:

- We will configure, regularly update, and test our member eligibility system to reflect the covered medical services, behavioral health services, and LTSS in the comprehensive benefit package for each member as of the effective date of coverage
- When we receive notification of changes to covered services from DHS, an Iowa health plan Operations lead will coordinate with various departments to implement and communicate the changes
- The Compliance Officer and Chief Operating Officer will work with all departments to put into place an implementation plan to make sure changes are implemented in a timely manner. This includes obtaining confirmation that changes have been made and compiling supporting documentation to prove that changes were made. The Compliance Officer and the Regulatory

Oversight Manager will share supporting documentation and the implementation plan with DHS as requested or required

- We will produce and distribute relevant information and documents necessary for health plan staff, providers, members, and families to recognize and understand changes (including member and provider materials, websites, provider contracts, staff training materials, etc.)
- We will disseminate related communication and documentation in accordance with the 90-day time frame via mail, electronic websites or bulletin boards, secure e-mail, fax, or any other communication method approved by DHS
- We will establish and utilize an internal SharePoint website to document, store, and circulate the Iowa-specific implementation plan and related documentation among our health plan staff

For example, in 2008, state legislative changes impacted covered services for our affiliate health plan in Georgia. Changes impacted multiple benefits, interest payments, eligibility requirements, provider reimbursement rates, claims processing, critical access hospitals, and hospital cost reporting. A designated Operations lead created and executed a cross-functional implementation plan to communicate and conduct all changes. Work plans included timelines and owners for work steps within the following categories:

- | | |
|---------------------------------------|-------------------------------------|
| • System changes | • Member communication and outreach |
| • P&P development or updates | • Staff training |
| • Testing and verification | • Reporting |
| • Provider communication and outreach | |

All changes were implemented within the timeframes designated, including readiness review with health plan staff and the State to demonstrate implementation of all changes.

Integrated Delivery of Care (3.2.4)

Question 3.2.4, #1

1. Describe proposed strategies to integrate the delivery of care across the healthcare delivery system.

In a policy brief on integrating physical and behavioral health care, The Kaiser Commission on Medicaid and the Uninsured described what they consider to be the most advanced and ambitious form of state transformation efforts:

“System-level integration of services and fiscal accountability underpins truly person-centered, holistic care and represents the most advanced model for the integration continuum.”

Amerigroup’s affiliates have a well-established history of this type of systems-level integration, administering both physical and behavioral health benefits in an integrated fashion that focuses on healthy behaviors. , as well as integrating disease and condition-specific expertise in addressing physical and behavioral health conditions with a focus on health behaviors. We have built the operational systems and infrastructure and developed programs and

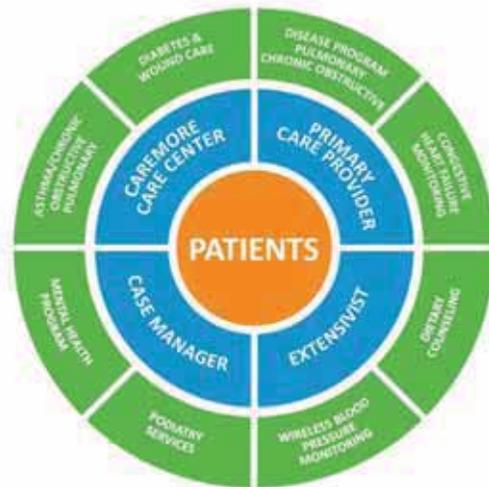

services that promote integration and a holistic approach in addressing member health service needs. Moreover, our approach to integration addresses psychosocial needs such as housing, education/employment, and meaningful participation in the community through linking and coordinating with community services and supports.

Amerigroup strongly believes in taking a fully integrated approach to members’ physical health, behavioral health, Long Term Services and Supports (LTSS), oral health, social needs, and waiver-related needs. We believe this integrated approach is crucial to improving the member’s quality of care and outcomes while proactively managing costs; emphasizing member choice, access, safety, independence, and responsibility. *We will bring our interdisciplinary team approach to Iowa to assure integrated care delivery in supporting the State’s health goals.* Our approach does not subcontract core components of our care coordination model; services are integrated internally and promoted with our provider network.

Our integrated care system incorporates a broad array of services and supports and is organized into a comprehensive service network to promote collaboration and coordination, identify and addresses health disparities, provide culturally competent care and services, and build on Iowa’s strengths.

In Iowa, we will use our proven interdisciplinary team infrastructure, processes, and technology tools to assure integration and coordination and thus promote high quality, cost-efficient, and well-coordinated care.

Figure 3.2-4. Member’s Interdisciplinary Team

IA_3.2.4_GR_1.1

- The member’s interdisciplinary team (see Figure 3.2-4) includes the member, family members, our medical and behavioral professionals, Community-Based Case Managers, health care specialists, staff from Integrated Health or Chronic Condition Health Homes, and home and community-based providers; this multifaceted team works together on a day-to-day basis and during joint rounds to design and execute a single, person-centered care plan based on members’ holistic needs and goals.
- Providers are critical partners in integrating care and a core component of the interdisciplinary team. This includes medical, behavioral, and LTSS providers, as well as the Iowa dental vendor and community partners providing social supports. We provide a feed of comprehensive, actionable information to empower providers to take a coordinated approach to providing high-quality, cost-effective care. We link integration to provider incentive programs and encourage providers to flow information back to the health plan and the State to improve data integration. We have already had discussions with the Iowa Hospital Association, Iowa Health Care Association, Iowa Center for Assisted Living, Iowa Primary Care Association, Iowa Behavioral Health Association, CMHCs, and the MHDS Regional service systems for Mental Health and Disability Services, among others. We plan to work with these partners and others to collaborate on evolving integrated care clinics and supporting integrated data sharing.
- Our interdisciplinary team uses a flexible and person-centered process to meet members where they are, assess needs, risk stratify, and work with members and providers to deliver integrated care and services, emphasizing member choice, access, safety, independence, and responsibility.
- Innovative technology tools are available to the interdisciplinary team, our provider partners, and other extended members of the ‘treatment team’ to support integration. This includes our multifaceted, bi-directional care coordination and member information platform that enables all members of the interdisciplinary team to view and contribute to the member’s record.

Telehealth Visits Expand Access to Services

Our interdisciplinary team approach is flexible, such that the team assigned to a given member will include different specialists or shift emphasis based on the member's evolving situation. We will use specific strategies to serve specialized populations' unique needs and address key transitions of care.

- Amerigroup appreciates the relationship the State has built with the University of Iowa and the relationship that all of the entities within the University have with Iowans who need and access a full range of services that increase their overall health and quality of life. We fully recognize that the University of Iowa Health Alliance is a crucial provider of these health care services to all Iowans. Therefore, to enrich our commitment to integrated care in Iowa and to assisting in the growth of our interdisciplinary teams, Amerigroup has engaged with the University of Iowa to establish a partnership that will bring the full array of the University's services and programs to our membership. In addition to acute and behavioral health care services linkages, we look to collaborate on an array of programs that range from training of support specialists to Applied Behavioral Analysis (ABA) and Autism services to building a financial incentive model to recognize better access to care and support services, decreased medical costs, and improved quality scores. In working with the University of Iowa, we will create integrated and innovative solutions that improve the health and quality of life for Iowans. We are working with the University of Iowa to incorporate the following programs into our integrated care coordination model:
 - Child Health Specialty Clinics
 - Center for Disabilities & Development (CDD)
 - University Center for Excellence on Developmental Disabilities (UCEDD)
 - Department of Psychology

Our Track Record for Integrated Care

Our health plan affiliates in 19 states provide integrated health care services to over 5.2 million members in state-sponsored programs. Our care management model focuses on person-centered planning that helps members optimize their wellness and take personal responsibility for their health care across a continuum of care and settings. It emphasizes coordinating health care services, supports, and resources that address all members' needs.

Our organization has been managing integrated care for state Medicaid agencies for 24 years. We are proud of the outcomes our integrated model has delivered to align with each state's goals. For example, our Tennessee health plan established a program to provide proactive care transition services for members with complex needs, including members diagnosed with SMI and co-occurring medical conditions.

The members in the program transitioned to us from a non-integrated behavioral health MCO, where coordination efforts were focused primarily on the members' SMI, rather than their total health care and social service needs. We assigned these new members were assigned to one of our behavioral health Case Managers who were certified in integrated Case Management and skilled in addressing members' behavioral and medical needs. Case Managers collaborated with behavioral health and medical providers, and members, to ensure that care was closely coordinated and supported members in receiving health screenings, behavioral health services, and follow-up services.

We conducted a retrospective study of members in this program who were diagnosed with SMI and diabetes mellitus to determine if our Case Management efforts led to improvements for both physical

IA_324_COB_32

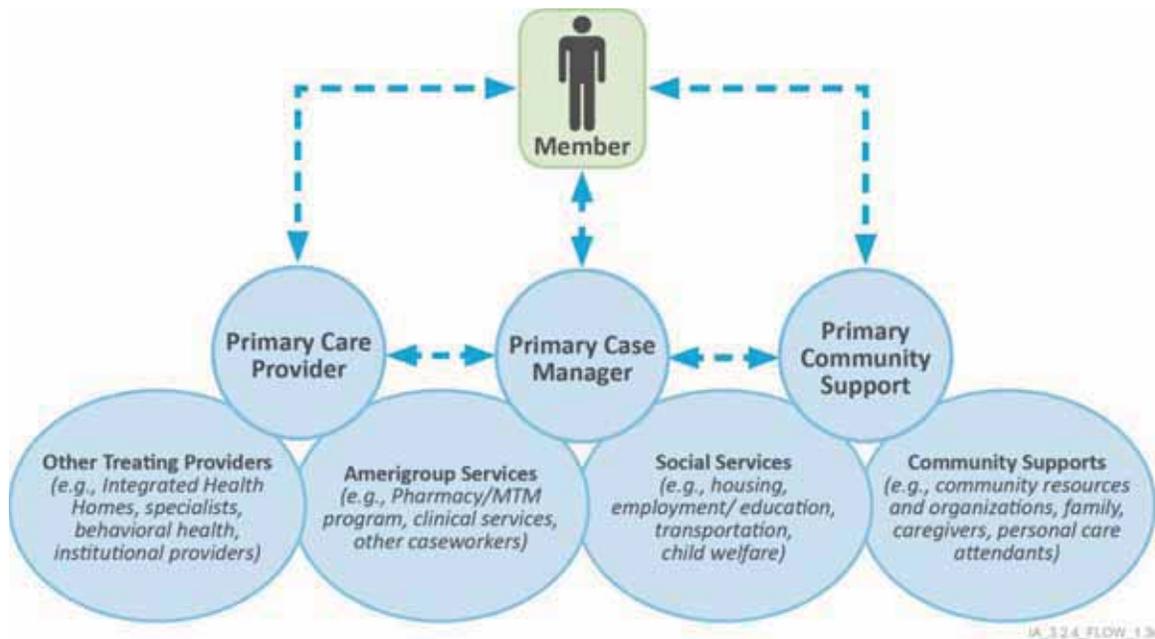

health and behavioral health quality metrics. We selected diabetes mellitus because it is one of the most common co-occurring conditions for members diagnosed with SMI and one that can benefit significantly from comprehensive care coordination. We were pleased to find that our holistic approach resulted in significant improvements between in both physical health and behavioral health utilization trends for members living with a diagnosis of SMI and co-occurring diabetes, which underscores the benefit of comprehensive integrated system.

- 116 percent increase in behavioral health visits
- 15 percent decrease in inpatient admissions
- 59 percent decrease in emergency room (ER) visits
- 17 percent increase in retinal eye exams.

Interdisciplinary Team Infrastructure

Our interdisciplinary team will work side-by-side, access the same data systems, and use a shared approach to the care/service planning process in order to integrate behavioral health, physical health, oral health, LTSS, and social services as shown in Figure 3.2-5. Just as our care planning process reflects the member as a “whole person,” we use a “whole team” approach to care coordination and Case Management. We establish Iowa-based teams of licensed professionals (behavioral health, physical health, and pharmacists) and support specialists (both family and peer) to engage members, their families, and network providers to address members’ holistic needs, establish person-centered goals, and deliver services that are responsive to cultural, racial, and ethnic differences.

Figure 3.2-5. Sample Interdisciplinary Team Infrastructure

The internal interdisciplinary team will come together to discuss members enrolled in Case Management during weekly integrated case rounds. This integrated Case Management activity is led and co-managed by both physical health and behavioral health medical directors. Rounds provide a venue for discussion of members with behavioral health concerns that may also be facing physical health crises, challenges to remaining in their preferred community, or awaiting approval to participate in a Waiver program.

Integrated team staff may also make joint member and/or facility visits to further coordinate with members, families or caregivers, and/or providers.

Interdisciplinary Team Components

- **Case Managers** offer members a single point of contact where all of their physical, psychosocial, and mental health needs can be addressed. Case Managers may have specialized expertise in medical, behavioral, social, LTSS, or HCBS waiver programs in order to provide specific insight and knowledge aligned with member preferences and support needs. Different specialists will stay involved with a given member so that no gaps in care and services occur.
 - Our Case Managers will be based in Iowa, with experience and strong ties in the communities in which they work
 - Our Integrated Case Management and Utilization Management (UM) Certification Programs increase clinical knowledge and expertise for physical health and behavioral health conditions, regardless of the Case Manager's specialty area
 - Case Managers will work together with PCPs, Behavioral Health providers, CMHCs, FQHCs, RHCs, health homes, peer support specialists, waiver staff, and family support specialists to facilitate close collaboration for members with high risk and specialized health care needs
- We will have a local Iowa Medical Director who is a psychiatrist, as well as other **behavioral health clinicians** who participate on the interdisciplinary team. Because we always manage behavioral health in-house and utilize the same information technology platform for physical and behavioral health, which is fully integrated and is a core component of our model of care.
- For LTSS, the following stakeholders are a part of the member's interdisciplinary team: the member, family members, their appointed legal representative, Community-Based Case Manager, PCP, physical and behavioral health providers as needed, others that the member wants on the team, and LTSS/waiver providers. If the member resides in a nursing facility, then nursing facility staff are a significant part of the team as well.
- In Iowa, our Case Managers will coordinate with the **Iowa Dental program** to coordinate necessary dental services. We will promote consistent teamwork, frequent training opportunities, and regular access to clinical consultation to enable information sharing and brainstorming among clinicians and use of social services to promote positive health outcomes for our members. We will also encourage primary care network providers to integrate oral health into their preventive care approach. If the State makes available claims data on dental, we will include dental data in our reporting, member record, and data mining to promote outreach from our health plan staff and network providers to close gaps in care and services.
- We will engage with **providers**, including PCPs, hospitals, and institutional providers, BH providers, CMHCs, FQHCs, RHCs, LTSS providers, and health homes to facilitate the holistic integration process. Incentives to integrate care will be offered to providers, including incentives both in primary care settings and in community mental health settings. We will share reporting with providers and encourage a continuous information feed to improve the quality of Medicaid data. We are willing to be the aggregation point/repository for data if providers are willing to provide requisite data. We are currently partnering with Wellmark to begin engaging with providers in Iowa and plan to work with Wellmark to launch similar ACO models to those Wellmark has successfully deployed in Iowa.
- Our model also incorporates community resources and **social systems of care**, like employment training, vocational rehab, housing resources, and other public programs to address the full spectrum of members' social needs.

In summary, integrated care builds on the knowledge of the “generalist” professionals, such as the PCP, with a focus on health behaviors, as well as the specialist’s detailed knowledge of a health condition. Thus, this approach stands in contrast to an “either-or” model of care. Addressing a member’s holistic needs is enhanced by a system of care in which professionals use core knowledge and skills that include motivational interviewing, member activation, and self-care.

Interdisciplinary Team Process

The interdisciplinary team uses the following approach to ensure an integrated, person-centered approach to care planning and service delivery.

- **Identifying** members who will most benefit from Case Management/Disease Management. Our predictive modeling and assessment tools blend medical, behavioral, oral, and social metrics
- **Stratifying** the intensity of Case Management /Disease Management services based on the member’s individual needs. Our risk stratification tools blend medical and behavioral conditions as well as social factors
- **Engaging** members and their caregivers and family in their health care decisions through ongoing outreach and communication
- **Establishing** an individualized care and service plans that incorporates personalized Disease/Case Management services and coordinates with all the providers necessary to deliver the physical health, behavioral health, long-term service and supports, oral health, and social needs necessary to meeting the member-specific care plan goals
- **Improving** care delivery for our members by ensuring coordination between providers, health plan Case Managers, and members. This includes assisting members and providers with scheduling appointments, arranging transportation, conducting appointment reminder calls, following up to verify service initiation, sharing updates on member progress, etc. We also conduct ongoing evaluation, including reviewing, tracking, monitoring, adjusting, and analyzing the care plan for outcomes, quality matrices, and performance improvement
- **Developing** members’ personal responsibility and self-management skills through education and incentives

Our care management model also fully integrates Disease and Case Management while fostering continuity for our members. Rather than enrolling members in separate Care Management programs based on their specific conditions (for example, separate plans for managing diabetes and depression for a member diagnosed with both), Amerigroup’s integrated program fully coordinates the member’s care and services. Once the member is enrolled in a program (Disease or Case Management), an assigned disease or Case Manager assumes sole responsibility for coordinating all necessary care and services across the member’s system of care.

IA_3.2.4_COB_4.2

However, when a member’s needs change (for example, complications increase his or her condition’s acuity level), the individual may be transferred from Disease Management to our Case Management program, where the Case Manager can provide more intensive assistance. Conversely, if during the course of Case Management a member’s condition improves and that level of support is no longer necessary, the Case Manager may transfer the individual to less intensive Disease Management. The team may also provide specialized Case Management for our members with complex needs, for example, pregnant women, members with elevated lead levels, members transitioning from hospitals, and members with Hepatitis C.

Our assessment process to identify candidates for these programs incorporates a multifaceted approach to holistic health. All members who enroll in active Disease Management, regardless of primary diagnosis, are screened for depression. The screening begins during the general assessment where the Personal Health Questionnaire, Version 2 (PHQ-2) is administered. If the PHQ-2 score is 3 or greater, the nurse then completes the PHQ-9 with the member. The nurse may then refer the member to a behavioral health specialist and/or his or her PCP to discuss the results of the screening, depending on the final score. Identifying depression is important, as it often exists in tandem with chronic conditions.

Interdisciplinary Team Technology Tools

Our interdisciplinary team will be equipped with innovative technology tools developed and refined over years of practical application to further support integration.

CareCompass, our internal care coordination system, provides information about member conditions and medications. Chronological progress notes promote comprehensive care coordination for member needs/issues, regardless of whether the driver is physical health, behavioral health, social issues, or LTSS.

CareCompass Mobile provides virtual office solutions to Community-Based Case Managers who are primarily working in the community and visiting members in their homes.

Member 360 provides Case Managers with a member dashboard that displays HEDIS care alerts; authorizations; prescriptions; lab results; and claims organized by type, such as inpatient, emergency room (ER), office visit, and behavioral health. ***This dashboard is also available to providers for members in their panels through our provider facing Member 360 program.*** The dashboard, demonstrated in Figure 3.2-6, also provides a timeline of clinical events for the member across a number of domains, including diagnosis, providers, transition periods, and medication history. Case Managers and providers can also access the treatment plan in Member 360. The integration of all domains of member data in one dashboard makes it easy for providers and health plan outreach staff to act on filling in gaps in care and making sure members are getting the services they need. With appropriate attestations and releases from providers and after consultation with the State, our system has the capacity to enable providers to see members' entire medical record. We are open to working with the State to serve as a repository for comprehensive information in order to improve the quality and integration of Medicaid data.

CONTAINS CONFIDENTIAL INFORMATION

Innovative Integration Strategies for Specialized Populations

Amerigroup has developed innovative Case Management strategies for our members who have specialized physical, behavioral, or social challenges. Our interdisciplinary team deploys these strategies to support specialized populations. Examples include:

1. **PC INSITE** integrates behavioral health capabilities into primary care clinics in order to carry out universal depression and substance use disorder screening for members, provide treatment, and monitor and follow-up with members
2. **CareMore Model** improves coordination of care for members with complex and/or chronic Disease Management needs

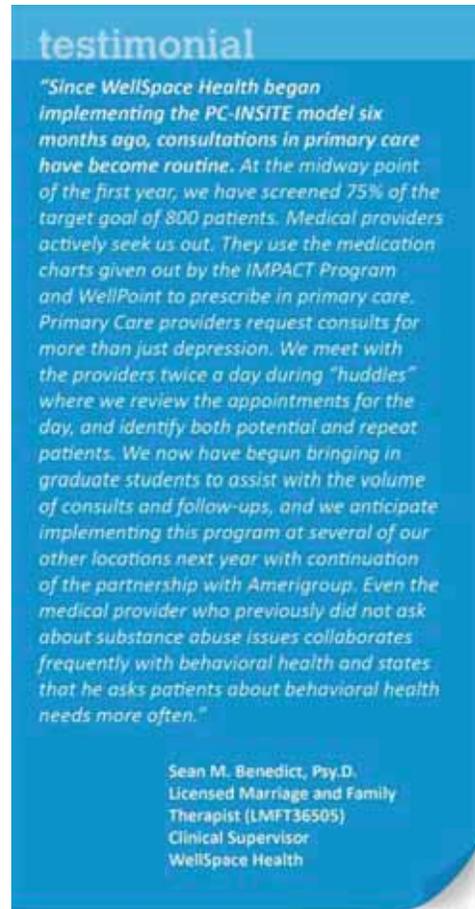

3. **Community Mental Health Center Primary Care** integrates behavioral health care services with medical primary care for SMI members through CMHC partnerships
4. **Autism Services and Supports** are delivered in an integrated manner through the Autism Specialist role
5. **Intellectual and Developmental Disability Services Program** coordinates health plan staff and relevant community partners to fully integrated IDD service plan execution
6. **Prescription Opiate Use Interventions** take a multipronged approach to reducing prescription opiate abuse
7. **Behavioral Telehealth** provides telehealth platform services to connect members to their providers for services needed when they are unable to travel, or in remote locations

PC-INSITE

The Primary Care Integrated Screening, Identification, Treatment, and Evaluation of depression and substance use disorders (PC-INSITE) is based on the evidence-based IMPACT model developed by psychiatrists at the University of Washington. The program was developed to facilitate and enhance primary care clinics’ capability to address behavioral health conditions. A behavioral health coach (licensed clinical social worker, psychologist, marriage and family therapist) is co-located in a primary care clinic to carry out universal screening on members using the BHQ-9 (depression) and a modified Audit C (alcohol and illegal drug use, as well as potential prescription drug abuse). Individuals screening positive are engaged in an assessment to rule out other behavioral health conditions, e.g., trauma, bipolar, unresolved grief, or other conditions that might include depressive symptoms. Based on the assessment, a coordinated intervention involving the member and the primary care physician is developed that may include health coaching based on EBP, solution-focused therapy, psychotropic prescription, referral to a behavioral health specialist, or watchful waiting. Systematic monitoring and follow-up include re-administering the BHQ-9 to evaluate changes and adjust the intervention plan based on that response (stepped-care). This integrated care program is currently being carried out in participating clinics in our affiliate health plans in Maryland, Tennessee, Texas, and California.

In Sacramento, our California affiliate has built on our collaboration with WellSpace, a large FQHC with clinics in the urban center as well as rural locations, to implement PC-INSITE. Funding supported their hiring a licensed behavioral health professional as a co-located behavioral health consultant in their medical clinics. The goal of the program is twofold: first, to address members’ needs in a holistic manner by screening for depression and SUD, with solution-focused interventions and follow-up, and second, to evolve the clinic practice model from a level three to a level six integrated care model as defined by the SAMHSA/HRSA paradigm for integrating physical and behavioral health.

This program builds on an EBP model, IMPACT, as well as the SAMHSA best practices for integrating physical and behavioral health in facilitating practice transformation by recognizing this is a “cultural

shift” in practice for medical providers as well as behavioral health professionals. Our organization’s long history in addressing physical and behavioral health through integration is thus being carried out through PC-INSITE, including a clinical model and financial support for clinics and community providers. The result: improved access for members, better care, and improved health outcomes – over 60 percent of members in this program have follow-up in which a PHQ-9 is completed. Of these members, over 60 percent have a decrease in PHQ-9 scores, which reflects improvement, and clinic staff report increased satisfaction because of the behavioral health expertise and support in responding to their patients' mental health conditions.

CareMore Model

One of the examples of Amerigroup’s innovation in delivering integrated care is our CareMore model. If awarded, Amerigroup will work with our affiliate, CareMore to open at least one care center, starting with a centrally located center in Des Moines to serve the members of the Iowa Initiative with complex or chronic conditions. CareMore uses a breakthrough model of care delivery that combines wellness, medical supervision, and a revolutionary approach to member engagement and participation.

CareMore’s PCPs, acting as primary care team leaders, and their Extensivists guide members through every step of an integrated health care journey, regardless of the setting – facility-based, within the home, or outpatient—thereby managing acute and chronic events from beginning to end to ensure continuity of care. CareMore utilizes the expertise of physicians, nurse practitioners, behavioral health and other specialty clinicians, and social support experts adept at managing the experience of our members in body, mind and spirit.

The CareMore experience includes physical locations that are a central part of the communities served. The locations are equipped to provide highly responsive care and provide an opportunity for members to connect with members of their health care team and participate in individualized support, preventive care, Disease Management and health education. CareMore currently maintains care centers for members of their Medicare Advantage Plans in California, Arizona, Nevada, Ohio, and Virginia; three care centers specifically designed to serve the needs of Medicaid members in Tennessee; and, because of the populations served by CareMore, they can demonstrate over ten years’ experience serving members who are dually eligible.

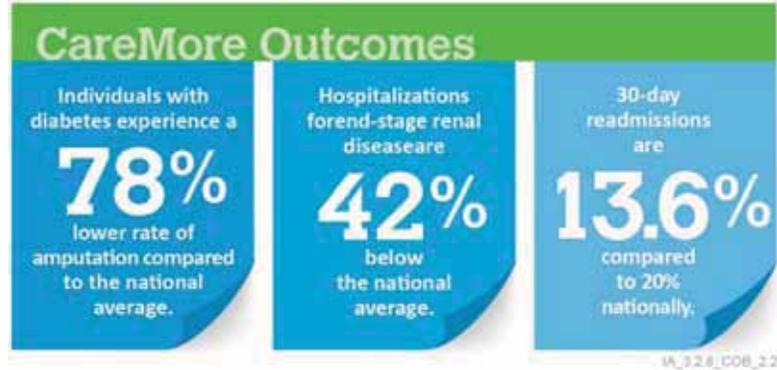

Amerigroup will assess the care and access needs of our Iowa members, as well as opportunities to engage with the existing provider community in order to introduce the CareMore delivery system model in Iowa. Specific services may include, for example:

- Primary Care Services
- Care coordination for high-risk members with chronic conditions
- On-site, holistic Behavioral Health support
- Asthma/Chronic Obstructive Pulmonary Disease (COPD) Program
- Congestive Heart Failure (CHF) Program
- Diabetes Care Program
- Fall Prevention Program
- Wound Care Program

Successful Outcomes

Founded by a group of physicians over 20 years ago, CareMore has received national recognition for its outcomes, particularly related to seniors, persons with disabilities, and individuals with chronic conditions. Members treated through the CareMore model of care incur 15 to 20 percent less (risk adjusted) total health care spending per year than members treated by regional peers, while still receiving quality care:

CareMore's array of member interventions and programs address the full continuum of a member's health care and behavioral status, and will serve to provide additional access and deep engagement where it is most needed. This includes culturally competent palliative program focused on member comfort and relief from the symptoms, pain, and stresses of a serious illness, with a goal of improving quality of life for members and their families.

Community Mental Health Center Primary Care

We are committed to integrating behavioral health components with primary care. In addition, we work to integrate primary care into Community Mental Health Centers (CMHCs). Because many of our SMI members receive services from large CMHCs and feel comfortable with these providers, CMHCs are a logical partner for integrating necessary primary medical care with behavioral health services. Our Tennessee affiliate launched a significant CMHC primary care partnership as a behavioral health medical home with Mental Health Cooperative in September 2013. The model's holistic orientation recognizes the importance of integrating primary and behavioral health services while coordinating linkages to community LTSS, including community housing options. Our approach emphasizes member-centered services and engages members in preventive health services while monitoring their response to interventions. We plan to launch similar models in collaboration with Iowa CMHCs like Eyerly Ball CMHC (who have signed an LOI with us), which will be adapted to the specific Iowa landscape and SMI population needs.

Autism Services and Supports

The behavioral health team in Iowa will include an Autism Specialist who will lend expertise to the team and will collaborate with Iowa's Regional Assistance Program, the University of Iowa, Center for Child Health Improvement and Innovation, the UCEDD, schools, providers, and community organizations to ensure that the behavioral health team facilitates service authorizations, required assessments are completed, and the members are getting the services of their preference to meet individual needs (including physical health services as well as services and supports such as education and employment). Further, the Autism Specialist will continue to provide expertise to the care coordination staff for members with Autism who may be participating in the health plan in a variety of cohorts.

Intellectual and Developmental Disability Services Program

In Iowa, we plan to partner with the Iowa Division of Mental Health and its Regional Coordinators of Disability Services, Iowa Medicaid Enterprise, Bureau on Long Term Care, and community

partners to facilitate service integration and transitions at the State, regional, and local level. Case Managers will also facilitate access to acute care benefits provided by Amerigroup.

In Kansas, where our affiliate health plan has full risk for all State plan and IDD waiver services, the IDD team and LTSS team work closely and collaboratively with the Autism Specialist and the BH team to support the breadth and depth of the member's and family's needs, including co-occurring behavioral health conditions or episodic challenging behaviors. In other states where our affiliate health plans have responsibility for limited services for members with ID/DD, such as New Jersey, an integrated team coordinates care and services for members with IDD. In all cases, the health team collaborates with any applicable internal resource to provide a seamless experience for the member and their family or caregiver. We plan to deploy similar approaches to best serve members in Iowa, customized to the specific community organizations with whom we partner.

Prescription Opiate Use Interventions

In response to what has become a national problem with prescription opiate misuse, our organization has instituted a multifaceted opiate intervention program in several of our state partners' plans. Streamlined relationships and communication with pharmacies, physicians, and other specialized resources (pain

IA_324_COB_72

medicine providers) allow more real-time recognition of problems beyond the typical purview of the primary care providers. Our pharmacy lock-in program restricts an over-utilizing member to a single pharmacy to obtain his or her medications, protecting against duplicate prescriptions from multiple pharmacies or providers. In some instances, and with prior State approval, we may restrict providers who can write prescriptions for opiates. This allows us to work closely with the provider and member to develop an integrated care plan. Implementation of these programs has decreased hospital admissions, inpatient days, ER visits, and opiate prescriptions.

Behavioral Telehealth

We will deploy **telehealth platforms** to further increase access and reduce barriers to integrated care. We will work with the substantial telehealth services currently in place, such as those provided by the University of Iowa, and expand them to serve the needs of our members. Specifically, we intend to provide LiveHealth Online, our telehealth platform for urgent needs, and partner with Breakthrough, a telehealth platform for behavioral health, as additional avenues to deliver one-on-one consultations with board-certified clinicians either through personal computers or at kiosks installed at strategic community locations. Breakthrough's overall member satisfaction is 87 percent, while 50 percent of members report they would not have had access to a Behavioral Health provider without Breakthrough's technology. Amerigroup will continuously work to identify appropriate locations for both of these platforms, so this technology will be easily accessible to our members in a private setting. Further, since our Community-Based Case Managers currently uses iPad technology in the field today to support care coordination, they will also be able to facilitate telehealth sessions throughout Iowa when necessary for members who do not have access to a computer or smartphone. We believe this multipronged telehealth strategy will help us eliminate gaps in care for members in both rural and urban areas by disaggregating healthcare from its traditional locale, empowering homebound or otherwise inconvenienced members to access required care and consultation.

Examples of Integrated Care Delivery for Specialized Populations

We’ve provided a few examples of the work of our interdisciplinary teams in our affiliate health plans to demonstrate the improved outcomes that will support redesign goals of the Iowa Initiative in Table 3.2-1.

Table 3.2-1. Integrated Care Delivery for Specialized Populations

Situation	We met with the member and daughter/POA, and identified that member was receiving attendant care under a waiver. The member’s daughter was her primary caregiver, but she did not live with the member and came over to stay with her when there was no attendant present. The strain of being committed to provide care for so much time was pushing her to consider nursing home placement.
Team intervention	We completed an assessment with both the member and caregiver, discussing alternative options and resources. We completed the Task/Hour guide, which recommended 56 hours per week of attendant care, versus the previously authorized 49 hours per week.
Outcome	The member’s daughter said that she was so relieved to have the additional assistance/care for her mother that she felt she could continue caring for her mother at home after all. She stated that she appreciated knowing that she has some support now that her mother is under LTSS and has a Case Manager.
Situation	This member, afflicted with multiple co-morbidities, was living at home with her extended family. She has a Personal Care Attendant through a consumer-directed waiver. Through close work with the member, her Case Manager discovered several unmet needs: the member’s family had been paying for incontinence supplies out of pocket, there were concerns about her falling while ambulating to the bathroom at night, and she had difficulty getting up and down from furniture in the living room.
Team intervention	We obtained incontinence supplies, a bedside commode, and a lift chair for the member through a DME company.
Outcome	The member’s family members are no longer paying for DME supplies. They don’t worry as much about her getting up at night and trying to walk to the bathroom. She is able to spend more time with the whole family. She continues to have monthly skilled nurse visits.
Situation	This member resided at a SNF under custodial care with a very involved family. He had end stage renal failure with mild dementia. The member’s son/POA conferenced with the LTSS Service Coordinator prior to the initial face-to-face assessment. During the conversation, the member’s son voiced much concern and frustration; the family and member had agreed to hospice/palliative care months ago, and the following week, the member was restarted on all medications and not involved in hospice.
Team intervention	The Service Coordinator completed the initial assessment and presented the family with all options that the Service Coordinator was able to take on their behalf: <ol style="list-style-type: none"> 1) Contact the MD to, again, discuss their wishes and request an order for comfort care. 2) Explore options at an alternative facility that would allow hospice care 3) Provide POA with the number for the local ombudsman. After consultation with the family, alternative placement in hospice care was decided upon.
Outcome	Within 48 hours of the initial assessment and meeting with the family, our Service Coordinator secured a long-term care bed at another nearby facility that had contracts with two local hospice agencies. Hospice was contacted and informed of the planned transfer and intent to begin hospice care once the member was admitted into the new facility. The family was informed that once hospice care was initiated, the member would not be eligible for MMP. The POA stated: “I understand, but we don’t want to lose you. You have been instrumental in making this happen for us.” The Service Coordinator thanked the son and agreed to stay involved through the transfer and until hospice was initiated. POA and member were very grateful for follow through.

Situation	This Georgia member is a 35-year-old woman with depression, HIV/AIDS, and hypertension. She was identified for care coordination through our predictive modeling process, and an initial health-risk assessment showed a PHQ-9 score of 17. She had stopped seeing her psychiatrist and counselors due to severe distrust and largely stayed in her room.
Team intervention	This member's Case Manager crafted a care plan that included education on the importance of hypertension medication and referral and continued support in locating and utilizing psychiatric and crisis services.
Outcome	The member has begun seeing counselors, is now taking her blood pressure medication as prescribed, and has agreed to see a psychiatrist that her Case Manager had recommended. Her follow-up PHQ-9 score dropped to 12.

Situation	This member was identified by our daily census report when he was admitted to psychiatric residential treatment and enrolled in our Complex Case Management Program. He was diagnosed with Autism Spectrum Disorder and psychosis, was having paranoid thoughts about his family members and peers, and was non-adherent to his medications.
Team intervention	His Case Manager assisted his discharge planner in identifying and coordinating outpatient care. After discharge, the Case Manager arranged for in-home intensive family intervention services, counseling, and medication management services.
Outcome	With the help of his supports, the member returned to school, participated in follow-up services, is adhering to his medications, and is no longer experiencing symptoms of psychosis. He has shown significant improvement in school and has not had any readmissions.

Situation	This member was diagnosed with diabetes and referred to Case Management/Disease Management because his poorly controlled blood sugar resulted in frequent ER visits.
Team intervention	The member's Care Manager developed a personally-tailored care plan that included referral to a smoking cessation program, diabetes education, coordination of dental care, referral for endocrinology services, and an exercise plan.
Outcome	The member has quit smoking, is working to improve his nutrition and monitor his sugar intake, and has reduced his BMI.

Situation	This member is a morbidly obese (300 lb.) adult male with schizophrenia, uncontrolled Type II Diabetes (HbA1C greater than 12), and hyperlipidemia, who is non-compliant with lifestyle modifications, medication therapy, diabetes testing, and follow-up appointments.
Team intervention	The member's mother contacted Amerigroup for help and was connected to the Case Manager. The Case Manager reviewed the member's claims history in Member 360 and noted that there were no claims for behavioral health, primary care outpatient visits, or prescription refills for the last three months. She brought the member's case to integrated complex case rounds, and the team recommended level III-Complex Case Management. She engaged the member to determine the source of his issues, and it was found that his medication made him drowsy, and his mother's car was too small for him to sit comfortably, leading to him not attending physician appointments. The Case Manager educated him on alternative medications, the importance of diabetes care, and arranged for alternative transportation. This led to the member attending a PCP appointment, beginning to take insulin and antihypertensive medication, seeing a psychiatrist, and switching psychotropic medications. The Case Manager then coordinated between the member, his mother, PCP, and psychiatrist to develop a care plan providing integrated Case Management services, education for the member, referrals to a nutritionist, endocrinologist, and counseling, as well as continued transportation arrangements.
Outcome	After three months in Level III-Complex Case Management, the member is adherent to his medication, attending appointments with his PCP, psychiatrist, and health counselor, and keeping up with diabetes testing. He is exercising each week and making changes to his diet. The member now has normal blood pressure, is not experiencing disorganized thoughts/hearing voices, lost 18 pounds, and lowered his HbA1c to six.

Integration of physical, behavioral, oral, social health and long-term care services are core to our organization. We recognize that integration is critical to meeting State goals. Throughout experiences in other states, our organization has developed best practices and evolved our infrastructure, process, tools, and approach to specialized populations. We look forward to partnering with Iowa to deploy our best practices to improve integration for Medicaid and other state-sponsored program members and partner with providers and community organizations to innovate further ways to optimize member outcomes and promote cost-effective use of State resources.

Emergency Services (3.2.5)

Question 3.2.5, #1

1. Describe your strategies to reduce inappropriate use of the emergency room and to address members who frequently utilize emergency services.

Through 24 years of experience in our 19 affiliate health plans, Amerigroup has developed a proven set of strategies that reduce the inappropriate use of emergency room (ER) services and assist members in finding the appropriate site of care for their situation. From 2012 to 2013, our affiliate health plans experienced an overall reduction of 19.6 percent in ER visits within our ER diversion program. We will deploy and adapt these strategies for Iowa members and according to the local provider landscape to help assure members access the right care, at the right time, in the right place.

IA_3.2.5_COB_12

We continually update our claims adjudication system, our Utilization Management system, our data analytic system, our member education system, and our care coordination system to identify specific instances of emergency services as well as track and trend inappropriate ER usage. Our systems issue alerts to our interdisciplinary team so that team members can educate, outreach, and assist members in understanding and accessing alternative sites of care as appropriate.

Within our suite of predictive models, our TRIAGE tool synthesizes member data (such as diagnoses, claims history, and authorizations) and assigns risk scores to indicate likelihood of ER visits for ambulatory care sensitive conditions. Called the TRIAGE Score, this risk measure enables us to stratify members into meaningful intervention groups. Interventions targeted to these groups are most likely to divert care for Preventable Emergency Department Diagnoses to settings better aligned and more appropriate to meet members’ needs. Refer to Section 9.1.4 for more information on the TRIAGE tool.

Amerigroup understands the goals of the Iowa Medicaid program stated in the RFP and how integral appropriate use of emergency services is to obtaining those goals. We will deploy the following programs in Iowa to reduce inappropriate utilization of ER services and to aid members who frequently use emergency services in finding the best site of care for their medical, behavioral, and social needs. We also, through our strategic relationships with hospitals in Iowa, will coordinate the sharing of ER data to further inform our strategies to reduce inappropriate utilization.

Programs to reduce inappropriate use of the ER

- Disease Management
- Emergency Room Alternatives
- Provider Incentives
- Management of Eligibility Changes

Programs to address members who frequently utilize emergency services

- Integrated Emergency Room Case Management
- Member Outreach, Education, and Marketing Materials
- Reconnecting Members to Health Homes
- Pharmacy Interventions

An example of our success in this area is a program developed in our Georgia affiliate health plan. They conducted targeted network expansion to add additional providers, notified key hospitals of frequent ER utilizers through the ER Case Management program, shared a weekly ER Utilization Management report, and incentivized providers to have after-hours appointments outside of normal business hours. For

As a result of our ER prevention program in our Georgia affiliate plan, the top 20 ER Provider Strategic Solutions groups experienced an 11.5% decrease in OP ER visits, a 3.8% increase in PCP visits, and an 800% increase in UCC visits.

IA_325_COB_23

Georgia members, the health plan provided education on the correct places to seek care for non-emergent services, enrolled members in ER, complex, and stabilization Case Management programs, set up Healthy Rewards member incentive program, held clinic days, placed regular health promotion calls, and sent health promotion mailings to members.

We tracked the outcomes of this effort from 2012 to 2014. As a result of the health plan’s efforts, the top 20 ER HDCS groups experienced an 11.5 percent decrease in ER visits, a 3.8 percent increase in PCP visits, and an 800 percent increase in urgent care center visits. A similarly multifaceted program in our Louisiana health plan saw a significant decrease in ER utilization in its highest utilizing members; we recorded a decrease from **47 percent of total utilization to 42 percent of total utilization in the year following implementation of these efforts.**

Strategies to Reduce Inappropriate Use of the ER
Disease Management

Our comprehensive Disease Management programs help members learn how to self-manage their illness—encouraging them to become active participants in primary and preventive care. This improves outcomes for the member and reduces the need for ER visits.

Disease Management promotes treatment in accordance with evidence-based clinical practice guidelines and connects members with the full array of biopsychosocial supports and services they need to achieve their goals. The result is reduced symptoms that cause ER visits. Based on national best practices, Amerigroup’s comprehensive Disease Management programs support members in accessing the most appropriate services to meet their needs. For example, from 2012 to 2013, our affiliate health plans experienced an overall reduction of 19.6 percent in ER visits and 25.3 percent for inpatient admissions for members enrolled in all Disease management programs, as shown in Table 3.2-2 below .

Table 3.2-2. Amerigroup and Our Affiliate Health Plans’ Disease Management Programs Improved Member Outcomes for ER Visits and Inpatient Admissions from 2012 to 2013

Amerigroup and Our Affiliate Health Plans’ Disease Management Results for Emergency Room Visits and Inpatient Admissions; 2012 to 2013 Year-Over-Year Comparison		
Disease Management Program	ER Visits Per 1,000 Members	Inpatient Admissions Per 1,000 Members
Asthma	- 27.2%	- 39.5%
Congestive Heart Failure	- 12.5%	- 10.6%
Diabetes	- 14.7%	- 8.2%
Major Depressive Disorder	16.5%	- 9.9%
All Disease Management Programs	- 19.6%	- 25.3%

Example: Asthma Support

As a component of our Disease Management program, we provide customized support for members with asthma to facilitate access to preventive care services, reducing ER use. Amerigroup outreach employees contact the parent/guardian of all children who have had ER visits with asthma issues. Our employees work with the adults to gauge the parent/guardian’s comfort level in dealing with asthma, make sure the child has appropriate medication, provide information on the **24 hour Nurse Helpline**, and provide a referral to an Amerigroup Case Manager if necessary. We also provide members with “**My Asthma Action Plan**,” a guide to understanding the severity of different asthma symptoms and when to contact the doctor or ER. Additionally, we provide **AMERITIPS** handouts to educate members on asthma triggers and how to avoid them.

Emergency Room Alternatives

Across the organization, Amerigroup offers our members access to PCPs with extended hours, urgent care centers, and physician telephone consults—all of which broaden member access to ER alternatives.

- **Nurse HelpLine:** Members can access the Nurse HelpLine for nonemergency medical questions and concerns. Nurses, guided by sophisticated decision tree software, assess each caller’s needs and recommend next steps, based on the nature and severity of the symptoms. Nurses route behavioral health emergencies to a Behavioral Health Clinician and alert Case Managers who coordinate follow-up care.
- **Behavioral Health Services Hotline:** Amerigroup will also maintain a Behavioral Health Services Hotline that members can access through the single, toll-free Member call center number. Representatives are available 24 hours a day, seven days a week (24/7), and 365 days a year to address member inquiries about behavioral health services, and qualified behavioral health professionals are available for crisis interventions.
- **Physician Consultations:** As allowed by State laws, Amerigroup has the capability to connect Nurse HelpLine callers presenting with certain non-emergent conditions, such as upper respiratory or urinary tract infections, to a board-certified, Iowa-licensed doctor who conducts a brief assessment, provides a diagnosis, and recommends treatment.
- **Urgent Care Services Network:** Our contracted network will include comprehensive and diverse urgent care service options, including PCPs who have extended hours, urgent care centers, and retail clinics. These services broaden member access to care and provide ER alternatives, especially after regular business hours. We will build a robust local urgent care network in Iowa by working with hospitals, systems of care, retail clinics, and other urgent care providers. Our Nurse HelpLine will educate and connect members with these resources if appropriate to meet their needs.
- **Telehealth:** We will deploy innovative telehealth platforms for both physical and behavioral health services to further increase access and offer an alternative to ER use. These services will deliver one-on-one consultations with board-certified clinicians either through personal computers or at

kiosks installed at strategic community locations. We will work with the substantial telehealth services currently in place in Iowa, such as those provided by the University of Iowa, and expand them to serve the needs of our members. Telehealth completes the continuum of options for our members, enhancing their access to ER-alternative services. We will deploy telehealth to Iowa in a way that complies with all State regulations regarding virtual healthcare services.

Nurses or other providers who are part of the alternative service offerings above will direct members to nearby ER resources when those services provide the most appropriate treatment for emergent issues.

Provider Incentives

Amerigroup will implement a shared savings program that incentivizes PCPs to efficiently and effectively deliver care to their assigned members. With our support, the provider group manages the medical cost of the assigned members efficiently by reducing unnecessary expenses like non-emergent ER use, focusing on care coordination for the members most at risk for high utilization, effectively coordinating needed specialty care, and other techniques. Providers who effectively manage the quality and efficiency of care for assigned members will receive rewards in the form of a shared savings payment.

Management of Eligibility Changes

The experience of our affiliate health plans confirms that Medicaid beneficiaries experience frequent enrollments and disenrollments. As a result, any gains an intervention has on overall ER use may be temporary as new members who have not received education on ER use and assistance in connecting with a PCP continuously join the plan. Members may also move to a new, unfamiliar community and return to the ER because of PCP disconnect. As a result, we continually and creatively promote long-term understanding of appropriate ER use for this population through investment in education and expansion of urgent care and retail clinic networks.

Strategies to Address Members Who Frequently Utilize Emergency Services

Integrated ER Case Management

For members at risk of an ER visit after a hospitalization, Amerigroup has adopted a transitional model of care, delivering intensive short-term support to successfully shift individuals from inpatient to outpatient care. Case Managers work with the individual, using member-defined strengths, needs, and preferences to prevent escalation to a readmission through the ER.

Our analytic systems and Case Managers also identify members who are most at risk of hospital admission, extended length of stay, and frequent ER visits; have actionable gaps in care; or could benefit from additional supports.

The Case Manager contacts the member by phone or face-to-face to identify the issues causing frequent ER use, and the Case Manager works collaboratively with the individual and his or her PCP/interdisciplinary team to develop a plan to connect the member with ongoing care that reduces unnecessary ER usage.

Members with more than three non-emergent ER visits in a year and a TRIAGE score indicating a likelihood of continued emergency use for low-level visits receive focused Case Management interventions that identify reasons for these visits and methods to reduce future use. Case Managers work with the member and family to help ensure members can access timely appointments and necessary specialty care for hard-to-treat

Between November 2012 and December 2014, our short-term Case Management strategies have prevented more than 600 expected readmissions, resulting in \$2.9 million in estimated savings across Amerigroup affiliate health plans.

IA_3.2.5_008_4.2

conditions and educate members about Amerigroup's after-hours resources, including our 24/7 Nurse HelpLine, and contracted urgent care centers. When a member requires additional medical management for conditions like chronic pain or substance abuse that are contributing to ER use, the Case Manager works with the interdisciplinary team, including medical and behavioral health directors, to identify specialized providers and additional resources needed to address the member's needs in the most appropriate ambulatory care setting.

Members flagged due to high ER utilization may also receive an interactive voice response approach that features an automated call with such question prompts as "do you have a PCP with whom you work well?" Respondents receive additional follow-up via live outreach from a specialized unit that pursues interpersonal interaction to assist them. This team also promotes *LiveHealth Online* telehealth visits during the conversation. In addition, at the member's request during a call or when a member cannot be reached, we mail a brochure about alternatives to ER use.

Example: Care Coordination Partnership with EMS

Our Indiana affiliate developed a care coordination program, "Connecting Members with Primary Care," to partner with Indianapolis Emergency Medical Services (EMS) to launch an innovative pilot program to serve our members in the surrounding area with repeated ER visits. Members identified by providers or via data mining who have repeated ER visits are referred to the program. We then deploy a team consisting of a paramedic and a social worker to outreach to the member, in their living environment, to assess the member's medical and social needs.

The Indianapolis EMS team investigates the member's health status, connection with PCP, understanding of plan of care, compliance with plan of care, condition of living space, and availability of food, shelter, clothing, heat, or any other social needs. The team helps the member make follow-up appointments; provides education regarding care, benefits, and the availability of other resources; and connects the member with needed community and other social supports. The Indianapolis EMS team works closely with the member's care team and PCP to best meet the member's needs and avoid duplication of services.

These services are designed to prevent avoidable ER visits through coordinated, individualized, and member-centered planning through promotion of the members' connections to their PCP and Case Manager. *We plan to explore similar programs in Iowa.*

Using short-term Case Management strategies, our stabilization model has demonstrated a reduction of readmissions. The model exploits opportunities for coordination of discharge care and augments our existing Utilization Management and Case Management activities. Between November 2012 and December 2014, the program prevented more than 600 expected readmissions, resulting in \$2.9 million in estimated savings across Amerigroup affiliate health plans.

Member Outreach, Education, and Marketing Materials

Amerigroup uses a comprehensive, thoroughly vetted strategy for influencing appropriate member utilization of emergency services. Amerigroup promotes appropriate use of the ER by providing detailed information in our member handbook regarding when and how to seek emergency care. Members who have visited the ER receive a letter alerting them that we take these visits seriously. The letter includes the member's PCP's name, address, and phone number and asks that he or she makes an appointment to follow up and determine what care is needed and understand the appropriate settings for such care. It also provides members with information on urgent care options available in their area and reminds them that they have access to our 24/7 Nurse HelpLine and transportation to their doctor's office.

When members are identified as high ER utilizers, our outreach team will initiate contact with them to discuss their care needs and assist in making follow-up appointments as necessary. When members cannot be reached by phone, we follow up with a **Trying to Reach You** letter asking them to call us regarding their ER use.

Throughout our long history in state-sponsored health programs, our affiliate health plans have actively pursued various strategies to reduce reliance on ERs. Through our member education and outreach efforts, these plans have achieved an overall 39.5 percent decrease in ER visits among targeted members who were designated as frequent users.

Reconnecting Members to Health Homes

Another method of reducing inappropriate emergency service utilization is to reconnect the member with their health home. We do this through:

- Providing our PCPs and other Network Providers with information on their members and their use of ER services
- Deploying Nurses in specific high-volume practices to collaborate with staff, redirecting and aligning members to appropriate levels of care
- Conducting direct outreach to PCPs after Amerigroup is notified or detects an ER visit for one of their members
- Enabling convenient, real-time, on-line appointment scheduling for health home sites

Pharmacy Interventions

We plan to implement two pharmacy-related programs, a lock-in program and a Medication Therapy Management (MTM) program, that we expect to impact ER utilization. The **lock-in program** will restrict members who have inappropriately utilized pharmaceutical treatment to a single pharmacy to obtain their medications, preventing duplicative prescriptions. Our **MTM program** will identify members with inappropriate or otherwise unsafe drug therapies and have a clinical pharmacist perform a comprehensive medication assessment and coordinate between the individual, caregivers, and prescribers of the member's medication to promote optimal therapy. Both of these programs have reduced inappropriate ER utilization in our affiliate health plans by eliminating the ER as a duplicative source of medication. Pharmacy programs support members in accessing improved care and outcomes while avoiding unnecessary ER use.

Question 3.2.5, #2

2. Describe your plans to ensure a response within one (1) hour to all emergency room providers twenty four (24)-hours-a-day, seven (7)-days-a-week.

We have a comprehensive process and back-end systems to help assure timely responses to ER providers within one hour, 24 hours a day and seven days a week (24/7). Utilization Management nurses are available 24/7, including holidays, to verify eligibility for members with urgent or emergent conditions and to process requests for prior authorizations by phone or fax. These important numbers are printed on the member's ID card and are publicized in our provider manual and on our member website.

In addition, we also operate a 24/7 behavioral health call center. Behavioral health call center representatives and Utilization Management nurses have access to the entire member record, including medical, behavioral, LTSS, pharmacy, and social information.

Question 3.2.5, #3

3. Describe your plans to track emergency services notification of a member's presentation for emergency services.

Given our affiliates' management of state-sponsored health programs across 19 different states, we are experienced in configuring our systems to track members' presentation for emergency services. One of our integrated Case Management tools, Member 360, displays a variety of alerts, authorizations, and notifications include alerts to members' presentation for emergency services. This information, combined with other medical, behavioral, LTSS, pharmacy, and social member data into a single record, provides a holistic picture of the member's utilization, care coordination services, and gaps in care. Through the provider facing Member 360 tool, providers who have members attributed to them will be able see this same member record via the Amerigroup provider portal.

We also use emergency service utilization tracking to inform Case Management outreach and enrollment. Most notifications of emergency services come to us from claims, given that providers are not required to notify us before providing treatment. Once claims data are loaded into our system, health plan staff and providers are able to view emergency service utilization as part of the holistic member record. Our CI3 tool also incorporates ER utilization in risk stratification. In other states, we have established daily information feeds and fax protocols with hospitals to provide alerts when members are admitted. We will implement similar data feeds and fax protocols in Iowa.

Our providers will notify us of ER visits, and this notification will be processed in our system. This allows us to track and report on ER visits. By combining this information with claims data and Member 360, we have the ability to identify and intervene upon overutilization of emergency services. In our Provider Manual, we will place responsibility on the provider and facility to notify us of ER visits. Additionally, we will not need providers to notify us directly if we receive ER data from the Iowa HIN (through admission, discharge, and transmission (ADT) data that is being piloted with ACOs in 2015).

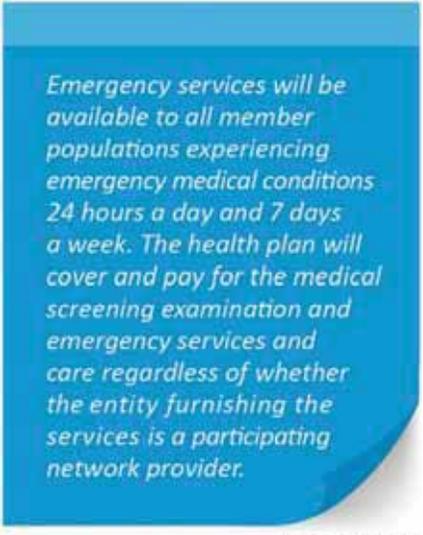

Question 3.2.5, #4

4. Describe your plans for reimbursement of emergency services, including what processes will be implemented to determine if an emergency condition exists.

Availability of Emergency Services

Emergency services will be available to all member populations experiencing emergency medical conditions, as defined in the Scope of Work, 24/7. The health plan will cover and pay for the medical screening examination and emergency services and care regardless of whether the entity furnishing the services is a participating Network Provider. We cover out-of-network services within the United States when emergency services are needed by a member who is in or outside the service area, regardless of whether the provider is part of our Network. No pre- or post-authorization is required for emergency medical, behavioral health, or substance use services, and it is not required for the member or provider to contact Amerigroup prior to treatment.

Because of the prevalence of interrelated medical, functional, and behavioral health issues, integration of physical, LTSS, and

Emergency services will be available to all member populations experiencing emergency medical conditions 24 hours a day and 7 days a week. The health plan will cover and pay for the medical screening examination and emergency services and care regardless of whether the entity furnishing the services is a participating network provider.

IA_3.2.5_COB_5.2

behavioral healthcare remains a primary focus for appropriately managing members' care in an emergency. To provide members experiencing behavioral health issues with the access they may need, Amerigroup maintains a toll-free **emergency and crisis behavioral health services hotline** staffed by trained personnel 24/7. Refer to Section 8.3 for more detail.

While we will not deny claims based on failure to receive notification of ER services, we encourage our participating members and providers to contact us within 24 hours of treatment. This step enables us to begin care coordination, facilitating any necessary authorizations for ongoing service, transportation, or transfers to Network Providers. Follow-up activity is based on the severity of the issue and its impact on the member's well-being and ongoing ability to remain in the community.

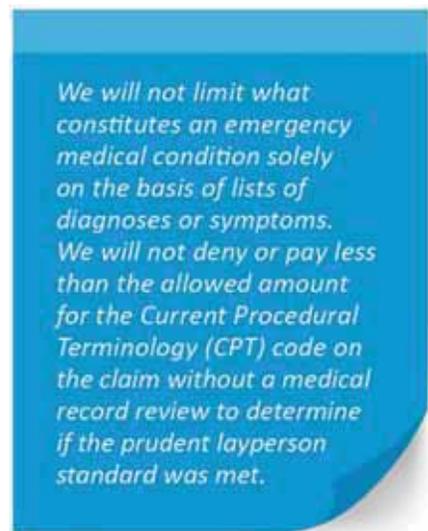

We know that members will also experience emergencies related to natural support availability and health status, environmental and weather disasters, and other situations. We have emergency back-up plans in place that can be brought to bear in these case-by-case examples. For example, with our affiliate health plan in Kansas, storm-related power outages recently put two ventilator-dependent TA waiver children at risk, an emergency we were prepared to respond to by engaging LTSS, providers, the State, and community agencies to resolve the issues safely and methodically.

If a member requires transfer from an out-of-network facility to a network facility, Amerigroup first requires the attending physician at the transferring facility to certify the member is medically stable for transfer. Upon receiving that determination, we identify available network facilities with required levels of services to meet the member's medical needs and facilitate an attending physician at the receiving institution to accept the case and transfer.

Emergency Services Reimbursement

When members present themselves to a hospital seeking emergency services and care, the determination that an emergency medical condition exists will be made, for the purposes of treatment, by a physician of the hospital or, to the extent permitted by applicable law, by another appropriate healthcare professional under the supervision of a physician of the hospital.

The physician or other appropriate healthcare professional treating the member in the emergency scenario will indicate on the member's chart the results of all screenings, examinations, and evaluations. The health plan will compensate the physician for all screenings, evaluations, and examinations that are reasonably calculated to assist the physician or other appropriate healthcare professional in arriving at the determination as to whether the member's condition is an emergency medical condition.

We will not limit what constitutes an emergency medical condition solely on the basis of lists of diagnoses or symptoms. We will not deny or pay less than the allowed amount for the Current Procedural Terminology (CPT) code on the claim without a medical record review to determine if the prudent layperson standard was met.

IA_325_COB_02

All coverage and payment for services are contingent on member benefits and eligibility at the time services are rendered.

Amerigroup will cover and pay for emergency services provided inside the United States regardless of whether the provider is an in-network or out-of-network provider. We will reimburse Network Providers based on a negotiated fee schedule, and we will reimburse out-of-network providers the Iowa Medicaid rates current at the time the services are delivered.

We will pay for all emergency services and care in accordance with the DHS contract. We will not deny payment for emergency services and care if, on the basis of presenting symptoms identified by the member, he or she appears to have an emergency medical condition, even if the condition turns out to be non-emergency in nature. Likewise, the health plan will not deny payment if the member obtains emergency services and care based on instructions of a practitioner or other representative of the health plan. When

included in the member's benefit plan, the health plan is responsible for covering emergency transportation without the need for precertification. Notwithstanding the requirements set forth in this section, the health plan will make payment on all claims for emergency services and care by non-participating providers. The health plan will not refuse to cover emergency services and care due to a lack of notification to the health plan. The health plan will provide coverage for pre-hospital and hospital-based trauma services and emergency services and care to members.

If the physician or other appropriate healthcare professional determines that an emergency medical condition does not exist, we will not reimburse providers for non-emergency services rendered in an ER subsequent to these determinations. We will also not reimburse for treatment of conditions that do not meet the prudent layperson standard for an emergency medical condition.

Defining Emergency Medical Conditions

We will not limit what constitutes an emergency medical condition solely on the basis of lists of diagnoses or symptoms. We will not deny or pay less than the allowed amount for the Current Procedural Terminology (CPT) code on the claim without a medical record review to determine if the prudent layperson standard was met. We will not impose restrictions on coverage of emergency services more restrictive than those permitted by the prudent layperson standard. Our determination of whether an emergency condition exists is based on the following definition.

“Emergency Medical Condition” means a medical or behavioral condition manifesting itself by acute symptoms of sufficient severity (including severe pain) that a prudent layperson who possesses an average knowledge of health and medicine could reasonably expect the absence of immediate medical attention to result in the following:

- Placing the health of the individual (or, with respect to a pregnant woman, the health of the woman or her unborn child) in serious jeopardy
- Serious impairment to bodily functions
- Serious dysfunction of any bodily organ or part

This includes cases in which the absence of immediate medical attention would not result in such impairment or dysfunction. We acknowledge that the prudent layperson standard is driven by the member's presenting symptoms and their perception of what those symptoms may mean.

This also includes situations when a representative of the health plan instructs the member to seek emergency services.

We will maintain a foundational list of codes that insure immediate payment on claims that are clearly defined as an Emergency Medical Condition in accordance with State policies. Prudent layperson review will be conducted by a non-clinically trained claims examiner on remaining codes. When an emergency services claim is presented to the Amerigroup claims administration system, the system will pend any claims that do not meet the technical requirements for an Emergency Medical Condition. We then will request medical records will then be requested for the claim. Once we receive the medical records, a claims examiner without clinical training will review the claim and make the determination whether the claim is to be paid as an emergency service. We will not impose restrictions on coverage of emergency services more restrictive than those permitted by the prudent layperson standard. Diagnosis codes will help determine the presence of an emergent condition and whether or not the ER payment reduction applies, but diagnosis codes will not drive reimbursement for outpatient hospital services. APC payment will be based on CPT or HCPCS procedure code.

If an emergency screening examination leads to a clinical determination that an actual emergency medical condition exists, we will pay for both the services involved in the screening examination and the services required to stabilize the member. We will pay for all emergency services that are medically necessary

until the clinical emergency is stabilized. The attending emergency physician or other appropriate healthcare professional actually treating the member is responsible for determining when the member is sufficiently stabilized for transfer discharge, and that determination is binding on the entities responsible for coverage and payment.

Member Liability (3.2.5.3)

We will not hold a member who has an emergency medical condition liable for payment of subsequent screening needed to diagnose the specific condition or stabilize the member. We will not require copayments for emergency services, as judged by the prudent layperson standard. We will comply with all cost-sharing and member liability requirements as further detailed in Section 5. Our Member Services team will also be ready to assist members with questions on billing received from providers and/or remedy services or care billed to the member in error.

Post-stabilization Services (3.2.5.4)

Amerigroup acknowledges that we will be financially responsible for post-stabilization care services obtained within or outside the health plan that are pre-approved by an Amerigroup Network Provider or other Amerigroup representative. We have extensive experience configuring post-stabilization payments in compliance with state and federal requirements in our claim payment system across our state-sponsored health plan affiliates. Our comprehensive process and back-end systems help us provide timely responses to ER providers within one hour, 24 hours a day and seven days a week (24/7).

We will also be financially responsible for post-stabilization care services obtained within or outside the Amerigroup plan that are not pre-approved by an Amerigroup Network Provider or other Amerigroup representative if Amerigroup does not respond to a request for pre-approval within one hour or cannot be contacted. Also, Amerigroup will also be financially responsible if an Amerigroup representative and the treating physician cannot reach an agreement concerning the member's care and an Amerigroup Network physician is not available for consultation. In this situation, Amerigroup will give the treating physician the opportunity to consult with an Amerigroup Network physician, and the treating physician may continue with care of the member until an Amerigroup Network physician is reached or Amerigroup's financial responsibility ends.

Amerigroup understands that our financial responsibility for post-stabilization care services that Amerigroup has not pre-approved ends when an Amerigroup Network physician with privileges at the treating hospital assumes responsibility for the member's care or assumes responsibility through transfer, or Amerigroup and the treating physician reach an agreement, or the member is discharged. Amerigroup acknowledges and agrees that the attending emergency physician or the provider actually treating the member is responsible for determining when the member is sufficiently stabilized for transfer or discharge, or whether the medical benefits of an unstabilized transfer outweigh the risks, and that determination is binding on Amerigroup. Amerigroup will negotiate a single-case agreement with out-of-network providers for post-stabilization services for which Amerigroup has financial responsibility.

If our member is admitted to the hospital or for observation, this will be flagged in our census, and we will deploy discharge planning and care coordination through our Utilization Management staff. If the member is released home and we are notified by the hospital, PCP, or member, Case Management will conduct outreach to coordinate required follow-up care and outreach within a week. Our PCP reporting and incentive programs will also enable and encourage providers to reach out to members for appropriate follow up. In addition, our Stabilization Team will facilitate rapid interaction and intervention during emergency department visits and at discharge from inpatient stays to arrange necessary outpatient services to either prevent the need for admission or avoid readmission. Our affiliate plan in Texas developed a rapid response process to avoid any gaps in services upon return to the home. Pharmacy, another area for potential error, is strictly monitored through review of our Pharmacy Benefit Manager's

claims to be sure Members have obtained needed medications upon discharge. Outcome measures for our affiliate's program in Texas reveal that Members with more complex health needs benefit most from the program.

Emergency Room Utilization Management (3.2.5.5)

Question 3.2.5, #5

5. Describe your plans to document a member's PCP referral to the emergency room and pay claims accordingly.

Our claims systems and processes will document PCP referral to ER services.

Our systems have the capabilities to capture a PCP referral field as part of the claim. When the PCP alerts us to this referral, we will document the referral in our system. If a referral from our PCP is attached to a claim, we will pay the claim regardless of whether the situation meets the prudent layperson or other standard and will not conduct retrospective review.

If we see a pattern of referral from a specific PCP where claims do not appear to meet medical necessity, we will reach out to the PCP with education on appropriate referrals. We also survey provider after-hours coverage by secret shopper to understand the guidance providers are giving so we can flag any issues. We encourage providers to work with members to make an active decision versus providing a passive direction.

Pharmacy Services (3.2.6)

Question 3.2.6, #1

1. Describe your proposed approach for delivering pharmacy benefits, including the use of any subcontractors.

Amerigroup's affiliate health plans bring 24 years of experience developing, implementing, and managing pharmacy services programs and benefits. We currently deliver pharmacy benefits to 4.5 million members in state-sponsored programs across 16 states. Our local, dedicated pharmacy services programs, backed by the resources and expertise of our national Pharmacy Department, give us a team of skilled clinical pharmacists and support staff, well-established policies and procedures, and innovative programs designed to maximize quality, safety, and efficiency. Our Pharmacy Director –who will be a local, Iowa-licensed Pharmacist – will work closely with our Pharmacy Benefit Manager (PBM) to confirm that pharmacy services meet all applicable State of Iowa, federal, and Scope of Work/Contract requirements.

Through our affiliates, we have experience delivering pharmacy benefits to all populations in the Scope of Work and know the potential pharmacy issues that can affect certain individuals such as children in foster care, those receiving home and community-based waiver services, or people who are enrolled in both Medicaid and Medicare. For instance, in Indiana, our health plan affiliate collaborates with the state Mental Health Quality Advisory Committee to develop clinical programs that help assure appropriate use of psychotropic agents in children and adults. We utilize mental health quality edits at the point of service to reduce psychotropic duplication of therapy and refine dosing regimens of our Medicaid population, including foster care members. See Section 3.2.6.5 for more information about our psychotropic medication management program for children/adolescents.

Amerigroup subcontracts with Express Scripts, Inc. (ESI) as our PBM. Amerigroup directly manages all clinical functions of our pharmacy program and maintains fully accountability and oversight of all PBM services. As our PBM, ESI will provide a robust pharmacy provider network, claims processing, and administrative services. ESI manages 5.5 million state-sponsored program lives across 23 states through 39 health plans. Of those, 4.5 million are Amerigroup affiliate members. By July 2015, ESI will serve more than 6.5 million state-sponsored program lives across 24 states through more than 42 health plans. As a URAC-accredited organization, they have demonstrated a commitment to quality and have been an excellent partner for Amerigroup in serving our members. Collectively, throughout this response, we refer to the pharmacy team (including ESI) as Amerigroup Pharmacy Services.

Fully Integrated Pharmacy Services

Our pharmacy program is fully integrated across all functional areas using joint operations and clinical meetings and committees, shared data and reporting, shared goals, and pharmacy participation on care teams. For example, our Pharmacy Department has standing meetings with our Program Integrity team to prevent, identify, investigate, and report fraud, waste, and abuse of prescription drugs by members and providers. Additionally, our Pharmacy Department participates on quality committees, performs whole-program utilization reviews, and collaborates with Amerigroup's Medical Director and Case Managers.

As a driving force of our pharmacy program, we support overall health management and optimize therapeutic outcomes through improved medication use and reduced risk of adverse events. Our program focuses on meeting the needs of our members by collaborating with providers and leveraging data to optimize health and safety. To further manage care holistically across the spectrum of physical, behavioral, and social needs, we fully integrate this program into our overall care management and disease management models.

Amerigroup's affiliates managing state-sponsored health programs across the country employ this approach today, and have achieved the following outcomes:

- **Cost-effective physician prescribing practices:** 84 percent generic utilization rate, higher than the Medicaid MCO national average of 80 percent
- **Engaged providers:** Utilization Management of pharmaceutical agents relative to best clinical practices, promoted through peer-reviewed profiles, led to a 10-point increase in quality ratings
- **Controlled resource utilization:** 25 percent reduction in inappropriate utilization
- **Decreased fraud, waste, and abuse:** Pharmacy lock-in program reduced members' inappropriate utilization by 25 percent (30 percent of drug spend)

We will blend the proven processes and monitoring programs currently in place across our affiliates with new programs and best practices based on the expertise of our national Pharmacy Department to address the needs of our Iowa Initiative membership. The result: a comprehensive pharmacy program that includes:

- Pharmacy benefits management
- Formulary and utilization management programs (standard, state-mandated, and custom)
- Retrospective drug reviews
- Medication therapy management
- Prospective and retrospective Drug Utilization Reviews with an educational component
- Lock-in program
- Member education programs to improve medication adherence, assure appropriate utilization, and to drive use of generics and preferred drugs and pharmacies
- Clinical and condition-specific solutions for diseases prevalent in our Iowa Initiative membership
- Proactive communications to prescribers, pharmacies, and members during transition periods
- Customized pharmacy network solutions
- Specialty drug solutions, including specialty step therapy and utilization management edits, medical benefit management, and other programs with Accredo®, ESI's specialty pharmacy

Pharmacy Provider Relations and Prior Authorizations

To provide access to pharmacies and physicians/prescribers, Amerigroup operates a 24/7 toll-free call center. The call center provides access to employees during all hours of operation and processes prior authorization requests received from prescribers by facsimile, telephone, and postal service mail within 24 hours. Additionally, our electronic prior authorization system is available 24/7.

Covered Services (3.2.6.1)

In accordance with Scope of Work Section 3.2.6.1, we will cover all classes of drugs covered by Medicaid Fee-For-Service (FFS), will enforce the rebate requirement and cover the same categories in the excluded/restricted classes as Medicaid FFS, and will cover medications rebated by the pharmaceutical manufacturer (in accordance with Section 1927 of the Social Security Act). We will include in the per diem rate all over-the-counter drugs for members in a nursing facility, psychiatric medical institutions for children, or intermediate care facility for individuals with intellectual disabilities.

Pharmacy Preferred & Recommended Drug List (3.2.6.2)

In accordance with Scope of Work Section 3.2.6.2, Amerigroup will follow and enforce the Preferred Drug List (PDL) and Recommended Drug List (RDL) under the Medicaid FFS pharmacy benefit with PA criteria, including quantity limits and days' supply limitations. We will notify providers of PDL and PA

changes at least 30 days prior to implementation. Drugs prescribed for the treatment of human immunodeficiency virus or acquired immune deficiency syndrome, transplantation, and cancer will be excluded from the PDL. We will use DHS's RDL for these drug categories and to inform prescribers of the most cost-effective drugs in those categories. Through outreach and education, we will assure members and providers understand the RDL. We will also train our internal staff to assure they understand the RDL. As there are changes to the list, we will re-educate members, providers, and staff and will make information available on our member and provider portals.

Pharmacy Prior Authorization (3.2.6.3)

Question 3.2.6, #4

4. Describe your plans for responding to all drug prior authorization requests within twenty-four (24) hours and dispensing at least a seventy-two (72) hour supply in an emergency situation.

Amerigroup offers a streamlined process for physicians to complete prior authorization requests. To facilitate member access to the medications they need, we offer physicians the option to submit prior authorization (PA) requests by contacting our toll-free number, submitting the request online, or by faxing the request. We respond to all drug PA requests within 24 hours by telephone or other telecommunication device and dispense/reimburse at least a 72-hour supply of a covered outpatient prescription drug that requires PA in an emergency situation. Our pharmacy PA process will comply with all Iowa and federal requirements and Scope of Work Section 3.2.6.3. Figure 3.2-7 illustrates our pharmacy PA process.

Pharmacy Prior Authorization System

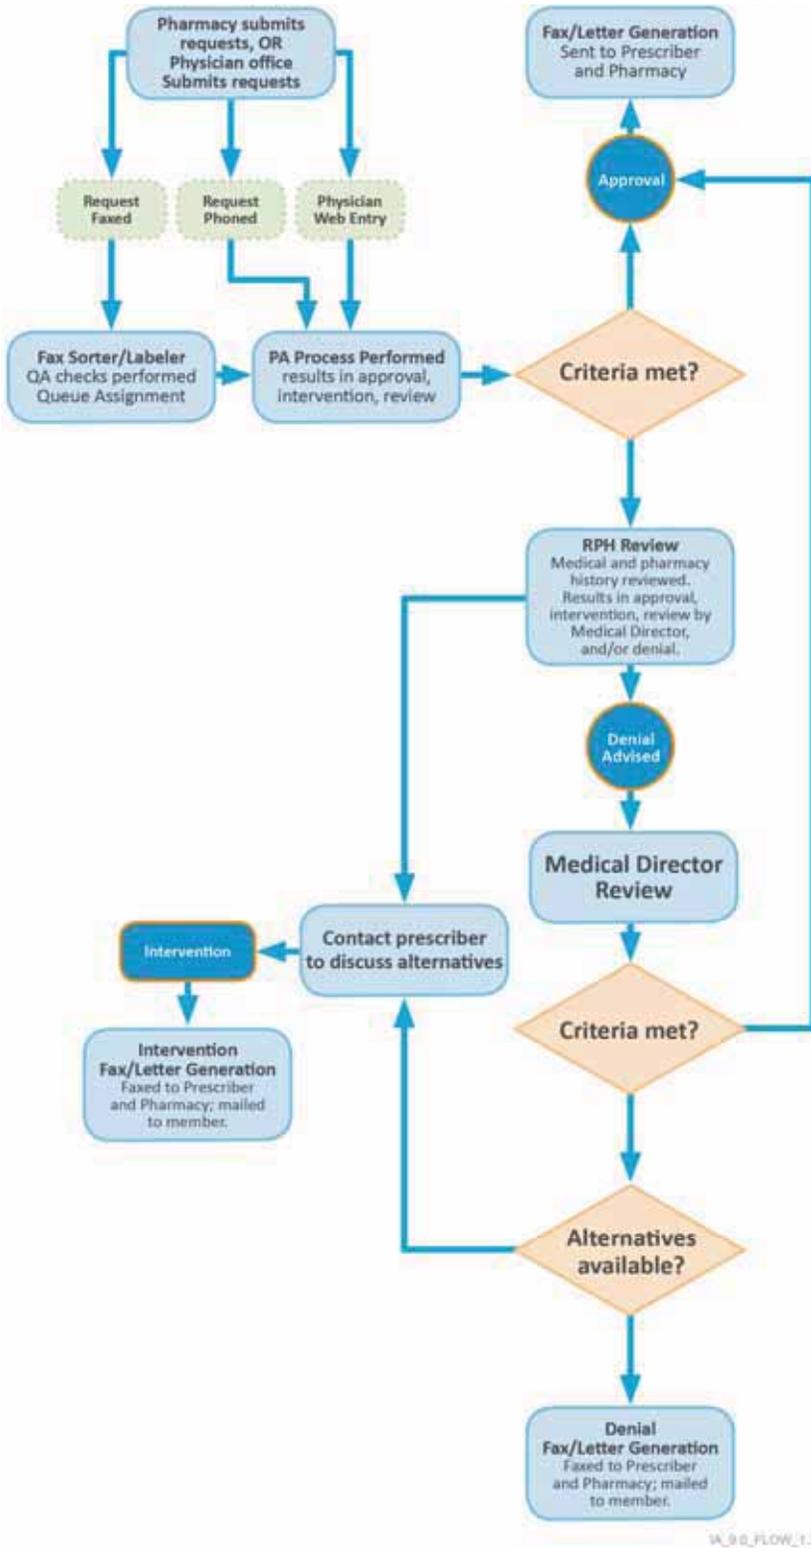

Our Pharmacy PA system supports both automated and manual PA determinations, responses, and reporting in accordance with Scope of Work 3.2.6.3. Through this system, we can examine up to 24 months of administrative data. If the State provides us with this administrative data, we will have this capability upon launch. We will establish a feed and repository of medical data sourced from FFS and MCO claims. We will maintain medical data files and define specific medical data elements and rules to evaluate as a part of the PA process, and we will integrate evidence-based guidelines, peer-reviewed findings, and recommendations of recognized specialists. We will summarize administrative data, along with PA approval/denial outcomes, for our providers on our provider-facing Member 360 platform.

We can also define point-of-sale clinical rules incorporating medical diagnoses in evaluating claims for utilization reviews. We call these special point-of-sale clinical rules Smart PA Rules. As an example of how Smart PA rules work: We will use a potential utilization review edit for Celebrex® dispensed to patients under 65. We may waive a Utilization Management review for patients with a history of Proton Pump Inhibitor (PPI) use within the last 180 days or if they have a diagnosis indicating an ulcer. We can set up a Smart PA rule to require a PA when Celebrex is filled, unless they meet the PPI or ulcer criteria. When a prescription for Celebrex is filled, the Smart PA rule will look back through the member's medication history and check for an ulcer diagnosis before returning a utilization management reject.

The National Council for Prescription Drug Programs (NCPDP) does not currently specify a mandated response time for processing electronic prescriptions, but if a PA exists in our claims system, claims adjudication occurs within milliseconds. After prescribers answer all PA criteria contained within the decision tree presented to them through the electronic PA system, approvals happen in real time.

For prior authorizations via phone and fax, we offer web-based physician and client PA tools to help simplify and speed up the process. The tools will transmit data electronically in HIPAA-compliant transaction formats and in the most current standard. We will comply with other nationally-accepted, industry standard formats as needed.

Figure 3.2-7. Amerigroup Prior Authorization Process and Review Flow

Our physician electronic PA tools streamline the process. Our system complies with the current version of the NCPDP SCRIPT standard and seamlessly works within the physician's electronic prescribing tool to offer prescribers additional flexibility.

Electronic PA can be accessed via an online portal or the prescriber's Electronic Medical Record (EMR) system (assuming the prescriber's EMR has upgraded its software to connect to ESI). The prescriber can also send real-time PA requests and information directly to us via the online portal to receive real-time feedback and approvals.

We will generate and distribute PA Approval and Denial letters to members and applicable healthcare providers. We mail letters to members and mail and fax letters to physicians. We will send these notifications in other languages, if requested.

We communicate our decisions swiftly and clearly. Communications go out the next business day after the decision is made. If required, we can fax notifications to the provider on the same day of the decision. Additionally, providers using electronic PAs receive an electronic notice of the decision.

When we receive a PA, it's automatically loaded for adjudication, and will be paid once processing is complete.

We will provide continuity of care exceptions for up to 90 days upon revisions to the PDL and PA programs. We can include or exclude specific drug categories and therapeutic classes from PA requirements based on the physician's National Provider

Identifier number or the prescriber's American Medical Association specialty code.

Access to Emergency Fills

When the Pharmacy does not fill a prescription at the time it is presented by the member due to an authorization requirement, the pharmacy must contact the provider and dispense a 72-hour emergency supply of the prescribed medication if the provider is unavailable. The pharmacist uses professional judgment to confirm that dispensing the prescribed medication would not jeopardize the health or safety of the member. We instruct pharmacists to enter an override code when dispensing these emergency supplies. Periodic written reminders to pharmacists promote ongoing compliance. Pharmacists can also contact the Pharmacy Help Desk 24 hours a day, seven days a week, 365 days a year for assistance with these overrides and emergency fill requests.

Provider Portal

Our HIPAA-compliant, web-based provider portal allows the provider to automate the PA process. In order to provide easy access for providers, we will place a link on the Amerigroup Provider Portal to redirect prescribers to the PA tool for prior authorizations involving drug therapy. This portal provides a number of benefits for the provider community including:

- Minimizing administrative burden by offering flexibility in submitting the PA (including clinical documentation to support the request) and automating back-end processes to generate the results
- Granting access to electronic health records via a secure login for our provider-facing Member 360, so that providers can see drugs filled, on which we have paid a claim, as well as a member's PA history and claims detail (including other prescribers)
- Providing authorized users access to PA questions
- Enabling authorized users to view approval and denial outcomes
- Electronically and securely submitting PA requests for automated and manual review by examining up to 24 months of administrative data and applying evidence-based guidelines to determine prescribing appropriateness
- Providing clinical guidelines and evidence-based guidelines (for example, the Beers Criteria list) for provider reference on the provider portal

Within our electronic PA system, PA criteria are presented to the prescriber real-time once the patient is identified and it is determined that a PA is required. The PA criteria question set is presented with decision tree logic to ensure that the prescriber only answers the questions required to drive the decision. Once the prescriber answers all of the required questions, he or she will submit the responses so we can evaluate them for an automated PA approval.

Question 3.2.6, #5

5. Describe your method for providing online and real-time rules-based point-of-sale claims processing for pharmacy benefits.

Point-of-sale Claims Processing System

Amerigroup and our affiliates have a long-term subcontractor agreement with ESI to provide network and administrative pharmacy services, including a real-time point-of-sale processing system for drug claims. In 2014, ESI processed 40 million prescription claims for our state-sponsored programs. All of our affiliates' network pharmacies are online and transmit claims electronically, following NCPDP telecommunication standards. The online claims adjudication system operates 24/7. Network pharmacies can transmit claims through any of the major switching companies to our PBM by maintaining a direct link to ESI's data center. Once received, claims are verified for eligibility, drug coverage, plan design,

formulary compliance, and Drug Utilization Review (DUR). In addition, the system applies hundreds of edits within seconds, based on benefit design and eligibility requirements. Concurrently, targeted alert messaging is delivered to dispensing pharmacists. Edits include:

- Participating pharmacy
- Member eligibility
- Drug coverage
- Benefit design edits (quantity, days’ supply, and refill-too-soon)
- Rejection edits for Third Party Liability and Coordination of Benefits
- Formulary and PDL compliance
- Prospective (concurrent) DUR edits
- Step therapy, therapy duplication, and other clinical edits

To promote complete safety before the medication is dispensed, the system alerts the pharmacist immediately to the results of the DUR edits. The system also transmits any applicable member co-pay or co-insurance and advises the pharmacy of the reimbursement amount. All of this activity is completed within seconds. The system also tracks and reports on the member’s usage, manual payments, adjustments, recoupments, and other identifying accounts receivable and claim information.

Prospective Drug Utilization Review

Prospective DUR (proDUR) applies a series of First Data Bank-supplied safety rules, in combination with internal proprietary rules, to review prescriptions for patient health and safety concerns. This provides important information to pharmacists to prevent adverse reactions and improves appropriate prescribing rates, and enables the pharmacist to assist with patient counseling. ProDUR alerts are activated for all prescriptions dispensed. We analyze all incoming prescriptions to prevent the patient from experiencing inappropriate drug prescribing or consumption, medical conflicts, or potentially dangerous interactions.

Through this program, Amerigroup and ESI will determine whether to send a warning (passive alert) or reject message (soft-block alert) for select alerts, including refill-too-soon, excessive dosing, and severe drug interactions. Passive alerts are informational warning messages sent to the pharmacist for evaluation. Soft-block alerts are clinical warning messages sent to the dispensing pharmacist to alert him or her of a potential issue and to prevent claim adjudication until the pharmacist takes appropriate action. Soft-block alerts are built with an override capability that allows the pharmacist to adjudicate the claim if the medication or dose is appropriate. This process requires the pharmacist to acknowledge and resolve each and every alert before the prescription can be dispensed. On average, the proDUR program identifies 12 percent of claims daily that hit a DUR edit resulting in a message to the dispensing pharmacy.

Clinical Edits at the Point-of-sale

We will employ DUR edits and prior authorization policies consistent with the Medicaid FFS proDUR edits. Table 3.2-3 provides an overview of our approach to this proDUR rule set.

Table 3.2-3. ProDUR Rules Support Safety, Quality, and Cost Control

Rule	Description	Example
Severe Drug-Drug Interactions	Identifies the most serious problems with concomitant drug therapies.	When taken together, amitriptyline and Parnate® may cause serious adverse effects that can potentially increase morbidity and mortality.
Drug Interactions	Identifies potential problems with concomitant drug therapies.	Quinidine and digoxin may cause adverse effects such as visual disturbances and hyperkalemia when taken concomitantly.
Drug-Allergy	Identifies potential hypersensitive reaction based on patient reported allergies.	Amoxicillin will cause an allergic reaction in patients allergic to penicillin.
Drug-Disease	Identifies potential contraindications with an existing member’s reported or inferred disease.	Beta blocker in patients being treated for asthma.

Rule	Description	Example
Refill-too-soon	Identifies a member who has more than an adequate supply of medication on hand based on all prior prescriptions filled, not just the last prescription received.	A member regularly obtains refills when 50% of current supply is consumed; by the second refill, the patient has accumulated an extra prescription.
Duplicate Therapy	Identifies the dispensing of two or more drugs within the same therapeutic category for the same patient.	Naprosyn [®] and Relafen [®] , when taken together, may cause increased risk of adverse effects associated with nonsteroidal anti-inflammatory drugs (NSAIDs) and results in no therapeutic advantage to the patient.
Maximum Daily Dose/Excessive Daily Dosing	Identifies a prescription being filled for more than the manufacturer's maximum recommended daily dose. Maximum daily dose rule is based on clinically recommended dosing guidelines.	Vicoden [®] at doses greater than the manufacturer's recommended maximum dosage can potentially cause hepatic toxicity and respiratory depression.
Excessive Dosing	Identifies prescription excessive dosing for drugs that should be dosed on an interval basis.	Chemotherapy medications can accumulate in the body; incorrectly taking doses may result in lethal drug blood levels. Rules look at, for example, single oral dose medications that are administered once every six weeks. The alert is sent to stop a repeat dose sooner than six weeks.
Sub-therapeutic Dosing (Under-dosing)	Identifies prescriptions being filled for less than the recommended minimum daily dose.	Oxacillin at doses less than 500 mg/day for the treatment of cellulitis will not effectively cure the member's condition.
Underutilization	Identifies patients who are non-compliant with their drug therapies.	Cardiac medication refilled after the supply is exhausted may cause an increased risk of adverse events because maintenance medication requires continuous therapy.
Maximum Daily Quantity	Identifies prescriptions for which the daily dose in dispensing units (for example, tablets and capsules) exceeds the quantity recommended for most users.	Hyperlipedemic prescribed at more than the usual daily dose interval (for example, Lipitor [®] prescribed for more than once-a-day dosing).
Minimum Daily Quantity	Identifies prescriptions for which the daily dose in dispensing units (for example, tablets and capsules) is less than the quantity recommended as effective for most users.	A prescription for Precose [®] (acarbose) would present a minimum-quantity-per-day alert, because Precose is typically administered with meals.
Potential Drug Name Confusion	Identifies drugs in the member's history that sound alike or, when written, look alike.	A medication error due to confusion between products, such as the antifungal medication Lamisil [®] , which sounds and looks similar to the anticonvulsant medication Lamictal [®] , can potentially cause confusion and even seizures.
Drug-Age	Identifies drugs that may have been inappropriately prescribed to patients based on their age.	Diazepam [®] for patients age 65 and older may cause increased risk for falls and fractures due to increased daytime sedation from age-related changes.
Drug-Gender	Identifies drugs that may have been inappropriately prescribed to a patient based on their gender.	Proscar [®] provides no therapeutic benefit for females and is used exclusively in males.
Drug-Pregnancy Contraindication	Identifies drugs contraindicated for use by pregnant women.	Isotretinoin [®] (acne medication) taken during pregnancy has been shown to put the fetus at increased risk.
Overutilization/Additive Toxicity	Identifies members exceeding 4 grams/day of Tylenol from multiple prescriptions.	Patient unknowingly takes multiple pain medications containing acetaminophen (APAP).

ProDUR rules also address the special needs of seniors (drug-drug interactions, drug-disease contraindications, drug-age precautions, and maximum daily dose limitations); children (drug-age contraindications and age-dosing issues); and women (drug-pregnancy contraindications). In addition, we offer the following enhanced, customizable proDUR cost-saving programs:

15-day Starter Fill Program

Prescription first-fills for Hepatitis B, Hepatitis C, oral Oncolytic, and atypical antipsychotic agents can be limited to a 15-day supply allowing the member to try the drug and assess tolerance. All subsequent refills will be the full 30-day supply or as deemed appropriate by the provider. Results of a nine-month study of a partial-fill program for 15 oral oncolytics showed that 41 percent of patients discontinued therapy after the first month of the prescribed therapy; nearly 20 percent stopped therapy after one partial fill due to adverse side effects. As many as 40 percent of members do not respond satisfactorily to the first drug prescribed for chronic conditions with agents known to have a high incidence of side effects.

Half Tab Program

Medications may be dispensed at a higher strength (double strength) to allow for the correct dose to be given when the tablet is split in half. This program includes a list of eligible medications safe for tablet splitting and yields a cost-saving opportunity.

Amerigroup and ESI also build utilization management edits into the point-of-sale that minimize inappropriate utilization, including length of therapy edits (to identify use of drugs beyond FDA-approved labeling) and prescriber ID edits (so that claims are not covered for non-par providers, those who demonstrate aberrant prescribing patterns, or are on the Office of Inspector General exclusion list).

Question 3.2.6, #6

6. Describe your plans to implement retrospective drug use review to identify patterns of fraud, abuse, gross overuse, or inappropriate or medically unnecessary care, among physicians, pharmacists and individuals receiving benefits, or associated with specific drugs or groups of drugs.

Retrospective DUR: Trending Prescriber Habits and Cost Savings

We review pharmacy and medical claims data to identify potential cases of under- and over-utilization; coordination of care issues; drug abuse or misuse; fraud, waste, and abuse; or inappropriate or medically unnecessary care among physicians, pharmacists, and individuals receiving benefits, or associated with specific drugs or groups of drugs. Our Pharmacy Services team acts on this data to provide targeted interventions. Below are some examples by prescriber:

- **Pharmacy data analysis** identifies providers prescribing outside of peer norms. Examples include prescriptions from out-of-state and non-par providers, a high level of controlled substance prescriptions written by the same emergency room prescriber, members consistently getting prescriptions from non-par providers and whose medical claim history does not support such drug use (which may indicate members paying providers to write such prescriptions), and non-par providers writing prescriptions for drugs with known street value or known diversion. These prescribers can be blocked from the drug claims systems, members can be referred to lock-in, and both prescribers and members can be referred to the national Special Investigations Unit for further review of suspected fraud and abuse
- **Prescriber engagement** urges providers to help us root out abusive behaviors through academic detailing and physician consultation programs. We send notices to prescribers who are multiple prescribers or are treating members with questionable activity. These communications alert

physicians when they or their patients are exhibiting unusual utilization patterns. In many cases, providers are unaware that the member receives prescriptions from multiple other providers.

- **Retrospective Drug Utilization Review (retroDUR) analysis** is performed in collaboration with the State through a review of administrative claims each month. Under Amerigroup's direction, targeted providers receive an alert that includes program description, identified members, a detailed explanation of clinical issue(s) along with suggested course of action and supporting clinical references, and 90-day prescription profile highlighting contributing medications.

Educational Component (3.2.6.4.3)

Amerigroup will conduct physician profiling and education at the State's request. In addition, we educate our network providers during orientation, ongoing, ad hoc, and annual trainings on our expectations, policies and procedures, and best practices in prescribing. Amerigroup's primary goal is to make sure network providers have the information, tools, and support necessary to prescribe medication for the safety, well-being, and improved outcomes of our members. Our Drug Utilization Management Report supports the identification of medications that may be duplicative, contraindicated for the member's age or condition, or over- or underutilized.

Reporting (3.2.6.4.4)

Amerigroup will report proDUR and retroDUR activities/educational initiatives to DHS quarterly and assist in data collection/reporting for CMS' DUR annual report. Refer to the Utilization Management Section 3.2.6.5 below for additional detail on our reporting capabilities.

Drug Utilization Review Commission (3.2.6.4.5)

We will collaborate with DHS on all new additions and changes to existing PA criteria, which will be forwarded for review and approval by the DUR Commission and State staff.

Utilization Management (3.2.6.5)

In accordance with Scope of Work Section 3.2.6.5, we will submit our utilization controls and programs to DHS for review and approval. We use standard utilization controls like prior authorizations and step edits, and also plan to use member education, a psychotropic medication management program, Medical Therapy Management (MTM), and pharmacy lock-in programs to help assure the best care for our members. Pharmacy is a component of our overall Utilization Management Program. Below is an overview of our pharmacy-specific UM programs available to our members.

Member Education

We will provide member education to help assure appropriate utilization and improve adherence. To make sure that our member education efforts are effective and comprehensible, all member materials are culturally and linguistically appropriate, easy-to-understand, and at the appropriate reading levels for the covered populations. Some of the educational programs we will implement include:

- **Gaps in Care Program:** Provides a Consolidated Medication Review, including a cover letter; personalized cover page; recent claims history; general quality and safety messages; important telephone numbers; and access to customized health information from Harvard Medical School. We mail Medication Reviews monthly with up to four messages. For example: members experiencing issues of adherence may receive "Important Tips for Taking Meds", which covers taking prescribed medications, such as when, how long, and when to consult with their provider.
- **Pharmacy Mobile App:** Members can choose to load Express Script's pharmacy application to access the *Medicine Cabinet* feature, which automatically syncs with the patient's prescription drug history for both retail and home delivery prescriptions. Members can easily manage multiple prescriptions with automatic updates to medication history, notifications of possible health-

related risks, reminder alerts for taking medications, notifications for refills, and automatic drug interaction checks for over-the-counter medicines, vitamins, and supplements.

Additionally, members can receive both email and phone refill reminders for prescriptions being filled through Amerigroup's Home Delivery Pharmacy.

Psychotropic Medication Management Program

Amerigroup will deploy a psychotropic drug prescription management program for children, adolescents, and young adults. The use of psychotropic medications is an integral part of treatment for persons receiving care for behavioral health conditions. As such, the use of psychotropic medications must be monitored closely to help assure that persons are treated safely and effectively. The goal of the program is to work collaboratively with prescribers to improve the quality and efficiency of psychotropic drug prescribing patterns and to improve the health outcomes of Iowa Initiative child/adolescent members including foster children. The program will help assure the safety of persons taking psychotropic medications, reduce or prevent the occurrence of adverse side effects, and help the child/adolescent who is taking psychotropic medications function better and achieve positive clinical outcomes.

In this program, drug claims data are stratified to identify prescribing and usage trends. Prescribers will be identified who are not following recommended evidence-based psychotropic treatment guidelines. Prescribers who are identified as deviating from best clinical practices are flagged, and our team follows up with these prescribers through routine alerts, letters, educational materials, and peer-to-peer calls. They will be encouraged to adjust their prescribing habits. The program does not infringe on the prescribers decision-making practice; rather, it is designed to improve behavioral health prescribing practices and patient medication adherence, targeting educational messages to prescribers thereby allowing them to "self-regulate" their prescribing patterns. This avoids the need for many external controls such as prior authorizations or limit of access to psychotropic drugs.

We design educational information to help the prescriber make care decisions based on the latest medical evidence. We monitor claims data to determine whether the provider makes changes after intervention; additional interventions (such as medication alerts, peer-to-peer consultation) are provided as needed to review continued prescribing patterns. Areas for review include multiple medications in the same therapeutic class, medications prescribed without clinical indications, excessive dosing and inadequate dosing, no timely refill (early discontinuation), rapid switching of medications, and patients with two or more physicians prescribing the same medication.

The following parameters will be monitored to make sure that all transitioning and newly enrolled members with Amerigroup have a psychotropic medication management review:

- Higher than recommended dosage of antipsychotic or stimulant medication
- Diagnosis consistent with prescribed medication
- Lower than recommended dosage of antipsychotic or stimulant medication
- Laboratory monitoring as indicated
- Concurrent behavioral health counseling as indicated
- Antipsychotic medication in children less than 6 years of age
- Two or more concomitant antipsychotic medications
- Use of three or more psychotropic medications in youths less than age 26

Lock-in Program

While effectively prescribed and managed medications can offer our members relief from chronic pain, treat disease, and help them maintain independent lives in their communities; inappropriate therapy can result in increased morbidity or mortality. If we identify potentially abusive or dangerous behavior,

members may be restricted to a specific pharmacy for all medication fills. Consideration for lock-in is based on use of multiple pharmacies or multiple controlled substances and/or prescriptions from multiple prescribers, particularly when a supporting diagnosis or medical claim is lacking. Lock-in can occur only following review of the member’s profile by a pharmacist. A lock-in may also occur when a member is receiving drug therapy from multiple prescribers and multiple pharmacies indicating uncoordinated care. Locking the member into a single pharmacy alerts all prescribers and the pharmacy of the coordination issues. The restriction is implemented to promote the member’s safety through coordination of care. The program is based on the member’s utilization of providers, medications, and pharmacies, as well as requests by a provider, outside agency, health plan, or in cases of fraud and abuse.

In 14 states, our affiliates’ lock-in programs offer a variety of tools, resources, and supports that have helped reduce inappropriate member utilization, decrease adverse drug events, minimize the risk of medication abuse and misuse, and achieve cost savings. For example, our Louisiana affiliate saved \$90,326 over 11 months (September 2013 – July 2014), which represents a savings of \$15.65 per enrolled lock-in member per month. During this same time, drug costs averaged \$82.16 per enrolled member per month. National savings reached \$15.14 for all of our markets using lock-in.

Our Iowa lock-in program will meet all applicable DHS and federal requirements, and all lock-in policies, procedures, and criteria will be submitted to DHS for approval prior to program implementation. Our affiliate plans’ lock-in programs (Table 3.2-4) in other states will provide us with additional resources and experience that we can leverage to enhance our local program.

Table 3.2-4. Amerigroup Affiliate Lock-in Programs

State	Lock-in Program
Florida	Pharmacy
Georgia	Pharmacy & prescriber
Indiana	Pharmacy & prescriber, hospital
Kansas	Pharmacy & prescriber, hospital
Kentucky	Pharmacy & prescriber, hospital
Maryland	Pharmacy & prescriber
Nevada	Pharmacy
New Jersey	Pharmacy & prescriber
New York	Pharmacy, alternative pharmacy, primary care physician group, nurse practitioner, clinic, durable medical equipment supplier, dental, dental clinic, podiatry, outpatient hospital, hospital
South Carolina	Pharmacy
Texas	Pharmacy
Virginia	Pharmacy
Washington	Pharmacy
West Virginia	Pharmacy

Our lock-in programs enhance patient safety, improve care coordination, and promote effective oversight by:

- Preventing serious adverse drug events by minimizing members’ use of multiple pharmacies and/or physicians in a short time frame
- Providing appropriate medical oversight and management that facilitates care coordination and connects members with the most appropriate services to meet their needs
- Using a non-judgmental structure so members can obtain needed care from qualified practitioners

- Identifying opportunities to address health concerns and inappropriate prescribing patterns

Medication Therapy Management

Amerigroup's MTM program helps achieve positive outcomes for members with co-morbid conditions who require multiple medications and those with specific chronic illnesses, such as diabetes, asthma, and depression. Our MTM program proactively identifies and engages members (telephonically through case management and face-to-face consultations with a retail pharmacist) who have inappropriate or conflicting drug therapies to prevent negative outcomes. Under our integrated MTM program, a clinical pharmacist will communicate with the member, prescribers, and caregivers to close gaps in care and optimize therapies for those with chronic conditions or complex drug therapies. The goal of this program is to verify that medication is appropriate, effective, safe, and able to be taken by the member as intended.

Once we identify a member as someone who can benefit from MTM, we may discuss program eligibility with the member and/or caregiver during the care planning process. The Case Manager explains the MTM program and available support to the member. If the member agrees to participate, the Case Manager will document this in Amerigroup's care coordination and management system, CareCompass. The Case Manager will then notify the appropriate MTM vendor to arrange for assessment of the member's medication therapies. With the member's input, the vendor will develop the medication assessment plan.

Amerigroup and its affiliates have seen positive results from MTM: Members enrolled in MTM show improved medication adherence rates; participants experienced fewer gaps in care and overall safer, more effective medication regimens; providers showed willingness to take action on sound clinical recommendations; and the program promoted collaboration leading to healthier and engaged members and engaged providers.

Utilization Management Program Reporting

We will provide Utilization Management reports in a DHS-approved format and timeline. Our standard monthly reporting includes program name, target member name, provider name of targeted member, total members opted out, total members qualified, and summary of program interventions. We use two main files to provide member and/or provider detail for members targeted by clinical outreach: a dashboard report (overall program snapshot, as shown in Figure 3.2-9) and outcomes report (overall program impact and effectiveness, as shown in Figure 3.2-10).

Figure 3.2-9. Our Reporting Dashboard Report Gives a Snapshot of the Program

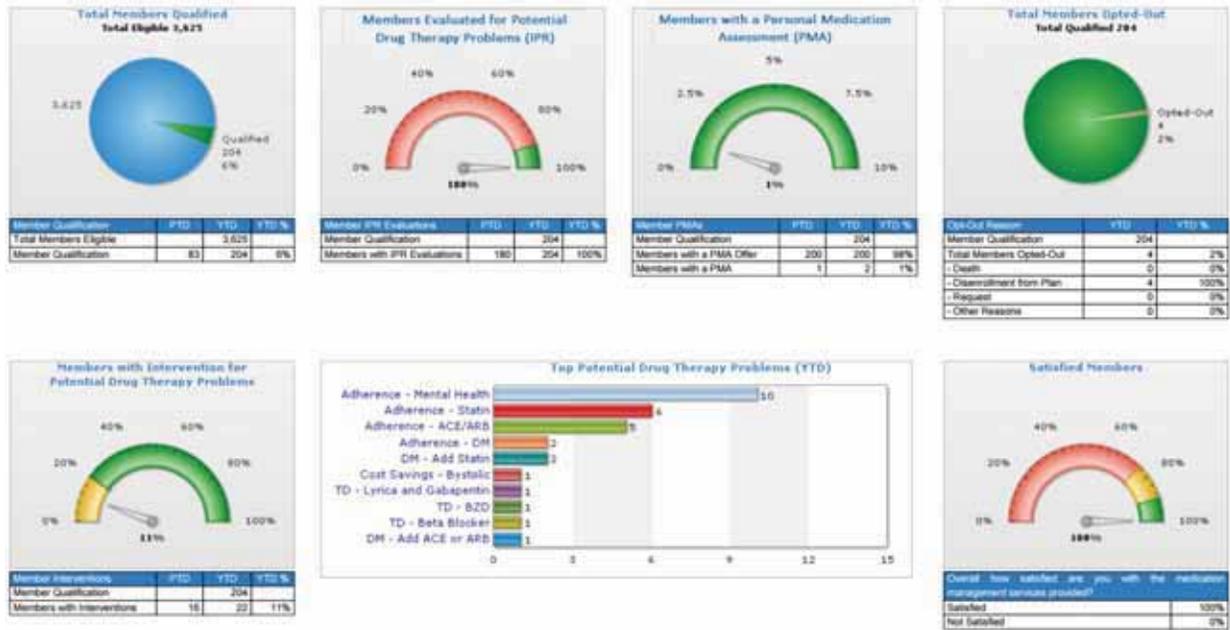

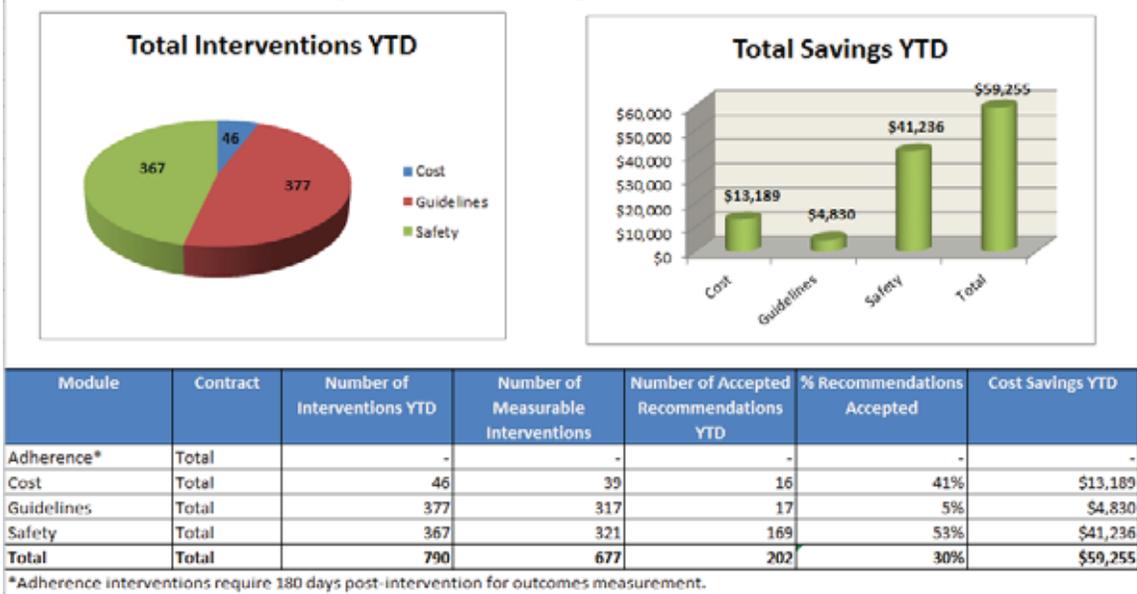

Figure 3.2-10. Our Outcomes Report Details the Program's Success

Question 3.2.6, #7

7. Describe your plan for monitoring your PBM as described in Sections 3.2.6.6.1.3 and 3.2.6.6.1.4.

Amerigroup's proposed PBM is Express Scripts (ESI). Amerigroup does not own ESI wholly or in part. *We place a particular emphasis on member choice and access, offering our members options among retail pharmacies as well as mail order or custom arrangements depending on transportation.* To that end, ESI does not own any retail pharmacies, is not a pharmaceutical manufacturer, and there is no corporate ownership or relationship between Amerigroup and ESI, other than the subcontractor relationship as our PBM. This helps prevent any perceived issues with "steering" business into

corporately-owned pharmacies and removes any potential for conflicts of interest. We will facilitate direct access to ESI for the State, when needed.

Oversight and Monitoring of our PBM

Amerigroup maintains oversight of all PBM services and remains fully accountable for all activities performed. We continuously monitor ESI to verify compliance with Contract requirements. In addition to local oversight through our Quality Management and Vendor Compliance Workgroup, we also have national oversight programs to verify that ESI's performance complies with all applicable DCH, NCQA, and federal requirements and standards. We audit subcontractors, including the PBM, and enforce correction of identified performance deficiencies or termination if deficiencies cannot be corrected. After the subcontractor is operational, we conduct annual audits to monitor compliance with State and federal regulatory and accreditation standards. When formal corrective actions are implemented, we meet biweekly with ESI to review progress. We hold our PBM accountable contractually using a set of performance standards, including maintaining required pharmacy help desk service levels, prompt claims processing, system availability and adjudication response time, PA turnaround times, pharmacy benefit set-up, mail service dispensing accuracy and timeliness, and network pharmacy access. As part of our oversight, we verify that our PBM maintains valid, nationally-recognized accreditations. ESI has achieved multiple URAC accreditations, including Pharmacy Benefit Management, Health Utilization Management, Specialty Pharmacy, and Mail Order Pharmacy.

Oversight Plan to DHS

Amerigroup will provide a specific written PBM Performance Oversight Plan for 2016 within 10 days of Contract execution with the State of Iowa, and will submit a finalized plan (with changes incorporated) to DHS within 30 days after submission of the first plan. Any changes will be submitted to DHS for prior approval before the Plan is updated.

System Requirements

Amerigroup's Pharmacy Services will adhere to all System Requirements outlined in Section 3.2.6.6.1.5, which includes maintaining an automated claims and encounter processing system for drug claims that support Contract requirements and assures timely and accurate claims and encounters processing.

Pharmacy Network (3.2.6.7)

We will provide a pharmacy network that complies with Exhibit B requirements, that includes only licensed and registered pharmacies that conform to the Iowa Board of Pharmacy rules concerning the records to be maintained by a pharmacy. ESI contracts with and maintains a pharmacy network on our behalf that includes more than 66,000 pharmacy providers nationally and over 730 retail pharmacy locations in Iowa, of which nearly half are independently owned pharmacies. Pharmacy accessibility is measured by comparing the member's address to the nearest pharmacy provider. We will meet the requirement to provide at least two pharmacy providers within 30 miles or 30 minutes from a member's residence in each county. In addition to community retail pharmacies, the Iowa pharmacy network will include mail (home delivery), specialty, home health, and long-term care pharmacies.

To promote member choice, we will keep an up-to-date pharmacy provider directory on our website for public access. Members or care providers simply enter their ZIP code or city, and the pharmacies closest to the member will be listed. There is a 24-hour feature allowing the pharmacies to be filtered only for those that can provide 24-hour services.

Pharmacy Access (3.2.6.8)

In accordance with Scope of Work Section 3.2.6.8, we agree that although we may offer mail order pharmacy as an option to beneficiaries, we or our PBM are not allowed to require or incentivize its use.

Our contracted relationships with Specialty Pharmacy Providers within the medical, home delivery, and retail pharmacy channels uniquely position us to provide comprehensive access to 100 percent of all specialty medications on the market. In addition, we offer one of the industry's most comprehensive ranges of specialty health solutions to improve care for members and reduce waste for health plans. To optimize care, we manage specialty medications across both the pharmacy and medical benefits.

Through a coordinated approach with our Specialty Pharmacy Provider, we offer a comprehensive portfolio of products, clinical expertise, and integrated technology to serve Medicaid and other state-sponsored program patients using specialty pharmaceuticals, which often include biotechnological medicines or therapies requiring special handling or administration. Our clinical protocols are drug-specific and based on the latest evidence, allowing them to anticipate the adherence and health challenges patients may face when taking specific medications. Their specialist clinicians and extended care team proactively engage patients, empowering them through education and removing any obstacles that prevent them from getting the most from their medication. They provide proactive therapy management, develop a deeper understanding of each patient through one-on-one consultation, and deliver personalized education so that our members will feel motivated to remain adherent.

Our Specialty Pharmacy Provider's experience in managing specialty pharmacy includes over 30 years of managing specialty pharmacy for thousands of clients of all types. They serve more than 500,000 members annually with complex specialty conditions. Their deep experience and scale enable us to provide a depth of clinical specialization that is at the root of how we provide better clinical care for members, improving health outcomes. Additionally, they support our members with more than 500 field-based nurses specialized to support the most complex members we care for.

Reimbursement (3.2.6.9)

Drug Ingredient Reimbursement

We will reimburse pharmacy providers at a rate comparable to the current Medicaid FFS reimbursement. Reimbursement will be the lower of Iowa Average Actual Acquisition Cost (AAC)/ National Average Drug Acquisition Cost (NADAC) or Wholesale Acquisition Cost (WAC) if no AAC/NADAC, Federal Upper Limit or Usual and Customary. We will use an average wholesale price methodology to adjudicate a reimbursement equivalent to the Iowa AAC/NADAC or WAC, consistent with the State's clarified RFP requirement that bidders pay a FFS equivalent rate, inclusive of dispensing fee.

Pharmacy Dispensing Fee

We agree to reimburse pharmacy providers at a dispensing fee as determined and approved by the Medicaid FFS cost of dispensing study performed every two years.

340B Drug Pricing Program

We will make sure that all 340B Covered Entities that use 340B drugs and serve Iowa Medicaid managed care enrollees adhere to the "Carve in Iowa Medicaid managed care prescriptions and other products into the 340B program" methodology. We will make sure that the entity:

- Uses 340B drugs, vaccines, and diabetic supplies for all Iowa Medicaid managed care enrollees served
- Informs HRSA at the time of 340B enrollment that the entity intends to purchase and dispense 340B drugs for Medicaid managed care enrollees
- Does not bill Amerigroup for 340B acquired drugs and products if the entities NPI is not on the HRSA Medicaid Exclusion File
- Purchases all drugs and other products billed to Amerigroup under 340B unless the product is not eligible for 340B pricing

- Submits pharmacy claims for 340B acquired drugs to Amerigroup at the entities AAC with values of "08" in Basis of Cost Determination field 423-DN OR in Compound Ingredient Basis of Cost Determination field 490-UE or insert "20" in the Submission Clarification Code field 420-DK
- Submits vaccines and diabetic supply claims for 340B acquired products to Amerigroup at the entities 340B AAC on the UB04 or CMS1500 claim forms

We will make sure that all contract pharmacies using 340B drugs, vaccines, and diabetic supplies carve out Iowa Medicaid managed care prescriptions from the 340B program. We will assure that the entity:

- Purchases all drugs and products outside the 340B program if billed to Amerigroup
- Consults the Iowa Medicaid Managed Care Pharmacy Identification for assistance in identifying managed care enrollees

Refer to Section 3.2.6.11 for further detail on our 340B process.

Drug Rebates (3.2.6.10)

Question 3.2.6, #2

2. Describe your ability and experience in obtaining and reporting drug rebates.

Drug Rebate Strategy

Amerigroup leverages our relationship with ESI, the nation's largest PBM, to provide the most cost-effective network with the best access and availability for our members. Our national Pharmacy Services team has expertise in negotiating competitive drug acquisition prices and dispensing fees, helping assure that Iowa receives the benefit of this relationship in retail, mail, and specialty pharmacy. Our well-established and experienced national Drug Rebate Team routinely handles rebate issues for many of our affiliate health plans across the nation, including 13 states where we manage the PDL for covered populations. They understand the usual reasons for manufacturers to dispute drug rebate invoices, including questions about the invoiced quantity, questions about formulary status, date of formulary status change, and validity of the submitted National Drug Code (NDC).

Each month, we inspect all claims to make sure rebate invoicing was performed accurately. We check claims for the correct contracted rebate rate and immediately report any deviations to our PBM for validation. If an error is found, our PBM corrects the claims and re-invoices them to the manufacturer for adjusted payment. Each month we receive data on the amount of rebates invoiced to pharmaceutical manufacturers for each group, and each quarter we receive data on the amount of rebates collected from the manufacturers. We compare the amount collected to the amount invoiced and investigate any discrepancies. Additionally, we calculate rebate payments to our clients quarterly and re-evaluate them each quarter until collections and payments are complete. Our process to restate a previous quarter's rebates in subsequent quarters eliminates the need for an annual true-up. Due to our depth of knowledge related to industry trends and cost drivers, Amerigroup affiliate health plans achieve a consistent rebate collection rate in excess of 99 percent of forecasts.

Amerigroup believes the best way to manage drug costs is to deploy PDL (formulary) strategies that drive utilization to the lowest net cost alternative. The lowest net cost alternative is usually a generic, but sometimes it can be a brand with a favorable rebate or an over-the-counter product. Amerigroup actively employs these strategies - across all of our affiliate health plans, our 2014 Medicaid Generic Dispensing Rate (GDR) increased to 87.8 percent from 87.1 percent in 2013. The estimated cost of care savings from improved GDR was over \$31 million in 2014, which equates to \$1.35 per member per month. Combined with strong utilization management strategies, our organization has continually maintained a low-cost drug trend year after year. For example, our affiliate plans have shown a negative expense trend of minus

4.1 percent compared to a Medicaid industry average of an increase of 2.3 percent. We have maintained this through a comprehensive review of generic step therapy programs, generic maximum allowable cost programs, and preference of lowest net cost brand alternatives.

Additionally, strategies to maximize rebates focus on lowering unit cost. Manufacturer rebate contracts typically disallow any utilization management controls. Over time, unit cost is lowered, but the increase in utilization outweighs unit cost savings, and the general drug cost trend exceeds budget. Under the Affordable Care Act (ACA), unit rebate amounts have increased, and managed care utilization is now included. However, supplemental rebates have been greatly reduced, requiring even more creativity in developing strategies to maintain low-cost trends. Amerigroup's affiliates have remained successful since the start of ACA in optimizing rebates within the lowest net cost strategy while managing utilization. Finally, Amerigroup is working with an experienced 340B contract pharmacy administrator in the development of a shared savings model that will support the continued availability and viability of safety-net provider services throughout the network.

We recognize the State of Iowa prohibits us from collecting federal and supplemental rebates on Medicaid members. We will report utilization information concerning covered outpatient drugs provided to our members to the State. This reporting will enable Iowa to include our utilization data with its FFS utilization data for covered outpatient drugs so that the manufacturers can pay rebates on these drugs. We will transmit drug claims data in formats and by deadlines established by DHS and will include utilization data for pharmacy services provided through other settings such as physician offices.

Question 3.2.6, #3

3. Describe any relevant experience resolving drug rebate disputes with a manufacturer.

Amerigroup will assist DHS in resolving pharmacy and medical drug rebate disputes and will adhere to State and federal guidelines when resolving disputes. Our proposed process entails the State providing Amerigroup with a list of disputed claims, including NCPDP standard rebate-reject reasons as soon as they are available. Amerigroup's successful process used today with our affiliates in other states includes a pharmacy-designated point of contact to receive information from the State on claims that require correction. Amerigroup will work to resolve all disputes through the PBM and/or directly with the provider within 30 days of receipt, giving the State ample time to submit these disputes to the manufacturer in the required 60-day time frame. Amerigroup works with the PBM or directly with the provider to resolve claims issues. We also support the State's access to network pharmacy providers for verifying information submitted on claims. Our drug encounter process includes corrected claims on the next scheduled data transmission.

Amerigroup does not provide coverage for any drug product, brand name or generic, legend or non-legend, sold or distributed by a company that did not sign an agreement with the federal government to provide Medicaid rebates for that product. We will help assure compliance with the Social Security Act, PPACA, and HCERA pursuant to rebates; will provide quarterly utilization reports to DHS; and will not obtain manufacturer drug rebates or other forms of reimbursement on enrollees.

Pursuant to requirements of the ACA, we will provide information on drugs administered/dispensed to individuals enrolled in our plan if we are responsible for coverage of such drugs. Specifically, Section 1927(b) of the Social Security Act, as amended by Section 2501(c) of PPACA, requires the State to provide utilization information for MCO-covered drugs in the quarterly rebate invoices to drug manufacturers and in quarterly utilization reports to the Centers for Medicare and Medicaid Services. We will submit all drug encounters, including physician administered drugs, with the exception of inpatient hospital drug encounters, to DHS or its designee for federal drug rebates from manufacturers. Refer to Question 3.2.6, #2 for additional detail.

We acknowledge that DHS participates in the federal supplemental drug rebate program, and as such, we and our subcontractors, including ESI, are prohibited from obtaining manufacturer drug rebates or other forms of reimbursement on the Medicaid enrollees.

Drug Encounter Claims Submission (3.2.6.11)

We will submit a weekly claim-level detail file of drug encounters to DHS or its designee, which includes individual claim level detail information on each drug claim dispensed/administered to members, including but not limited to the total number of metric units, dosage form, strength and package size, and National Drug Code of each covered outpatient drug dispensed to Medicaid enrollees. We will provide this reporting to the State in the manner and time frame prescribed by DHS, including submission of complete and accurate drug encounter data and a rebate file to the State or its designee. We will comply with all file layout requirements, including format and naming conventions and submission of paid amounts. Our claims detail and encounter files follow the NCDPD D.0 layout and include the units, amount billed/paid, and whether the claim was paid or rejected, among other fields. We acknowledge that a complete listing of claim fields required will be determined by DHS. Refer to Question 3.2.6, #2 for further detail.

Our drug claims process recognizes claims from 340B pharmacies for products purchased through the 340B discount drug program at the claim level utilizing the NCPDP field designed for this purpose. Amerigroup Pharmacy Services requires all pharmacies to submit claims in the current NCPDP standard. Where applicable, pharmacies submitting 340B claims for managed Medicaid members must submit claim values required by law or regulation. Upon submission of the claim, pharmacies receive the lesser of the appropriate reimbursement according to the terms of their network contract. In addition, pharmacies may receive reimbursement for a dispensing fee and for professional service fees according to the rates outlined in their applicable pharmacy network contract. In the post-adjudication pharmacy response, Amerigroup Pharmacy Services returns the appropriate Basis of Reimbursement Determination code as applicable to the reimbursement based on the Amerigroup Pharmacy Services contract.

Disputed Drug Encounter Submissions (3.2.6.12)

We will assist DHS or the State's designee in resolving drug rebate disputes with a manufacturer at our expense. Refer to Question 3.2.6, #3 for additional information. We acknowledge that weekly, DHS will review Amerigroup Pharmacy Services' drug encounter claims and send a file back to us of disputed encounters identified through the drug rebate invoicing process. Within 60 calendar days of receiving the disputed encounter file from DHS, we will correct and resubmit any disputed encounters and send a response file that includes 1) corrected and resubmitted encounters as described in the Rebate Section of the Contractor Systems Companion Guide (to be developed and approved by DHS in coordination with its rebate vendor and the MCOs) and/or 2) a detailed explanation of why the disputed encounters could not be corrected, including documentation of all attempts to correct the disputed encounters at an encounter claim level detail, as described in the Rebate Section of the Contractor Systems Companion Guide. Refer to Question 3.2.6, #3 for additional information. We acknowledge that in addition to the administrative sanctions of this Contract, failure to submit weekly drug encounter claims files and/or a response file to the disputed encounters file within 60 calendar days as detailed above for each disputed encounter will result in a quarterly offset to the capitation payment equal to the value of the rebate assessed on the disputed encounters being deducted from Amerigroup's capitation payment.

Amerigroup's affiliates have never had any issues working with states on rebates. As part of our Pharmacy error resolution service, we track client-level encounter acceptance and rejection rates. Across Anthem, the encounter rejection rate for all clients with our error resolution service is 1.86 percent (98.14 percent acceptance rate). Clients enrolled in our error resolution service for six months or more have an average rejection rate of 0.7 percent (99.3 percent acceptance rate).

EPSDT Services for Youth (3.2.7)

Amerigroup will provide early and periodic screening, diagnosis, and treatment (EPSDT) services to all members under 21 years of age in accordance with law. EPSDT services play an important role in the early identification of children and adolescents with specialized needs who may benefit from Case Management interventions or targeted service delivery. Amerigroup shares Iowa’s commitment to promoting preventive healthcare, holistic screening, and comprehensive follow-up for Iowa’s children. We will fulfill all requirements of Iowa’s Care for Kids program and deploy best practice education and outreach to help children and their parents or guardians maximize the benefit from EPSDT services in order to improve health outcomes for the Iowa Initiative’s younger members.

For 24 years, our affiliate health plans have coordinated EPSDT services for children enrolled in Medicaid programs, which has allowed us to leverage best practices to achieve top-quality outcomes for members under 21 years of age that capitalize on our highly coordinated model of care. Table 3.2-6 shows how our affiliates have been recognized by NCQA for achieving top quality outcomes for coordinated EPSDT services.

Table 3.2-6. Our Coordinated EPSDT Services Achieve Top-Quality Outcomes

Affiliate Health Plan	Result (NCQA Quality Compass)
Texas	75 th percentile for Child and Adolescent well-care and children’s access to care
New Jersey	75 th percentile for Child and Adolescent well-care
New York	90 th percentile for Child and Adolescent well-care and children’s access to care

We use our extensive experience to establish policies and procedures for EPSDT services that comply with federal and State rules and regulations related to EPSDT. These policies explicitly state that all EPSDT-eligible members are notified of EPSDT available services; that screening, diagnostic, and

treatment services are available and provided; and that tracking or follow-up occurs to make sure that these services are provided to all of Amerigroup’s eligible Medicaid children and young adults. We recognize that this follow-up is especially crucial for members with disabilities. Our multipronged engagement strategy includes member education (such as our welcome kit and phone call and our member website), member outreach (including our innovative Clinic Days program and incentive programs), community programming (for example, our Head Start immunization program and back-to-school events), and provider outreach (including our PCP orientation and incentive programs).

EPSDT screenings will be performed by providers qualified by the State to perform Care for Kids services. EPSDT services will be provided for new members and on an ongoing basis according to the Care for Kids periodicity schedule. At a minimum, covered screenings will include, but are not limited to:

- A comprehensive health, developmental, and behavioral assessment, updated at each screening examination
- Assessment of Nutritional Status and complete physical evaluation and identification of unusual eating habits, accurate measurement of height and weight, and laboratory testing to screen for iron deficiency
- A comprehensive unclothed physical exam
- Immunizations appropriate to age and health history as recommended by Advisory Committee on Immunization Practices (ACIP)

- Appropriate laboratory tests, lead toxicity screening at 12 and 24 months per current federal requirements
- Health education, including anticipatory guidance and counseling
- Vision and hearing screening
- Dental/oral health screening services furnished by direct referral to a dentist for children beginning at 12 months

EPSDT-related covered healthcare services (not otherwise covered for other populations) may include, but are not limited to, the following services if the services have the potential to correct or ameliorate physical or behavioral health:

- Chiropractic
- Nutrition counseling
- Audiology, including:
 - Hearing screening
 - Audiological assessments; electrophysiological measures such as auditory brainstem response (ABR)
 - Examination, fitting and purchase of hearing aids, including hearing aid accessories and supplies
- Private duty nursing services including:
 - An initial assessment and development of a plan of care by a registered nurse
 - Ongoing private duty nursing services delivered by a licensed practical nurse or a registered nurse
- Durable medical equipment (DME), including assistive devices
- Occupational, physical, and speech therapy services for either habilitative or rehabilitative treatment if the services are not:
 - Specified in the member's individualized education plan or
 - Specified in the member's individualized family service plan and delivered in the schools or through Children's Medical Services community-based providers

IA_3.2.7_COB_4.2

We will partner with local community organizations, schools, and State agencies to provide referrals for services not covered under health plan benefits for members under 21 and their families or guardians. We plan to engage Head Start education programs, the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC), School Health-Related Special Education Services, vocational rehabilitation, and Maternal and Child Health Services located at local health departments.

IA_3.2.7_COB_2.3

We will use internal systems for tracking EPSDT services and EPSDT outreach and monitoring to engage both members and providers. We will also analyze annual Healthcare Effectiveness Data and Information Set (HEDIS®) rates, which align with the Care for Kids periodicity schedule, against national benchmarks and State performance goals to identify opportunities to improve clinical care and service. We have the experience, technology, and staff to continue to improve EPSDT compliance through strategies that are tailored to meet the unique challenges of Iowa's Medicaid populations. It is important to note that all member populations will

have follow-up care and remediation provided to them through the Care for Kids program; we do not view EPSDT as a simple “check the box” exercise.

By promoting timely, age-appropriate Care for Kids services, we will improve children's health outcomes in a multitude of ways. We will improve children's health by making sure all children under 21 receive needed preventative care. We will boost access to high-quality healthcare by partnering with providers such as PCPs and Public Health Departments on EPSDT initiatives like clinic days, where providers dedicate blocks of time (sometimes during extended evening hours, weekends, or school vacations) to accommodate children and their parents or guardians. We will strengthen the relationship between the child (or his or her parent or guardian) and the PCP and/or Public Health Department. We will reduce inappropriate use of the emergency room by fostering appropriate prevention and primary care.

Autism Services

Through our population assessments, we have the ability to identify members who have been diagnosed with autism spectrum disorder. This is defined as any pervasive developmental disorder defined in the most recent Diagnostic and Statistical Manual of Mental Disorders at the time services are rendered, including autistic disorder, Asperger's disorder, Rett's disorder, childhood disintegrative disorder, and pervasive developmental disorder not otherwise specified. For children with autism or a disability, we will provide physical therapy, occupational therapy, speech therapy, and other related services based on EPSDT findings to help members be as successful as they can be (example shown in Table 3.2-7). We will integrate behavioral health and physical health functions to provide LTSS-like benefits, whether the member is eligible for a waiver or not. Environmental specialists will conduct home assessments to make sure the member can access all needed services and supports.

For autism spectrum disorder, we will provide coverage for the following services when such services are prescribed or ordered by a licensed physician or a licensed psychologist and are determined by us to be medically necessary for the screening, diagnosis, and treatment of autism spectrum disorder:

- **Screening and Diagnosis.** We will provide coverage for assessments, evaluations, and tests to determine whether someone has autism spectrum disorder.
- **Assistive Communication Devices.** We will cover a formal evaluation by a speech-language pathologist to determine the need for an assistive communication device. Based on the formal evaluation, we will provide coverage for the rental or purchase of assistive communication devices when ordered or prescribed by a licensed physician or a licensed psychologist for members who are unable to communicate through normal means (speech or writing) when the evaluation indicates that an assistive communication device is likely to provide the member with improved communication.
- **Behavioral Health Treatment.** We will provide coverage for counseling and treatment programs that are necessary to develop, maintain, or restore, to the maximum extent practicable, the functioning of an individual. We will provide this coverage when provided by a licensed provider. Additionally, we will cover applied behavior analysis when provided by a behavior analyst certified pursuant to the Behavior Analyst Certification Board or an individual who is supervised by such a certified behavior analyst and is subject to State standards and regulations.
- **Psychiatric and Psychological Care.** We will provide coverage for direct or consultative services provided by a psychiatrist, psychologist, or licensed clinical social worker licensed in Iowa.
- **Therapeutic Care.** We will provide coverage for therapeutic services necessary to develop, maintain, or restore, to the greatest extent practicable, functioning of the individual when such services are provided by licensed or certified speech therapists, occupational therapists, physical therapists, and social workers to treat autism spectrum disorder. Additionally, as a Value-Added

Service, we will provide additional transportation services to ensure eligible members and their families have access to therapeutic care.

- **Pharmacy Care.** We will provide coverage for prescription drugs to treat autism spectrum disorder that are prescribed by a provider legally authorized to prescribe.

Table 3.2-7. Example of Our Autism-Specific Supports Services

Diagnosis	Examples of Tailored Components	Named Service Coordinator Qualifications	Multidisciplinary Experts
4.3.11.11.a Autism Spectrum Disorder (ASD)	<ul style="list-style-type: none"> • Age-appropriate positive behavioral intervention and strategies • Communication – verbal and nonverbal cues, devices • Strategies for continuity at school and home 	<ul style="list-style-type: none"> • Experience with supporting people with ASD • Knowledge, such as communication disorders, positive behavioral support 	<ul style="list-style-type: none"> • Behavioral Analyst • Autism • Assistive Technology

Screening, Diagnosis, and Treatment (3.2.7.1)

Question 3.2.7, #1

1. Describe your plans to ensure the completion of health screens and preventive visits in accordance with the Care for Kids periodicity schedule.

Through the experience of our affiliate health plans in 19 states, Amerigroup has a fully developed strategy to promote timely EPSDT screenings for our members under 21 and developed best practice methods to enhance Care for Kids outreach. We will maintain extensive educational efforts, including community-based education for members, parents/guardians, and providers. Augmenting this effort, our local Quality and Health Promotion teams will coordinate reminders and follow-ups to confirm compliance with federal and State law regarding the provision of EPSDT services to all members under 21 as part of Iowa’s Care for Kids program.

Amerigroup’s EPSDT DataMart will gather internal and external data to monitor compliance with the Care for Kids periodicity schedule. With this information, we will identify children with upcoming or missed EPSDT screenings and services and communicate with their PCPs. We will then download these data monthly to our Iowa outreach database, which is used by our local Health Promotion Outreach

Specialists to identify member families or guardians who require outreach to follow up on outstanding appointments. We will also analyze annual HEDIS rates, which align with the Bright Futures guidelines, against national benchmarks and State performance goals to identify opportunities to improve clinical care and service.

Each month and as needed, our Quality Management (QM) Department will generate reports that identify EPSDT service gaps and opportunities for member and/or provider outreach. The reports generate actionable information that will enable us to quickly assess the need for follow-up or Case Management interventions and outreach to member families or guardians and PCPs to close gaps in care. These reports are also available to providers.

Each month and as needed, our QM Department will generate reports that identify EPSDT service gaps and enable us to quickly assess the need for follow-up or care management interventions and outreach to member families or guardians and PCPs to close gaps in care.

IA_327_COB_52

Our reports will drive how the quality team monitors, tracks, and conducts outreach to promote EPSDT compliance. These reports will be reviewed regularly by QM employees, with follow-up actions taken as appropriate. Our **pre-service reports** show children who are due for EPSDT services 90 days prior to the due date. These reports are available to Network Providers and are also used internally for outreach to member families or guardians. Our **concurrent reports** display all services, both retrospectively and prospectively, required by an individual child. These reports also include compliance information for overdue services, such as the number of mailed reminders or attempted phone calls. QM employees use these reports to follow up on overdue or outstanding services and identify and address barriers to compliance or reasons past outreach was not successful. Our **retrospective reports** show children who are overdue for EPSDT services. These reports are used to send notices to the member's family, guardian, PCP, or relevant specialist. Amerigroup also runs a variety of **ad hoc reports** based on specific data query parameters. For example, we run reports on EPSDT compliance for a certain age group or geographic area to identify trends in screening rates to help drive outreach and performance improvement strategies.

The EPSDT DataMart aggregates information from several internal data sources, including enrollment and encounter data, to track the provision of EPSDT services. We will supplement internal data with relevant external data sources, such as the Iowa Immunization Registry Information System (IRIS), State fee-for-service and historical member databases, and ongoing claims data for our EPSDT DataMart, and we will regularly train providers on proper coding to boost data integrity. By leveraging all of these data sources, we will identify EPSDT services that may have been delivered prior to enrollment with Amerigroup or delivered through public health departments.

PCPs will typically arrange and provide referrals for children who need follow-up services as a result of EPSDT screenings. The EPSDT DataMart will provide our Health Promotion staff with information to identify and then connect with member families to follow up with the appropriate services in a timely manner. Our Health Outreach Specialist will receive monthly reports to identify children screened and referred for diagnostic and treatment services and to verify if they accessed the services. The Outreach Specialists will then call member parents or guardians for whom we cannot confirm receipt of services. During the call, the Outreach Specialist will work with the parent or guardian to emphasize the importance of follow-up and to address any barriers to obtaining that follow-up care, such as transportation or appointment scheduling.

Our EPSDT DataMart will capture results of lead screening from encounter data when available from labs, allowing us to outreach to the parents or guardians and PCPs of children with positive screens to make sure that they receive follow-up services. These children and their families will be referred for Case Management. Case Managers will facilitate all referrals, coordinate with public health departments, and coordinate a home assessment by an environmentalist.

Amerigroup is committed to promoting a collaborative approach to improving health outcomes for members under 21, and partnering with PCPs and specialists to make sure EPSDT-related health screens and preventive visits are completed is a vital element to achieve that goal. We will maintain processes to monitor provider performance and intervene when we identify improvement opportunities.

Most importantly, we will work with members, parents/guardians, PCPs, and specialists to verify that services are delivered to members. Our Medical Director will consult directly with providers who request treatment or services that do not meet clinical criteria to identify alternatives and explore options that will achieve the optimal outcome for the child. We find this especially important, as many providers are on occasion unclear about the unique criteria for provision of EPSDT-related services. We will continually work with PCPs and any other relevant providers to make sure all required Care for Kids components are addressed, including screens that include health history, developmental assistance, complete physical exam, vision screening, hearing test, appropriate lab tests, immunizations, nutrition screen, and health education including anticipatory guidance, oral health assessment, other tests, and referrals for treatment.

Beyond these data mining operations, we plan to implement various and innovative approaches to member education, member outreach, and provider outreach, to make Care for Kids services widely known, easily accessible, and highly utilized. As an example of these efforts, we will implement our Healthy Rewards program to incentivize members to attend their EPSDT screenings. These financial incentives, coupled with provider incentives for providing complete and timely EPSDT services, are expected to meaningfully impact the rate of EPSDT screens. We discuss these initiatives further in the Section 10.3 Member Incentives.

Reports and Records (3.2.7.2)

We will continually work with the State to provide the required data and reports in the timeline and format specified. We have extensive experience producing or contributing to EPSDT (CMS-416) reports working with our state partners in 19 states.

Our advanced EPSDT DataMart will capture, store, and analyze internal and external data to monitor each member's compliance with Bright Futures guidelines and track EPSDT screenings, diagnoses, and treatment. In addition to claims and authorizations, our EPSDT DataMart will incorporate data from many available sources, including the State and its agents, the Iowa Immunization Registry Information System (IRIS), and lab vendors. We will routinely run reports that identify members for outreach who are due or overdue for EPSDT screenings or who require follow-up treatment services as a result of an abnormal screening. We will send these reports to providers to facilitate appointment scheduling for these services.

Outreach Monitoring, and Evaluating (3.2.7.3)

Question 3.2.7, #2

2. Describe your proposed outreach, monitoring and evaluation strategies for EPSDT.

Amerigroup's affiliate health plans have extensive experience in conducting outreach, monitoring, and evaluation for EPSDT populations that we will leverage for our Iowa program. Our affiliates have successfully implemented member-centric and comprehensive education, incentive, and outreach programs that consistently lead to high levels of enrollment and adherence, such as our New York plan's NCQA Quality Compass rating in the 90th percentile for child and adolescent well care. EPSDT outreach and monitoring are integrated into our quality management function, and we analyze EPSDT performance and HEDIS measures to guide continuous improvement initiatives.

As our affiliates have done in 19 other states, we will establish strong local ties by partnering with community organizations, schools, public health departments, federally qualified health centers (FQHCs), rural health clinics (RHCs), and providers to reinforce high screening rates. In Iowa, we plan to explore partnerships with Easter Seals, the Department of Health, Iowa's Academy of Pediatrics, Iowa Primary Care Association, the Public Health Department Association, Boys and Girls clubs, hospitals or other organizations that offer Lamaze classes, and others.

Member Education, Incentives, and Outreach

We will educate members and their parents or guardians about the importance of preventive healthcare services, actively monitor utilization to verify that members receive timely, age-appropriate services, and employ proven outreach strategies to close gaps.

Education

We will use a variety of education materials, incentives, and opportunities to emphasize to members and their families or guardians the importance of completing EPSDT screenings and any required treatment

IA_3.2.2_COB_1.2

resulting from these screenings. To help assure optimal success in reaching all members, including those hard to reach, we will use a multipronged approach that empowers members, involves families and caregivers, supports providers, and leverages community resources and governmental programs to drive optimal EPSDT screening rates.

New Mom Coach

Our local Health Promotion team calls all new moms within 30 days of birth to educate them about the importance of Care for Kids services such as immunizations and well-child visits. During the calls, we also take the opportunity to talk with them about the importance of a PCP. We will also hold community-based Baby Showers and Diaper Days to educate moms about the Care for Kids schedule and other items.

Taking Care of Baby and Me

Taking Care of Baby and Me is a comprehensive Case Management/care coordination program offering:

- Individualized, one-on-one Case Management support for women at the highest risk
- Care coordination for moms who may need a little extra support
- Educational materials and information on community resources
- Prenatal and postpartum packets containing educational materials

Amerigroup will work with hospitals that provide delivery services to assist them in becoming Baby Friendly certified. This certification is the standard for hospitals who wish to be supportive of breastfeeding moms. The Baby Friendly Hospital Designation partnership will provide additional support to breastfeeding moms. Additionally, Amerigroup will offer incentive gift cards to expecting and new moms to keep up with prenatal and postpartum checkups.

Kid-friendly Materials

Our “Captain Amerigroup” brochures and postcards are kid friendly and include well-child schedules and related information in a format that engages both children and their parents or guardian. See Figure 3.2-11 for a sample from our Louisiana affiliate health plan.

Figure 3.2-11. We Utilize Kid-friendly Material to Engage Both Children and Parents/Guardians

New Member Welcome Call

Parents of new members receive a welcome telephone call within 30 days of enrollment, in which we educate them about the importance of preventive care, including EPSDT screening services in accordance with Bright Futures guidelines.

Healthy Families Program

As a Value-Added Service, members can enroll in our Healthy Families Program, which helps educate members and their families about healthier eating habits. The program is available for families with children who are overweight, obese, or have a history of co-morbid conditions. This six-month program includes a ten-week, family-centric program that meets twice weekly and encompasses all family members. The program includes scheduled telephonic contacts based on stratification of needs. Nurse Coaches use Motivational Interviewing (MI) to engage members in behavior change. MI is a client-centered, directive method for enhancing intrinsic motivation for change by exploring and resolving ambivalence. This communication technique is partnered with the Transtheoretical Model of Behavior Change involving progress through a series of five stages: Precontemplation, Contemplation, Preparation, Action, and Maintenance. PCPs are notified at enrollment and with three-month status updates via right fax. Nurse Coaches send educational materials via mail and refer members to online resources and local activities, when available.

The Healthy Families program involves a registered nurse coach who engages with the member throughout the program. Healthy Families connects mind and body, parents and children, to focus on healthy lifestyle choices through:

- A family-centric approach
- Multiple levels of support via the family and community
- Availability of tangible materials for participants
- Web-based resources for additional information

New Member Welcome Kit

Our new member enrollment packet includes information about Care for Kids services. Our member handbook includes information about the benefits of preventive healthcare, the services available under the Care for Kids program, and where and how to obtain these services, including how to obtain transportation assistance.

AmeriTips

We provide fact sheets to member families or guardians about a variety of health topics, including immunizations, lead screenings, and well-child visits (these are also available to providers).

Member Website

Our dedicated member website provides immediate access to member and caregiver education materials designed to support the understanding of Care for Kids services.

Amerigroup's locally based outreach team will also evaluate data and identify new opportunities to educate members and families about Care for Kids.

Outreach

Our member outreach strategy blends innovative and traditional outreach tactics that are designed to increase participation in the Care for Kids program. On a monthly basis, Health Promotion Outreach Specialists will download data on upcoming or missed EPSDT screenings and services from EPSDT DataMart. Health Promotion Outreach Specialists will use the following strategies, which have been proven effective by Amerigroup affiliate health plans in other states, to reach and educate relevant member families or guardians.

Clinic Days

One of our most successful initiatives among affiliate health plans has been Clinic Days held at key provider offices. We will work with high-volume PCP practices to hold open appointments for Amerigroup members within a block of time over the course of one or several days (sometimes extending evening or weekend hours, or holding sessions during school vacations, to maximize parent or guardian availability). Our Outreach Specialists will contact member families or guardians with due or overdue screenings to schedule appointments during these time slots. We will confirm attendance with member families or guardians the evening before and offer small incentives (such as movie gift cards) to complete the appointment. During Clinic Days, our Health Promotion Team will distribute information about lead poisoning, immunizations, and well-child visits and verify that all Care for Kids components such as immunizations and lead screening (in accordance with Bright Futures guidelines) are completed during the appointment.

Incentives

Incentives offered to member families or guardians (or teenage members) will encourage member engagement in Care for Kids services, as well as other preventive care services. Through our Healthy Rewards program, member families can earn up to \$20 in incentive payments on a Healthy Rewards debit card for completion of EPSDT screening services. They are also entered into a monthly raffle in which we give away a birthday party (for ages three to six) or an iPod Touch® or tablet (for ages seven to 21).

Community Outreach

A hallmark of Amerigroup is our commitment to collaborating with community organizations and agencies, which offers an excellent opportunity to promote EPSDT and conduct screenings. Following the example set by our affiliate health plans in other states, we will partner with local organizations to hold community events where we will distribute AmeriTips, which remind families about Care for Kids and the Bright Futures guidelines. We will also distribute Care for Kids reminder packages through schools that have historically had low screening rates. We plan to escalate outreach during summer months, holding Back to School events that promote well visits and EPSDT screening.

As a Value-Added Service, we will also provide our members access to Amerigroup Community Resource link, which is a searchable online resource for local Iowa community-based programs, benefits, and services displayed in an easy-to-use format and searchable with GPS technology. This tool will be a reliable source of information about local programs and services available throughout Iowa.

Care for Kids Telephonic Outreach and Appointment Scheduling

Amerigroup's Iowa-based Health Promotion team will conduct telephonic outreach to member families or guardians who are due or overdue for Care for Kids services, prioritizing outreach to age groups, ZIP codes, and practices with low screening rates. Monitoring tools will enable Outreach Specialists to view all the gaps in care for EPSDT-related services for each member in a household. When we contact the member or family/caregiver, we will "maximize the moment" by working with him or her to schedule all outstanding services, including immunizations, EPSDT screenings, and well-visit exams for all family members. We will work with the member or family/caregiver to identify and address any challenges or barriers that may limit the member's ability to participate in the screening visit. Based on that information, we can concurrently coordinate support services, such as transportation and referrals. In 2014, our Louisiana affiliate health plan made 10,973 interactive calls to the parents or guardians of child members under the age of 2 who were missing immunizations.

To locate members for whom we have incorrect telephone numbers, our outreach database is populated with alternate contact information supplied through the Nexis® database, offering Outreach Specialists additional opportunities to locate members.

- During outreach calls, specialists will query members or their parents or guardians about why they are not obtaining timely EPSDT screens. We track and trend that information, and the data guides our program improvement efforts. For example, our affiliate health plans in other states have found that the most significant barrier for families in scheduling Care for Kids services is typically conflict with work and school. As a result, we expand our outreach staff and increase the number of outreach calls during the summer months, when families experience less conflict with school schedules.

Annual Care for Kids Reminders

Amerigroup will mail an age-specific Preventive Health Reminder 45 days before each member's birthday, which emphasizes the importance of all Care for Kids services and incorporates a complete schedule of Care for Kids services. In 2014, our affiliate health plan in Louisiana sent almost 220,000 EPSDT reminders to members.

Care for Kids Overdue Service Reminder Postcards

We will mail a Care for Kids Overdue Service Reminder postcard to all member families or guardians with an overdue EPSDT screening 90 days after the due date of a missed service (in accordance with the Bright Futures schedule). The postcard will request that the member or parent/guardian contact his or her PCP to make an appointment and instruct the member or family to call the toll-free Member Services telephone number if the member or family/guardian has any questions, is deaf or hard of hearing, needs help scheduling an appointment, or needs transportation assistance. In 2014, our Louisiana affiliate health plan sent 205,013 overdue service reminder postcards to members.

Newsletter Articles

Our newsletters include reminders about timely preventive and well-care services and encourage member families or guardians to call their PCP to schedule appointments.

Community Programming

Like our affiliate health plans in other states, Amerigroup will continue to maintain a highly visible community presence and partner with schools, FQHCs, providers, and community organizations to conduct health fairs and other events that promote Care for Kids education, including distribution of flyers promoting well-child visits and AmeriTips on EPSDT and immunizations.

Head Start: Engaging Young Children and Parents

Working with Head Start programs has a positive effect on immunization rates and other EPSDT-related measures, as many children enrolled in Head Start are also enrolled in Medicaid. Amerigroup will collaborate with Head Start programs to reach and educate parents. Our Health Promotion team will partner with Head Start to present to parents on health topics (including Care for Kids), to educate children and families or guardians about dental health, to conduct on-site lead screening, and to deliver well-baby presentations and baby showers for expectant and new moms. We will also ask Head Start representatives to participate in our Health Education Advisory Committees, which offer guidance and input into, among other areas, Care for Kids education and health promotion.

Back-to-School Events: Engaging School-aged Youth

Annually, we plan to conduct back-to-school events at which we engage with members and their families about health issues, including distribution of Care for Kids educational flyers. This includes our hallmark Repack the Backpack events, in which we provide kids with free backpacks and back-to-school supplies (such as notebooks, pens, and pencils), educate children and their families about preventive health, and conduct free health screenings. As noted below, we also will distribute Care for Kids educational folders in partnership with school districts in ZIP codes with low screening scores.

Teen Engagement Strategies

Teens and adolescents are the most difficult audience to reach to boost EPSDT screening rates. They do not require annual school physicals and often do not show for appointments set by parents or guardians. In our experience, face-to-face education, coupled with appropriate incentives, are vital to boosting screening rates for members age 12 to 21. We will directly interface with and educate these members through community events. For example, our affiliate health plans partner with local Boys and Girls Clubs and the Police Athletic League. As a Value-Added Service in Iowa, Amerigroup will partner with local Boys and Girls Clubs to provide free memberships for Iowa teens and adolescents. We will also work with providers who serve this population to hold evening events and weekend clinic days and coordinate EPSDT screenings with sports physicals. We plan to implement age-appropriate incentives (gift cards and drawings) to contribute to improved adolescent well-visit rates.

In New York, our affiliate health plan has been successful convening a bimonthly Teen Advisory Board to discuss topics that include well visits and screenings and produce a teen newsletter. We will consider deploying this program in Iowa as well.

Provider Education, Incentives, and Outreach

An integral element of our Care for Kids strategy is PCP engagement and education. Timely Care for Kids services strengthen the PCP relationship. Our field-based Provider Relations team and our Health Promotion teams will work collaboratively to build physician and office staff knowledge about Care for Kids services and the Bright Futures guidelines. Most importantly, we will deliver tools that detail PCPs' quality performance metrics relative to their peers and share best practices to improve those metrics.

PCP Orientation

During orientation for PCPs and PCP office staff, we review a training module titled "Improving EPSDT Screening for Members." The training explains EPSDT services, benefits, periodicity schedule and guidelines, reporting and coding, Amerigroup outreach, and links to other support tools.

Physician Outreach

With EPSDT monitoring data, we identify PCPs with poor performance records and focus our outreach efforts on these providers, such as through education with our Chief Medical Officer or QM and Provider Relations staff.

Incentives

Care for Kids services are part of our PCP Quality and Population Management provider incentive program, as described in Section 10.3, to further incentivize PCPs to use the data, tools, and training we provide to close gaps in Care for Kids services. That program includes the HEDIS measures for Well Child Visits (0-15 months of life), Well Child Visits (age 2-5 years), and Adolescent Well Care Visits (age 12-21 years) in the overall measure set for the program.

Engaging School-based Health Clinics

Augmenting our PCP education, Amerigroup will work with school-based health clinics to encourage their involvement in Care for Kids services, which promotes convenience for members and families. Amerigroup is one of the only MCOs to partner with school-based clinics.

Vaccine for Children (VFC) Education

As part of our physician education program, we educate providers about VFC, a federally funded program that provides vaccines at no cost to children who might not otherwise be vaccinated because of inability to pay. Program grantees like the state health departments and certain local and territorial public health agencies distribute vaccines at no charge to private physicians' offices and public health clinics registered as VFC providers.

Care for Kids Physician Toolkit

Amerigroup's Care for Kids Provider Toolkit includes an overview of Care for Kids requirements, a quick reference guide, a list of preventive care resources, and EPSDT assessment summaries for all age groups.

EPSDT Medical Record Audit

Amerigroup conducts quarterly EPSDT audits to assess PCP compliance with Care for Kids requirements. The results of that audit drive individual as well as network PCP education about Bright Futures guidelines to boost compliance.

Reports

We will deliver actionable information to enable PCP practices to reach out to members to remind them about the need for Care for Kids services and schedule upcoming or overdue Care for Kids services.

Provider reports will include the following:

Pre-service Reports show members enrolled in each PCP practice who are due for Care for Kids services 90 days prior to the due date.

Overdue Care for Kids Service Listing for Members summarizes members with overdue Care for Kids services, including member demographics, services that are overdue, and the date that the service was due. In 2014, our Louisiana affiliate health plan sent 63,519 letters.

Monitoring & Evaluation

Our QM program will monitor and measure the outcomes of clinical care and services by analyzing clinical and service performance indicators and healthcare outcomes to identify and act on opportunities for improvement. The QM team will compare EPSDT and HEDIS findings to results from previous years and to NCQA's National Quality Compass and the federal screening target of 80 percent. We also acknowledge that well-child measures are included in the State's pay-for-performance program.

Together with the Health Promotion and Member Outreach Services Manager, our Health Promotion Consultant will be responsible for continually monitoring EPSDT performance and communicating with the Plan Compliance Officer about any performance risks related to the contract, such as if EPSDT rates fall below required performance standards. Our Health Promotion Manager also reports to the QM Committee, which will oversee all quality operations within Iowa.

Our local QM nurses will review medical records by fax or mail and also conduct education about processes or tactics to improve EPSDT compliance. This audit will verify whether records include documentation that all EPSDT screenings and follow-up visits have been completed.

Improving Performance

Amerigroup will collaborate across multiple functional areas to identify, monitor, and prioritize clinical areas for improvement that result in improvement on targeted clinical measures, including EPSDT rates, from the prior year's rate. We have embedded EPSDT compliance functions throughout our organization, including QM, Provider Relations, Compliance, and Health Promotion staff. For example, during our quarterly EPSDT provider audit, the QM team will randomly select providers to participate in the audit. We will review their medical records to assess their compliance with EPSDT requirements. We will create Corrective Action Plans (CAPs) for providers that fail to meet the minimum standards, educate the provider about Bright Futures guidelines, and re-audit to verify that the provider is now compliant.

When we identify underperforming EPSDT compliance trends (below the 80 percent threshold), we will undertake educational efforts to improve performance. For individual providers, this means

We have embedded EPSDT compliance functions throughout our organization, including Quality Management (QM), Provider Relations, Compliance, and Health Promotion staff.

IA_3.2.7_CGB_8.2

education about the requirements and development of a Corrective Action Plan that maps out what the provider needs to do to become compliant with a follow-up audit. More strategically, we will educate all providers about our audit results through newsletters and our provider website to educate them on EPSDT elements that do not meet the 80-percent threshold, reinforcing the screening requirement and tools.

Augmenting audits, we will emphasize provider collaboration to improve health outcomes. PCP practices with a certain panel size (to be determined to include as many providers as feasible while maintaining meaningful data usage) will receive quarterly quality measurement reports that show each provider’s performance relative to key quality metrics, including Bright Futures components such as immunizations, lead screening, and well-child visit rates for children and adolescents. They will be able to see their individual performance relative to the State’s target rate and the health plan’s rate (claims only) and the number of additional members they need to see to hit the target. With these data, our QM and Provider Relations teams can then share information and strategies on how to measurably improve their quality performance.

In addition, our Medical Director will share audit results with the Iowa chapter of the American Academy of Pediatrics so that we can collaboratively educate Iowa pediatricians on EPSDT requirements. This collaboration boosts provider compliance with Bright Futures guidelines for all Iowa children.

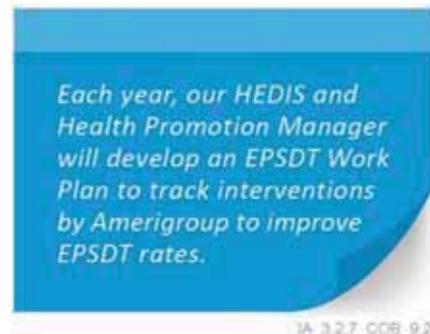

We also intend to collaborate with the State to identify new opportunities to enhance our EPSDT performance. For example, in Wisconsin, our affiliate health plan launched a CAHPS Workgroup project to make contact with members, including members under 21 and their parents or guardians, identified as visiting the emergency room (ER) for non-emergent treatment, without a PCP visit in the calendar year, to provide education on engagement with their PCP to ensure those members receive appropriate health, mental health, and developmental services. The outreach also stressed the importance of consistent checkups to identify problems early and to obtain proper diagnosis and treatment. From December 2014 to March 2015, the health plan connected with 479 members under 21 (or their parents or guardians) and collected information on why they visited the ER. Results are below in Table 3.2-8.

Table 3.2-8. Our CAHPS Workgroup Project in our Wisconsin Affiliate Gathered Data on Reason for ER Visits to Enhance EPSDT Performance

Reason For ER Visit	Member Response Totals	Percent of Responses
PCP Closed	19	4.13%
Urgent Care & PCP Closed	125	26.10%
Referred to ER	46	9.60%
No Appointment Available - PCP	25	5.22%
Didn't know of other options	81	16.91%
Does not recall/Unsure	37	7.72%
Felt ER was best option	146	30.48%

These members received primary care, emergency care, and member service education about:

- Urgent care locations, nurse line services, and alternatives to ER care
- Available support for contacting and attempting to schedule an appointment with a PCP
- Additional information on EPSDT and HEDIS measure–related screenings offered to 264 members under the age of 21 (or head of household)
- Additional support in scheduling preventative screening-

related services with a PCP offered to 106 members under the age of 21 (or head of household)

- Each year, our HEDIS and Health Promotion Manager will develop an EPSDT Work Plan to track interventions by Amerigroup to improve EPSDT rates. The EPSDT Work Plan will tie key performance metrics to outreach and education interventions, assign business owners to each intervention, and set timelines for completion. Amerigroup's Health Promotion Consultants will monitor the status of the interventions and use the information to adjust our Care for Kids efforts accordingly. We will also use an internal tracking software system to track, coordinate, and report events to the State.

Additionally, our Child/Adolescent Domain Workgroup will function as a best practice engine to support Iowa in meeting child/adolescent preventive health HEDIS P4P/VBP/EPSTDT targets and Performance Improvement Plan (PIP) goals. We will develop and share best practice interventions to improve HEDIS and EPSDT rates, as well as member health outcomes, while reducing fiscal and other risks.

Child/adolescent subject matter experts participate and serve as a leader in the identification, research, and implementation of corporate, member, provider, and system interventions. State Health Plan QI leaders and/or designees as well as all interested affiliate health plans will be invited to participate as active contributors to the workgroup to ensure a broad perspective during the entire process from information gathering, analysis, and identification of best practice interventions to pilot implementation.

We are confident that our education, outreach, incentive, tracking, and continuous improvement processes described above will promote comprehensive EPSDT service delivery for Iowan members under 21. We are committed to providing these crucial services to assure optimal member outcomes and cost-effective care and service delivery.

Behavioral Health Services (3.2.8)

Question 3.2.8, #1

1. Describe your proposed approach for delivering behavioral health services, including the use of any subcontractors.

Approach for Delivering Behavioral Health Services

Amerigroup Iowa (Amerigroup) will bring a behavioral health program to Iowa that delivers highly coordinated covered benefits that are fully integrated across our health plan. Amerigroup will directly administer the delivery of mental health and substance use disorder treatment and support services that are localized, customized, evidence-based, and, above all, recovery and resilience-driven. We will not subcontract to a behavioral health organization or affiliate to administer behavioral health benefits and services. ***We will build upon the experience of 15 of Amerigroup's 19 affiliate health plans that coordinate the delivery of fully integrated physical health and mental health and substance use disorder treatment services, and in seven states, long-term services and supports (LTSS).***

Amerigroup affiliates coordinate the full spectrum of behavioral health services, including home and community-based services for children with a serious emotional disturbance. We also currently cover services similar to Habilitation Program services for members with a serious mental illness in many of our health plans, including in Kansas, Tennessee, and Texas. Additionally, we will cover 1915(i) services along with a full spectrum of physical and behavioral services in December 2015 as a Bayou Health Plan in Louisiana and as a Health and Recovery Plan in New York beginning the in January 2016.

Our Recovery-Based, Integrated, Collaborative Approach

Our approach in Iowa will extend the significant work done by the State, advocacy groups, consumers, families, and local providers to further evolve behavioral health services coordination, integration, and delivery. We will combine clinical evidence, member support needs, and State customer needs with our affiliates' deep and extensive knowledge and experience to implement a recovery-based, integrated, and collaborative model that welcomes and engages members in their personal recovery efforts.

- Our staff will **promote recovery and resiliency** throughout the provider network and in our interactions with members and their families with the goal of maximizing community integration. A recovery philosophy that is hope based and focuses on member self-determination; developing empowering relationships; having a meaningful, productive role in society; and eliminating stigma and discrimination is the foundation for collaboration and integration of health services.
- As a leader in offering a **truly integrated model**, we do not separate the management and delivery of mental health and substance use disorder services from physical healthcare, pharmacy services, and LTSS, including social supports. Our highly experienced national behavioral health management team will be a seamless component of the Iowa Initiative, providing national behavioral health expertise. Amerigroup's behavioral health, physical health, and LTSS clinicians will work together as a single team using a single care coordination and management system to deliver fully integrated care.
- We will use the Amerigroup Member 360 capability to **support coordination and delivery of recovery-based, integrated care**. Member 360 is an easy-to-use dashboard that integrates a variety of member data, including HEDIS care alerts, authorizations, prescriptions, lab results, and claims organized by type such as inpatient, emergency room, office visit, and behavioral health services. In addition, each time there is a change in a member's medical or behavioral health condition as indicated by a new or modified authorization for services, our system can automatically generate an email to the Integrated Health Home encouraging them to check Member 360 for updated clinical information so updates can be made to the member's care plan.
- Amerigroup will also deliver an **information-sharing and collaborative platform** where interdisciplinary team participants can review and contribute to the care plan as authorized by the member. The platform is operational today in several states currently serving members with disabilities and mental health and substance use conditions, including individuals with intellectual and developmental disabilities or those with a serious mental illness.
- We will collaborate **with local and state-based stakeholders** (such as families, natural supports, advocacy organizations, and network providers) to ensure access to integrated mental health and substance use disorder services and to the social supports families and children need to maintain a stable and safe family environment and that adults need to live independently.

We will focus on:

- **Prevention** — Working with providers, the community, and consumers around evidence-based interventions for prevention of behavioral health disorders; for example, evidence-based, targeted, time-limited, parent-infant communication training for at risk families that has a clear connection to improved outcomes
- **Early detection** — Using comprehensive screening programs to identify and treat member's service and support needs early
- **Peer support and recovery** — Growing Iowa's strengths-based program grounded in member choice and recovery

- **Enhanced access to mental health and substance use disorder services** — Through provider development activities and the use of innovative care delivery technologies, including telehealth and online consultation
- **Enhanced access to community supports** — Especially housing, education, and employment through collaboration with community-based organizations (CBOs), county agencies, advocacy groups, providers, and the State
- **Provider collaboration and partnerships to pay for value rather than volume (pay for performance)** — Recognizing that this transition may take more time for some and less time for others. This collaboration is provider specific and takes into account provider experience and preferences.
- **Innovative, integrated physical and behavioral healthcare model design** — Promoting, supporting, and developing additional integrated care model capacity including increasing access to patient centered medical homes (PCMHs), Iowa Accountable Care Organizations (ACOs) and Chronic Condition Health Homes (CCHHs), and Integrated Health Homes (IHHs). For example, one of our recent agreements with a primary care provider (PCP) group includes quality threshold targets for both physical and behavioral measures.

Amerigroup Will Actively Promote Recovery at Every Opportunity

From our experience helping states transition to integrated models, including our collaboration with states such as Tennessee and Kansas, we understand that ground-breaking systems change, such as moving from a behavioral health carve out to integrated services model, requires the involvement of the State, providers, members, advocacy organizations, and other stakeholders. We will work collaboratively to develop Iowa-specific initiatives that build on the existing recovery-based behavioral health foundation.

Amerigroup will work to improve recovery outcomes, including participation in employment and educational opportunities, using a variety of managed care tools and initiatives.

- We will promote recovery in all of our internal, external, member, and provider communications.
- Our Case Managers will work with members, their families and representatives as well as other members of the interdisciplinary team to develop care plans that promote recovery and work with behavioral health providers to align the members' treatment plan and care plan.
- We will evaluate recovery-oriented questions in our annual member and provider satisfaction surveys, analyze the results, and share these with members, providers, and quality committees as described in Section 10.1.
- We will leverage our data analytics to track members' progress on key outcomes, such as employment and education, and develop and share blinded provider profiles displaying member outcomes using provider peer comparisons.
- We will develop a provider scorecard, similar to the scorecards used by our affiliate plans in Florida, Georgia, and Tennessee, that report on key quality and clinical measures and analyzes data trends. Scorecards are an effective way for providers to receive feedback and use that feedback to improve their performance.
- We will tie outcomes to provider incentives described in Section 10.3 of our proposal, such as the Behavioral Health Incentive Program (BHIP), which we have successfully implemented in other states such as Tennessee.
- We will support or provide training and consultation to providers on EBPs that promote recovery and distribute recovery-based clinical practice guidelines (CPGs). We will deliver EBP and CPG training across the State at both individual practices and through group settings. We will also track

EBP implementation and provide additional training and coaching as needed. We will encourage experienced providers who have specialized expertise in the areas of recovery and resiliency to work with less experienced providers.

- We will seek suggestions and input for increasing provider adoption of EBPs from the provider network, DHS members, and other key stakeholders, including from our proposed Behavioral Health Advisory Committee (BHAC).

Behavioral Health Services Will Be Coordinated by a Specialized and Locally Based Behavioral Health Team

We recognize that members with behavioral health service needs require specialized expertise from clinical staff with training, skills, hands-on experience, and extensive local knowledge. We have a proven track record of rapidly recruiting a team with local roots and experience covering services, benefits, and populations served. For example, our Kansas affiliate, which covers a similar array of services and enrolls a similar population to the services and groups included in the Iowa Initiative, completed readiness activities from contract award to implementation in seven months.

Our behavioral health team in Iowa will be uniquely skilled at holistically addressing each member's needs—behavioral, physical, social, and functional. We will recruit Iowa-based behavioral health staff including:

- Behavioral Health Medical Director (an Iowa licensed psychiatrist)
- Iowa-licensed, behavioral health managers
- Behavioral health licensed staff, such as psychologists, social workers, and psychiatric nurses with specialization in in child, adolescent, and adult mental health and substance use disorder treatment
- Family and peer specialists who will be Iowa-certified peer support specialists
- A behavioral health network management specialist

We will also identify members of our behavioral health team who will provide specialized expertise in a variety of areas, including:

- Recovery and resiliency
- Intellectual or developmental disabilities
- Trauma-informed care
- Housing and employment
- Forensics and juvenile justice
- Quality improvement

A health home manager and dedicated staff, including peer specialists, will work with contracted health homes including IHHs collaborating with the behavioral health team to support the delivery of evidence-based, integrated care.

Our Iowa-based team will be supported by the national resources of our parent company and affiliate health plans, including clinicians with expertise in child psychiatry, eating disorders, and addiction medicine.

Collaboration Will Drive Increased Access to Integrated and High-Quality Recovery-Focused Services

We will collaborate with local and state-based stakeholders, including members and their families, advocacy organizations, network providers, CBOs, and county and state agencies, to provide access to the

full continuum of integrated physical health, mental health, and substance use disorder treatment services, as well as community-based supports for members with long term services and support needs.

Our affiliate health plans are collaborating with and implementing innovative provider arrangements that recognize the importance of offering members readily accessible primary and behavioral healthcare in a single location. For example, we are working with integrated provider systems in California, Florida, Georgia, Kansas, Maryland, New York, Tennessee, Texas, and Virginia. These integrated arrangements take a variety of forms, including integrating primary care into community mental health centers (CMHCs), and providing PCPs with in-office behavioral healthcare coordination and consultation services. Dedicated Amerigroup staff are supporting and promoting PCMHs and health homes. Reimbursement includes incentive arrangements that promote the provision of high-quality, integrated, and coordinated care such as the BHIP described in Section 10.3.

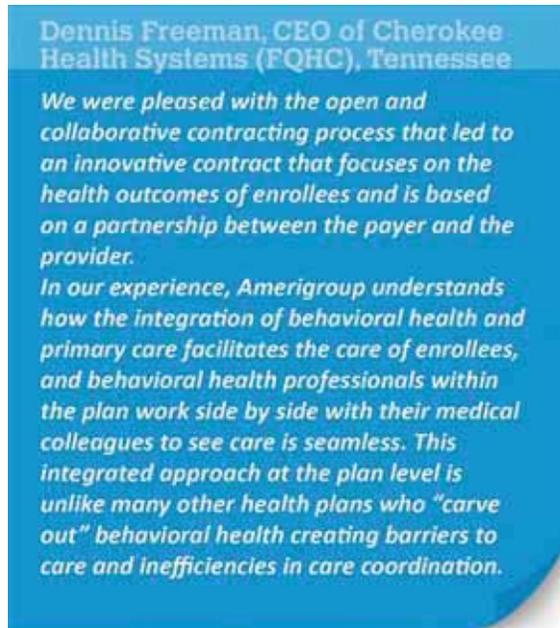

We fully support initiatives like Iowa's IHHs and have already begun work to develop additional integrated provider options in Iowa, which will be a primary focus for Amerigroup. For example:

- We have held discussions with 36 CMHCs and executed Letters of Intent (LOIs) with 16.
- We are discussing integrated care opportunities and look forward to extending and deepening those conversations. For example, we will contract with Eyerly-Ball CMHC and its co-located PCPs.
- We have also executed a LOI for inclusion of Stead Family Department of Pediatrics at the University of Iowa and its 14 Title 5 clinics that will provide IHH services for children with special healthcare needs.
- We are in discussions with the Iowa Primary Care Association to develop, with their agreement and DHS' authorization, an innovative, value-based agreement similar to the one implemented with Cherokee Health Systems of Tennessee, considered one of the premiere integrated models in the nation. This agreement rewards improvements in quality and improved care outcomes, shifting the provider incentive universe from volume to value.

We will also partner with local communities to identify and develop additional services and supports that enable members to live and participate fully in the community, such as innovative housing arrangements and employment options.

Our Integrated Care Model

Amerigroup will provide fully integrated physical health, mental health, and substance use disorder, and LTSS care management using our proven interdisciplinary team infrastructure, processes, and technology tools, promoting high quality, cost-efficient, and well-coordinated care. We serve our members through a "whole person" approach that supports members' physical, behavioral, cognitive, functional, and social strengths and support needs across the full spectrum of healthcare settings and living arrangements. Our person-centered model helps members optimize their benefits and available services to get the high-quality healthcare and support they need. Our care coordination and integrated care model is described in detail in Section 9.0 and summarized here. Members enrolled in the Habilitation Program or Children's Mental Health Waiver and an IHH will have an IHH care coordinator

who works closely with Amerigroup Community-Based Case Managers and the behavioral health team. The IHH care coordinator will provide care coordination and service planning, as described in Section 3.2.11.

Our interdisciplinary team, which will include physical health, behavioral health, and Community-Based Case Managers and specialists, will work together on a day-to-day basis and during joint rounds to design and execute a single, person-centered care plan based on members' holistic support needs and goals. Behavioral health Case Managers will work with adult members with serious mental illness and/or substance use disorder and child and adolescent members with a serious emotional disturbance with case management and care coordination needs.

Behavioral health Case Managers will also review whether the member is enrolled in an IHH or CCHH, and if not, evaluate a referral to an IHH or CCHH. If the member is enrolled in either, the case manager will work in concert with the IHH or CCHH care coordinator, member, and family to support the member's recovery journey.

Members and families will receive the level of case management and care coordination support needed. Case management includes complex case management for members who have more intensive care coordination needs and specialized interventions during transitions among different levels of care and life transitions (pre-school to school age, adolescence, transition to adulthood and adult systems of care, and aging). Members are identified for case management through risk stratification (described in Section 9.1.4) based on specific events, such as inpatient admission, and through referrals, both internal (from other areas of the health plan such as member services and utilization management [UM]) and external (from families, providers, schools, social services agencies, and State agencies such as corrections).

Complex Case Management

Members are prioritized for specific levels of case management support based on the intensity of their needs. Members with the highest intensity needs are enrolled in complex case management.

Case Managers work with the member to complete a recovery-focused, comprehensive, person-centered assessment that forms the foundation for the development of a person-centered care plan. The case manager focuses person-centered planning on the member and member's family and includes others of the member's choosing, including the member's PCP, behavioral health providers, community-based support providers, schools, and others involved in the member's life. For example, for a child in foster care, the team might include the child's foster care parents, a school representative, and representatives from the appropriate State and local agencies and organizations.

The care plan documents the member's goals, including recovery-oriented goals, and includes physical health and behavioral health benefits as well as non-Medicaid funded services. The team reviews the member's health status and works with the member and, as appropriate, family and others of the member's choosing to identify any potential gaps in service or barriers to success. LTSS benefits and case management interventions are also integrated into the care coordination and management system supporting development of an integrated care plan/service plan for members with long-term care needs.

After soliciting feedback from other members of the team, including providers, the care plan is finalized. The completed care plan is shared with involved parties (as well as being visible in Member 360) and becomes a dynamic document, evolving as the member progresses, with ongoing input from members of the interdisciplinary team.

The member remains enrolled in complex case management until they have achieved their recovery-oriented goals and may transition to care coordination or determine they no longer need care management.

Episodic Case Management

Some members and their families need case management during specific events including during life transitions, such as transition from childhood to adolescence and transition to adulthood; transitions in levels of care, settings, or providers; and during and following an acute episode of care. We describe specific types of episodic case management in Section 9.0. Examples of case management strategies for members with behavioral health needs that we will implement in Iowa include:

Case Management for a First Episode of Psychosis

Members experiencing a first episode of psychosis (FEP) will receive comprehensive case management and referral to resources that provide recovery-oriented support services for young people who are experiencing a FEP. Members who are hospitalized with a FEP will receive discharge planning and transition support from a behavioral health case manager, including referrals and follow-up to help ensure they are receiving essential behavioral health and wraparound services. A member with a FEP is an ideal candidate for an IHH with an emphasis on self-care and health promotion activities as well as linking and coordinating with other health and community-based service providers.

Inpatient Discharge Planning and Transition

We will implement field-based case management to coordinate discharge planning for high-risk members who are in jeopardy of long lengths of stay or who may be at risk for readmission. If the member is enrolled in a health home, our behavioral health case manager will collaborate with the member's health home care coordinator to support discharge planning and transition.

Field-based Case Managers or a peer specialist will engage and assess members in inpatient settings, evaluating member strengths, the member's support system, and available resources. We will work with the member, health home as applicable, and other members of the interdisciplinary team to establish short-term goals based upon outcomes from the visit and update the plan of care identifying needed services and supports to achieve timely discharge and help ensure stability in the community. We will collaborate with the inpatient facility discharge planner, advocate on behalf of the member, schedule follow-up outpatient visits, and arrange for necessary support services such as housing or transportation. We will document findings and outcomes in our care coordination and management system, which is visible in Member 360.

We will also engage, where clinically indicated, our Bridge on Discharge providers who initiate contact with the member while in the inpatient unit and schedule a first transition outpatient visit. Together, we will work with members to develop comprehensive relapse prevention plans that address member goals in the community and development of a crisis plan.

Additionally, as Value-Added Services, we will provide a post discharge kit and free home-delivered meals to eligible members and their families. The discharge kit provides tools for family members and caregivers to successfully help transition members from hospital to home, aid in recovery, and help decrease the chances for readmission. The meal program provides nutritious home-delivered meals, which allows members to focus more on recovery rather than proper nutrition, shopping, or finding a caregiver to prepare them.

Transition Age Youth

Transition Age Youth with serious mental illness are three times more likely to be involved in criminal activities than adolescents without mental illness. They are also four times less likely to be engaged in any gainful activities including employment or enrollment in college or trade school. Our strategies for supporting Transition Age Youth include evaluating for inclusion in complex case management, transition planning assistance from a care coordinator and case manager who help ensure continuity of care and services providers.

In addition, as part of our integrated approach to care, our medical Case Managers evaluate adolescents in complex case management when they reach the age of 18. The purpose of this evaluation is to determine

the need for any additional behavioral health support secondary to the combined stress resulting from youth to adult transition and the stress associated with a complex medical condition (such as diabetes or sickle cell disease). This evaluation also takes into account the member's eligibility for a health home or current enrollment in a health home.

We will work closely with State, local, and community programs that provide related educational, health, and social services to youth-in-transition members. Together, we will promote access to available services and resources for the youth, their involved biological family, foster family, and adoptive family as requested. We will work with these organizations to coordinate care with providers who can help equip youth to develop self-care skills to transition to adulthood successfully. Case Managers will also develop a transition plan and contact current treating providers to confirm that an appropriate plan is in place for coordinating the child's integration into the adult service delivery system. Because the children's system of care typically offers a greater array of publicly funded services, our Case Managers work with involved state agencies, local services agencies, and CBOs to identify ways to bridge service gaps using community-based services.

Case Rounds

Regular case rounds assemble the regional team, with the medical director and behavioral health medical director, to address member's complex care needs. For example, our New York affiliate identified a member with repeated emergency room use who refused to participate in care coordination and whose family also refused. The medical director contacted the member's PCP who had a long-standing relationship with the member and working through the provider was able to engage the member in care coordination and address avoidable emergency room use.

Coordination with Integrated Health Homes or Chronic Health Homes

Behavioral health case management and care coordination will always involve careful evaluation of the member's eligibility for, or current enrollment in, either an Integrated Health Home or Chronic Health Home. If a member is eligible, we will discuss potential enrollment in either an IHH or CHH. If the member enrolls, we will carefully align and coordinate the services provided by Amerigroup with the services being provided through the IHH or CHH. In this way, we help ensure non-duplication of services and the most efficient use of resources. We will document this coordination in our care coordination and management system.

Additional detail about the coordination with IHH and CHH is included in Section 3.2.9 and 3.2.10.

Question 3.2.8, #2

2. Describe how your proposed approach will incorporate the values outlined in Section 3.2.8.1.

We will extend the significant work done by the State, advocacy groups, consumers, families and local providers by collaborating to evolve behavioral health services. We will combine clinical evidence, member needs, and State customer needs with Anthem's extensive knowledge and experience providing integrated, high-quality behavioral health and physical health services.

Amerigroup affiliates adhere to the principles included in SOW Section 3.2.8.1, and we will build upon the existing programs and policies of our affiliate health plans to implement these principles. Our philosophy in the design and delivery of behavioral health services and supports incorporates our values of integration, collaboration, and recovery.

Our Approach Is Built on a Recovery and Strengths-Based Foundation

Our coordination and delivery of behavioral health services are recovery and strengths-based and built upon Amerigroup's guiding principles.

- **Members are empowered with voice and choice to be in control of their health and health supports.** This person-centered philosophy emphasizes self-direction, responsibility, and independence and recognizes that there are many pathways to recovery, resiliency, and wellness.
- **Acceptance, respect, responsibility, and hope are essential to health.** Hope is fostered based in the knowledge that personally valued recovery is possible.
- **We value diversity.** We are responsive to cultural, ethnic, and racial differences consistent with the needs and desires of the members we serve, and we uphold their rights, dignity, and self-determination.
- **Health is not just the absence of illness.** Health is a state of complete physical, mental, and social well-being.
- **There's no health without mental health. Mental health and physical health are not and cannot be separate.** A whole-person approach implies a unified system of care and works to positively shape and strengthen mental, social, cultural, political, and economic environments.
- **Our role is to collaborate with providers. Without healthy and robust provider partnerships, we cannot succeed.** Our providers have the ability to engage our members in a way that can alter the course of our members' lives.
- **Enhanced quality and outcomes.** Our goal is to provide tools, support, and incentives to our providers to help them deliver optimal care and, at the same time, enhance quality and outcomes.
- **We do the right thing.** By supporting members on their journey to health wellness, healthcare resources are used more efficiently, members achieve better outcomes and maintain community tenure, and the system as a whole benefits.

Our behavioral health team will use evidence-based practices to provide the level of support most appropriate for each member based on the member's desired outcomes, identified needs, and personal recovery efforts. A recovery philosophy—hope based and committed to member self-determination, empowering relationships, and a meaningful productive role in society while eliminating stigma and discrimination—is the foundation for our work.

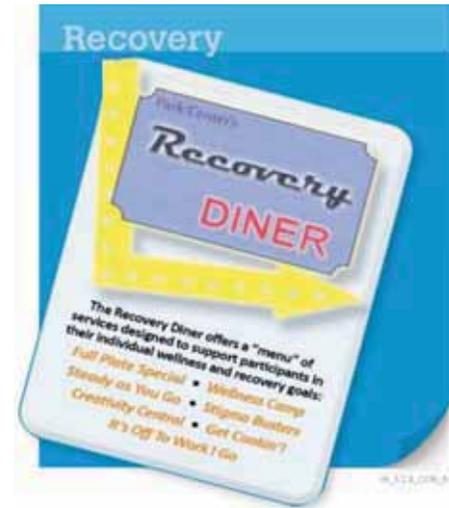

Services will be managed and coordinated by a team that involves the disciplines necessary to meet the member's needs holistically and which allows us to share a comprehensive view of the member's health, functional status, and recovery. Overlaying these efforts is our absolute commitment to putting the member and, as appropriate, caregivers, at the center of the process and fully engaging the member in treatment.

We collaborate with providers, members and their families, and stakeholders to deliver and continually advance a recovery-oriented system of care.

- **We will evaluate our provider network's use of EBPs.** We promote adoption of key EBPs, and our clinical team is trained in EBPs. Our EBP strategy is to collaborate with providers and the larger stakeholder community to identify the EBPs most likely to have the greatest clinical impact on the largest number of members given current practice patterns and practice capabilities. This approach is consistent with the State's promotion of EBPs, such as IDPHs' program that trains and disseminates information to providers to promote adoption of Multi-Dimensional Family Therapy for adolescents involved with the justice system.

- **We will train our provider network and staff on mental health awareness.** We will implement and promote mental health awareness month activities, in partnership with local advocacy groups. For example, a local NAMI representative or other advocacy group representative, usually either a family member or a person with lived experience, will meet with members and health plan staff who interact with members to discuss mental illness/substance abuse and the barriers individuals with mental illness/substance abuse face in healthcare and community living.
- **Increasing access to recovery-focused community services will be a key goal for Amerigroup, Iowa.** Our affiliate health plans, supported by national resources, have a long history of piloting new innovations to address local needs and to drive improved outcomes; successful programs are quickly implemented on a large scale. For example, our Tennessee affiliate health plan recognized the need for more recovery-oriented services and asked Park Center’s leadership to partner with us to increase access to wellness and recovery services for adults. *“Recovery Diner” shown in Figure 3.2-12, serves as a best practice in the areas of psychosocial rehabilitation, supported housing, and supported employment.*

Figure 3.2-12. Recovery Diner Offers Services Designed to Support Participants in Their Wellness Goals

Park Center enhanced its model by implementing the evidence-based Dartmouth model for supported employment. The model demonstrates that when individuals who are interested in working receive supported employment services, even when they are experiencing symptoms of serious mental illness or substance use disorder, they can get better when they work, no matter where they are in their recovery journey. Park Center reported positive recovery outcomes. They found that 88 percent of the Amerigroup adult members with psychiatric disabilities who obtained a job retained it for 90 days. Amerigroup and Park Center are working to expand the current arrangement to formalize our joint focus on outcomes measures. We look forward to creating similar programs in Iowa.

- **Members with a mental illness or substance use disorder, their families, providers and other key stakeholders will be active participants in our program development and quality improvement activities.** We will form a Behavioral Health Advisory Committee (BHAC), similar to the ones we have implemented in New York and Tennessee, and comprised of members, family members, providers, and advocates. BHAC informs our overall approach to recovery-focused treatment, provides guidance, oversight, and evaluation for our programs, including EBP access to care, stigma cultural competence, and health disparities. The BHAC is a best practice used by our affiliates and meets quarterly. *For example, our Tennessee affiliate’s BHAC has 45 participants of which 53 percent are member and family representatives and 23 percent are providers specializing in substance abuse services.* The geographically, culturally, and racially diverse BHAC (half the participants are non-Caucasian, and six Tennessee counties are represented) meets quarterly and is facilitated by our Statewide Director of Wellness and Recovery, a self-identified consumer of mental health services. Subcommittees on policy development, service planning, service evaluation, and member, family member, and provider education are each chaired by a BHAC member and attended by an Amerigroup employee. BHACs provide feedback to the health plan to enhance services for members. For example, BHAC recommendations resulted in

developing family support services for children and adolescents and their families and a frequently asked questions tip sheet for members "Making the Most of Your Behavioral Health Medications."

- **Amerigroup will implement multiple strategies to engage members in treatment.** We will support providers' treatment services through integrated care planning that implements a member-directed and recovery-focused care plan for members enrolled in case management aligned with the provider's treatment plan and coordinated across settings and providers. We will also proactively identify members who appear to have a history of inconsistent engagement in treatment from a review of encounter data to identify gaps in services, from available assessment information, and from provider calls or notification that they have been unable to engage the member consistently. *A behavioral health case manager will engage the member using EBPs such as motivational interviewing and the Patient Activation Measure or PAM[®].* PAM is a tool used to assess members' level of knowledge, skills, and confidence regarding their health condition. The assessment results help the case manager identify the types of interventions most likely to help the member progress to the next stage of self-management. Use of the PAM by Amerigroup Case Managers has improved quality by decreasing inpatient admissions and ER visits while increasing PCP and specialist visits, all in the broader context of reducing overall cost of care. We will incorporate relevant EBPs, such as the PAM, to help members become more active participants in their healthcare and behavioral health treatment. If a member has no prior engagement with a case manager, the behavioral health team will contact the member to initiate the care planning process that will include strategies for engagement in treatment. Outreach may include:

- Making telephone calls to the member, including repeated attempts at varying times of the day, in accordance with State access standards
- Making personal visits to the member by field-based employees or by our providers who will offer home-based services
- Placing behavioral staff in high-volume PCP offices
- Mailing written information to the member asking them to contact us for more information and providing contact information for the local behavioral health team
- Contacting the member's providers, particularly PCPs, to find and connect members, leaving information with the provider and obtaining an alternate telephone number and address.

We will also identify opportunities to partner with health homes, CBOs, and county agencies to locate hard to find or reach members.

If a member continues to decline treatment, we monitor their service utilization, contact providers we identify from the claims data, and identify opportunities for contact based on specific events like ER use, inpatient admission, or a change in healthcare status.

- **We fully support the State's goal of maximum community integration.** Through collaboration with community-based organizations, members access services and supports to maintain their home environment, education, and employment. The primary focus of our integrated approach to service delivery is promoting members' recovery. Members diagnosed with serious mental illness or serious emotional disturbance are typically the highest cost and highest needs members and therefore have the greatest opportunity to benefit from integrated, coordinated, and recovery-focused healthcare. We are passionate about developing and implementing strategies for members in this priority population that minimizes hospitalizations and residential treatment while increasing community tenure. We will consider individual member choice and community-based alternatives whenever feasible (within available resources).
- In addition to our clinical case management approach, other key elements of our strategy involve:
 - Collaborating with other systems including housing, school, and supported employment

- Incorporating social/recreational opportunities to increase community participation and connectedness
- Providing Value-Added Services as part of the overall clinical intervention, such as paying for membership fees for local Boys and Girls Clubs or providing financial assistance for utility deposits, household goods or rent to support a member's reintegration into their community
- We support the use of enhanced staffing to help members reside safely in a community-based setting and will build upon affiliate experience and policies to help assure covered benefits are provided at the right level of intensity to meet members' needs. ***We will also authorize cost-effective supplemental services for members who would otherwise require a higher level of care to help members remain in the community.*** We will develop Iowa-specific policies and procedures for supplemental service authorization based on our history of developing collaborative, innovative solutions to address member supports needs.
- **We are committed to implementing services that uniquely address children's behavioral health needs and preserve the integrity of their family environment.** For instance, ***in Tennessee, our affiliate health plan implemented the Family Connection Program developed by Tennessee Voices for Children, a statewide agency.*** The program was a cost-effective alternative used exclusively by Amerigroup and now broadly available statewide. Family support providers are trained parents or caregivers with first-hand experience raising a child with emotional, behavioral, or mental health disorders who have successfully navigated the system to access services and supports. They provide support to other families and work with a behavioral specialist, the child, and his or her parents to identify child and family strengths and needs, connect the child and family with services, and build necessary skills to maintain the child at home, in school, and in the community.
- **Amerigroup will leverage technology to increase access to services and improve member outcomes.** We will leverage the substantial telehealth services currently available in Iowa (for example, through the University of Iowa) and provide additional telehealth platforms for behavioral health. Amerigroup will offer a web-based behavioral telehealth solution that provides members in geographically remote areas with access to qualified behavioral health providers and services. This technology has been successfully launched across the nation supporting critical communications between members and qualified providers. ***Surveys show that overall member satisfaction is 87 percent with 50 percent of those responding reporting that they would not have access to a behavioral health provider without this innovative technology.*** Amerigroup will identify strategic geographic locations such as local Community Mental Health Centers, Public Health Department locations in local communities, and other places that to provide telehealth technology that can be easily accessible to our members in a private setting.

We will also leverage technology to address a common barrier to a member's improved symptomatology and function—lack of medication adherence—through automated medication reminders. Amerigroup will bring this newly created secure online and mobile platform focused on medication adherence through electronic pill dispensers paired with member-specific automated reminders to the Iowa Medicaid market. This interactive application is capable of managing and dispensing medication and tracking medication adherence, with robust reporting, through a cloud-based portal. Through this portal, members and caregivers can access medication-related information that can be used to inform decision-making and treatment plans. Key features of this technology solution include:

- Member autonomy through electronic medication reminders
- Real-time medication adherence data
- Secure social support engagement platform for members and caregivers

- Real-time care management monitoring to mitigate adverse effects of missed medication

Amerigroup has partnered with *Careticker, an innovative web and mobile platform that enables a family member and/or family caregiver to track and report caregiving activities provided to a member.* In addition, the family members can submit daily notes and observations regarding their loved one. This information is reported back to the case manager in real time. The case manager can then communicate and interact with the family member and provide the necessary support or guidance to the family member during the course of care for their loved one.

Question 3.2.8, #3

3. Describe how your proposed approach will engage families, natural supports, advocacy organizations and network providers in the behavioral health care planning and care delivery process.

Engaging Families and Other Stakeholders in Behavioral Health Planning and Care Delivery

Families, other natural supports, advocates and providers—along with members—are key components of a recovery-oriented, strengths-based approach to behavioral health. Our approach to care planning and care delivery recognizes that inclusion of family members and other natural supports, including friends and advocacy organizations in which a member participates, is key to supporting a member's sustained recovery.

Care planning, which we make a collaborative interactive process with the member, member's family, health plan, and others designated by the member, aims to provide the appropriate level of support to the member, family and other natural supports, and providers in the development and implementation of a recovery-focused and strengths-based personal care plan. The resulting care plan is developed during meetings that are convenient and accessible—through the use of toll-free conferencing or face-to-face participation at a convenient location, typically at a member's home, in a service site like a clinic or day program, or at a community-based location that provides appropriate facilities. Likewise, Case Managers will help the member identify and invite the network providers, including primary behavioral health providers, who will be a part of the interdisciplinary team. We will also work with IHH care coordinators to help assure adherence to member-driven, family-focused, and inclusive interdisciplinary care planning.

Family members and friends may benefit from training and ongoing support to help them actively participate in the care planning process. Our family and peer specialists will provide the level of support each family member and friend needs to participate in care planning and will connect them with additional, specialized programs such as the University of Iowa's Family Navigator Network and adult peer support program. In addition, we will build upon the work of our affiliate health plans that have developed a number of family psychoeducation programs to meet the needs of our diverse members. While health plan-specific models differ in their formats (whether they use a multi-family or single-family format), duration of treatment, member participation, and delivery locations, we will promote the use of the SAMSHA-approved EBPs Family Psychoeducation (FPE) and corresponding Family Support (FS), approaches used to develop a working alliance with consumers and families, by network providers and connect members and their families to providers trained in the use of these EBPs. Formal research shows consumer outcomes improve if families receive these sorts of EBP interventions.

We will collaborate with Iowa-based providers currently delivering similar services and identify opportunities to support, supplement, or build upon their current efforts. We will assess the current use of FPE through meetings with county mental health agencies and providers, including IHHs, and discuss

methods to increase adoption. Based on this evaluation process, we will work with providers to expand the use of family psychoeducational programs. In addition, our Case Managers and UM staff will also identify opportunities for FPE during development and ongoing review of care plans and work with providers to revise these plans when appropriate to make sure this modality is available. Examples of how we might promote adoption include:

- Distributing FPE EBP materials to existing network providers, posting them on the provider website, and announcing adoption in newsletters, broadcast faxes, and special mailings
- Including FPE EBPs in provider education
- Promoting adoption during case conferences, record reviews, and other interactions with providers
- Supporting member and family engagement in FPE with select, high-volume providers by sponsoring initial member engagement activities such as a dinner meeting to introduce FPE to members and families

Individual Service Coordination and Treatment Planning Requirements (3.2.8.4)

We will require providers to develop a wellness and health promotion-oriented treatment plan for members engaged in care that meets applicable Iowa Administrative Code requirements. Each treatment plan should include a crisis plan or relapse management plan that addresses the member's self-identified triggers and that is consistent with the member's care plan. We will communicate this expectation:

- As part of the contracting process and during initial provider orientation
- In our Provider Manual
- During routine meetings with providers
- Whenever we identify a treatment plan that does not include required elements
- During routine audits

Our approach to making sure providers are meeting contractual requirements and performance expectations is built on collaboration and support. If we identify a need for individual or group provider education to strengthen service coordination and treatment planning, we will make this education available through webinars, in-person educational sessions, and educational materials disseminated on our website and through fax blasts.

Covered Mental Health and Substance Use Disorder Services (3.2.8.5 - 3.2.8.6)

Amerigroup will deliver behavioral health services in accordance with the scope of covered services outlined in Iowa Administrative Code 441 Chapter 78, the Iowa Medicaid State Plan, and waivers.

Fifteen of Amerigroup's 19 affiliate health plans currently coordinate and manage the delivery of a full range of behavioral health services, expanding to 17 health plans by January 2016. Our affiliate health plans also have extensive experience partnering with states to administer publicly funded substance use disorder programs and services. Our local affiliates provide substance use disorder benefits in 13 states expanding to 14 of 19 health plans by January 2016.

Amerigroup will comply with covered services requirements: We understand that medically necessary mental health services will be provided to meet the individual's service needs whether or not they are court ordered or are provided to children in need of assistance or adjudicated delinquent. We will provide

SUD services described in Exhibit D of the RFP to IDPH participants in accordance with SOW Section 3.1.1.1.

Iowa Health and Wellness Plan (3.2.8.7)

We understand that members enrolled in the Iowa Health and Wellness Plan, with the exception of Medically Exempt members, are eligible for the services covered under the Iowa Wellness Plan Alternative Benefit Plan State Plan Amendment and will comply with the requirements of the SOW Section 3.2.8.7.

Question 3.2.8, #4

4. Describe your proposed peer support/counseling program.

Amerigroup recognizes the value of peer supports for our members, and seven affiliate health plans—in Florida, Georgia, Kansas, Kentucky, Nevada, New York, and Tennessee—either currently cover this benefit (with West Virginia soon adding this service as a covered benefit) or actively recruit and hire team members as peer support specialists. We will build upon affiliate experience and the excellent work the State has done, partnering with the provider community and the University of Iowa's Center for Child Health Innovation to grow the current training capacity for peer support/family support certification.

We will work closely with IHHs and their peer support and family support specialists. In addition, we will credential and work closely with other certified peer support specialists to make their services available to members and families. *We recognize the important contributions that peer recovery specialists make* and want to assure that these services are widely available to our members. To that end, *we will pay the State certification fee of \$100 for up to 100 peer support specialists seeking first-time State certification.* We will also contract with organizations that provide family and youth peer support services for high-risk adolescents and young adults.

Peer Recovery Specialist Certification

We will collaborate with DHS and the University of Iowa, and potentially other Iowa-based organizations, to support the current Iowa-specific service description and training for Peer Recovery Specialists, including substance use disorder peer support/counseling coaching that includes practitioner qualifications, and assist in increasing access to peer recovery specialists who will work with members with an SUD. We will actively look for opportunities to support the State and other health plans with trainings around the State, providing technical assistance and financial support for trainings offered statewide. The training will also focus on developing expertise in substance use disorder awareness and treatment and health and wellness issues, such as preventable, premature death; eight wellness dimensions; habits to support physical wellness; nutrition and diet; physical activity; and sleep and rest. Sponsorship will include underwriting of the cost of the trainings.

Peer Support Innovations

Amerigroup is constantly exploring innovative methods to outreach to, engage, and support our members in their recovery journey.

Careticker

Careticker, described previously in Section 3.2.8.2, includes a virtual caregiver social network that enables family members and caregivers to connect and provide peer support to one another. Caregivers can reach out based on locations (those that are in their community) and to those who may have similar conditions.

Veteran Peer Supporters

We will implement a program in Iowa that recruits veterans to create a peer support network that incorporates national best practices while meeting the needs of the local community. We will recruit veteran field medics with medical experience who will become peer support workers conducting outreach activities and collaborating with providers and community-based agencies in veteran centers, agencies serving significant populations of veterans who are homeless, and neighborhoods where hard-to-reach members will be connected to services.

Self-advocacy Group Memberships

Amerigroup will also offer self-advocacy memberships as a Value-Added Service for members interested in developing skills to advocate for themselves through training, resources, and participation in advocacy groups. Members will be eligible to receive membership in one of four national advocacy groups: the National Center for Independent Living; TASH; the American Association for People with Disabilities; Self-Advocates Becoming Empowered and the Autistic Self Advocacy Group. We will also sponsor member attendance to a conference or event sponsored by organizations such as Iowans with Disabilities in Action, NAMI-Iowa, Area Agencies on Aging, the Developmental Disabilities Council, and Iowa Foster and Adoptive Parents Association.

Question 3.2.8, #10

10. Describe how you will provide care that addresses the physical and behavioral health needs of members in an integrated manner.

Integration is at the heart of our philosophy and approach to the delivery of benefits and services. Our comprehensive approach to providing care that addresses a member's physical and behavioral health service needs in an integrated manner includes integrated healthcare system planning combined with Amerigroup's implementation of our fully integrated managed care model in Iowa. We know that the separation of behavioral and physical health benefits is inefficient and does not meet the holistic needs of members. In fact, the linkage between behavioral health conditions and physical health conditions is very strong. Attending to behavioral health conditions and health behaviors provides increased opportunity for member stability and recovery, as well as achieving efficiencies in service delivery.

- We will work with members, providers, advocacy organizations, county mental health agencies, State representatives, and other stakeholders to help implement integrated, managed physical and behavioral healthcare in a way that is sensitive to the service needs of local communities. We propose joining with other health plans to form a working group on integrated care to:
 - Address the communities' short-term needs related to transition from Magellan's management of behavioral health services to the health plans'
 - Identify barriers to integration that exist today and ways to remove these barriers
 - Identify approaches to continued evolution of integrated care rooted in EBPs
- We actively support development of integrated and chronic condition health homes and other approaches to the delivery of integrated care as described in Section 3.2.4., including colocation of primary care and behavioral healthcare providers, as we have successfully done in other states (see Section 3.2.9 and 3.2.10). We will also provide telepsychiatry consults and consults with other specialists for PCPs through the use of telehealth and online consultations, including consultations with addictionologists, to address pain management, opiate addictions, and other substance use issues. We will closely collaborate with FQHCs in their integrated care efforts as we recognize the value that they bring to treating the continuum of behavioral conditions from mild to complex.

- We will implement our fully integrated care management program described in Section 3.2.8.1. Behavioral health Case Managers will work in regional interdisciplinary teams that include the disciplines required to meet the holistic service and support needs of members including physical health, LTSS, and social supports such as housing and employment. Our behavioral health team provides the level of support members and their families need, including care coordination and complex case management, and address member's complex needs as part of the interdisciplinary team process.
- Amerigroup will implement integrated mental health services and supports that include informal supports provided by family members, friends, and community-based organizations into member's behavioral health treatment plans to help members remain in or return to their home. Amerigroup will provide compensation for informal supports as supplemental services when the support is needed to avoid higher cost care and helps the member remain in the community, including at home with family members. Supplemental services are individually identified services not available from any other source authorized to meet a member's preferences and support needs. Informal supports will be tracked and reported using Careticker, described previously in Section 3.2.8.2.
- Case Managers will engage members and their families in recovery- and resiliency-focused care planning that includes the member, family members/representative, health home representatives for members enrolled in health homes, the member's PCP, behavioral health treating providers and other services providers, and others chosen by the member or involved in the member's daily living. We will work with members and their families to identify their services and supports, including informal supports and services reimbursed from other funding streams.
- Amerigroup will promote recognition of mental health and substance use disorder issues that can complicate receipt of healthcare services by offering Mental Health First Aid training to non-emergency transportation providers and other systems (such as EMS, police, and school systems) that routinely come in contact with members with behavioral health issues. This will build on the current foundation of Mental Health First Aid training offered in Iowa. Mental Health First Aid is a ground-breaking public education program that helps the public identify, understand, and respond to signs of mental illnesses and substance use disorders. Those who take the 12-hour course learn a five-step action plan encompassing the skills, resources, and knowledge to help an individual in crisis connect with appropriate professional, peer, social, and self-help care. We will also collaborate with organizations such as the Iowa Primary Care Association, Iowa Department of Human Services, Division of Mental Health, Iowa Department of Education, Iowa Department of Public Health, NAMI, and Iowa Law Enforcement Academy by sponsoring training for other providers and community agencies that serve our members.
- We will implement Member 360, a member dashboard, and an information-sharing and collaborative platform where interdisciplinary team participants can review and contribute to the care plan, each described previously in Section 3.2.8.1.
- We will reward the provision of high-quality and integrated care through provider incentives, described in Sections 3.2.8.1 and 10.3. We will identify additional innovative pay for performance opportunities working in collaboration with the State and providers as the managed care delivery system matures.

Prevention and Early Intervention (3.2.8.10)

Question 3.2.8, #5

5. Describe your services for prevention and early intervention.

Amerigroup will implement a comprehensive array of services that build on initiatives implemented by affiliate health plans with demonstrated value in identifying members who can benefit from preventive and early intervention services. Screening for emerging or unrecognized mental health and substance use disorder treatment needs is an important component of our program and key to achieving positive integrated health outcomes. We will give providers screening tools and training to support early detection of member's behavioral health needs so that members and their families receive preventive and early intervention and work with providers to support screening and early intervention at every opportunity.

Prevention and Screening Approaches for PCPs

An important aspect of early intervention is detection of developing issues at the earliest possible time. PCPs are often the first healthcare professionals to identify an issue during an office visit. We expect PCPs to screen our members for behavioral health conditions, and we will provide them with the tools and expertise to complete these screenings. We will provide PCPs with tools and on-site support to facilitate detection of mental health and substance use disorder issues.

- **Amerigroup will build on the work of the Iowa Chapter of the American Academy of Pediatricians (AAP)** to provide PCPs with tools and training for screening and detecting emotional disorders, mental health conditions, and substance use among their child and adolescent patients and for connecting children and their families to early intervention programs and our behavioral health team. For example, we will promote use of the Behaviorally Effective Healthcare in Pediatrics (BEHIP) protocol developed by AAP. BEHIP provides training for pediatricians in screening for behavioral health issues using recommended standard tools such as MCHAT for autism spectrum screening, the pediatric symptom checklist, Strengths and Difficulties questionnaire, PHQ-9 modified, and CRAFFT. BEHIP also offers coding and reimbursement training for using these screening tools and offers videos that are targeted at helping increase the comfort level of the pediatrician in identifying and initiating treatment of behavioral health issues. This is especially important in the adolescent population where the pediatrician has to be fully prepared to explore essential behavioral health issues. For many teens, this may be one of the few opportunities for screening and intervention.
- We will provide evidence-based screening tools for adults and children such as the PHQ-9, AUDIT-C, and Mood Disorders Questionnaire; educate providers on their use; and develop policies and procedures to guide administration, intervention, and follow-up. We will also distribute information and materials for screening and prevention throughout our contracted network of providers. We will encourage providers to contact the behavioral health team or make a referral to us for help identifying providers of behavioral health assessment and treatment services and to identify other services or programs that will help address the member's and family's support needs, including health education, disease management, care coordination, and complex case management.
- **We will implement innovative models**, such as co-location of behavioral health staff in a PCP's office, that further support screening and early intervention. Over half of patients seek treatment for behavioral health conditions from their PCPs, and non-psychiatrists write more than three-fourths of antidepressant prescriptions. We propose to implement the Amerigroup Primary Care Integrated Screening, Identification, Treatment, and Evaluation of Depression and Substance Use Disorders (PC-INSITE) program to improve the detection, diagnosis, treatment, and ongoing management of

persons experiencing depression and/or a substance use disorder (SUD). PC-INSITE creates supports within the primary care setting to enhance the PCP's tools to diagnose and treat behavioral health conditions such as depression and substance use disorder. This whole-person approach utilizes social workers, psychologists, and professional counselors to perform screening, assessment, and brief solution-focused interventions in the primary care clinic. Psychiatrists provide consultation and support to the PC INSITE team and both formal and informal consultation with PCPs regarding medications.

- **We also propose to implement the new Amerigroup PC INSITE program for children and adolescents in conjunction with the AAP.** The program includes two main elements: behavioral health coach interventions and the BEHIP protocol. The behavioral health coach interventions engage the physician, child/adolescent, and family members in determining a course of intervention—behavioral health coaching, psychoeducation and parent coaching, psychotherapy, antidepressant medications, or some combination of these interventions. The behavioral health coach employs techniques and approaches consistent with motivational interviewing and cognitive behavioral treatment (CBT). Activities may include the following EBPs:
 - Relaxation techniques
 - Focusing on pleasurable activities
 - Addressing negative thinking patterns
 - Social skills training
 - Problem-solving
 - Strategies for maintaining gains
- **Reimbursing for screenings during primary care visits.** We will reimburse PCPs for Screening, Brief Intervention, and Referral to Treatment (SBIRT) services for members with substance use problems. This model screens for substance abuse and supports brief counseling and treatment. It also includes a pathway for referral for more in-depth evaluation and/or treatment for members needing more intensive support. We will include screening requirements and information on how to refer a member to a behavioral health provider in our provider contracts and Provider Manual and review this information during provider orientations. Our PCPs can access online training on screening tools and on-site technical assistance from Provider Services Staff. Medical practice consultants with behavioral health experience will be on-site at key primary care and PCMH locations to support PCPs in recognizing the importance and application of screenings. Provider newsletters, bulletins, and alerts will also educate providers on screening for behavioral health conditions.

Health Plan Screening and Outreach

In addition to screening completed as part of our New Member Welcome Call and identification of members for early intervention using claims and other data analysis, we will screen members engaged in our disease management and care coordination programs during initial assessment and follow-up contacts, as clinically indicated. The assessment will incorporate, as appropriate, the PHQ-9 and the Mini Mental Status Examination. Screening questions address behaviors, medical and behavioral co-morbidities, mood, cognitive abilities, social adjustment, and substance use (including tobacco) and are part of our overall disease management and care coordination tools. Depending on responses to questions, our assessment tool probes into more than 20 potential clinical areas for risk factors, including depression, psychosis, anxiety, suicidality, attention deficit hyperactivity disorder (ADHD), autism, and Asperger syndrome. We will use this information to help us determine the member's need for a referral for further assessment by a mental health or substance use disorder provider as well as their need for other services and supports based on complexity, severity, intensity, and risk.

We will also conduct targeted outreach to members at-risk for a first time behavioral health admission. Using a predictive modeling program developed by our national Health Care Analytics team, our system ranks our members 0-100 (low to high) on their risk of a first-time admission for a mental health or substance use disorder condition within the coming two months. Members who score 10 or more who are not currently participating in care coordination (or their families) receive outreach calls from our behavioral health clinical team to assess their need for care coordination or complex case management and provide them with information regarding housing, transportation, and other services available. This program is currently being used in Florida, Georgia, Kansas, Louisiana, Maryland, New Jersey, New Mexico, Nevada, New York, Tennessee, Texas, and Virginia and has shown success in reducing first time admissions. Specifically, those **members able to successfully engage in this program are twice as likely not to have a first-time behavioral health admission.**

Court-Ordered Mental Health and SUD Services (3.2.8.14)

We will be responsible for the provision of covered and required mental health and substance use disorder services ordered for members through a court action as specified in the SOW Sections 3.2.8.11 and 3.2.8.12. Our affiliate health plans routinely collaborate with and coordinate covered court-ordered services and actively work to improve service outcomes and efficiencies. We will work with the court system to develop care plans and appropriate interventions for members with court-ordered services. We will also provide education about our health plan, integrated care coordination model, interdisciplinary team planning and care plan development, and our approach to substance use disorder treatment coordination and service delivery, to further support court orders and desired outcomes.

We also plan to implement a unique program, designed after a program originally conceived in Georgia, in which we integrate advice from a group of Iowa expert judges with deep content knowledge on the specific program and services. Amerigroup Georgia currently provides training for Law Enforcement Officials and Judges across the State on the Georgia Families 360 (foster care) program. The health plan provides detailed training to judges in various jurisdictions making courtroom visits to educate judges and their staff on a range of topics including care coordination and psychotropic medication oversight. In addition, Amerigroup Georgia distributes a Juvenile Court Judge and Law Enforcement Primer to every judge and juvenile court system in Georgia. The primer includes training resources, frequently asked questions, a court system specific presentation, and a contact list. We look forward to working with the Iowa judicial system and law enforcement representatives to develop and implement a similar program that is specifically tailored to meet their needs

We also look forward to working with court system, IDPH, and the State on developing any needed, evidence-based interventions that have demonstrated effectiveness with this population such as Multi-Dimensional Family Therapy (MDFT) and other interventions for families and youth at risk and other juvenile offenders. Amerigroup can provide EBP support and training, either through one of our national provider relationships or through an Iowa-based practitioner with the required expertise.

Services at a State Mental Health Institute (3.2.8.13.1-3.2.8.13.2)

We will authorize payment for inpatient treatment at State mental health institutes for members as specified in SOW Section 3.2.8.13. Our UM system and precertification criteria enable us to identify admissions by facility type and age of the member. Our UM team receives ongoing, rigorous, and State-specific training that helps ensure access to appropriate services and timely authorization in accordance with DHS requirements. For more information on our UM process, please refer to Section 11.

We understand that the State's Mental Health Institutes have been an important part of the system of care and will work collaboratively with DHS and other stakeholders to meet the needs of members admitted to and discharged from these facilities. We also understand the role of the State's Mental Health Institutes will inevitably change, and we will work collaboratively with stakeholders to assure that our processes

and procedures align with any changes. We are aware of the significant efforts of the Mental Health and Disabilities Services Redesign group and look forward to participating in this important initiative to improve behavioral health services and outcomes. We will bring to this process our national expertise, along with our Iowa-based behavioral health experts.

Members admitted to, and discharged from, State Mental Health Institutes will be enrolled in care coordination and followed by their assigned care coordinator throughout their stay. Amerigroup care coordinators will participate in the member's treatment planning as requested by facility staff and will be actively engaged in discharge planning.

We will build on the experience of affiliate health plans to support discharge to the community and implement innovative programs to increase community tenure. For example, our Tennessee affiliate, in partnership with the local community, developed an innovative community-based alternative housing and treatment service for members who had been in long-term institutional care together. Amerigroup Tennessee collaborated with a CMHC, Mental Health Co-op, and a local business person to find housing and coordinated extensive wraparound services for them to be successfully integrated into the community and in many instances reunited with their families.

Question 3.2.8, #7

7. Describe how you will support IDPH-funded Women and Children services.

Supporting IDPH-funded Women and Children Services

We will collaborate with IDPH across the wide range of Women and Children services and programs it offers to IDPH-eligible members, coordinating access to IDPH-funded substance use disorder treatment services and making sure IDPH substance use providers are reimbursed timely. We will provide training to IDPH and providers on claims submission and provide a designated point of contact within our claims and provider relations team available to assist with billing and reimbursement issues. We have already begun meeting with IDPH-funded providers who specifically provide care for women and children. We value and understand the services delivered by IDPH, such as WIC, that are important to Medicaid-covered women and children and that may represent an opportunity for the early identification of pregnant women with substance use disorders. We will assure that our Amerigroup Case Managers are aware of the scope of services, the covered IDPH benefits, and how to refer and coordinate with IDPH providers.

Ensuring Pregnant Women with SUD are Prioritized

We recognize that pregnant women with substance use disorders are a priority for identification and rapid engagement in treatment. Amerigroup will implement processes and programs used by our affiliate plans to make sure that we prioritize pregnant women with substance use disorders. We also recognize that the treatment of substance use disorders in pregnant women is a specialty unto itself. We have outreached to providers with this level of expertise such as Heartland Family Service, Crossroads Behavioral Health Services, and Jackson Recovery Centers.

Pregnant members enrolled in care coordination or complex case management are screened for substance use and when identified enrolled in the appropriate level of care management based on their individualized needs. Our Taking Care of Baby and Me program is a comprehensive maternal and child health program and provides high-risk pregnant members, including members with a substance use disorder, with obstetric (OB) case management. Our Taking Care of Baby and Me program, including the OB case management component of the program, is described in Section 9.0 Care Coordination.

Our ongoing training and support for our OB/GYN network providers includes information on the importance of screening for substance use disorders in pregnant women. In addition, we provide information, tools, and education on the use of standard substance use screening tools.

We will promote the use of the most effective interventions for women who are pregnant and opiate addicted. For example, in Tennessee, we have adopted the most recent and effective standard of care for pregnant women with opiate addiction who are admitted for detox at Vanderbilt. Amerigroup Tennessee coordinates access to Subutex through a specialty vendor. Subutex is a safer addiction medication that has fewer long-term effects on the fetus than other medication alternatives. The health plan worked with the State to obtain authorization to pay for a dosage that is beyond the member's covered benefit as a cost-effective alternative. This solution offers pregnant women who are addicted to opiates the opportunity to safely reach a level of stability on medication that protects the health of the fetus, avoids the neonatal abstinence syndrome that would occur if she were using, and promotes her ability to be drug-free or at the lowest level of maintenance possible. In coordination with DHS and with local provider expertise, we will leverage best practices from Tennessee and other plans in our Iowa program.

Our healthcare analytics capabilities identify women with potential substance use disorder. Providers are contacted by Amerigroup clinical staff to get a complete clinical picture of their identified members who have received narcotics prescriptions from more than three providers in a 90-day period. Based on the information and supplemented by information gathered in a call to the members, we determine the nature of the needed clinical intervention and create a case management plan to effectively treat members with a confirmed substance abuse disorder.

Outreach Services for IV Drug Users (3.2.8.15)

Question 3.2.8, #6

6. Describe how you will ensure providers conduct outreach activities for IDPH participants who are IV drug users.

We will train and educate providers and periodically conduct monitoring to confirm that they are outreaching to and actively seeking to treat IDPH IV drug users. We will collaborate with the State and other health plans to develop provider training materials and help providers complete required activities through the provision of technical assistance and consultation. We will conduct an annual audit of provider outreach activities to confirm completion and linkage to appropriate treatment programs and, where outreach is not occurring or is ineffective, work with the provider to develop a corrective action plan.

Tuberculosis Services (3.2.8.16)

We will make tuberculosis services available for IDPH participants through our contracts with the IDPH substance use disorder provider network. We will train and educate providers and periodically conduct monitoring to confirm they are implementing infection control procedures and protocols provided by the DHS and IDPH and testing for tuberculosis in the populations identified in the SOW Section 3.2.8.16. We will collaborate with the State and other health plans to develop provider training materials and help providers complete required activities through the provision of technical assistance and consultation. We will conduct an annual audit of provider activities to confirm adherence to these requirements.

Maintaining and Updating a Compendium of Evidence-Based Mental Health Practices (3.2.8.17)

Amerigroup maintains EBPs and emerging best practices for mental illness and substance use disorders that reflect optimal treatment protocols and incorporates these into our CPGs. We use EBPs and emerging best practices recommended by the:

- American Psychiatric Association (APA)
- American Academy of Child and Adolescent Psychiatry (AACAP)
- Substance and Mental Health Services Administration (SAMHSA)
- National Institute of Mental Health (NIMH)
- American Society of Addiction Medicine
- National Institute on Drug Abuse
- National Alliance of Mental Illness
- United States Department of Health and Human Services

Examples of EBPs for mental illness and substance use disorders we maintain include:

- ACT–SAMHSA
- Illness Management and Recovery — SAMHSA
- Supported Employment (Individual Placement and Support) — SAMHSA
- Integrated Dual Disorder Treatment for co-occurring disorders —SAMHSA
- Family Psychoeducation — SAMHSA
- Tobacco Cessation
- Motivational Enhancement Therapy — SAMHSA
- Twelve-step Facilitation
- Cognitive-Behavioral Therapy For SUD
- Medication-assisted Recovery for SUD

Examples of behavioral health clinical practice guidelines maintained by Amerigroup include:

- Behavioral Health Screening, Assessment, and Treatment
- Bipolar Disorder in Adults
- Bipolar Disorder in Children and Adolescents
- Schizophrenia
- Antenatal Depression (AND), Post-partum depression (PPD), and Post-partum psychosis (PPP)
- Preferred Practice Guidelines, Identification and Treatment of Adult Depressive Disorder
- Attention Deficit Hyperactivity Disorder in Children (ADHD)
- Preferred Practice Guidelines, for the identification and treatment of Substance Use Disorder (SUD)

EBPs are selected by each health plan based on the characteristics of the local market. We will identify EBPs for Iowa based on analysis of member needs, service utilization, and provider practices. We will consult with the local providers on their use of EBPs, analyze responses, perform data analysis, and gather input from DHS and our subject matter experts to compile a compendium of EBPs for Iowa for initial implementation. We will annually and on an ongoing basis assess the consistency of EBP use and

advise the State of needed changes to support increased utilization and consistency with established EBPs.

Question 3.2.8, #8

8. Describe your screening and treatment protocol for children with serious behavioral health conditions. Provide a sample crisis plan and describe how you will work in collaboration with local school systems.

Screening/Treatment Protocol for Children with Serious Behavioral Health Conditions (3.2.8.18)

Amerigroup screens children for serious behavioral health conditions at every opportunity and expects pediatricians and behavioral health providers to identify and screen children with serious behavioral health conditions that if left untreated may cause serious disruption in a child’s development.

We are sensitive to the expertise and individualized practice patterns for screening and treatment protocols for children. Our conversations with Iowa practices (individual, group, FQHC, and university based) regarding their approaches to screening children revealed a broad variety of legitimate approaches. A screener appropriate for a busy pediatric practice will, of necessity, be very different than a screener for a behavioral health practitioner. We therefore suggest a nuanced approach to standardized screening.

For example, for a pediatric practice, we propose the use of the following tools:

- The Children with Special Health Care Needs Screener (CSHCN) operationalizes the Maternal Child Health Bureau of the Health Resources and Services Administration’s definition of CSHCN. This screener focusses on the health consequences a child experiences as a result of having an ongoing health condition rather than on the presence of a specific diagnosis or type of disability. This screener has broad applicability and is easy to use.
- The Pediatric Symptom Checklist-17 is the short version of a validated, reliable instrument that assesses child psychiatric symptoms and identifies those in need of a more in-depth assessment.
- The Vanderbilt Assessment Scale provides a measure of symptoms assessment and impairment of performance.

We propose a set of broad guidelines for behavioral health providers that start with approaching the child as a person living within broader systems that have a significant impact on overall health. These guidelines suggest that screening conducted by a behavioral health provider address the following:

- DSM diagnosis
- Current and historical symptoms:
 - Suicidality
 - Psychosis
 - Potential of harm to self or others
 - Eating disorder
 - Substance abuse
- Functional impairment
 - Self-care
- Community (juvenile justice and child welfare)
- Social relationships
- Family
- School (learning disorders)
- Family, psychosocial, and developmental history
- Medical history, including medications
- Cultural and spiritual

Given the various legitimate tools for screening and understandable provider concern regarding potentially having to implement multiple “standardized” protocols, we recommend a collaborative approach. This approach includes stakeholders, providers, members and families, child welfare, the Mental Health and Disability Services Regions, and other health plans along with DHS to determine the standardized screening and treatment protocol for children with serious behavioral conditions for network providers (physical and behavioral). This collaborative effort can minimize administrative burden while at the same time assuring, to the greatest extent possible, standardized clinical evaluation of children with serious behavioral conditions.

This collaborative approach would bring together Iowa providers, stakeholders, managed care organizations, and DHS. The goal is to determine via dialogue a mutually agreeable, clinically effective screening tool and treatment protocol for use in Iowa.

Amerigroup Screening

Amerigroup also screens for serious childhood disorders in a variety of ways:

- During the new member Welcome Call made to the child’s family, the family is asked to respond to an automated brief telephone screen and given the option to speak to a Member Services Representative. Positive screens are batched and distributed in a daily notification file for screening by our behavioral health team and for further clinical evaluation.
- During a discussion with a Member Services Representative, the family may indicate their child has or appears to have a behavioral health need. The family is warm transferred to a behavioral health call center representative and connected to the local behavioral health team or to the on-call behavioral health clinician for screening.
- Our predictive modeling process uses claims and encounter data to continuously identify members for care coordination and other programs. The system considers member historical information, including diagnosis and demographics, to predict future outcomes. Our process produces two predictive scores: the Chronic Illness Intensity Index (CI3) and a Likelihood of Inpatient Admission (LIPA). Our predictive modeling system synthesizes member data, such as diagnoses, hospitalizations, emergency room encounters, expenditures, and demographics, to develop individualized risk profiles. Children identified as high-risk, including at risk for a first time admission with a primary behavioral health diagnosis, are referred to the behavioral health team for screening.
- Children who have an acute episode of care and who are not engaged in case management are also referred to the behavioral health team for screening.
- Our pharmacy management system proactively identifies children being prescribed psychiatric medications by a non-psychiatrist. These data are used for further outreach and exploration, often leading to the identification of children with emerging serious psychiatric conditions who are in need of specialty care.
- We accept referrals from any source, subject to privacy requirements. Referrals for children with a suspected serious behavioral health condition from physicians and other providers, State and local agencies, including schools and community-based organizations, are accepted by the behavioral health team. Referrals may also originate within the health plan. For example, a child enrolled in case management with a primary medical diagnosis may exhibit behavioral health issues and be referred for screening following a case conference.

Complex Case Management and Social Services Collaboration

Network providers, upon completion of a child's screening and development of a treatment plan, contact behavioral case management staff to collaboratively determine the need for enrollment in complex case management or enrollment in an IHH. Behavioral health Case Managers proactively follow up with the provider to understand the outcome of the evaluation and plan next steps.

The behavioral health case manager working with the member, family, and provider determines if additional assessments are needed, completes referrals for these assessments by qualified providers, and initiates care planning as described previously in Section 3.2.4 that includes the requirements specified in the Scope of Work. The care plan identifies the child's treatment needs as well as the need for other services and supports designed to help the child remain at home or in a community setting (which may include CMH Waiver services described in Section 3.2.11) and a crisis plan. The crisis plan is developed during care planning and is designed to help the family, child, and others working with the child proactively plan for crises by identifying the child's triggers, child/family strengths, immediate child/family needs, safety concerns, and treatment choices. Key contact people are also identified, including the care coordinator, treating behavioral health provider, and others involved with the child and family such as schools, child welfare, and juvenile justice providers and systems.

Collaboration with schools, child welfare and juvenile justice providers and systems, and others involved with the child and family uses an interdisciplinary planning process that supports alignment of the member's care plan, treatment plan, IEP, and family safety plan to identify wrap around services and supports including informal supports such as family peer supports that are effective at maintaining children at home, in school, and participating in community activities such as sports and other enrichment programs.

A sample crisis plan is provided as Attachment 3.2.8-1 Sample Child Crisis Plan.

Reserved (3.2.8.19)

The State has marked this RFP requirement as "Reserved."

Parity (3.2.8.20)

Question 3.2.8, #9

9. Describe how you will ensure compliance with the Mental Health Parity and Addiction Equity Act.

Amerigroup has created a multi-departmental work group that includes senior leadership to evaluate and continuously monitor program compliance with the Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA). The work group also provides ongoing guidance on parity between physical health and behavioral health services for members in the states we serve. This includes several committees that help promote compliance across organization initiatives. We will include, on contract award, the Amerigroup Behavioral Health Medical Director of the Iowa Health Plan.

We follow parity requirements and guidance as they are released, including guidance provided in the "CMS Letter RE: Application of the Mental Health Parity and Addiction Equity Act to Medicaid MCOs, CHIP, and Alternative Benefit (Benchmark) Plans SHO # 13-001 ACA #24." We are reviewing the proposed rule recently issued by CMS that addresses application of certain parity requirements to coverage offered by Medicaid managed care organizations, Medicaid Alternative Benefit Plans, and Children's Health Insurance Programs and will make any required revisions to our practices to help ensure continued compliance following rule finalization.

Amerigroup follows federal and State parity laws (for example Timothy's Law), including quantitative and non-quantitative limits for network contracting and reimbursement. We do not place annual, episode, or lifetime quantitative limits on benefits unless imposed by the State. We also do not place prior authorization requirements on routine outpatient behavioral health services. Health plans cannot impose a non-quantitative treatment limitation with respect to MH/SUD benefits in any classification unless, under the terms of the plan (or coverage) as written and in operation, any processes, strategies, evidentiary standards, or other factors used in applying the non-quantitative treatment limitation to MH/SUD benefits in the classification are comparable to, and are applied no more stringently than, the processes, strategies, evidentiary standards, or other factors used in applying the limitation with respect to medical surgical/benefits in the classification.

Mental Health, Physical Health, and SUD Integration (3.2.8.21)

Question 3.2.8, #11

11. Describe your mechanisms for facilitating the reciprocal exchange of health information between physical and behavioral health providers and methods for evaluating the effectiveness of such strategies.

We will utilize Member 360 and data exchange systems to facilitate the exchange of information across providers. Furthermore, we will incorporate performance measures such as HEDIS and gaps in care or services to track provider success within the program and will also track utilization of system features to confirm that providers are using the system. These measures will guide future improvements.

Sharing Information through Provider Reports and Tools

One of the most valuable supports we offer our providers is access to the wealth of data we have for our members who access healthcare services. To foster continuity of care and to reduce duplication of services and waste, we collaborate with our providers through sharing data through reports and a secure provider portal. The type of provider drives the type and amount of reporting and access we offer, with PCPs prioritized for information sharing. We also facilitate information-sharing and collaboration among treating providers, offering technology that strengthens the role of the PCP and other providers involved in member care. We believe that communication with our providers needs to be two-way—creating what we call a “clinical data ecosystem” in which clinical data are captured and transformed into actionable information that can be used to improve member health outcomes. The main system that we utilize to facilitate the exchange of data amongst providers is Member 360:

Our integrated care management platform, Member 360, combines member data and information from various sources into a single record to provide a holistic picture of the member's utilization, care management services, and gaps in care. Member 360 includes such information as member health risk assessments, care plans, longitudinal member health records, pharmacy data, and clinical data. Through the provider view of Member 360 located on our secure provider portal, providers who have members attributed to them can see member records giving them simple, easy-to-access data and information to assist them in engaging members in their health and well-being. This view enables any provider who is treating our members to see the full picture, including care plans and assessment information, enhancing their ability to reduce duplication and improve care coordination and collaboration between providers through this one-source clinical data repository. We will utilize this tool across provider/member populations.

The provider view of Member 360 also enables providers to understand their members from a population health perspective, how their members are doing, and more importantly, provide information that helps them achieve better results. Member 360 will support providers in achieving the quality incentives defined in our quality programs. With appropriate releases, a PCP will be able to view their members with diabetes to view their most recent HbA1c test results and, at the same time, see members who need to have HbA1c testing done. Additionally, the PCP will be able to view behavioral health treatments, medications, admissions, care plans, goals, and outpatient visits. The tool will take the providers to the next level by delivering much more than data; instead it displays information that is synthesized in a succinct view to create obvious, actionable items. Member 360 will allow PCPs to support recovery efforts, be alert to potential drug interactions, and more effectively coordinate care.

We offer our providers an array of additional data and resources such as the following:

- Interactive provider website with links to a variety of resources, such as Amerigroup Patient and Medical Supports, Clinical Practice Guidelines, and Office Support. The provider website includes online copies of provider manuals, orientations, and training materials.
- Reports to providers on their overall panel allowing them to view their success at meeting certain quality measures. A HEDIS Quality Measurement Report Card enables us to engage in improvement discussions with providers and enables providers to track and improve on clinical measures that are part of behavioral quality incentive programs (such as follow-up after hospitalization rates, HEDIS, ADHD, and antidepressant medication management scores).
- Preferred Provider Scorecard, a tool we developed to enable staff to implement member service referrals to high-quality providers—those with proven records of quality service and outcomes, such as annual quality audit scores, complaint counts, potential quality of care counts, and critical incident handling timeliness.

Availity Improves Provider Satisfaction

To make it easier for our providers, we are making claims status, eligibility, and enrollment information available via Availity, a multi-payer portal. The Availity secure health information network gives providers an easier solution by making data from multiple health plans available to them in one standardized, simplified interface.

Additionally, we will enable two-way information-sharing with providers to exchange admission, discharge, and transfer (ADT) data to be integrated into our care management process and Member 360 integrated platform. ADT data provide Case Managers with a wealth of information interceding and facilitating more timely transitions, more effective communications with the member's PCP, and better coordination of member care. As additional clinical and administrative data sources are available from large Iowa providers and through Health Information Exchanges (HIE), we will continue to enrich the Member 360 environment. We will work with the Iowa HIE to implement a DIRECT secure email gateway between large contracted PCPs and Amerigroup.

Post-launch, we will facilitate additional data-sharing between providers. If the State approves and providers attest that they have permission to share protected information, we will provide HIV, SUD, and mental health information through Member 360. This will give providers the ability to see the entire clinical picture and intervene with the "whole person," in mind. We have mechanisms to help assure that this data exchange is leading to positive outcomes.

Through Member 360, we will track information on gaps in care, HEDIS measures, and others that will enable assessment of physicians' performance over time. Practices with a fully implemented Member 360 that successfully and actively use it are typically the best performing practices from a quality and clinical perspective (highest HEDIS scores and lowest re-admit rates). Additionally, we will track utilization of the various data sources (for example, number of views by data type, time spent on Member 360) to

assess interaction and engagement with the systems. We aim to make data exchange a very measurable, scientific process that leads to empirical, positive outcomes. We are particularly excited about the opportunity to wed our leading-edge information technology clinical platforms with the excellent work that Iowa has done creating IHHs and Chronic Health Homes. An additional opportunity to leverage this technology platform is with behavioral health provider groups who have either implemented integrated care models or are in the process of doing so. We have raised this possibility in several Iowa meetings and have been greeted with widespread enthusiasm.

We also have standard policies and procedures that providers follow regarding reciprocal information-sharing. These policies indicate the required release of information needed and suggest standardized forms for ROI and information-sharing that meet applicable State and federal privacy guidelines and requirements.

To assess the effectiveness of data-sharing, we take several approaches. First, we survey our PCPs on the degree to which they inquire about behavioral health treatment services their members are receiving. Then, we gather information on the extent to which the PCP outreaches to the behavioral health practitioner and the frequency with which they report receiving information from the behavioral health providers. We do a similar survey for behavioral health providers, asking them the frequency with which they reach out to PCPs and the response rate from primary providers. We use this information to communicate with our provider network.

In addition, we will track the utilization of Member 360 at the individual provider level and use this information to work collaboratively with providers to improve performance. Our work in other states has demonstrated that the provider use of Member 360 greatly improves quality and clinical outcomes, and we look forward to demonstrating similar results in Iowa.

Sharing Information for Specific Populations

Delivering Data to Strengthen the Integrated PCP Practice

We will deliver quality management reports to integrated PCP providers to help them better understand the health status and needs of their member panel and provide training and support to improve practice patterns and outcomes. They will be supplied with a suite of monthly reports via the provider website to help them proactively manage the care of their members. These reports include the following, which will be stratified to include members with co-occurring behavioral conditions:

- Monthly Member Listing of members currently assigned to the practice
- Monthly New Member report of new members added to the PCP's roster in the current month
- Daily Inpatient Census of their members currently in an inpatient setting, both physical health and behavioral health admissions
- Weekly Emergency Room (ER) report of their members for whom Amerigroup received an ER claim in the previous week
- Monthly Chronic Illness Intensity Index report showing the relative risk ranking of their members in terms of likelihood to use significant medical services resources in the future
- Monthly Potential Missed Care Opportunities report showing which members have not yet had the test, screening, or visit for various quality-of-care indicators
- Quarterly Medical Cost Management and Shared Savings Reconciliation reports listing opportunities for the practice to manage their members' care more efficiently
- Collaborating with Behavioral Health Providers to Improve Results

For high-volume behavioral health providers as well as health homes, Amerigroup will provide monthly member-level view and total population view reports such as:

- Monthly Member Listing of members currently assigned to the practice
- Monthly Inpatient Report, which is a census of their members with an admission in the past month to include both physical health and behavioral health admissions
- Monthly ER report of their members for whom Amerigroup received an ER claim in the previous month
- Monthly Chronic Illness Intensity Index report showing the relative risk ranking of their members in terms of likelihood to use significant medical services resources in the future
- Monthly Potential Missed Care Opportunities report showing which members have not yet had the test, screening, or visit for various quality-of-care indicators

Using the above reports, Amerigroup will work with these providers to improve quality and health outcomes.

For hospitals, Amerigroup will provide a Behavioral Health Facility Report Card that reports utilization trends on our highest volume inpatient acute facilities and will share this for discussion in our quarterly meetings with these providers. We will also discuss quality issues, including HEDIS measures, and share any relevant data with the group. The meeting is an opportunity to brainstorm with providers on ways to improve quality and member outcomes.

Integrated and Chronic Condition Health Homes (3.2.9 - 3.2.10)

Health Homes are an emerging best practice to address members with chronic health conditions, a serious mental illness (SMI), or serious emotional disturbance (SED). Based upon our organizational experiences and expertise, Amerigroup is prepared to continue Iowa's work in evolving health homes for members with two or more chronic conditions (chronic condition health homes) and integrated health homes for members with SMI/SED conditions. Our responses to 3.2.9-3.2.10 address both types of health homes in outlining:

- Philosophy, health home models, and experiences
- Approach for implementing health homes
- Strategies to increase health homes participation
- Financial model
- Methods to ensure non-duplication of payment for similar services

Our Philosophy

In Iowa, the health home services already exist as a core component of Iowa's medical assistance programs that encompass integrated health homes (IHH) focused on adults and children with serious mental illness. Chronic condition health homes (CCHH) are established for adults and children with at least two chronic conditions or one chronic condition and who are at risk for developing a second. Iowa is one of 16 states that have adopted the Health Home (HH) model. ***We acknowledge the State's consistent track record of innovation and are excited for the opportunity to push this innovation forward.***

Given the State's efforts in establishing HHs thus far, our goal is not to develop, but to improve upon the HH model. We will seek to inform and engage members experiencing multiple occurring conditions in working with the healthcare team to utilize community resources and incorporate hope, personal responsibility, and self-advocacy to achieve functional and clinical outcomes. With IHHs, we will also

focus on building upon the provider network given in the bid library, while working to fill regional gaps (primarily in rural counties), in establishing a consistent, coordinated network. With CCHHs, we understand that regional coverage has additional gaps in available health home providers. We will be proactive in conducting outreach and assisting interested parties in becoming health homes. This includes working with the Iowa Primary Care Association and their member health clinics. With both models, our philosophy is to engage in collaboration with health home providers to evaluate what is working, and what can be improved and enhanced to aid health homes in driving quality and innovation of this evolving health services model.

Amerigroup is committed to supporting DHS’s goals to expand and evolve health homes to reduce fragmentation in care and enhance access to services that address the holistic service needs of members experiencing serious mental illness, serious emotional disturbance, or chronic health conditions by increasing care coordination, facilitating transitions in care, promoting self-care and health promotion, and linking to community services and supports. In establishing the rationale and goals for the health home, we embrace the principles that the individual is front and center in addressing his or her preferences, self-identified needs, and health goals consistent with the member’s cultural values and beliefs. It is important for the health care system to evolve into one that reduces fragmentation in attending to the physical, behavioral, and social needs of the individual.

Health homes are established to evolve the health services system of care in promoting collaboration, coordination, and accountability between health service providers that establishes a person-centered health services plan with person-centered health goals and objectives. Health homes establish a health services team with a health professional champion for the member. The individual is engaged as an active participant in their health to take actions in addressing chronic health conditions. Health homes support the individuals’ self-care as well as making referrals to community services and supports. Health information technology (HIT) facilitates care coordination as well as tracking of health service and ongoing recommended health visits. In addition, our integrated information system can supplement the health homes’ HIT by providing alerts on service gaps to help the team proactively address predictable health service events. Decision supports and evidence-based practices establish the foundation of quality health care enhancing personal health, reducing premature mortality, and gaining efficiencies in health service costs by reducing unnecessary emergency room utilization and inpatient admissions. HIT enables a population health orientation in providing information to direct health services to members at-risk.

Amerigroup’s affiliates have a strong history in promoting holistic systems of care such as health homes, patient-centered medical homes (PCMHs), and other health home-like programs and services; all of these systems are important in establishing an integrated health services model that enhances quality care in addressing physical and behavioral health conditions.

As illustrated in Table 3.2-9, we believe a true transformation to an integrated model of care requires a systemic change from the traditional way of delivering health care services to providing long-term solutions that meet the biopsychosocial needs of members.

Table 3.2-9. Provider Transformation to a Health Home Care Delivery Model

Move From Traditional Care Delivery Model	Move To Health Home Care Delivery Model
Admit, discharge	Engage and follow-up
Focus on the immediate needs	Incorporation of short- and long-term care needs and goals into a single plan of care
Treatment of a single presenting condition	Holistic, biopsychosocial approach to the member’s well-being (mind and body)
Compliance	Adherence
Physician decision-making	Shared decision-making
Passive patient	Active and engaged, voice and choice of the member

Move From Traditional Care Delivery Model	Move To Health Home Care Delivery Model
Episodic documentation	Registries, alerts, and reminders
File audits, episodic events	Focus on outcomes, including member, clinical, and financial
Disease coping	Chronic Condition/Disease Management, including member education on healthy behaviors, health promotion, lifestyle choices, and self-care responsibilities
Individual providers	Integrated Care Teams
Fee-for-service volume-based model	Shared-risk and reward, value-based model

We look forward to working closely with DHS and our network providers to refine and build on lessons learned for health homes to meet the diverse and unique needs of our members in the Iowa Managed Care program. Our IHHs and CCHHs will follow the guidance described in the Centers for Medicare and Medicaid Services State Medicaid Directors’ Letter #10-024.

Core Services

Health homes, whether for persons with severe mental illness, or with two or more chronic health conditions, or with one chronic condition and at risk for a second chronic condition, are responsible for six core health home services, as identified by CMS. DHS has defined these services within the provider agreement, and Amerigroup will include these definitions in health home agreements:

- Comprehensive Care Management.** Providing for all health care needs/arranging care and services, developing a Continuity of Care Document (CCD), and implementing a formal screening tool for behavioral health
- Care Coordination.** Assisting members with medication adherence, appointments, referral scheduling, understanding health insurance coverage, reminders, transition of care, wellness education, health support and/or lifestyle modification, and behavior changes; utilizing health information technology (HIT) to facilitate the processes and communicate results
- Health Promotion.** Coordinating/providing behavior modification interventions aimed at supporting health management, improving disease outcomes, disease prevention, safety, and an overall healthy lifestyle; using Clinical Decision Support within the practice workflow; and implementing a formal Diabetes Disease Management Program
- Comprehensive Transitional Care (including appropriate follow-up from inpatient to other settings).** Transitioning patients from inpatient to other settings; confirming receipt of updated information through a CCD and receipt of information needed to update the patient’s care plan; and following up with the patient after transition
- Individual and Family Support Service (including authorized representatives).** Communicating with the patient, family, and caregivers in a culturally appropriate manner for the purposes of assessment of care decisions

- **Referral to Community and Social Support Services.** Coordinating or providing recovery services and social health services available in the community (for example, understanding eligibility for various health care programs and disability benefits and identifying housing programs)

Working Together

We will leverage the state-sponsored health program experience and that of our affiliate health plans in refining Iowa's health home program. Our collective knowledge will be invaluable *in engaging current health home providers and building on their experiences* to address the biopsychosocial needs of members through a single, individualized, and integrated care and service plan. Our established tools, technology, processes, policies, and procedures will support our providers at their level of health home sophistication and drive their learning, evolution, and commitment to a model of care coordination which promotes provider communication, collaboration, coordination, and accountability.

Experience Across the Nation

While we recognize health home programs are a relatively new service model, Amerigroup and our affiliate health plans have been active leaders in implementing health homes and systems of care that reduce fragmentation and promote a holistic focus on person-centered, well-coordinated care across the service delivery system. We have the following *experience in other states*:

- Establishing Patient Protection and Affordable Care Act (PPACA) Section 2703 health homes consistent with Center for Medicare and Medicaid Services (CMS)-approved State Plan Amendments in our New York, Washington, and Kansas affiliates for populations with a broad spectrum of chronic or complex conditions; taken together, we have engaged over 8,000 members in HH services in less than two years – in Washington, we went from a 5 percent participation rate in 2013 to 23 percent in 2014 (over 300 percent increase)
- Working directly with state-operated health homes in West Virginia, Maryland, and Wisconsin to support coordination of care activities
- Providing support and consultation to state entities for planning and developing health homes in California, Kentucky, and Tennessee
- Implementing an alternative health home model, Enhanced Care Coordination (ECC), in Virginia and Indiana that is focused on member engagement, care coordination, and health promotion, leading to member-desired health goals

Chronic Condition Health Homes

Chronic condition health homes (CCHHs) are a refinement to the Patient Centered Medical Home (PCMH), in which the core principles of the PCMH are to attend to the holistic needs of individuals, as well as coordinate with other health services providers. Additionally, the PCMH seeks to build a relationship with individuals served in the clinic to be a resource over time to ensure health promotion and wellness activities, as well as addressing health conditions over the long term. The health home model refines this focus to narrow and intensify the activities for individuals with two or more chronic conditions or one chronic condition and at risk of a second chronic condition. There is a continued focus on a team-based approach, care coordination, and health promotion.

Important in evolving the chronic condition health home is the development of a team-oriented clinic culture that integrates knowledge and expertise to address physical and behavioral health services. This includes a number of important tasks, such as:

- Screening individuals for depression, substance use disorders, and other mental health conditions. Tools to support screening might include: PHQ-9, Audit-C, Pediatric Symptom Checklist, Adverse Childhood Events, Patient or Caregiver Activation Measure

- Implementing procedures to monitor and follow up with members with chronic conditions and experiencing a co-morbid mental health or substance use disorder
- Alerts (generated from providers' EHR) used to provide notification of predictable times for interventions (e.g., eye and foot exams and monitoring of A1C for a person with diabetes)
- Altering interventions when the individual is not responding (stepped care)
- Health promotion and self-care programs
- Timely follow-up after an emergency room or inpatient admission
- Facilitating other transitions in care
- Addressing social and community elements of health, such as housing, transportation, meaningful inclusion in the community, employment, education, recreation, and social supports

For many clinics, this involves a significant investment to redefine processes and procedures and requires addressing the individual professional's willingness and aptitude to adjust the way he or she carries out his or her roles.

We will leverage our affiliates' experience guiding clinics in becoming PCMHs or HHs through education, training, and support in moving to a service model that addresses physical and behavioral conditions utilizing team-based approaches. Chronic condition health home providers will integrate behavioral health expertise to conduct screenings and assessments, provide interventions, complete referrals to the most appropriate specialist, coordinate these services, promote self-care, and work as a team to engage individuals over the long-term.

Integrated Health Homes

Integrated health homes, or in some states identified as behavioral health homes, are intended to increase access to physical health services, lead to less fragmentation, and increase collaboration between Providers. Just as important, integrated health homes seek to engage members and their families in self-care by developing a personalized holistic health services plan that is reflective of the member's and his or her family's health and resiliency and recovery goals. Outcomes reflect on expected program goals, including reduced hospital admissions, reduced hospital length of stay, reduced emergency room (ER) service utilization, reduced pre-mature mortality, increased health status, and increased member and provider satisfaction.

For integrated health homes, in contrast to chronic condition health homes, the challenge for the behavioral health provider (Community Mental Health Center) is addressing the member's physical health issues. For many behavioral health professionals this is new territory; thus, training and consultation on co-morbid health conditions such as congestive heart conditions, diabetes, hepatitis, COPD, HIV/AIDS, cancer, and the interaction of severe mental illness or a substance use disorder are necessary to facilitate effective interventions. In addition, evidence-based practice informs interventions and the role of health care team members in assisting the member develop self-care knowledge, skills, and confidence in addressing his or her health conditions. In developing the integrated health home network, a readiness review evaluates the organization's use of screening instruments and evidence-based practices employed to address health conditions. For example, a tobacco cessation program might employ one of the following three Evidence-based Practices: "Peer-to-Peer Tobacco Dependence Recovery Program," "Learning about Healthy Living," or "Intensive Tobacco Dependence Intervention for Persons Challenged by Mental Illness: Manual for Nurses."

Taken together, we will leverage our experience to educate, train, and support our health home providers in establishing a health home service model that addresses physical and behavioral health conditions. Our IHH model addresses the care coordination needs of members enrolled in 1915 (i) and 1915 (c) waiver programs (Section 3.2.11). Screening instruments will inform chronic health home providers of potential

behavioral health issues while screening for co-morbid medical conditions such as hypertension, diabetes, and BMI and will focus integrated health homes on physical health conditions. This increased holistic focus provides a foundation to enhance shared treatment planning, care collaboration and coordination between health service providers. Outcome monitoring and reporting on population measures such as inpatient and utilization will inform health homes on the effectiveness of their programs.

Question 3.2.9, #1

1. Describe your proposed approach for implementing health homes.

We will promote health home transformation through a holistic orientation that recognizes the importance of integrating primary and behavioral health services while coordinating linkages to long-term community services and supports. Member choice and person-centered care will be emphasized. We believe the crux of health home operations will be based on the following:

- Implementation of health homes will reflect our core values of person-centered, family focused, community-based, and culturally competent care; we will be responsive to the member's racial and ethnic identity values and beliefs
- Engaging Federally Qualified Health Centers (FQHCs), Community Mental Health Centers (CMHCs), Rural Health Clinics (RHCs), primary care, social workers, and other community-based organizations that are currently engaged with members who would benefit from the services and supports of the health home; the engagement process includes a "readiness review" to establish resources in place and ones to be developed in evolving a health home model of care
- Identifying members meeting diagnostic criteria and acuity parameters through claims analysis and the algorithm established for Iowa consistent with the Iowa State Plan Amendment; using the Chronic Illness Intensity Index (CI3), the predictive modeling program developed by our national staff in Health Care Analytics that examines claims history, we will rank our members, e.g., 0-100 (low to high) on their risk of a first-time admission for a mental health or substance use disorder condition within the coming two months. HH will be notified of members who score 10 or more, as well as provided ongoing information on HH members' risk status by type of health condition. Refer to Section 9.1 for further detail on our predictive modeling capabilities
- Enrolling members in the health home that aligns with member choice and condition needs
- Sharing clinical information with health home providers regarding utilization and acuity risk scores
- Monitoring and supporting members by identifying gaps in and access to care
- Engaging in ongoing quality improvement to maximize member outcomes and satisfaction

Working with Providers

The core of Amerigroup's health home design will be a professional-led approach that incorporates coordination between providers that engages the member, family members, providers, and natural supports in developing an integrated care plan that incorporates the member's holistic needs. This includes physical health, behavioral health, and socio-economic issues related to housing, employment, natural supports, and meaningful community participation. In addition to the health home core services listed above, health homes provide traditional health services such as primary care services, specialty services (including psychiatric services), tests and procedures, emergency services, and facility/inpatient services.

A central component for the health home will require our providers to engage members in their own healthcare, conduct care coordination between physical and behavioral health professionals, including specialists, and facilitate continuity in services during transitions between levels of care.

IA_3.2.9-10_COB_3.2

A central component for the health home will require our providers to engage members in their own healthcare, conduct care coordination between physical and behavioral health professionals, including specialists, and facilitate continuity in services during transitions between levels of care. Effective care coordination will address barriers to service access and gaps in care and promote self-care and member responsibility in decision-making regarding health status and condition management. Shared treatment plans reflect development of member-centric goals, as well as primary responsibility in addressing goals. Treatment planning specifically takes into consideration medication prescribed by all providers with notification of all providers of all prescriptions. Health plan care coordinators may facilitate this process as well as remind health home providers of clinical information available in Member 360. Providers will also be responsible for providing members with information about health promotion such as healthy habits, including exercise, nutrition, and medication adherence. To accomplish these tasks, our health home contracts include requirements for face-to-face meetings, as well as a minimum number of contacts based on the tier a member is assigned. Additionally, we have established guidelines for reporting delivery of health home services reflecting the provision of one of the six core services.

We believe the care coordination role is crucial to the integrated and chronic condition health home and will be further defined for health home providers during the implementation process. Health home care coordinators will have the requisite experience and licensing, as appropriate, to conduct some or all of the following types of activities:

- Coordinating physical and behavioral health care, including referring to specialty providers as needed
- Participating in developing and updating a person-centered care plan based on a biopsychosocial assessment and member progress inclusive of health service providers involved in the member's care
- Developing crisis plans that are integrated into the care plan and readily accessible by all involved team members
- Providing individual and family support
- Educating members, family members, and caregivers on wellness, healthy habits, and personal responsibility in maintaining the member's health
- Facilitating communication, sharing of information, and collaboration between providers
- Helping assure initiation of identified services and supports
- Providing medication reconciliation information to all providers to prevent duplication or contraindication
- Assisting with transitions between levels of care, including follow-up appointments
- Collaborating with the Case Manager on challenging or complex conditions
- Linking, referring, and facilitating access to community-based services

To effectively onboard new health home providers, we conduct a comprehensive health home readiness review. This process scores providers across a number of categories, including: administrative leadership and support, staffing (including definition of team member roles), electronic health record (EHR) capabilities, and clinical processes—procedures for conducting assessments and developing health action plans, processes to collaborate with hospitals, evidence-based treatment protocols, and quality improvement processes. In this way, we are able to assess the provider's capacity to provide integrated care, both from a clinical and an administrative perspective. Support is provided in sharing best practice, evidence-based practice protocols to enhance quality, as well as guidance on early intervention and prevention of behavioral health conditions (See Section 3.2.8). Given our experience with this process, we are positioned to identify and recruit the best providers to serve as health homes.

Engaging Providers through Education

We plan to work with the University of Iowa's IHH learning collaborative, the MHDS Regions for Mental Health, and the Iowa Primary Care Association to facilitate ongoing health home services and enhance provider collaborations. This robust program identifies and engages providers that are ready to embrace a progressive approach to delivering member-centric, meaningful, and cost-effective care to their members. We have a number of educational and incentive approaches that start with assessing a provider's readiness for transformation to a multi-disciplinary team-based coordinated care model. We will work to engage providers across a continuum of key program features essential to the delivery of care that is well-coordinated and integrated and results in positive outcomes for members.

Two main strategies are important to inform providers about program requirements and expectations:

- Promoting collaborative learning communities
- Leveraging our experienced Iowa-based employees

Collaborative Learning

Providers and their care teams participating in the health home will be required to make best efforts to participate in our collaborative learning series, such as participating in live webinars, listening to educational recordings from our library, and completing virtual training sessions designed to assist in practice transformation and maintenance. Attendance will be tracked and assessed to monitor ongoing participation and compliance. We will design a transformation education series to help support provider success in improving quality of care, reducing costs, and managing high-risk members. For example, collaborative learning events might involve a variety of different virtual learning opportunities, including monthly webinars, local virtual office hours that provide extended access for providers and their care team who may have questions, and community-based forums for sharing best practices.

Leveraging best practices from the University of Iowa, our collaborative learning topics will include how to reduce unnecessary hospital readmissions and emergency room visits and how to increase access to care. This includes care coordination for complex conditions such as diabetes; chronic obstructive pulmonary disease (COPD); asthma; coronary artery disease (CAD); congestive heart failure (CHF); and behavioral health conditions, including serious mental illness (SMI), severe emotional disorder (SED), and substance use disorder (SUD).

In building the health home network, new community-based organizations are recruited through directed outreach efforts. When interest has been determined, the provider organization completes a readiness assessment. This assessment identifies key program features and asks the organization to identify the resources currently in place or ones that need to be developed to evolve the service delivery system to one that achieves the goals of a health home. Additional activities dedicated to enhancing the network of IHH and CCHH include:

- Practice consultants and liaisons — dedicated resources
- Regional provider meetings to provide clinical and administrative information on program components, vision, goals, and objectives
- Distribution of a Provider Manual detailing the program
- Webinars and conference calls to address program implementation issues
- Support of multi-payer learning collaborations
- Encouraging and notifying providers of opportunities to evolve their clinical model; for example, the National Council for Behavioral Health calls for organizations to participate in a national learning collaboration for behavioral health organizations to build integrated care capacity—this opportunity addresses such topics as:

- Developing high-functioning primary care teams
- Integrating behavioral health in the primary care setting
- Integrating chronic case/disease self-management in behavioral health settings
- Integrating population health management in behavioral health settings
- Identifying who is responsible for care coordination
- Monitoring and program review of service provision through report cards, including areas such as:
 - Engagement
 - Gaps in care
 - Follow-up after discharge for any type of admission
 - Premature mortality

Leveraging Experienced, Iowa-based Employees

We will make several program resources available to support and collaborate with DHS to achieve successful outcomes and reach program goals. The following information describes the types of roles we will develop in order to support the program. The patient-centered care support roles and contact information will be available via our provider portal prior to the program launch. Some roles may vary, and the level of interaction of the support team may vary based on the needs of the provider organization. Our intent is to make other roles available as necessary to develop health home practice-ready expertise such as:

- **Health Home Leadership** — David Johnson, MSW, ACSW, provides leadership for our national health home program with over 35 years personal experience, with 15 of those years in developing and implementing integrated models of care. For the past two years he has led Amerigroup's health home programs
- **Patient-centered Care Consultant** — Our dedicated regionally based Patient-centered Care Consultants (PCCCs) will focus on program models and structure that include defining work flows and process improvement initiatives. These team members use reports to help focus on interventions that improve population health outcomes by maximizing available practice resources and establishing quality improvement structures. The PCCC works collaboratively to establish transformation action plans.
- **Provider Clinical Liaisons** — Our dedicated Provider Clinical Liaisons (PCLs) will support provider organizations' development of care coordination skills, interpretation of reports, and identification of members who can benefit from a care plan. These individuals also educate providers and staff around the elements of a care plan and assist in care plan creation, coordinating and monitoring care, and establishing processes to facilitate transitions in care. Additionally, the PCL helps organizations manage care for members with more complex needs by leveraging available health plan programs while promoting seamless coordination between the PCP and health plan-sponsored programs
- **Peer-to-Peer Physician Consultation** — Our physical and behavioral health clinical leadership will provide oversight of holistic care plans and actively collaborate with team members and providers as necessary to engage members and their families to enhance self-care. This effort will incorporate clinical rounds with a multidisciplinary team of professionals. Weekly chronic condition rounds include our medical and behavioral health Medical Directors, Utilization Management Nurses, subject matter experts on issues with children or individuals who are aged or with disabilities, a pharmacist, and Disease Managers. These team members prepare and present concerns and complex situations at rounds for validation of the care plan and to obtain suggestions on how to improve the member's care. The team discusses available community resources and receives input from the Medical Directors regarding medical management, medications, and suggested modifications to the care plan

Supporting Providers through Information Sharing

Practice transformation is a process that incorporates quality improvement methodology and practice-level data to drive change that impacts quality, cost, and member experience. It is expected that health home providers will have access to health information systems that include Electronic Health Records (EHR) with preferred functionality including: alerts, patient registries, decision-supports, secure communications with patients and other providers, and reporting on clinical outcomes. Additionally, in order to drive practice improvement, physicians participating in the health home will have access to a series of web-based tools and data platforms.

We are advancing our providers' ability to deliver quality care through care coordination and collaboration that is supported by access to member healthcare information that is holistic, timely, and accurate. Our integrated care coordination platform, Member 360, combines member data and information from various sources into a single view of the member's health services experience to provide a holistic picture of the member's utilization, care coordination services, and gaps in care. Member 360 includes such information as member health risk assessments, care plans, longitudinal member health records, and clinical data. Through the provider view of Member 360 located on our secure provider portal, providers who have members attributed to them can see the member record via our provider portal giving them simple, easy-to-access data and information to assist them in engaging the member in his or her health and well-being. This view enables any provider who is treating our members to see the full picture, including care plans and assessment information, enhancing his or her ability to reduce duplication and improve care coordination and collaboration between providers through this one-source clinical data repository.

The provider view of our care coordination platform, Member 360, enables any provider who is treating our members to see the full picture, including care plans and assessment information, enhancing his or her ability to reduce duplication and improve care coordination and collaboration between providers through this one-source clinical data repository.

IA_329-10_COB_42

The provider view of Member 360 also enables an understanding from a population health perspective, informs how his or her members are doing, and provides information that helps the provider achieve better results. Member 360 will support providers in achieving the quality incentives defined in our quality programs. With appropriate releases, a PCP will be able to view his or her members with diabetes to view their most recent HbA1c test results and, at the same time, see members who need to have HbA1c testing done. The tool will take the providers to the next level by delivering much more than data; instead, it displays information that is synthesized in a succinct view to create obvious, actionable items. Refer to Question 3.2.8, #11 for more information on information sharing between providers.

As described in detail in Section 10.3.2 Provider Incentive Program, Amerigroup will also deploy to PCPs a proprietary on-line reporting tool that allows providers to see actionable, member-specific information. **Using alerts, dashboards, and reports, this tool will give PCP provider practices the information they need to manage their members' health.** It will help practices stratify their membership based on risk and prevalence of chronic conditions, and it will offer actionable clinical insights such as care gap messaging and preemptive flagging of members with high risk for readmission. Functionality will include provider- and member-level drilldown capabilities into quality performance metrics and identification of cost-of-care savings opportunities such as emergency room avoidance.

Monitoring Outcomes and Effectiveness of Interventions

Our health home program evaluation will be comprised of clinical quality measures such as the delivery of integrated physical and behavioral health care coordination and preventive care, as well as utilization measures, including appropriate emergency room utilization, inpatient admissions, and generic dispensing rates for select sets of drug classifications.

In addition to serving as a basis for incentive calculations, these measures will be used to establish a minimum level of performance expected of our providers and encourage improvement through sharing of information. It is important to develop measurements based on criteria that “measurement informs practice.” The following types of measurement criteria guide the identification of measures, including, but not limited to the following:

- Measureable and reportable in order to maintain focus on priority areas where the measurement demonstrates an impact on the care delivered
- Useable and relevant to assure providers use the results to support practice improvement
- Feasible to collect, using data that is readily available for measurement and retrievable without undue administrative burden on our providers

Amerigroup is aware of the six CMS core health home services and will define our quality measures for health home providers to be aligned with these measures, including topics such as screening for behavioral health conditions like depression and SUD, reducing unnecessary emergency room utilization and hospitalization, and following up on members after hospitalization.

Determining How to Make Improvements to the Health Home

Amerigroup will work closely with a variety of health home participants, including members, family members, providers, Patient-centered Care Consultants (PCCCs), and Provider Clinical Liaisons (PCLs), as well as utilize relevant goal achievement data to continually monitor the performance of health home providers. This will include but not be limited to the following:

- Member and provider satisfaction survey results
- Member call center reports
- Transition between program reports
- Member grievances and appeals
- Healthcare Effectiveness Data and Information Set (HEDIS®) outcomes such as emergency room utilization, readmission, and follow-up appointment adherence
- After-hours and weekend appointment availability surveys

Based on this information, Amerigroup will define and drive improvements to the health home through interventions and education with targeted providers who have unique or outlying issues or identified trends for multiples provider groups. Additionally, we will supply all providers with a dashboard that shows population-wide HEDIS scores, gaps in care, emergency room visits, daily census reports for inpatient admissions, etc. member-level data and reports will be available through Member 360 for provider reference.

Question 3.2.9, #2

2. Describe strategies proposed to increase health homes participation.

Member Education

As described in detail in Section 8 (Member Services) and Section 6.1.6 (Provider Relations and Communications) of this response, we will inform all members of our specialized programs, including the health home, through our comprehensive Member Education program that includes the following:

- Member handbook
- New member welcome call
- Member portal
- Care Management and Disease Management employees
- Member Services and Nurse HelpLine employees
- Member advocate

All members who are enrolled in the health home will receive a letter mailed directly to their place of residence outlining the member's rights and responsibilities and program benefits.

Our Patient-centered Care Consultants (PCCCs) and Provider Clinical Liaisons (PCLs) will provide education and training to health plan employees and network providers on the goals and functioning of the health home through the Member Education program, as well as one-on-one consultation as needed. Amerigroup will establish written processes, policies, and procedures for educating members, providers, and health plan employees on what the health home brings to the Iowa High Quality Healthcare Initiative.

Member Outreach and Incentives

Under current processes, members will be referred to chronic condition health homes (CCHHs) by the health home and referred to integrated health homes (IHHs) by Amerigroup. Should the State change this process, we are prepared to identify members' status via claims history/enrollment reporting, which will enable us to attribute the member to a health home based on geographic residence and "provider loyalty," providers/clinics where the member has previously received services. We will also collaborate with providers and care managers to identify new members providing for provider or member self-referral for health home services. We will proactively enact strategies to identify, reach out to, and encourage participation of members who are eligible for enrollment in a health home. The following activities reflect our experience working in collaboration with our health home providers in implementing innovative, creative strategies to increase member participation. We will evaluate strategies that are being used in Iowa as well as ones that might be utilized to enhance engagement, for example:

Daily Hospital Census

- Provide Daily Census to health home that includes admits/discharges
- Obtain weekly feedback from them regarding follow-up

Incentive Program

- Develop incentives for members completing their Health Action Plans, e.g., a prepaid debit card for member completing health action plan

Increase rate for Health Action Plan completion

- Pay providers a higher rate for Health Action Plan completion

Member Outreach

- Assist in member outreach

- Create collaterals and mailers that will increase engagement for health homes to use and reminding members to update their contact information
- Update member website with health home information
- Bad Contact Information : Obtain a list, scrub the data and return an updated list back to the HH

Staffing Support for Health Homes

- Co-locate a nurse in the CMHC (IHH)
- Co-locate a behavioral health professional in primary care setting (CCHH)

Early feedback from potential CCHH providers in Iowa suggests that they have a difficult time seeing the value of CCHHs and that they perceive barriers to enrollment. To address these concerns, we will obtain additional feedback on provider concerns to develop program modifications to enhance provider participation. We will bolster our efforts to clearly articulate the value proposition of CCHHs to the provider community.

Question 3.2.9, #3

3. Describe your proposed reimbursement structure for health homes.

Iowa establishes tiers based on the number of chronic conditions (for CCHHs) or intensity of care (for IHHs) for a per member per month (PMPM) rate by tier. For base health home services reimbursement, we will contract with health homes at the going Medicaid FFS PMPM rates:

CCHH Rates		IHH Rates	
Tier 1 (1 to 3 Chronic Conditions)	\$12.80	Tier 5 (Adult)	\$127.97
Tier 2 (4 to 6 Chronic Conditions)	\$25.60	Tier 6 (Child)	\$127.59
Tier 3 (7 to 9 Chronic Conditions)	\$51.21	Tier 7 (Adult with Intensive Care Management)	\$347.97
Tier 4 (10+ Chronic Conditions)	\$76.81	Tier 8 (Child with Intensive Care Management)	\$347.59
		Tier 9 (Member Outreach, 3 months only)	\$102.40

As rates are changed by the State, Amerigroup will implement such changes within the required timelines or per the provider contract.

CONTAINS CONFIDENTIAL INFORMATION

CONTAINS CONFIDENTIAL INFORMATION**Question 3.2.9, #4**

4. Describe how you will ensure non-duplication of payment for similar services.

We believe care coordination activities promote continuity and consistency of care provided for our members. However, a potential for service duplication may occur in moving between programs and specifically HCBS waiver services in which a member is receiving targeted case management services. In such situations, a member will only be enrolled in one program; health homes as DHS indicates that children served under CMH Services under the 1915(c) waiver will be enrolled in integrated health homes and not targeted case management. If a member qualifies for both an integrated health home and a chronic condition health home, the member may choose in which health home to enroll, but may only enroll in one health home. Members participating in other HBCS programs are not eligible for IHH services.

Additionally, if a member meets the criteria for our complex Case Management, as determined by our algorithms, to be managed by Amerigroup's complex Case Managers, while also being eligible for chronic condition or integrated health home services, the health plan complex Case Manager will specifically coordinate with the health home care coordinator. Our complex Case Manager is alerted to health home enrollment through our data systems, which track members assigned to a specific health home, as well as the member's primary care physician with enrollment dates. The collaboration and coordination with the health home care coordinator facilitates a robust care coordination plan without duplicating activities and services.

We will include communication and collaboration responsibilities in our provider agreements. Our complex Case Managers will also determine member enrollment activity and guard against duplication of services. Leveraging our claims system, we will verify billing for targeted Case Management and health home services. We will also track member participation in services and supports and movement between programs through our care coordination program, Member 360, described above. In summary, our health homes will collaborate regularly (at least quarterly) with targeted Case Managers, other Case Managers, or DHS service workers for each member receiving Case Management services; these interactions will be aided by the criteria, contracts, oversight, and systems we have in place.

Additional strategies for identifying which programs our members with complex and specialized health care needs are enrolled in and potential or actual duplication of services include the following:

- Reaching out to members identified with high needs, helping them understand the goals of each program and assisting with selecting the one that best meets their preference and support needs
- Collaborating with health home providers to identify and develop information-sharing strategies to help assure members are not receiving duplicate services
- Utilizing the State-provided health home report to identify and designate our network providers that also serve as health homes

- Monitoring our data tracking systems to identify members who receive services through health home providers
- Working directly with network providers to help them understand the differences between the programs and identify and refer members who may benefit from one of the programs to the most appropriate program
- Connecting providers with our peer-to-peer consulting opportunities to assure members are referred to the most appropriate program

Our strategies to prevent duplication of efforts will be documented upon request and include elements such as records of joint staffing meetings where a member's medical needs, current activities, and HCBS waiver services needs are reviewed and appropriately updated. Amerigroup supports DHS' approach to delivering care that is holistic, integrated, and well-coordinated for members in the Iowa High Quality Healthcare Initiative. Health homes are an important aspect of providing continuity in health services, engaging members in self-care, and promoting recovery and resilience. We look forward to sharing our plans and working with DHS to continue our efforts toward our common health home goals.

Question 3.2.10, #1

1. Describe how you will fulfill the requirements of this section in addition to the general Health Homes requirements.

Amerigroup will:

- Develop a network of health homes which meet the requirements established in the State Plan, building on what the State has implemented, and filling regional gaps as detailed in the "Our Philosophy" portion of this response.
- Establish care coordination for members enrolled in health homes through collaboration with community-based organizations at the point-of-care in the community
- Provide training, technical assistance, expertise and oversight to health homes, that reflects quality-driven, cost-effective health home services in a culturally competent manner that addresses health disparities and improves self-care as detailed in Question 3.2.9, #1
- Identify eligible members for enrollment, as detailed in Question 3.2.9, #2
- Perform data analysis at the member level and program-wide to inform continuous quality improvement, as detailed in Question 3.2.9, #1
- Reimburse providers according to a reimbursement methodology proposed by the Contractor and approved by the Agency, as detailed in Question 3.2.9 #3
- Develop an incentive payment structure, for the Agency's review and approval, that rewards health homes for performance based on quality and outcomes, as detailed in Question 3.2.9, #3
- Monitor quality and outcomes and report on measures as detailed in Question 3.2.9, #1

1915(i) Habilitation Program Services and 1915(c) Children's Mental Health (CMH) Services (3.2.11)

Question 3.2.11, #1

1. Describe your proposed approach for delivering these services.

Proposed Approach for Delivering Services

Amerigroup Iowa (Amerigroup) will build upon the experience of 15 of Amerigroup's 19 affiliated health plans that coordinate the delivery of fully integrated physical health and mental health and substance use disorder treatment services, and in seven states, Long-Term Services and Supports (LTSS). Our Kansas affiliate administers Kansas' Serious Emotional Disturbance (SED) Waiver services. In December 2015, our Bayou Health Plan affiliate in Louisiana will also begin covering 1915(i) services. Beginning January of 2016, our New York affiliate will cover 1915(i) services along with a full spectrum of physical and behavioral services as a Health and Recovery Plan (HARP) for adults and in 2017 will cover those services for children as well.

Amerigroup will coordinate delivery of Habilitation Program and CMH Waiver services working in partnership with members, their families, Integrated Health Homes (IHHs), other providers, and community supports to meet members' individual needs supporting resilience and recovery. Our proposed approach recognizes that:

- An effective program embraces principles that reflect hope, voice and choice, and empowering relationships that create an expectation that resilience and recovery lead to meaningful participation and an active role in society
- Effective coordination of children's mental health services is child and family focused: children with a SED and their families need intensively coordinated in-home and wraparound services to support successes at home and school, and in the community
- Adults with serious mental illness and substance use who have a history of homelessness, unemployment, and poor social functioning benefit from intensively coordinated community-based service options to reside successfully in home and community-based settings
- Ongoing provider and health plan staff education and training in evidence-based practices and developments in the field of mental health and substance abuse treatment are essential elements of a high-quality program
- Stigma and discrimination takes many forms including children being bullied by other children and youth: working with schools and community groups is an important aspect of habilitation programs and services
- Evolving and emerging technologies, such as telehealth and web-based communications, are used to increase access to services helping to maintain members in their homes and communities
- Systematic tracking of progress and outcomes informs shared decision-making and is an important aspect in the implementation of evidence-based treatment programs and services

Amerigroup clinicians and support staff, drawing upon our national and affiliate health plan resources, will be fully prepared to assume responsibility for:

- Identification of members who may be eligible for Habilitation Program and CMH Waiver services
- Assessment of needs based eligibility
- Service plan review and authorization

- Claims payment
- Provider recruitment
- Provider agreement execution
- Rate setting
- Provision of training and technical assistance to providers

Amerigroup will assign community-based case managers dedicated to working with IHHs, who with our Provider Clinical Liaisons (described in Section 3.2.9) and Provider Relations Team, will support health homes integration of primary and behavioral health services while coordinating LTSS. Community-Based Case Managers will focus on members who receive HCBS, including members enrolled in IHHs who are eligible for the Habilitation Program or CMH Waiver services.

Provider Clinical Liaisons will:

- Oversee the Community-Based Case Manager
- Consult with the case manager and IHH care coordinator as needed to help assure the member's total needs are met

Integrated Health Homes will:

- Integrate Treatment Plans from across the system of care
- Establish a Care Coordination Plan
- Provide care coordination – physical health, behavioral health, Habilitation Program and CMH Waiver, and social supports
- Develop the service plan for members enrolled in the Habilitation Program or CMH Waiver
- Monitor quality indicators and outcomes to help assure plan implementation

Community-Based Case Managers, with oversight from Provider Clinical Liaisons, will:

- Complete initial assessments and reassessments
- Assure person-centered planning
- Review and authorize service plans
- Work closely with IHH care coordinators to help support creation of an integrated care plan that includes the service plan and to facilitate coordination with other areas of the health plan as needed

Amerigroup's Provider Relations Team with Community-Based Case Managers and Provider Clinical Liaisons

- Identify and recruit Habilitation Program and CMH Waiver providers
- Coordinate credentialing with the Amerigroup credentialing team
- Facilitate provider agreement execution
- Develop and implement provider training and technical assistance
- Monitor claims payment

Our approach to provider support recognizes the nuances of contracting and supporting non-traditional providers to verify that they fully understand the Iowa Initiative and Amerigroup's policies and procedures. Highlights of our approach with LTSS providers will include:

- Providing proactive provider education that addresses Habilitation Program and CMH Waiver providers' needs and requirements, including the changes that will take place transitioning from fee-for-service to managed care

- Implementing sound reimbursement practices, including prompt and accurate claims payment
- Developing collaborative relationships, including extensive, one-on-one outreach
- Providing technical assistance in collaborating with Habilitation Program and CMH Waiver providers promoting program and individual success such as proactively contacting providers if we identify possible claims submission errors during our weekly claims review
- Implementing practices to simplify and minimize administrative burdens

The Community-Based Case Manager with the Provider Clinical Liaison and Provider Relations Team will develop and implement provider training and technical assistance using our collaborative learning approaches described in Section 6.1.

We will work closely with each IHH to implement approaches that meet the needs of members in the local community. We will solicit input to guide continual enhancement of IHHs in carrying out this role in the delivery of HCBS from the Stakeholder Advisory Committee and a Behavioral Health Advisory Committee comprised of members, family members, providers, and advocates, as described in Section 3.2.8. We will work with members, their families or representatives, Agency staff, and advocacy groups to continually evaluate and refine our approach in Iowa to support the delivery of comprehensive and integrated services that improve members' health outcomes and functional capacity and support members to live in the community in the most integrated setting.

Level of Care and Needs Based Eligibility Assessments and Annual Support Assessments

Identification

Amerigroup will build upon affiliate health plan experience to develop and implement policies and procedures for ongoing identification of members who may be eligible for Habilitation Program and CMH Waiver services. We understand these policies and procedures are subject to Agency review and approval. Amerigroup will:

- **Process referrals from a member's providers:** Providers will be able to make referrals directly to our clinical team by phone, email, or fax or using an online referral form.
- **Process member self-referrals:** We will implement a no-wrong-door policy for referrals. In most instances, members will contact the health plan through the single, toll-free number and speak to a Member Services Representative. The representative will contact the case management team while on the phone with the member and connect the caller with a member of the team, or if not immediately available, leave a message for the team. Calls will be returned no later than the following business day.
All health plan staff who interact with members and their families will also be trained to accept a self-referral or family referral and the process for doing this. Examples of staff who may receive these requests include health plan case managers, utilization management, disease management, and health education and outreach professionals.
- **Incorporate hospital admission notifications:** Hospitals will be required to notify us of unplanned admissions within 24 hours of the member's admission. Planned admissions are prior authorized and we are notified upon admission. We will also collaborate with the Iowa Health Information Network to identify methods to receive real time or near real time hospital admissions data. Notification of hospital admission data will be aggregated and a hospital census report generated twice daily. A case manager will notify the IHH of the admission and the IHH care coordinator will contact members or their families to initiate discharge planning and schedule a date, time, and location for completion of an assessment.

- **Perform ongoing review of claims data:** Amerigroup will perform ongoing review of claims that alone or in combination with other information, such as diagnosis or assessment information, indicate a potential need for Habilitation Program or CMH Waiver services. Examples include members who have an SED or behavioral health diagnosis and have:
 - Gaps in services
 - Frequent Emergency Room (ER) use
 - Inpatient readmissions
 - Unusually high or low service utilization

Upon identification, a Community-Based Case Manager will contact the member or member's family to schedule a date, time, and place for completion of an assessment. We will refer individuals who are identified as potentially eligible for LTSS to the State or its designee for level of care determination, if applicable.

Assessment and Annual Support Assessment

Amerigroup will develop policies and procedures for administration of the InterRAI Home Care (or subsequent tool specified by DHS) and level of care for members identified through any of the processes described previously due for a reassessment. The assessment will also be used to identify the member's needs and goals for specific services and will include an assessment of the individual's ability to have his or her needs met safely and effectively in the community and at a cost that does not exceed limits established in the Habilitation Program or CMH Waiver.

We will conduct a thorough interview with the member, and family or representative as applicable, during the needs assessment process that helps build trust with members, their providers and natural supports. This trust is tantamount to person-centered care planning. Community-Based Case Managers will also conduct a risk assessment to determine if the member's preferences, needs and goals can be safely addressed in the setting they choose. The Community-Based Case Manager carefully reviews any identified risks with the member and family, as applicable, and develops a risk agreement that addresses steps that will be taken to mitigate those risks. The Community-Based Case Manager will also make sure the member and family is fully aware of any potential outcomes that may occur if the risk is not addressed.

Assessments will be performed face-to-face with the member by a Case Manager trained to administer the InterRAI Home Care. The Case Manager will also solicit input from the member's family (or representative), caregiver, or others as requested by the member and review additional relevant information, such as previous assessments, to gain a complete understanding of the member's needs and goals.

The reassessment will be completed at least annually, when we become aware that the member's functional or medical status has changed in a way that may affect level of care eligibility, and when a member, family member or member's representative, requests a reassessment.

Conflict-Free Assessment

Amerigroup recognizes the importance of providing a needs assessment in accordance with conflict-free principles and practices. ***Amerigroup case managers are strictly prohibited from being involved in service delivery to prevent any conflicts of interest.*** To further assure that needs assessments are conducted in accordance with all Balancing Incentive Program requirements relating to conflict-free case management, we will develop policies and procedures to implement safeguards that include:

- Community-Based Case Managers may not deliver covered services.
- Community-Based Case Managers will be required to report any conflicts of interest they may have to the Long Term Care Manager. Potential conflicts of interest include but are not limited to, familial and personal relations with the member, their family or representatives, or any paid personal care

attendants or other support workers and/or the provider agency that may compromise their ability to evaluate member needs and goals objectively.

- Amerigroup policy clearly articulates that case managers and other staff making coverage decisions are strictly prohibited from financial incentives or other rewards for limiting care or services. Likewise, we affirm that decisions about hiring, promoting, or terminating case managers or other staff is not based on the likelihood or perceived likelihood that they support, or tend to support, denials of benefits or services. To reinforce the importance of conflict-free case management, all employees will sign a Compensation Policy Statement upon hire that affirms this policy. We will retain the signed Compensation Policy Statement in the employee's personnel file or other file as deemed appropriate.
- Our grievance policies and procedures will include the right to a conflict-free assessment as well the right to file a grievance or appeal concerning dissatisfaction with choice, quality of services, eligibility decisions, service provision, or outcomes. We track grievance and appeal data to help identify and implement necessary operational changes or enhancements.
- Case management supervisors will monitor case manager performance and audit a random sample of member records to verify case managers' compliance with all program requirements including conflict of interest requirements. We will investigate and initiate corrective action when a conflict of interest is confirmed, including assigning a different case manager who has no conflict of interest to the member.
- Amerigroup will review conflict free assessment requirements and our safeguards with a broad array of stakeholders to gain their input into ways to strengthen these safeguards. Our Stakeholder Advisory Board and Behavioral Health Advisory Committee (described previously in Section 3.2.8), will provide input into our safeguards initially (following contract award) and at least annually thereafter as part of our quality oversight process.

Assessment Timeframes

We understand the timeframe for completion of assessments and reassessments will be finalized with DHS through the Contract negotiation process. We propose the following timeframes:

- We will complete an **initial needs assessment** within 30 days of identification of a member who appears to need or requests Habilitation Program or CMH Waiver services. We will identify these members from analysis of historical claims data or other data when available. We will also identify members who may need these services during completion of the Welcome Call screening or from referrals from inside or outside the health plan, including self-referrals and family referrals. When the member has an urgent need for services covered under the Habilitation Program or CMH Waiver, we will assess the member within 72 hours of learning of an urgent need, except when there are extenuating circumstances such as severe weather. In extenuating circumstances we will complete the assessment as soon as circumstances permit.
- We will complete annual reassessments within 30 days prior to the 12-month anniversary date of the previous initial or annual assessment.
- We will complete reassessments related to a change in the member's needs or circumstances within five days of learning of the member's change in needs. Members who have urgent needs will be reassessed within 72 hours of learning of an urgent need, except when there are extenuating circumstances such as severe weather. In extenuating circumstances, we will complete the assessment as soon as circumstances permit. Amerigroup may authorize interim services pending completion of the assessment.

Once the assessment is completed, we will submit the level of care or functional eligibility assessment to the State in the manner prescribed by DHS for a determination of eligibility to receive Habilitation Program or CMH Waiver services.

We will also make sure the member is receiving additional non-waiver services and supports, including state plan behavioral health services and community-based supports, any applicable Value-Added Services, and other needed supports, which may include care coordination and case management.

We understand the Agency will approve the mechanism and the timeline in which the needs assessments will be administered. We will adhere to these requirements and will seek approval from DHS for any proposed changes to the mechanism or timeline.

Documentation Requirements

We will maintain all reassessments in the Amerigroup care coordination and management system, which will include the results, recommended level of care, and date of the reassessment. Our system will maintain all level of care or needs-based eligibility reassessment data, including but not limited to, the date the reassessment was completed. Our system has the capability to generate routine and ad hoc reports to meet DHS' needs.

We will submit reassessments to the Agency in the timeframe and format specified by the Agency for members who have a change in their level of care. We will maintain documentation for members with no change in level of care or needs-based eligibility and make this available upon request from the Agency.

Appearance of Ineligibility

If during the assessment process we determine the member does not appear to meet criteria for Habilitation Program or CMH Waiver services, we will advise the member and/or family of this, of the member's right to continue the assessment, and to continue to pursue eligibility. The member or family may elect to terminate the assessment at this time or at any time during the assessment. If they make this decision, we will document the decision in the member's record and obtain the member's or representative's signature. We recognize a member's right to request services without limitation, and Amerigroup will not encourage a member or the representative to discontinue the process. We will provide documentation of members or representatives who decide to terminate assessment to the Agency within the timeframe and in the format specified by the Agency.

Waiting List for CMH Waiver

Amerigroup understands there may be a waiting list for the CMH Waiver at the time of a member's initial assessment. The Community-Based Case Manager will advise the member, family member, or representative there is a waiting list and they may choose to receive other support services until a waiver slot is made available by the Agency. In the event there is a waiting list, and the member is not identified as having access to a reserved waiver slot, we will make sure the member is receiving additional non-waiver services and supports, including state plan behavioral health services and community-based supports, while on the waiting list. If a member is in a facility and qualifies for a reserved capacity slot, we will work with DHS to determine when the member may access CMH Waiver services and inform the member and family or representative, if applicable, of the timeline and process for enrollment into the CMH Waiver. We will complete an assessment with the member when the member is notified of an available waiver slot.

We may also elect to authorize supplemental services to meet the member's identified needs and goals and will not hesitate to authorize these services to prevent the need for higher cost care, including institutionalization. We will develop policies and procedures, based on the experience of affiliate health plans, that specify how and under what circumstances supplemental services will be determined necessary for those waiting for a waiver slot.

Service Plan Development and Person-centered Planning

Following completion of the assessment and prior to authorization of services, we will develop a service plan using a person-centered planning process led by or with the member and family or representative, depending on the member's age and preference. The service plan development process will meet all contractual requirements as well as state and federal regulations and policies as described in this section. Amerigroup will develop policies and procedures to guide service planning in accordance with these requirements and train IHH care coordinators on these policies and procedures.

Amerigroup's approach to service planning emphasizes member choice, self-determination, and community integration. We work with the members and/or families/representatives to determine how they want to live their lives and identify the supports they need to achieve their goals. Our Community-Based Case Managers will work with the member's IHH care coordinator and make sure the member's team uses a person-centered planning process to develop the member's service plan.

The Community-Based Case Coordinator will help assure the person-centered service planning process:

- Reflects cultural considerations, including the member's primary language or method of communication, cultural beliefs, and preferences
- Uses plain language that is transparent and easily understood by the member and family member/representative
- Addresses conflicts or disagreements, including divergent recommendations among team members with priority given to the voice and choice of the member and family
- Adheres to conflict of interest guidelines
- Assures informed choice and decision-making for the member regarding the services and supports they receive and from whom

Service Planning Team

A Community-Based Case Manager will work with the member and family to identify a service planning team as specified in the Scope of Work. The team will include people chosen by the member.

Team members will include professionals and non-professionals with adequate knowledge, training, and expertise surrounding community living and person-centered service delivery. At a minimum, the team will include the member and as applicable, the member's family and/or legal representative, service providers, and others directly involved in the member's care, including input from the member's PCP, specialists, and behavioral health providers.

The member or family will select a team lead from among the team members. If the member does not select a team lead, the service planning team will make the selection. If the team lead is not the member's Community-Based Case Manager or IHH care coordinator, the Community-Based Case Manager or IHH care coordinator will assist the team lead as needed with the person-centered service planning process.

Following identification of team members, the team lead and member or family will identify the ***member's preferred location, date, and time for service planning and assure the date is timely.***

In preparation for service plan development a Community-Based Case Manager with the team lead and IHH care coordinator, if not the team lead, will:

- Review the results of the member's assessment, including the member's identified strengths, needs, preferences, goals, and support needs
- Review other relevant information, including Individual Educational Plans for children in school, previous assessments and service plans, medical records including the member's treatment plan, the member's current claims and encounter data, and authorizations
- Consult with the member's PCP to help assure the member's medical needs, including preventive health needs, are being met

- Review the Habilitation Program and CMH Waiver cost cap
- Identify and arrange any accommodations needed by the member or other team members to participate in service planning, such as interpreter services and visual cueing
- Notify team members of the date, time, and location of service planning and methods for participation (in-person, by phone conference, and through written input)

Amerigroup will deliver an information-sharing and collaborative platform where interdisciplinary team participants can review and contribute to the service plan, as authorized by the member. The platform is operational today in several states serving members with disabilities and mental health and substance use conditions. The team lead will document the review and findings using this platform, which allows input by all members of the team.

The team lead, with the assistance of the Community-Based Case Manager, will actively engage the member throughout the service planning process.

- They will help the member or family drive the person-centered planning process that emphasizes ***member choice, the independent living philosophy, and the principles of self-determination.*** Service planning will be conducted in the member's primary language or method of communication, and will incorporate the members/family's cultural beliefs and preferences.
- The team lead, with the assistance of the Community-Based Case Manager, will provide information in plain language that is transparent and easily understood by the member and member's representative and is accessible to individuals with disabilities and persons who have limited English proficiency, consistent with 42 CFR 435.905(b). The planning approach will also recognize a child's developmental age and stage – information will be shared with children and adolescents in a way that they can understand it.
- The team lead will review the service planning process with the member, member's family or representative in preparation for the service plan meeting and provide the level of support and information needed throughout the meeting to help the member exercise informed choices and decisions.
- The team lead will ***also provide necessary information and support*** to assure that the individual directs the process to the maximum extent possible, and is enabled to make informed choices and decisions.

The team lead will address ***conflicts or disagreements***, including divergent recommendations among team members, with priority given to the voice and choice of the member and family/representative. Clear conflict of interest guidelines will be provided to all participants.

The team lead will help the member and family, working with other team members chosen by the member, identify the member's individual support needs, goals, and desired outcomes. The service plan will include an emergency plan that identifies the back-up providers and natural supports available to meet the member's needs when no approved service plan exists and which, if not addressed, may result in injury or harm to the member or other persons or in significant amounts of property damage as specified in the SOW Section 3.2.11.2.9. In addition, the service plan addresses life transitions including pre-school to school age, adolescence, transition to adulthood and adult systems of care, and aging.

The team identifies the services and supports from all sources, paid and unpaid, that together can meet the member's identified needs and goals and support achievement of the member's desired outcomes, considering the member's health and welfare needs, as well as the availability and appropriateness of services. ***Members will be offered choices that improve quality of life and integration into the community.*** These include Medicaid State Plan services including Habilitation Program services, CMH Waiver services, and services from other programs or agencies such as school-based services, vocational

rehabilitation services, community-based resources including children's resources, behavioral health resources, social support services, and natural supports such as family supports. The team will review identified service needs to assure that services are not duplicative with services available from other sources such as those under the Individuals with Disabilities Act or the Rehabilitation Act of 1973.

Amerigroup will also offer Value-Added Services described in Section 3.2.14 (when not available from another source) such as assistive devices, additional hours of respite and self-advocacy memberships to help the member to continue to live at home or reside safely in a community setting.

The team identifies the amount, duration, and scope of needed Habilitation Program and CMH Waiver services, helping to assure these services do not duplicate other available services and do not exceed service-specific limits specified in the waiver, state plan amendment, Iowa Administrative Code or other guidance issued by DHS. The team also calculates the service plan cost and compares the cost to the member's cap. If the cost for requested services exceeds the cap, the team identifies ways to adjust the service plan while continuing to help assure the member's health and welfare.

The Community-Based Case Manager ***identifies authorized and available HCBS waiver service providers and provides information about potential providers.*** Members who require a home- and community-based residential setting and/or services delivered outside their home, such as in a supported employment setting, and their families or representatives, review available options that comport with federal HCB setting requirement regulations, with assistance from other team members. They may arrange a visit with the help of the Community-Based Case Manager or IHH care coordinator prior to selecting a setting. The Community-Based Case Manager or IHH care coordinator also provides information about the benefits of integrated residential and service settings and offers the member and family opportunities to meet with other individuals with disabilities who are living, working, and receiving services in integrated settings, and with community providers, and identifies and addresses any concerns about the setting.

Each residential or service setting considered by the member and family is documented in the service plan. In addition, the discussion and options provided for meaningful day activities, employment, and education opportunities are documented.

The member's IHH care coordinator ***completes the service plan and includes notes summarizing the meeting, including participants, method of participation, and any outstanding items that require follow-up in the IHH electronic medical record for the member.*** The member or family member is asked to indicate agreement with the final service plan by signing the printed service plan. A paper copy of the service plan is provided to the member/family and other designated people involved in the plan. The care plan is also available to IHH care coordinators and providers in the member dashboard, Member 360°. The completed service plan is provided to Amerigroup for review and authorization as described in the next section.

Members may request an update to the service plan at any time by contacting their Community-Based Case Manager or IHH care coordinator.

Service Authorization and Initiation

IHHs will submit service plans for members enrolled in an IHH to the Community-Based Case Manager. The Community-Based Case Manager will review service plans within five calendar days of submission. Amerigroup may authorize interim services while the service plan is pending when essential to maintain the member at home and to help assure the member's health and welfare.

- The Community-Based Case Manager is responsible for confirming:
- The completeness and accuracy of the final service plan
- Requested services will help the member achieve his or her desired goals identified in the service plan

- Requested services meet the necessity requirements specified by DHS in the HCBS Waiver Provider Manual, Habilitation Program 1915(i) State Plan Amendment, Iowa Administrative Guide, and any other guidance or rule specified by DHS
- Requested services do not duplicate other services the member receives
- All sources of available coverage have been identified and the requested services are not otherwise available or covered
- Requested services are covered in the amount and for the duration requested and do not exceed cost limits established by the Agency
- The requested services, in combination with all other services and supports, paid or unpaid, permit the member to remain at home or in a community setting and help assure the member's health and welfare
- The member will receive, at a minimum, one billable unit of service per calendar quarter and needs Habilitation services or CMH Waiver services on a regular basis
- The providers chosen by the member or family/representative are authorized providers and are in good standing (that is, not under corrective action)

In the event any condition specified above is not met, the service plan is pended, and the IHH care coordinator is notified of Amerigroup's findings. The Community-Based Case Manager and the IHH care coordinator will then work with the member or family and team members to resolve the issue.

In the event the issue cannot be resolved, the Agency will be notified and Amerigroup will work with the Agency to determine the most appropriate course of action. In the event a requested service is denied or reduced or the final determination constitutes an adverse action, the member or family will receive a Notice of Action and may exercise their right to appeal as described in Section 8.15.

The service plan is then sent to the prior authorization team to review and authorize the services and funding amount within the core operating system. If additional benefits are identified by the team and included in the service plan, these will be reviewed and authorized by the Amerigroup prior authorization team or Utilization Management (UM) Manager. The UM Manager will consult with the Community-Based Case Manager, and Medical Director and Behavioral Health Medical Director, when needed, to confirm necessity for additional benefits.

Upon authorization of services, the providers selected by the member receive a service authorization number, a written or electronic service authorization, and a copy of the member's service plan. The IHH care coordinator is also notified of service authorizations.

Services may be initiated following receipt of the service authorization number.

The service plan will be reviewed and revised: (i) at least every 12 months; or (ii) when there is significant change in the member's circumstance or needs; or (iii) at the request of the member.

Emergency Plan Requirements

The team develops an emergency plan that identifies the supports available to meet the member's needs in the event of an emergency, including when an unpaid caregiver is suddenly unavailable to meet a member's essential daily needs, or when there is no approved service plan in place. The emergency plan will also include the member's risk assessment and the health and safety issues identified by the member's team; the emergency backup support and crisis response system identified by the team; and emergency backup staff designated by providers for applicable services.

Home Based Habilitation

For members in a home-based habilitation service setting, the team includes in the service plan:

- The member's living environment at the time of Habilitation Program enrollment

- The number of hours per day of on-site staff supervision needed by the member
- The number of other waiver consumers who will live with the member in the living unit
- An identification and justification of any restriction of the member's rights, including but not limited to maintenance of personal funds or self-administration of medications

Amerigroup will build upon the experience of affiliate plans that deliver LTSS to develop policies and procedures that address these requirements including determination of the hours per day a member needs on-site supervision and application of restrictions, including safeguards.

Refusal to Sign

Amerigroup will develop and implement DHS- approved policies and procedures that describe the measures we will take to address instances when a member refuses to sign the service plan. We describe our proposed approach below:

In the event the member or family/representative declines to sign the service plan, the team lead discusses alternative supports, services, or service settings that can meet the member's needs and assure the member's well-being, and if agreeable to the member, revises the service plan. If the member is unwilling to accept the alternatives offered, the Community-Based Case Manager will discuss the situation with the Long Term Care Manager, and develop a risk mitigation plan with the member. The risk mitigation plan identifies the services and supports that will be available and the plan to mitigate any identified risks that could arise and documents the refusal to sign in the care coordination and management system.

Amerigroup notifies DHS of the member's, or as applicable, family's or representative's refusal to sign the service plan.

Compliance with Home and Community-Based Setting

Amerigroup will assure Habilitation Program and CMH Waiver services are not furnished to individuals who are inpatient in a hospital, nursing facility, institution for mental diseases, or intermediate care facility for individuals with intellectual disabilities We mine claims to identify instances when providers bill for delivery of HCBS while a member is in an institutional setting and recoup the payment when appropriate.

As part of Amerigroup's education plan for Habilitation Program and CMH Waiver providers, we will continue to educate and remind them that they cannot bill for services while the member is inpatient in a facility.

We will also assure non-institutional LTSS are provided in settings which comport with the CMS home and community-based setting requirements as defined in regulations at 42 CFR 441.301(c)(4) and 42CFR 441.710(a) and as specified by DHS in rule or policy. We will cooperate fully with DHS in the assessment of a HCBS setting upon request of DHS.

Disenrollment

Amerigroup will track information that pertains to ineligibility or potential ineligibility for Habilitation Program or CMH Waiver services and notify the State, in the manner prescribed by the Agency, when we identify such information. For example, this may include instances where a member is hospitalized beyond 30 days, or fails to receive the minimum billable unit of service, or appears to have a change in functional or medical status that could make them ineligible. We understand the State has sole authority for determining if the member will continue to be eligible under the Habilitation Program and CMH Waiver and will comply with the State's determination.

Minimum Services Requirement

Amerigroup will track and notify the State of any instance when a member enrolled in the Habilitation Program or CMH Waiver does not receive at least one billable unit of service under the waiver per calendar quarter. We will provide notification of such instances in the manner prescribed by DHS.

Frequency of Care Coordination Contact

Amerigroup will develop policies and procedures for frequency of care coordination contact. IHH care coordinators will be required to contact members receiving Habilitation Program or CMH Waiver services at a minimum monthly, either in person or by telephone, with an interval of at least 14 calendar days between contacts. Members will be visited in their residence or location of services face-to-face at least quarterly with an interval of at least 60 days between visits and more frequently when necessary. Policies and procedures will include the scope and method of each contact, documentation of the contact, and the process to be followed when a member has experienced a change in need(s) or requests an update to his or her service plan.

Amerigroup has partnered with Careticker, an innovative web and mobile platform that enables real time communication with members and monitoring of the provision of in-home services. We will work with IHHs to determine a method to arrange access to Careticker so that IHH care coordinators may connect with members receiving Habilitation Program or CMH Waiver services in real time from anywhere.

Monitoring Receipt of Services

Amerigroup will adapt processes implemented successfully in other states where affiliates deliver HCBS to monitor the provision of services in Iowa. Our system is already configured to support oversight and monitoring and includes the capability to compare service delivery against authorized services and providers. ***Careticker enables a family member or caregiver to track and report any and all caregiving activities provided to a member.*** In addition, users can submit daily notes and observations. This information will be made available to the Community-Based Case Manager. Careticker also enables monitoring of provision of services and detailed reporting regarding the type and level of services provided to member. The Community-Based Case Manager can then communicate and interact with the family member and IHH care coordinator and provide needed support.

IHHs will maintain the member's service plan in the electronic medical record and a copy will be stored in the Amerigroup care coordination and management system. Service authorizations will be stored in the Amerigroup authorization and claims system. IHH care coordinators will call members within five business days of service authorization to confirm initiation of authorized services and that these services are meeting the member's individually identified needs and goals specified in the service plan. If services have not been initiated or are not satisfactory to the member, the IHH care coordinator will identify the reason for this and the intervention needed to resolve the problem and coordinate the solution with the community-based case manager.

Services will also be monitored monthly as part of the required monthly contact by the IHH care coordinator, which includes at least one face-to-face visit with the member. Prior to contact with the member, the IHH care coordinator will review Habilitation Program or CMH Waiver claims submitted and claims paid, compare claims amounts to the member's cost cap, and match claims to the service plan to identify any apparent discrepancies between services authorized and services billed, including under or over billing. Any discrepancies will be reported to the Community-Based Case Manager for follow-up and remediation. During the monthly contact with the member, or at any time the IHH care coordinator or Amerigroup identifies or is notified of a service gap, the Community-Based Case Manager and IHH care coordinator will review the service gaps, identify the cause of the gaps, and determine if intervention is needed. For example, claims may be missing if a member is sick and misses scheduled days of service that would have otherwise been provided, but these missed services might not constitute a service gap that requires intervention. Other reasons for service gaps that require specific intervention include:

- The provider failed to show up as scheduled, and the member did not notify Community-Based Case Manager or IHH care coordinator
- The member or family declined authorized services
- The provider is no longer available, and the member has not selected a new provider
- The provider is unable to meet the member's needs because of a change in the member's needs and the Community-Based Case Manager or IHH care coordinator were not notified of the change in needs
- The authorized services are not meeting the member's needs, addressing the members individually identified goals, or helping the member achieve desired outcomes

The IHH care coordinator will gather information from the member/family and the provider to determine reasons for the service gap and develop solutions, including ways to avoid the situation in the future.

Interventions include:

- Completing a member reassessment to confirm the member's needs, individually identified goals, and desired outcomes and identify any changes.
- Revising the member's service plan to address changes in a member's needs, individually identified goals, and desired outcomes
- If the provider failed to deliver services as authorized, initiating a corrective action plan with the provider, which must be successfully completed within the timeframe agreed to or additional corrective actions may be imposed, including suspension or termination as a HCBS provider
- Offering the member and family the choice of a different provider
- Updating the member's risk assessment and agreement to prevent a recurrence of the gap

Claims Payment

Claims are processed daily, and payments are made twice a week on Tuesday and Friday nights. We encourage providers to participate in electronic funds transfer, which clears in two days. Prompt and accurate payment is vital to the continued operations of LTSS providers. We will make every effort to resolve claims questions from providers quickly and efficiently. Our specially trained LTSS Provider Services Staff and other staff will answer provider calls and address questions, assist with claims questions and problem solving, and provide further education during the call. For those issues that are not resolved during the initial call, Amerigroup will maintain an internal service escalation process to make sure that provider issues are researched and prioritized for quick resolution.

We will review weekly claims provider impact reports to identify possible provider submission errors, including denied claims, and provide technical assistance. For example, if we see an increase in denied claims, our representatives will promptly contact providers to educate them and facilitate correct submission and payment.

In addition, we will provide a daily file of pre-adjudicated shadow claims data to the State as required under Section 13.4.1 of the Scope of Work.

Provider Recruitment

Amerigroup has already created a target list of LTSS providers, including Habilitation Program or CMH Waiver providers, for recruitment using the State provider listings. We are in the process of obtaining letters of interest and have met with provider associations and advocacy groups to discuss potential additional providers of Habilitation Program or CMH Waiver services. Provider recruitment is an ongoing process, and as we accelerate our outreach to provider associations, advocacy groups, and individual providers, we will learn of additional providers we should invite to join our network. Collaborative relationships with all system stakeholders are crucial to developing and maintaining a comprehensive

provider network. We will continually monitor the adequacy of the provider network and develop additional capacity through identification of new providers entering the service area or becoming newly qualified as a provider of Habilitation Program or CMH Waiver services. We will meet with stakeholders and DHS to develop methods to grow the supply of qualified providers. Community-Based Case Managers will alert the Provider Relations Team when additional providers are identified for recruitment. In addition, they will work closely with the Provider Relations Team should they identify a shortage of a specific type of provider or the need for a provider with additional specialized skills, and will develop a provider recruitment plan.

Rate Setting

We will reimburse Habilitation Program or CMH Waiver providers at least at the State Medicaid rate.

Provider Training and Technical Assistance

Amerigroup will provide comprehensive training to providers, including Habilitation Program and CMH Waiver providers. Our affiliate health plans have existing provider training materials and programs that will be adapted for Iowa. In addition, we will seek a contract with the University of Iowa to provide Iowa-specific training including training for Habilitation Program and CMH Waiver providers.

We will provide training via webinar and in-person, and will include dedicated and ad hoc training sessions. Amerigroup Provider Relations staff, with oversight by a specialty Provider Relations Manager responsible for behavioral health and LTSS providers, and clinical staff, will provide training on the full range of covered services, including person-centered planning, self-direction, integrated care coordination, service authorization, claims coding, and billing support, as well as state rules and regulations, and much more. More information on provider training can be found in Section 6.

Providers new to managed care typically need hands-on assistance following training. We will offer on-site assistance to providers through our regional Provider Relations Teams that will include staff whose sole focus will be supporting behavioral health and LTSS providers. Face-to-face assistance will be especially helpful to providers new to managed care, including smaller providers, and is part of our standard provider orientation and training.

Community-Based Case Managers and IHHs will assist the Provider Relations Team with the development and provision of training materials and sessions, and may make joint visits to providers when needed to provide additional or more in-depth training.

Integrated Health Home Training

Amerigroup will provide comprehensive orientation and training to IHHs that will equip all care coordinators with the core competencies required to address the diverse physical, mental health, substance abuse, and social support needs of each member.

Question 3.2.11, #2

2. Describe your experience serving similar populations, if any

Experience

Amerigroup's seven affiliate health plans have 15 years of experience coordinating LTSS, including HCBS Waiver and state plan services, and currently do so for over 202,000 members nationwide, including over 18,000 children and adolescents, 106,000 non-elderly adults, and almost 77,000 adults 65 or older. 16 affiliate plans coordinate behavioral health services for over 520,000 members nationwide. Waiver target populations include frail elders; individuals with physical disabilities, traumatic brain injury, HIV/AIDS, intellectual and developmental disabilities; and children with a serious emotional disturbance. Over 30 distinct HCBS are coordinated by our affiliates.

Our Kansas affiliate administers Kansas' SED Waiver services, which provides wraparound facilitation, short-term respite care, attendant care, independent living/skills building, parent support and training, and professional resource family care (intensive family-based support) to children who are experiencing an SED and are at risk for inpatient psychiatric hospitalization.

Beginning in 2016, our New York affiliate will cover 1915(i) services along with a full spectrum of physical and behavioral services as a Health and Recovery Plan (HARP) for adults and in 2017 will cover those services for children as well. In December 2015, our affiliate Bayou Health Plan in Louisiana will also begin covering 1915(i) services.

Our New York affiliate will coordinate the delivery of recovery-oriented HCBS designed to assist adults and children with significant behavioral health needs living in the community. All HARP members will be enrolled in a health home and receive services not currently available such as psychosocial rehabilitation, peer supports, family support and training, and employment supports.

In addition, affiliate plans in New York, Kansas, and Washington have extensive experience working with fully integrated health homes, and we will build upon this expertise to support the delivery of integrated physical health and behavioral health services, including Habilitation Program and CMH waiver services, through Iowa's IHHs.

Family Planning Services (3.2.12)

Amerigroup will provide Iowa members with unrestricted access to family planning services, supporting members to self-refer to any DHS Medicaid provider, including providers not in our contracted network. Our affiliate health plans currently provide family planning services as a covered benefit for over 5.2 million state-sponsored program members across 19 states. We will form partnerships with Iowa's providers and educate members to promote access to family planning services in order to support member health and well-being, reduce risks associated with unplanned or closely-spaced pregnancies, and improve pregnancy and birth outcomes.

Amerigroup promotes access to family planning services by educating members about their family planning benefits and engaging them in active decision-making prior to increasing their family size.

IA_3.2.12_COB_2.2

Access to Family Planning Services

To enable broad access to family planning services, our Iowa network will include federally qualified health centers (FQHCs), rural health clinics (RHCs), local public health departments, and family planning clinics funded by Title X money.

We will also provide members direct access to a network women's health specialist for covered women's routine and preventive health care services. In addition, a member may choose a primary care provider (PCP) or an OB/GYN as their PCP.

Members may receive family planning services and related supplies from Medicaid providers outside of our network without restrictions and have access to contraceptive counseling as desired. We do not exclude coverage of any service on moral or religious grounds. Members have access to all methods of contraception approved by the Federal Food and Drug Administration, including long-acting reversible contraceptives (LARCs). LARCs are available as a pharmacy benefit or are reimbursable to providers for placement during a postpartum stay.

Family Planning Education

Amerigroup promotes access to family planning services by educating members about family planning benefits and engaging them in active decision-making prior to increasing their family size. That includes helping members achieve birth intervals of at least 18 months, which has been proven to reduce risks associated with a subsequent pregnancy too soon after delivery.

We encourage our members in the inter-conception period to obtain a comprehensive medical history and physical examination annually – or more often when indicated. We require providers to include anticipatory guidance and reproductive health education in annual physical exams. We also provide information about family planning in our member handbook, on our member website, and through one-on-one family planning counseling with case managers.

Enhanced Services

Mothers with Pre-term Labor

Amerigroup has a process in place whereby we identify members with a prior pre-term delivery during our OB High Risk Screen. If a member responds that she has had a prior pre-term delivery, a baby delivered at least 3 weeks before her due date, or a low birth weight infant, she is logged in a Provider Alert file. The Case Management team monitors the file twice a week for updates and sends providers an alert notice when one of their members is identified as a candidate for Makena or 17P. We provide providers with a process and order form to request the medication to be sent to their office or to request a home health provider to provide the medication in the member's home. If a member is placed on the medication, we provide weekly follow-up to make sure the member is compliant with her provider visits or her health home visits.

Specialized Populations

Our national Maternal Child Behavioral Health (MC BH) specialist will be available to work with case managers and at times will co-manage members with behavioral health-related issues like depression, substance use disorders, and mental health disorders. The national MC BH program team members actively collaborate with the health plan's OB and behavioral health teams.

Provider Incentives

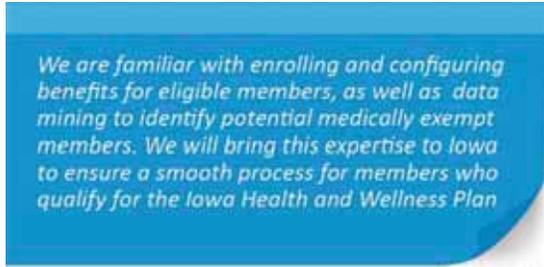

CONTAINS CONFIDENTIAL INFORMATION

Iowa Health and Wellness Plan Benefits (3.2.13)

Amerigroup recognizes wellness and prevention as a critical aspect of improving member health outcomes and reducing the overall cost of care. Accordingly, we will deliver Iowa Wellness Plan benefits to members eligible for the Iowa Health and Wellness Plan in accordance with the Alternative Benefit Plan coverage option as described in Exhibit D of the Scope of Work. Through our affiliates, we have experience administering programs for Medicaid expansion populations and alternative Medicaid expansion programs like the Iowa Health and Wellness Plan and its innovative approach to promoting member engagement in positively affecting their health outcomes.

For example, our Indiana affiliate serves the State of Indiana in administering HIP 2.0, which shares many similarities with the Iowa Health and Wellness Plan. HIP 2.0 is an ACA Medicaid expansion alternative plan for adults who are not disabled with income up to 138 percent federal poverty level (FPL) in Indiana. HIP 2.0 includes 19 different benefit packages and a Personal Wellness and Responsibility (POWER) account funded by the member and the State to pay healthcare costs.

From this experience, we are familiar with enrolling and configuring benefits for eligible members, as well as data mining to identify potential medically exempt members. We will bring this expertise to Iowa to help assure a smooth process for members who qualify for the Iowa Health and Wellness Plan.

We are familiar with enrolling and configuring benefits for eligible members, as well as data mining to identify potential medically exempt members. We will bring this expertise to Iowa to ensure a smooth process for members who qualify for the Iowa Health and Wellness Plan

IA_3.2.13_008_1.1

Medically Exempt Members (3.2.13.1)

Question 3.2.13, #1

1. Describe how your proposed approach will ensure Medically Exempt members will receive State Plan benefits

We understand that the State will identify Medically Exempt members through the member survey and attestation and referral form. When we receive notification from the State that a member is Medically Exempt via the 834 file, we will enroll the member in the Medicaid State Plan by default. If we receive notice, via the 834 file, that the member has opted out, we will enroll the member in the Iowa Wellness Plan.

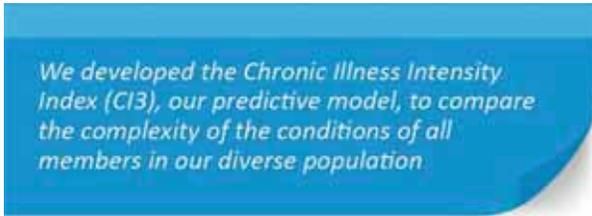

The Plan indicated on the 834 will be transferred into our system of record, which will indicate the benefit package and the member's eligibility. Members will be able to reference the benefit package they have selected and for which they are eligible in the member handbook, and will receive an ID card and complete welcome packet for their plan of choice. Utilization Management staff will have easy access to the benefit package and eligibility information for the member through our internal systems, as detailed and illustrated in Section 3.2.2. When members need services, they will present their membership card, which will indicate to the provider the benefits for which the member is eligible.

Question 3.2.13, #2

2. Describe your proposed strategies for implementing retrospective claims analysis to determine if a member is Medically Exempt.

We will use a proprietary predictive modeling system to identify members who may be Medically Exempt through data mining and retrospective claims review. When we identify members who fit into the Medically Exempt criteria, we will submit this information to the State in the form and format required. We understand Medically Exempt determinations are subject to DHS approval.

We developed the Chronic Illness Intensity Index (CI3), our predictive model, to compare the complexity of the conditions of all members in our diverse population. This allows us to stratify all members appropriately, thus identifying members with the most complex needs/conditions requiring intensive case management. In Iowa, we will also adapt the CI3 model to flag diagnoses or other criteria from claims that could be used to identify potential members who may be Medically Exempt, according to the federal definition of "medically frail" as detailed in the SOW.

We developed the Chronic Illness Intensity Index (CI3), our predictive model, to compare the complexity of the conditions of all members in our diverse population

IA_3.2.13_COB_2.1

The CI3 is based on the Johns Hopkins ACG Predictive Risk Scoring Model. Our predictive modeling system uses member data including diagnoses, demographic information, and recent inpatient and emergency room utilization history from claims to measure risk level, likelihood of admission, and in the case of Iowa, qualification for medical exemption.

All members have a clinical profile generated on a monthly basis to track changes in status and meet members' changing needs swiftly. These individualized clinical profiles contain information about each member including: demographics, contact information, risk and likelihood of admission scores, coexisting conditions, utilization data, and recent case management information. Case Managers access member profiles via a powerful tool that is easily navigated and prioritizes the member profiles based on

predicted level of case management need. We will utilize this monthly profile to identify members who may be medically exempt and pass that information along to the State in the form and format required.

Value-Added Services (3.2.14)

Question 3.2.14, #1

1. Describe any proposed Value-Added Services. Include in the description:
 - a. Any limitations, restrictions, or conditions specific to the Value-Added Services;
 - b. The providers responsible for providing the Value-Added Service;
 - c. How the Value-added Service will be identified in administrative (encounter) data;
 - d. How and when providers and members will be notified about the availability of such Value-Added Services while still meeting the federal marketing requirements; and
 - e. How a member may obtain or access the Value-Added Services.

Amerigroup works with our state partners to assess the greatest needs of the community's various stakeholders, and then develops innovative, sustainable solutions to drive positive outcomes where results are needed most. By providing certain benefits above and beyond the required core services, we believe we can achieve lasting and measurable improvements in the behavioral and physical health and welfare of the diverse Iowa Medicaid population.

By offering expanded programs and services, we provide opportunities to help care for the whole person and better address the specific needs for each segment of the population. Our offerings take a multifaceted approach to improving member health and well-being, providing members with enhanced wellness and prevention benefits and expanded Home- and Community-based Services (HCBS) and supports. To help care for the whole person and address the specific needs for each population segment, we have developed three unique and specialized packages, or 'suites' of benefits that will enhance care, promote healthier outcomes, and increase member satisfaction.

We will submit our proposed Value-Added Services to the State for approval and will provide them at no additional cost to the State or the member. We understand that the costs are not reportable to the State as allowable medical or administrative expenses, and we will not pass the costs to providers. We will share Value-Added Service data in the form, format, and timeframe requested by the State.

Amerigroup will maintain records on each Value-Added Service that allow us to track member participation and monitor program effectiveness. For some of our Value-Added Services, we will receive claims from providers that we can identify by CPT code. Depending on DHS requirements, we can either submit these as encounters or exclude them from our encounter submissions, as we do in some affiliate health plans. For non-medical Value-Added Services, such as Boys and Girls Club memberships and personal backpacks, we will maintain information in a designated general ledger account as an administrative expense that we can submit to DHS in the requested format.

We have grouped our 24 Value-Added Services into three suites tailored to specifically address population-specific needs such as additional education opportunities, additional services for waiver populations or specific goals set by the State of Iowa, like reducing tobacco use and obesity. Our first suite is focused around Health and Wellness programs, the second suite encompasses training and various support programs and the third suite is meant to enhance independent living skills. Each benefit grid addresses each of the five components, a through e, of question 3.2.14.1.

CONTAINS CONFIDENTIAL INFORMATION

CONTAINS CONFIDENTIAL INFORMATION

Question 3.2.14, #2

2. Provide any applicable data on improved outcomes linked to Value-Added Services you have implemented in other states.

Our experience shows Value-Added Services that motivate members to adopt healthier lifestyles are effective in improving health outcomes. We are confident that our tailored Suites of benefits will deliver meaningful additional value to our members and reinforce achievement of the Iowa Initiative program goals.

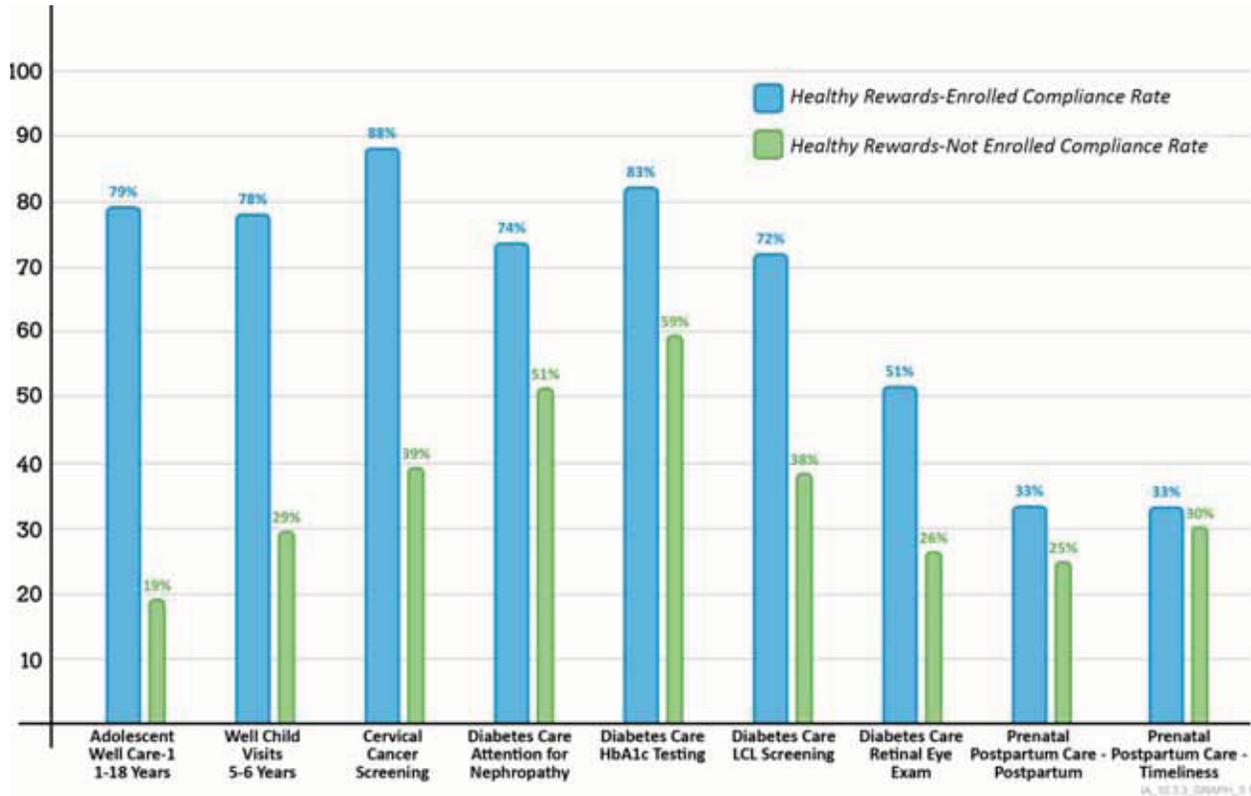

Amerigroup and its affiliates have implemented and refined Value-Added Services across many states. We constantly measure our programs as we work to enhance their efficacy. The following details our outcomes experience for three of the most important programs planned for deployment in Iowa: the Healthy Rewards Member Incentive Program, Tobacco Cessation Program, and Healthy Families Nutrition and Fitness Program. We anticipate similarly strong member outcomes as a result of these programs in Iowa.

Healthy Rewards Member Incentive Program

Amerigroup will offer our Healthy Rewards member incentive program for Iowa members. In many of our affiliate health plans, our Healthy Rewards program is offered as a value-added service. In Iowa, we will offer the program as a core benefit. Healthy Rewards offers members the opportunity to accumulate credits by obtaining targeted preventive care services and screenings for chronic conditions, including HEDIS measures. We fully integrate Healthy Rewards with our comprehensive case and disease management programs. When we've offered the program as a value-added service in our affiliate health plans and the program has demonstrated measurable quality gains.

Our Healthy Rewards Program, offered as a value-added service in Kansas, has proven effective at boosting quality metrics. For example, our Kansas affiliate's HEDIS 2014 measures demonstrate the strong impact of member incentives on results. For example, Healthy Rewards enrollees had 79 percent compliance with adolescent well care visits, while non-enrollees had 19 percent compliance. These and other measures are illustrated in Figure 3.2-12.

Figure 3.2-12. Healthy Rewards Drive Improved Quality Scores for Our Kansas Affiliate (August 2014)

Tobacco Cessation

Amerigroup will offer smoking cessation coaching as a value-added benefit as well as a \$30 Healthy Rewards incentive for members who use tobacco to quit smoking through Amerigroup’s value-added Smoking Cessation Program. Together with coverage of smoking cessation medications on the Iowa Medicaid formulary, these programs will help establish Iowa Medicaid as a best practice State for smoking cessation.

In a recent participant survey, 31.75 percent of Amerigroup member respondents receiving coaching and medication achieved the six-month quit metric.

Healthy Families

This value-added program includes education and counseling on nutrition and fitness. Nurse coaching over a six-month period helps families explore and set goals, resolve ambivalence, develop small doable steps, and remove barriers. Motivational Interviewing and Stage-Based communication strategies drive conversations for member-centric goal setting and building on successes.

The Healthy Families Program has been highlighted by Medicaid Health Plans of America as a Diabetes Care Best Practice program. It is currently deployed in our affiliate health plans in Florida, Kansas, Kentucky, Louisiana, and Washington. Results among children ages 7-13 are shown in Figure 3.2-13.

Of note, program participants increased their fruit/vegetable intake, a key goal of Iowa’s Healthiest State Initiative, by 57 percent. See Section 10.2 for more details.

Figure 3.2-13. Healthy Families Program Encourages Healthy Behavior

Administration of Covered Benefits (3.2.15)

Medical Necessity Determinations (3.2.15.1)

Our utilization management (UM) procedures determine the medical necessity of care or services on a case-by-case basis in accordance with State and federal laws and regulations. Our process is grounded in nationally recognized, evidence-based criteria and guidelines. We form our Medical Policies and Clinical Guidelines through a rigorous, clinically driven process with external providers in the community and academic settings providing input and approval. However, we are acutely aware of and responsive to the differing needs and situation of each unique member. UM staff considers the severity of illness, presence of multiple conditions, and episode- and person-specific variables when applying criteria to determine medical necessity of care or services. In addition, all of our delegated vendors undergo strict oversight and maintain adherence to NCQA standards while basing their medical necessity decisions on Amerigroup’s evidence-based clinical criteria and case-by-case individual considerations. Our member-centered, holistic approach enables members to receive necessary care, support, and services within a safe setting that promotes optimal health and well-being.

- We have extensive experience working with state-defined medical necessity criteria in our affiliate plans, and we are ready to work with DHS to implement any Iowa-specific criteria or process guidelines. We understand that DHS will provide UM guidelines for many services (such as EPSDT and family planning) and determine specific UM parameters for aspects of the services (for example, the PDL for Pharmacy) in others, as specified in Exhibit D

- For medical and pharmacy State plan benefits, we will use nationally accepted, evidence-based medical necessity criteria. We do not place quantitative or other utilization control guidelines unless supported by an individualized determination of medical necessity that is based upon the specific needs of the member
- For behavioral health State plan benefits and substance use disorder services, we will use UM guidelines established and approved by DHS. We will also develop psychosocial medical necessity criteria specific to the Iowa Initiative
- For EPSDT services for members under 21, we will comply with State requirements to provide any services that could correct or ameliorate physical or behavioral health
- For emergency services, we will not impose restrictions on coverage that are more restrictive than those permitted by the prudent layperson standard. We will have our non-clinical staff review emergency services claims using the prudent layperson standard and make individualized determinations of medical necessity

LTSS Determination

Our affiliate health plans have 17 years of experience managing LTSS benefits and Amerigroup will adhere to Iowa's criteria and methodology regarding the reasonableness and volume of services selected for inclusion in the member-centered care plan by the member and service coordinator. For Long Term Services and Supports (LTSS), we will not use medical necessity criteria, however, we will use functional necessity criteria. The provision of LTSS and related DME will be determined and approved through the member-centered care planning and assessment process in consultation between the member, their family, legal representative or care giver, and the community-based case manager. Spending on covered services must fall within the budget cap. We plan to partner with Telligen on a consultative basis during the implementation period to understand the existing assessment process and criteria for LTSS in Iowa to promote consistency and continuity of care through the transition. Our affiliates' experience in managing the LTSS determinations in our other markets (including Florida, New Jersey, New York, Tennessee, Kansas, Texas, and California), coupled with Telligen's Iowa experience and contribution in establishing the local criteria, helps assure our member-centered care plans and assessments will adhere to Iowa methodology while benefiting from our deep experience.

Coverage Changes

We will not limit or reduce coverage unless supported by individualized determination of necessity based on the specific member situation. We will apply appropriate medical necessity criteria to physical

We will not limit or reduce coverage unless supported by individualized determination of necessity based on the specific member situation.

IA_32.15_COB_12

and behavioral State health plan services based upon individual member needs and a thorough assessment of specific services available within the local delivery system. Through our affiliates, we are experienced working with LTSS members and their families, legal representatives or caregivers to make decisions about services as part of the member-centered assessment and resulting care planning process.

During periods of transition, we will not reduce or deny members continuing access to their providers, services, or care until we are able to conduct a full assessment and develop a care plan. During

contract implementation and transitional periods, we will honor existing prior authorizations for at least 90 days in the first year and at least 30 days thereafter, and will allow members to continue accessing their current providers, care, and services for the required timelines to ensure a seamless experience and continuity of care.

Cost-effective Services

Our UM program is based on clinical evidence and factors in person-specific considerations on a case-by-case basis to achieve cost efficiency. Our UM and case management staff will refer members to cost-effective alternative services when appropriate to meet the member's needs. We will also train providers to help direct members to the most cost-effective and appropriate option for their situation. For example, through our PCP network, the Nurse HelpLine, and member materials, we encourage members to use urgent care instead of the emergency room if their condition is not an emergency. In addition, we may require providers to document attempts to use a more cost-effective drug or therapy before we authorize a more costly drug or therapy if there is reason to believe the lower cost option will meet the member's need as well as or better than the higher cost alternative.

Amerigroup has a successful history of promoting cost-efficient care coordination programs with significant cost savings in our affiliate plans.

In our Maryland affiliate, our pharmacy lock-in program with care coordination for prescription opiate users resulted in a 36 percent decrease in inpatient days, a 17 percent decrease in admits and emergency room visits, and a 20 percent decrease in prescriptions.

We consistently demonstrate our leadership in communities to promote medically appropriate, cost-effective services and our ability to impact positive policy change. We achieve this through our compilation and communication of evidence-based mental health practices and identification of provider delivery practices inconsistent with these practices.

For example, in Tennessee, our health plan affiliate developed medical necessity guidelines to address the high use of a community-based case management service provided by the Community Mental Health Centers called Level II Case Management. Once the guidelines were approved by TennCare, the State Agency responsible for Medicaid services, we developed an authorization process to establish consistent criteria for who should receive the services and under what circumstances. Further, we worked with the other health plans and the State to better define the benefit and tailor its design to medical necessity. While some providers have resisted this more specific definition of Level II Case Management, the Governor and the TennCare Bureau advocated for this position to address the need for cost-effective and efficient service delivery with demonstrable positive impact on healthcare outcomes. We continue to set the standard for services in Tennessee under TennCare.

Second Opinions (3.2.15.2)

Our members have the right to ask for a second and third opinion about the use of any healthcare services, at no cost to the member.

Second opinions, which are described in our member handbook, may be requested and obtained by members in situations where there is a question concerning the diagnosis or the options for surgery or other treatment of a health condition. The member, parent, and/or legally appointed representative are entitled to obtain a second opinion from a Network Provider or an out-of-network provider (if a Network Provider is not available). There is no cost to the member for obtaining a second opinion. At the member's choice, we allow members to receive a third surgical opinion provided by a third provider if the second opinion fails to confirm the primary recommendation that a medical need exists for the specific surgical operation. Additionally, there is no cost to the member for obtaining a third opinion. This policy applies consistently to all member populations for all medical, behavioral, and LTSS services.

Our Members have the right to ask for a second and third opinion about the use of any healthcare services, at no cost to the member.

IA_3.2.15_C06_4.2

Cost Sharing and Patient Liability (3.2.15.3)

We acknowledge that any cost-sharing imposed on Medicaid and CHIP members must be in accordance with State and federal policy and will not hold members liable outside of what is required by law. We will not hold members liable in the event of insolvency or non-payment by the State to Amerigroup Iowa. Our provider contracts also prohibit charging members for missed appointments.

Members who receive covered services are not to be held liable for:

- Non-payment to Amerigroup by the State
- Non-payment to the provider by Amerigroup or the State
- Amerigroup’s debts in the event of insolvency

Our provider contract states that our members will be held harmless in the event of insolvency and shall not be charged for missed appointments. We protect members from situations in which a provider bills them for services for which they have no liability, also called balance billing. We have an established policy and procedure for handling member calls regarding provider bills. We support proper provider billing practices by educating providers and members, maintaining a documented process for handling balance billing resolution, and monitoring provider compliance.

As the State notifies us of applicable patient liability amounts for members living in an institutional setting, we will have policies and procedures in place to implement mechanisms to communicate the liability amount to providers and shall delegate the collection of patient liability to the Network Providers. We will then pay the providers, net of the applicable patient liability amount.

We have a strong track record of managing member liability for members who reside in facilities. We have nearly ten years of experience across several of our affiliate health plans, including California, Tennessee, New Mexico, and Kansas, and are confident in our ability to implement similar processes in Iowa to assure providers are appropriately paid and members not overcharged. We will work with nursing facilities that have members or personal representatives who refuse to pay member liability, as we have done successfully in our affiliate plans.

Continuity of Care (3.3)

Question 3.3, #1

1. Describe your strategies to ensure the continuity of care of members transitioning in and out of the program, and transitioning between Contractors and funding streams.

If a member is requesting services or has historically been receiving services from an out-of-network provider, our provider relations team works with the provider to secure the provider’s participation in our Network.

IA_3.3_COB_1.2

One of our organization’s core competencies is our ability to seamlessly support continuity of care during member and provider transitions with new program implementations. Amerigroup Iowa’s (Amerigroup) care planning process, staff training, policy, procedure, and technology are designed to seamlessly transition members while assuring that continuity of care and services comply with all applicable State and federal requirements. We recognize that any type of transition can potentially be stressful for members, so we work with them every step of the way to make sure they have the information and supports in place to prevent disruption in care.

Over 24 years of providing services to Medicaid and other state-sponsored program populations, our organization has developed comprehensive policies and procedures

that provide the structure and resources needed to effectively transition to or from another managed care entity, another provider, between programs within a state, or from fee-for-service Medicaid. We will work closely with the member's new MCO, program administrator, and/or providers to facilitate a smooth transfer of prior authorization information, care plans, treatment plans, and other pertinent information.

Additionally, we are in the process of developing a long-term partnership with a current DHS contractor, Telligen, which will allow Amerigroup to combine Telligen's robust and extensive expertise and experience with the State's waiver programs and populations with Amerigroup's innovative care model. Through this partnership we intend to learn from and leverage the most impactful elements of Telligen's Iowa experience, enhancing our ability to fully understand the programs and processes that have served these members historically. Telligen's experience in contributing to the development of the State assessment tool criteria for waiver and LTSS benefits will complement and inform Amerigroup's existing care model, and allow us to more effectively provide seamless continuity of care for our most vulnerable members on day one. Additionally, we are exploring opportunities to utilize Telligen resources to support Amerigroup's care coordinators and their activities under our proposed care model and programs.

Member Transitions from Fee-for-Service to Managed Care

Amerigroup knows that engaging members early on enables us to better achieve improvements in health outcomes. Through early identification, assessment, and care plan development, we can successfully transition new members to managed care. Our processes for transitioning new members include:

- Informing new members of program benefits through DHS-approved welcome materials and outreach
- Conducting follow-up welcome calls to engage new members and identify immediate or existing health care needs – an opportunity to engage, build a relationship, and obtain health-related information
- Holding town hall meetings throughout Iowa communities to engage members and their families, giving them the opportunity to be introduced to Amerigroup, ask questions, or voice concerns
- Evaluating members quickly to determine their medical, functional, and behavioral health status
- Prioritizing outreach and assessment according to the member's risk levels (so that those with the most imminent needs are assessed quickly)
- Identifying the appropriate level of care coordination stratification and engagement
- Identifying members' primary care provider or connecting them to one
- Obtaining and incorporating existing care plans and other information such as previously completed assessments into our clinical system
- Establishing interdisciplinary care teams as part of our Care Management model
- Developing the member's comprehensive person-centered care plan using the multidisciplinary care planning process
- Identifying and coordinating care for members who have special health care needs
- Providing for care coordination through our physical or behavioral health Case Management programs or through our LTSS process
- Offering single case agreements with non-participating providers to facilitate ongoing care
- Ensuring continuity of access to prescription drug treatment and refills
- Providing for care coordination and information sharing with home and community-based providers and others central to members with specialized support needs or who are participating in Waiver programs

- Addressing care coordination across agencies and providers for children in foster care

We have a process in place that supports seamless transition of members with pre-existing care plans. When we receive information on approved prior authorizations and current care plan, we incorporate this information into the member's record to help our clinical staff determine continuity of care needs and support meeting Iowa transition of care requirements. Should DHS provide us with historical claims and authorization data for FFS members, we will incorporate that data into our continuity of care efforts in order to assure that we are delivering the right care at the right time in the right place.

Member Transitions from One MCO to Another

Coordinating care is a critical part of a member's treatment. When a member transitions from Amerigroup to another MCO, we work with the plan to provide a clinical summary of information that includes:

- The member's care plan, if he or she is enrolled in case/disease management
- A listing of prior authorized services
- The member's medication summary
- The member's primary care physician's or any other specialty providers' contact information and treatment plan summary

IA_33_COB

Our interdisciplinary team coordinates benefits and services across managed care plans to verify that all gaps in care and services are identified and resolved, regardless of which plan pays. This includes coordination of shared case planning and regular care conferences to sync services for each member as needed. We are already adept at such coordination for members with special health care needs, whom we serve today, and collaborate with the other benefit plans in our regions to develop a plan for seamless transition and coordination of care.

When a member transfers from another MCO to Amerigroup, we will:

- Obtain notification of the member's transfer from the MCO
- Evaluate the member's immediate health care needs through outreach and screening, then implement coordination and care management, as needed
- Review clinical information received from the MCO
- Contact the member's primary care provider or specialty provider to coordinate care
- Document the member's information in our clinical management system

Upon notification of the member's transfer to Amerigroup, we will begin establishing a positive relationship with the individual. ***Our goal is to quickly engage members in the services and supports they need, encouraging appropriate utilization of services, and giving them the information they need to learn to self-manage.*** Amerigroup will pay a newly enrolled member's existing out-of-network provider for medically necessary covered services until that regimen of care is completed. The member's records, clinical information, and care can then be transferred to an Amerigroup provider. Payment to out-of-network providers will be made within the same time period required for those within the network. We will make all reasonable attempts to contract with these out-of-network providers.

IA_33_COB_42

We will base the length of transition on the severity of the member's condition and the amount of time reasonably necessary to ensure a

safe transfer to an alternative provider. Determinations on appropriate transition periods will be made on a case-by-case basis in accordance with what is best for the member’s treatment.

Amerigroup has standardized policies and procedures to identify existing PA decisions at the time of member enrollment and will provide PA decision data (in addition to current service authorizations, utilization data, and other clinical information) to other MCOs upon member transition. We have systems in place and experience orchestrating these structures through our affiliates in 19 markets, which will help provide seamless transitions for our prospective, current, and former members.

While our procedures for MCO and fee-for-service (FFS) transitions are very similar, we realize members and providers who have not previously participated in managed health care may experience a higher level of anxiety and stress associated with the transition. As a result, we provide detailed, accessible information about the member’s option to remain with an out-of-network provider until we can contract that provider into our network or complete a comprehensive assessment and help identify a new one who can meet the member’s needs.

Promoting Continuity of Care during Transition

For Amerigroup, continuity of care does not merely mean honoring the services the member is receiving at the time of transition. It means identification and delivery of care that is holistic, continually assessed for appropriateness, adjusted as necessary, and monitored for outcomes. Our established continuity of care guidelines include systems and processes for facilitating seamless member transitions from FFS to managed care, one MCO to another MCO, from program (funding source) to program(funding source), or from one provider to another. We describe each of the critical components of our approach to facilitating continuity of care for all members in Table 3.3-1.

Table 3.3-1. The Multiple Components of Our Effective Continuity of Care Program Helps Us Deliver High Quality Care and Prevent Disruption in Care

Component	Description
Authorizations	We honor all existing authorizations, including those with external organizations providing carved-out services and frequency of service identified on the member’s care plan for up to 90 days following enrollment. There are exceptions to this rule that allow for longer transition periods with which we work within. During this time, Case Managers complete an assessment as needed and develop a new care plan with the same or alternate services and supports based on the member’s holistic needs. Case Managers continually monitor the member’s progress and continued need for authorized services. Clinicians complete necessary prior authorization requests to prevent disruption in care.
Transportation	To support a smooth transition and minimize potential anxiety, Amerigroup clinicians discuss the need for transportation with the member and family or caregivers during the transition call or case management assessment. Our clinicians arrange for initial and/or on-going transportation through our non-emergency medical transportation (NEMT) vendor and add the service to the member’s care plan.
Non-Contracted Providers	Our clinical team identifies members receiving services from out-of-network providers and contacts our Provider Relations department for outreach and contracting. If we are unable to contract with the provider for any reason, we work closely with the member to choose another provider or, if it is in the best interest of the member, we work with the provider to establish a single-case agreement to provide ongoing care. We do not enter into single case agreements with any provider who has sanctions.
Care Plans	Case Managers review new members’ care plans for appropriateness of care, arrange for all medically necessary services, and identify any gaps in care. Case Manager’s review and honor new members’ care plans. We complete a thorough review that supports the existing care plan or work with the member, family members, caregiver, and providers to develop a new care plan. We identify any gaps in care and refer the member for additional services, if needed.
Multidisciplinary Clinical Rounds	Under the direction of our Chief Medical Officer, our clinical case rounds include multidisciplinary participants from departments across the health plan, including Utilization Management, case

Component	Description
	<p>Management, chronic Case/Disease Management, and behavioral health Case Management. Case rounds are conducted weekly to discuss complex cases, identify gaps in care, obtain clinical consultation from our Chief Medical Officer and Behavioral Health Medical Directors on chronic conditions and address barriers to access.</p>
Behavioral Health Rounds	<p>In addition to complex case rounds, our Behavioral Health Medical Director leads clinical rounds biweekly. During these rounds, complex cases are reviewed to make sure interventions are appropriate and timely. The team evaluates each case to identify and resolve any barriers to reaching goals, such as co-occurring conditions, language, medication adherence, transportation, or family issues.</p>
Timely and Accurate Information	<p>Our clinical support tool, Member 360, combines member data and information from various sources into a single record to provide a holistic picture of the member’s utilization, care management services, and gaps in care. It includes such information as member Health Risk Assessments, care plans, longitudinal member health records, and clinical data.</p>
Dedicated Case Managers	<p>During the initial assessment, Case Managers take time to get to know the member; learn about his or her preferences, family, and supports; and identify and understand the member’s needs. By proactively obtaining a copy of the member’s plan of care, past assessments, and open service authorizations and through outreach to the providers with established relationships with the individual, the Case Manager lays the foundation for continuity of care.</p>
Transition from Inpatient Facilities	<p>We recognize that members who are transitioning between plans during an inpatient stay are faced with an additional challenge to coordination of care. Amerigroup currently co-locates Utilization Management Nurses at key hospitals to work closely with Case Managers assigned to members upon hospitalization to initiate discharge planning. Upon identification of a member who is hospitalized, our co-located Utilization Management Nurse conducts the following activities:</p> <ul style="list-style-type: none"> • Notifies the Case Manager • Initiates concurrent review • Works closely with the care team, including the member, family, caregivers, hospital employees, the Case Manager, and providers to develop a discharge plan • Meets with the Case Management team twice weekly to discuss the member’s progress • Identifies any gaps in care and barriers to accessing the services needed to support a safe and timely transition to the community. <p>The Case Manager is responsible for confirming completion of the discharge plan, identifying any gaps in services and supports, scheduling post-discharge follow-up appointments, and participating in the member’s transition home or to the community as needed.</p> <p>To further support members transitioning from inpatient facilities, Amerigroup will provide two Value-Added Services, home delivered meals and a post-discharge stabilization kit, for eligible members. The meal program provides members with relief to focus more on recovery rather than proper nutrition, shopping, or finding a caregiver to prepare meals and the discharge kit provides tools for family members and caregivers to successfully help transition members from hospital to home, aid in recovery, and help decrease the chances for readmission.</p>
Waiver or Residing in Nursing Home	<p>For members participating in a Waiver or residing in a nursing facility or other institutional facility, we will employ a collaborative process that supports and assists the member through the transition period. Specific activities include:</p> <ul style="list-style-type: none"> • Supporting member representation and advocacy • Participating in assessments and completing a LTSS assessment • Educating the member regarding key contacts at the health plan and for transportation and other providers; valued-added services; validating receipt of the New Member Packet and ID card

Component	Description
	<ul style="list-style-type: none"> • Arranging and coordinating community-based LTSS • Authorizing services consistent with the care plan in place at the time of the transition to Amerigroup • Monitoring the member satisfaction with service providers and/or the provision of services to ensure they are in accordance with the care plan • Exploring community-based alternatives to nursing facility or services consistent with member preference • Exploring alternatives with members for whom community-based services are becoming inadequate to meet their needs

Engaging Providers in Transitions to Support Continuity of Care

Amerigroup collaborates with providers to assure continuity of care during a member’s transition period. We facilitate confidential exchange of information between PCPs and specialty providers, including behavioral health. We support effective communication and appropriate information sharing through:

- **Promoting Provider Coordination of Care.** We encourage and work with providers to communicate clinical findings, treatment plans, prognosis, and the member’s psychosocial condition as part of the coordination process. Our clinical team reviews member and provider requests for continuity of care and facilitates continuation with the current provider until a short-term regimen of care is completed or the member transitions to a new practitioner.
- **Encouraging Communication among Providers.** Our clinical team coordinates care and facilitates communication and information sharing among PCPs and specialists, as well as external Case Managers. Our Case Managers will link multiple providers and make sure that all care is coordinated and documented in our clinical system as part of our interdisciplinary team process.

Throughout the transition, Case Managers involve the current and new providers in developing and implementing the member’s transition plan. It clearly outlines the responsibilities of each provider and timelines for completing member transition activities, facilitating a seamless transition for the member.

Prior Authorizations (3.3.1)

Honoring Prior Authorizations and Treatment Plans

In accordance with the Scope of Work, Amerigroup will honor outstanding authorizations for non-LTSS services for a minimum of 90 calendar days. LTSS services will be authorized for a full year or until a new assessment can be completed. We will honor existing exceptions to policy granted by the Director for the scope and duration designated. Following the first year after the Contract start date, Amerigroup will honor all outstanding authorizations for 30 calendar days. Upon receiving notice of the existing prior authorization from the provider, former plan, or the member, we will build an authorization within our medical management system. Based on the member’s preferences and support needs, we may extend authorization beyond these days to assure continuity of care.

Additionally, we will maintain an individual’s care management stratification until a new assessment is completed when a member transitions from another program or MCO.

We have an effective process in place that supports seamless transition of members with pre-existing care plans. When we receive information on approved prior authorizations and the member’s current care plan, we incorporate the information into the member’s record to help Care Managers identify the member’s continuity of care needs and honor any existing prior authorizations. We also review the results of the member’s screening and assessments and current care plan to determine ongoing and additional service and supports as part of the development of a person-centered care plan.

For members transitioning from Amerigroup to another MCO, we will provide the new MCO necessary information to facilitate the transition of the member, including: current service authorizations, utilization data, and any applicable clinical information such as disease management or care coordination notes.

Provider Continuity

Our staff will also assist members who have a current provider who is not participating in the network. During the first 90 days of enrollment, members may continue receiving services from a non-network provider. In these cases, we will establish single case agreements with the providers and make all reasonable attempts to contract with the provider from whom an enrolled member is receiving ongoing care. If the provider does not wish to join our network, we will work with the member to select a new provider able to meet his or her preferences and support needs and collaborate with the previous provider to develop an individualized plan to transition the member to the selected participating provider.

Transition Period – Out of Network Care (3.3.2)

Amerigroup will build and maintain a robust provider network that offers an array of services and promotes member choice. At times, a member may need or may already be receiving services from a provider who is not currently in our network. If a member requests services or has historically been receiving services from an out-of-network provider, our Provider Relations team will work with the provider to secure the provider's participation in our Network.

To facilitate continuity of care, Amerigroup will (with the exception of LTSS, residential services, and certain services rendered to dual diagnosis populations):

- Reimburse out-of-network care for the first 90 calendar days of the contract
- Provide out-of-network care if there is no provider within 60 miles of the member's residence
- Amerigroup would not require service authorization for the continuation of medically necessary covered services of a new member transitioning into the Amerigroup, regardless of whether such services are provided by an in-network or out-of-network provider; however, Amerigroup may require prior authorization of services beyond 30 calendar days.

Transitions during Inpatient Stays (3.3.3)

We recognize that members who are transitioning between plans during an inpatient stay are faced with an additional challenge to coordination of care. When a member in an inpatient setting disenrolls from our plan, we will continue to provide care coordination until the date of discharge from acute care or for 60 days after disenrollment, whichever is less, unless the member is no longer eligible for Medicaid. In this case, we will maintain financial responsibility for all hospital charges incurred up to the date of discharge, including the Hospital Diagnosis Related Group (DRG) payment. We will already be in the process of providing concurrent review and discharge planning for that inpatient stay. Upon learning of the disenrollment, our Utilization Management Nurse will notify the facility of the change in enrollment, advising the facility to submit their claim for the admission to us, but that as of the new MCO effective date, the physician services will be billed to the new MCO. We will reach out to the new MCO to coordinate the discharge planning for this member, as the new MCO will be responsible for the post-discharge care. Amerigroup will share clinical, administrative, and care planning data needed by the new MCO to ensure the member continues to receive the necessary services. Our care coordinators will work collaboratively with the new MCO, treating providers, and the inpatient facility to confirm appropriate discharge planning takes place, including a scheduled follow-up appointment with the appropriate provider.

On the other hand, when we learn of a member newly enrolled with us who is currently in an acute care setting, we will reach out to the facility and advise that the physician services as of the effective date of the member's enrollment with us will be billed to us for the admission, but that the current MCO will be

responsible for the facility charges. We will reach out to the current MCO to coordinate discharge planning for the member with the understanding that post-discharge services will now be our responsibility. We will coordinate with the MCO for data to assist us in assuring the member's safety and continuity of care under Amerigroup.

We recommend that all participating MCOs coordinate to create a FAQ document for providers in order to coordinate care management, payment, and discharge. The aforementioned data sharing plan for MCOs will be instrumental in facilitating this process.

Long Term Services and Supports (3.3.4)

We will not reduce, modify, or terminate LTSS services unless the change is supported by an up-to-date assessment and level of care determination for DHS or its designee. Members receiving LTSS will be able to see all prior providers and continue receiving the same services documented on their existing approved service plan at the time of enrollment, even if the provider is out of network, until a new service plan is completed and either agreed upon by the member or resolved through the appeals or fair hearing process and implemented. We will honor existing exceptions to policy granted by the Director for the scope and duration designated. We will honor authorization of LTSS from a non-contracted provider as necessary to ensure continuity of care in order to facilitate a seamless transition in development of the plan of care without any disruption in services.

Residential Services (3.3.5)

Year One and Ongoing Operations (3.3.5.1-3.3.5.2)

In accordance with the Statement of Work, Amerigroup will support members in residential settings at the time of enrollment to maintain their access to the facility provider for up to one year during the first year of the Contract, even if the provider is not part of the network. During this period, the member's current providers will be reimbursed at the FFS rate, and existing prior authorizations will be honored.

After the first year of the Contract, members using residential providers, as defined in Section 3.3.5.1, we will not transition them to another residential provider unless all three of the following conditions are met:

1. The member or his/her representative specifically requests to transition
2. The member or his/her representative provides written consent for the transition based on quality or other concerns raised by Amerigroup, which shall not include the residential provider's rate of reimbursement
3. The residential provider has chosen not to contract with Amerigroup

We will work to contract with appropriate contractors in order to deliver the right care for our members in the right place at the right time. For residential providers who have chosen not to contract with us, we will authorize continuation of the services for at least 30 days pending facilitation of the member's transition to a contracted provider, subject to the member's agreement with such transition. We may continue to reimburse non-contract provider services when that provider is able to best serve the member's support and service needs.

When a member is transitioned to a contracted provider, we will assure that the member receives the appropriate continuity of care and a seamless transition to a new provider, even when that requires us to extend the authorization of services beyond the minimum 30 day requirement.

Members with dual diagnoses of an intellectual and/or developmental disabilities a behavioral health conditions are provided with the choice of remaining with their current residential providers for at least one year. In addition, these members will be offered the opportunity to stay with their inpatient psychiatric provider as long as the services continue to be medically necessary, regardless of the providers' network status.

Pregnancy Continuity of Care (3.3.6)

We are eager to work with DHS to develop our continuity of care policies for pregnant members. We will plan to seek DHS's review and approval for all continuity of care policies for pregnant members, both as they are developed and if/when they may be updated.

If a member is pregnant at the time of enrollment and has a current relationship established with an out-of-network provider from a previous pregnancy or from the early stages of the pregnancy, we will support member choice to remain with the established provider through the entire pregnancy until the standard post-partum period is complete.

Dual Diagnosis Continuity of Care (3.3.7)

Continuity of care is critical in the treatment of members with dual diagnosis, as this clinical condition is often among the most difficult to engage in the treatment process. In fact, treatment engagement is considered by many the key component in treatment success. Therefore, Amerigroup always emphasizes continuity of care when evaluating this clinical situation. Our overarching goal is to maintain all outpatient relationships that are effectively treating dual diagnosis conditions. We take several approaches to reach this end. First, we make every effort to contract with providers identified in these situations. Second, we will look to maintain that relationship via a single case agreement. Through either of these pathways, we will then support the ongoing therapy relationship until the episode of care is completed.

If we are unable to contract with the provider or reach a single case agreement, we will at a minimum allow three months of medically necessary treatment and at the end of this period of time evaluate the situation clinically to determine the need for continued treatment. Our bias at the end of this three-month period is clinical. That is, if treatment is progressing, the relationship between provider and members is good, and the treatment remains medically necessary, then we strive to find a pathway with the provider that allows for the episode of care to reach a successful clinical conclusion. It has been our experience that in the vast majority of cases, we are able to reach an arrangement with the provider that allows clinical determinants to be the criteria by which the episode of care is evaluated, rather than a specific, defined time period.

Coordination with Medicare (3.4)

Question 3.4, #1

1. Describe your proposed approach and strategies for coordinating care for duals (members with both Medicare and Medicaid coverage).

Our organization routinely manages the coordination of Medicare and Medicaid services and Medicare cost-sharing for dual-eligible members. ***Our affiliates have coordinated Medicare and Medicaid benefits for our Medicaid members since 1998. Nationwide, our affiliates serve more than 680,000 Medicare Advantage members and more than 160,000 dual-eligible members.*** We are familiar with system requirements and processing of Medicaid secondary crossover claims, and we will configure our Iowa benefit and claims systems to administer these wrap-around services and cost-sharing according to the Contract in order to ensure the Iowa Initiative is only paying its fair share for services.

Amerigroup will be a responsible steward for Iowa DHS while helping members access all necessary care and services covered under Medicaid and Medicare. In 2014, our national cost-containment activity generated \$487 million in savings by identifying and coordinating benefits with Medicare, other health insurers, and liable third parties. Of that, 89 percent was identified prior to claims payment, minimizing the need for more difficult and costly post-payment recoveries. Almost 97 percent of total savings resulted from coordination of benefits (COB) with other insurers including Medicare fee-for-service (FFS) and Medicare Advantage plans. COB and third party liability (TPL) are core competencies of our organization, and we will deploy our capabilities to deliver significant value to the State of Iowa.

We also have extensive experience working with providers to make sure members can access necessary care and services through either Medicare or Medicaid benefits. We work with providers to ensure that members are not billed for services for which they are not liable. We will bring our provider training and communication strategies to Iowa.

In addition, we train our member and provider services, utilization management (UM), and case management staff to problem solve for members with Medicare and Medicaid benefits. This allows us to promote a seamless member experience and comprehensive access to benefits without paying for claims for which we are not liable. Our local affiliate health plans have been pioneers in coordinated programs for dual-eligible individuals, and we look forward to partnering with the State on innovative strategies to coordinate and integrate care.

Following execution of the Contract, Amerigroup will obtain DHS approval of our proposed plan to coordinate care for dual-eligible members. We will implement and adhere to DHS-approved plan. We acknowledge that changes to these plans must receive DHS's prior approval.

Wrap-around benefits

Our Case Managers work to complement the member's Medicare benefits with Medicaid benefits and services that address support needs not met through Medicare. If a medically necessary service is not covered by Medicare but is a Medicaid benefit, we will cover the service. If a Medicare-covered service has a limit (such as skilled nursing or DME supplies) and a member exhausts the Medicare benefit, we will coordinate the member's Medicaid benefits to follow the Medicare benefit and continue care when medically necessary.

Member Billing and Cost-Sharing

Our provider contracts contain "hold harmless" provisions that prohibit providers from charging members for cost-sharing or sending members "balance bills." We have an established policy and procedure for handling member calls regarding provider bills. We support proper provider billing practices by educating providers and members, maintaining a documented process for handling balance billing resolution, and monitoring provider compliance as illustrated in the following scenario:

A member calls the health plan and speaks to the Member Services Representative or member advocate regarding a bill they received from a provider that has been turned over to collections. The Member Services Representative or member advocate would collect all the information relating to the concern and, if possible, obtain a copy of the bill that the member received. The Member Services Representative or member advocate would engage an associate with the health plan's Provider Relations Department. The Provider Services Staff would contact the provider or collections company to discuss the "balance bill" and educate them regarding the prohibition on balance billing so that the provider can update the member's account. Once the provider corrects the member's account, the Provider Services Staff would communicate the correction back to the Member Services Representative/member advocate. The Member Services Representative/member advocate will then follow up with the member to communicate that the bill they have received was in fact an error and has been corrected by the provider.

Care Coordination for Dual-Eligible Members

Amerigroup affiliates have coordinated and authorized services for dual-eligible members since 1998, and have offered Medicare Advantage Dual-Eligible Special Needs Plans (D-SNPs) starting in 2006. These programs have strengthened our experience serving dual-eligible members, with Amerigroup affiliates now operating D-SNPs in 11 states. Equipped with information readily available through screenings and assessments, claims, and prior authorized services analysis, the Service Coordinator conducts a comprehensive review of the member's medical and long-term support needs and authorizes appropriate services.

Regardless of the Medicare plan (FFS or Medicare Advantage) chosen by the member, we will offer the same intensity of care coordination and case management; only the operational details differ. During the care coordination or UM process, our Case Managers and UM staff will monitor the authorization of services to make sure that the correct payer source is accessed in each case.

Case Manager Roles and Responsibilities

Our Case Managers who work with dual-eligible members in Iowa will have Medicare and Medicaid experience and receive continual training to ensure their comprehensive understanding of Medicare and Medicaid requirements and coverage. Consequently, our Case Managers will be able to analyze Medicare and Medicaid data to identify gaps in care and collaborate with members and their PCPs or other providers to close these care gaps, whether Medicare or Medicaid pays for the care or service. Staff will also respond to HEDIS[®] alerts in our care coordination and management system, CareCompass, for gaps in care for both Medicaid and Medicare covered care or services.

Authorization for Community-Based Services with Medicare

Amerigroup understands the critical importance of coordinating services for dual-eligible members and strongly supports DHS's mission to coordinate services between Medicaid and Medicare managed care products for dual-eligible members. Amerigroup will coordinate the care for the dual-eligible population the same way we do for non-dual members, which includes coordinating with the member's Service Coordination Team and providers. Members enrolled with us for both Medicare Advantage and Medicaid programs benefit from integration and coordination of the spectrum of their health, pharmacy, and long-term support benefits. We use available information from both programs to identify member support needs to make this seamless for the member.

Dual-eligible Members enrolled in Fee-for-Service

Members enrolled through Medicare FFS will require additional assistance because the Medicare FFS program does not provide a Case Manager or single point of contact for care coordination. In the absence of a PCP under the Medicare FFS program, the Amerigroup Case Manager identifies the member's PCP or one or more treating physicians, works with the providers to obtain additional necessary information, and explains the community-based services available, the process for authorization of Medicaid covered services, and the details of Amerigroup care coordination.

Dual-eligible Members enrolled in another HMO

Our Case Managers for dual-eligible members enrolled in another HMO coordinate services in full compliance with the Medicare Improvements for Patients and Providers Act (MIPPA). For members who are receiving services from a Medicare HMO, our Service Coordinator works directly with the HMO Case Manager to discuss identified needs for the dual-eligible member.

Discharge and Transition Planning for Dual-eligible Members

When a dual-eligible member is hospitalized, we will engage with the discharge planning process to confirm necessary Medicaid covered benefits and services are in place at discharge to complement Medicare services; for example, home and community-based services or non-emergency transportation to post-discharge medical appointments. We will engage with providers to manage other care transitions in a similar manner to help assure provision of complementary Medicaid services.

Coordination of Benefits

Experience with Medicare and Medicaid Coordination of Benefits

Organization wide, we have significant experience supporting the various components of wrap-around services, including:

- Medicaid-only services (services that do not have a corresponding Medicare service)
- Medicare services that become a Medicaid expense because the benefit limit on the Medicare side is reached. This includes the member exhausting any life-time maximums or annual maximums in either Medicare Advantage (Part C), FFS Medicare benefits (Part A and Part B), and Medicare Drug Benefits (Part D)
- Medicare services that become a Medicaid expense due to co-insurance, deductibles or copayments (true crossover claims)

Our guiding principle is that member access to needed medical, behavioral, LTSS, and social services is paramount. Consequently, our COB approach minimizes the impact on members. Our processes are virtually invisible to members and their families as we prospectively work directly with providers and other carriers to resolve COB and TPL cases. In 99 percent of these cases, our affiliates accomplish our objectives with no member involvement. We augment our COB efforts by working with Network and out-of-network providers to identify and resolve the root causes of inappropriate billing.

We educate all of our Network Providers about hold-harmless requirements and the prohibition against billing members for covered services through the Provider Manual, provider orientations, and individual discussions with our Provider Services team. Our provider contracts also include hold-harmless provisions. When we identify an issue with an out-of-network provider attempting to bill a member, Provider Services staff work with the provider to resolve the issue and prevent a recurrence. Members who have cost-sharing or billing concerns may contact a Member Services Representative or speak with their Service Coordinator or member advocate for assistance resolving these issues. These Amerigroup team members will coordinate with our Appeals and Grievances Department to make sure we are appropriately coordinating benefits with Medicare FFS and Medicare Advantage.

We approve all needed services, regardless of payor, to make sure services are available to the member. Our protocols are designed to track members' other insurance for covered benefits as primary and that covered benefits are secondary if there is benefit overlap. Systems and procedures are in place through the claims adjudication process to recoup Medicaid monies if Medicare is the primary payor for the service(s) rendered. For instance, if we discover that we have paid a claim for a member who has other insurance, we will go back to the carrier to obtain reimbursement, not to the provider, so that the provider is spared the burden of having to file for reimbursement with the other carrier.

Identifying Medicare and Other Health Insurance Information

Amerigroup is committed to maximizing the identification of Medicare coverage, Other Health Insurance (OHI) coverage, and liable third parties; avoiding claims payment when there is evidence of alternate payment responsibility; and recovering any and all overpayments. We are experienced using a multipronged approach for our affiliate health plans. All of our solutions are HIPAA-compliant with strong administrative, technical, and physical safeguards to maintain patient privacy. Our cost-containment efforts foster member satisfaction as we work directly with carriers and providers to coordinate benefits, minimizing required involvement from members and their caregivers or families.

Amerigroup identifies Medicare and OHI coverage for members through multiple avenues, such as:

- Claims-mining processes performed on all inbound claims
- Providers indicating this information on or with claim submissions
- Vendor partnerships for acquisition of Medicare and OHI information
- Medicare/dual-eligible status information available on the Iowa eligibility file
- Daily Medicare, OHI, and TPL leads received throughout the company from members, providers, and internal customer service and care coordination staff
- Daily automated CMS Coordination of Benefits Agreement (COBA) files that identify Medicare primary payments for our Iowa Medicaid membership

Our vendor partnerships provide us access to extensive data repositories to identify OHI information that may be new or modified, as well as OHI that has been terminated for members. We supply weekly demographic information on our members to the Council for Affordable Quality Healthcare (CAQH) and obtain weekly results after it is compared with information stored in their registry from other participating major health plans. We also provide monthly member demographics to HMS and receive results back biweekly after our information is compared to its data repository from more than 150 health insurance organizations. Once a member is in our system, their demographics are included in the next scheduled data extract that is provided to each vendor for OHI identification. We thoroughly validate all Medicare/OHI leads we identify and receive internally as well as results we receive from our vendors.

We will include all of the above processes for identifying Medicare and OHI coverage information in our Iowa operations.

Validating Other Health Insurance

We will submit all potential leads for Medicare and OHI to a dedicated team within our national Cost Containment Department. Employees on this team will conduct daily review of leads received from Iowa eligibility file feeds, members, providers, and other sources, including our claims-mining processes. Employees will verify the accuracy of the other coverage information and also make sure that the coverage data are accurately and completely documented in the member record of our claims processing system.

Our team will also thoroughly validate any Medicare/OHI leads we receive through our partnerships with CAQH and HMS. Results from these vendors initially go through an automated validation process designed to help identify potential errors in the data as well as potential conflicts of information that may require additional manual verification. We will use our business standards for an OHI record to validate results prior to loading. For any data not meeting the business standards, our cost containment team will investigate prior to loading. Once validated to be accurate and complete, an employee will manually add the record into the system.

We have extensive experience validating OHI through our health plan affiliates, as evidenced by our success generating savings through our COB and TPL processes.

Integrating COB with Claims Adjudication

Our claims processing system is fully integrated with our COB and TPL processes to:

- Capture Medicare or OHI information contained on the claim to help assure payment accuracy
- Evaluate Medicare flags or OHI flags stored on the Amerigroup member eligibility records to determine Medicare/Medicaid COB
- Suspend claims where Medicare, OHI, or TPL is indicated to make sure coordination of Medicare/Medicaid benefits is accurate and consistent

Our claims process in Iowa will effectively support COB management by automatically incorporating a series of edits that prospectively identify and correct potential overpayments based on current Medicare/OHI information housed in a member's record.

During adjudication, our claims processing system will compare the submitted Dates of Service (DOS) to the effective and termination dates of the OHI coverage (Medicare Coverage) in the member record. If the claim DOS are within the effective and termination dates, we will suspend the claim for additional analyst review. When analysts identify claims as eligible for COB, they will coordinate the claims based on Iowa COB guidelines. For example, if we identify a Medicare source, but the required Explanation of Benefits (EOB) is not attached to the claim, we will notify the provider that the claim must be submitted to the appropriate third party to determine the Medicare paid amount. If the required information is attached to the claim, we will suspend the claim for additional analyst review before final adjudication. We use this information to assure that the total benefits issued by the primary carrier and Amerigroup Iowa do not exceed the allowed amount and are coordinated correctly and applying lesser of rules CFR 42.

While our practices support prospective identification of Iowa members with Medicare coverage, we will also coordinate benefits with the provider or alternate carrier before claim payment, when appropriate. We also conduct post-payment reviews and work directly with providers and carriers to recoup payments when the Medicare/OHI eligibility data are not present at the time of initial claims payment.

Question 3.4, #2

2. Explain how your staff will be trained to assist dual-eligible members with questions about benefits, appeals, grievances, and other topics where Medicare and Medicaid policies may differ.

Knowledgeable staff are critical when communicating with members about complex matters, such as benefits and processes between Medicare and Medicaid programs. We will train our staff across member and provider services, provider relations, claims, UM, and care coordination to assure that we can address all questions from dual-eligible members and promote comprehensive access and coordination for Medicare and Medicaid benefits. As part of new hire training we train our staff on Medicare and Medicaid benefits and policies, then based on their functional area, relevant in-depth training on Medicare and Medicaid. For example, UM and Care Coordination teams must understand which benefits that are Medicare primary and do not require an authorization by the provider. In addition, they are trained to coordinate care with other providers to ensure that Medicare benefits are exhausted prior to initiating Medicaid coverage. Provider Relations, Member Services, Claims and Appeals and Grievance staff need to understand the benefits, payment and payment coordination along with the rules and regulations for claims, appeals and grievances.

Initial training is conducted through a combination of class room and computer based training (CBT) and tracked by the manager to ensure that their staff has completed the training curriculum. In addition we provide ongoing training and updates to our staff through team meetings, CBTs and lunch and learns.

We will train staff to assist dual-eligible members with their questions about benefits, appeals, grievances, or other topics that arise from the differences between Medicare and Medicaid policies and processes. We will ensure that our dual-eligible members understand how their Medicare and Medicaid benefits work together and work with members to understand details of their Part A, Part B, Part D, or Part C coverage. Our staff has access to dedicated subject matter experts that specialize in Medicaid and Medicare and assist in creating training, updating policies and procedures, claims processing, managing system configuration changes, and ensuring compliance.

We have extensive experience coordinating care for the more than 160,000 dual-eligible members we serve today across our organization's affiliate state-sponsored program health plans. Nationwide, our affiliates have 48,918 members enrolled in Medicare Advantage D-SNP plans in 11 states and 23,496 members enrolled in Dual Eligible Demonstration programs in four states. Our health plan affiliates are industry leaders and among the first plans to offer these comprehensive, integrated dual-demonstration programs. We will bring this perspective and the best practices gained from these experiences to Iowa and look forward to collaborating with the State to further integrate and coordinate Medicare and Medicaid benefits and drive optimal outcomes for dual-eligible members.

Long Term Services and Supports (4.0)

Amerigroup’s fundamental approach to long term services and supports (LTSS) is founded on person-centered principles and practices to facilitate member- and family-driven services and supports that are responsive and meaningful to evolving preferences, support needs, and personal goals. We are dedicated to assisting all members in exploring service and support options to maximize community integration in alignment with their personal goals and the Olmstead Decision. Through this commitment, not only do we support members to succeed in communities of their choice, we also help states achieve cost efficiencies.

Through our affiliate health plans, Amerigroup has over 17 years of experience supporting more than 200,000 members living in their communities and those residing in facilities, as demonstrated in Figure 4.0-1. **Amerigroup has a depth and breadth of LTSS expertise that few other health plans can bring to Iowa.** Our affiliates manage fully integrated Medicaid LTSS programs in seven states and offer LTSS services as part Medicaid Covered Benefits in several other states. We have extensive expertise serving diverse members comparable to Iowans eligible for the State’s LTSS program. Our person-centered philosophy, coupled with a strong focus on quality improvement, has led to refinement of processes to better serve members to maximize informed choice and independence. Our member survey results consistently show scores of **over 90 percent on key member satisfaction metrics across our affiliates**, including, but not limited to Community-Based Case Manager performance, adequacy of services and supports, and degree to which members’ overall needs are met.

Figure 4.0-1. Amerigroup Affiliates Have Significant Experience Serving Members in LTSS Plans

State	Members Eligible for LTSS	Populations Served	LTSS Start Year
California	48,379	Seniors, Adults with Disabilities, SSI recipients	2014
Florida	6,869	Seniors, Adults with Disabilities	2003
Kansas	11,563	Seniors, Adults with Disabilities, TBI, IDD, Autism, Pediatric Technology Assisted Waiver	2013
New Jersey	1,659	Seniors, Adults with Disabilities, IDD*, Children with Disabilities, SSI Recipients	2014
New York	2,864	Seniors, Adults with Disabilities	2005
Tennessee	5,136	Seniors, Adults with Disabilities, TBI, IDD*, “At Risk of Meeting NF LOC” groups	2010
Texas	125,619	Seniors, Adults with Disabilities, IDD*, SSI recipients, Pediatric Populations (<21, voluntary enrollment)	1998
Total	202,089		

*LTSS Services Not Included in Managed Care

Amerigroup Iowa (Amerigroup) has already begun engaging Iowan advocacy groups, provider associations and community based organizations and stakeholders and will continue to do so using a number of strategies that have proven track records in other states. In the coming months we will continue our discussions and outreach efforts with them to gain better understanding of what is working and not working within the current LTSS system. Upon Contract award, we will establish an advisory committee comprised of diverse individuals from across the state representing future members and families, providers, and community-based organizations to tailor our approach and model specifically to Iowa. In addition, we will partner with DHS to hold regular community forums to hear from a broader audience, and we will participate in relevant local and statewide conferences to identify system of care gaps to

develop strategies to close those gaps and build consensus and innovative solutions related to issues and concerns.

Person-centered Case Management Model

Our approach utilizes regional case management teams with multifunctional expertise to assist Community-Based Case Managers, members, families, representatives, and members' interdisciplinary teams in the development of person-centered service plans and *serve* as an ongoing resource to meet the varying needs of members to support health, well-being, independence, and community living in the most integrated setting such as employment and participation in community activities. Our case management model involves a continuous process of communicating, coordinating, delivering, monitoring, and assessing services and supports and progress toward achieving member goals to optimize person-centered service delivery. The core components case management model will include:

- ***Matching our members to the right Community-Based Case Manager*** by carefully considering member diagnoses, complexity of medical and/or behavioral health conditions, and intensity of service and support needs to identify a Community-Based Case Manager on our team with appropriate experience, knowledge, and skills
- ***Person-centered planning*** through partnership and collaboration with members, their natural supports, and member-identified interdisciplinary teams who will consider members holistically using discovery and assessment results to make sure that medical, behavioral, social, and educational needs are addressed to maximize health, well-being, and independence in the development of a comprehensive, person-centered service plan
- ***Coordination and collaboration across member systems of care*** to align resources based on need, integrate services, reduce duplication of efforts, improve continuity of care and services, and increase cost efficiencies
- ***The continuous process of delivering, monitoring, and assessing interventions*** designed to meet the members' goals defined in person-centered service plans, as well as other care/treatment plans, as part of their system of care to maximize individual health, well-being, and quality of life.
- ***Technology and innovations*** to improve member and natural support experience, expand the tools to enable collaboration among multiple stakeholders, enhance our members' ability to self-direct services and supports, provide real-time member information, and improve provider and system performance
- ***Ongoing stakeholder engagement*** at the member and system levels to build consensus, innovative solutions related to issues and concerns, and facilitate continuous program improvements to better serve members

We look forward to the opportunity to partner with the State of Iowa and the Department of Human Services in LTSS system transformation to better align funding decisions with member needs and to enhance access, quality, and accountability while promoting member informed choice, independence, and community integration.

General (4.1)

Question 4.1, #1

1. Explain how you will ensure that individuals are served in the community of their choice and that funding decisions take into account member choice and community-based resources.

Amerigroup's fundamental approach to long term services and supports (LTSS) is to identify with each member the services and supports they need and prefer to maximize choice and independence. We are committed to assisting all members in exploring options for community integration in accordance with their personal goals and the Olmstead Decision. Through this commitment, not only do we support members to succeed in the communities of their choice but also help states to achieve cost-efficiencies.

To support our approach, we continuously inform our members regarding available services and programs in lieu of institutional care, assure member needs and preferences drive service plan development, and provide support to help assure that the service plan is effective in helping our members remain in the community.

CONTAINS CONFIDENTIAL INFORMATION

As a result of our approach, we achieved significant successes in our affiliate health plans managing LTSS, including consistently achieving over 90 percent member satisfaction rates in our LTSS programs. Moreover, in 2014 our affiliates successfully transitioned more than 630 members from facilities to home- and community-based care. Simultaneously, we kept readmission rates low. For example, 90-day facility readmission rates in Texas were less than 3 percent in 2014. These results demonstrate our commitment to person-centered service planning and health literacy of practices and principles that support our members in the most integrated home- or community-based setting, which we will leverage to serve our LTSS members in Iowa.

These results demonstrate our commitment to person-centered principles and practices to identify with members the services and supports they need and prefer to maximize choice and independence; we will leverage our expertise to fully support community integration in accordance with the personal goals of our Iowa members and the Olmstead Decision.

Supporting Member Education and Informed Choices

A core responsibility within our model is embracing person-centered service planning. We communicate an array of options available to our members, supporting and promoting their informed decision-making and their well-being. Our approach promotes member engagement in all aspects of care and services, including interdisciplinary team development, use of supports, and choice of specific providers. From our experience, we know fully informed members make effective decisions that promote health and safety and are suited to their preferences. This is a cornerstone to improving member experience, adherence to the service plans, and overall outcomes.

Initial Discovery, Assessments, and Informed Consent

Once a member has enrolled in our LTSS program, our Community-Based Case Management team contacts the member and begins the educational process regarding our role, program services and benefits, and resources and options available to promote integrated coordination. During this conversation, the member receives an overview of the core service planning and case management processes including all applicable assessments. This comprehensive orientation allows us to align with the member on his or her preferences and confirm the member's interest in LTSS.

During face-to-face assessments, we engage members, their interdisciplinary team, member-selected participants, and natural supports, including family, in a highly individualized conversation to identify needs and preferences for building out their service plan. While outlining the benefits included in the LTSS program, we remind members of their right to choose their interdisciplinary team members, Case Managers, and services including the option to self-direct their services through the CCO. If members choose the CCO, we provide training and administrative support to bolster member confidence in self-directing while preventing gaps in services. Amerigroup helps assure that all processes, such as selecting providers and developing a service plan, reflect and honor the member's strengths, goals, and preferences.

Person-Centered Service Planning

Our Community-Based Case Managers work collaboratively with members to develop a service plan that emphasizes and supports member choice and individual goals. During service plan development, we continuously engage members and their family or representatives about needs and preferences. Our Community-Based Case Managers work with members, their family or representatives, and their providers to identify all available services and supports, including but not limited to covered benefits, community and State agency resources, Value-Added Services, health insurance coverage options (such as Medicare), and natural supports. Our Case Managers reside in the same communities as our members and therefore have detailed knowledge about the community, local provider network, other community resources available, and Medicare, Medicaid, and LTSS benefits. Finally, our Case Managers are also culturally diverse. We train our Case Managers in cultural competency to help assure that members have every opportunity to comfortably express preferences and communicate with their Case Manager.

Ongoing Communication

Our focus on member education and engagement continues through regular, ongoing communication with members. First and foremost, we solicit feedback on providers during regular in-person and telephonic conversations. This helps us understand whether current providers are meeting member needs and whether a change in providers is warranted. Whether or not the providers are meeting the Amerigroup network provider standards, we inform our members of all new and alternative resources that are relevant to their needs and preferences, spanning both covered services and non-covered services available through community resources. These regular conversations provide members with the personalized information they need to make informed decisions and direct their care and service plans.

At Amerigroup, we are committed to providing members with educational opportunities and information beyond that available through case management contacts. We make use of multiple alternative forums, including but not limited to community events, new member trainings, mailed collaterals, and our member portal accessed through our website or via a mobile application. We believe that providing members multiple venues to learn about Medicaid and LTSS services helps maximize members' engagement, self-advocacy, and active participation in their care and service plans.

Incorporating Member Choice in Funding Decisions

As members request adjustments to their service plans based on changing circumstances or new information, our Community-Based Case Managers honor their preferences, unless a requested service is unavailable. If a service could potentially pose a health or safety issue or is not a covered benefit, the Community-Based Case Manager will work to educate the member and revise the service plan to address all concerns and preferences. Our Community-Based Case Managers assure that all approved services are consistent with the member's level of care and waiver designation as applicable. We further assure that the member does not exceed his or her established cost limit. Throughout this process, we will put our members' needs and preferences first and will not hesitate to deploy creative strategies to help support our members.

Supporting Members in the Homes and Communities of Their Choice

Developing a Broad and Comprehensive Provider Network

At Amerigroup, we understand that developing broad and diverse provider and service networks, particularly in rural areas, is key to assuring member choice, access, and independence. This approach supports the State's goals of complying with new federal regulatory requirements, such as the CMS HCBS Settings regulation. We work very closely with our providers and establish provider incentive programs to encourage the capacity building of needed services and supports in the geographic areas around the State. Amerigroup and our affiliates are experts in developing comprehensive networks that meet and often exceed state requirements. Our local teams entrench themselves in the communities we serve, meeting face-to-face with both traditional and non-traditional providers and associations to build trust, open communication, and develop collaborative relationships.

Our approach to provider network development focuses on the entire array of services that our members may wish to access reflecting our member-centric, locally based approach to care and service delivery. *We understand the nuances of developing and maintaining a broad network that maximizes provider and service diversity as well as geographic coverage, access, and diversity of services and supports.*

Highlights of our service approach include:

- Proactive education that addresses LTSS provider needs and requirements
- Sound reimbursement practices, including prompt and accurate claims payment, encouraging enrollment for ERA/EFT
- Collaborative relationships, including extensive one-on-one outreach

- Technical assistance to support LTSS providers, such as proactive outreach if (through our weekly claims review) we identify possible provider submission errors
- Practices to simplify and minimize administrative burdens
- Provider incentive programs that reward high-quality service and outcomes and member satisfaction

As a result of our affiliates' success in developing and maintaining LTSS provider networks, our providers consistently report high satisfaction rates. *In several markets, more than 8 in 10 providers consistently report that they would recommend our health plans to other providers.* These results demonstrate our ability to support our members with broad, diverse provider networks that can deliver reliable and effective services for our members in their homes and the community.

Providing Value-Added Services

CONTAINS CONFIDENTIAL INFORMATION

Engaging Community-based Resources

Occasionally, members have needs that may not be immediately met through our existing provider network or may not be a covered service. To support these members to remain in the community of their choice, Amerigroup engages all existing community resources to provide solutions. We know that healthcare providers or MCOs cannot operate in isolation from the community, and thus, we have a rich history of actively engaging community-based organizations, advocacy groups, faith-based organizations, and other community resources to develop creative solutions for members requiring a service that is not otherwise a covered benefit. For instance, one of our affiliate health plans had a member who required home repairs that fell outside of the defined home and environmental modifications benefit available to her to safely remain in the community. Our Case Manager worked with Catholic Charities to facilitate the needed repairs to the rear door of the house as well as the member's bedroom windows, free of charge, alleviating the safety concerns. Amerigroup will not hesitate to help members find creative solutions like these that encompass community inclusion, employment, social supports, and non-covered benefits.

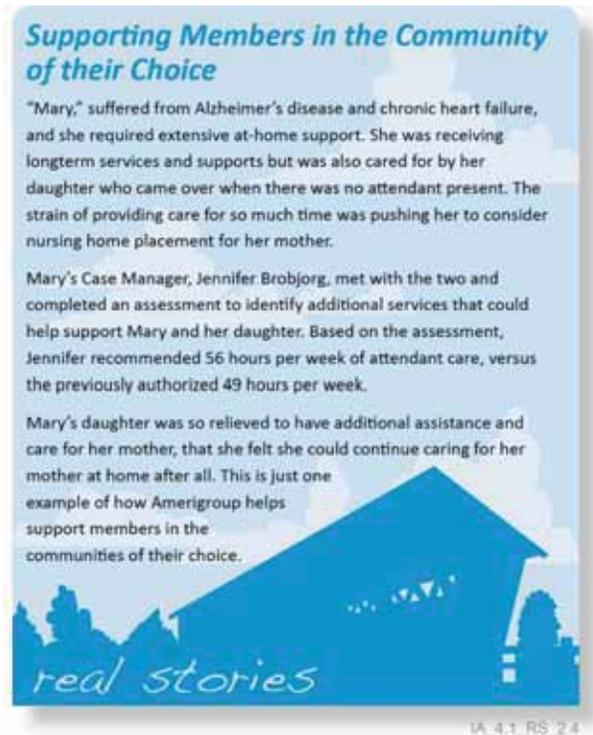

When building new relationships in our service areas, we identify community organizations that are integral to delivering non-covered services that have the potential to address unmet needs of our members. We use a variety of strategies and actions to introduce Amerigroup to the community by engaging in outreach and awareness activities, such as sponsoring and participating in health fairs, provider training, and giving back to the community through our corporate volunteer program. We strive to develop lasting relationships with local leaders and work to foster a common vision that promotes the well-being of the broader community and facilitates access to non-covered services for our members. Once we determine how best to work together, we invite organizations to contract with us or sign a statement of intent.

We have already begun to develop relationships with key community partners relevant to our LTSS membership in Iowa, including but not limited to:

- **Brain Injury Alliance of Iowa.** The Brain Injury Alliance of Iowa supports individuals with acquired brain injury and their families through services such as legal advocacy, PCA trainings, and community events.
- **The Iowa Developmental Disabilities (DD) Council.** The DD Council pursues projects and activities that influence public policy and attitudes toward those with DD, build the ability of Iowans with DD to lead independent lives, and support Iowans with DD to be advocates in their own care.
- **The University Center for Excellence in Developmental Disabilities** The University Center for Excellence in Developmental Disabilities partners with Iowans with disabilities, their family members, providers, State and local agencies, and many others to improve the health and full community participation of persons with disabilities and to advance the community supports and services on which they rely.
- **The University of IA Center for Child Health Improvement.** The University of IA Center for Child Health Improvement provides Iowa's children and their families communities with the necessary knowledge, skill, and resources to achieve their optimal potential. Their aim is to provide a coordinated network of resources and services centered on the child and family and improve population outcomes for children by improving access to services, expanding the array of community-based services available on a local level, and working to increase collaboration among the systems.
- **Centers for Independent Living.** The Centers for Independent Living create opportunities for independence for people with a variety of disabilities through independent living skills training, individual and systems advocacy, peer counseling, and transition services.
- We will continuously establish strategic partnerships with agencies that serve our LTSS members in Iowa—agencies that members already trust and respect. Our goal is to leverage existing community supports to enhance their capabilities and provide members with choice and consistency in their service delivery and relationships.

Supporting Members with Enhanced Staffing Needs

As part of our commitment to our members and to maximize our results related to community-based alternatives inclusion, Amerigroup has established mechanisms to assure that enhanced staffing or supports are driven by functional status and abilities of our members, are provided to support members' ability to be served in the community of their choice, and are not reduced arbitrarily. Our Case Managers vigilantly monitor changing circumstances through member and family feedback; ongoing contact with the member, family members or representatives, providers, and community supports; and review of claims history.

If our Case Managers suspect a change in the member's status, they do not hesitate to initiate a reassessment. Reassessments go through multiple levels of review by the member's interdisciplinary team to confirm accuracy and are documented in CareCompass Mobile. We ask members to approve adjustments to the service plan only when reassessments indicate a change in functional status that impacts the volume or type of services. Case Managers follow established processes in this regard that include advising members of appeal and Fair Hearing rights should a difference in opinion arise over a specific request from the member. Amerigroup strictly enforces adherence to these policies through ongoing case management audits and reviews and will work to assure that members receive the type and frequency of service that they prefer and need to safely live in the community of their choice.

Supporting Members and Preventing Facility Admissions

To further support members' ability to remain in the community of their choice, we engage in several processes to maintain members' health and independence and prevent admission to nursing facilities, intermediate-care facilities for individuals with intellectual disabilities (ICF/IDs), and State Resource Centers (SRCs). During our service planning process, we conduct assessments to identify any concerns associated with the member's choice to live in a home- or community-based setting and work with the member to identify solutions to mitigate concerns. We also work with members to develop back-up plans that help prevent service disruptions if scheduled providers can no longer serve the member. Collectively, these actions support Olmstead compliance and uphold the principles of self-determination while securing members' well-being. We work with all of our members to describe to them the possibilities of community living and the services and supports that would be available to them through the waiver program. We partner with community organizations, trusted members of their support team, and peers who have already transitioned to clearly define for them and show them real situations in the community of an integrated and meaningful life.

Prior to engaging in service planning, our Case Managers conduct a comprehensive assessment process to identify and address any safety concerns associated with a member's choice to be served in a home- or community-based setting. This process involves reviewing previously available medical history, enrollment file data, hospitalizations and institutionalizations, mental health conditions, substance use disorders (SUDs), behavioral challenges, and chronic illnesses. With approval from the member, Case Managers will actively engage with the member's community supports, including but not limited to schools, neighbors, places of worship, and community organizations, to help identify risk issues that have recently emerged. Most importantly, this process involves an open and honest dialogue between Case Managers and members to help identify any member concerns associated with the home- or community-based services. Case Managers then work with the member, family members, representatives, providers, and community-supports to identify solutions that could alleviate safety concerns by considering both covered and non-covered options.

Case Managers will also work with members and their family members or representatives to develop a back-up plan to prevent any service disruption that may jeopardize members' ability to be served in the community of their choice. During this process, Case Managers and members will identify back-up providers who can be contacted in the event that the scheduled provider fails to provide necessary services. In creating the back-up plan, we will consider providers who are able to deliver services on short notice as well as those in proximity to the members' residence. We will review back-up plans annually at least to assess changes in provider availability and will update them more frequently if a listed provider can no longer deliver a service or if the member's needs change.

Coordinating Seamless Transitions

Transitioning from Facility Care to Less Restrictive and More Integrated Settings

A strength of which we are very proud is our ability to facilitate transitions from facility settings to the community enabling greater independence, increased integration, and an enhanced quality of life. As with all Amerigroup case management activities, member choice is the most important factor in facilitating member transitions. Our Community-Based Case Managers work closely with each member residing in a nursing facility to assess interest in transitioning to a more independent setting. In addition to ongoing communication with our members to assess interest in transition, we will formally identify interest in transition during initial admission and at least annually thereafter.

We will convene a transition case conference to help support the development of a transition plan that meets the member's needs and preferences. The conference is a cornerstone of the process and includes an interdisciplinary team consisting of Case Managers, specialty providers, social workers, RNs, therapists, current and prospective PCPs, and the member, family, and other representatives. The conference is convened to identify medical follow-up, psychosocial or behavioral health issues, housing, social goals, and other waiver benefits that will require attention at transition to build the transition plan. To assure comprehensiveness, the transition case conference completes a transition checklist that includes items such as deposits, furniture, appliance, and linens that help the team identify additional supports that the member may require. Through continuous member engagement and support from the transition case conferences, we are able to support successful transitions for our member.

Our Case Managers remain engaged with the members and anyone they include in their personal network throughout the process. The Case Manager conducts a final discharge planning meeting through which the interdisciplinary team finalizes the transition plan, verifies that each step is clearly addressed, and resolves any open questions or concerns. Within 48 hours following the member's transition from the facility, the Case Manager conducts an in-person visit to confirm that all services and supports have been initiated as outlined in the member's transition plan. The Case Manager will remain in close communication with the member and family members or representatives post-discharge to address any emerging barriers and adopts a less intensive engagement as the member successfully reintegrates.

Transitioning from the Hospital to Less Restrictive Settings

For members who have recently been hospitalized, we are committed to ensuring that their transitions back to the community are supported while minimizing the risk of readmission. To this end, Amerigroup has a transition of care program that outlines best practices for care transitions. The transition of care program facilitates member access to outpatient services by connecting the member with these services prior to discharge. Our case management approach integrates the transition of care model, working in collaboration with members, family members, representatives, and clinicians located on-site at specified hospitals. Key components of this model include pre-transition visits, follow-up care arrangements, post-discharge check-in, medication reconciliation, member education, disease-specific interventions, and discharge plan reminders. For members with complex functional needs, we will also discuss with the member their option to consider transitioning to a less restrictive facility such as a nursing home, ICF/ID, or SRC before completing a full transition to the community. Through these proven processes, our affiliate health plans have reduced admission rates while emergency room rates have remained flat, evidence that we are engaging members in their service plans and facilitating access to the right care, in the right place, and at the right time.

Amerigroup understands the unique challenges members can face when transitioning back home from a hospital stay. To further assist members and help make transitions as smooth as possible, we will provide a post discharge kit and free home-delivered meals to eligible members and their families as Value-Added Services. The discharge kit provides tools for family members and caregivers to successfully help

transition members from hospital to home, aid in recovery, and help decrease the chances for readmission. The meal program provides nutritious home-delivered meals, which allows members to focus more on recovery rather than proper nutrition, shopping, or finding a caregiver to prepare them.

Level of Care and Support Assessments (4.2)

Amerigroup's affiliates have 17 years of experience supporting our members living in their homes and communities and those residing in facilities through Medicaid long term services and supports (LTSS) programs. Our quality improvement activities lead to ongoing refinement of processes to better serve members as they transition through various life stages. This includes but is not limited to early identification of member service and support gaps that signal need for LTSS; open communication with members and families to make sure the member and family supports provided are meaningful and include social, education, and employment goals; eligibility screenings prior to referral to our state Medicaid partners for eligibility and initial level of care determination; and ongoing monitoring and tracking to make sure member needs are fully addressed and reassessments are completed in a timely fashion in order to avoid service interruption and gaps in care.

Our Community-Based Case Managers are trained to administer state-adopted standardized assessment tools to protect inter-rater reliability along with other oversight functions to check the integrity of information gathered during the discovery process with the member and applied throughout the ongoing assessment process. Additionally, our team has extensive experience with the Preadmission Screening and Resident Review (PASRR) screening processes and working in collaboration with our state partners or their designees to provide a seamless experience for members. We understand the importance of a comprehensive approach to align funding decisions with member strengths, goals, needs, and preferences. Engaging the members and those who know them best provides our Case Managers with the opportunity to engage in follow-up questions and answers to compliment the assessment results prior to the development of the person centered service plan. Additionally, Amerigroup has administrative and quality assurance oversight processes in place to protect conflict-free case management in accordance with state and federal regulations.

Initial Determination for Non-members (4.2.1)

Through our affiliates, Amerigroup has significant experience working with state partners who retain responsibility for Medicaid eligibility and level of care determination for enrollment in nursing facilities, intermediate care facilities for individuals with intellectual disabilities (ICF/IDs), or 1915 (c) Home and Community-Based Services (HCBS) waiver programs. We will coordinate with the State to obtain and include level of care determinations and initial assessment and reassessment results from the administration of the InterRAI-HC and Support Intensity Scale (SIS) tools, as well as other pertinent member specific information as part of the person-centered planning process. We support the State's commitment to use its adopted core standardized assessments to promote fair and equitable allocation of funding resources based on each member's individual support needs. This process will inform the development of person-centered service plans based on the individual member's selected services and personal goals within HCBS waiver cost limits. Amerigroup recognizes the value of streamlined assessment and documentation across all waiver populations and programs and will work in collaboration with DHS to achieve the State's goals. We will not revise the adopted assessment tools or use other tools without State approval.

Level of Care Assessments and Annual Support Assessments (4.2.2)

Identification (4.2.2.1)

Amerigroup has developed operational protocols, policies, and procedures to promote early identification of member service and support gaps that may signal emerging needs that are better addressed through LTSS programs to enhance member health, well-being, and independence. All Community-Based Case Managers are trained to recognize indicators that suggest a member may benefit from and meet LTSS program enrollment criteria. Amerigroup will train all Community-Based Case Managers on LTSS eligibility criteria established by Iowa Medicaid Enterprise (IME) so that timely action is taken in coordination with DHS. Our Community-Based Case Managers engage and inform members regarding all available LTSS options. After conducting initial assessments for interested members using a state-approved tool, Amerigroup will refer all potentially eligible members to the State or its designee for level of care determination. Through this process, we are better able to align services and supports with member strengths, needs, and preferences to accommodate periods of transition that all people and families experience

Processing Referrals to LTSS

Amerigroup's "no wrong door" approach provides a single point of entry for LTSS program referrals from end to end. All member-facing staff accept self-referrals from members or referrals from their families, support networks, service providers, or health professionals. Training includes respect for the member's own advocacy and self-direction, active listening skills, how to gather situational facts, accurate documentation of essential information for follow-up, and proper routing of requests to the LTSS case specialist or the assigned Case Manager or care coordinator. In each instance, staff will work in consultation with the case management team manager to link the member with a Community-Based Case Manager. The member's Case Manager or care coordinator will work in tandem with the newly assigned Community-Based Case Manager to facilitate continuity and integration of all service and support needs in the process described below. In the event that a member has not been linked to a specific Case Manager or care coordinator, the newly assigned Case Manager will consult and engage team members with relevant expertise throughout the process detailed below:

- Regardless of the referral source, the assigned Case Manager will contact the member and, as appropriate, their family or representative to learn more about the member's needs and concerns. The Case Manager will discuss the request and the required steps prior to LTSS program referral to the State or its designee. If the member has an established relationship with another Case Manager or care coordinator, he or she will facilitate the introductory call. The Case Manager will describe LTSS options and discuss interest in receiving LTSS. During the initial call the Case Manager will also perform a brief telephonic screening to determine level of urgency to prioritize access to services and the face-to-face assessment.
- If it is determined that the member has an urgent need compromising health and safety as a result of a recent change in daily living circumstances or health-related conditions, the Case Manager will authorize medically necessary interim services and schedule and complete a face-to-face screening assessment no later than seven days from the date of referral.
- If the results of the telephonic screening indicate that the need for LTSS is not urgent, the Case Manager will work with the member and as appropriate the family or representative to schedule and complete the face-to-face assessment no later than 30 days from the date of referral.

Referrals received after hours will be routed through our 24/7 Member call center. The call center representative will have access to our core operating system and will enter a detailed message that tasks

the member’s Community-Based Case Manager for follow-up with the member the next business day. When indicated, the call center representative will also be able to connect the member to an on-call Community-Based Case Manager after hours. For members in crisis, a referral will be made immediately to emergency services. In the event of a medical emergency, our members are encouraged to call 911; our call center representatives will assist as requested to facilitate the call.

Ongoing Identification of Members Who May Be Eligible for LTSS

In addition to processing all inbound referrals, Amerigroup’s person-centered approach uses an array of ongoing discovery and assessment strategies to facilitate proactive identification of members who currently need additional resources available through LTSS programs and those with risks factors that signal signs of instability in life circumstances such as physical and/or behavioral health conditions that may result in a change that leads to LTSS eligibility. Our comprehensive approach emphasizes an integrated model that utilizes our collective expertise of our health plan employees and the interdisciplinary team to develop a holistic view of each member’s evolving life experiences and service and support needs across physical, behavioral health, and social service delivery systems. Table 4.2-1 below outlines our processes to identify members potentially eligible for LTSS programs.

Table 4.2-1. Amerigroup Seeks to Identify All Members Who May be Eligible for LTSS

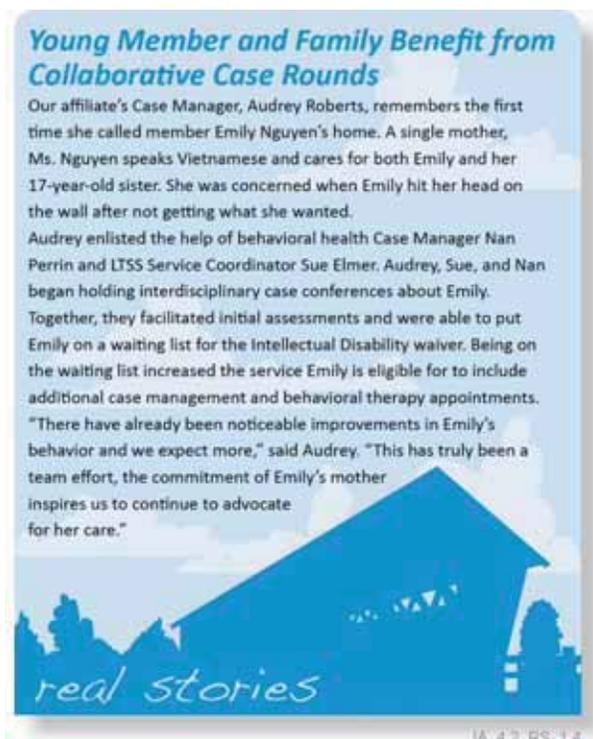

Method:	Process we will use to identify Iowa High Quality Healthcare Initiative (HQHI) members for LTSS:
Claims Analysis and Predictive Modeling	Our predictive modeling process facilitates prospective identification of members who may meet HCBS Waiver program or Nursing Facility and ICF/ID eligibility through medical and behavioral health conditions and/or developmental factors of elevated risks through analysis of claims data to identify conditions and prioritize outreach and assessments, for example, emergency room use, hospitalizations, and prescription drug utilization.
Review of State Enrollment Files	Files provided by the State will be used to identify members enrolled in LTSS programs, those on waiver waiting lists and others that may be at risk of institutionalization or in imminent need of HCBS waiver supports. Community-Based Case Managers will expedite informal and State-approved initial screening assessments to facilitate proactive eligibility referrals to the State or its designee.
Telephonic outreach and screenings	Screenings will be used to quickly identify potential unmet needs or specialized needs for newly enrolled Amerigroup members, including potential stressors and challenges in members’ natural support systems. This information will identify members for initial screening assessments for LTSS eligibility and specialized services that the member may require.
Review of other care or service plans, treatment plans, and medical records	Prior service documentation, medical necessity determinations, authorized care, and treatment plans are examples of other documentation we will review to identify specialized and/or complex needs. We will also review member records on an ongoing basis, including, as applicable, person-centered service plans, State-adopted assessment results, other assessments, medical records, and Individual Education Program plans. All documentation is uploaded to the member’s CareCompass file with member and/or representative consent to inform ongoing service planning and collaboration.
Referrals	Members will be prioritized for outreach and assessments to determine needs through self-referrals and referrals from family or representatives, support network, early intervention programs, schools, service providers, physicians, and/or other health professionals.
In-person Initial Assessment Processes	In-person initial assessments using State-adopted tools will be administered face-to-face with the members and, as appropriated, their families or representatives to identify clinical and functional reasons for referral to the State or its designee to determine eligibility and level of care.

Method:	Process we will use to identify Iowa High Quality Healthcare Initiative (HQHI) members for LTSS:
Ongoing Monitoring	Amerigroup's regional case management teams further encourage communication between non-LTSS and LTSS case managers to proactively identify additional members who may be in need of LTSS. Specifically, non-LTSS case managers can easily communicate with other team members, including LTSS case managers, regarding specific members formally during case rounds and on an as-needed basis. This level of coordination makes sure that members with LTSS needs are promptly identified and referred to the State for level of care determination and sets the foundation for integration across physical health, behavioral health, and social service delivery systems.

Through internal and external collaboration and coordination we are able to maximize available State, regional, and community resources to eliminate service and support gaps promoting member health, well-being, and independence. For example, our physical health, behavioral health, and LTSS leadership and teams are co-located to facilitate an internal referral process to address unmet needs. So, as behavioral health Case Managers become aware of changing needs with a member, they can consult and refer the member to their LTSS colleagues to provide all needed supports. Additionally, the teams conduct a variety of internal collaborative case rounds to build immediate and long-range solutions for our members with the most complex needs, including integrated rounds for members with co-occurring conditions, complex case rounds for LTSS members with medically fragile conditions, and nursing facility reintegration rounds for members we are assisting in repatriating to the community. Our Case Managers navigate delivery systems and coordinate with our State and regional partners, contracted providers, and community resources to link members to needed services and supports that are brainstormed through our collaborative processes.

Initial Assessment and Annual Support Assessment (4.2.2.2)

As described in Section 4.2.2.1, the Community-Based Case Manager will contact the member by phone. If the member has an established relationship with another Case Manager or care coordinator, he or she will facilitate the introductory call. During this call LTSS options will be described and discussed to determine interest in available services and supports and moving forward with the eligibility process. The Case Manager will discuss the request and the required steps prior to LTSS program referral to the State or its designee. During the initial call the Case Manager will also perform a brief telephonic screening to determine level of urgency to prioritize access to services and the face-to-face assessment. If the member wants to move forward with LTSS eligibility, the Case Manager will schedule an in-person initial assessment using the State-approved tool. For urgent requests, Case Managers will schedule and complete the in-person assessment within one week, if at all possible. Case Managers will schedule and complete initial in-person assessments within 30 days for all non-urgent referrals. In the event that a member does not

appear to meet LTSS eligibility criteria for LTSS enrollment, Amerigroup will notify and advise the member and, as appropriate, his or her family or representative of the right to continue or discontinue the process as outlined in Section 4.2.3.

Question 4.2, #1

1. Describe your ability and process for conducting level of care reassessments and tracking and determining when a reassessment is required.

Our affiliate health plans have a strong track record of successfully implementing all state-appointed assessments in their LTSS markets and have completed assessments using state-appointed tools for over 25,000 members across their LTSS programs.

IA_3.4.2_COB_2.2r

Amerigroup has established processes and protocol in place requiring timely completion of all reassessments with a proven tracking system that has demonstrated effectiveness. **Amerigroup affiliates have consistently achieved near 100 percent compliance with timely reassessment as measured by state quality audits.** We generate daily reports for our Community-Based Case Managers to track reassessments to make sure assessments are scheduled in a timely fashion to prevent gaps in care and services and that a member's service plan addresses any changes in medical or functional status.

Amerigroup has developed innovative solutions that support our successful reassessment process. Using our innovative iPad-based CareCompass Mobile technology, our Case Managers are able to conduct reassessments effectively and efficiently. We will leverage

our innovative approach and experience in Iowa to support accurate, complete, thorough, and timely reassessments for our members.

Tracking Reassessments
Annual Reassessment

For all our LTSS members, we will perform reassessments when a member experiences a significant life change or at least every 12 months to capture any changes in medical and functional status that cause a change in level of care. To conduct timely reassessments, Case Managers download regularly updated reports regarding all upcoming reassessments as required to meet the ongoing needs of our members. We generate reports on the CareCompass platform daily that are easily customized to include all reassessment due dates in 30-, 60-, 90-, 120- or 180-day increments in the format in Figure 4.2-1. These reports are accessible by Case Managers, as well as regional managers in the case management program. This assists Case Managers to plan reassessments in advance and prioritize needs and provides regional managers the ability to provide timeliness of reassessment oversight.

Figure 4.2-1. CareCompass Report Manager Produces Daily Reports to Track Reassessment Needs

Member LOC Indicator (e.g., interim)	Member Group ID	Effective Date	Term Date	Last Contact Date	Last Contact Note Type (e.g., on-going, annual assessment)	Last Contact Type	Next Contact Due Date	Next Contact Type (e.g., telephonic, face-to-face)

IA_3.4.2_COB_2.2r

Changes in Member Need

As stated above, we identify significant changes to life circumstances and functional and/or medical needs that trigger a reassessment. Changes indicating a need for reassessment include but are not limited to:

- Increased frequency in hospitalizations
- Inability of primary natural support to care for the member
- Change in medical conditions like uncontrolled seizure activity or disease progression such as HIV/AIDs
- Home environmental factors placing the member at undue risk

To help identify changes in member circumstance, Case Managers continuously monitor the adequacy of members' service plans through regular in-person and telephonic communication with the members, their family or representatives, and providers. Case Managers also continuously monitor medical claims data via Member 360 to identify members needing an early reassessment. Member 360 provides Case Managers with a member dashboard that displays HEDIS[®] care alerts; authorizations; prescriptions; lab results; and claims organized by type such as inpatient, emergency room, office visit, and behavioral health. It also provides a timeline of clinical events for the member across a number of domains, including diagnosis, providers, and medication history. Member 360 provides a complete overview of members' medical care to help inform reassessment decisions.

Conducting Reassessments

Through our affiliates, Amerigroup has significant experience conducting reassessments for our LTSS populations and a proven track record of consistently complying with reassessment timelines in all states of operation. Through our experience, we created well-defined policies and procedures and innovative systems to conduct reassessments as an essential component of meaningfully informed service plan development.

During reassessments, we will administer the Supports Intensity Scale (SIS) for ID populations and InterRAI-HC for all other LTSS populations to help support State efforts to achieve uniformity in assessments across LTSS programs to promote the alignment of funding resources to member needs. Amerigroup brings demonstrated experience implementing standardized assessment tools, including modified versions of the InterRAI-HC in other states. Given our experience, we are confident we will be able to successfully and consistently use InterRAI-HC and SIS to support level of care assessments.

To supplement the InterRAI-HC and SIS tools, we will use our proprietary needs assessment called the Universal Assessment Tool (UAT). Amerigroup developed the UAT specifically for our LTSS members so that Case Managers may fully understand of the member's functional, physical, behavioral, and support status, as well as self-reported needs. The comprehensive nature of the UAT provides the Case Manager with a full picture of the member's health status. As part of the UAT, Case Managers will probe the member and, as appropriate, family or representative perspectives on member strengths, needs, and preferences. For example, through these tools, the Case Manager will determine if frozen, hot, or personal care attendant (PCA)-prepared meals would work best for the member (documenting the need for gluten free, vegetarian, diabetic-free, heart healthy or renal meals). The assessment uses branching logic based on member responses triggering exploration of the most relevant areas, resulting in highly individualized conversations to help tailor services and supports based on identified member needs across physical, behavioral, and social delivery systems. To avoid duplication of efforts between assessments and re-asking members and families the same set of questions, we will directly incorporate all relevant member responses from the State-adopted assessment tools into the UAT.

To facilitate successful reassessments, our Case Managers will be equipped with our proprietary iPad-based tool, CareCompass Mobile. CareCompass Mobile will be programmed with all necessary

reassessment tools, including the InterRAI-HC, SIS, and UAT. The technology reduces administrative burden and creates efficiencies by automating transfer of information that, in turn, facilitates Case Managers to directly focus on the needs and concerns of members by involving members in the service-planning process. Given our experience incorporating several assessments into our CareCompass Mobile Technology as demonstrated in Table 4.2-2, we are confident we will be able to leverage our innovative CareCompass Mobile solution in Iowa.

Table 4.2-2. Amerigroup Affiliates have Significant Experience Implementing State-designated Reassessment Tools in States that Require Use of Specific Tools

	State-designated assessment tool	Technology platform used to administer	Reassessments completed
Florida	701B	CareCompass Mobile	6,300
New Jersey	NJ CHOICE*	CareCompass Mobile	3,470
New York	Uniform Assessment System	Laptops for login to state system	3,350
Texas	Medically Necessary and Level of Care	CareCompass Mobile	13,598
Total			26,718

*State-modified version of InterRAI-HC

Question 4.2, #2

2. Propose the approach by which needs assessments will be administered in a conflict-free manner consistent with BIP requirements.

Amerigroup recognizes the importance of providing need assessments in accordance with conflict-free principles and practices. Conflicts of interest can arise and impede the person-centered planning process that facilitates the identification of member-specific strengths, needs, and preferences in the development of the service plan. ***At Amerigroup, our Case Managers are strictly prohibited from being involved in service delivery to prevent any conflicts of interest.*** To further help assure that needs assessments are conducted in accordance with all BIP requirements relating to conflict-free case management, Amerigroup developed policies and procedures to provide comprehensive Case Manager training such as prohibition of incentives, required mechanisms to report grievances, and oversight processes through Case Manager performance reviews and quality improvement programs.

Case Management Processes

Case Manager Training

To help assure adherence to BIP requirements, Case Managers undergo rigorous training to promote conflict-free needs assessments and overall case management. During general orientation for new employees, Community-Based Case Managers are required to complete online learning modules on policies and procedures related to ethics, including standards for conflict-free case management.

Core competency training includes specific modules for the State-adopted standardized assessment tool. Core modules include but are not limited to Member-Centered Principles and Practices, Motivational Interviewing Techniques, Member Rights and Conflict-Free Case Management, and Amerigroup’s approach. During assessment training, we further emphasize that Case Managers must protect the integrity of the standardized assessments through prescribed protocols for administration along with other oversight to check result accuracy against information gathered during discovery process to guard against over- or underreporting of member service needs. Our Case Managers receive annual and targeted training to maintain core competencies and professional development. Ongoing training also covers

conflict-free assessment techniques on an as-needed basis. Further information on our training processes for Case Managers can be found in Section 4.3.

Conflict of Interest Policies

In accordance with Amerigroup policies and procedures, Case Managers are required to report to their Long Term Care/Care Coordination Manager any conflicts of interest they may have, including but not limited to familial and personal relations with the member, his or her family or representatives, any paid PCAs or other support workers, and/or the provider agency that may compromise their ability to evaluate member needs objectively. In addition to reporting conflicts of interest as they arise, our Case Managers are required to formally attest that they have no conflicts of interest on an annual basis. If a Case Manager reports a conflict of interest, the Long Term Care/Care Coordination Manager will reassign the member's case to another Community-Based Case Manager within the region.

Financial Compensation

To further adherence to conflict-free case management, Amerigroup policy clearly articulates that financial incentives or other rewards to Case Managers for limiting care or services for members is strictly prohibited. Likewise, we affirm that decisions about hiring, promoting, or terminating Case Managers or other staff are not based on the likelihood or perceived likelihood that they support or tend to support denials of benefits or services. To reinforce the importance of conflict-free case management, all employees sign a Compensation Policy Statement upon hire that affirms this policy. We retain the signed Compensation Policy Statement in the employee's personnel file.

Grievance Reporting and Tracking

Amerigroup's "no wrong door" approach provides a single point of entry for grievances, complaints, and appeals from end to end. All employees are trained on standards for managing member inquiries, grievances, and appeals. Typically calls from members, families, or representatives are received by our Member call center representatives, regardless of the point of entry, and grievances and complaints are recorded and routed to the Grievance and Appeals Unit. We focus on responding to members in a courteous and professional manner and make every effort to resolve any issues that may arise through a well-defined and documented process that supports the member every step of the way. We maintain robust and effective procedures and systems for tracking and monitoring member inquiries, grievances, and appeals from initial receipt to escalation processes and resolution time frames to investigation processes and follow-up responsibilities. Staff members do not review or make decisions on cases where they were involved in previous levels of review or decision-making. For example, Case Managers performing the State's adopted needs-based assessment are prohibited from involvement to protect the integrity of the process. Section 8.15 provides a description of Amerigroup's processes and timelines.

In addition to Amerigroup's Welcome Packet and information on the member website, Member Services representatives, Case Managers, and Utilization Management staff are trained to inform members of their rights and responsibilities during each contact when a member, family, or his or her representative expresses dissatisfaction with any aspect of care or services. During the initial assessments and reassessments, members are also informed of their rights. We affirm with our members and their families or representatives their understanding of our internal grievance, complaint, and appeal processes. Additionally, we make sure members and their family or representative are fully informed and understand State Fair Hearing processes and provide support as needed so that they are able to exercise their full rights.

Based on the results of the internal investigation, the decision may, for example, result in a directive of reassessment by a different assessor, member assignment to another Case Manager in the geographical region with relevant prior experience specific to the member's needs, or other actions as needed.

Oversight

Case Manager Performance Reviews

Our affiliates have established principles and practices within our “Ethical Framework for Case Management Practice” that include core policies that define clear expectations regarding case management performance. These standards of practice are foundational to conflict-free case management and service delivery. Case Manager and non-case manager quality case reviews are completed by the Quality Management and Improvement (QM/QI) Committee quarterly on a random selection of open and closed case records from within the medical management system. Quality case reviews are based on objective quality indicators as specified in applicable policies and evaluate whether a Case Manager has been operating in a conflict-free manner. This includes evaluating Case Managers for consistent implementation and documentation of all components of the case management process, including case initiation, assessment, planning, coordination, monitoring, and evaluation.

If it is suspected that a Case Manager has a conflict of interest, the QM Committee will meet with the Case Manager to discuss an action plan for improvement. The action plan may include:

- Providing education and/or counseling to the employee until improvement is noted
- Conducting quality case reviews on a more focused basis (for example, weekly or biweekly) until achieving a consistent score at or above the designated minimum threshold
- Conducting manager ride-a-longs through which Long Term Care/Care Coordination Manager can observe Case Managers directly and help remediate any concerns

The QM/QI Committee reviews aggregated quality review results for trending and analysis to support continuous quality improvement in the case management program.

Annual Review of Case Management

On an annual basis, the plan national Quality Improvement Committee (QIC) will evaluate the case management program to confirm that the scope, goals, performance measurements, and planned activities are consistent with national and business strategic plans and the national case management standards of practice. This process includes but is not limited to an evaluation of:

- Aggregate findings from the quality case review process described above
- Aggregate data from member satisfaction survey reports and complaints, including but not limited to needs assessments

If there are any concerns relating to conflict-free case management, Amerigroup will develop an action plan to address the concern that may include training, team restructuring, and additional audits.

Engaging All Stakeholders in Oversight

Amerigroup also engages community stakeholders in continuous improvement of our LTSS program practices and processes through input gathered in open forums that are convened on a routine basis. In all our markets, we establish both a Member Advisory Board and a Provider Advisory Board with diverse membership to augment oversight through the review of policies and procedures, as well as issues raised by members, their families, natural supports, providers, and community supports. Active engagement of our stakeholders gives Amerigroup insight needed to improve policies meant to protect member rights, including but not limited to conflict-free case management, assessments, and service delivery. Section 8.12 describes our advisory board composition and processes.

We will review with both the Member and Provider Advisory Boards the specific policies and procedures and give the members and providers the opportunity to ask questions and give input to us. The board members may request that we consider making some changes to our policies and procedures, in which case we will track those requests that will go to the plan leadership for review and consideration. We will

continually update the board members on our changes and innovations and the conflict-free needs assessment process and will give the members an opportunity to bring issues and complaints to the board meetings for consideration and review. We welcome and value the input and advice from our stakeholders and understand the vital role they have in assisting Amerigroup in having the best performance and outcomes possible.

Question 4.2, #3

3. Propose a timeline in which all assessments shall be completed: a) Upon initial enrollment with the Bidder b) When the Bidder becomes aware of a change in the member’s circumstances which necessitates a new assessment and c) At least every 12 months

Assessment Timelines

Amerigroup recognizes the need to conduct timely assessments and reassessments to make sure members do not experience a gap in care or services and that their member-centered service plans reflect current service and supports needs across physical health, behavioral health, and social delivery systems. Based on our experience, we propose the timelines listed in Table 4.2-3 to support timely completion of initial assessments and reassessments, as well as assessments related to urgent and non-urgent LTSS referrals.

*Table 4.2-3. Proposed Timelines for Assessments and Reassessments**

	Upon Initial Enrollment or Non-urgent Referral	Upon Discovery of a Change in Circumstance or Urgent Referral	Annual Level-of-care Reassessment
Ongoing Basis	Within 30 Days	Within 7 days	60 days prior to expiry
At Contract transition (Implementation)	Within 90 Days	Within 7 days	Prior to authorization expiry

**All timelines reflect minimum standard; members with higher levels of need will be prioritized.*

Based on effective processes and protocols in other state LTSS markets, Amerigroup proposes timelines for the completion of initial assessments, significant changes signaling reassessment, and annual reassessments as follows:

- From the date of initial enrollment, identified as potentially eligible for LTSS or non-urgent referrals initial assessments will be completed within 30 days. This expedites referrals to the State for LTSS eligibility and level of care determinations and provides the Case Manager with needed information to support the member in his or her community through non-LTSS services and community resources until services can be secured through LTSS programs for eligible members.
- Annual reassessments will be completed no less than 90 days prior to the expiration of the member’s service plan to avoid any gaps in care and services and to incorporate current information as part of development of the person-centered service plan to align funding decisions and support needs within waiver cost limits.
- When members experience significant changes in life circumstance or medical and/or behavioral health status, initial assessments based on urgent referrals and reassessments will be completed no later than seven days from the date of notification. We understand that significant changes in the member’s circumstances, such as loss of a family member who served as a primary support or a behavioral health crisis, can dramatically impact the health, safety, and well-being of our members, often requiring immediate intervention to avoid nursing home or ICF/ID placements. New level of care information provides the Case Manager with needed information to support the member, his or her family, and the interdisciplinary team with person-centered planning to close gaps in care and services.

Meeting Member Needs Through Timely Reassessments

As discussed under Question 4.2, #1, Long Term Care/Care Coordination Manager are able to access customizable reports updated daily through CareCompass Report Manager that provides a summary of all reassessments due in 30, 60, 90, 120 or 180 days. Through these reports, Long Term Care/Care Coordination Manager are able to monitor reassessment timelines for all members and are empowered to intervene where necessary to help provide for timely reassessments. Additionally, LTSS Case Managers stay well-informed to concerns or issues that may impact member support needs through monthly monitoring and quarterly face-to-face meetings and continuously monitor our members' reassessments needs. Case Managers will make best efforts to schedule reassessments during regular in-person visits and telephonic conversations with the member. If necessary, Community-Based Case Managers will supplement routine conversations with additional telephonic contact to schedule reassessments. Case Managers will make their initial request for reassessment well in advance of the due date to help assure timely reassessments.

If a member cannot be reached through three telephonic contacts, we will deploy creative strategies, including but not limited to:

- Sending field-based Case Managers to the member's home address to establish contact
- Leveraging assistance from other members of the regional case management team in locating and engaging members
- Reaching out to members' providers and asking providers to relay the need for reassessment to the member and family members or representatives
- Reaching out to pharmacies where our members fill prescriptions to obtain updated contact information
- Reviewing all claims data that may have been paid on the member's behalf and reaching out to those providers who have been paid to seek additional information

To help assure that member contacts are made to schedule an appointment, our Long Term Care/Care Coordination Manager will provide continuous oversight unto the reassessment process.

In the event that a reassessment timeline is missed due to mitigating circumstances such as a hospital admission, Amerigroup will work diligently to prevent any gaps in care for our members. We will continue to work with members and their family members or representatives to complete a reassessment at the member's earliest convenience and will carefully document all efforts to conduct a reassessment in a timely manner. Finally we will not hesitate to extend a member's authorized services as needed to help assure member health, safety, and well-being.

Documentation Requirements (4.2.2.3)

Question 4.2, #4

4. Describe your plan to track and report level of care reassessments.

Amerigroup has established processes and protocols in place requiring timely completion of all reassessments with a proven tracking system that has demonstrated effectiveness. State quality audits consistently report nearly 100 percent compliance with timely reassessment in our affiliate health plans. Our innovative CareCompass technology and robust reporting systems reduce administrative burden and create efficiencies by automating the transfer of information.

Tracking and Reporting Reassessments

After reassessments are completed, Case Managers will record the results, including the determined level of care, in CareCompass Mobile. All assessments and forms completed on the iPad are electronically dated and archived in CareCompass for future reference in accordance with all applicable privacy regulations, including HIPAA. Archiving reports in CareCompass reduces administrative burden and creates efficiencies by automating the transfer of information. Through CareCompass archives, we are able to make reassessment records available quickly and easily to the State upon request.

If the needs assessment indicates a change in level of care, Case Managers will forward all documentation of the reassessment and the results to the State within the time frame defined by DHS. We can easily customize the CareCompass reporting format as needed to meet DHS reporting requirements for assessments indicating a change in level of care.

Incorporating Reassessment Outcomes in Service Plans

Once we receive member level of care determinations from DHS, we will coordinate with members and families to schedule the annual service planning meeting with the interdisciplinary team. We will engage the member and the interdisciplinary team to review the current service plan; revisit member strengths, preferences, and support needs; and discuss the level of care determination incorporated into the updated service plan along with all service authorizations. We will also mail a copy of the updated service plan to the member and, as authorized, to the primary care provider (PCP). Our members are able to view their service plan through Member 360. Contracted providers have access to service plans of the members they support through provider facing Member 360.

Preadmission Screening and Resident Review (4.2.2.4)

Question 4.2, #5

5. Vendors must work with the State or its designee responsible for implementing the PASRR process. Propose strategies to ensure members receive the specialized services and supports indicated by the PASRR level 2 screening.

Amerigroup has vast experience coordinating with states throughout the PASRR process. Just as we do in other states, we will work closely with the State of Iowa and/or its designee in the step-by-step completion of PASRR Level I screenings and Level II evaluations. Our policies and procedures adhere to federal regulations and will be modified to comply with Iowa-specific rules and regulations.

Prior to members' involvement in the PASRR process, Community-Based Case Managers work closely with our members and their interdisciplinary team through the member-centered planning process to develop a service plan that maximizes available resources through Medicaid, other State and local programs, our Value-Added Services, family and natural supports, and community resources with the goal of remaining in the community. These efforts take place when members have experienced significant life changes that require additional home and community-based services and supports to divert potential institutional placement or when a member expresses the desire to reintegrate into the community. For example, if a member is hospitalized, we work closely with the discharge planner to make sure services and supports needed in the home are in place prior to discharge.

Promoting Timely Completion of PASRR Screenings

Case Managers communicate directly with nursing facilities and other entities that are required to complete and report PASRR Level I screenings and Level II evaluations within State and federal timelines. Upon notification that a member on the LTSS waiting list or participating in one of the State's HCBS waiver programs has been admitted to a nursing facility, Case Managers promptly confirm completion of the Level I PASRR. The Case Manager will request confirmation from the State or its designee to make sure a quality review of the Level I screening have been completed accurately and prior to admission. If the member is deemed to meet nursing home admission criteria, the Case Manager will request Level I results to make sure that all PASRR requirements have been met. For example, in the event that a member with ID or SMI is approved for admission, a Level II evaluation will be triggered to identify needed specialized services.

In the event the State or its designee does not have record of the member's Level I screening, the Case Manager will work collaboratively toward accurate and timely completion as directed. Through contractual agreements with nursing facilities, we require compliance with federal and State PASRR rules and regulations, including but not limited to Level I screening completed prior to admission.

Providing PASRR-identified Specialized Services

Amerigroup contractual agreements with nursing facilities also include compliance with federal and State regulations that require a Level II evaluation for all members with ID or a behavioral health disorder to make sure identified needed specialized services are completed as part of preadmission screening. For all other members suspected to have a diagnosis of ID and/or a behavioral health disorder post admission or who have experienced a change in conditions, PASRR Level II must be completed to identify and address specialized needs.

Amerigroup will conduct regular facility record audits to monitor PASRR compliance. If a nursing facility is found to be in violation of contractual requirements, we develop a Corrective Action Plan. During this process we will work directly with the nursing facility to address any barriers to compliance. After repeated violations, we will reserve the right to terminate authorization for payment, open a quality of care investigation, and/or work with the applicable State agency on enforcement. In these circumstances, we will work with the member and interdisciplinary team to identify a new facility for the member.

For members with ID and/or behavioral health conditions, we will monitor for improvements in the medical and/or functional status suggesting that they may no longer meet PASRR admission criteria. In the event that the Case Manager questions appropriateness, we will request the completion of applicable PASRR Level I and/or Level II screening to determine ongoing eligibility. We will work to identify similarly inappropriate circumstances for all members indicating care and service needs could be adequately met through HCBS waiver programs coupled with natural supports and community resources.

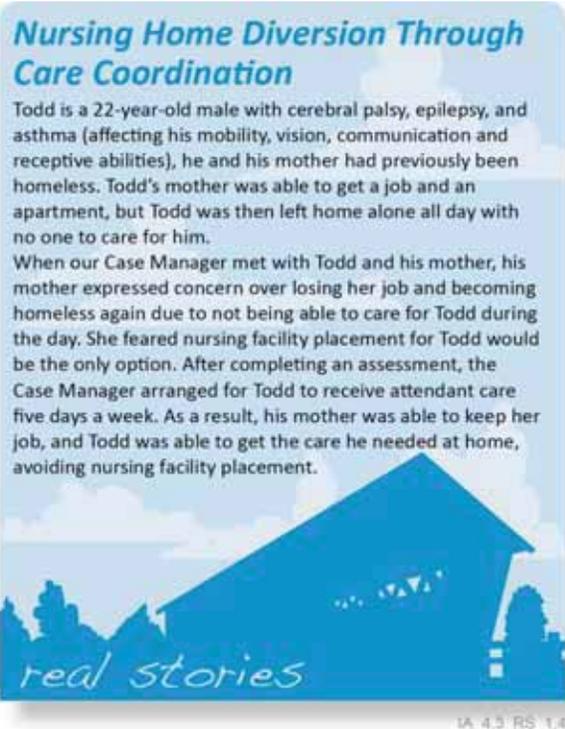

For those with ID or behavioral health conditions that met PASRR screening for admission; whose functional or medical limitations have subsided; and for whom we have concerns that ongoing institutionalization is related only to the behavioral health, ID, or other similarly inappropriate circumstances, we will require the nursing facility to have applicable PASRR screening completed to determine ongoing eligibility for the nursing facility. ***We will work with all our members to continually inform them of community-based options and identify opportunities for reintegration into the community through the person-centered planning process.***

Appearance of Ineligibility (4.2.3)

Amerigroup's affiliates have extensive experience working with members who may appear ineligible for LTSS programs based on state-specific criteria. Our policies and procedures are compliant with applicable federal Medicaid managed care requirements and will be modified to meet Iowa-specified time frames and requirements for noticing, monitoring, and reporting. In the event that a member does not appear to meet LTSS eligibility criteria for LTSS enrollment, Amerigroup will verbally notify and advise members and, as appropriate, their family or representative of the right to continue or discontinue the process. When the decision is made to proceed with the assessment process, we will follow the processes within specified timelines for completion of the initial assessment and the submission of documentation and results within DHS established time frames. If the member or, as appropriate, family or representative decides to discontinue the process, Amerigroup will formally document the decision in CareCompass, including the authorizing signature and date. Amerigroup will adhere to State-designated timelines for providing DHS with documentation of termination. The use of our CareCompass technology to record all assessment results and relevant documentation allows for electronic transfer of data regarding the appearance of ineligibility to DHS in a manner prescribed by DHS.

Waiting Lists (4.2.3.1)

We are committed to creatively supporting our members who are on the waiting list for HCBS programs to prevent out-of-home placement in a nursing facility, an ICF/ID, or a Psychiatric Medical Institution for Children (PMIC). If an HCBS program is not immediately available, we will inform our members of their right to be served in a facility setting and will provide additional non-waiver supports and services. We will offer Value-Added Services such as community reintegration, additional respite care, PCA services, and assistive devices as described in Section 3.2.14. We will also work with the State, as our affiliates do in other states, to achieve successful implementation of Iowa's Olmstead Plan to support rebalancing efforts to shift away from nursing facility, ICF/ID, or PMIC beds reliance to less costly HCBS waiver programs in an effort to reduce waiting lists and keep members in their homes and communities. Additionally, we support our State partner in the implementation of needs-based assessments with resource allocation methodologies to align resources with needs and help assure that access to LTSS is provided equitably and based on member need. We will work collaboratively with the State through LTSS access meetings to manage overall access to LTSS services.

Community-Based Management Requirements (4.3)

Question 4.3, #1

1. Describe your proposed model for delivering LTSS care coordination services.

Amerigroup's case management model is founded on person-centered principles and practices to make sure that services and supports are tailored to the individual needs of all members. Our approach utilizes regional case management teams with multifunctional expertise to *assist* Community-Based Case Managers and members and their families, representatives, and interdisciplinary teams in the development of person-centered service plans and *serve* as an ongoing resource to meet varying needs of members to support health, well-being, independence, and community living and in the most integrated setting such as employment and participation in community activities. The member's assigned Case Manager serves as the team lead to enhance positive member experience and optimize person-centered service delivery.

The fundamental role of Case Managers is to serve as the main point of contact for the member and his or her family or representative as an advocate and a navigator across systems of care. The Community-Based Case Manager serves as a communicator and coordinator of all activities associated with the development of the member's service plan, monitoring services and supports (paid and unpaid) to measure quality, clinical, and functional outcomes. Through this role, the Case Manager serves as a collaborator, solution seeker, and community builder to better serve the member, support the family, and other unpaid supports. Our case management model enhances the alignment of resources to address unique and varying complexities of member needs. Service plans are considered to be living documents tailored to reflect services and supports that are responsive to the evolving development and changing needs of our members and their families and unpaid supports.

Coordination and collaboration are essential across systems of care. In addition to leading the member's interdisciplinary team in the development of the person-centered service plan and its implementation, we work closely with care teams of members residing in nursing facilities and intermediate care facilities for individuals with intellectual disabilities (ICF/IDs) to coordinate care delivery and align facility-based care plans with the member's comprehensive services plan. ***For our members who receive care coordination through an Integrated Health Home (IHH), the assigned Community-Based Case Manager communicates and supports the implementation of the member's care plan as appropriate.***

Person-centered Case Management

A person-centered approach is essential in the development and implementation of a comprehensive service plan designed to integrate and coordinate services and supports across an array of service delivery systems and programs. Amerigroup's case management model involves a continuous process of coordinating, delivering, monitoring and assessing services and supports and progress toward achieving member goals. The person-centered service plan is an evolving document that may need to be evaluated and re-negotiated based on the member's level of progress and satisfaction with services and supports or due to significant changes in the member's needs. During the planning process, the member and family or representative are informed of the various services and supports available and the requirements of each service to support member choice and to better align service resource to need. Facilitating alignment of allocated resources to member needs requires partnership and collaboration with the member, family or representative, the assigned Community-Based Case Manager, and the interdisciplinary team to address

the preferences, needs, and goals of the member within long term services and supports (LTSS) program cost limits. Negotiable and non-negotiable preferences and service and support needs of the member are identified. Services and supports considered to be non-negotiable are medically and functionally necessary with direct impact on the health, safety, and well-being of the member to remain in his or her home and to prevent unnecessary out-of-home placements and/or hospitalizations. ***Our person-centered approach includes case management practices that protect member rights through adherence to State and federal requirements, including Amerigroup's conflict-free case management guidelines and policies as described in Section 4.2.2.2***

Matching Members with the Right Case Manager

Amerigroup's quality improvement activities are geared toward enhancement of member experience; we continually refine our case management approach using person-centered practices and principles. Upon receipt of a new member's enrollment file, our regional case management team determines if additional discovery information is needed prior to the assignment of the Case Manager. ***Community-Based Case Manager experience, knowledge, and skills are matched with our members based on diagnosis, complexity of medical and/or behavioral health conditions, and intensity of service and support needs.*** Our regional case management teams serve as an additional resource to help Case Managers, members, and families identify and assess services tailored to the specific needs of the member, align resources for specific condition or diagnosis, and respond to the member's preferences, strengths, and goals.

Member Services Call Center

Through our extensive experience, our members and, as appropriate, their families/representatives or unpaid supports develop trusting relationships with their Case Managers often seeking guidance and support as service needs naturally ebb and flow with the changing schedules and demands of daily life. ***Our members are able to contact their Community-Based Case Managers via our Member call center; members receive a warm transfer to their Case Manager for seamless connection.***

If the Case Manager is out in the field or it is after hours, the member will have the option of leaving a message for return no later than the following day or speaking with the on-call Case Manager and/or case specialist to expedite resolution of issues or concerns. Through our proprietary care coordination and management system, CareCompass, the on-call Case Manager and/or case specialists is able to quickly view the member's personal record to readily address concerns or issues.

Person-centered Service Planning Process

Amerigroup's case management approach is founded on member-centered principles and practices to identify with members the services and supports they need and prefer to maximize choice and independence. We are committed to assisting all members in exploring options for community integration in accordance with their personal goals and the Olmstead Decision. Through this commitment, not only do we support members to succeed in the communities of their choice, but we also help states achieve cost efficiencies.

Community-Based Case Manager Role in the Creation of the Person-centered Service Plan

The assigned Community-Based Case Manager works closely and collaboratively with the member, his or her family representative, and the member's identified interdisciplinary team to develop ***a comprehensive person-centered service plan that considers each member holistically to make sure that medical,***

behavioral, social, and educational needs are addressed to maximize health, well-being, and independence. Through conversations with the member and his or her family or unpaid natural supports, the Community-Based Case Manager carefully plans coordination processes and activities responsive to identified strengths, preferences, and needs. The Community-Based Case Manager’s roles and responsibilities are the following:

- Serve as the main point of contact for the member to help assure covered, non-capitated, and non-covered services and supports that are included in the service plan reflect individual preferences and needs
- Help the member and his or her family drive the service plan development process and ongoing direction of his or her service delivery
- Support children and youth as they gain independence and take a more active role in directing their care
- Oversee the development, collaboration, and coordination of the service plan and make sure it reflects the member’s system of care by integrating medical, behavioral, and functional community-based services and supports, covered services, non-capitated services, and non-covered service from all resources
- Help assure families that the person-centered service planning process is member- and family-oriented, including all needed services and supports such as inclusion activities, employment assistance/supported employment services, adaptive aids, and durable medical equipment
- Monitor monthly services and supports cost limits to make sure the member does not exceed his or her cost limit based on individual level of care determination and waiver specific cost caps.
- Reassess regularly and revise the member’s service plan based on monitoring, changes in health status, or requests from the member and his or her family or representative
- Provide information or training as needed to the member and his or her family or representative to maximize access, resources, and progress toward personal goals
- Involve and share information with the member’s primary and specialty care providers as appropriate to enhance the integration of services and supports into the member’s systems of care

Person-centered Service Plans

Our person-centered planning process includes essential steps to optimize delivery and integration of services and supports across the member’s systems of care. The process begins with discovery activities and standardized assessments that build a holistic picture of the member’s preferences, supports, needs and goals; development of the person-centered service plan in partnership with the member and his or her self-selected interdisciplinary team; service plan implementation; and ongoing monitoring as described in Table 4.3-1.

Table 4.3-1. Creation of the Person-centered Service Plans

Service Plan Discovery Process
Gathering information about the member takes place prior to the development of the person-centered service plan. Our model supports a shift from typical methods of case management and serves to create real opportunities for partnership and trust with the member, family, representatives, and unpaid supports. The discovery activities include:
Program Welcome, Introduction, and Screening Call. The assigned Community-Based Case Manager telephonically welcomes and introduces the member or family to Amerigroup’s LTSS program. An initial screening is completed along with conversation to identify preferences, strengths, and needs and review authorization timelines to prevent service gaps. The initial and reassessment processes and timelines are discussed as described in Section 4.2.2 Level of Care Assessments and Annual Support Assessments.

Review of Member-specific Information. The Case Manager reviews notes from the welcome call, enrollment files from DHS, claims information, the current service plans and authorizations, service plans from other programs, previous assessment results, school records and the Individual Education Plan (IEP) if available, medical provider treatment plans, and social service related records as available for historical background.

Completion of Face-to-face, Appropriately Timed State-adopted Assessment and Other Assessments. The InterRAI- Home Care (InterRAI-HC) or Supports Intensity Scale (SIS) will be completed along with complimenting assessments. The interview includes clarification, observations, and professional assessments such as behavioral health, occupational therapy, physical therapy, speech therapy, and adaptive equipment assessments. The Case Manager talks with the member and family using open-ended questions to get to know the member and family, understand how to work together, build trust, and support active involvement in decision-making, planning, and implementation of the service plan. The Case Manager provides information and talks about Consumer Choices Option (CCO), Freedom of Choice Form for community-based services, providers, and nursing facilities; and ICF/ID provider options to support informed member, family, or representative decision-making.

Documentation. All assessment notes, contacts, and actions are recorded in the electronic member file.

Person-Centered Service Planning Preparation

After the completion of discovery activities and identification of member's interdisciplinary team, the case manager prepares for the meeting and completes the following actions:

Identification of the member's interdisciplinary team in partnership with the member and his or her family or representative; scheduling and coordinating attendance at the service planning meeting; establishing ground rules, reviewing LTSS programs, Consumer Choice Options and the Freedom of Choice form and arranging accommodations to support engagement and meaningful participation.

Consultation with the primary care provider (PCP) and relevant specialists telephonically regarding medically necessary physical, behavioral, and functional needs.

Person-Centered Service Planning and Development

The case manager serves as the meeting facilitator and is responsible for managing meetings, keeping conversations on track, and supporting input from the member and family or representative and other individual members of the interdisciplinary team. The case manager uses motivational interviewing, redirection, conflict resolution, and consensus-building methods to enhance the person-centered planning process. Service Planning and Development includes:

An overview of information gathered during the discovery process, such as level of care determination from the State or its Designee, results from State-adopted and other assessments, information gathered regarding the service and support preferences and covered services, and description of non-covered services, as well as Value-Added Services that benefit the member.

Leading the interdisciplinary team discussion along with the member, and family or representative to *maximize health, well-being, independence, and adult transition planning when appropriate*. Member-Centered Service Planning and Development includes:

- | | |
|--|--|
| <ul style="list-style-type: none"> • Identification of member strengths, opportunities, challenges, and solutions • Availability of natural supports such as family, unpaid supports, and community resources • Review of roles and responsibilities of member, family, or representative, unpaid supports, Home and Community-based Services (HCBS) or facility service providers, and other key contributors such as schools, vocational rehabilitation counselors, and Amerigroup • Development of short- and long-range service plan strategies and goals • Identification of services and the amount, frequency, duration, service delivery schedule, provider type, and provider selection within LTSS program specific cost caps • Review of the completed service plan to make sure the member and family or representative understand and agree | <ul style="list-style-type: none"> • Agreement on current and recommended covered, non-covered, and non-capitated services and supports to meet the member's preferences, needs, and goals • Description of methods to coordinate and integrate care between providers of covered and non-covered services • Completion of the comprehensive service plan with simultaneous entry into the member's electronic record • Copy of the service plan provided as agreed on via certified mail or secured email • Verification that authorizations are consistent with continuity of care and that no gaps in care will be experienced as outlined in Section 3.3 Continuity of Care. • Notification to current and new providers that service authorizations are viewable in Member 360 • Submission of identified services that require health plan administrative authorization |
|--|--|

Person-centered Service Plan Implementation

The service plan is a living document with specific services activities, timelines, objectives, and goals coordinated and monitored by the case manager. Activities include:

Continuous Engagement. The case manager works with the member, and family or representative to identify solutions to new or emerging issues and make changes as necessary to better address service plan goals. The member's assigned case manager will monitor authorized services and supports through monthly telephone calls and four in-person contacts per year as specified in Section 4.4.6 Frequency of Community-Based Case Manager Contact or more frequently as needed or requested by the member, and family or representative.

Evaluation of Services and Supports in the Service Plan. Our case management model involves a continuous process of delivering and monitoring supports and interventions designed to meet the member's preferences, health and well-being, and personal goals. The service plan is an evolving document that may need to be evaluated and re-negotiated based on the member's progress toward identified goals. In the event of a significant life change a reassessment will be conducted for the State or its designee to determine level of care. Amerigroup will make sure needed services and supports are in place until service plans and association authorizations are adjusted.

Monitoring and Evaluation of Progress to Service Plan Goals

Our case management involves a continuous process of delivering, monitoring, and assessing interventions designed to meet the goals of the person-centered service plans, as well as other care/treatment plans, as a part of the member's system of care to maximize individual health and quality of life outcomes. The service plan is an evolving document that may need to be evaluated and renegotiated based on clinical and psychosocial level of progress toward set goals. Service plans will be adjusted within the member's level of care determination and associated cost limit as needed to promote attainment of goals. ***In the event that the member has experienced a significant life change, a reassessment will take place as described in 4.2.2.2. Amerigroup will make sure that needed services and supports are in place to address any health and safety concerns while waiting for the amended level of care determination.***

Avoiding Duplication of Efforts

Amerigroup has established policies and procedures that guide coordination of care and services for members who are dually eligible for Medicare and Medicaid to help assure that Medicaid is always the payer of last resort. Coordination begins with the State-adopted comprehensive member assessment (or reassessment, depending on the specific situation) and identification of the member's needs and desired outcomes. Community-Based Case Managers work with the member and, when appropriate, family or designated representatives and other members of the care team and/or interdisciplinary team, including consultation with member's PCP or treating provider, to develop a person-centered service plan. The service plan identifies the member's currently authorized or accessed services and supports, including but not limited to Medicare and Medicaid wrap-around services, services outlined in the IEP, and benefits available through Care for Kids, as well as non-capitated services. The Community-Based Case Manager coordinates authorization of covered wrap-around services as needed, depending on the type of service(s), and helps the member, their family, or representative identify available and preferred providers. Community-Based Case Managers and, when appropriate, Utilization Management nurse help assure services are coordinated and wraparound services are available to meet the member's changing needs. The Community-Based Case Manager shares information as authorized with the member's PCP or treating provider and other program providers.

Technology and Innovations

We continuously seek innovations to enhance our care coordination and case management systems and support our members. We have been leaders in offering innovative solutions to continuously improve our model and ultimately better meet our members' needs.

Care Coordination and Management System. Our proprietary tools, *CareCompass*, *CareCompass Mobile* and *Member 360*, comprise our clinical care coordination and management solution. They integrate seamlessly with our core operations system, Facets, and represent the system of record for member care coordination and case management information.

CareCompass collects, organizes, and presents information enabling management and coordination of member care, services, and supports and facilitates communications among participants of the member's care team and/or interdisciplinary team. Care coordination data such as claims history, pharmacy, authorization, immunization records, lab results, and care and disease management data are readily available in an organized format with tools for Community-Based Case Managers to identify and manage members' needs. Member 360 delivers a comprehensive view of member data to approved Network Providers within the member's system of care.

CareCompass and CareCompass Mobile

CareCompass Mobile is an innovative and proprietary iPad-based tool that facilitates our person-centered approach to case management services for members participating in HCBS and facility-based LTSS programs. To facilitate person-centered service planning, Community-Based Case Managers who administer the InterRAI-HC or SIS, as well as other assessments, are equipped with CareCompass Mobile, which guides and documents assessments. The tool syncs with our care coordination/case management system, enabling access to the data by the Case Manager assigned to the member and by our case management and utilization teams. If the member is referred to an IHH based on criteria outlined in 3.2.10, the IHH provider and its care coordinator will have HIPAA-compliant access to Member 360, which allows them password-protected access to the IHH member.

The Case Manager is able to view discovery information such as the member's historical utilization data, preference summaries, assessment outcomes and other information to support the development of the person-centered service plan. The assessment details are combined with other clinical information and the member's historical utilization data. Through CareCompass Mobile Case Managers are able to create a holistic view of the member, enter the service plan in real-time as it is developed, easily access the full picture of each assigned member's care and services, and evaluate and monitor service plans and progress toward individual goals. The technology reduces administrative burden, creates efficiencies by automating transfer of information, gives the Case Manager tools to efficiently coordinate services and supports and record case notes in real-time, and facilitates the ability to dedicate more direct time focused on members' lives leading to improved outcomes and quality of life

Member 360

As an adjunct to CareCompass and CareCompass Mobile, Member 360 will be a vehicle to facilitate the transfer of health information to all providers involved in the member's care as shown in Figure 4.3-1. Authorized providers will have access to a single view that displays member specific data in an easy-to-navigate dashboard, including HEDIS[®] care alerts, authorizations, prescriptions, lab results, and claims organized by type, such as inpatient, emergency room, and office visits. Member 360 combines various data into a single holistic picture of the member's use, case management services, and gaps in care and/or services and supports. It organizes information into a timeline of clinical events representing a longitudinal member record across a number of domains, including diagnosis, providers, and medication history. *It will organize care coordination and case management information under a single tab,*

including information such as the member's service plan, health risk assessment, level of care and related assessments, goals, interventions and outcomes milestones, and a list of chronic conditions.

To further support providers in serving our members, we recently implemented additional online technology. Through the provider facing Member 360 tools, authorized providers can see their members' service plans and other relevant screens and records determined by provider type via the Amerigroup website, giving them simple, easy-to-access data and information. This helps providers improve quality of care and services. Our platform supports providers in achieving the quality incentives defined in the Amerigroup quality programs. For example, a provider supporting a member to control diabetes can search for his or her Amerigroup patients with diabetes to see their most recent HbA1c results. The provider is then able to identify with the member, natural supports, and personal care attendants (PCA) the barriers in diet and exercise that are negatively impacting the member's health status.

Question 4.3, #2

2. Propose the required qualifications, experience and training requirements for community-based case managers.

Amerigroup will hire Community-Based Case Managers who live in the communities we serve, who have strong engagement and relationship-building skills, and who have experience working with specialized populations served through Iowa's HCBS waiver- and LTSS facility-based programs as specified in all applicable State and federal regulations. We actively seek individuals who bring a passion for our organizational mission and a commitment to helping members and their families or unpaid supports improve their own health, make informed choices, self-direct services, gain independence, and take

responsibility in the achievement of personal goals. Additionally, we will invest in comprehensive training and professional development programs to equip our employees with additional knowledge and skills to enhance member experience and achieve the goals of the Iowa Initiative.

Qualifications

Through our affiliates’ experience serving over 200,000 members comparable to Iowa’s LTSS populations for 17 years, we have maintained rigorous recruitment and hiring standards for our Community-Based Case Managers. Professional qualifications in accordance with 641 IAC Chapter 80.6(1) are detailed below in Table 4.3-2.

Table 4.3-2. Community-Based Case Manager Qualifications and Requirements

Qualifications		
Requires a registered nurse (RN) or licensed practical nurse (LPN) licensed to practice in Iowa with a minimum of one year relevant experience serving populations representative of members eligible for Iowa’s LTSS programs. Specialized knowledge and associated skills related to Medicaid HCBS waiver programs, nursing facilities, and ICF/IDs preferred.	Requires a BS in a related field (including but not limited to psychology, social work, mental health, counseling, nursing, education, occupational therapy, marriage or family therapy, and recreational therapy) with a minimum of one year of relevant experience in the delivery of services and supports in community-based and/or facility-based settings representative of the populations eligible for Iowa’s LTSS programs. Specialized knowledge and associated skills related to Medicaid case management in relation with HCBS waiver programs, nursing facilities, and ICF/IDs preferred.	Requires a home health aide with an equivalent of two years of relevant experience in the delivery of services and supports in community-based and/or facility-based settings representative of the populations eligible for Iowa’s LTSS programs. Specialized knowledge and associated skills related to Medicaid case management in relation with HCBS waiver programs, nursing facilities and ICF/IDs preferred. May provide case management services under the delegation of a qualified RN, LPN, or case manager with a BS degree.
Amerigroup Case Management Requirements		
<ul style="list-style-type: none"> • We will hire case managers who live in the communities we serve with two to five years of experience in providing integrated case management services to populations similar to those in the DHS LTSS Programs • Case managers will have expertise necessary to maximize member health, well-being, and independence such as experience with populations with chronic and complex physical and behavioral conditions • Case managers will have specialty expertise such as case management of spinal cord or brain injuries, members with Autism, behavioral health, mechanical dependencies, cancer, HIV, or intellectual or developmental disabilities to best meet the needs of members receiving LTSS waiver services • All clinical and non-clinical case managers will successfully complete competency-based case management program training and participate in mandatory professional development trainings as terms of employment as described in Table 4.3-3. 		
Iowa Initiative-specific Case Management Skills and Knowledge		
<p>Our case managers will have expertise and specialized knowledge matched to the diagnoses and varying complexities of the members in LTSS programs. Case managers and/or regional case management teams will have competence in supports areas such as integrated supported employment; self-direction programs; community alternatives and LTSS community resources; person-centered planning; conflict-free case management practices; State-adopted assessment administration, evaluating physical, behavioral, and social needs; community options counseling, diversion strategies and transition planning to support community reintegration.</p>		

Amerigroup supports members and families in other state markets that have elected to self-direct services through programs similar to the CCO. We will recruit and hire Community-Based Case Managers who have experience working in partnership with members and, as appropriate, their families participating in self-direction through the CCO. Members in CCO self-directing their waiver services and supports will be matched with a Community-Based Case Manager with CCO or other self-direction experience. All of our Community-Based Case Managers will receive CCO-specific training and ongoing learning opportunities to promote a best-in-class approach to supporting members in taking greater control and responsibility of their services and supports.

We will recruit and hire Community-Based Case Managers with diverse backgrounds that meet the standards, qualifications, and skills necessary to meet the varying medical, behavioral health, educational, and social support preferences and needs of members participating in one of the HCBS waiver programs. Additionally, we will hire Community-Based Case Managers who have experience supporting members residing in nursing facilities and ICF/IDs and who have community reintegration skills to support members who have decided to transition to the community of their choice.

We will match members to Community-Based Case Managers with specialty expertise to enhance positive member experience; optimize member-centered service delivery and maximize health, well-being, self-growth, and independence.

Training

We will require all case managers and health plan staff to undergo comprehensive training. Our program-specific training curriculum builds the skills and knowledge required to address the diverse preferences and needs of our members participating in HBCS waiver programs and those residing in nursing facilities or ICF/IDs. Our training experts are clinical and non-clinical employees who are knowledgeable and have field experience in intellectual and developmental disabilities, behavioral health disorders, gerontology, child development, complex medical conditions, social supports, and systems of care to better meet the needs of our diverse membership. Additionally, we contract with subject matters experts, advocates, and community organizations to augment our training programs.

Competency-based Training

Over a period of several months, Amerigroup conducts formal training required of newly hired Community-Based Case Managers, regional case management team members, and support staff to verify that they meet measurable competency standards. Competency tests will be used to validate training effectiveness. To monitor the effectiveness of training, we will conduct a 90-day evaluation (or sooner if necessary) to determine the need for additional training. The structured course curriculum for community-based case managers will include training areas and topics found in Table 4.3-3.

Table 4.3-3. Initial and Ongoing Training for Case Managers for Iowa-specific Case Management Program

New Hire Training Curriculum	
Introduction to Amerigroup	
<ul style="list-style-type: none"> • Mission, values, and principles • Ethics, privacy, information security, and compliance; State, federal, and Contractual requirements • Medicaid and Medicare programs and benefits • Provider roles and responsibilities 	<ul style="list-style-type: none"> • Fraud, Abuse, and Waste program, HIPAA • Quality assurance and performance improvement • Conflict-free case management • Cultural competency • Member rights and responsibilities

Community-Based Case Management Skills and Processes	
Introduction to LTSS	
<ul style="list-style-type: none"> • LTSS vision — people, processes, and tools • Overview of Iowa DHS and applicable HCBS waivers • Covered, case-by-case added, Value-Added Services, and non-covered benefits (for example, through community-based organizations) • Preadmission Screening and Resident Review (PASRR) federal and State requirements 	<ul style="list-style-type: none"> • Consumer-direction/self-direction option for members • Member Advisory and Advocacy Group • Grievance, Complaint, pre-appeal, and appeal process, including the role of the member advocate • Motivational interviewing techniques, active listening and observational skills
LTSS Community-Based Case Manager Role	
<ul style="list-style-type: none"> • The LTSS Community Based Case Manager role and responsibilities • Coordination processes and outreach • General overview of coordination processes for facility settings (for example, options counselling, transition activities, etc.) 	<ul style="list-style-type: none"> • Communication processes — correspondence telephonically, via emails and faxes • Employment and vocational support • General overview of coordination processes for home- and community-based settings (for example, available home and community-based services, self-direction, etc.)
Assessment and Service Plan Development Training	
<ul style="list-style-type: none"> • Training on level of care assessments and needs assessments, including InterRAI-HC, SIS, and Universal Assessment Tool (UAT) • Service development, planning, and implementation, including setting goals, monitoring, and reporting 	<ul style="list-style-type: none"> • Population-specific needs including incontinence management, caregiver stress and burnout, and risk of falls • Screening tools for intake, institutional or facility risk, and family caregiver needs
Introduction to Iowa High Quality Healthcare Initiative (IHQHI)	
<ul style="list-style-type: none"> • Overview of Iowa DHS and HCBS waiver programs and LTSS facility-based services • Covered, case-by-case added, Valued-Added Services, and non-covered benefits (for example, through community-based organizations) • Consumer Choice Options 	<ul style="list-style-type: none"> • Health Homes and Integrated Health Homes, and Pharmacy services/processes, including DHS formulary and emergency supply • Iowa's Care for Kids program benefits, periodicity, best practices, and required elements of a checkup
IHQHI LTSS Population-specific	
<ul style="list-style-type: none"> • Child and adult abuse and neglect, including information specific to Iowa's Child Abuse and Dependent reporting requirements • Trauma-informed Care, Disability Literacy, Grief, Loss, and Bereavement • Medically Fragile population needs and services 	<ul style="list-style-type: none"> • HBCS waiver-specific — HIV, Elderly, Physical Disabilities, ID, Autism, SED, Health and Disability • Nursing facilities and ICF/IDs • State and federal — Integrated settings/HCBS definition of community, person-centered planning, and processes
Cultural Competency	
<ul style="list-style-type: none"> • Cultural competency program • People first language 	<ul style="list-style-type: none"> • Cultural competency plan • Language assistance line
Member Rights/Responsibilities	
<ul style="list-style-type: none"> • Member Advisory and Advocacy Group 	<ul style="list-style-type: none"> • Grievance, complaint, pre-appeal, appeal processes, including the role of the member advocate
Appointment Availability and Access Standards	
<ul style="list-style-type: none"> • In-network and out-of-network referrals • Provider and member satisfaction and surveys 	<ul style="list-style-type: none"> • Telehealth

Provider Information	
<ul style="list-style-type: none"> • Provider profiles that include contact information, specialty, and after-hours availability 	<ul style="list-style-type: none"> • Provider Manual, hotline, and portal/website
Operation Systems, Case Management, and Member 360	
<ul style="list-style-type: none"> • Documentation, information sharing, access, and security levels, documentation and forms, task/assignment tracking, progress notes, and completion dates • Core operating system training • General tasks, rules, and processes • Documentation process • Letter and fax generation • Check eligibility, identify plan and demographics, and look up authorizations 	<ul style="list-style-type: none"> • Member-specific information, scheduling the visit, using forms and historical forms and refresh as needed, appropriate completion of assessments • Care Compass and Care Compass Mobile • Careticker • Public Partnerships, LLC online tools • MySupport • Member 360
Hotlines	
<ul style="list-style-type: none"> • Member, Provider, and behavioral health services hotlines, 24-hour Nurse HelpLine, triage, crisis response 	<ul style="list-style-type: none"> • Regional case management team
Clinical Training for Case Managers	
<ul style="list-style-type: none"> • Member identification, screening, and grouping, including risk factor identification, stratification, and complex leveling • Use of Amerigroup Utilization and Medical Management criteria, Standards of Care, and authorizations, denials, reductions, and appeals processes 	<ul style="list-style-type: none"> • Chronic condition and behavioral health management and use of clinical practice guidelines and evidence-based practices • Crisis, transitions, and discharge planning; coordination of follow-along services, transfer action and evaluation
Case Management Peer Mentoring Program	
<ul style="list-style-type: none"> • New case managers will shadow current case managers and observe learned concepts 	<ul style="list-style-type: none"> • Certified Service Coordinators will be prioritized for Levels 1 and 2 Members

Classroom Training Provides Essential Knowledge

Amerigroup’s initial new hire classroom training provides employees with the essential information they need to serve our members as summarized in Table 4.3-3. This training gives them a strong base to assist our members in accessing the services they need when they need them. To fully engage employees in each training topic, we use a combination of techniques that includes didactic training, examples of member stories and videos, and practical application exercises. Upon completion of each classroom module, we confirm that our case managers demonstrate mastery of all covered modules.

Our initial classroom training provides a comprehensive overview of all aspects of the LTSS program and case management, including but not limited to member covered benefits and non-covered services, individual cost limits, managing care, and utilization management systems. Additionally, we educate employees on tools for engaging members and providing excellent customer service such as motivational interviewing, person-centered planning, tailoring services and supports based on member strengths, support needs and personal goals, development of person-centered service plans and ongoing monitoring. We teach employees to demonstrate our values through positive and trusting relationships with our members, their families and communities to optimize member experience, well-being, independence and full participation in their daily lives.

Question 4.3, #3

3. Describe your proposed staffing ratio for community-based case managers to members.

The provision of optimal case management support and coordination must take into account a number of case mix factors essential to nimble Community-Based Case Manager-to-member ratios such as intensity of involvement, acuity and complexity, geographic challenges and population distribution, contact frequency and modalities, and amount, scope and durations of service needs. Factors in our case mix structure will include a methodology that creates a weighting system to assist in determining average case manager-to-member ratios. Amerigroup has created a flexible caseload model that is responsive to our members evolving needs as they move through various life stages along with the ebb and flow of demands on their families and unpaid supports. Based on predictive modeling using claims data analysis, assessment results, and diagnostic classifications to stratify the LTSS population and projected needs, we are able to assign and adjust caseloads based on changes in member need.

Our person-centered approach to case management provides members and their families and natural supports with the intensity of case management needed based on each member's unique needs and living situation.

IA_4.3_COB_10.2

Helping Assure Sufficient Staffing

Our staffing approach provides us with to flexibility to tailor case management support specifically to each member. Additionally, with support through ancillary staff, such as our multifunctional regional case management teams, member advocates and LTSS specialists, we are able to increase our level of interaction, coordination, and system navigation based on our members current medical, behavioral, or social support needs.

Through CareCompass Mobile Report Manager, our LTSS regional case management supervisors are able to view reports that monitor caseloads, contacts, frequency of contacts, changes in scope of coordination, and other relevant information impacting individual case managers' caseloads as well as population trends. Our LTSS regional supervisors use these reports, as well as case manager feedback, to continuously improve staffing models to meet changing members' needs.

We also work to adjust our hiring process based on case management staff projections using enrollment trends, claims data, and predictive modeling to maintain adequate staffing ratios. As we anticipate an increase in enrollment or changing member demographics, we immediately increase recruitment, hiring, and training processes to make sure sufficient staff are readily available to serve current and newly enrolled members. As needed, we assign temporary case managers from our pool of qualified regional staff to provide members with a main contact until they are assigned to a case manager or to provide interim support to our members while other employees are on paid time off.

In keeping with our systematic and thoughtful approach to maintaining staffing ratios, we will hire sufficient staff to have excess capacity during program implementation to facilitate efficient transition to Amerigroup and prevent any gaps in services. On an ongoing basis, we will monitor and review caseloads and will not hesitate to hire additional case managers and supporting staff to make sure that member needs are met in a timely manner. In our affiliates' experience managing LTSS programs, we have learned that providing members with ready, prompt access to a case manager is essential in continuity of care and service, positive health and life outcomes, and the achievement of personal and family goals.

External Communication and Coordination (4.3.2)

Question 4.3, #4

4. Describe how care coordination services will include ongoing communications with community and natural supports.

A foundational principle of Amerigroup's Community-Based Case Management model is coordination and collaboration across systems of care that intersect with our members day-to-day lives. We believe open communication with diverse stakeholders will foster the ability to bring to scale the expected practice that facilities-integrated services and supports with a holistic approach that recognizes the interdependence across medical, behavioral health, educational, employment, social, and functional supports will make sustainable strides in improved health status, safe community living, independence, and the overall well-being of our members and their families. We utilize this approach in all markets before, during, and after implementation

At a systems level, our engagement strategies across all markets include member and provider advisory committees, regular community forums, and participation in member-relevant local and statewide conferences to identify system of care gaps along with strategies to close those gaps, build consensus and innovative solutions related to issues and concerns, and facilitate continuous program improvements to better serve members.

Meaningful Engagement and Enhancing Communication and Coordination

Natural Supports

The fundamental role of Community-Based Case Managers is to serve as the main point of contact for the member and his or her family or representative as an advocate, navigator across systems of care, communicator, and coordinator of all activities. We have embraced person-centered principles and practices to facilitate member- and family-driven services and supports that are delivered to be responsive to what is important to our members and their families/representatives or unpaid natural supports to improve health, well-being, self-determination, and their ability to reside in the community. Members and those who know them best, typically their families, friends, and other natural supports, are key collaborators in our providing information on what is important to and for the member to shape person-centered services and supports that are meaningful not only to the members, but also to the family as a whole and unpaid supports that shoulder responsibility day-to-day for their loved ones. The fundamental role of Community-Based Case Managers is to serve as the main point of contact for the member and his or her family/representative or natural supports as an advocate and navigator across systems of care. Through our extensive experience, our members and, as appropriate, their families/representatives or unpaid supports develop trusting relationships with their case managers, often seeking guidance and support as service needs naturally ebb and flow with the changing schedules and demands of daily life.

To provide additional support, our members and their families or representatives are able to contact their Case Managers via our Member call center; members receive a warm transfer for a seamless connection to their Case Manager or the on-call case specialist to expedite resolving issues or concerns. Additionally, Amerigroup has partnered with Careticker, an innovative platform that

We recognize the interdependence across the medical, behavioral, and social needs of our members and coordinate between all stakeholders to serve our members.

IA_4.3_COB_11.1

families and other natural supports are able to use as a resource together through a secure social engagement platform to improve member outcomes and experience, as well as the experience of families and other natural supports.

Interdisciplinary Team

Members and those closest to them such as family, other unpaid natural supports, and paid PCAs and/or provider agencies, typically form the interdisciplinary team identified by the member and/or family. We have significant experience across seven states supporting members and families to lead and direct their services and supports through informed decision-making and collaboration and partnership with their interdisciplinary team. The development of comprehensive person-centered plans involves all interdisciplinary team members and involves discussions about natural supports, community resources, Value-Added Services, Medicaid- and HCBS-covered and non-covered services, and other supports and programs to strategically get the right services and supports in place in the most cost-effective manner. Providers are identified and selected with service and support schedules determined prior to finalizing the service plan. After the service plan is completed, the Case Manager will then send the service plan along with all documentation to the Utilization Management (UM) nurse to review and obtain the authorization. All information is entered into our core operating system for electronic transmission into Member 360. The UM Nurse communicates and provides the authorization number and a written or electronic service authorization to the provider of the service and the Case Manager prior to the services being initiated. The member's Community-Based Case Manager will continuously assess the effectiveness of the service plan and works with the member and representative as applicable and other team members as appropriate to revise the service plan when desired outcomes are not achieved or when a member's needs or goals change.

Through open communication and exchange of information, we have found the interdisciplinary team is more effective in supporting members receiving HCBS waiver supports. For members residing in nursing facilities or ICF/IDs, we also facilitate open lines of communication and information-sharing with nursing facilities and ICF/IDs to enhance their care and services. Additionally through Member 360 and Careticker, described in Section 4.3, case managers and authorized providers are able to view in real-time member information and case notes to:

- Identify and mitigate risk factors and/or significant life changes negatively impacting the member's health, safety, and well-being
- Address issues quickly to avoid unnecessary emergency room visits, hospitalizations, and out-of-home placements
- Identify trends that signal that the service plans need to be revised, additional temporary services are needed to address gaps, and timely reassessments are needed due to a significant change in health or functional status

System of Care Providers

Amerigroup strongly believes in taking a fully integrated approach to members' physical health, behavioral health, oral health, social needs, and waiver-related needs. ***We believe this integrated approach is crucial to improving the member's quality of care and outcomes while proactively managing costs and emphasizing member choice, access, safety, independence, and responsibility through active engagement, communication, and coordination.***

Through our person-centered approach, Community-Based Case Managers are members' main point of contact from where all of their physical, psychosocial, and mental health needs can be addressed. Case Managers may have specialized expertise in medical, behavioral, social, LTSS, or waiver components of care in order to provide specific insight and knowledge aligned with member needs. Different specialists will stay involved with a given member so that no gaps in care occur.

We will engage with providers, including PCPs, hospitals and institutional providers, behavioral health providers, community mental health centers, federally qualified health centers, rural health clinics, LTSS providers, and health homes to facilitate the holistic integration process. Incentives to integrate care will be offered to providers, including incentives both in primary care settings and community mental health settings. We will share reporting with providers and encourage a continuous information feed to improve the quality of Medicaid data. We are willing to be the aggregation point/repository for data if providers are willing to provide requisite data.

As described in Section 4.3.1, our care and case management teams are equipped with innovative technology tools developed and refined over the years to further support integration of care and services.

- **CareCompass**, our internal care coordination and management system, provides information about Member conditions and medications. Chronological progress notes promote comprehensive care coordination for member needs/issues, regardless of whether the driver is physical health, behavioral health, social issues, or LTSS.
- **CareCompass Mobile** provides virtual office solutions to field-based case managers who are primarily working in the community and visiting members in their homes.
- **Member 360** provides case managers with a member dashboard that displays HEDIS care alerts; authorizations; prescriptions; lab results; and claims organized by type such as inpatient, emergency room, office visit, and behavioral health. *This dashboard is also available to authorized providers for members in their panels through our provider facing Member 360 program.*

Coordinating with other MCOs

For all members transitioning from another MCO to Amerigroup or from Amerigroup to another MCO, continuity of member care and services is our first priority.

Transferring from another MCO to Amerigroup

- We will contact the member's prior Community-Based Case Manager for information regarding the member's needs, current medical necessity determinations, authorized care and services, person-centered service plan and treatment plans.
- Community-Based Case Managers will also review available historical data to expedite the process. Our goal is to use every available resource to obtain information about members to avoid asking them, and their families or representation to repeat information already provided to a previous health plan.
- All previously authorized services will continue without authorization for at least the first 90 days or until a new person-centered service plan is developed.

Members Leaving Amerigroup and Transferring to Another MCO

- When a member is transferring to another MCO, our Community-Based Case Manager will contact the Case Management Department of the new MCO, with permission of the family or representative or the member if 18 years of age or older.
- We will provide the new case manager with the most recent InterRAI-HC or SIS assessment, the level of care determination, the person-centered service plan, the list of providers working with the member, and notice of any upcoming appointments.
- We will also offer to schedule a care conference to support transition of care and services with minimal interruption to members and their families.

Continuity of Care

Member 360 will be a vehicle to facilitate the transfer of health information to all providers involved in the new member's care. Authorized providers will have access to a single view that displays member data in an easy-to-navigate dashboard, including HEDIS care alerts, authorizations, prescriptions, lab results, and claims organized by type, such as inpatient, emergency room, and office visits. ***It will organize care coordination and case management information under a single tab, including information such as the member's service plan, assessments, goals, interventions and outcomes milestones, and a list of chronic conditions.***

Community-based Organizations

Occasionally, members have needs that may not be immediately met through our existing provider network or may not be a covered service. To support these members to remain in the community of their choice, Amerigroup engages all existing community resources to provide solutions. We know that healthcare providers and MCOs cannot operate in isolation from the community, and thus we have a rich history of actively engaging community-based organizations, advocacy groups, faith-based organizations, and other community resources to develop creative solutions for members requiring a service that is not otherwise a covered benefit.

When building new relationships in our service areas, we identify community organizations that are integral to delivering non-covered services and that have the potential to address unmet needs of our members. We use a variety of strategies and actions to introduce Amerigroup to the community by engaging in outreach and awareness activities such as sponsoring and participating in health fairs, offering provider training, and giving back to the community through our national volunteer program. We strive to develop lasting relationships with local leaders and work to foster a common vision that promotes the well-being of the broader community and facilitates access to non-covered services for our members. Once we determine how best to work together, we invite organizations to contract with us or sign a statement of intent.

Amerigroup has already reached out to numerous community organizations and agencies in Iowa and is developing partnerships in anticipation of Contract award and implementation. Since March 2015, we have identified and met with dozens of community organizations to discuss how we could collaborate. For example, we have already begun to develop relationships with key community partners in Iowa as described in Section 4.1, including:

- Brain Injury Alliance of Iowa
- Coalition for Children's and Family Services
- Community Action Association
- Community Health Charities of Iowa
- Easter Seals
- Evangelical Lutheran Good Samaritan Society
- Iowa Association of People Supporting Employment First
- The Iowa Developmental Disabilities Council
- The University Center for Excellence on Developmental Disabilities
- The University of Iowa Center for Child Health Improvement
- Iowa's six Centers for Independent Living
- Iowa's six Area Agencies on Aging
- Iowa Counties Public Health Association
- Iowa Foster and Adoptive Parents Association
- NAMI Iowa

We will continuously establish strategic partnerships with agencies that serve our LTSS members in Iowa—agencies that members already trust and respect. Our goal is to leverage existing community supports to enhance their capabilities and provide members with choice and consistency in their service delivery and relationships.

Internal Contractor Communications (4.3.3)

Question 4.3, #5

5. Describe how internal operations support communication among departments to ensure community-based case managers are aware of issues related to their assigned membership.

Amerigroup takes an enterprise-wide approach to care coordination. We emphasize the importance of interdepartmental connectivity in all aspects of our operations to prevent gaps in care, as well as fragmentation or duplication of services. Our fully integrated regional case management teams help support interdepartmental connectivity by uniting all aspects of care coordination and case management, including clinical and non-clinical roles.

We further support interdepartmental connectivity by making sure that our case management team and assigned case manager are notified whenever any Amerigroup staff member uncovers member information that has substantial bearing on a member's holistic well-being. To support this level of interconnectivity, our case managers have access to our core operations system and CareCompass, which aggregates information from multiple Amerigroup departments to provide a whole-person view of our members. These systems will then feed information into Member 360, allowing a full view of the member's eligibility, claims, service plan, and other information to assist the staff with a quick and easy dashboard view of the member's care. Furthermore, we train all of our staff to direct any relevant information regarding our membership directly to our regional case management team, which is then able to direct this information to the member's case manager. In our experience, these processes best equip our case managers to exchange information and have a whole-person view of the member. This helps us improve case management and member outcomes.

Regional Case Management Teams

While case management depends on various departments such as clinical and non-clinical case management staff and utilization management, our regional case management teams are structured to facilitate ongoing and regular communication between departments. Our regional case management teams collectively assume responsibility for a population within a region and work closely with one another with a singular goal to support our members' interdisciplinary needs.

To help support communication between regional case management teams, we host weekly case rounds. All staff members within a regional case management team engage in case rounds at least once a week to strategize on ways to meet the needs of members with complex health care needs, including members receiving LTSS. Case rounds bring together a multifunctional team to facilitate a joint discussion of member needs. Due to their collaborative nature, case rounds can be used to discuss shared concerns relevant to all case managers' caseloads, as well as to share knowledge on issues associated with other team members' assigned cases. In addition, staff members within the regional case management team will initiate ad hoc discussions regarding members' needs so that they can quickly address issues or concerns that may arise.

Member 360

As part of our strategy to provide interdepartmental connectivity, our case managers have access to a proprietary information-sharing tool, Member 360. Member 360 integrates information across Amerigroup departments — updated daily — and includes information on eligibility, HEDIS care alerts, authorizations, prescriptions, lab results, and claims organized by type, such as inpatient, emergency room, office visit, and behavioral health. Use of Member 360 helps assure that case managers have access to enterprise-wide information regarding a member.

Member 360 enables fast access to key member information for all team members. Case managers can quickly find all critical information in a single view that displays all member data in an easy-to-navigate dashboard. The tool also alerts case managers and case managers to gaps in care or services for members. The tool's longitudinal patient record provides case managers with a clear view of care continuity for members enrolled in case management. In its first two months of testing, case managers reported a 30-percent reduction in the time required to locate key member information, enabling them to spend more time to focus on member needs.

“No Wrong Door” Approach

Amerigroup's “no wrong door” approach provides a single point of entry for all members to address requests, issues, and concerns end to end. This includes but is not limited to interactions with Member Services representatives, the Nurse HelpLine, member advocates, Provider Management, and Quality Management.

Calls and messages are routed to the appropriate employees. For member queries or issues, calls and messages are directed as appropriate to the member's assigned case manager, on-call case specialist, and an available regional case management team member.

If an Amerigroup employee, regardless of department, is notified of information that has substantial bearing on a member's whole-person care, he or she will take appropriate measures to inform the regional case management team. The staff member will first confirm the member's identity and service region and will then identify the regional case management team associated with the member. With member consent, the staff member documents the concern and will promptly call the Long Term Care/Care Coordination Manager or send a secure email regarding the issue. The Long Term Care/Care Coordination Manager will then direct the concern to the member's Community-Based Case Manager. As necessary, our staff members will prioritize urgent concerns to help assure speedy resolution. Through these processes, our enterprise is able to maintain connectivity and make sure that case managers are informed of all issues related to their membership.

Changes in Case Managers (4.3.4)

Question 4.3, #6

6. Describe strategies to minimize community-based case manager changes and processes to transition care when a member has a change in community-based case managers.

Through our experience we understand that it is critical to provide continuity of Community-Based Case Management services for our members. To this end, Amerigroup actively works to minimize case manager transitions, as well as helps assure seamless case manager transitions on an on-going basis and during Contract onset.

Minimizing Transitions

We recognize the importance of protecting long term relationships between case managers and members that promote open and honest discussions. To help achieve this goal, we deploy several strategies that promote continuity of care by minimizing case manager turnover, decreasing uncertainty during temporary case manager leaves, and matching member needs to case manager specialty. These strategies promote longevity of the member-case manager relationship while maintaining members' choice to adjust case managers as necessary. The interdisciplinary team and regional case management team structures also help assure that, should any unavoidable transition of case management team members arise, other team members who are familiar to the member will remain as a part of the member's team to promote consistency and continuity for the member.

Effective Retention Strategies

Based on our affiliates' experience and observations across markets, we know that poor case manager retention significantly contributes to avoidable case manager transitions. The North American average turnover for case managers is 25–30 percent, which results in frequent need to reassign case managers and hinders the member's continuity of care. However, from our affiliates' extensive experience serving members receiving LTSS across seven states, we have developed targeted strategies to improve case manager retention. ***Across our affiliates, we are proud to report a retention rate regularly exceeding 90 percent for our case managers.*** We will implement our proven retention strategies in Iowa to achieve superior results for our case management program.

Amerigroup has proactively identified systems for reducing turnover and increasing case managers' satisfaction with their jobs. We currently use these successful strategies and will continue to implement these moving forward:

- Hiring the “right employees”
- Frequent and ongoing communication
- Employee recognition programs that reward performance
- Engaging employees in ongoing communication
- Making sure that each employee is working at the top of his or her licensure and capabilities
- Ongoing training and support to equip staff for their roles and responsibilities

Hiring the “Right Employees” Increases Retention

Our affiliates' experiences have taught us that hiring employees who are a good fit for our case management program is an important retention indicator. Because our affiliate health plans have been coordinating LTSS for 17 years, we have a keen understanding of the qualities and competencies that are the most important for our case management team members. For example, we conducted a detailed analysis of our LTSS teams in multiple states to identify the competencies that most directly correlate with job performance for our case management teams. The analysis revealed that successful case manager attributes include thoroughness, flexibility, assertiveness, and self-structure. In response to these findings, ***our affiliates implemented consistent interview and screening processes to help assure appropriateness of fit for the case manager position.*** Our recruitment, interviewing, and hiring decisions focus on vetting candidates to be sure that they have the skills necessary to be successful. As part of the hiring process, applicants complete a job aptitude survey that helps us identify where they would best fit within the organization.

Engaging Employees through Ongoing Communication

Amerigroup has learned that communication is a key component of a healthy culture and employee engagement that encourage case managers to remain employed with Amerigroup. We know this is especially true for Community-Based Case Managers who may regularly be in the field and therefore are at risk for feeling disconnected from their colleagues and Amerigroup. Through weekly updates, team meetings, quarterly newsletters, and Town Hall meetings, we strive to keep employees informed and knowledgeable about our business. We send weekly updates to all employees to share state-specific information and to welcome new hires. We also recognize service anniversaries and celebrate promotions.

Our care coordination managers also provide our members with guidance throughout their employment to help assure that Case Managers feel supported and included as key members of our care coordination team. Our care coordination managers provide updates on program initiatives, assist case managers in resolving issues, and follow-up on performance goals. The managers create a personal connection with each case manager, increasing their satisfaction. Clinical leadership also provides targeted education, case

staffing, and open-forum question-and-answer sessions. This allows leadership to scan the landscape for specific issues or training opportunities and respond quickly.

To facilitate connectedness during visits in the community, we have also equipped our Case Managers with iPads to support their field work. Through the use of this innovative technology, Case Managers have access to communication tools such as email, our documentation system, and web-enabled applications. This allows case managers to stay connected while working in the field to serve our members and reduce duplication of their work efforts.

Employee Recognition Programs Reward Performance

We know that rewards and recognition are key to engaging employees in becoming high performers. In several of our states of operation, we have implemented rewards and recognition programs to acknowledge employees who perform above and beyond:

- ***Spot Bonus Programs.*** The Spot Bonus Program allows employees to be recognized for outstanding customer service by any stakeholder, including members, providers, the State, and others. The winning employee is recognized for going above and beyond.
- ***Values in Action Award.*** This is a quarterly award nominated and voted on by peers and leadership for going above and beyond. Multiple case managers have won this award. We reward winning employees with public recognition and a front-row parking spot.
- ***Service Recognition.*** Service Recognition recognizes our employees for years of service with the company. This program offers awards beginning with a five-year anniversary and then at each five-year service milestone going forward. It also offers retirement gifts for employees who retire with 20 or more years of service. Choices range from jewelry to silverware to clocks, depending on years of service.
- ***Informal Recognition.*** Informal Recognition includes timely and effective acknowledgements of an employee's contribution toward a department goal or objective. Rewards may be gift certificate/card; cash; occasional tickets for such events as movies, sporting events, and amusement parks; occasional team parties; and other appropriate gifts or outings.

Ongoing Training

We have also found that Case Managers are more fulfilled with their work experience and thus are more likely to stay with Amerigroup if they continue to feel professionally challenged and they find professional development opportunities. To this end, we offer staff ongoing training opportunities based on interest and need expressed by our Case Managers.

Anthem Learning Center is our one stop for all learning and development within the company. It includes all courses and systems we use to help employees become better at their jobs (Ace My Job). Our goal is to provide the resources employees need to do well in their job and prepare them for their next assignment (Own My Career). The center also provides managers with the tools to develop their teams (Develop My Team). This approach improves individual performance so that together we can transform healthcare with trusted and caring solutions.

Lunch and Learns are offered on a routine basis to team members to provide training and updates to team members. Topics covered are varied base on the needs of the team and can include but are not limited to cultural awareness, new services being offered by vendors or providers, best practices, time management, regulation updates, HEDIS, etc.

Innovative Strategies from Affiliate Plans

Our affiliate health plans coordinate LTSS for members in seven states, and we routinely share best practices, including those related to optimizing our care coordination employees' performance. For example, our affiliate health plan in New York identified the need to improve employee retention. This posed a challenge due to a highly competitive market with numerous LTSS plans and a limited candidate pool. In 2012, after careful analysis and planning, the health plan developed creative solutions to address retention, including:

- Offering all Case Managers the option for a four-day work week
- Rotating scheduled days off among team members

Since the program's launch, the New York health plan has seen significant improvements in retention; only one Case Manager left the plan, resulting in a **retention rate of 96 percent**. These successful approaches demonstrate our commitment to developing creative strategies for retaining employees. If appropriate, we will not hesitate to deploy these proven strategies in Iowa.

Case Manager Assignments

Amerigroup's quality improvement activities are geared toward enhancement of member experience; we continually refine our case management approach using person-centered practices and principles. Upon receipt of a new member's enrollment file, our regional case management team determines if additional discovery information is needed prior to the assignment of the Case Manager. **Community-Based Case Manager experience, knowledge, and skills are matched with our members based on diagnosis, complexity of medical and/or behavioral health conditions, and intensity of service and support needs.** Our regional case management teams serve as an additional resource to help Case Managers, members, and families identify and assess the needs and services tailored to the specific needs of the member; align resources for a specific condition or diagnosis; and respond to the member's preferences, strengths, and goals.

Facilitating Seamless Case Manager Transitions

Case Manager Transitions at Contract Onset

Amerigroup realizes the importance of member and family relationships with Case Managers, and we are committed to members keeping their State-assigned Case Managers for at least the first six months of Contract implementation. During this process we will work closely with existing State-assigned Case Managers and our members to develop individualized transition plans with a detailed transition strategy that is person-centered to promote continuity in recognition of the preferences and goals of the member and his or her family or representative to engage meaningfully and ease stressors related to transition. State-assigned Case Managers and newly assigned Amerigroup Case Managers will together provide a seamless experience for the members and their families or representatives, when appropriate, to make sure there are no disruptions in care or services during transition.

Upon receiving enrollment files from Iowa at Contract implementation, Amerigroup will reach out to the member through a welcome call to introduce the member to the plan and address any questions the member may have. During this conversation, we will inform members of their right to keep their existing State-assigned Case Manager for six months and will then ask members whether they would like keep their current Case Manager or immediately transition to an assigned Amerigroup Case Manager. Whether the member elects to transition to an Amerigroup Case Manager right away or wishes to remain with the existing State-assigned Case Manager for another six months, the Amerigroup regional case management team will match the member with a transitional or permanent Case Manager and will begin working to

develop the transition plan to make sure authorizations are in place and that there are no disruptions in care or services for the member.

If the member chooses to transition to a new Amerigroup Case Manager, we will inform DHS about this decision so that DHS can relay the decision to the outgoing Case Manager. The Amerigroup LTSS manager for the region will then work to promptly assign the member a new Amerigroup Case Manager, who will conduct an initial needs assessment in accordance with the timelines discussed in Section 4.2. With DHS permission, we would also seek to do a face-to-face visit between the outgoing and incoming Case Manager wherever possible to help assure the member is comfortable with the transition.

If the member chooses to keep his or her existing Case Manager during the six-month transition period, Amerigroup will respect the member's choice. The Amerigroup Case Manager will keep close and frequent contact with the existing Case Manager via phone, email, and in-person meetings throughout the transition period. In this situation, our Case Manager will work in collaboration with the outgoing Case Manager to conduct the State-adopted initial needs assessment in accordance with timelines discussed in 4.2 and with DHS permission will ask the outgoing Case Manager to be present during assessments and service planning. Upon completion of service planning, we will support the outgoing Case Manager in conducting follow-up calls and visits for the six-month period. We will facilitate the transfer of any medical information from Amerigroup to the outgoing Case Manager so that he or she can continue to be effective in his or her case management. Our Case Manager will seek to be informed and, wherever possible, involved in case rounds or interdisciplinary team communications facilitated by the outgoing Case Manager.

As the six-month transition period winds down, our Case Manager will conduct face-to-face transition visits with the outgoing Case Manager to help assure that the member feels secure in the transition. As needed, we will not hesitate to facilitate multiple joint face-to-face meetings to facilitate a smooth transition for the member, family, or representative. During the last weeks of the transition, Amerigroup will convene a final transition meeting with the member, family or representative, and, when appropriate, both Case Managers and the interdisciplinary team to make sure all documentation and information has transitioned from the outgoing Case Manager to the Amerigroup Case Manager to enhance a seamless transition.

Amerigroup will also be open to exploring the possibility of hiring the existing State-assigned Case Managers and fully integrating them into the team as Amerigroup staff based on qualifications and capabilities. Where possible and at the request of members, we will assign former State Case Managers to members within their previous caseload.

Ongoing Case Manager Transitions

We recognize that transitions will be necessary on an ongoing basis under certain circumstances. This includes circumstances in which the Case Manager is no longer employed by Amerigroup, has a conflict of interest and can no longer serve the member, or is on temporary leave from employment. Case Manager transitions may also occur if caseloads must be adjusted due to size or intensity of the Case Manager's caseload or if the member requests a new Case Manager. Anticipating these situations, we have developed several strategies to help facilitate seamless transitions between Case Managers when necessary. These strategies will help assure there are no interruptions in care for our members receiving LTSS in Iowa due to changes in Case Manager assignments.

Assigning Appropriate Replacement Case Managers

In the event of a necessary Case Manager transition, new Case Managers will be assigned in a timely fashion and will have the requisite qualifications. For long-term changes in Case Managers, the Regional Care Coordination supervisor will work expeditiously to assign a new Case Manager to promote continuity of care and services. The LTSS manager or case management team lead will match the Case

Managers and members ***based on diagnosis, complexity of medical and/or behavioral health conditions, and intensity of service and support need while assessing the Case Manager caseload capacity.***

Wherever possible, the outgoing Case Manager will contact the affected member telephonically to discuss the change and provide background about the Case Manager. During this process the Case Manager will explain reasons for the change and address any questions or concerns that the member may have. We will also inform the member of his or her right to request a new Case Manager if desired. Wherever possible, we will also schedule a face-to-face transition meeting involving both the former and new Case Manager. If the Case Manager is unable to telephonically inform the member of the change, our LTSS manager or case management team lead will inform the member and introduce the new Case Manager.

For short-term case assignment changes due to short-term leaves, we will facilitate smooth transitions with short-term assignment of Case Managers. Our LTSS managers and case management team leads understand the importance of making sure that every member has a Case Manager and will assign our members a temporary Case Manager in advance of a planned leave. Case Managers will be informed of their short-term assignment through their manager and through CareCompass system to help assure that they are aware of their responsibilities. For the duration of the transition, the temporary Case Manager will address any urgent concerns and will perform member outreach as necessary. Upon return of the original Case Manager, our LTSS managers will reassign the member to the original Case Manager to facilitate continuity of care.

Equipping Case Managers to Serve Members Effectively

To facilitate smooth transitions, we have implemented systems that prepare Case Managers to serve their new membership with relative ease. Once assigned, Case Managers will be able to view the member's complete records, including assessments, service plan, backup plans, and crisis plans through CareCompass. The Case Manager will also be able to view members' medical history through Member 360. By having this information easily available, Case Managers can get up to speed on member needs and circumstances very quickly.

In addition, our team-based approach to care coordination helps assure that Case Managers are well supported to service members. Our staffing model places Case Managers in regional case management teams that collaborate with one another to optimize care coordination. Case Managers with newly assigned membership are supported by their colleagues in the regional case management team if any questions should arise. Together, these processes minimize the risk of interruptions in care, as the Case Managers are effectively equipped to serve their newly assigned membership.

Discharge Planning (4.3.5)

Question 4.3, #7

7. Describe your proposed discharge planning process.

Planning and coordinating successful discharges for our members in LTSS programs are among our top priorities at Amerigroup. Our discharge planning approach integrates different components of the post-discharge transition by emphasizing the importance of working in close collaboration with clinicians located on-site at specified hospitals or providing this level of service directly through the assigned case management team.

By implementing policies that prepare members for successful discharge and support members upon discharge, we have achieved impressive results across our LTSS programs. For example, ***our Texas affiliate managing a Medicaid program for older adults with disabilities in Texas saw a 5–6 percent decrease in annual hospital readmissions after implementation of our comprehensive discharge planning program.*** Our organization's experience and success in coordinating hospital discharge for LTSS member populations makes us well equipped to support our members requiring LTSS in Iowa.

Comprehensive Discharge Planning Program

Through our Comprehensive Discharge Planning Program, we work to identify services and supports for our members and seek to support members as soon as they are admitted to the hospital. We provide our members with extensive support prior to discharge, during the discharge itself, and beyond discharge. If the hospitalization indicates a significant change in circumstance, our team also seeks to conduct a reassessment within seven days as described in Section 4.2. During this process, we seek to support our members' needs and preferences for transitions to mitigate risk of readmission and help improve our members' quality of life.

Engaging the Member upon Hospital Admission

We initiate our comprehensive discharge planning program immediately upon notification of hospital admission. Our Community-Based Case Managers are notified of hospital admission through Census Reports that are updated on a daily basis. Upon notification, the Case Manager seeks to meet with the member to discuss the conditions leading up to the admission, discuss the discharge planning process, and assess the member's risk for readmission.

Over the course of a member's admission, we also engage in ongoing conversations to help prepare the member for discharge. During ongoing conversations with the member and his or her family member or other natural supports, the Community-Based Case Manager will educate members and his or her natural supports about condition changes that may require immediate intervention. We also educate members about disease-specific interventions to boost their ability to take care of their health during discharge. Our conversations are supplemented with educational materials for reference.

Coordinating Discharge with Hospital Staff

We coordinate discharge with the hospital staff to help assure that members are fully equipped for success. Our Case Managers engage hospital staff upon admission to better understand the events leading up to the admission. Our Case Managers communicate with hospital staff on an ongoing basis during admission to understand how the member is progressing in his or her condition. Our Medical Director helps support these efforts and is available to Amerigroup Case Managers, providers, and other hospital staff for consultation.

The Case Manager also collaborates with the member, natural supports, and treating clinicians to identify potential gaps in care and work together to make critical decisions regarding the discharge plan and care setting. This team develops a comprehensive discharge plan to address each of the member's discharge needs such as the need for new equipment, follow-up appointments, and medications. The goal is to help assure that members receive the care they need and their personal objectives and preferences are safely addressed.

Prior to discharge our Community-Based Case Managers also engage with hospital staff to help support a medication reconciliation process. Members are often discharged without medications that were prescribed to them before their admission. To address this gap, we obtain the hospital discharge medication list from the hospital nurse, hospital discharge planner, or the member, family member or representative and compare prescriptions to the list of medications previously prescribed. We resolve any discrepancies by reviewing discharge medications with the outpatient provider.

Post-discharge Support

Upon member discharge, our Community-Based Case Managers work to support our members to prevent readmission. In the days following discharge, our case management team will follow-up with the member to confirm that the discharge plan is being followed and identify and address any needs that the member may have. We will also remind him or her of upcoming appointments and to offer assistance if barriers arise to following through with the plan. This is particularly important with regard to well-care

appointments that are scheduled for the member. If they have not had a regular checkup with their PCP or other preventive care services, we will facilitate scheduling and enabling member attendance at these appointments and will coordinate transportation as needed.

Should our conversations with members, natural supports, providers, or others indicate a significant change in circumstances that contributed to the hospitalization as described in Section 4.2, the Case Manager will seek to conduct a reassessment with the member upon discharge.

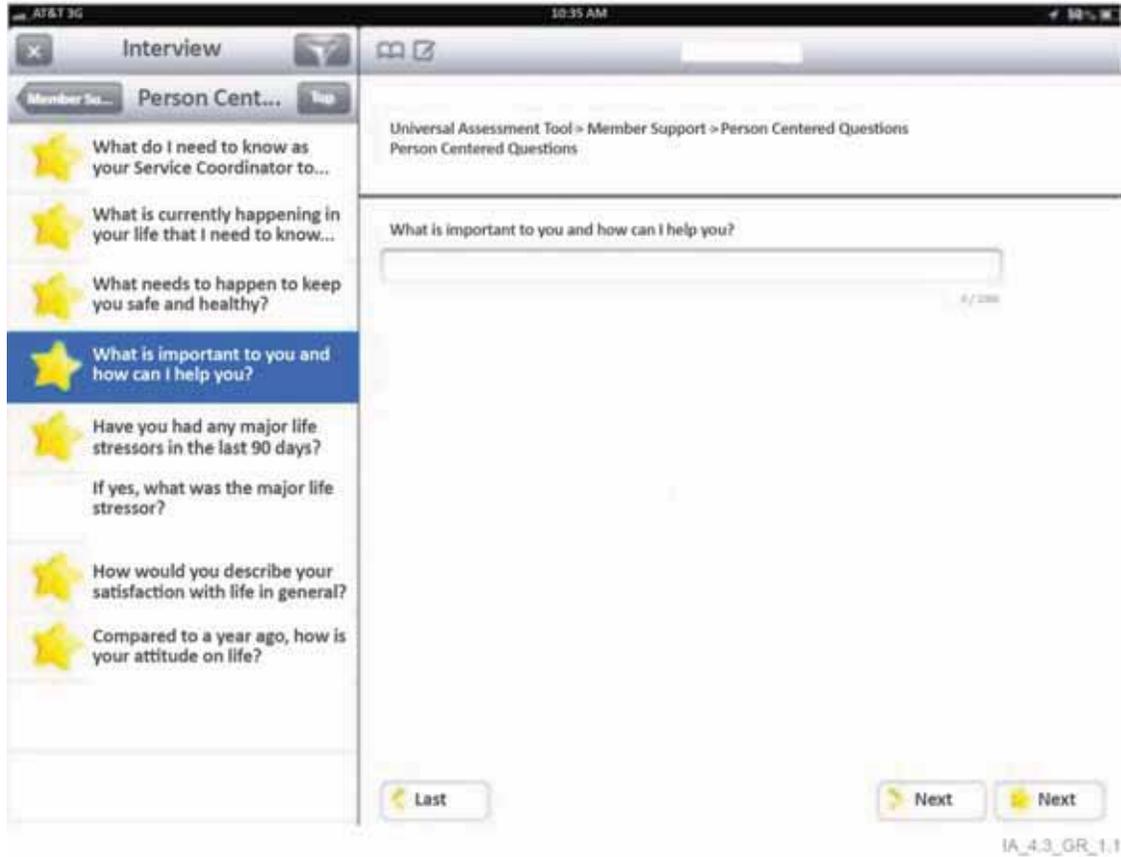

In-person Requirements (4.3.6)

Amerigroup understands the importance of standardized and consistent documentation of all in-person visits with members made by Community-Based Case Managers for the purposes of record keeping, as well as ongoing review and monitoring. We will utilize CareCompass Mobile, our innovative iPad technology used by Community-Based Case Managers, to facilitate documentation of all in-person interactions. Contact notes are then directly incorporated into members' case files on CareCompass as described in Figure 4.3-4. For each in-person visit, our Case Managers will be required to record and save case notes using a template that includes the following member information in accordance with SOW requirements 4.3.6:

- Physical condition, including observations of the member's skin, weight changes, and any visible injuries
- Physical environment
- Satisfaction with services and care
- Upcoming appointments
- Mood and emotional well-being
- Falls and any resulting injuries
- Member concerns or questions
- Statement from member's representative or natural support regarding any concerns or questions (when the representative/natural support is available)

By using CareCompass Mobile to electronically record contact notes, Amerigroup promotes efficiency, standardizes notes across all Case Managers, reduces risk of incomplete or lost case notes, and facilitates easy reference by the case management team.

Figure 4.3-4. CareCompass Mobile Facilitates Comprehensive Documentation of Member Contacts

Response to Problems and Issues (4.3.7)

As part of our member-centric approach, Amerigroup is committed to identifying, documenting, and responding to problems and issues, including service gaps and complaints regarding quality of care rendered by providers, workers, or Community-Based Case Management staff. We are LTSS experts, with affiliates serving more than 200,000 members eligible for our LTSS program in seven states. Our teams excel in meeting our contractual and state obligations while at the same time responding to problems and issues in a timely manner.

Service Gaps

Case Managers will continuously monitor gaps in care and resolve roadblocks by proactively engaging stakeholders, including the member, natural supports, providers, community-based organizations, and the interdisciplinary team. Case Managers will be able to monitor service provision through the CareCompass case management system, which tracks member progress with the service plan by incorporating the member’s medical records. If a Case Manager identifies regular gaps in care through medical records or through regular communication, the Case Manager will begin conversations with the member and appropriate stakeholders to identify potential causes and solutions. If warranted, the Case Manager will reach out to providers to address concerns and will not hesitate to change providers as necessary.

Member Concerns

Amerigroup adopts a “No Wrong Door” policy for grievances, whereby all verbal indications of discontent expressed about any matter or aspect of Amerigroup or its operation to any Amerigroup employee will be recorded as a grievance and processed. We will resolve grievances within 30 calendar days of the date we received the request or as expeditiously as the member’s health condition requires. We understand that we may request an extension for up to 14 additional calendar days to complete the grievance or appeal process if we feel it serves the best interest of the member. In cases where the member did not request the extension, we give the member written notice of the reason for the extension within two business days of the decision to extend the time frame. Amerigroup resolves clinically urgent quality of care concerns as expeditiously as the member’s medical condition requires but in no event greater than 72 hours after receipt. Further detail on the grievance and appeals process can be found in Section 8.15.

If a member in our LTSS program expresses a concern regarding service providers to any Amerigroup employee, the employee will document the concern, and the member’s Community-Based Case Manager will be informed. Once the Case Manager is informed about the concern by either the member or another Amerigroup employee, the Case Manager will work with the member to understand his or her concerns and collectively develop potential solutions. The Case Manager will proactively reach out to the all involved stakeholders to better understand the situation. The Case Manager will then propose a solution that helps meet member needs. This may include asking the provider to administer the services through different employees, modifying the way in which services are delivered, or switching providers. All our member-facing staff are thoroughly trained to record, report, and address member complaints. Through communication with providers, the member, and natural supports, the Case Manager will make best efforts to develop a solution that effectively resolves the member’s concern.

If a member in our LTSS program expresses a concern regarding care coordination staff, the employee receiving the complaint will inform his or her direct supervisor. The supervisor will review and investigate the claim through direct conversations with the member and Case Manager, as well as a review of the relevant records. If needed, the superior will assign a new Case Manager to the member and may develop a Corrective Action Plan for the Case Manager to improve performance.

Community-based Case Management Monitoring (4.3.8)

Question 4.3, #8

8. Describe your process for monitoring the effectiveness of the community-based case management process. Provide outcomes from similar contracts in other states, if available.

Amerigroup embraces ongoing monitoring and quality improvement as a workplace culture, not as a separate function within the health plan. Our culture of quality is embedded in every aspect of our organization. Every employee is a quality advocate, and all care coordination staff members take an active role in monitoring the effectiveness of the care coordination process and are assigned quality goals as part of their annual performance objectives.

Identifying and Remediating Individual Findings

As part of our process to monitor the effectiveness of care coordination processes, we will implement ongoing evaluations of the interactions between individual members and Case Managers to help assure that services are appropriately delivered and Case Managers are excelling in their level of care assessments, service plan development, and tracking of services.

We oversee the performance of our care coordination staff through regular reviews and audits. All care coordination staff have quality case reviews completed monthly on a random selection of open and closed case records from within the medical management system. Consistent implementation and documentation of the case management processes (that is, case initiation, assessment, planning, coordination, monitoring, and evaluation) are assessed through the quality case reviews process in accordance with SOW requirements 4.3.8.1 - 4.3.8.14.

The manager and/or designee and the individual employee review all case review results to assess the Case Manager's learning needs. The Case Manager is provided feedback on trends observed, confirmation that they are following their policies and procedures, and opportunities for improvement. An action plan for follow-up is developed, if necessary based on the review findings. Actions plans may include but are not limited to:

- Providing education and/or counseling to the employee until improvement is noted
- Conducting quality case reviews on a more focused basis (for example, weekly or biweekly) until achieving a consistent score at or above the designated minimum threshold
- Having managers conduct ride-alongs to observe Community-Based Case Manager technique, provide feedback, and address concerns

Tracking and Trending Data to Improve Effectiveness

We continuously track, trend, and analyze our quality-related data. This process encompasses grievances and appeals data, critical incidents and potential quality of care concern reports, provider/member satisfaction surveys, and utilization data. We then take action at the member, provider, and systems levels to improve safety, care, and service.

Continuously Developed Performance Reports

To support our efforts to be data driven, we have programmed our case management system, CareCompass, to produce daily reports that track key performance metrics. These robust tools allow are case management team to continuously monitor efficacy and help remediate individual and systemic issues as they arise.

These reports include metrics such as:

- Timeliness of annual assessments
- Timeliness of service plan development
- Timeliness of authorization or notice of adverse determination of services
- Rate of emergency room use
- Rate of inpatient admits and/or days/1000
- Rate of nursing facility days/1000
- Number of community re-integrations
- Number of diversion

Leveraging the Universal Assessment Tool to Drive Quality

To support the tools mentioned above, we also leverage assessment tools, including the Universal Assessment Tool (UAT), to track and trend data related to member experience. The UAT, used to compliment the InterRAI-HC and the SIS for initial member assessments and reassessments, is the primary method for assessing LTSS member satisfaction that includes, for example, participation in service planning, access to services, and support satisfaction with case management services. The member's Case Manager administers the UAT face-to-face with the member. The assessment responses are recorded in our care management system, CareCompass.

We then aggregate and analyze assessment data on a monthly basis, and we use a rolling three-month trend to identify opportunities for improvement, including in the following areas:

- Participation in service planning
- Ability to access services
- Receipt of new-member materials
- Satisfaction with services provided
- Satisfaction with case management program

Case managers will also ask questions regarding specific services the member receives, as appropriate. Responses will be recorded in our case management system and will be used at the health plan level to trend overall member satisfaction and quality of services being delivered across the plan.

Strategies to Improve Community-based Care Coordination

Annual and Quarterly Oversight

On an annual basis, the Quality Improvement Committee (QIC) will evaluate the care coordination program to evaluate whether the scope, goals, performance measurements, and planned activities are consistent with national and business strategic plans and the national case management standards of practice.

The QIC reviews all performance measure results in accordance with requirements in Scope of Work (SOW) Section 4.3.8.1–4.3.8.14. Quality performance measures for care coordination include but are not limited to:

- Case management quality case review outcomes
- Complaints with case management process
- Member satisfaction with case management services
- Documentation of member-identified issues and concerns in the case management plan as identified through reports and surveys
- Medication adherence assessment and follow-up in the service plan as an identified issue with interventions and targets

The QIC will also meet on a quarterly basis to provide oversight and guidance for all quality activities and has input into the case management process and quality measures. Quarterly reviews provide an additional checkpoint through which any issues or concerns with the LTSS care coordination program can be addressed in a timely manner.

Based on its findings, the QIC will identify key areas for improvement and will communicate these findings in performance results to regional and business unit staffs. When directed to do so by the QIC, the regional and business unit staff will be responsible for implementing action plans to improve or

correct identified problems. The annual QIC evaluation also results in a revision of the care coordination program to meet the upcoming year's needs.

Measuring Success of Strategies

Baseline Data Collection

Once we initiate a performance improvement project (PIP) related to Community-Based Care Coordination processes, we transform the design of the PIP into data collection processes that track interventions, incentive payments, encounters associated with the PIP, and other data points. The baseline data collection time frame is established, usually for a year. The Amerigroup quality team analyzes this information quarterly to obtain ongoing insight into the quality of care delivered to members.

Re-measurement

Subsequent data collection is compared to the baseline data to determine if the interventions are correct. Amerigroup quality management staff monitor all data results in comparison to the goals and benchmarks established by the health plan and identify areas exceeding or not meeting goals.

Adjusting Strategies

When we exceed targeted performance, we share interventions with other affiliate health plans to promote organization-wide adoption of best practices. When data points do not meet goals, we conduct root cause analysis and discuss results at the relevant workgroup meetings to identify barriers for members, providers, and the health plan. We implement new interventions and actions to address the identified barriers and then re-measure.

LTSS Results in Other Markets

Our affiliates' strategies to improve the Community-Based Care Coordination processes for our members receiving LTSS have yielded significant successes. Our affiliates regularly score over 90 percent on overall member satisfaction and satisfaction with care coordination in our LTSS program. They also achieve near 100 percent timely completion of reassessments in audits and successfully transitioned over 630 members from facility care to the community in 2014. Our overall success has been supported by successes in our individual markets as demonstrated in Table 4.3-4.

Table 4.3-4. Our LTSS Program Has Generated Positive Results for Members Across the Country

Affiliate Health Plan LTSS Program Results	
 <p>KANSAS</p>	<ul style="list-style-type: none"> • We were able to prevent 640 members at risk for institutionalization from entering the facility setting in 2014 • A 2014 survey of over 5,000 members in our LTSS program demonstrated that after one year of participation members were: <ul style="list-style-type: none"> ○ 17% less likely to use nursing facility services ○ 8% less likely to use an emergency room ○ 19% less likely to use inpatient hospital services
 <p>FLORIDA</p>	<ul style="list-style-type: none"> • In 2011, we achieved over 99% overall member satisfaction in our LTSS program • In 2011, we received consistent satisfaction ratings for case management, home services, and assisted living for our members receiving LTSS; more than 90% of members rated us an eight or higher on a scale of 0–10 • In 2013, 98% of members receiving LTSS surveyed rated Amerigroup's diversion program at an eight or higher on a scale of 0–10

Affiliate Health Plan LTSS Program Results

	<ul style="list-style-type: none"> • According to a member satisfaction survey done by the New York State Department of Health, 91% of respondents in the Amerigroup LTSS program said they would recommend their plan to others
	<ul style="list-style-type: none"> • In 2012, we achieved 99% member satisfaction with care coordination services for members receiving LTSS • We consistently achieved a 95-percent compliance rate for ongoing care coordination contacts • Between 2010 and 2013, we reduced the proportion of members receiving LTSS in nursing facilities from 82% to 60% • Analysis of UAT data has demonstrated consistent positive outcomes for more than 90% of members receiving LTSS in TN in the following areas: <ul style="list-style-type: none"> ○ Not experiencing social isolation ○ Participating in service planning ○ Accessing services ○ Receiving new-member materials ○ Services meeting member needs

Affiliate Health Plan Case Study: Strategies Implemented in Florida, 2010–11

As an example, the AHCA Nursing Facility Discharge Planning PIP experienced statistically significant decreases between measurement periods two and three, although all measures remained above the 80-percent goal. The team identified barriers related to institutional performance, which resulted in annual retraining of employees, revised data collection documents, increased number of medical records in the inter-rater reliability (IRR) process from one to 10, expanded audit function, and redistributed Case Manager responsibilities. The new interventions we implemented resulted in significant improvement. New prescription education increased to 93.9 percent in 2011, home health referral increased to 93.3 percent, and PCP notification increased to 86.2 percent.

In another example, we were faced with high caseloads as the result of a sudden program growth in 2010 and were unable to meet monthly member contact targets. We applied root-cause analysis, which guided us to add employees and reallocate Case Manager responsibilities. We met monthly targets throughout 2011 as demonstrated by re-measurement.

Admissions (4.3.9)

In accordance with requirements in Section 4.3.9, our team will support all members seeking nursing facility, ICF/ID, or community-based residential alternative setting. For members that are unable to be placed in facility-care based on the State's level of care determination or unavailable placement, our Community-Based Case Managers will meet in person with the member and/or his or her representative to discuss the reasons why placement was not possible and available alternatives and will work to identify a suitable alternative facility or community-based residential setting. Our Case Managers will also help assure that members have the option to receive HCBS in more than one residential setting appropriate to their needs and shall educate our members on all available settings. Our Case Managers retain detailed local knowledge of available facilities and providers and therefore are well equipped to help support our members in the LTSS program.

As discussed in Section 4.2, Amerigroup will also help assure that all PASRR requirements have been met prior to admission to the facility, including level I screening and level II evaluation as needed. Amerigroup is committed to making sure PASRR requirements have been met prior to the member's admission to a nursing facility.

Transitions between Facilities (4.3.10)

In the event that a member transitions between facilities, our care coordination staff will work to help provide a seamless transition. Our process for transitioning members between facilities allows members to be fully supported when they leave a facility, receive the services they need and desire, maintain continuity of care, and avoid an acute care episode. The Case Manager coordinates the planning and transition process with the member or his or her representative, family, advocate, legal guardian, PCP, and other providers and the discharge planning personnel at the facility to identify a new facility for the member and plan the transition.

Our Case Managers work closely with facility discharge planners, providers, and other staff to minimize disruption during the transition. This collaboration includes regular communication during face-to-face meetings, as appropriate, and through phone calls and emails. This communication increases as the transition date approaches, and the parties confirm that all pertinent healthcare information is transferred to the receiving facility.

Our Case Managers also engage with staff at the new nursing facility, ICF/ID, another facility, or residence to coordinate a smooth transition. Our Case Managers advocate on our members' behalf so their preferences and choices are respected. For example, they may work with the nursing facility to allow a member to bring his or her own bedding or to allow a modified schedule of activities. Our Case Manager arranges to meet the member at the nursing facility, ICF/ID, another facility, or residence on the date of admission to welcome the member, meet with facility staff (if applicable) to verify the services and support the member will receive, and begin developing action plans to deploy against member goals. For the duration of the member's stay, the Case Manager will conduct face-to-face visits, reassess the member's needs, as appropriate, involve natural supports, and communicate with facility staff. Our goal is to confirm that the member receives high-quality care that supports improved health outcomes.

Implementation (4.3.11)

Question 4.3, #9

9. Provide proposed strategies for ensuring a seamless transition of LTSS services during program implementation. Include a proposed strategy and timeline within which all members receiving LTSS will receive an in-person visit, an updated needs assessment and service plan. Describe how you will ensure services are not reduced, modified, or terminated in the absence of an up-to-date assessment.

Amerigroup understands the importance of coordinating seamless transition of LTSS services during program implementation to prevent any fragmentation or duplication of care and help assure member safety. ***Our affiliates have vast experience in working with over seven states transitioning from fee-for-service (FFS) to managed care within the last 17 years. Through each state's transition we have improved on our execution of implementations to bring our best practices to fruition.***

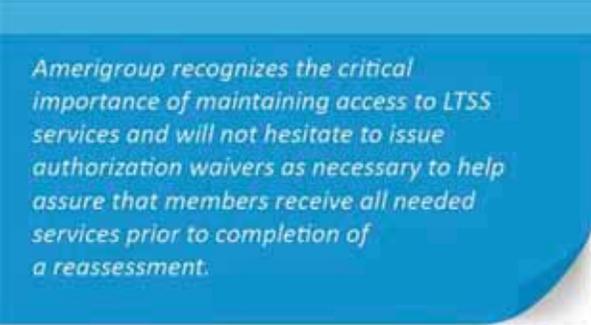

We know that LTSS services are critical to our members' ability to live safely in the community or facility setting and will help assure that members continue to receive their existing services without reduction, modification, or termination until an updated assessment is completed no later than 90 days from Contract implementation. To facilitate this process, we will communicate on an ongoing basis with both our members and providers.

As part of our comprehensive strategy to promote seamless transition for our members receiving LTSS we will also work to engage our members through ongoing communication and to address any concerns regarding provision of services and will seek to contract with existing providers to further help assure continuity of care. *Through early identification, assessment, and service plan development, we can successfully transition new members receiving LTSS to managed care.*

Providing Coverage of Necessary Services During Transition

Amerigroup will work with the State to help assure that services during periods of transition are not reduced, modified, or terminated in the absence of an updated service plan. To facilitate this process, we will work closely with DHS to obtain available information on members receiving LTSS, including medical records, service plans, and prior authorizations at the time of enrollment. We will enter this data into our core operating system. Prior authorizations and service levels will not be altered until the member has been successfully contacted and receives an updated assessment and service plan. This process will help promote continuity of care and minimize the possibility of gaps in care during Contract implementation.

The LTSS manager will then review all members' assessment expiration dates and will work to help assure that members receive a reassessment prior to their authorization expiration and no later than 90 days after Contract implementation. During this process the Long Term Care/Care Coordination Manager will identify any members who are at risk for authorization expiring prior to reassessment due to an abundance of members with imminent authorization expiry. If the LTSS manager identifies any risks associated with completing the reassessments prior to authorization expiration, he or she will immediately notify the CEO and COO, who will work in coordination with the Claims department to issue authorization waivers until a reassessment is completed. Amerigroup recognizes the critical importance of maintaining access to LTSS services and will not hesitate to issue authorization waivers as necessary to help assure that members receive all needed services prior to completion of a reassessment.

Amerigroup recognizes the critical importance of maintaining access to LTSS services and will not hesitate to issue authorization waivers as necessary to help assure that members receive all needed services prior to completion of a reassessment.

IA_4.3_008_12.2

Member Engagement and Communication

We realize members who have not previously participated in managed healthcare may experience a higher level of anxiety and stress associated with the transition. As a result, we provide detailed, accessible information about the member's right to receive services in accordance with his or her previous service plan until a new reassessment is completed. We also inform our members about our timeline for reassessment, seek to address any concerns that the member may have regarding the transition end, and encourage members to report if they observe any interruption of services.

Our processes for engaging and educating new members about our program, including their right to retain existing services, include:

- Informing new members of program benefits through DHS-approved welcome materials
- Conducting follow-up welcome calls to engage new members and identify immediate or existing healthcare needs — an opportunity to engage, build a relationship, and obtain health-related information

- Partnering with DHS and other MCOs in holding town hall meetings throughout Iowa communities to engage members and their families, giving them the opportunity to be introduced to Amerigroup, ask questions, or voice concerns
- Quarterly meetings with the Member Advisory Board

If any member reports an interruption in services to any Amerigroup employee, our LTSS manager will be informed and will work to resolve the concern with the appropriate departments immediately (for example, issuing an authorization and collaborating with Provider Relations and Internal Claims Resolution to have claims reprocessed if necessary). Any reports of interruption in service will be a top priority for the LTSS manager and our employees across Amerigroup.

Provider Engagement and Communication

During Contract implementation we also inform our providers of their right to receive compensation for services provided in accordance with current service plans until a reassessment is conducted. Similar to our communications with members, we will encourage providers to report any instances of service interruption for immediate resolution. Forums for communication with providers include but are not limited to:

- Ongoing communications and relationship-building activities with professional associations
- Communications between provider relations and provider entities during network development
- Partnering with DHS and other MCOs in holding Town Halls in which providers can openly ask any questions and voice any concerns.
- Quarterly meetings with the Provider Advisory Board
- Training sessions for providers

Amerigroup also recognizes the importance of existing relationships between members and their current providers and that those relationships have a distinct impact on the outcome of a member's care. This is particularly critical for our members receiving LTSS who often have special healthcare needs or multiple conditions that require coordination. To promote continuity of care, we will seek to contract with any providers that are currently offering services to our members. When situations arise, our Community-Based Case Managers will seek to keep members' existing providers. In our experience, this strategy helps promote seamless transition with minimal disruption in care for our members.

Nursing Facilities and ICF/IDs (4.3.12)

Case Management Requirements (4.3.12.1)

Question 4.3.12, #1

1. Describe proposed strategies for providing care coordination services for residents of nursing facilities and ICF/IDs, including the timelines and frequency of in-person visits.

Amerigroup's primary focus for residents of a nursing facility or intermediate care facility for individuals with intellectual disabilities (ICF/ID) is to implement best practices for case management that provide members with excellent services in a supportive setting that prioritizes their desires and goals. Our approach to service planning emphasizes member choice, self-determination, and community integration. We accomplish this through focused member engagement. Our Case Managers partner with members, their families, and representatives to identify each member's unique needs, strengths, and preferences continuously through the member's care.

Person-centered Service Planning

Our Case Manager arranges to meet the member at the nursing facility or ICF/ID on the date of admission to welcome the member, meet with facility staff to verify the services and supports the member will receive, and begin developing action plans to deploy against member goals. For the duration of the member's stay, the Case Manager will conduct regular face-to-face visits; reassess the member's needs, as appropriate; involve natural supports; and communicate with facility staff. Our goal is to confirm that the member receives high-quality care that supports improved health outcomes.

For new members receiving LTSS, the LTSS manager will assign an appropriate Case Manager based on the member's location, coordinator capacity, and prior coordinator experience. New members will be assessed within 90 days of enrollment. During this in-person visit, the Case Manager will be responsible for:

- Explaining the assessment process and forms to the member and natural supports
- Evaluating the member's functional ability relative to performing activities of daily living
- Discussing the member's needs and whether those needs are currently being met by natural supports or the nursing facility
- Assessing member interest in transitioning to a home- or community-based setting
- Helping assure that the member is educated regarding services that are available through HCBS waivers if he or she wishes to leave the facility (including information on self-direction through the CCO)
- Identifying the key individuals involved in the member's care to comprise the interdisciplinary team; these members are the member, family members, representatives, other individuals of the member's choosing, and nursing facility or ICF/ID staff, including the member's social workers, nursing facility Case Managers, PCP, and other treating providers

Our Case Managers then prepare for the service planning process. Prior to service planning, our Case Managers work closely with the member and the member's interdisciplinary team, including facility staff, to identify the member's identified interests, goals, and support needs. Our Case Managers also work with the facility to review other relevant information, including medical records and prior service plans.

During the service planning process, our Case Managers meet with the member, interdisciplinary team lead, and any natural or legal supports whom the member requests to:

Use the CareCompass Mobile Device to complete the Universal Assessment Tool and service plan

Identify the member's needs and desired outcomes, including living arrangement, satisfaction with the facility, and any unmet needs

- Identify supports from all sources, including the nursing facility programs and offerings, as well as external paid and unpaid supports that together meet the member's needs
- Assess satisfaction with the member's existing nursing facility service plan
- Identify and address any gaps associated with the nursing facility service plan
- Incorporate the nursing facility service plan into our service plan once the plan is deemed appropriate
- Answer any questions from the member and leave their business card with the phone number to the care coordination phone queue

Ongoing Member Engagement and Monitoring

Regular Member Visits

Case Managers will continuously follow-up with our members in a nursing facility or ICF/ID on the effectiveness of the service plan through regular in-person and telephonic contact. Case Managers will be sure to contact members at least once monthly either in person or by telephone with an interval of at least 14 calendar days between contacts. Members will also be visited in their facility face-to-face by their Case Manager at least quarterly with an interval of at least 60 days between in-person visits.

Through ongoing monitoring, Case Managers will be able to gauge member progress with his or her service plan. To facilitate this process, case managers will record the member's physical condition, physical environment, satisfaction with services and care, upcoming appointments, emotional well-being, any injuries, and statements regarding any questions or concerns by the member or natural support. These responses will be recorded directly into CareCompass Mobile. Case Managers will then use member responses to follow-up as appropriate with nursing facility staff and the member's providers.

We will be cognizant of members with intellectual or developmental disabilities who are residing in nursing facilities or ICF/IDs due to lack of social supports or accessible resources in the community. We will work with these members and their families or representatives to help assure that their needs are fully addressed in the most appropriate manner and consistent with their preferences.

Collaboration with Facility Staff

A critical component of our care coordination strategy for facility staff involves coordinating with facility staff. We recognize that nursing facility staff interact with our members on a significantly more frequent basis and therefore see them as essential partners in care coordination for our members in facility care. To facilitate collaboration with nursing facility or ICF/ID staff, our Case Managers meet regularly with facility staff and hold quarterly meetings to discuss changes in our members' progress. We also seek to involve facility staff in Amerigroup case rounds and work collaboratively to address any issues that may arise.

Coordinating Facility Transitions

As part of our facility care strategy, we are committed to safe transitions to alternative settings for interested members. Our Case Managers continuously seek to identify members with an interest in transitioning to a home- or community-based setting in ongoing communications with the member, family members, and facility staff. In the transition planning process, we work with the member to identify all risks and identify all supports that can support the member from his or her first day in the community onwards. We also convene interdisciplinary transition conferences, including facility staff, to support the member in developing a transition plan and help address our member's diverse needs. Upon discharge, we support our members with post-transition monitoring in accordance with SOW requirements 4.3.12.6. Our Case Managers then work to quickly remediate any barriers or obstacles that the member may face to support maximal community integration.

Case Manager Specialization for Efficacy and Efficiency

Amerigroup recommends that Case Managers specialize in serving either facility members or HCBS members whenever possible. In our experience, this enables Case Managers to focus on the needs of a specific population rather than having to focus on both facility-based and community-based members. Specialization allows Case Managers to develop expertise in issues that predominantly occur only in facility care such as patient liability and dual-eligible payer strategy. Members benefit from their Case Manager's specialized knowledge about the processes and procedures governing the facility and their care.

Specialization increases Case Manager efficiency, builds relationships with facility staff, and increases member satisfaction. The Case Manager is able to develop strong working relationships with the staff of the facilities for which he or she is responsible. A strong relationship with the staff of the facility improves the channels of communication between the member, the facility, and Amerigroup. This close communication makes all parties aware of any unmet needs or adverse events, allowing them to respond quickly and appropriately. In addition, specialization allows the Case Manager to conduct face-to-face assessments for multiple members in the same location during the same day. This is a tremendous efficiency gain, minimizing travel time, simplifying scheduling, and allowing Case Managers to spend more time to focus on member needs.

Question 4.3.12, #2

2. Describe processes for working with nursing facilities and ICF/IDs to coordinate care.

At Amerigroup, we understand that care coordination and case management in the nursing facility and ICF/ID are unique and involve more interaction with and dependence on the providers who are providing a home for the member 24 hours a day, seven days a week. Given the importance of nursing facility and ICF/ID staff in coordinating care, we consider them to be critical members of a member's interdisciplinary care team. To promote coordination with nursing facilities and ICF/IDs, we have developed policies that help promote long-term relationships with nursing facilities and ICF/IDs and engage with staff members regularly to discuss member needs.

Our Staffing Model Fosters Communication

Our staffing model is designed to help Case Managers build relationships with nursing facilities and ICF/IDs that facilitate seamless communication to discuss members' needs and available services. We will make best attempts to assign Case Managers to specific nursing facilities and ICF/IDs to promote and foster the continuity and development of collaborative relationships with the facility's staff and encourage a coordinated process in providing members' services and supports. Our Case Managers will be on site routinely at the facilities where members reside to provide medical and social supports coordination and will thereby build relationships with staff members and develop familiarity with the specific facility's processes.

Because Case Managers are assigned to membership at specific facilities, our Case Managers will communicate very regularly with facility staff to coordinate based on member needs and seamlessly adapt to, complement, and collaborate with each facility's "norms" to provide effective coordination of care for our members residing in those facilities. Case Managers will meet weekly with facility staff to reconcile member census to stay abreast of any changes such as hospice enrollment or hospitalizations. This process allows us to react and respond quickly to changes in member status. Case Managers hold quarterly meetings with nursing facility and ICF/ID staff, members, and the members' supports, when appropriate, to discuss the members' goals, progress, and potential service gaps and to identify new needs or goals. Facility staff is also invited to attend Amerigroup case rounds that are pertinent to their

membership. Through this process, Case Managers are able to work collaboratively to resolve any potential issues by providing access to additional services or supports and offering creative solutions as an integral member of the treatment team.

We Work With Facility Staff to Coordinate Discharge

Case Managers work especially closely with nursing facility or ICF/ID staff during member transitions between facilities, from a facility back to the community, and vice versa. Our Case Managers collaborate with facility discharge planners and other staff to achieve a smooth transition. This collaboration includes regular communication during face-to-face meetings, as appropriate, and through phone calls and emails.

Communication increases as the transition date approaches, and the parties confirm transfer of all pertinent healthcare information to the Case Manager or receiving facility. During this process, the Case Managers collaborate with the facility social worker to convene a planning conference to identify all needs associated with the member's transition.

Our Case Managers also engage with staff at the new nursing facility or ICF/ID to coordinate a smooth transition. Our Case Managers advocate on our members' behalf so that their preferences and choices are respected. For example, they may work with the facility to allow a member to bring his or her own bedding or allow a modified schedule of activities. Based on our experience, we know that honoring the member's preferences leads to improved member outcomes.

Question 4.3.12, #3

3. Describe strategies for coordinating physical health, behavioral health and long-term care needs for residents and improving the health, functional and quality of life outcomes of members.

At Amerigroup, we know our care coordination efforts can have a significant impact on the quality of a member's nursing home or ICF/ID experience. We embrace our responsibility to establish strategies that meet members' diverse needs and improve outcomes for our members. To this end, we have structured our care coordination program for members in nursing facilities or ICF/IDs to promote and monitor high-quality care delivery, integrating a member's physical, behavioral, and LTSS needs while improving health, functional, and quality of life outcomes.

Interdisciplinary Case Management

Interdisciplinary case management across all members' needs is at the core of what we do. Central to our care coordination efforts is the interdisciplinary team, which includes the member's medical, functional, and quality of life supports. Our Case Managers communicate on a regular basis with all the individuals that comprise a member's interdisciplinary team to help assure that the member is progressing with his or her service plan and that his or her needs are being met. We also work to encourage communication between members of the interdisciplinary team as needed to help assure that members' care is not fragmented or duplicative.

To facilitate the Case Manager's ability to engage with all aspects of a member's care, we will implement regional case management teams (described further in Section 4.3.1). Each team is staffed with Case Managers that are physical health, behavioral health, HCBS, or facility experts. While our members receiving LTSS in nursing facilities or ICF/IDs will primarily interact with coordinators who have facility-based expertise, the other team members within the team provide critical support to help understand and address the full spectrum of member needs. In weekly case rounds, the team members have a standing forum to share experiences and best practices that help improve care coordination. Case Managers can initiate ad hoc discussions with their team members to address concerns or issues that may arise and need to be resolved prior to weekly case rounds.

Improving Outcomes for Our Members

Our Case Managers work to continuously monitor member's health, functional, and quality of life outcomes and deploy creative strategies to help improve outcomes for our members in facility care. During all our visits and telephonic conversations with members, we identify and document our members' reported physical health, behavioral health, and long-term care health outcomes in accordance with all requirements listed in 4.3.6. We also seek to identify any concerns related to our membership during ongoing conversations with nursing facility staff and natural supports, as well as by monitoring member progress with their service plan in CareCompass. We also continuously monitor the Long-term Care Minimal Data Set (MDS) data to monitor our members' health status.

Based on discussions with the member, family members, representatives, and facility staff, as well as review of the member's progress with his or her service plan and MDS data, our Case Manager will work with all stakeholders to identify solutions to the issue. These solutions may include but are not limited to:

- Resolving medical equipment, adaptive equipment, and other supply and service needs for members
- Addressing the need for specialty consultations and specialized services
- Addressing inappropriate use of psychoactive drugs for behavioral control
- Addressing inappropriate use of restraints

Once potential solutions have been identified, we will act as advocates on behalf of our members to help assure their needs are met. We will work in close collaboration with the member's interdisciplinary team to help assure timely resolution of the concern. If necessary, our Community-Based Case Managers will be empowered to seek help from other members of our Iowa-based team such as our LTSS manager or Medical Director to support our members.

In addition to coordinating between covered benefits, our Case Managers will make best efforts to identify and coordinate the provision of non-covered benefits for our nursing facility and ICF/ID members. For example, we will seek to coordinate with Iowa COMPASS to procure appropriate equipment to support safety and independence. We also plan to engage with State-funded programs, as appropriate, to optimize Iowa's investment in supporting seniors and people with disabilities. This would involve, for example, integration of service delivery with CMHCs and AAAs, as well as faith- and community-based organizations that deliver wraparound services not covered through Iowa Medicaid. Linking together the disparate, existing community services and agencies through a single service plan maximizes nursing facility outcomes and also makes the best use of available services throughout Iowa today.

Identifying and Reporting Concerns

Based on ongoing communications with the member and nursing facility or ICF/ID, our Case Managers are trained to monitor facility performance and report any concerns. In all telephonic and in-person conversations, our Case Managers ask members if they have any concerns related to the facility or their care provision. Case Managers will also rely on personal observation of both the member and the facility to identify and report issues. They will be monitoring for evidence of activities such as regular nursing rounds, coordination of laboratory and other required medical testing, and appropriate nutrition depending on each individual member's needs.

Our policies and procedures regarding reporting of concerns vary depending on the severity of the infraction. For relatively minor quality concerns that can be addressed quickly, our Case Managers will not hesitate to speak directly with nursing facility staff for resolution. These concerns could include:

- Level of lighting in the member's room
- Member concern regarding demeanor of specific staff members

- Member complaint that services are frequently scheduled during family/member visits

For more significant infractions that reflect general procedural or structural deficiencies in our nursing facilities, our Case Managers will escalate concerns to our Provider Relations team. Examples of such concerns could include:

- Suspicious odors
- Poor temperature regulation within the facility
- Verbally abusive staff members
- Poor quality services
- Regular infractions of members' service plans

Our Provider Relations team will then conduct an audit of the facility and will work with the facility to resolve any concerns. If the concerns persist, our Provider Relations team will implement a Corrective Action Plan that requires our nursing facilities partners to meet quality requirements.

In rare instances when the nursing facility fails to meet requirements stipulated in our Corrective Action Plan we will work to transition our members to another facility and will terminate our contract with the nursing facility. For very severe infractions that violate State licensure requirements, the Provider Relations team will report this to our Credentialing and Compliance managers so that the finding can be reported to the Health Facilities Division of the Iowa Department of Inspections and Appeals for State follow-up.

Client Participation Assistance (4.3.12.2)

Amerigroup recognizes that non-payment of patient liability can result in a member's discharge from nursing facility or ICF/ID care and therefore can disrupt the provision of services.

We also recognize that involuntary discharge from facility care often results in stress, confusion, and reduced quality of life for our members, and therefore we take several steps to avoid involuntary discharge. We ask our nursing facility partners to inform our Community-Based Case Manager if a member is in danger of discharge due to non-payment of the patient liability. Our Case Manager and nursing home staff then discuss the issue with the member and representative when appropriate, determine the barrier to payment, and seek to elicit cooperation. We also provide written notice to our members of their patient liability.

During our conversations, Amerigroup will screen for any misappropriation of funds that may have resulted in non-payment, and if concerns are identified we may:

- Refer the member to Adult Protective Services and/or law enforcement
- Submit request to the Social Security Administration to change the representative payee status to the person of the member's choosing or the nursing facility
- Engage additional family members
- Present evidence of payment to the facility if available

If patient liability continues to remain unmet, we will convene a formal meeting with facility leadership, the member and/or responsible party, LTSS Ombudsman, and any other representatives as applicable to review patient liability, potential consequences of non-payment, plan for payment, and available alternative facilities. Through these processes, we seek to give members the opportunity to address the patient liability and prevent discharge wherever possible.

In the event that Amerigroup, through the collaboration with the nursing facility and/or ICF/ID, is unsuccessful in resolving the payment of the patient liability by the member, then Amerigroup will work to find an alternate nursing facility or ICF/ID willing to serve the member.

Amerigroup Case Managers have comprehensive local knowledge of available institutional settings for our members and are therefore well equipped to support this transition.

In addition, our Case Managers will document all efforts made in the process of addressing patient liability and the steps and actions taken through such efforts in CareCompass.

State Resource Centers (4.3.12.3)

At Amerigroup, we understand the importance of coordinating care and administrating coverage for members in State Resource Centers (SRCs) as they provide intensive intermediate care facility services for individuals with intellectual disabilities. To help support these goals, we will support all members who have been deemed by the court not competent to stand trial (Iowa Code Chapter 812) or guilty by reason of insanity (Iowa Rule of Criminal Procedure 2.22) in entering an SRC. For all our members in SRCs, we will engage in member-centric care coordination as described in Section 4.3.12.1 that is compliant with the Conner Consent Decree.

We also understand Iowa's commitment to decreasing SRC beds in favor of alternative settings of care and will work to support this goal while avoiding gaps in care or duplication and fragmentation of care for our members. To support this goal, we will work to divert referrals from SRC placement to available services in the community and will fund transition activities, including staffing for overnight visits. Our proven strategies for facility diversion will help reduce SRC stays.

Compliance with Conner Consent Decree

Our Community Based Case Managers will work to help assure that members in SRC are served in a fashion that promotes compliance with all Conner Consent Decree Requirements relating to:

- Respect for individual dignity
- Member education regarding available services
- Right to choose settings of care
- Right to participate in service planning
- Continuous monitoring of the member's changing needs
- Involvement of the member's legal guardians or other designated representative

Our member-centric approach to care coordination, described in Sections 4.1 and 4.3.1, is founded on the principle of respect for our member's individual dignity, as well as a recognition that these preferences may change over time. To support members' right to self-determination we engage in comprehensive options counseling to educate members and their natural supports on all options available to them, including available services and their right to choose settings of care. We see the service plan as an extension of members' needs and wants and put members at the helm of their service planning process. After service plan development, we will continue to monitor members' changing preferences and will work to incorporate them into the service plan wherever resources permit.

Amerigroup also recognizes that members residing in SRC have intellectual disabilities and therefore may not be able to communicate all their needs or desires and/or may be unable to make informed choices. For these members, we will work very closely with the member's legal representative or other designated representative to coordinate services for the member. We will seek to involve the member and the member's representative in all decision-making, including choice of available services, settings of care, service planning, and ongoing monitoring. We will also support our members by helping assure that the representative is acting in the best interest of the member and will report any concerns to the appropriate authority, including the Adult Protective Services.

SRC Diversion

To help facilitate diversion and meet State goals for reducing SRC beds by 12 beds per year, we will implement a comprehensive diversion strategy that both keeps members from entering the SRC and works with members and their family or representatives who are interested in transitioning from SRC care to the community. Using processes described in Section 4.3.12.4 and 4.3.12.5, we will use predictive algorithms to identify members with ID at risk for facility admission and will engage in option

counseling. During this process we will provide members and their family or representatives with an array of options other than SRC care, including but not limited to ICF/ID, nursing facility, psychiatric medical institutes for children, and home- and community-based care. We will also provide the member with aggressive care coordination to maximize the degree to which member needs are met.

We will also continuously identify members who may be interested in transitioning members from SRC care to the community or alternative setting of care. Upon identification of a member interested in transition, we will work with the member, his or her family or representative, and his or her broader interdisciplinary team to coordinate a successful transition to the community. We will not hesitate to coordinate new placement, as well as post-discharge supports such as staffing overnight visits, and will work with the member, his or her family members, and representatives to identify additional community-based supports. As a Value-Added Service, we will help facilitate the process by providing financial assistance needed for the transition, easing the burden of purchasing household necessities.

CONTAINS CONFIDENTIAL INFORMATION

Diversion Strategies (4.3.12.4)

Question 4.3.12, #4

4. Propose institutional diversion strategies and describe successes in other states.

Our comprehensive care coordination model and exceptional Case Management team implement a high-touch model that emphasizes member choice, thorough and coordinated service planning, proactive interventions, and continuous quality improvement.

Our approach has facilitated significant rebalancing of the LTSS system in our LTSS markets. *For example, our Tennessee affiliate was able to reduce the proportion of members receiving LTSS in nursing facilities from 82 percent to 60 percent between 2010 and 2013. Likewise, in Kansas, our affiliate health plan was able to prevent 640 members at risk for institutionalization from entering the facility setting in 2014 and achieved a 17-percent decrease in nursing facility use after one year of participation in our program.* Meanwhile our affiliate's members have been strongly supportive of our diversion strategies. In our Florida plan, 98 percent of members receiving LTSS surveyed rated our diversion program at an eight or higher on a scale of zero to 10. Based on our experience, we are confident we will be able to bring similar results to Iowa to prevent institutionalization and maintain member health, safety, and autonomy.

Early identification of members in need of LTSS is critical to diverting members from nursing facility placement. Individuals often enter the LTSS continuum in the nursing facility because of lack of knowledge, availability of housing options, or access to other resources. We focus a significant amount of effort on diversion, which is embedded in our comprehensive care coordination processes that include the following:

- Face-to-face administration of comprehensive member assessments that identify the member's needs and assess such factors as the member's capabilities, functional status, natural supports, and desired outcomes
- Collaboration with the member, his or her natural supports, and providers to develop a comprehensive service plan and manage needed changes and updates
- Informing each member about the option to participate in the Consumer Choices Option and that members who elect this option receive the support they need to manage a self-direction service provider such as consumer-directed attendant care
- Identification of all the member's physical health, behavioral health, and LTSS needs and the services and supports from all sources that will meet these needs and following up to confirm that all services are in place and satisfactory to the member
- Care coordination appropriate to the member's needs, which may include intensive management and frequent face-to-face contact for high-risk members or those who have complex care needs
- Periodic contact, as appropriate, with involved family and/or other natural supports and the member's physicians to solicit and provide feedback on the member's status and needs
- Identification of the member's gaps in care and action to help the member close these care gaps by providing interventions and coordinating preventive and other necessary care

Intervening to Prevent Institutionalization for High-risk Members

Amerigroup is also committed to identifying and preventing institutionalization for high-risk members, including members who are waiting placement in a nursing home, ICF/ID, or other institutional setting, members who may be on an HCBS waiver wait list, and members who have a change in circumstances or deteriorating health or functioning, have requested nursing facility or ICF/ID services, are admitted to a hospital or inpatient rehabilitation program, or are admitted to a nursing facility for short-term stay, in accordance with requirements in SOW 4.3.12.4. We will provide all members at risk of admission with additional options counseling and will provide aggressive care coordination to identify supports and services necessary to help the member remain within the community.

Identifying High-risk Members

Amerigroup will use a variety of means to identify members who may be at risk for institutionalization to help assure that all populations at risk for nursing facility or ICF/ID or other institutional setting admissions are identified.

Members with Deteriorating Health

To identify members who have deteriorating health, we have developed a proprietary predictive algorithm in partnership with the Duke Clinical Research Institute to complete an analysis of member assessment and healthcare utilization data to identify key risk factors for admission to an institutional setting from the community setting. Case Managers will be able to access this tool through our CareCompass Mobile application, where Case Managers will use the application to develop service plans targeted to the member's individual risks.

This initiative is led by our team of biostatisticians and epidemiologists who have more than 30 years of combined experience and have published 50 peer-reviewed papers and national presentations in academic healthcare research focusing on clinical outcomes, program evaluation, and predictive modeling. The Duke Clinical Research Institute also will complete a clinical research study that identifies optimal health pathways and services that can significantly improve quality of care and life for this population. As additional data from these studies becomes available, we will incorporate it into our proprietary tool to more effectively keep members in the community.

Other At-risk Members

Our Community-Based Case Managers will identify members who are on waiting lists for nursing facility care or an HCBS waiver through ongoing conversations with members, providers, and nursing facilities. We will also identify members who have been discharged from inpatient settings and rehabilitation or nursing facilities for short-term respite through our daily census, which is provided to Case Managers.

Intervening to Prevent Facility Admission

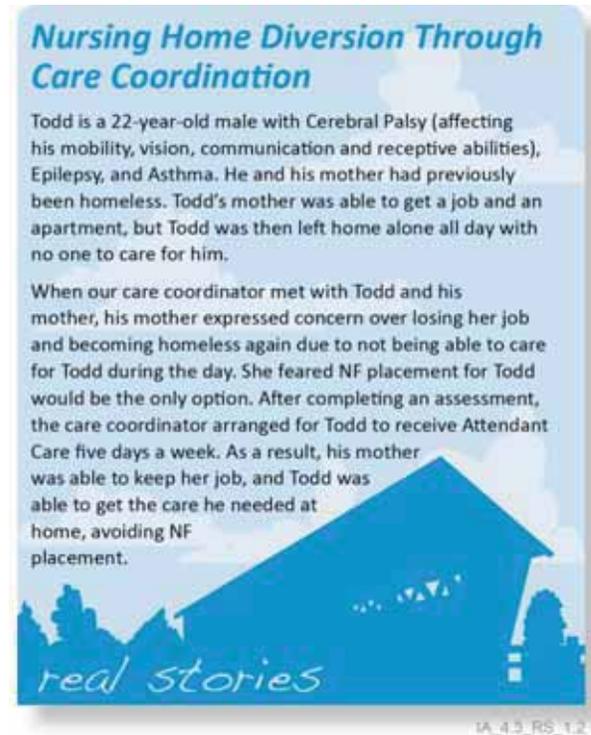

For all our members who are identified as being at high risk for facility admission, we will implement intensive care coordination and discharge planning processes as appropriate. In our experience, this process helps assure that members are aware of all their care options and are supported in the community of their choice.

As part of our care coordination strategy, we will provide options counseling to all our members to inform them of available resources to support them in a home- and community-based setting. As needed we will not hesitate to involve other members of our case management team, including our Medical Director, to provide additional information and context. Services that we may educate our members on may include but are not limited to:

- Adult day programs that may provide relief to natural supports
- Community programs providing services to members
- Value-Added Services benefits for members as described in Section 3.2.14
- HCBS waiver options
- Self-direction option (Consumer Choice Option)
- Option to be served in an alternative community setting

Our Community-Based Case Managers will then work to help assure that our members receive all available services and supports to prevent facility admission. We will also work to support members' decisions to be served in alternate settings or through the Consumer Choices Option.

For members who are awaiting discharge from inpatient, rehabilitation, or short-term facility care, we will also provide a comprehensive discharge plan as described in Section 4.3.5. During this process we will meet with members prior to discharge to understand members' needs and preferences associated with the transition and will educate the member on strategies for successful transition. We will also work in close collaboration with the hospital or nursing facility to help assure that the member has all necessary medications and devices needed for successful transition. As needed, we will complete a reassessment of member needs and will authorize additional services to help members remain within the community.

Community Transition Activities (4.3.12.5)

Question 4.3.12, #5

5. Propose strategies to identify members who have the ability or desire to transition from a nursing facility or ICF/ID setting to the community. Propose assessment tools, provide a sample transition and describe post-transition monitoring processes.

At Amerigroup, we are committed to supporting members living independently in the communities of their choice and engaging proactive efforts to identify members who have the desire and ability to transition from a nursing facility or ICF/ID. We recognize that members transitioning out of a facility are extremely vulnerable particularly in a more independent setting, given the complexity of their needs and the coordination of services required to meet these needs. To this end, Amerigroup has implemented an interdisciplinary transition process that proactively seeks to identify member needs and risks associated with transition and assists members in addressing those risks to facilitate safe and successful community re-integrations. *Amerigroup affiliates have successfully transitioned more than 630 members to the community in our seven states with LTSS programs during 2014. We have simultaneously achieved low facility readmission rates. For example, in our Texas affiliate, less than three percent of members who transitioned to the community in 2014 were readmitted within 90 days.* Given our organization's experience facilitating successful community integrations, we are confident we will be able to *facilitate successful transitions in Iowa.*

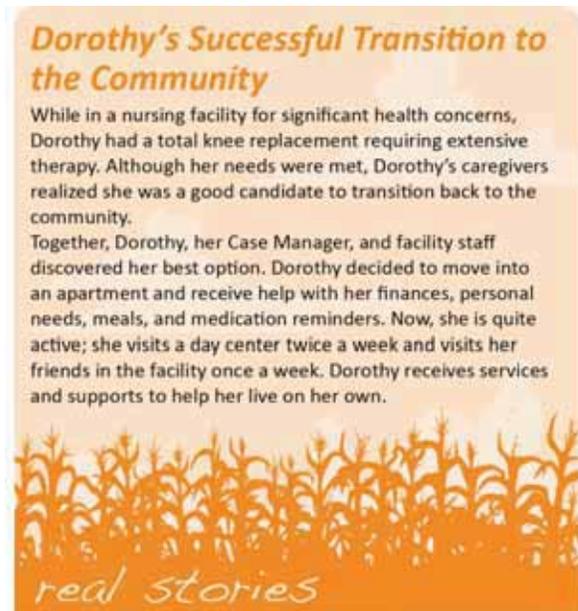

Transition Screening and Initial Assessment

Our Case Managers will conduct face-to-face transition screening assessments with each nursing facility and ICF/ID resident annually. In addition to annual screening assessments for all members in facility care, we will conduct a screening assessment for all members who express a desire to transition to the community during ongoing contact with a Case Manager and for members identified through MDS Section Q.

The screening is designed to:

- Confirm the member's desire and potential ability to transition
- Review the member's level of care to identify the appropriate waiver population for receipt of HCBS
- Educate the member about the transition process
- Inform the member about potential eligibility for participation in the Money Follows the Person (MFP) program

For members identified as potential candidates for transition, the Case Manager uses the UAT, a proprietary assessment designed specifically for our members in LTSS plans. The UAT assesses the member's physical, behavioral, functional, and psychosocial needs and also covers other factors important to transition planning such as access to natural supports and identification of housing needs and resources. The Case Manager then works with the member to understand his or her needs, goals, and preferences associated with the transition to help assure that all aspects of transition planning and

IA_4.3_RS_2.3

transition maximally support the member. Through this conversation, the member and Case Manager develop an initial transition plan. A sample transition plan can be found at the end of this section in Attachment 4.3.12-1.

Supporting Members in Transition Planning

The Case Manager then works with the member to help assure the member is prepared for a successful transition. Once the Case Manager has completed the comprehensive assessment and developed an initial transition plan, our Case Manager engages an interdisciplinary team to support the member's transition called a Transition Case Conference. Transition Case Conferences include the member, member's PCP, other specialty providers, Centers for Independent Living (as applicable), Easter Seals, facility discharge planner, and social workers. This team works to help the member identify necessary steps to help assure the most successful transition to the community. To help develop an exhaustive transition plan, the Transition Case Conference addresses critical issues, including but not limited to:

- Summary of current medical, behavioral, and social needs
- Short-term and long-term care needs and goals
- List of services required and frequency
- Description of who will provide the services
- Name of PCP and natural supports
- Identification of potential challenges associated with transition that we will support the member in overcoming
- Housing options, training, employment, interests, and priorities
- Social Security or other benefits
- Review backup plan or set up a plan (if applicable)

During this process, the team thoroughly assesses the member's needs, gathering key information and documenting the required in-home services and related support. To help assure comprehensiveness, the transition case conference completes a transition checklist, including items such as deposits, furniture, appliance, and linens that help the team identify additional supports the member may require. Through continuous member engagement and support from the Transition Case Conferences, we are able to support successful transitions for our member.

The Case Manager supports the member in identifying all required services before discharge and coordinates with facility staff to arrange for the delivery of items or services that the member will require in the community. This includes arranging and confirming that appropriate home care, durable medical equipment, home modifications, and other services and resources are in place when the member leaves a facility. The Case Manager also helps our members secure any transportation assistance that is required and makes all necessary referrals for this service. Before discharge, Case Managers help schedule any follow-up and regular appointments with the PCP or specialist providers.

The Case Manager also supports the member in transferring medical records, medication information, and other pertinent member information to receiving PCPs and specialists upon discharge. The Case Manager coordinates medication reconciliation with pharmacy experts at the facility to compare the member's medications in the facility to the medication orders for the community. If there are discrepancies, the Case Manager contacts the member's PCP and/or treating provider to resolve the differences. He or she also confirms that the member has identified a community pharmacy to fill medication orders and that any required prior authorizations are completed prior to discharge. The Case Manager will then educate the member on the ability to establish with the pharmacy a monthly auto refill for his or her prescriptions as well.

Post-discharge Support

On the day of discharge and for the weeks following discharge, our Case Managers provide members who have recently transitioned with additional support to facilitate a successful transition. Our established practices, developed through our experience across seven LTSS markets, help minimize member readmissions and provide a positive experience for the member. On the day of the discharge, a member of the case management team will meet with a member at the facility. Here the Case Manager confirms that the member has all necessary medications, has arranged for all appropriate follow-up appointments, and has access to required transportation. Within 48 hours following the member's discharge from the facility, a member of the case management team confirms in person that all community-based services and supports are in place and satisfactory to the member and, as appropriate, his or her family or representative. We will also remind him or her of upcoming appointments and offer assistance if barriers arise that may prevent the member from following through with the plan. This is particularly important with regard to well-care appointments that are scheduled for the member. If he or she has not had a regular checkup with his or her PCP or other preventive care services, the Case Manager will facilitate the scheduling of and attendance at these appointments.

During the two months following transition, the Case Manager will continue to be in close communication with the member and natural supports to identify and address any roadblocks to successful transition. The Case Manager will make at least one in-person visit every two weeks to confirm that the member's home can support his or her needs. As the member adjusts to the new living arrangement after the second month, the Case Manager provides the intensity of care coordination needed to support the member in the community, making at least monthly face-to-face contact for the first year. Should it be determined that more frequent contact is required based on additional assessment of the member's needs and risk factors, then the Case Manager will document this in the initial transition plan or will update the transition plan as the follow-up visits occur.

Question 4.3.12, #6

6. Describe processes for interacting with the State's MFP designee and strategies to prevent duplication and fragmentation of care.

Amerigroup affiliates have significant experience administering MFP under a variety of models in several states (including California, Texas, Kansas, New Jersey, and Tennessee) that we will leverage to implement the MFP program in Iowa. We also have significant experience working closely with state MFP designees as partners in effectively coordinating the transition and delivery of services in the home- and community-based settings. During this process we will avoid duplication and fragmentation of care through clearly defined transition plans, communication with all stakeholders and providers regarding transition dates and services to be transitioned, and ongoing monitoring to help assure seamless continuity of service delivery.

Working as Partners with the MFP Designee

We will identify members for MFP using a multipronged approach. As described in response to Question 4.3.12, #5, we will conduct annual screenings for all members in nursing facilities and ICF/ID to determine their ability and interest in transitioning to a home- or community-based setting. We will also perform screenings for any members in facility care that express a desire to transition to the Case Manager or in response to MDS Section Q. If these members qualify as ID/DD or Brain Injury members receiving LTSS and have been in a nursing facility or ICF/ID for at least three months, we will proactively inform them and/or their representative, family members, and other natural supports about the MFP program and gauge interest.

If the member and/or representative express interest, we will refer him or her directly to the State for eligibility and enrollment determination. Once the State has verified enrollment of a member into the MFP program, we will work in close collaboration with the member, his or her representative, other natural supports, and the State MFP designee to create a transition plan and engage in the discharge planning. The State MFP designee will be invited to play a key role in the Transition Case Conferences to address critical issues such as medical follow-up, service plan appropriateness, risk identification, psychosocial needs, behavioral health issues, housing, and entitlement benefits as part of the member's transition plan. Case Managers will also provide regular updates to the State MFP designee as frequently as necessary regarding conversations with stakeholders, including providers and nursing home staff, as well as home assessments. We will inform the MFP designee about the transition planning progress and align on the transition plan prior to member discharge.

Preventing Duplication and Fragmentation of Care

We recognize that the simultaneous involvement of the MFP designee and Case Manager in administering the MFP program has the potential to result in duplication or fragmentation of care. To mitigate the risk of duplication or fragmentation, our transition plan for MFP designees will clearly outline responsibilities of the MFP designee relative to the Case Manager so that there is little room for misunderstanding. We will also work closely with the MFP designee to eliminate ambiguity in roles and responsibilities that could result in gaps in care. In addition to clearly defining responsibilities, we will make best efforts to assign MFP membership to Case Managers specializing in MFP so that they are familiar with the particular challenges associated with administering the MFP program and will therefore be best equipped to remediate any oversights. Staffing Case Managers based on MFP expertise will also minimize the number of Amerigroup contacts with whom the MFP designee must coordinate, further mitigating risk for duplication and fragmentation of care. Our designated MFP Case Managers will regularly communicate with the MFP designee to discuss member needs and collaboratively coordinate care.

Finally, our Case Managers will regularly monitor CareCompass and Member 360, our proprietary technology, to review the member service plan and medical history, including service utilization for members receiving LTSS. Through regular review of these systems, Case Managers will be able to flag in CareCompass and address any instances of duplication or fragmentation. In the event of duplication or fragmentation, the Case Manager will immediately connect with the MFP designee and appropriate stakeholders or providers to resolve any concerns and modify the member's service plan if necessary.

When MFP is No Longer Authorized by CMS

Amerigroup will collaborate with DHS, MCOs, and other stakeholders to assist with the development and implementation of a sustainability plan (subject to DHS approval) when the MFP grant is no longer authorized by CMS.

Post-transition Monitoring (4.3.12.6)

As discussed in Sections 4.3.5 and 4.3.12.5, Amerigroup is committed to supporting our members upon discharge from inpatient settings and facility care. Thus in accordance with SOW Section 4.3.12.6, Amerigroup will conduct in-person visits with members who have been reintegrated within two days of transition, every two weeks for the first two months following transition, and once per month for the first year following transition. While these requirements reflect minimum requirements, our Case Managers will not hesitate to make more frequent contact with members based on an assessment of the member's needs, preferences, and risk factors. Our Community-Based Case Managers will also monitor member admissions to hospital or facility settings through our daily Census Report and will work to support our members who have been readmitted. Our goal is to make sure we can assist with identifying issues and implementing strategies to improve outcomes for our members.

Utilization Review (4.3.12.7)

Amerigroup understands the importance of performing utilization review for our nursing facilities, nursing facilities for persons with mental illness, ICF/IDs, mental health institutes, and hospitals to help assure that services are being provided appropriately. In accordance with SOW requirements 4.3.12.7, Amerigroup will conduct on-site utilization review for facility settings at least annually and will conduct reviews of hospitals at least every three years. We will also arrange an exit interview in which providers will be informed of results at completion of the review and will provide providers with a written report. The written report will include evaluation of compliance, recommendations for enhancements, and corrective action as necessary. The report will be provided within 30 business days of completion. All members requiring specialized services will be included in the utilization review sample and reported to the State. The health plan will utilize the State reporting format should one be issued. In addition, the report will be reviewed and signed off by the health plan lead prior to submission to the State by the regulatory contract manager.

1915(c) HCBS Waivers (4.4)

Overview (4.4.1)

Amerigroup Iowa (Amerigroup) will draw upon the expertise of our affiliate health plans that cover HCBS waivers and our national LTSS experts to implement fully compliant and innovative home and community-based services to Iowans. Amerigroup's capabilities have been recognized by Julianne Beckett whose daughter Katie was the first Medicaid home and community-based waiver person in the country. Ms. Beckett believes Amerigroup will deliver needed innovations to improve the lives of those served by Iowa's Medicaid program, and her letter of support is provided as Attachment 1.1-1.

We will work with members, their families or representatives, DHS staff, and advocacy groups to continually evaluate and, when needed, refine our approach in Iowa to support the delivery of comprehensive and integrated services that improve members' health outcomes and functional capacity and support members to live, receive services, and participate in the community in the most integrated setting.

Service Plan Development (4.4.2)

Question 4.4, #1

1. Describe in detail how service plans meeting contractual requirements, state and federal regulations, and all applicable policies, will be developed for each member enrolled in a 1915(c) HCBS waiver.

Amerigroup Community-Based Case Managers hired from the local community and who have experience serving individuals enrolled in Iowa's HCBS waivers under the direction of Amerigroup Long Term Care Manager/Care Coordination Managers will help ensure service plans meet all State and federal requirements.

Service plan development will begin with completion of a comprehensive assessment:

- When a member is enrolled into an HCBS waiver following level of care determination and waiver enrollment authorization by the State or its designee
- For members newly enrolled into Amerigroup receiving HCBS waiver services at the time of enrollment, during the member's continuity of care period as described in Section 3.3
- Every 12 months thereafter when the Health Plan completes a level of care redetermination and the member's waiver eligibility is confirmed
- Whenever members request a revision to their service plan or when there is a significant change in members' needs or goals, at which time an assessment or reassessment will be completed

Amerigroup proposes to use our core LTSS assessment process, developed by our affiliates as a result over 17 years of delivering HCBS waivers services to managed care members. Our assessment identifies the member's individual goals, preferences, physical health, behavioral health, functional support, and social supports status and needs through a discovery process. An Amerigroup Community-Based Case Manager will complete the assessment, incorporating the results of the InterRAI HC or Supports Intensity Scale, as applicable, described in Section 4.2. Following completion of a comprehensive assessment and prior to authorization of waiver services, a service plan will be developed using a person-centered planning process led by or with the member, depending on the member's preference. This begins the process of ensuring that the member's social, school, work, and family goals and supports are included every step of the way.

The member's Community-Based Case Manager will work with the member and, as appropriate, the member's family or representative to identify ***a service planning team that includes professionals and non-professionals with adequate knowledge, training, and expertise surrounding community living and person-centered service delivery and who understand the personal needs and goals expressed by the member. Our approach for delivering CMH Waiver services is described in Section 3.2.11.***

The member and his or her Community-Based Case Manager will identify the team members, which may include the member's representative, family members, caregivers, service providers, health home staff for members enrolled in a health home, and others directly involved in the member's care. This can include input from the member's primary care provider (PCP) (if applicable), specialists, behavioral health providers, and Court Appointed Special Advocate Program volunteers (for children). We will obtain input from court-appointed mental health advocates, teachers, counselors, other case managers, and corrections officers as applicable. Additional clinical health plan staff such as nutritionists and a pharmacist will be available to the team to consult on specific issues as needed.

The member will select a team lead and the member's main point of contact from among the team members. If the member does not select a team lead, the service planning team makes the selection. If the team lead is not the member's Community-Based Case Manager, he or she will assist the team lead as needed with the person-centered service planning process.

The Community-Based Case Manager will be responsible for ensuring that service plan development is person-centered and timely and occurs at times and locations convenient to the member.

Preparation for Service Planning

Following identification of team members, the team lead and member will identify the preferred location, date, and time for service planning. In preparation for service plan development, the Community-Based Case Manager and team lead if not the member's Case Manager or care coordinator:

- Reviews the results of the member's assessment, including the member's identified interests, goals, and support needs
- Reviews other relevant information such as school Individual Educational Plans (IEPs), Vocational Rehabilitation Plans for Achieving Self-Support, previous waiver assessments and service plans, medical records, the member's current claims and encounter data, authorizations, and other health plan supports such as disease management and health education
- Consults with the member's PCP to help ensure the member's medical needs, including preventive health needs, are being met
- Reviews the member's HCBS waiver cost cap
- Identifies and arranges any accommodations needed by the member or other team members to participate in service planning such as interpreter services and visual cueing
- Notifies team members of the date/time and location of service planning and methods for participation (in-person, by phone conference, and through written input)

The Community-Based Case Manager, or team lead when not the Community-Based Case Manager, documents this review and findings in the care coordination and management system and in the Health Home electronic medical record (EMR) for members enrolled in health homes.

Frequency of Service Plan Development

The service plan must be completed and approved prior to the provision of waiver services and will be reviewed and revised: (i) at least every 12 months; or (ii) when there is significant change in the member's circumstance or needs; or (iii) at the request of the member. ***Members may request an update to the service plan at any time by contacting their Community-Based Case Manager.***

Person-centered Planning Process

The team lead will help the member drive the person-centered planning process *that emphasizes informed member choice, independence, and the principles of self-determination*. He or she will review the person-centered service planning process with the member, member's family, or representative to prepare for the service planning meeting and *provides the level of support and information needed throughout the meeting to help the member direct the process to the maximum extent possible and exercise informed choices and decisions*. The person-centered service planning process:

- Reflects cultural considerations, including the member's primary language or method of communication, cultural beliefs, and preferences
- Provides information in plain language that is transparent and easily understood by the member and member's representative and is accessible to individuals with disabilities and persons who are limited English proficient, consistent with 42 CFR 435.905(b)
- Addresses conflicts or disagreements, including divergent recommendations among team members, with priority given to the voice and choice of the member and family
- Assures informed choice and decision-making to the member regarding the services and supports they receive and from whom
- Adheres to guidelines addressing freedom from conflict of interest

The team lead will help the member and his or her representative, working with other team members as appropriate, to:

- Identify the member's desired outcomes and support needs, including the member's desired living arrangement, educational and/or employment goals and needs, and other community living goals and needs
- Identify services and supports from all sources, paid and unpaid, that together can meet the member's identified needs and support achievement of desired outcomes, considering the member's health and welfare needs, as well as the availability and appropriateness of services, including:
 - Medicaid State plan services
 - HCBS waiver services
 - Value-Added Services described in Section 3.2.14 such as assistive devices, additional hours of respite, and self-advocacy memberships
 - Services from other programs or agencies such as school-based services, vocational rehabilitation services, and workforce system services
 - Community-based resources, including housing, independent living, and social support services
 - Additional health plan benefits such as health education and disease management
 - Unpaid natural and caregiver supports
 - Family supports
 - Cost-effective supplemental services for members who would otherwise require a higher level of care
- Identify the amount, duration, and scope of needed HCBS waiver services in addition to State plan services and services available from other sources, including unpaid and family supports.
 - HCBS waiver services are reviewed to ensure these services do not duplicate other available services, which are to be accessed before waiver services.
 - Home and community-based settings options that comport with federal HCBS setting requirement regulations are reviewed with assistance from other team members. The Community-Based Case Manager may arrange a member's visit to a setting prior to a member selecting a setting. *We document each setting considered by the member in the service plan.*

- ***The service plan also records discussion and options provided for meaningful day activities, employment, and education opportunities*** including community supports like secondary education and other sources of coverage such as vocational rehabilitation options. ***Members choose from services that improve quality of life and community integration.***
- Calculate the service plan cost and compare the cost to the member's HCBS waiver cap; if the cost for requested services exceeds the cap, the team identifies ways to adjust the service plan while continuing to ensure the member's health and welfare
 - For members electing self-direction, calculate the amount of the budget available for self-directed services as described in Section 4.4.6.
 - Identify authorized and available HCBS waiver service providers, provide information about potential providers, and help the member select or change providers, as requested by the member
 - Develop an emergency plan that identifies the back-up providers and natural supports available to meet the member's needs when no approved service plan exists and which, if not addressed, may result in injury or harm to the member or other persons or in significant amounts of property damage; support services are interrupted or delayed or in the event of an emergency. The plan will include the member's risk assessment and the health and safety issues identified by the member's interdisciplinary team; the emergency back-up support and crisis response system identified by the interdisciplinary team; and emergency, back-up staff designated by providers for applicable services.
 - Determine if the member wishes to participate in the option to self-direct services described later in this section, and if so, identify which services will be self-directed in accordance with HCBS waiver policy and the amount available for the member's self-directed budget (see Section 4.4 – Consumer Choices Option).

Documentation

The member's Community-Based Case Manager will complete the service plan, which we will store in the care coordination and management system and, for members enrolled in Health Homes, also in the Health Home EMR. The Case Manager will include notes summarizing the meeting, including participants, method of participation, and any outstanding items that require follow-up. The member or his or her representative will be asked to indicate his or her agreement with the final service plan by signing the printed service plan. If the member or representative refuses to sign the service plan, we will work with the member to problem solve and, if no resolution is reached, implement the procedure described under ***Refusal to Sign the Service Plan***, later in this section, as approved by DHS.

We will provide a paper copy of the service plan to the member and representative as applicable and distribute it to other designated people involved in the plan. The care plan will also be available to Case Managers and providers in the member dashboard, Member 360.

Service Authorization and Initiation

The member's team will approve all HCBS waiver services included in the final service plan. The final approved service plan will then be sent to the prior authorization team to review and authorize the services and funding amount within the core operating system. If the team identifies additional benefits and includes them in the service plan, the Amerigroup Utilization Management Nurse or Utilization Management (UM) Manager will review and authorize them. The UM team will consult with the Medical Director when needed to confirm necessity of requested services and support.

The providers selected by the member will receive a service authorization number, a written or electronic service authorization, and a copy of the member's service plan. Waiver services may be initiated following receipt of the service authorization number.

Oversight

The member's Community-Based Case Manager will continuously assess the effectiveness of the service plan and works with the member and representative as applicable and other team members as appropriate to revise the service plan when desired outcomes are not achieved or when a member's needs or goals change. The service plan will be reviewed and revised: (i) at least every 12 months; (ii) when there is significant change in the member's circumstance or needs; or (iii) at the request of the member.

Service Plan Content (4.4.3)

Question 4.4, #2

2. Submit a sample service plan.

Sample Service Plan

A sample service plan is provided as Attachment 4.4-1 and includes each of the required elements specified in Section 4.4.3.

Emergency Plans (4.4.3.2)

Amerigroup will develop Emergency Plan policies and procedures, drawing upon the expertise of affiliate health plans that coordinate HCBS waiver services. Emergency plans will comply with Iowa Administrative Code and DHS policy for development and documentation of emergency plans for HCBS recipients. Policies and procedures will address the requirements in Scope of Work (SOW) Section 4.4.3.2 and will include such situations as personal emergencies and widespread public and natural emergencies.

Supported Community Living (4.4.3.3)

Amerigroup will develop Supported Community Living policies and procedures, drawing upon the expertise of our affiliate health plans that coordinate HCBS waiver services. These policies and procedures will comply with Iowa Administrative Code and DHS policy for supported community living. They will address such issues as how to accommodate housemate compatibility, shared staffing, and restrictions on member's rights. In addition, they will address characteristics of settings that comply with HCBS setting requirements and the method to identify settings determined compliant by the State. They will also address the procedure to be implemented if a setting appears to be or could be non-compliant with the HCBS setting requirements, including notification to DHS. The service plan will include the following for members in supported community living:

- The member's living environment at the time of 1915(c) HCBS waiver enrollment;
- The number of hours per day of on-site staff supervision needed by the member;
- The number of other waiver consumers who will live with the member in the living unit; and
- An identification and justification of any restriction of the member's rights, including but not limited to maintenance of personal funds or self-administration of medications.

CONTAINS CONFIDENTIAL INFORMATION

Refusal to Sign (4.4.3.4)

Amerigroup will develop and implement policies and procedures, subject to DHS review and approval, which describe the measures we will take to address instances when a member refuses to sign the service plan. Our proposed approach is described below:

If the member or representative declines to sign the service plan, the Community-Based Case Manager discusses alternative supports, services, or service settings that can meet the member's needs and assure the member's well-being, and, if agreeable to the member, the Community-Based Case Manager revises the service plan. If the member is unwilling to accept the alternatives offered, the community-based Case Manager will discuss the situation with his or her manager and develop a risk mitigation plan with the member. The risk mitigation plan will identify the services and supports available and the plan to mitigate any identified risks that could arise and documents the refusal to sign in the care coordination and management system. Amerigroup notifies DHS of the member's, or as applicable, representative's refusal to sign the service plan.

We will provide a paper copy of the service plan to the member and his or her representative as applicable and distribute it to other people involved in the plan. The care plan is also available to Case Managers and providers in the member dashboard, Member 360.

Compliance with Home and Community-Based Setting Requirements (4.4.4)

Amerigroup will confirm in accordance with 42 CFR 441.301 (b)(1) waiver services are not furnished to individuals who are inpatient in a hospital, nursing facility, institution for mental diseases, or ICF/ID.

As part of Amerigroup's education plan with HCBS providers, we will continue to educate and remind them that they cannot bill for services while a member is inpatient in a facility. In addition, we mine claims to identify instances when providers bill for delivery of HCBS waiver services while a member is in an institutional setting and recoup the payment when appropriate.

We will also ensure non-institutional LTSS are provided in settings that comport with the CMS home and community-based setting requirements as defined in regulations at 42 CFR 441.301(c)(4) and 42CFR 441.710(a) and as specified by DHS in rule or policy. We will cooperate fully with DHS in the assessment of an HCBS setting upon request of DHS.

Disenrollment (4.4.5)

Minimum Service Requirements (4.4.5.1)

Amerigroup will track and notify the State of any instance when a member enrolled in an HCBS waiver does not receive at least one billable unit of service under the waiver per calendar quarter. We will provide notification of such instances in the manner prescribed by DHS.

If the State determines a member is no longer eligible for 1915(c) waiver services, we will comply with the disenrollment determination.

Service Needs (4.4.5.2)

Question 4.4, #3

3. Describe how member's expenditures are tracked against any aggregate monthly cost caps.

Amerigroup will build upon the experience of our affiliate plans that cover HCBS waiver services subject to a cost cap and track expenditures against this cap. For example, in Tennessee, our affiliate health plan's care coordinators monitor cost neutrality by calculating the monthly cost neutrality amount based on three levels of institutional care and projecting expenditures for HCBS waiver services and other services included in the calculation as specified by the State, such as home health and private duty nursing services. We maintain the cost cap, HCBS projected expenditures, and monthly tracking in the care coordination and management system.

Our affiliates have been successful in other states, such as New Jersey, Tennessee, and Texas, using our proactive approach to intervene early to understand the reasons members may be approaching or exceeding their cost cap and to arrange or authorize alternative services when needed to maintain members in the community within the state's cost guidelines. We do not hesitate to authorize supplemental/additional services to prevent the need for higher cost care, including institutional placement, except when determined the only feasible service or the member's preferred service setting.

In Iowa, we will apply a similar process that meets the requirements specified in SOW Section 4.4.5.2 subject to DHS review and approval. Our proposed approach is described below.

The member's Community-Based Case Manager will continually monitor 1915(c) HCBS waiver member's expenditures against the aggregate monthly cost cap. The member's Community-Based Case Manager will review HCBS waiver claims, sum the cost of waiver services expenditures for the month, and compare the sum to the aggregate cost cap for the HCBS waiver recorded in the care coordination and management system in the member's service plan. The Community-Based Case Manager will use a *Cost Neutrality and Expenditure Determination* form to track and monitor each member's cost.

We take a proactive approach to monitoring the cost cap. If we find a member within 80 percent of the monthly cost cap amount or it appears that he or she will exceed the cap, the Community-Based Case Manager will contact the member and his or her representative as appropriate to complete a reassessment and determine if the member requires a higher level of care or if his or her needs can continue to be met through a combination of paid and unpaid supports. We will:

- Identify any non-waiver services available to meet the member's needs, including health plan supplemental services designed to help the member remain in a community setting and obtain authorization and/or coordinate access to these services
- If additional services are not available, advise the member of the exception process and assist the member with completion of an exception request for authorization of additional services or an additional amount of existing services
- If the exception request is denied, advise the member of his or her appeal rights, which will also be provided in writing through the standard grievance and appeals process
- Advise the member of alternative and appropriate care settings, which may include congregate care settings (for members not residing in a congregate care setting) when the cost of HCBS waiver services provided to the member in this setting is within the cost cap, or alternative institutional settings

- If the member refuses to transition to a more appropriate option, the Community-Based Case Manager will document this in the care coordination and management system and notify the Long Term Care Manager/Care Coordination Manager who will communicate this information to DHS.

It is also possible expenditures may be approaching or over the cost cap because services were used in excess of the amount authorized for the month, an error was made by the provider when submitting the claims, or for other reasons. In these types of situations, the Community-Based Case Manager will provide education and assistance to the member and/or provider as appropriate to avoid an overage going forward. If a provider is non-complaint with HCBS waiver service provision or billing requirements, the provider will be placed on a corrective action plan by provider relations staff, and the member will be given the option to select a new provider. Providers who continue to compromise the member's cost cap will be terminated. Our goal is to work with members and their community-based care manager and team of supports and service providers to assure they continue to receive the services and supports necessary to remain living in the least-restrictive and most integrated setting.

Receipt of Long-Term Care (4.4.5.3)

Amerigroup will notify the State if the member receives care in a hospital, nursing facility, or intermediate-care facility for individuals with intellectual disabilities for 30 days in one stay for purposes other than respite care. Amerigroup will require Long Term Care providers to notify us of a member's planned admission prior to admission and an unplanned admission within 24 hours of admission. An Amerigroup care coordinator or, if enrolled in a HCBS waiver at the time of admission, his or her Community-Based Case Manager, will contact members admitted to a hospital or long-term care institutional setting to begin discharge planning to support transition back to a community setting whenever feasible, with the concurrence of the member or his or her representative, and at the earliest date clinically indicated and agreed to by the member and treating providers.

Frequency of Community-based Case Manager Contact (4.4.6)

Amerigroup will develop policies and procedures, drawing upon the expertise of affiliate health plans that coordinate HCBS waiver services that comply with Iowa Administrative Code and DHS policy for frequency of Case Manager contact. Amerigroup Community-Based Case Managers will contact 1915(c) HCBS waiver members at least monthly, either in person or by telephone with an interval of at least 14 calendar days between contacts. Care coordinators will visit members in their residence face-to-face at least quarterly with an interval of at least 60 days between visits. Policies and procedures will include the scope and method of each contact, documentation of the contact, and the process to be followed when a member has experienced a change in need(s) or requests an update to his or her service plan. We will generate reports for case management teams identifying members who require a visit in the next 30, 60, 90, 120, or 180 days, to help make sure required visits are made timely.

Monitoring Receipt of Services (4.4.7)

Question 4.4, #4

4. Describe proposed methods for monitoring the provision of services identified on a member's service plan.

Amerigroup will adapt processes implemented successfully in other states where affiliates deliver HCBS waiver services to monitor the provision of services in Iowa. Our system is already configured to support oversight and monitoring and includes the capability to compare service delivery against authorized services and providers.

Amerigroup will maintain the member's service plan in the care coordination and management system and service authorizations in our core system. When services are authorized, a flag is set to be triggered on a specified date, in this case five days after scheduled service initiation, alerting the Community-Based Case Manager of a required activity. Each day, the Community-Based Case Manager reviews members flagged in the care coordination and management system. Community-Based Case Managers will call these members to confirm initiation of authorized services and that these services are meeting the member's needs.

If services have not been initiated or are not satisfactory to the member, the Community-Based Case Manager will identify the reason for this and the intervention needed to resolve the problem. We will also monitor HCBS waiver services claims monthly as part of the required monthly Community-Based Case Manager contact, which includes at least one face-to-face visit with the member in his or her residence quarterly as specified in SOW Section 4.4.6.

Prior to contact with the member, the Community-Based Case Manager reviews HCBS waiver claims submitted and claims paid, compares claims amounts to the member's cost cap as described previously in Section 4.4.5.2, and matches claims to the service plan to identify any apparent gaps in care. We also will program the care coordination and management system to notify Community-Based Case Managers if the following conditions, which must be reported to the State, are met:

- The member does not receive at least one billable unit of an HCBS waiver service a quarter
- The member has a stay in a hospital, nursing facility, or ICF/ID for 30 days for any purpose other than respite

During the monthly contact with the member, the Community-Based Case Manager will review any apparent service gaps to confirm them, review the member's service plan with the member to help assure authorized services are meeting the member's identified needs, and determine if the member has a change in needs, including caregiver availability that requires an adjustment to the service plan following a reassessment.

If there are service gaps, the Community-Based Case Manager will identify the cause and determine if intervention is needed. For example, claims may be missing if a member is sick and misses scheduled days of service that would have otherwise been provided, but these missed services might not constitute a care gap that requires intervention. Other reasons for service gaps that require specific intervention include:

- The provider failed to show up as scheduled, and the member did not notify the Community-Based Case Manager or the member declined authorized services.
- The provider is no longer available, and the member has not selected a new provider.

In these types of situations, the Community-Based Case Manager gathers information from the member and the provider to determine the cause of the problem and develop solutions, including ways to avoid the situation in the future.

We recommend that all health plans work together with DHS to select a single EVV vendor to monitor member receipt of HCBS waiver services and other services as noted in Section 13.1 of our response.

Self-Direction (4.4.8)

Question 4.4, #5

5. Describe in detail your proposed strategy for implementing the Consumer Choices Option, including how Support Broker and financial management services (FMS) will be implemented.

General Responsibilities (4.4.8.1)

Amerigroup fully supports self-directed care and services, and our affiliate health plans offer this option to HCBS waiver enrollees in Florida, New Jersey, Kansas, Tennessee, and Texas. In these states, our affiliates work closely with Financial Management Services (FMS) contractors, including with Public Partnerships, LLC (PPL) in Florida, Kansas, Tennessee, and Virginia. These affiliate plans have developed comprehensive policies and procedures that guide member election, the option to use a representative for self-direction, and implementation and support of self-direction. Best practices from existing, comprehensive, self-direction training programs and member education materials can be leveraged for Iowa.

Amerigroup will work with independent support brokers and with PPL for FMS services in Iowa. PPL provides FMS and/or support broker services in 26 states. PPL and our national self-directed care experts, with input from the Stakeholder Advisory Board and members electing self-direction, will work together to customize existing policies, procedures, training programs, and member materials for Iowa, developing additional and new content as needed to meet all requirements specified in SOW Section 4.4.8. In addition, we will develop and submit a Transition Plan to DHS for review and approval, describing how we will work with members, self-direction representatives, support brokers, DHS, other key stakeholders and the current FMS entity (Veridian) to support member's transition to PPL.

In addition, we will implement resources and supports to increase access to, and selection of, self-directed services, including peer supports for members to learn from others' experiences with self-direction.

The MySupport platform, described in Section 4.4.2, will also help members to connect with personal care attendants who have skills that match their individual needs, preferences, and values.

Support Broker Functions (4.4.8.5)

Amerigroup will work with current independent support brokers, assisting with enrollment and providing training and oversight, to make sure support brokers perform all of the support broker functions described in SOW Section 4.4.8.5 and IAC 441-78. Amerigroup affiliate plan self-direction experts and the FMS entity, working with DHS and with input from support brokers and the Stakeholder Advisory Board, will develop policies and procedures that build on our best practices helping members to successfully self-direct their services.

Enrollment

We will work with the support brokers and DHS to obtain each support broker's evidence of previous satisfactory completion of training and background screening and enroll them without delay upon receipt of this information. We will work with DHS to make sure experienced brokers may continue to provide services to their clients who transition to Amerigroup without interruption during the transition period to Amerigroup.

We will assist individuals wishing to become new support brokers to make sure they meet minimum requirements for age and education and have passed the required background checks (Child Abuse Registry, Dependent Adult Abuse Registry, Sexual Offender Registry checks, and DCI/FBI Criminal History Record checks) prior to working with Amerigroup.

Following enrollment, all support brokers (experienced brokers transitioning to Amerigroup and newly hired brokers) will complete training.

Amerigroup Training

Amerigroup training will consist of Amerigroup core training and Consumer Choices Option training.

Amerigroup core training will be designed to help support brokers understand our health plan operations, programs, and provider-specific procedures. Existing independent support brokers transitioning to Amerigroup will complete this training while they continue to provide support broker services to members.

The second part of training will be Consumer Choices Option and support broker-specific training and will cover all of the topics specified in SOW Section 4.4.8.5. Training will incorporate the DHS Independent Support Broker training content as applicable with additional content developed by Amerigroup as applicable. For example, we will develop training content and materials that describe Amerigroup's development of a member's service plan and self-directed budget and the roles of the Community-Based Case Manager and support broker. We will also develop, with our FMS entity PPL, Amerigroup's financial management services procedures, and PPL will participate in these trainings. We will develop training methods and content with DHS review and subject to DHS approval.

New support brokers (individuals not providing support broker services at the time managed care is implemented) may not provide support broker services to our members until they have completed and satisfied all training and background check requirements and are certified as a Mandatory Abuse Reporter.

Support brokers will have a variety of ways to complete training, including through webinars, online modules, and group trainings offered in key locations throughout the State. In addition, local health plan staff, including Provider Services Staff and Community-Based Case Managers, will be available to provide one-to-one assistance to support brokers with all aspects of training and service provision, including transition to Amerigroup.

All providers receive additional periodic training when changes occur that impact their responsibilities and may receive one-to-one training to address performance issues.

Oversight

Amerigroup will be responsible for completion of all required activities and will provide oversight of and technical assistance to support brokers and the FMS in the execution of their responsibilities as displayed in Table 4.4-1. Community-Based Case Managers will coordinate specific activities with support brokers but will not duplicate activities. ***Amerigroup will develop protocols clearly identifying responsibilities to help ensure non-duplication.***

Table 4.4-1. General Responsibilities of the Support Broker and FMS Will Be Carried out with Amerigroup Oversight

Activity	Support Broker	FMS
Identifying resources, including natural and informal supports that may assist in meeting the member’s needs	Y	
Developing a budget to address the needs of the member	Y	
Conducting employer-related activities such as assisting a member in identifying a designated representative if needed, finding and hiring employees and providers, and completing all documentation required to pay self-directed providers	Y	Y
Identifying and resolving issues related to the implementation of the budget	Y	Y
Assisting the member with quality assurance activities to ensure implementation of the member’s budget and utilization of the authorized budget	Y	Y
Recognizing and reporting critical incidents related to self-directed services as further described in Section 10.4	Y	Y
Facilitating resolution of any disputes regarding payment to providers for services rendered	Y	Y
Monitoring the quality of services provided	Y	Y

Community-Based Case Managers will, during the monthly contact with a member receiving HCBS waiver services, assess the member’s satisfaction with self-directed services, their support broker (if using a support broker), and the FMS. Any concerns raised at this time about any aspect of self-direction will be investigated by the Community-Based Case Manager and reported to the Provider Relations Manager and Long Term Care/Care Coordination Manager for assessment and resolution. In addition, we will address any complaints received from members or representatives concerning any aspect of self-directed services in accordance with the grievance process described in Section 8.15.

Oversight will also include monitoring of annual member satisfaction survey results as well as ongoing FMS monitoring of the member’s budget and expenditures. Any support broker issues that appear to be systemic (occur more than once with more than one member) will be addressed through both individual and systemic remediation, which may include changes to policies and procedures, additional support broker training, placing a support broker on a corrective action plan, or terminating the support broker from the network, as applicable.

Informing Members About the Consumer Choices Option

We will take every opportunity to inform Amerigroup HCBS waiver recipients of the Consumer Choices Option including the following ways:

- We will include a link to <http://dhs.iowa.gov/ime/members/medicaid-a-to-z/consumer-choices-option> on our member website and information describing the option and how to obtain additional information in our member handbook.
- Every member enrolled in a waiver that includes self-direction will be offered the choice to self-direct during the service plan planning process, phone calls, reassessments, and other opportunities to describe the value of self-direction. The member’s Community-Based Case Manager will describe the option and explain which services may be self-directed, the option for a representative to direct services with the member or on the member’s behalf, the role of the support broker and FMS, and the responsibilities a member or representative will assume under the option.
- The service plan will include a statement that confirms the self-directed option has been offered to the member during service plan planning and will note the member’s decision (electing or declining the option).

- Members choosing to self-direct services will be asked to sign an informed consent form and risk agreement.

Question 4.4, #6

6. Provide a sample of the following tools and forms related to the Consumer Choices Option:
- a. Self-assessment tool for members seeking to self-direct service;
 - b. Informed consent contract; and
 - c. Risk agreement.

Self-Assessment (4.4.8.2)

Our affiliates have developed self-assessment tools and policies and procedures that specify how and when a member completes a self-assessment and the alternatives available to members when the self-assessment results indicate a member is unable to self-direct services. We propose to use the self-assessment tool submitted as Attachment 4.4-2 and will adapt our existing policies and procedures for Iowa.

Members determined unable to self-direct but who are still interested in this option may appoint a representative to assume self-direction responsibilities. We inform members that they may exercise their choice to self-direct at any time if they are not ready to participate after learning of their responsibilities.

Documentation (4.4.8.3)

In addition to the notation in the service plan (described previously in this section) indicating the member's decision whether or not to self-direct, we will obtain the member's informed consent using the *Informed Consent Contract and Risk Agreement* that will be signed by the member or their representative when applicable and the member's Community-Based Case Manager.

Community-Based Case Managers are responsible for ongoing assessment of risk for those members who self-direct their services, such as the member spending too much in one month from his or her self-directed budget and running out of funds the following month. At the time of the member's decision to participate in self-directed services, a risk assessment is completed or revised, and a *Risk Agreement* is initiated and signed by the member and his or her self-direction representative, legal representative as applicable, and Community-Based Case Manager. A new *Risk Agreement* is initiated and signed when a member experiences a change in needs and in authorized services. The member's Community-Based Case Manager reviews the contract and agreement and answers any questions the member or representative may have. The *Informed Consent Contract and Risk Agreement* are provided as Attachment 4.4-3.

Use of a Representative (4.4.8.4)

Amerigroup fully supports a member's option to select a self-directed representative such as a family member or friend to direct or help direct services. Amerigroup understands that representatives may be either a legal representative or non-legal representative freely chosen by an adult member. If a member selects a non-legal representative, Amerigroup acknowledges that they cannot be a paid provider of services and must be 18 years of age and will ensure consent forms are in place in these instances.

Our affiliate health plans that offer self-direction and PPL have extensive experience working with self-direction representatives. Both PPL and the member's independent support broker will work closely with the member and the self-direction representative, actively engaging the member during each contact. The independent support broker is responsible for making sure the self-direction representative is acting in the best interest of the member. If the independent support broker identifies a concern, this will be brought to the member's Community-Based Case Manager for investigation and resolution. We will adapt existing

member satisfaction surveys and service planning tools to help ensure self-direction representative (legal and non-legal) requirements specified in SOW Section 4.4.8.4 are met.

We will introduce the member to the support broker as soon as possible after his or her service plan is finalized and the member's desire to self-direct has been documented in the service plan. Support brokers will make telephonic contact within two business days, with an initial orientation and enrollment meeting set at the earliest opportunity. The support broker shepherds the member through each step of the enrollment process, helping the member and representative when applicable complete training and requisite paperwork as soon as possible.

The support broker provides the level of support the member and, when applicable, self-direction representative need to complete key tasks. Support broker responsibilities include:

- Educating members on how to use self-directed supports and services
- Assisting in managing budget expenditures and budget revisions
- Assisting with employer functions such as recruiting, hiring, and supervising providers
- Assisting with approving and processing job descriptions for direct supports
- Assisting with completing forms related to employees
- Assisting with timesheets, purchase orders, and invoices for goods
- Obtaining quotes for services and goods, as well as identifying and negotiating with vendors
- Assisting with problem-solving employee and vendor payment issues or concerns
- Assisting with back-up plan development
- Reviewing, monitoring, and documenting progress of the member's self-directed budget
- Completing critical incident reporting

Financial Management Services (4.4.8.6)

Amerigroup will contract with PPL, a *national leader in consumer direction for financial management services (FMS)*. PPL will coordinate and work with the independent support brokers who are approved by the State based on the requirements defined in IAC 441-78. PPL provides FMS to more than 26 states and routinely performs the following functions:

- Fiscal/Employer Agent Services in compliance with the IRS regulations
 - Payroll and timesheet processing
 - Tax filing and reporting
 - Criminal background checks and provider credentialing
 - Development of a provider registry
 - E-verification
 - OIG verification checks
- Financial Management
 - Budget planning, tracking, and accounting
 - Authorization management via business rules engine
 - Claims processing and payment
 - Banking and disbursing funds
- Support, Counseling, and Customer Service
 - Telephonic customer service during business hours in English and Spanish; a language line is also available
 - Provide training for support brokers and Case Managers/care coordinators
 - Provide training for other health plan staff

- Provide training for consumers and providers
- Offer peer trainer services
- Help individuals understand billing and documentation responsibilities, perform payroll and employer-related duties, purchase approved goods and services, track and monitor individual budget expenditures, and identify expenditures that are over or under the budget

PPL's experience and multi-state presence provides states, health plans, members, and their families with a high level of service and security. They offer a fully tested continuity of operations planning and have multiple operating locations that can be utilized in the event of an emergency, providing comprehensive back-up with uninterrupted service. PPL also operates a customer service call center with specially trained call center agents, interactive voice response options, and automated outbound call capabilities. They also provide email communication during standard business hours. Their information system capabilities include a multi-channel single repository time and attendance system to assure time entries are captured at the most convenient time and by the most convenient method, including an online timesheet and smartphone mobile application. Their systems are HIPAA compliant and secure and maintain security testing records.

PPL is proud of its reputation for providing high-quality support broker services, and this is reflected in performance data, audit findings, and the results of satisfaction surveys. ***For example, the 2013 audit of the West Virginia Intellectual and Developmental Disabilities Waiver Personal Options program achieved the highest score possible with zero deficiencies cited.***

Amerigroup is excited to offer an established partnership with PPL, a national leader in self direction for FMS. If selected as one of the Iowa High Quality Healthcare Initiative health plans, we are open to discussion with DHS on which FMS vendor may provide services to assure consistency between the plans and a smooth transition for Iowans.

Back-up Plan

Upon enrollment in self-direction, the support broker assists the member and/or representative in developing a back-up plan that documents how the member's needs will be met. *Identification of participant risks and the emergency plan are components of the service plan.*

The back-up plan addresses the three major risks:

- A worker is unable to provide services or fails to show up as scheduled
- The member experiences a personal emergency or change in condition
- There is a community catastrophe

The member and/or representative develop a written back-up plan. The back-up plan includes but is not limited to the following types of information:

- If a worker is unable to provide services, the back-up worker (who may be paid or unpaid) available to provide services is included along with the worker's contact information. Ideally, the back-up plan includes several paid and unpaid workers to help assure access at any time of the day or night.
- If there is a personal emergency, an emergency contact and other emergency-related information are included along with the member's PCP, hospital preferences, and advance directives. An emergency document suitable for prominent display in the member's home is completed and is to be posted where it is available for any responders.
- If there is a community catastrophe, a personal disaster preparedness plan that addresses who will respond to the participant, where they will go, and critical supplies and personal items they will take with them is included. Some participants prepare a suitcase with extra medications and items necessary for survival should a flood, fire, or other event occur. Members with special needs with the

help of the support broker identify the nearest special needs shelter and how and under what circumstances they will go to the shelter.

The back-up plan will be updated annually or when a member experiences a change in needs, provider, or living situation/circumstances and will be maintained in the member's file. The member will designate a location in the home where the back-up plan will be stored in addition to providing a copy to Amerigroup. The back-up plan is also maintained in the care coordination and management system and readily available in Member 360. This will help assure that all individuals who need access to the back-up plan can readily access it when needed.

Budget (4.4.8.8)

The member's self-directed budget is determined during service plan development. The services that may be self-directed are included in the service plan, and the member's Community-Based Case Manager calculates a budget based on the fee-for-service (FFS) rate for each service in the amount specified on the approved service plan. The budget is approved by the member's service plan team.

At the time of enrollment into the CCO, the support broker reviews the self-directed budget with the participant and/or self-direction representative and assists in the development of a spending plan, which specifies how budget funds will be utilized over the term of the budget. This includes helping the member identify the rate they want to pay their worker, comparable rates for the service when paid fee for service, and assistance with the negotiation process. In addition, the support broker helps make sure the member does not schedule a worker for more than 40 hours weekly. This helps assure the participant's service needs are met in the manner he or she chooses but within the limits of the assigned budget.

As services are provided and costs are applied to the participant's budget, PPL's web portal will identify and pend (not pay) any services in excess of the spending plan. These are researched, and the member, his or her self-direction representative and/or worker, support broker, and Amerigroup Community-Based Case Manager are notified of excess spending. The Community-Based Case Manager working with the member, support broker, and FMS, investigates and resolves these situations. The support broker monitors these occurrences to help assure timely resolution and also to provide feedback and training to the member and self-direction representative as needed. PPL will provide Amerigroup with budget utilization reports, which allow case-specific and program-wide monitoring of budget use.

Payment (4.4.8.9)

The member or his or her representative review and approve time sheets to determine accuracy and appropriateness, with the assistance of the support broker when needed. Members using the MySupport platform, as described in 4.4.2, will have access to an easy-to-use time sheet tracking system.

PPL has robust policies and procedures, as well as internal controls, for processing payroll and payment for goods and services. Prior to the program launch, PPL will document eligibility criteria, available services, start and end dates, unit and dollar limits, rates, and provider qualifications. These become the business rules and drive the process. In addition, they will configure their payroll system to correspond with all payment rules, including time sheet, budget caps, and invoice submission windows.

Members review the caregiver's time sheet and other invoices each week to confirm what has been submitted for payment to PPL. This can be accomplished via the PPL web application or mobile app, fax, or mail. In addition, PPL uses their web portal platform and other software to validate the provider credentials and expenditures against the authorized and approved itemized services and goods. All time sheets and invoices are reviewed and compared to the service plan and matched to the member's approval as a check and balance process. Any payment requests that exceed the authorization limits will be partially paid or pending for Case Manager review and approval or denied based on the established program rules.

PPL will recoup any unspent funds monthly for service accounts and annually for savings accounts. Amerigroup will work with PPL to establish the policies and procedures following DHS' rules for recouping unspent funds monthly for service accounts and annually for saving accounts. PPL typically runs biweekly or twice monthly payroll. PPL can run off-cycle or special payroll as needed to accommodate outliers in agreed-upon circumstances

Services Pending Implementation of Self-directed Services (4.4.8.10)

Amerigroup will provide all 1915(c) HCBS waiver services to members who elect the Community Choices Option with network providers until all necessary requirements are fulfilled to implement the self-direction of services. This includes, but is not limited to, verification of the provider's qualifications and completion and signature on all service agreements. If the member elects not to receive services using network providers, until all necessary requirements have been fulfilled to implement the self-direction of services, Amerigroup will document this decision and provide face-to-face visits with a Community-Based Case Manager or care coordinator at the frequency determined necessary to ensure the member's needs are met.

Provider Qualifications and Employment Agreement (4.4.8.11)

PPL will help assure provider qualifications are met and agreements are signed prior to enrollment and throughout the life of the employment relationship as specified in SOW Section 4.4.8.11. PPL ensures completion of criminal record checks and adult and child abuse registry check information. PPL's employer and employee profile logic defines the qualification to provide services and the services the employee is authorized to provide.

Member and Self-direction Representative Training (4.4.8.12)

The support broker will provide member and self-direction representative training that meets the requirements of SOW Section 4.4.8.12, including training in:

- The member's roles and responsibilities and those of a representative
 - Scheduling employees
 - Assisting with forms related to employees, including time sheets
 - Evaluating employees
 - Terminating employees
- Identifying resources to meet the member's self-directed service needs
- Developing a budget
- Managing and monitoring the budget
- Managing revisions to the budget
- Performing employer functions
 - Assisting with recruiting, hiring, training, and overseeing employees
 - Assisting with and approving job descriptions for employees
- Online tools training: BetterOnline™ Portal and Better@Work™ mobile app
- Critical incidents and how to report these
- Resolving disputes with employees
- Back-up planning

PPL has an extensive library of training materials developed for self-directed programs in other states that serve adults with physical disabilities, children with disabilities, individuals with intellectual and developmental disabilities, elders, and others that will be adapted for Iowa.

Monitoring (4.4.8.13)

Question 4.4, #7

7. Describe your approach for monitoring the quality of service delivery and the health, safety and welfare of members participating in the Consumer Choices Option.

In addition to the individual monitoring provided by support brokers and budget, expenditure, and provider qualifications monitoring provided by the FMS, Amerigroup will monitor the quality of service delivery and the health, safety, and welfare of members participating in the Consumer Choices Option through the following additional activities:

- We will hold weekly operational meetings and quarterly program meetings with PPL, an approach implemented successfully by our affiliate health plans, to discuss and develop ongoing improvements to internal processes resulting in a better experience for members enrolled in the Consumer Choices Option.
- We will also hold weekly calls to discuss members who have been referred for enrollment but have not initiated services. We will identify where in the process the member and his or her identified provider(s) are and if there are any barriers preventing the member or provider from completing the enrollment process. When barriers are identified, Amerigroup and PPL will discuss how to remove the barriers to complete enrollment. We will also maintain a dedicated employee to work with PPL in initiating consumer-directed services. This dedicated employee will serve as a liaison in the initiation process.
- In addition to our weekly calls, we will implement a consumer direction dashboard that enables us to track referral turnaround times. We will then use this information during our meetings with PPL to identify solutions to reduce turnaround times.
- Amerigroup will conduct interviews with members and representatives monthly and home inspections quarterly at a minimum to confirm that workers are acting in accordance with members' interests. We will develop interview and home inspection forms or checklists that must be completed by a member of our care coordination staff and entered into the care coordination and management system. Data from these activities will be reviewed to identify both individual issues that require follow-up with a member or his or her representative and program-level trends that require development of a quality improvement plan.
- Amerigroup can perform independent, real-time monitoring of support broker and FMS functions through PPL's web portal, which gives Amerigroup users administrative rights to review a member's self-directed activities and create reports reflecting the timeliness and accuracy of PPL's performance for specified functions.
- Amerigroup will conduct a participant satisfaction survey of program participants when a member elects to disenroll from the CCO or annually, whichever event occurs first. We will develop the survey tool with input from the Stakeholder Advisory Group and will produce and distribute an annual written report of findings to the Stakeholder Advisory Group, Quality Management and Improvement Committee, PPL, and LTSS team for review and identification of areas for improvement. We also will develop a performance improvement plan when indicated to be implemented by our Quality Management and Improvement program in conjunction with our Long Term Care/Care Coordination Manager.

Disenrollment from Self-direction (4.4.8.14)

Members may voluntarily disenroll from the CCO at any time. In addition, members may also be disenrolled when there is evidence of Medicaid fraud or misuse of funds or if continued self-direction poses a risk to the member's health or safety. Amerigroup will submit involuntary disenrollment requests to DHS for review and final determination. We will submit requests in the format required by DHS and include the information necessary for documentation of the rationale for termination to aid DHS' review and determination. In the event of disenrollment:

- Amerigroup will send a notice to the member regarding termination from the CCO following all policies and procedures established by DHS.
- The Community-Based Case Manager will facilitate a seamless transition from the CCO, helping assure that the member transitions to the standard HCBS waiver service model without interruption or gaps in service delivery.
- The member's Community-Based Case Manager will complete a reassessment and develop a new service plan with the member for traditional service delivery.

PPL will terminate the member in the PPL system, which will prevent any further payments (based on the Amerigroup notification of disenrollment from the CCO).

The Community-Based Case Manager may authorize interim HCBS waiver services to maintain the member in his or her community setting pending completion of a service plan, provider selection, and service authorization. This will reduce the potential for an interruption or gap in services for the member.

General Provisions (5.1)

Aggregate Cost-sharing Limit (5.1.1)

Question 5.1, #1

1. Describe your strategy for ensuring total cost sharing does not exceed five percent (5%) of quarterly household income.

Amerigroup Iowa (Amerigroup) agrees to comply with all cost-sharing provisions in accordance with 42 CFR 447.50 through 447.60, the State Plan, and the State's 1115 waiver for the Iowa Health and Wellness Plan. Amerigroup will track members' cost-sharing to make sure that in the event a member's five percent quarterly limit is reached, cost-sharing is no longer collected until the beginning of a new quarter, and the provider's reimbursement is adjusted accordingly. At that point, copayment amounts will no longer be deducted from claims reimbursement.

We will load income data that are provided to us by the State via daily 834 eligibility files to our claims processing system. Amerigroup tracks copayments through our Medicaid Management Information System (MMIS) on a quarterly basis. We track payments from both members and vendors that make payments on a member's behalf. If the five percent limit for the household is reached, all cost-sharing incurred by all household members is included in the calculation, as noted in Scope of Work (SOW) Section 5.1.1. Amerigroup will notify providers of members' financial participation or cost-sharing requirement and submit this methodology to DHS for review and approval.

We acknowledge that any cost-sharing imposed on Iowa Initiative Members must be in accordance with State and federal policy, as described in SOW Section 3.2.15.3 Cost Sharing and Patient Liability.

Conditional/Potential Members

All new members will be considered conditionally eligible for the first 60 days; new member information will be sent by the State on a Conditional Eligible 834 file. Upon receipt of the conditional 834 eligibility files, Amerigroup will mail fully eligible members a Welcome Packet that includes the following:

- Member Handbook
- Welcome Packet Insert — Please Read
- Welcome Packet Insert — Provider Directory Request
- Welcome Packet Insert — PCP Selection Form
- Employer Contribution Notice
- Non-profit Contribution Notice
- Welcome Letter content based on the member's Plan enrollment and Federal Poverty Level (FPL)

Experience with Cost-sharing, Billing, and Collections

Our affiliates' experience with the Healthy Indiana Plan (HIP) 2.0 and other states has paved the way for us to implement industry best practices for both cost-sharing and billing and premium collections.

For the past seven years, our Indiana affiliate has successfully administered cost-sharing and billing and collection services for the Healthy Indiana Plan. The plan's current enrollment is 25,800, with 16,500 caretaker members (families with children) and 9,300 members (individuals). An average of 15,600 members makes monthly contributions to their POWER accounts, similar to paying monthly Medically Needy premiums. Members are adults ages 18 to 64 and their dependents who are not eligible for employer coverage or Medicaid; have not had insurance coverage for the previous six months; and have a family income at or below 200 percent of the federal poverty level. The plan is responsible for billing and

collection, providing notices regarding member status including delinquent payments, and terminating members for non-payment. It accepts payments by mail, telephone, and online using electronic bank withdrawal, and has an arrangement with a large national chain of retail stores that will accept cash and debit card payments from members. Additionally, employers can pay up to 50 percent of a member’s premium, and the health plan can arrange an automatic payroll deduction for members.

Public Notice (5.1.2)

Question 5.1, #2

2. Describe processes for making information on premium and cost sharing available to both members and providers.

Making Cost-sharing Information Available

In accordance with SOW Section 5.1.2 and SOW Section 13.4.8 Member Financial Participation and Cost-Sharing, Amerigroup will provide the following information to both providers and members:

- The groups of individuals subject to cost-sharing charges
- The consequences for non-payment
- Cumulative cost-sharing maximums
- Mechanisms for making payments for required charges
- A list of preferred drugs or a mechanism to access such a list if drug copayments are applied by Amerigroup

Amerigroup currently has policies and procedures that guide us in identifying members who are exempt from cost-sharing provisions.

Amerigroup’s electronic member enrollment records include an indicator that reflects each member’s copayment status, which is updated with current information from DHS. Member identification cards are mailed within five days of receipt of the enrollment file from DHS.

New members with the no copayment indicator on the enrollment file automatically receive an identification card that indicates \$0 copayments, as illustrated in Figure 5.1-1. Existing members who reach their limits are noted through the inclusion of an indicator on the enrollment file that triggers an update to their electronic record and the automatic issuance of a new identification card indicating \$0 copayments.

Amerigroup will accumulate the cost share amounts for members. We will notify members in writing when their cost share maximum has been met for the quarter and provide instructions to call customer service if a member feels they have paid more than five percent of their family’s income for the quarter on healthcare. The letter will also include the effective date the cost share is met and inform the member they will have no further contributions or

Figure 5.1-1. ID Cards Will Clearly Identify Members with Cost-sharing Protections

copayments for the remainder of the quarter and that cost share will be reinstated at the beginning of the following quarter.

Our member and provider handbooks reference the cost-sharing and suspension processes. We inform providers cost-sharing is flexible and changes quarterly. The member handbook details how members may report their out-of-pocket expenses; what happens once we determine the cost share has been met for a quarter; what the member will receive; and how to access their information via the portal. We will continue to send the member an invoice but inform them that the actual premium amount due is suspended until the end of the quarter.

Amerigroup will also provide a cost-sharing calculator for our members via the member portal, which will allow members to login and view cost-sharing information as well as medical claims.

Provider Notification of Cost-sharing

Amerigroup will use several methods to make Network Providers aware of members' cost-sharing status. Our approach encourages optimal member service by offering providers several opportunities to confirm cost-sharing requirements when serving Iowa members, which results in reducing confusion and potential obstacles to care and services.

ID Card. As noted above, each member who is exempt from cost-sharing provisions is issued an ID card that indicates that copayments are not required. Amerigroup instructs providers to check member ID cards at each visit.

Monthly Summary Report. Each month, Amerigroup will deliver a listing of all members assigned to a PCP or medical home. Such rosters will include an indicator for members who are exempt from cost-sharing.

Provider Services. Provider Service Representatives can verify each member's cost-sharing status when checking eligibility by telephone.

Amerigroup continuously explores additional opportunities to share information with providers. We are currently developing other avenues for cost-sharing verification. For example, provider offices often verify a member's eligibility during an office visit through our voice portal. We are enhancing our provider voice portal to include automatic alerts for members who have no copayments. We are also upgrading our provider website tool to enable secure, real-time viewing of each member's copayments status when the provider office checks eligibility online.

Amerigroup will continue to identify and implement innovative tools to enhance the experience for both members and providers, including processes related to protecting members with no copayments.

We propose that providers use the State eligibility site, or the eligibility portal, to determine whether or not a cost-sharing amount should be collected. This approach has worked successfully for our Indiana health plan. The portals will show if there is a copayment required at the time of service. HP, our Web Interchange partner, will update copayment requirements according to the quarter the cost share is suspended in the Web Interchange.

Healthy Behaviors Program (5.2)

Tracking Compliance to Healthy Behaviors Program

Amerigroup Iowa (Amerigroup) is excited to aid in the administration of the Iowa Healthy Behaviors Program, which allows members to have their premium responsibility waived in the first year after a member's enrollment. Our care model encourages member responsibility in their health and incentives have been an effective way to encourage that responsibility. We understand that member premiums will continue to be waived in subsequent years if members complete the healthy behaviors described below in their prior annual period.

Amerigroup will comply with the requirements in Scope of Work Section 5.2 Healthy Behaviors Program. We understand that each year, the State will submit its proposed protocols and standards for the Healthy Behaviors Program to CMS for subsequent review and approval. As a steward of the State's program(s), we will judiciously implement policies and procedures in support of this Program.

For all Iowa Health and Wellness Plan members enrolled in the Healthy Behaviors Program, we will track completion of healthy behaviors in our Medicaid Management Information System and will educate members on both the benefits and importance of completing healthy behaviors. Amerigroup is aware that according to the current Program standards, to participate in the Healthy Behaviors Program and avoid paying a monthly contribution, Iowa Health and Wellness Plan members must:

- Get a **wellness exam** (annual physical) from a healthcare provider
- Complete a **health risk assessment**

Our healthcare analytics systems and care coordination processes enable us to track member completion of the healthy behaviors, tie premium collection in the subsequent enrollment year based on member's completion of healthy behaviors in the previous year, and educate members on the importance and benefits of healthy behavior completion.

We understand that members are granted a 30-day grace period after their enrollment year to complete their healthy behaviors and qualify for a contribution waiver.

Copayments (5.3)

Question 5.3, #1

1. Indicate if you propose to implement State Plan copayments on populations in addition to the Iowa Health and Wellness Plan and *hawk-i* members.

Amerigroup Iowa (Amerigroup) intends to impose copayments for Iowa Health and Wellness Plan participants in accordance with the State's 1115 waiver and *hawk-i* members in accordance with the State's CHIP Plan.

For all other enrolled populations, Amerigroup will impose copayments as outlined in the State Plan, *with the exception of the following three categories in which copayments will not be imposed:*

- Generic/Preferred Brand Rx
- Psychologists
- Physician Office Visits

The elimination of copayments for these services reinforces Iowa's health goals to provide coordinated care and high quality outcomes.

Amerigroup will comply with all benefit, copayment, and cost-sharing provisions as required by the Contract and statutory and regulatory requirements.

During implementation, benefit packages will be configured, and those populations that do not have copayments will be configured into a benefit package where they are not taken. This process begins when Amerigroup receives the 834 eligibility files from the State, which indicate the status of the member and then translates in the system to a benefit package that will not take copayments or will take copayments depending on the eligibility status of the member. We have the infrastructure necessary to support benefit and cost-sharing provisions, including systems configuration, training, and development of policies and procedures that promote compliance with Iowa's requirements. We also understand that some members are protected from copayments and cost-sharing provisions, as described later in this section.

Amerigroup affirms our understanding of cost-sharing prohibition for those members who are exempt from participating in cost-sharing provisions. Further, we acknowledge and understand that certain families may reach their cost-sharing maximum and should be protected from paying additional cost-sharing amounts.

Exempt Populations (5.3.1)

Question 5.3, #2

2. Describe how exempt populations and services as outlined in Section 5.3.1 and 5.3.2 will not be charged copayments.

Copayments will be determined in accordance with the State Plan and federal regulations, specifically in accordance with 42 CFR 447.56. Amerigroup has implemented similar population exemptions from copayments in other states, and we will determine the appropriate benefit package for each member using the information provided by the State and DHS. Copayment information will be included in the member's benefit package and printed on the member's ID card. Pursuant to federal regulations, ***Amerigroup will not collect contributions or impose any other cost-sharing, including copayments for:***

- Individuals between the ages of 1 and 18 years, eligible under 42 CFR 435.118
- Individuals under the age of 1 year, eligible under 42 CFR 435.118
- Disabled or blind individuals under the age of 18 years eligible under 42 CFR 435.120 or 42 CFR 435.130
- Children for whom child welfare services are made available under Part B of title IV of the Social Security Act on the basis of being a child in foster care and individuals receiving benefits under Part E of that title, without regard to age
- Disabled children eligible for Medicaid under the Family Opportunity Act
- Pregnant women during pregnancy and through the postpartum period, which begins on the last day of pregnancy and extends through the end of the month in which the 60-day period following termination of pregnancy ends, in accordance with 42 CFR 440.210(a)(2) and 440.250
- Any individual whose medical assistance for services furnished in an institution is reduced by amounts reflecting available income other than required for personal needs
- An individual receiving hospice care, as defined in section 1905(o) of the Social Security Act
- Non-urgent use of hospital emergency rooms by members who are identified as an American Indian pursuant to 42 CFR 447.51; the State will identify all American Indian members through the eligibility determination process

- Individuals who are receiving Medicaid by virtue of their breast or cervical cancer diagnosis under 42 CFR 435.213

Exempt Services (5.3.2)

Amerigroup's affiliates have implemented similar service exemptions from copayments in others states, and we will make sure copayments are not imposed for the following exempt services:

- Preventive services provided to children under age 18 years
- Pregnancy-related services, including those defined at 42 CFR 440.210(a)(2) and 440.250(p) and counseling for cessation of tobacco use
- Provider preventable services as defined at 42 CFR 447.26(b)
- Family planning services and supplies described in section 1905(a)(4)(C) of the Social Security Act

Nonemergency ER Use (5.3.4)

In accordance with SOW 5.3.4 Nonemergency Use of Emergency Room, Amerigroup will impose an \$8 copayment for Iowa Health and Wellness Plan members' nonemergency use of an emergency room (ER) and a \$25 copayment for *hawk-i* member's nonemergency use of an ER.

A copayment will *not* be imposed on *hawk-i* members whose family income is less than 150 percent of the federal poverty level (FPL). To impose cost-sharing for nonemergency use of the ER, the hospital providing the care must first conduct an appropriate medical screening pursuant to 42 CFR 489.24 to determine the individual does not need emergency services.

Amerigroup will inform our provider network of the emergency room services copayment policy and procedure such as the hospital's notification responsibilities outlined below and the circumstances under which the hospital must waive or return the copayment. We acknowledge that, before providing nonemergency treatment and imposing cost-sharing for such services on an individual, the hospital must:

- Inform the individual of the amount of his or her cost-sharing obligation for nonemergency services provided in the ER
- Provide the individual with the name and location of an available and accessible alternative nonemergency services provider; if geographical or other circumstances prevent the hospital from meeting this requirement, cost-sharing may not be imposed
- Determine that the alternative provider can provide services to the individual in a timely manner with the imposition of a lesser cost-sharing amount; the assessment of access to timely services must be based on the medical needs of the enrollee
- Provide a referral to coordinate scheduling for treatment by the alternative provider

Amerigroup will:

- Inform an individual of the amount of his or her cost-sharing obligation for nonemergency services provided in the ER
- Provide the individual with the name and location of an available and accessible alternative nonemergency services provider; if geographical or other circumstances prevent us from meeting this requirement, cost-sharing may not be imposed
- Determine that an alternative provider can provide services to the individual in a timely manner with the imposition of a lesser cost-sharing amount; the assessment of access to timely services must be based on the medical needs of the enrollee
- Provide a referral to coordinate scheduling for treatment by the alternative provider

Inability to Pay (5.3.5)

We understand that members may notify providers that they are unable to pay a copayment. As indicated in SOW Section 5.3.5 Inability to Pay, providers may not deny care or services to any member because of his or her inability to pay the copayment. To enforce this policy, Amerigroup will proactively engage and educate providers, provide documentation in the Provider Manual, and assist members who report they have been denied services based on an inability to pay.

Proactively Engage and Educate Providers

In addition to having the people, processes, and systems in place for determining cost-sharing and member contributions and informing members of their responsibility, we will proactively engage and educate our provider network. Providers will need to understand how the Iowa Initiative works and program eligibility requirements such as extending member enrollment to 12 months and providing a 90-day grace period to members for premium payments.

Our Provider Representatives will be working on the ground with providers, and will help educate them on changes to the program. We will also use our communication media, such as blast faxes, provider newsletters, and our provider website, to disseminate educational information to our network providers regarding the program.

We will also include Medically Needy training in our regularly scheduled twice-monthly provider orientation and training seminars. Our approach will foster a positive message regarding members enrolled in this program and will help members and their families find the primary care provider (PCP)/medical homes they need for quality healthcare.

Claims Payment (5.3.6)

Helping assure that provider payments are accurate and timely is an Amerigroup priority, as it is a key component of provider satisfaction. Payment and cost-sharing tracking is built into our claims payment systems and processes.

In accordance with SOW Section 5.3.6 Claims Payment, Amerigroup will reduce the payment it makes to a provider by the amount of the member's copayment obligation, regardless of whether the provider has collected the payment or waived the cost-sharing, except as provided under 42 CFR 447.56(c).

Please see Section 13.4 for a complete description of Amerigroup's Claims Payment and Processing best practices.

Patient Liability (5.4)

Question 5.4, #1

1. Describe your proposed methodology for notifying providers of the patient liability amount and paying providers net of the applicable patient liability amount.

Our affiliate health plans have a wealth of experience in administering benefits that include patient liability, and our team already has a solid understanding of the current patient liability requirements in Iowa. Each state has different requirements, and we tailor our operational processes for each one.

Our methodology for notifying providers is embedded in our established policies and procedures to make sure that members pay their patient liability. We understand that Iowa will notify us via the State's 834 files of any applicable patient liability amounts that are a member's responsibility.

In turn, Amerigroup Iowa (Amerigroup) will communicate the patient liability amount to our providers and delegate collection of patient liability to Network Providers, as appropriate. Amerigroup will pay our providers the net of the applicable patient liability amount.

Performing Required Tasks and Functions

Amerigroup will adapt our current protocols as necessary to reflect the process for collecting patient liability amounts that will be outlined in the contract. We will apply our best practices and standards that have been successfully deployed for similar programs. We fully anticipate that our current infrastructure and experience will enable compliance with Iowa's contract requirements.

For example, our provider agreements and provider manual will include a provision that acknowledges the member may have patient liability responsibilities and that the reimbursement from Amerigroup to the provider will automatically deduct any patient liability amount, as appropriate.

To illustrate our capabilities, in Tennessee, Amerigroup's affiliate is required to administer patient liability requirements for members who meet criteria and receive Long Term Services and Supports (LTSS), including those residing in a nursing facility and those receiving home and community-based services (HCBS) as an alternative. The State provides relevant patient liability data in its daily enrollment file, including the member's monthly liability amount. Amerigroup's Tennessee affiliate maintains discrete processes for nursing facility and HCBS providers, each of which we describe below to illustrate the depth of Amerigroup's capabilities for the Iowa Initiative.

As always, members who need additional assistance understanding their obligations or navigating the program can engage a Member Advocate from the health plan to assist them throughout this process.

Patient Liability for Nursing Facilities

We recognize that some members residing in a nursing facility or Intermediate Care Facility for people with Intellectual Disabilities (ICF/ID) have a patient liability that must be met prior to Medicaid services reimbursement. If a nursing facility or ICF/ID is considering discharging a member due to non-payment of the patient liability, Amerigroup will work with the nursing facility to remediate the issue and/or assist in locating an alternate nursing facility or ICF/ID willing to

Amerigroup will train our employees, including Case Managers, LTSS Service Coordinators, and Member Service Representatives, as well as our network providers on all requirements related to patient liability so that we can educate and support our members and providers.

IA_54_COB_13

serve the member and document these efforts, in accordance with SOW Section 4.3.12.2 Client Participation Assistance.

Amerigroup's affiliates cover nursing facility services in several markets: California, Florida, Kansas, New Jersey, New York, Tennessee, Texas, and Virginia. Due to the unique nature and complexity of nursing facility claims, we maintain a specialized team to process and monitor claims and ensure that timeliness standards are met. Amerigroup has developed the experience, institutional knowledge, policies, and procedures necessary to meet the State's processing standards. Our knowledge will be leveraged in the Iowa program to ensure the prompt and accurate payment of nursing facility claims.

Amerigroup acknowledges understanding of the requirement to collect the member's portion of the rate for nursing facility care. We are successfully performing this function for our nursing facilities and maintain a process to deduct patient liability collected by providers. We work closely with our members and providers to help them understand the process.

Amerigroup works to ensure that no provider bills a member for all or any part of the cost of a treatment service, except as allowed for Title XIX cost-sharing and patient liability.

Patient Liability for HCBS Providers

Amerigroup understands that HCBS providers who provide waiver services are also subject to patient liability requirements and that the primary provider is responsible for collecting the patient liability. For members with multiple providers, we will coordinate collection with those providers. Our affiliate in Tennessee has established a best practice for applying patient liability amounts that we may consider in Iowa. In any case, Amerigroup will comply with all State requirements.

HCBS providers are often small businesses that rely on a strong cash flow to thrive in their community. Amerigroup affiliates' best practices in other markets reinforce the financial viability of our HCBS providers by directly billing members receiving HCBS for their patient liability amounts. HCBS providers are paid in accordance with their contracts, and the affiliate bears the risk for member payment of their liability amount each month.

To illustrate how we may opt to conduct this for the Iowa Initiative, we look to our Tennessee affiliate experience. Community-Based Case Managers work with members to educate them as necessary about their patient liability requirements, including their monthly obligation, and support them in developing a payment plan. Each month, the health plan sends an invoice to the members for their patient liability amount and directly collects payments from members.

As with nursing facilities, the Community-Based Case Manager will work with members and their families or representative to resolve non-payment of patient liability amounts. In the process, the case manager will also verify that those members' finances are not being misappropriated by family or representative. The case manager supports the member to identify and try to resolve barriers to payment. For example, the case manager may refer the member to the local Center for Independent Living that offers budget and financial management training. Our staff will apply best practices and work with HCBS providers to address issues related to patient liability.

Balance Billing

Amerigroup will comply with all requirements addressed in SOW Section 5.4, Patient Liability and SOW 3.2.15.3 Cost Sharing and Patient Liability. In accordance with 42 CFR 438.106, Amerigroup and our contracted Network Providers will not hold members liable for any of the following:

- Covered services provided to the member for which DHS does not pay Amerigroup
- Covered services provided to the member for which DHS or Amerigroup does not pay the provider that furnishes the services under a contractual, referral, or other arrangement
- Amerigroup's debts or our subcontractor's debts, in the event of the entity's insolvency

Providers contracted with Amerigroup may not “balance bill” our members, which means that members cannot be charged for covered services above the amount Amerigroup pays to the provider.

We Educate Members and Providers

We communicate, educate, and remind providers on member payment issues in a variety of modes and methods, including:

- **Provider agreements** — As part of the provider agreement, Amerigroup Iowa will specify the nursing facility's responsibilities regarding patient liability. Our contracts with providers will explicitly state that members may not be billed for covered services.
- **New provider education** — We train new providers who join the Network, and balance billing is one of many topics that we address.
- **Existing provider education** — We train existing providers through group seminars throughout the year and during one-on-one office visits at least annually; if balance billing is an issue, we review our policy and federal and State laws and regulations.
- **Provider policy and procedure manual (Provider Manual)** — We address balance billing in our Provider Manual, which is an addendum to the provider agreement.
- **Provider bulletins and other general communications** — If balance billing occurs as an issue across the Network, we include this topic in general provider communications such as provider bulletins and newsletters; if it is specific to an individual provider or small set of providers, we address the issue in a personalized letter and outreach.

By signing our participating provider agreement, providers acknowledge acceptance of payment from us as payment in full as a condition of participation in the Iowa Health and Wellness Plan and in the Amerigroup Network.

Prior to authorizing services with out-of-network providers, we will assure that they fully understand and accept the prohibition against balance billing. Our Provider Relations employees educate providers on prohibited practices and continuously monitor their activity. Providers must report and maintain a central record of amounts charged to members and billing activity related to services provided to a member. In addition, we educate members about the resolution and the consequences of signing waivers for non-covered services. Amerigroup will help a member recover payments for inappropriate charges and will repay the member if the recovery is not successful.

Working with Members

We inform members that they may not be balance billed. Members may contact our Member Services call center for assistance with billing issues. Our Member Services call center and Grievance and Appeals Department work with members to promptly resolve balance billing issues. Further, in accordance with SOW Section 3.2.15.3 and all related State and federal regulations (such as 42 CFR 438.106), we and our subcontractors will not hold members liable for any covered service or for our debts. Should members have questions regarding cost-sharing and patient liability, our Member Services call center staff is prepared to respond to member concerns or issues, as required in SOW Section 8.3.2, Helpline Staff and Knowledge.

New and Innovative Approaches

Amerigroup will have Community-Based Case Managers who specialize in serving either members in nursing facilities or those living in the community with HCBS waiver services. This specialization fosters expertise in delivering services and cultivating relationships with providers who have very different needs. For addressing patient liability, this specialization helps our Community-Based Case Managers understand the impact of collecting patient liability amounts from members. For example, Community-Based Case Managers build a solid understanding of the billing and collection practices of the nursing

facilities in which they visit members and can collaborate with them to enhance them as necessary to maximize payment of patient liability amounts.

IDPH Sliding Scale (5.5)

Question 5.5 #1

1. Describe how your organization will ensure the IDPH approved sliding fee schedule is implemented among network providers.

- Amerigroup Iowa (Amerigroup) understands that substance use disorder services are available to Iowa Department of Public Health (IDPH) participants based on a sliding fee scale and that sliding fees are determined on the basis of income and family size and standardized for all IDPH-funded treatment service providers. Further, we acknowledge that for all IDPH-eligible transactions, IDPH funds shall be the payment of last resort for IDPH participants.
- Amerigroup understands that we will receive a per member per month capitation payment for all enrolled members, with the exception of IDPH-funded substance abuse services, which are funded by federal block grant and State appropriations under the authority of IDPH.
- Amerigroup acknowledges that we will not bear the risk for the delivery of IDPH substance abuse services and that we will receive separate funding from DHS and IDPH. In addition, we understand we must meet distinct funding and service requirements while assuring close coordination of all services and supports. In accordance with SOW Section 5.5, Amerigroup will make sure that the following practices are enforced:
 - IDPH-approved sliding fee schedule will be implemented among Network Providers.
 - IDPH participant billing and collection procedures will be consistent with those established and provided by the IDPH.
 - Services funded partially or completely by IDPH will not be denied to a person because of the inability of the person or group to pay a fee for the service.
 - There will be no charge for missed appointments, but a one-time no-show fee, not to exceed an amount established by IDPH, may be charged to IDPH participants.
 - Amerigroup will work to identify and implement innovative tools to enhance the experience for both members and providers, including educating providers about the IDPH sliding fee schedule.

General Provisions (6.1)

Amerigroup Iowa (Amerigroup), along with our affiliate plans, is an industry leader in providing culturally competent network solutions for our state partners: solutions that recognize and support the needs and preferences of some of the most vulnerable citizens. Our provider network development and management is based on the experience we gain by being on-the-ground in the markets we serve; collaborating with providers, community leaders and advocacy groups; and listening to our potential members and their families describe the challenges they face as they maneuver the healthcare system. Building our network strategies around this feedback creates a strong foundation for the repeatable and sustainable success of our networks. When it comes to provider network development and maintenance, our results are strong:

Amerigroup appreciates how to build provider networks. In our organization’s last three significant builds, our affiliate health plans contracted more than 72,000 providers, as shown in Table 6.1-1.

Table 6.1-1. Amerigroup Affiliates’ Extensive Experience in Building Networks

Provider Type	Amerigroup Affiliates’ Recent Network Builds		
	Kentucky*	Tennessee*	Virginia*
Primary Care	5,672	2,167	7,765
Behavioral Health	2,452	1,348	5,783
Specialist	23,176	5,068	14,202
FQHC/RHC	207	101	87
Urgent Care	482	246	51
Hospital (including CAH)	113	52	74
Nursing Facility	10	166	159
LTSS/Ancillary	985	763	1,352
Totals	33,097	9,911	29,473

* Products in Kentucky were TANF/CHIP/BH; in Tennessee for east and west territory expansion products were TANF/CHIP/LTSS/BH/DSNP; in Virginia the product was MMP.

- **Providers count on Amerigroup for prompt payment.** Knowing that many of our providers are very reliant on payments they receive from us, we process payments at least twice per week and streamline our processes to support prompt claims payment. As an example from our affiliate health plans, for the first two months of 2015:

 - 96.7 percent of electronic claims from Florida Nursing Facilities were paid in 10 days
 - 99.9 percent of clean claims from Kansas Nursing Facilities were paid in 14 days
 - 99.9 percent of clean claims from Tennessee Home- and Community-Based Services (HCBS) providers were paid in 14 days.
- **Amerigroup members have high satisfaction with their health plan.** What our members think about us, as reported through the Consumer Assessment of Healthcare Providers and Systems (CAHPS) survey, represents the final measure of our success in building and maintaining strong provider networks. As illustrated in Table 6.1-2, the 2014 CAHPS survey shows that the average results across all of our affiliate health plans were meaningfully **above the NCQA 75th percentile target in all eight categories** for children and six out of eight categories for adults.

Table 6.1-2. Amerigroup Affiliates' 2014 CAHPS Scores Indicate Excellent Member Satisfaction

CAHPS Scores by Percentile (2014)		
Category	Adult	Child
Getting needed care	80.90	85.81
Getting care quickly	81.57	90.98
How well Doctors communicate	89.08	93.15
Customer Service	86.66	89.04
Rating of Healthcare	71.30	85.74
Rating of Personal Doctor	77.61	86.61
Rating of Specialist	79.84	86.76
Rating of Health Plan	73.80	86.80

As explained through our detailed answers in the remainder of this section, and as proven in the statistics above, Amerigroup stands ready to deliver a robust provider network that will meet the established January 2016 go-live date and will meet the needs of our assigned members throughout the life of our contract.

Provider Network (6.1.1)

Question 6.1.1#1

1. Describe how you plan to meet all network composition requirements.

Meeting Network Composition Requirements

Amerigroup will meet the Iowa network requirements by drawing upon the knowledge and experience our affiliates have gained over the past 24 years working in Medicaid and other state-sponsored programs across 19 states. Although simple sounding, we successfully build and maintain networks because we build care systems that serve members in their local communities.

An example of Amerigroup's focus on local solutions is the consultative relationship we developed with Wellmark, Inc.—which has served Iowans since 1939 when it was known as Blue Cross of Iowa—to help us improve our working knowledge of Iowa and its providers. Wellmark is assisting us in partnering with their Accountable Care Organizations (ACOs). Wellmark's intimate knowledge of the Iowa market has allowed us to gain an understanding of Iowa providers and programs and how they interact with members who will be covered under the Iowa Initiative. This has included brokering a discussion with 3M regarding their Value Index Score (VIS) product. Wellmark has assisted in identifying providers that are already in value-based purchasing arrangements so that we know how best to approach the

provider regarding similar arrangements with Amerigroup.

Building upon our Wellmark relationship, Amerigroup is fully engaged with Iowa-based providers, community groups, advocacy organizations, and professional associations. With an overarching commitment to driving improved health outcomes and quality of life for each member, these engagements allow us to better identify network opportunities so that we have the right providers available for our

members. Additionally, by having the right providers in our networks, we can fully integrate the member's physical health, behavioral health, and social services and supports across the spectrum of providers.

We appreciate the relationship the State has built with the University of Iowa. We understand the University of Iowa has been awarded a grant to ensure peer support specialists throughout Iowa are appropriately trained. Further, we recognize that the University of Iowa Health Alliance is a crucial provider of health care services to all Iowans. With that as the background, Amerigroup has engaged with the University of Iowa to establish a partnership that will bring the full array of the University's services and programs to our membership. In addition to acute and behavioral health services linkages, we look to collaborate on items such as:

- Disease prevention, early detection, and intervention
- Supporting transitions for children, youth, and young adults
- Living Well with a Disability training
- Applied Behavioral Analysis and autism services
- Improved health outcomes
- Improved quality scores
- Financial incentive models to incentivize better access to care, decreased medical costs, and improve quality scores
- Telehealth programs
- ACT (SAMHSA) pilot for people with intellectual and/or development disabilities with co-occurring behavioral conditions

As this partnership develops, we will work to realize the benefit of the expanse of department- based initiatives the University has already deployed within Iowa. While not meant to be an exhaustive list, we have interest in the departmental programs of the:

- Child Health Specialty Clinics
- Center for Disabilities & Development
- Center for Child Health Improvement & Innovation
- University Center for Excellence on Developmental Disabilities
- Department of Pediatrics
- Department of Psychology

To signify our commitment to work together, Amerigroup and the University of Iowa have executed a letter of intent and we have agreed to formal contract discussions in May. We are excited about this relationship and anticipate that partnering with the University of Iowa will allow for continued development and implementation of innovative real solutions that improve health and the quality of life for Iowa's most vulnerable citizens, while saving taxpayers money. We believe the efficiencies created and the increase in quality of care and services will be the measurement of success for this partnership.

Our network will include acute care providers, federally qualified health centers, rural health clinics, local health departments, and individual providers that may be strategically located in areas with high or scant concentrations of Medicaid recipients. Our successful network will include community mental health centers, substance use disorder providers, nursing facilities, assisted living facilities, centers for independent living, area agencies on aging, and providers who supply home improvements. Once contracted, our local teams will work closely with all providers—especially those less familiar with being part of a managed care system—so that they are successful within our network and for our members.

As part of our behavioral health network, we have adopted a strategy to develop robust capabilities in behavioral health telehealth and to reimburse services delivered via telehealth at the same rate as office-based services.

To fill in any remaining opportunities for provider types that we may need to consider, we will continue to obtain information about Iowa's providers who currently serve fee-for-service Medicaid members. Reviewing this group of providers will help us continue to identify potential gaps in our network, as well as allow us to cross-walk our membership with providers who may already be caring for our potential members. Once identified, we will work to pursue contracts with those providers.

With 24 years of experience in other markets, our Provider Services team has a great deal of success in helping fee-for-service providers and stakeholders understand and accept the benefits of managed care for members.

Network Development in Iowa to Date

Amerigroup will offer a high-quality, culturally-competent statewide network of providers for the January 2016 start date. Through the avenues described above, and use of GeoAccess® tools, we will demonstrate that our network composition will meet all of the requirements in Exhibit B of the Scope of Work.

Our provider network will have the capacity to enroll a membership of 250,000 members or more. As of April 15, 2015, our network development efforts have yielded Letters of Intent (LOIs) from an array of provider types, summarized in Table 6.1-3.

IA_322_COB_12.J

Table 6.1-3. Amerigroup has Actively Engaged with Providers in Iowa

Provider Types	# of Provider Outreach	# of LOIs/Letters of Support	Approximate # of Locations Represented
Family Planning	17	6	35
Independent Rural Health Centers + Hospital Rural Health Center Affiliates	4	5	20
Federally Qualified Health Centers	40	13	40
Hospitals	123	12	21
Multispecialty Clinics	34	6	739
Health Departments/Public Health	101	26	30
Community Mental Health Centers	36	16	85
Behavioral Health Regional Centers	15	2	2
Home Care & Assisted Living	45	30	52
Skilled Nursing/Nursing Facility	25	26	53
Home Health	7	10	13
Centers for Independent Living	6	7	20

Although not referenced by name in the table, we have secured LOIs with **Broadlawns Medical Center**, **The Iowa Clinic**, **the University of Iowa Health Alliance**, and **Paramount Health Options**. We have also received a letter of support from **IowaHealth+**, who has also assisted in collecting letters of intent from

its member FQHCs. These provider organizations are significant for our network because of the depth and breadth of the services they will provide Iowa Initiative members.

By securing LOIs with these providers, we have established a valuable relationship that forms the foundation for completing a provider contract. With the reception Amerigroup has received during the plethora of provider conversations, we have full confidence in our ability to deliver a robust provider network to Iowa.

To date, we have had discussions with many key Iowa providers, including:

- **Catholic Health Initiatives**, where we are working with a number of providers
- **Unity Point**, which includes 873 providers statewide
- **Mercy Health Network** (including Trinity Health), which includes 1,330 providers statewide
- **University of Iowa Health Alliance** (Mercy Cedar Rapids, Genesis Health Systems, University of Iowa Health Care, Wheaton Franciscan Healthcare)

Furthermore, we have met with the **Iowa Health Care Association** and **Iowa Center for Assisted Living**, and joined them at their 2015 Spring Conference as a Conference Sponsor. More than 400 people representing nursing facilities, assisted living facilities and home health providers attended this conference.

Network Development Goals and Plans

Amerigroup's provider network development goal is grounded in the requirement that we are responsible for providing or arranging for the provision of any medically necessary covered service required by our members, whether specified by the Iowa Initiative documents or not. To that end, our focus is on understanding the provider network that currently serves Medicaid, hawk-i and the aged, blind and disabled populations, as well as assuring appropriate access to Long Term Services and Supports (LTSS) and pharmacies.

Amerigroup's network development plans have and will include:

- Review of our expected membership and its relation to the overall population distribution of the State
- Finalization of the number of providers, by type and location, which will be needed to properly support the depth and breadth of benefits we will administer with a focus on preventive and primary care services
- Refinement of the number of providers when consideration is given to access standards and travel distances that may currently be experienced by Medicaid members
- Engagement with providers who are currently serving Iowa Medicaid members through a combination of reviewing the current Medicaid network, reviewing Wellmark's existing network, and outreaching to providers in the community to understand their referral and use patterns
- Proactive communications with potential providers regarding our strengths and experience in all aspects of Medicaid, including our hands-on approach to provider services in a post go-live era and emphasis on our focused support of those providers who work extensively with waiver populations and LTSS
- Contract terms and conditions that clearly define Amerigroup's expectations of performance and hold all parties accountable to the success of the program
- Continuous monitoring and adjusting of our recruitment focus to confirm that the needs of all member populations and provider types are part of Amerigroup Iowa's network
- Proactive education that addresses provider needs including review of:
 - Member benefits associated with all population
 - Reimbursement practices, including prompt and accurate claims payment

- Technical assistance to help providers succeed, such as one-on-one training to minimize claim submission errors
- Practices aimed at simplifying operations and the provider's administrative burden, such as availability of electronic claims submission, electronic remittances, and electronic fund transfers

We view success as building and maintaining a provider network that addresses the entire continuum of care our members need and receive—from primary care to specialized healthcare services—reflecting our company-wide, member-centered, and family-focused mode of care and service delivery.

Providing Covered Services

We will be ready to assume responsibility for all preventive and primary care services, physical health, behavioral health, and LTSS, including HCBS waiver programs, nursing facilities, and Intermediate Care Facilities for Individuals with Intellectual Disabilities (ICF/IDs) services and supports for the Medicaid, hawk-i, and IDPH participant populations and as required by 42 CFR 438.206. Our approach includes establishing partnerships with existing providers and support systems across Iowa, providing a variety of proven and innovative healthcare programs that will improve outcomes for Iowa Initiative members, and building a close relationship with DHS to promote program success. We create a stable environment through our focus on continuing care delivery by recruiting existing providers, which will allow activities in progress at transition to continue uninterrupted and rapidly bring members receiving ongoing services under our Care Coordination practices. We attribute much of our success to the respect providers have for Amerigroup and our focus on partnership to deliver quality care to our members.

Amerigroup maintains a singular focus on managing publicly-funded health and social support programs. Through our affiliates, we serve more than 5.2 million members in Medicaid other state-sponsored health programs, including nursing facility residents, HCBS program participants, and individual dually eligible for Medicaid-Medicare benefits. The scope of our proposed efforts for the Iowa Initiative reflects our *depth of affiliates' experience across similar populations and benefits*, including a wealth of programs and protocols tailored to the distinct needs of each population we serve.

Experience with Iowa Initiative Covered Services

Amerigroup brings to Iowa extensive experience coordinating and delivering a wide range of integrated benefits and services to diverse Medicaid populations. Table 6.1-4 summarizes our affiliates' membership by population and service to illustrate the depth of our expertise working with individuals, benefits, and providers similar to those in Iowa. *As Table 6.1-4 illustrates, through our affiliates, we are currently serving every population defined in the Iowa Initiative.*

Table 6.1-4. Amerigroup Affiliates Deliver Integrated Benefits to More than 5.2 Million Members*

Amerigroup Health Plans and Programs they Serve, by State

* Membership numbers presented above are inclusive of membership as of December 31, 2014 for our parent company Anthem, Inc. and its state sponsored health plans. Members may be counted in more than one category and numbers are rounded. In addition, in February 2015, our parent company completed the acquisition of two Florida managed care organizations, Simply Healthcare Plans, Inc. (Simply) and Better Health, Inc. (Better).

Our affiliates have a long history in designing and implementing state-specific programs, including those covering populations such as Iowa's HCBS waiver program. We design each program to reflect the local community and state goals and objectives. Our core strengths in benefit and service integration across all populations include:

- **Physical and behavioral health integration** offering member-centered physical and behavioral health programs that holistically coordinate a tailored array of care and services for each individual member, including social and community supports
- **Dedicated and integrated Pharmacy Department** that brings together prescription drug management with Care Coordination, and offers members convenient access to pharmacy benefits that maximize quality and health outcomes in the most cost effective manner
- **Long term services and supports** that are integrated and coordinated with physical and behavioral health services while incorporating highly specialized assessment and service coordination tools with member involvement and direction—supporting members to remain in control of their health
- **Management of nursing facility care** that focuses on diversion and reintegration as well as care and service planning for the nursing facility stay

- **Clinical and data systems** that support efficiency and precision in coordinating benefits across multiple settings

Capacity to Meet the Needs of Covered Populations Network Development and Contracting

Our Provider Services Department has primary responsibility for developing, managing, and monitoring our provider network. Our network development and contracting approach complies with all DHS guidelines and requirements for Iowa Initiative members. In developing, administering, and monitoring the network, we will not discriminate with respect to participation, reimbursement, or indemnification against any provider who is acting within the scope of his or her license or certification under applicable state law solely on the basis of that license or certification. We do not discriminate against providers who serve high-risk populations or specialize in conditions that require costly treatment.

Recognizing our responsibility to provide members with accessible services and a choice of providers, we strive to be proactive in network development and management – carefully identifying and planning for potential network gaps before they become an issue. We regularly review our provider network design and distribution to determine if there are opportunities for improvement. In addition, we monitor member complaints around access and review requests for authorizations from non-participating providers to identify gaps. Most network gaps are the result of providers ceasing to do business, leaving the service area, closing their panel to additional members, or losing their credentials. ***Across our affiliate plans, voluntary turnover rate for providers disenrolling from the network is less than one percent.*** When we identify network gaps or the potential of a network gap, Amerigroup uses a variety of integrated and comprehensive intervention strategies to quickly fill these gaps. For example, our Iowa Provider Solutions team will provide outreach to targeted providers or provider types to discuss network participation.

We developed a five-step process for network development and contracting, presented in Table 6.1-5.

Table 6.1-5. Amerigroup’s Proven Network Development and Contracting Process

Step	Activity	Methodology
1	Identify providers in the coverage area	We identify potential providers through input from our internal staff (including member outreach, provider services, and medical management); existing network providers; our members and their families; community-based organizations; advocates; and listings from applicable regulatory boards of licensed providers. We will also identify providers who are not enrolled in the Iowa Initiative and encourage their participation. In addition, our website provides contact information for providers who may be interested in joining our network.
2	Contract with providers	Our Provider Engagement and Contracting Representatives contact providers, often in-person, to explain the program to them, answer any questions, and obtain signed agreements.
3	Credential providers	We then verify the credentials of providers through our NCQA-approved credentialing process. (Section 6.1.3 for additional details regarding our credentialing and recredentialing process.)
4	Approve providers	Once credentialing is completed and the provider has been approved by the Credentials Committee, we continue with the administrative process of contracting. We verify the W-9 and state-mandated Professional or Facility Applications for completion and accuracy. Once we verify all documents, the Provider Engagement and Contracting Specialist receives the packet and applies an effective date of 30 days in the future. The specialist is required to submit all necessary documents (contracting checklist, rate sheet, provider contract and any amendments, state-mandated professional or facility application form for each participating provider, and W-9) through the tracking database within 10 calendar days of receipt. We load the provider’s contract information into our network database. This sets the provider up for inclusion in our Provider Directory and identifies the provider for future provider communications.

Step	Activity	Methodology
5	Educate providers	We invite all newly contracted providers and their office staff to participate in orientation training. The orientation sessions will be extensive and will include in-service, face-to-face training to communicate all applicable DHS and Amerigroup policies, procedures, rules, regulations, and expectations. We also identify available resources and appropriate methods of communication with Amerigroup. We will offer various times and locations as well as webinar opportunities to attend presentations as part of our initial provider orientation activities and also on an ongoing basis throughout the year. As part of the orientation, our staff provides an overview of the Provider Manual, which will incorporate all DHS and Amerigroup policies and procedures relevant to the operations of the provider office in the delivery of covered services to our members. More information on our education and training procedures can be found in Section 6.1.6.

Serving Expected Enrollment

Amerigroup’s fully scalable operations will enable us to effectively identify and contract with providers who can serve Iowa Initiative members across all enrollment categories. Our experience with diverse populations and comprehensive benefit packages through our affiliates in other states have led us to anticipate Medicaid enrollment, evaluate member preferences, and thoroughly develop and refine our unique capabilities required to efficiently deliver covered services, including primary and preventive services, while improving health outcomes. Our local, community-based managed care model is based on national program knowledge and expertise developed throughout our organization’s 24-year history. Our health plans share best practices to support and further improve innovation and program development for our customers.

For example, we have implemented and thoroughly tested the necessary solutions to promote independent living for seniors and people with disabilities. Our employees use our iPad®-based CareCompass Mobile tool to support field-based assessment and management of individuals who need LTSS, enabling them to personally connect with and engage members who have the most extensive care coordination needs. A more complete description of CareCompass Mobile can be found in Section 3.2.4.

Another example of our expertise with diverse populations and benefits is our fully integrated care coordination model. Our model facilitates greater member engagement and self-management of varying and often inter-related medical, behavioral, social, and functional conditions resulting in overall improvements in health status and well-being.

For members with serious mental illness (SMI), HIV, or traumatic brain injury that also have two or more identified chronic conditions, or who have one chronic condition and are at-risk for a second; we will provide Health Homes to integrate services around the member, as outlined in Table 6.1-6.

Table 6.1-6. Amerigroup Services that Support Health Homes

Amerigroup Services Supporting Health Homes	
The Amerigroup Health Home Coach	Specialty Care Providers
Community-based Providers	Social Support

In addition, we are experienced in coordinating acute care services for individuals with intellectual and/or developmental disabilities, especially collaborating with various state agencies and community organizations to address the diverse needs and preferences of this population. Amerigroup will leverage our affiliates’ extensive LTSS experience and capabilities to address the unique needs our members, such as tailored health risk and care management assessment. While the specific care pathways for these members will differ somewhat from other populations, our proven approach and infrastructure to identify, assess, and coordinate care and services for this population is well established and fully replicable in Iowa.

Question 6.1.1, #2

2. Describe any counties or areas of the state and any provider types in those areas where you anticipate facing network development challenges. Discuss your mitigation strategies.

Network Development Opportunities

Through our extensive analysis and discussions with Iowa providers and stakeholders in the Iowa Initiative, we understand the challenges that exist for members when they attempt to seek services in a State where 36 percent of the population lives in rural areas. Additionally, as mentioned previously, we know from discussions with advocacy groups and provider groups there are areas of the State that are challenged in providing members a robust array of services, particularly in primary care, behavioral health, certain specialties, and transportation.

Health Professional Shortage Areas exist across Iowa. For instance, for primary care providers, there is a shortage in 40 counties according to the Iowa Department of Public Health (2014 data), and a shortage of rural health clinics in 47 counties according to the Iowa State Office of Rural Health (2014 data). For behavioral health services, 89 of all 99 counties in Iowa have a shortage of behavioral health providers according to the Iowa Department of Public Health (2014).

In addition, several Iowa counties are considered Medically Underserved Areas, including but not limited to Franklin, Tama, Audubon, Palo Alto, Fremont, Lucas, Monroe, Decatur, Wayne, Van Buren, and Appanoose counties, according to the Iowa Department of Public Health (2012 data).

Mitigation Strategies

Members who are a part of the Iowa Initiative will require appropriate and timely access to the broad range of services covered under the program. When access may pose an obstacle to service delivery, we will use several tactics to mitigate these challenges, including:

- Speaking with existing network providers regarding the potential of them expanding their services and/or locations
- Using our LTSS Community-Based Case Managers/Care Coordinators to help identify potential providers to contract with to assist in meeting the needs of our members
- Having our Provider Services staff personally visit locations around Iowa to make sure we are getting real time, real situation information and not simply relying on a list of providers
- Reviewing any provider list that DHS maintains for the fee-for-service program to make sure that we have contacted all providers who currently provide services within the Medicaid program
- Encouraging the use of telemedicine in rural or underserved areas to connect members to care (in compliance with Iowa rules and regulations)
- Contracting with nurse practitioners
- Establishing single case agreements with providers, when necessary, to augment services

Closing Network Gaps – Specialty Services

When we encounter barriers or gaps in our Iowa network, we will take specific action so that no member is without adequate coverage. Options include:

- Transporting the member to a surrounding county for care
- Encouraging geographic expansion of existing network providers
- Facilitating the use of mobile services
- Adopting telehealth monitoring programs

- Contracting with additional available providers, using single case agreements if necessary to expedite delivery of critical care

Provider Services will monitor our network through GeoAccess mapping. If a Care Coordinator has difficulty obtaining services from a network provider, he or she will notify Provider Services and often will offer names of providers for consideration. Our priority is to obtain immediate services for our members, usually through a single case agreement. After we resolve the urgent need, the Provider Services team will initiate contract discussions.

Mitigating Primary Care Challenges

Given the current shortage of PCPs in Iowa, as well as the number of PCPs who are age 55 and older, Amerigroup will work closely with DHS to offer solutions. Solutions may include:

- **Working with medical schools to educate students on primary care shortages** and advantages of working in rural areas (including the assistance they can gain in paying back student loans)
- **Partnering with rural health centers, hospitals, and public health departments** to collaborate on solutions for health care services, such as rotating provider clinics for both primary and specialty care
- **Considering higher reimbursement rates** for providers who would rotate in specialty/mobile clinics in a critical access hospital
- **Strengthening skills of PCPs and OB/GYNs related to behavioral health.** We will work to strengthen the skills of our PCPs and OB/GYNs in identifying and treating behavioral health and substance use disorders. These are often the first providers to recognize a behavioral health or substance use disorder issue. In areas with few behavioral health providers, PCPs and OB/GYNs may often be the treating provider for such conditions. Amerigroup gives these providers guidelines for depression screening and sample screening tools to facilitate the process. Our affiliate health plans launched annual webinar training to further strengthen PCP skills related to screening, treatment, and referral to specialists for members with behavioral health conditions. The training educates PCPs on:
 - Behavioral health conditions typically treated in a primary care setting
 - Screening of mental health conditions for substance use disorders
 - Communication with behavioral health providers
 - Referral to behavioral health specialists, including when to refer and how to identify appropriate behavioral health providers
- **Paying PCPs** who extend office hours to provide primary care to our members outside of normal operating hours

CareMore Model

By introducing CareMore, an Anthem affiliate, Amerigroup will offer the State a breakthrough model of care delivery that combines wellness, medical supervision, and a revolutionary approach to member engagement and participation. CareMore's PCPs, acting as primary care team leaders, and their extensivists, guide members through every step of an integrated health care journey, regardless of the setting—facility-based, within the home, or outpatient—thereby managing acute and chronic events from beginning to end to assure continuity of care. CareMore uses the expertise of physicians, nurse practitioners, behavioral health and other specialty clinicians, and social support experts who are adept at managing the experience of our members in body, mind, and spirit.

The CareMore experience will include at least one physical location, starting with a facility centrally located in the Des Moines market. It will be a central part of the community it serves. The location will be equipped to provide highly responsive care and provide an opportunity for members to connect with their

health care team and participate in individualized support, preventive care, disease management, and health education. More information about CareMore can be found in Section 3.2.4.

Mitigating Behavioral Health Challenges

Amerigroup will offer telemedicine services for behavioral health services throughout the State to address the potential gaps within the network. This will include identifying partners to become originating sites for telemedicine, such as hospitals, rural clinics, and health departments.

Mitigating Transportation Challenges

Amerigroup will work with our transportation vendor, Logisticare, to develop solutions that address potential gaps that we have learned are an issue in Iowa. This includes identifying local transportation choices where we could reimburse for non-emergent transportation, which includes working with providers, senior centers, or emergency medical service companies to assist with expanding transportation. Additionally, as a Value-Added Service, we will cover up to 10 round trips to transport eligible members and their families to therapeutic appointments.

Single Case Agreements

Providing our members with appropriate and timely access to care is vital. In some instances our members may need to seek treatment from a provider that is out of the area or State, or not participating in our provider network. We use a defined process for handling these types of cases to assure the member is receiving needed treatment in a timely manner. When we become aware of a request for a member to see a non-participating provider, our clinical employees follow strict protocols to confirm continuity of care and medical necessity. They also check for sanctions against the requesting provider. Our local Provider Services staff works directly with the practitioner to complete any necessary paperwork (single case agreement) to document the authorization and reimbursement details. Should a member need an evaluation for transplant services, we have a team of clinicians that work to locate centers of excellence to assure members have access to quality healthcare.

Provider Agreements (6.1.2)

Question 6.1.2 #1

1. Describe your process for reviewing and authorizing all network provider contracts.

Reviewing and Authorizing Provider Agreements

Amerigroup has an established process for reviewing and authorizing all network provider agreements. Our provider agreements will be reviewed and approved by DHS. We will use a standard Medicaid contract for all providers, in compliance with requirements set forth in Scope of Work (SOW) Section 6.1.2 Provider Agreements.

Our provider agreements will meet all State of Iowa (including RFP requirements) and federal language requirements, as well as accrediting agencies' contract requirements. Our provider agreements state the terms and conditions of the agreement, including effective date, the responsibilities of Amerigroup and the participating provider, as well as specified healthcare services for which the provider will be responsible, including any restrictions or limitations. We describe our comprehensive credentialing process in Section 6.1.3 Provider Credentialing.

Our legal department prepares any changes required in provider agreement templates, and we will submit all changes for approval by DHS before they are used with providers. Across many functional areas—Regulatory Services, Compliance, Legal Services, Provider Services, Provider Solutions, Network Management, and Utilization Management—our employees identify any new state or federal requirements, requests by providers, or other pertinent updates that would affect the provider agreement

template. These subject matter experts will be a major part of managing projects, implementing benefits, and understanding accreditation, clinical, and business requirements under the Iowa Initiative.

We will submit any changes to the sample provider agreement to DHS for approval. Depending on the change, the following may occur with existing contracted providers:

- Amendments sent to impacted providers via unilateral amendment notification procedures identified in the provider's agreement
- Notice in a provider bulletin outlining the changes and faxed to providers as well as placed on our provider website
- New agreements sent to providers for signature
- Amendments sent to the providers for signature
- Necessary modifications made to the Provider Manual

Provider Agreement Requirements

Amerigroup provider agreements meet all requirements set forth in SOW Section 6.1.2 Provider Agreements. Our agreements also specify that the provider will be required to:

- Assure continuation of member benefits
- Cooperate with Quality Management and Improvement activities
- Permit access to medical records to the extent permitted by state and federal law
- Maintain the confidentiality of member information and records
- Comply with the affirmation statement indicating that the provider may freely communicate with patients about available treatment options, including medication treatment options, regardless of benefit coverage limitations
- Provide timely notification to members affected by termination of a provider or an entire provider group
- Comply with provider non-discrimination statements and meet all regulatory requirements so that members are not discriminated against in the delivery of healthcare services
- Comply with administrative policies and procedures, including payment systems, utilization review, quality assurance and improvement, credentialing, confidentiality, medical management, sanctions, member grievance, and other specified programs

Amerigroup's agreements contain a provision that includes definitions for all terms used in the agreement that have specific client, managed care, member payment, and provider payment meanings. Contracts used with nursing facilities and HCBS providers will contain the specific language that has been outlined within the Scope of Work.

We will notify DHS of any risk sharing agreements we enter into with providers. If providers receive a capitation payment, their contracts will state that all encounter data must be submitted to Amerigroup within 90 days of the date of service. When negotiations with a provider result in changes to the standard pre-approved contract, those changes are reviewed by different levels of management within the company to assure the suggested change is appropriate. If negotiation with a provider results in substantive changes to the base contract, that contract will be filed and approved by DHS before it is executed by Amerigroup.

Nursing Facility Provider Agreements (6.1.2.1)

Amerigroup's provider agreements include the following requirements for nursing facilities:

- Promptly notify Amerigroup of a member's admission or request for admission to the nursing facility as soon as the facility has knowledge of such admission or request for admission
- Notify Amerigroup immediately if the nursing facility is considering discharging a member and consult with the member's Care Coordinator
- Notify the member and/or the member's representative (if applicable) in writing prior to discharge in accordance with State and federal requirements
- Comply with responsibilities regarding patient liability as described in Section 5.4 and acknowledge that the State has sole responsibility for determining patient liability amount
- Notify the Contractor of any change in a member's medical or functional condition that could impact the member's level of care eligibility for the currently authorized level of nursing facility services
- Comply with federal Preadmission Screening and Resident Review requirements to provide or arrange to provide specialized services and all applicable Iowa Law governing admission, transfer, and discharge policies

In addition, our provider agreement includes language that allows for automatic termination of the agreement if the nursing facility is involuntarily decertified by the State or CMS.

HCBS Providers (6.1.2.2)

Amerigroup's provider agreements include the following requirements for HCBS providers:

- Provide at least 30 days advance notice to Amerigroup when the provider is no longer willing or able to provide services to a member and to cooperate with the member's Care Coordinator to facilitate a seamless transition to alternate providers
- Continue to provide services to the member in the event that a HCBS provider change is initiated for a member, regardless of any other provision in the provider agreement, in accordance with the member's plan of care until the member has been transitioned to a new provider, as determined by Amerigroup, or as otherwise directed by Amerigroup, which may exceed 30 days from the date of notice to Amerigroup
- Immediately report any deviations from a member's service schedule to the member's Care Coordinator
- Comply with the critical incident reporting requirements as described in SOW Section 10.4.2
- Comply with all child and dependent adult abuse reporting requirements

Question 6.1.2 #2

2. Provide sample provider agreements.

Amerigroup Iowa has developed its Provider Agreement for the Iowa Initiative in accordance with all RFP, DHS and other State and federal requirements and includes a sample provider agreement in Tab 6 as Attachment 3.2.7.5-4.

Question 6.1.2, #3

3. Indicate if you propose to impose any requirements for exclusivity agreements for quality or payment purposes.

At this time, Amerigroup does not intend to introduce exclusivity agreements for quality or payment purposes into the Iowa market, as we believe these can ultimately limit our ability to create integrated care models. With that said, Amerigroup will develop and implement value-based purchasing arrangements and incentive programs that assist in improving the quality of care rendered to our members.

Question 6.1.2, #4

4. Propose the percentage of provider contracts that will be consistent with value-based purchasing by January 1, 2018 and specify the percentage annually for each year thereafter. Will you move into value-based purchasing before 2018?

Value-based purchasing (VPB) and incentive programs that link provider payment to improved performance are a cornerstone in our work with our provider network. As described more fully in our response to Section 10.3, our value-based purchasing programs cover a wide range of provider types, from primary care to attendant care and from small providers to ACOs. We propose implementing several different provider incentive programs, including:

- ACO Shared Savings / Shared Risk
- PCP Quality and Access to Care
- Behavioral Health – Community Mental Health Centers
- Personal Attendant Care
- PCP Quality and Population Management
- OB/GYN - Birth Outcomes
- Nursing Home Facilities

Amerigroup's affiliates have extensive experience in developing and administering value-based purchasing programs, such as our PCP Quality and Population Management Incentive Program which drives improvements in quality and service delivery while appropriately managing costs. It began as a pilot program in our Georgia and Tennessee health plans in 2010 with positive results. This program works to:

- Improve targeted clinical quality results
- Promote quality, safe, and effective patient care across the healthcare delivery system
- Improve provider operational efficiency
- Improve medical cost management by providing incentives for improving quality care and tools for providers to reduce medically unnecessary utilization and costs

CONTAINS CONFIDENTIAL INFORMATION

Our VBP arrangement will recognize population health outcome improvement as measured through the VIS, combined with a decrease in total cost of care for the population in the VBP arrangement. As measured by a percentage of members covered by such an arrangement, *Amerigroup commits to the following percentages for the Iowa Initiative:*

- By January 1, 2017 – 30 percent of our total assigned population (members) will be assigned to provider in VBP **contracts.**

- By January 1, 2018 – 40 percent of our total assigned population (members) will be assigned to providers in VBP contracts.
- Each year after 2018, the goal will be to increase the number of members covered by VBP arrangements by 5 percent per year through year 2020.

We support DHS' position that driving population health through delivery system reform under VBP requires that providers have a clear understanding of the specific lives for which they are accountable. As such, Amerigroup members who are part of a VBP will be assigned to a designated primary care provider (PCP). In support of VBP arrangements, Amerigroup will provide PCPs with a listing of assigned members on at least a monthly basis. This PCP information will be immediately reported for use in system wide coordination enhancements as specified by DHS, such as provider alerts through the Iowa Health Information Network (IHIN), or if possible, the provider member rosters.

Provider Credentialing (6.1.3)

We have successfully credentialed over 118,000 practitioners, ancillary providers, and facilities across our affiliates. We have the systems, staff, and policies and procedures in place to accurately and timely credential the full spectrum of physical, behavioral health, and LTSS providers required for the Iowa Initiative. We will use our robust process that meets all of the requirements of the RFP, as well as federal and State laws and regulations related to the credentialing of healthcare providers. We have successfully credentialed practitioners, facilities, and ancillary providers, plus all of the physical health, behavioral health, and LTSS provider types needed for the Iowa Initiative. Our robust credentialing and re-credentialing process meets National Committee for Quality Assurance (NCQA) accreditation requirements as evidenced in our successful NCQA surveys.

Credentialing Policies and Procedures (6.1.3.1)

Question 6.1.3, #1

1. Describe your credentialing process.

Our processes help facilitate the thorough and timely completion of credentialing applications. We closely monitor timeliness of the credentialing process, including the number of:

- Applications received
- Applications processed
- Age and turn-around time specific to credentialing applications
- Status of applications, including requests for additional information
- Applications received, administratively closed, and approved
- Credentialing and re-credentialing applications denied

We will credential providers within the timeframes outlined in Exhibit F of the Scope of Work. In 2014, across our affiliates, we averaged less than a 30-day credentialing turnaround time upon receipt of a complete and clean application for 14,000 providers.

Our current credentialing and recredentialing processes meet DHS requirements and NCQA guidelines. In our most recent health plan reviews, our credentialing program was found to be in full compliance. We regularly review our credentialing policies and procedures and update them in accordance with new NCQA standards, and when new federal or State requirements are issued.

Amerigroup's credentialing process verifies that all network providers are qualified by training and experience to deliver healthcare services to our members. The credentialing of network providers is an

important component of our contracting and quality management process, assuring that quality of care is maintained or improved and verifying that providers hold current State licensure and enrollment in the Iowa Initiative. We will incorporate ongoing assessments of the quality of care delivered by providers as they participate in our network. Our written policies describe the scope, criteria, timeliness, and specific procedures for conducting credentialing and recredentialing of providers and facilities, as well as the training to be delivered for Amerigroup staff on the policies and requirements for credentialing Iowa providers. Our Iowa Credentials Committee and Quality Management and Improvement Committee will review and approve these policies annually.

Credentials Committee. Our national Credentials Committee is a policy-making body responsible for all credentialing policies and procedures across our organization. The Amerigroup Iowa Medical Director will be a voting member of this committee and will be responsible for setting clinical competence and conduct criteria for the entire Amerigroup provider network via this policy making body. Locally, we will have a Credentials Committee, including no less than two participating licensed Iowa physicians, one of whom will practice in the specialty type most frequently used by Amerigroup members. These physicians will also operate within the scope of the credentialing program and have no other role in Amerigroup’s network management. The Chair of the Credentials Committee may appoint additional participating practitioners of other specialty types, as deemed appropriate. The committee also consults specialists as needed to complete the review of a provider’s credentials.

Credentialing Practitioners. Amerigroup credentials the following contracted healthcare practitioners:

- Physicians (includes Medical Doctors, Doctors of Osteopathy, and Doctors of Podiatric Medicine)
- Nurse Practitioners wishing to include their name in provider directory publications
- Certified Nurse Midwives
- Chiropractors
- Licensed Clinical Social Workers
- Licensed Mental Health Counselors
- Licensed Marriage and Family Therapists
- Psychologists

For the Iowa Initiative, we will delegate and oversee credentialing of vision providers by our subcontractor, Superior Vision.

Employee Training on Credentialing and Recredentialing

All of our employees are continuously trained in all areas of credentialing, which include review of all policies and procedures, systems, and checklists with required information as well as introduction to all verification sources and how to identify issues and concerns. We also train staff on quality audit processes that review the credentialing and recredentialing operations, including standard reports that identify gaps, and check for any incomplete or missing required evidence. Additionally, we offer training for departments involved in the credentialing program, such as medical leadership and provider services. We make training materials available on intranet sites and offer monthly trainings for new staff.

Initial Professional Provider Credentialing

We will use DHS' standard provider credentialing form during the credentialing process. As part of the participating provider agreement, providers must agree to all DHS and Amerigroup standards for credentialing and maintain standards of the Iowa Initiative, including compliance with DHS record-keeping requirements, access and availability standards, and Quality Management and Improvement Program standards.

We also use the industry standard Council for Affordable Quality Healthcare's (CAQH) Universal Credentialing DataSource to capture provider credentialing applications, thereby reducing the administrative burden placed on practitioners. This proven approach includes verification that qualifications and credentials are accurate, thorough, and efficient, while also easing provider burden.

To initiate a new credentialing application via the CAQH system, providers may contact CAQH or Amerigroup directly. Basic provider demographic information is collected via the system, and the provider will grant permission for Amerigroup to access the common credentialing application. Applicants must complete and attest to the correctness of the credentialing application information submitted into CAQH's Universal Credentialing DataSource. Amerigroup will access and accept the provider credentialing applications submitted and maintained in the Universal Credentialing DataSource.

We extract completed credentialing applications from CAQH for primary source verification in accordance with State and NCQA requirements. Elements included in the credentialing verification process include, but are not limited to, the following NCQA-required elements:

- Valid license to practice in the state in which the practitioner will be treating covered members
- Current enrollment in the Iowa Initiative
- Hospital admitting privileges
- Current valid Drug Enforcement Administration (DEA), Chemical Database Service (CDS), and state-controlled substance certificates
- Education and completion of residency
- Board certification, as applicable
- Medicare/Medicaid sanctions or Federal Employee Health Benefit (FEHB) program sanctions or limitations
- Malpractice insurance
- Malpractice claims history
- National Practitioner Data Bank/Health Care Integrity and Protection Database query
- Disclosure by providers and fiscal agents; information on ownership and control
- Work history
- State or federal license sanctions or limitations
- Excluded Providers: Searches will be conducted on the names of parties disclosed during the credentialing process against the U.S. Department of Health and Human Services Office of Inspector General (HHS-OIG) list of Excluded individuals/Entities, and the General Services Administration System for Award Management. Parties appearing on any of these databases will not be contracted with or employed by Amerigroup.
- Disclosure by providers: information on persons convicted of crimes

Process for Recredentialing

All participating providers included in our credentialing program are re-credentialed at least once every three years, consistent with NCQA standards. During the recredentialing period, we re-verify the provider's data from the initial credentialing process to confirm that all elements are active and in good standing. The recredentialing process incorporates re-verification and the identification of changes in the provider's licensure, sanctions, certification, health status, and/or performance information (including malpractice experience, hospital privilege, or other actions) that may reflect on the provider's professional conduct and competence. Amerigroup reviews this information to assess whether network practitioners and health delivery organizations continue to meet our credentialing standards.

We review all information collected and stored in the provider's file. The provider's file includes evidence of education, sanctions, licensing, updated disclosure statements, and quality of care or quality for service complaints/grievances as well as outcomes of investigations. We query the excluded provider's database on all re-credentialed providers. We review and consider additional information such as the following:

- Member(s) grievances that resulted in a sanction, restriction, or other action and/or four or more grievances in 12 months (as applicable)
- Administrative issues, utilization management issues, and quality of care information pertaining to educational interventions and sanctions imposed on the provider (as applicable)

The following performance indicators are also incorporated into the recredentialing process for PCPs:

- Information from quality improvement activities (as applicable)
- Member grievances (as applicable)
- Other plan-specific data as available and applicable

Credentialing HDOs

Health Delivery Organizations (HDOs) include acute care hospitals, home health agencies, skilled nursing facilities, nursing homes, LTSS providers, freestanding surgical centers, lithotripsy centers treating kidney stones, free-standing cardiac catheterization labs, and behavioral health facilities providing mental health and/or substance use disorder treatment in an inpatient, residential, or ambulatory setting.

To assess whether an HDO participating in our network meets appropriate standards of professional conduct and competence, they are subject to credentialing and recredentialing. In addition to State licensure and other eligibility criteria, all participating HDOs are required to maintain accreditation by a relevant, recognized accrediting body or, in the absence of such accreditation, we may evaluate the HDO's most recent site survey by pertinent federal or State oversight agencies.

Amerigroup considers accreditation from the following oversight organizations. We note acceptable accrediting agencies after each provider type in Tables 6.1-7 and 6.1-8.

Table 6.1-7. Medical Facilities – Acceptable Accrediting Agencies

Facility Type (Medical Care)	Acceptable Accrediting Agencies
Acute Care Hospital	The Joint Commission (TJC), Healthcare Facilities Accreditation Program (HFAP), National Integrated Accreditation for Healthcare Organizations (NIAHO), and Center for Improvement in Healthcare Quality (CIQH)
Ambulatory Surgical Centers	TJC, HFAP, Accreditation Association for Podiatric Surgical Facilities (AAPSF), Accreditation Association for Ambulatory Health Care (AAAHC), American Association for Accreditation of Ambulatory Surgery Facilities (AAAASF), and Institute for Medical Quality (IMQ)
Home Healthcare Agencies	TJC, CHAP, ACHC
Skilled Nursing Facilities	TJC, Commission on Accreditation of Rehabilitation Facilities (CARF), Board of Certification (BOC) International
Nursing Homes	TJC, BOC Int’l
Free-standing Cardiac Catheterization Facilities	TJC, HFAP (may be covered under parent institution)
Lithotripsy Centers (kidney stones)	TJC

Table 6.1-8. Behavioral Health – Acceptable Accrediting Agencies

Facility Type (Behavioral Health)	Acceptable Accrediting Agencies
Acute Care Hospital—Psychiatric Disorders	TJC, HFAP, NIAHO
Residential Care—Psychiatric Disorders	TJC, HFAP, NIAHO, CARF, Council on Accreditation (COA)
Partial Hospitalization/Day Treatment—Psychiatric Disorders	TJC, HFAP, NIAHO, CARF for programs associated with an acute care facility or Residential Treatment Facilities
Intensive Structured Outpatient Program—Psychiatric Disorders	TJC, HFAP, NIAHO, COA for programs affiliated with an acute care hospital or healthcare organization that provides psychiatric services to adults or adolescents, CARF if program is a residential treatment center providing psychiatric services
Acute Inpatient Hospital—Chemical Dependency/Detoxification and Rehabilitation	TJC, HFAP, NIAHO
Acute Inpatient Hospital—Detoxification Only Facilities	TJC, HFAP, NIAHO
Residential Care—Chemical Dependency	TJC, HFAP, NIAHO, CARF, COA
Partial Hospitalization/Day Treatment—Chemical Dependency	TJC, NIAHO for programs affiliated with a hospital or healthcare organization that provides drug abuse and/or alcoholism treatment services to adults or adolescents, TRICARE or CARF for programs affiliated with a residential treatment center that provides drug abuse and/or alcoholism treatment services to adults or adolescents
Intensive Structured Outpatient Program—Chemical Dependency	TJC, NIAHO, COA for programs affiliated with a hospital or healthcare organization that provides drug abuse and/or alcoholism treatment services to adults or adolescents; CARF for programs affiliated with a residential treatment center that provides drug abuse and/or alcoholism treatment services to adults or adolescents

New HDO applicants will submit a standardized application to Amerigroup for review. If the candidate meets our screening criteria, the credentialing process will begin. During the credentialing process, we will conduct searches on new HDO applications against the HHS-OIG List of Excluded Individuals/Entities and the General Services Administration System for Award Management. Parties appearing on any of these databases will not be contracted by Amerigroup.

Delegation of Credentialing/Recredentialing

At times, we may elect to delegate credentialing and recredentialing activities to another entity. A description of our delegation oversight responsibilities and an overview of the delegation process are detailed in our quality improvement program as well as our policies and procedures. All delegates will undergo an initial predelegation audit, complete with file audit and policy and procedures review, followed by a committee review and recommendation. Once delegated, each entity is required to submit regular updates and undergo annual re-assessments. Activities and responsibilities associated with delegated activities are documented within the written agreement between Amerigroup and the subcontractor. The agreement requires the subcontractor and medical groups to provide reports related to the performance of their delegated activities and other obligations under the agreement. Amerigroup complies with NCQA standards for delegation oversight.

Verification of Credentialing Assertions

Upon receipt of completed credentialing applications and during the recredentialing process, we cross-reference providers' information with the OIG's List of Excluded Individuals/Entities and any available State databases to identify excluded providers. These lists are also cross-referenced during our credentialing team's monthly sanctions monitoring process described above. As we identify excluded providers from the List of Excluded Individuals/Entities or any other State sources, the provider is given an adverse credentialing determination when identified during credentialing or is terminated from our network when identified during the recredentialing or monitoring process.

In accordance with the federal and State regulations, we will obtain certain information from contracted providers, and any individuals and/or entities having a five percent or more direct or indirect ownership or a controlling interest in the entity, to verify if the person or persons have any federal sanctions that would prohibit us from reimbursing the provider for services furnished to a member.

Providers excluded from participation under federal regulations for either Medicare or Medicaid will not be eligible to contract with Amerigroup or any of our subcontractors.

Newly contracted providers, re-contracted providers, providers requiring credentialing, and delegated groups must complete a Disclosure of Ownership and Control Interest Statement (Survey) to be considered for participation in our network. Our national Sanction Monitoring Unit reviews extracted specific data monthly.

The Sanction Monitoring Unit is responsible for identifying participating medical providers loaded in Amerigroup provider databases that have been sanctioned by any of the State licensing boards or agencies. Based on information disclosed in the survey and notification of any positive match against a participating provider, we will review and determine appropriate corrective action, which may include termination of the provider agreement.

If the provider agreement requires termination due to the information disclosed or an identified sanction, we will follow its established termination procedures.

Nondiscrimination Policy

Amerigroup does not discriminate against any potential provider on the basis of race, gender, color, creed, religion, national origin, ancestry, sexual orientation, age, veteran status, marital status, or any unlawful basis not specifically mentioned herein, or against healthcare providers who serve high-risk populations or who specialize in the treatment of costly conditions. Amerigroup's credentialing processes do not discriminate against (1) a healthcare professional solely on the basis of license or certification, or (2) a healthcare professional who serves high-risk populations or who specializes in the treatment of costly conditions.

Other than gender and language capabilities, which are provided to members to meet their needs and preferences, we do not require this information in the credentialing or recredentialing process. The Credentials Committee bases its decisions on issues of professional conduct and competence as reported and verified through the credentialing and recredentialing process. Amerigroup will notify DHS of any credentialing applications that are denied due to program integrity–related issues.

Adverse Actions Taken on Provider Applications for Program Integrity Reasons (6.1.3.2)

As part of our provider enrollment and credentialing process, Amerigroup will require that providers disclose whether they have been convicted of a criminal offense, have had civil or money penalties or assessments imposed under Section 1128A of the Act, or have been excluded.

We do not contract with providers who have been excluded from participating in federal healthcare programs under Section 1128 or Section 1128A of the Social Security Act.

Ongoing Sanction Monitoring

To support credentialing standards during credentialing and between recredentialing cycles, Amerigroup has an ongoing monitoring program to verify continued compliance with credentialing standards and to assess and address any issues of substandard professional conduct and competence, including fraud and abuse issues, for providers and HDOs. The credentialing staff reviews reports from various sources, including the following:

- Office of the Inspector General
- Federal Medicare/Medicaid Reports
- Office of Personnel Management
- State Licensing Boards/Agencies
- Member Services Department
- Clinical Quality Management Department (including data regarding complaints of both a clinical and nonclinical nature, reports of adverse clinical events and outcomes, and satisfaction data)
- Other health plan functional areas, as appropriate

We also consider any other verified information received from appropriate sources.

When a participating provider or HDO has been identified by these sources, we use formal criteria to assess the appropriate response, which may include review by the Chair of the Credentials Committee, review by the Medical Director, referral to the Credentials Committee, or termination. We will report practitioners and HDOs to the appropriate authorities as required by law.

Timeliness (6.1.3.3)

Amerigroup will follow established policies and procedures that will support the credentialing of providers according to the following performance requirements as outlined in Section 6.1.3.3 and Exhibit F of the Scope of Work: (i) 90 percent within 30 calendar days, and (ii) 100 percent within 45 calendar days.

LTSS Providers (6.1.3.4)

Amerigroup conducts criminal history background checks on all LTSS providers in all of our affiliate plans. Amerigroup has pursued access to the FACT Clearinghouse for our affiliate plans through appropriate State departments charged with public safety. We will automatically bar a provider who has a finding of physical or sexual abuse of a child or adult from participating in our Iowa Network based on information we receive from a DHS-approved entity, such as the FACT Clearinghouse.

For all other finding types, we will collaborate with the State of Iowa to review the findings and decide whether participation in the network will be allowed. We will consider the following prior to issuing a decision to include or bar a provider from our Iowa provider network:

- The severity of the finding
- The length of time that has passed since the finding occurred
- Any pattern of abuse or neglect
- The age of the victim(s)
- Any other relevant risk factor

We are committed to protecting the safety and well-being of our members. Once participating in our network, we will check the FACT Clearinghouse and sex offender registry at least annually.

Facility Requirements (6.1.3.5)

All facilities, including but not limited to hospitals, in the Amerigroup Iowa network will be licensed as required by the State.

Substance Use Disorder Providers (6.1.3.6)

Amerigroup will require that all substance use disorder services provided to members are provided by programs licensed by the Iowa Department of Public Health, in accordance with Iowa Code chapter 125 or by hospital-based substance use disorder treatment programs licensed and accredited in accordance with Iowa Code Section 125.13.2(a). We will consider counselor certification as specified in Iowa Administrative Rules 641—155.21(8) as an acceptable credential for practitioners employed by a licensed substance use disorder treatment program.

Question 6.1.3, #2

2. Describe methods to streamline the provider credentialing process.

Streamlining Provider Credentialing

Amerigroup fully supports the use of standardized credentialing applications, and we will adopt the Iowa Standardized Credentialing Application for all Iowa practitioners. We can accept electronic versions of the Iowa Standardized Credentialing Application via CAQH and paper copies. Our affiliates have been participating with the CAQH Universal Credentialing DataSource for several years in order to reduce the administrative burden placed on practitioners when multiple versions of credentialing applications are used. We are also familiar with state-specific credentialing applications used outside of the CAQH DataSource and already use these credentialing applications in several of the states we currently serve. This proven approach includes verification that qualifications and credentials are accurate, thorough, and efficient, while also easing provider burden. Upon identification of a potential provider to be added to our Iowa network, we will solicit the applicant to complete the Iowa Standardized Credentialing Application, which is available from CAQH. The provider must provide a minimum of five years of work history, evidence of current malpractice coverage, a history of malpractice claims paid, and copies of all current, unrestricted licenses and registrations, including the DEA or CDS certification information.

Once we receive a clean application, we log the application based upon receipt date and then forward it to our national Credentialing Department, where all verifications and credential file preparation is conducted. We create and maintain an electronic credential file for each provider applicant. This file contains all copies of documentation received, as well as verifications, in accordance with NCQA and state-specific requirements. Upon completion of all verifications, the Credentialing Department will screen the credentialing applicant for

IA_9.13_COR_2.1

completeness and will send to the Amerigroup Iowa Credentialing Committee for approval. Our Iowa Health Plan Credentialing Committee will include practicing physicians and providers as well as our Iowa Plan Medical Director. We screen all credentialing applications upon receipt to identify any deficiencies or missing information. Credentialing Specialists contact applicants whose applications are incomplete and request the missing or needed items. Applicants are given one week from the date of request to submit the missing information. Typically, we make three attempts directly to the applicant to retrieve the missing or expired information. If the information is not received within this time period, we return the application to the provider with a request to reapply with all required documentation.

In addition to using the CAQH Universal Credentialing DataSource process, Amerigroup has implemented several innovations that help streamline the provider credentialing process. For example, we use Cactus software system to support reporting, tracking, and trending. We track disclosure of ownership electronically and include the results in our monthly monitoring/screening and use Bridger to perform monthly program integrity checks, which includes an enhanced matching process for quicker identification and review of sanctioned/excluded individuals. We have also worked closely with our state partners to implement new workflows, forms, and tools to streamline the credentialing process for all Medicaid managed care organizations.

Question 6.1.3, #3

3. Describe your plans for performing criminal history and abuse checks and assuring all network providers hold current licensure as applicable.

Member safety is an Amerigroup priority. We use tested policies and procedures to ensure our network providers meet our standards. Prior to contracting with a provider or supplier, our Provider Credentialing Department screens each prospective health plan provider against the HHS-OIG List of Excluded Individuals/Entities (LEIE) and the General Services Administration's System for Award Management. We also screen current network providers against the LEIE monthly as required by applicable state regulations.

We conduct primary source verification in accordance with NCQA standards. This verification process includes verification of licensure and DEA, education and training, board certification, sanctions (federal and state), malpractice history, and malpractice coverage. We also assess the applicants training and education against training requirements established by the Credentialing Committee. If a practitioner fails to meet these training requirements, we close the application and return to the provider.

As part of the credentialing and recredentialing process, we will perform the criminal history check and abuse checks through sites made available by the State of Iowa for all providers including LTSS (as required). Otherwise, we will include an internal attestation to the requirements in the standard process in accordance with DHS standards.

Question 6.1.3, #4

4. Describe your plans for ensuring non-licensed providers are appropriately educated, trained, qualified and competent.

Non-Licensed Providers (6.1.3.7)

Amerigroup understands the critical role that non-licensed providers, including HCBS, independent support brokers, and transportation vendors, play in delivering comprehensive and timely healthcare to members in Iowa. Therefore, we help our non-licensed providers adapt to State and federal requirements for healthcare delivery with onsite training and technical assistance while assuring quality healthcare for our members. Such training and assistance is particularly valuable to organizations in rural areas where the organization might be the only source of services, yet does not have access to the business resources typically available in urban areas. We provide training to all of our providers. Where assistance with in-depth training on specific functions or supports by a non-licensed provider is necessary, we collaborate and contract with subject matter experts to assist us in delivering this training so that providers can deliver the care our members need. As an example, we would partner with our Financial Management Services vendor to provide training in conjunction with Amerigroup to independent support brokers.

CONTAINS CONFIDENTIAL INFORMATION

To the extent possible, we model our standards for credentialing non-licensed providers in accordance with NCQA and CMS requirements, with exceptions made for some elements where the standard may not be applicable. Since there is no standardized data exchange method for credentialing information on non-licensed providers, Amerigroup conducts the following activities:

- Determine which provider types must have a State-issued provider ID
- Understand the current requirements, such as those posted on the State's website for provider enrollment and licensing of the provider's specialty
- Require that providers complete an Amerigroup ancillary application and submit a W-9, evidence of liability insurance, and a business license in addition to any other specific requirements that the State may have for that provider type
- Help providers obtain licenses, most recent compliance survey, and corrective action plan, as applicable, and potentially include a site visit by Amerigroup personnel
- Validate the provider's good standing with the HHS-OIG and the General Services Administration's Excluded Parties List System websites as well as other data sources as directed by DHS

Cultural Competence (6.1.4)

Question 6.1.4 #1

1. Describe your plans for ensuring the delivery of services in a culturally competent manner.

For 24 years, our affiliate plans have provided culturally competent services to diverse populations in state-sponsored programs across 19 states. We know that cultural competence requires a deep understanding of how culture and heritage impact member care, health, and access to services. To provide culturally competent services to members in Iowa, we will take what we know and continue to learn about the State, its communities, and its resources and combine it with Amerigroup's tradition of providing culturally competent services and the best practices shared by our affiliates nationwide.

We adhere to all 15 National Culturally and Linguistically Appropriate Services (CLAS) Standards in healthcare and our policies and procedures fully support these standards. Additionally, we embrace a "Three R" approach to delivering culturally competent services—recognition of, respect for, and response to the culture, ethnicity, values, religions, beliefs, gender identities, and desires of members—while preserving their dignity.

Delivering Culturally Competent Services to All Members

Many distinct cultures are represented in Iowa communities, such as African American, Latino/ Hispanic, and American Indians/Alaskan Native populations. In addition, cultural competence encompasses more than just racial and ethnic differences; it includes any marginalized population group who may be ethnically and racially similar, but who are at risk for stigmatization or discrimination, different in other identities, or who have different care needs that result in health disparities.

We strive to identify and bridge gaps to make sure *all* of our members receive equitable and effective care. We provide access to members with special health needs (such as video relay for the hearing impaired) and we work with State agencies and community partners to meet the needs of members with disabilities. We build our networks and local community health plans mindful of the diversity of our members and the potential impact on their access to healthcare services. Showing the true diversity of our members is very important – it tells the story of who our members are and who we are.

Cultural Competency Starts With Us

At Amerigroup, cultural competence is a leadership principle and an integral part of our tradition. We know that proactively embracing and honoring the differences among our membership is vitally important to address members' health needs successfully. We will strive to promote culturally- and linguistically-responsive services for all of our Iowa Initiative members by:

- Recruiting and hiring a culturally diverse workforce, including local Iowa staff as well national and call center staff who mirror our membership
- Conducting orientation and ongoing cultural competency training for every Amerigroup employee
- Building and maintaining a culturally competent network of providers who are attuned to cross-cultural issues, respect cultural differences, communicate effectively, and provide the same level of quality care to every member
- Providing comprehensive, linguistically-appropriate, and culturally-sensitive communication materials for members and their families

Amerigroup defines cultural competency as the delivery of integrated health care services within the context of members' cultural beliefs, behaviors, practices, disabilities, and language preferences.

IA_6.1.4_CCB_B.2

- Partnering with local, community-based organizations and advocacy groups to help us identify, better understand, and address the needs of members
- Providing methods for communication in alternative formats, such as our video relay line for those who are deaf or hard of hearing, large print and Braille for those who have low vision or are blind
- Offering language assistance and interpreter services for those with limited English proficiency. For example, we know that in Iowa nearly seven percent of the population over age five speaks a language other than English in the home, and we can provide oral translation/interpretation services for over 200 languages at no cost to members through our language line. See Section 8.2 for full descriptions of our communication services.
- Conducting ongoing organizational assessments of culturally- and linguistically-appropriate capabilities as part of our Quality Management and Improvement Program and making adjustments as our membership evolves to assure cultural competency across all our functional areas
- We develop cultural competency strategic plans for the specific programs we manage. This integrates knowledge, attitudes, and skills reflective of a culturally competent organization, and serves as the blueprint for our overall cultural competency program and practices. Plans are descriptive, organized around objectives and strategies, and designed to provide a measurable approach to assure cultural competency across Amerigroup, our providers, and our subcontractors.

We make sure that cultural competency practices – such as the value of honoring members' beliefs, being sensitive to cultural diversity, and adopting attitudes and interpersonal communication styles that respect members' cultural backgrounds – are incorporated across every part of our delivery system. For example, we include relevant questions asked during initial and comprehensive member assessments, develop cultural supports in the member's care plan, recruit qualified, multi-cultural practitioners, and partner with local, community-based organizations and cultural groups to provide additional support for our members.

In addition, all Amerigroup employees participate in our cultural competency computer-based training course upon hire and must complete an annual refresher course thereafter. Training defines cultural competency and presents examples of it in action. Our cultural competency training efforts help make sure that our employees understand that delivering services to people of all cultures, races, ethnic backgrounds, sexual orientations, abilities, and religions must occur in a manner that recognizes, values, affirms, and respects the worth and dignity of all members. Our curriculum includes definitions, benefits of cultural competency, government regulations, values, language resources, health-related beliefs, cultural-specific health disparities, and variations in social comfort factors. Learning objectives include the ability to:

- Describe laws and regulations concerning cultural competence
- Identify and appreciate the cultural groups we serve, including but not limited to those with disabilities and advanced age, through specialized modules
- Assess cultural beliefs and preferences that impact a member's world view and how these beliefs impact their choice in care
- Identify how culture influences members' approaches to health care and social services as well as their attitudes toward aging, disability, and illness
- Understand and apply approaches that promote self-awareness and acceptance
- Describe the ways Amerigroup accommodates our diverse membership
- Describe and apply techniques to overcome language barriers and communication disabilities

We also require all newly hired employees to participate in diversity training during their orientation. In addition to our core training, our Member Service Representatives will receive additional training on local Iowa geography and other Iowa Initiative-specific training. See Section 2 for a full description of our Staff Training Plan.

Addressing the Specialized Health Needs of Diverse Groups through Community Collaborations and Partnerships

We are committed to driving improved health outcomes and quality of life one member at a time—by doing the right thing for every member, every time. We work to address any geographical, cultural/linguistic challenges, or any other barriers our members may face. We develop comprehensive grassroots and community outreach programs, and collaborate with community partners who work with diverse populations on various cultural and health issues and disparities. Our members' lives focus on their homes and neighborhoods. By reaching out to them where they live in a culturally responsive way, we can increase participation in health promotion and illness prevention activities. To promote culturally competent care in local communities, we do the following:

- Host health fairs and participate in others through partner organizations
- Hold classes in the communities we serve to make it easier for members to attend and get the benefit of information we share
- Employ local, community-based outreach teams to locate and engage members in a culturally competent manner (For example: our Texas affiliate developed best practices for using “promotores”, locally-based individuals who promote health education and prevention in a culturally- and linguistically-appropriate manner, particularly for underserved populations)
- Offer the Value-Added Service of Amerigroup Community Resource Link, a searchable online resource for all local Iowa community-based programs, benefits, and services displayed in an easy-to-read format and searchable with GPS technology to provide members a holistic view of community resources they may not otherwise be aware of
- Partner with organizations, such as community centers, shelters, senior centers, clinics, housing authorities, and food banks to help locate and engage members (For example: our affiliate health plans partner with 189 public health departments across the country to break down barriers and connect members who are homeless to meaningful access to care and services. With an estimated 16,000 Iowans experiencing homelessness, many of which will have Medicaid coverage, enhanced outreach will be critical to helping these members access care and fully coordinating their care across systems.)

Amerigroup Continuously Identifies Ways to be Culturally Competent

Cultural competence is not static. It is a dynamic process that involves continually learning and responding as our membership evolves. We routinely analyze member utilization and demographic information to identify the cultural groups and unique characteristics of the communities we serve, determine any communities or cultural groups that are not being reached or served, and identify solutions for reaching these communities or cultural groups.

For example, our Louisiana affiliate identified dialect differences within the American North and South Vietnamese communities that were part of its membership. Their experience working with Vietnamese community partners helped make them aware that there was a disconnect between Vietnamese translated material and the southern Vietnamese dialect. As part of our affiliate's standard process, all translations are handled by a national marketing services translation vendor. Our affiliate resolved the situation by forwarding the translated materials to the Vietnamese Initiative in Economic Training (VIET) translation services. VIET made translation and dialect changes to the member materials, which were then sent back

to the national marketing services translation vendor to verify for compliance. The materials were then submitted to the State of Louisiana for final approval.

Through lessons learned, such as the example above, we know to pay close attention to our members' distinct needs that may not be covered in our standard processes and to make immediate adjustments as needed. For example, we may find these changes necessary for Iowa's Native American and Alaskan Native populations, who also use many different dialects.

Amerigroup's Associate Resource Groups Celebrate Diversity

As part of emphasizing the importance of collaborative community partnerships, our parent company, Anthem, established Associate Resource Groups that operate within all Amerigroup affiliates to encourage employees to join groups within the company that celebrate and support diversity in all its aspects such as ethnicity, gender, sexual orientation, and disability. These groups represent diversity and inclusion, and have allowed our affiliates to achieve major strides in our employees' partnerships with the communities we serve. Associate Resource Groups bring together employees across our lines of business. They not only assure attention to diversity, but also actively participate in community programs designed to address health disparities for the specific groups represented. Current groups formed in other affiliates include African American Professional Exchange to address diversity in the African American community; and SOMOS, a Latino and Hispanic diversity group. In Iowa, we will continue these efforts with the same level of commitment and involvement from our employees.

Culturally Appropriate Care (6.1.4.1)

The quality of the patient-provider interaction has a profound impact on members' ability to communicate symptoms to their provider and adhere to recommended treatment. When developing our provider networks we consider language, thoughts, communications, actions, customs, and cultural beliefs, and values of our members because we are aware that:

- The health, healing, and wellness belief systems of our members affect how they engage in their health care and with their care providers
- Illness, disease, and causes can be perceived differently by the member and the provider, which affects how care is perceived and given
- The behaviors of our members seeking health care and their attitudes toward our health care providers can affect how often they seek health care support
- Providers who are informed about cultural competency are able to deliver services through a wider set of values, which can open a broader range of access, including members with disabilities, those of varying sexual orientation, or those from other cultures

We expect our providers to demonstrate cultural awareness and to have appropriate skills, such as the ability to understand another's values, beliefs, and culture. Our network strategy and performance measures are designed to incorporate NCQA standards, most notably: ***The organization assesses the cultural, ethnic, racial, and linguistic needs of its members and adjusts the availability of practitioners within its network, if necessary.***

Cultural competence, multi-lingual support, accessibility to the provider's premises, and any special communication abilities are an integral part of our provider network development efforts. These requirements are detailed in the Provider Manual and online directory, as well as ongoing communications with network providers. We consistently recruit and retain providers who can best meet the cultural, ethnic, and linguistic needs and preferences of members. This helps promote choice among providers, so that ***members can select from a diverse array of network providers (and change when needed) based on their cultural preferences and unique healthcare needs.***

We have learned that many health care professionals are committed to providing culturally competent care, but lack the awareness, knowledge, or skills to do so. Through our provider training, we furnish information that providers and their staffs can use to remove cultural barriers between them and members. We strive to make sure that our providers are not only culturally sensitive, but also reflect the culture and languages of our members.

We encourage members to contact us to report all grievances, including the inability to obtain culturally competent care. To determine the impact of our cultural competency program, we closely monitor member grievances and satisfaction surveys. We also make special effort to assure that our processes are culturally sensitive and train grievance and appeals staff be sensitive to member needs throughout the grievance and appeals process. Detailed information regarding our Member Appeals and Grievance process can be found in Section 8.15 of this response.

Identifying Providers to Serve Members with Disabilities

While provider language proficiency and translation are essential to communicating with members, we believe this barely touches the surface of culturally competent service delivery for members with disabilities. Members with disabilities often face challenges when accessing care, such as the need for accessible exam tables or other adaptive aids in order to receive care or testing. Our Provider Services Staff will work to identify providers equipped to provide services to members with disabilities, or with expertise in treating members with special needs. We will also implement a local approach to identify PCPs and specialists located near members who are knowledgeable about the experiences members with disabilities frequently encounter. We will ask caregivers, community-based providers, Case Managers, and organizations working with members with disabilities such as Centers for Independent Living to help identify providers to recruit.

Provider-Patient Relationship (6.1.5)

Amerigroup values the provider-patient relationship and understands that the patient's health and well-being depends on this collaborative relationship. We know that health care professionals contribute to this partnership by serving as their patient's advocate regarding their health and rights. Therefore, we do not and will not prohibit or restrict a healthcare professional acting within the lawful scope of practice from advising or advocating on behalf of a member who is their patient regarding the member's health status, medical, behavioral health, or long-term care options. This includes any alternative treatment that may be self-administered; any information the member needs to decide among all relevant treatment options; the risks, benefits, and consequences of treatment or non-treatment; or the member's right to participate in decisions regarding his or her health care and to express preferences about future treatment decisions.

Provider Relations and Communications (6.1.6)

Question 6.1.6, #1

1. Describe your provider relations and communications strategy.

Providers are our valued partners in helping members lead healthy lives. Every day across our markets, our affiliate health plans work with Network Providers to transform care delivery and improve health outcomes. We emphasize communication and collaboration with all our providers across the care continuum, including medical homes, primary care providers (PCPs), behavioral health, LTSS and other specialty providers, and hospitals. We will maintain local, field-based Provider Services staff in Iowa who will work with providers face-to-face as well as other channels to engage and support providers in the important work they do.

Amerigroup's provider relations and communications strategy reflects the needs of the Iowa Initiative and complies with all relevant Scope of Work requirements. Our strategies include:

- **Locally based Provider Services staff** to inform and support providers by building strong relationships on the ground, locally in Iowa.
- **Provider Manual** to communicate important program information.
- **Provider training and education** to inform providers on the Iowa Initiative and our policies and procedures through individual and group provider training and education programs.
- **Provider website** to give providers comprehensive, online access to actionable, informational and streamlined information.
- **Provider newsletters** to provide relevant and helpful information to providers on a quarterly basis, including up-to-date health information and any relevant program changes (newsletters are conveniently available on our website).
- **Provider mailings and blast faxes** to provide key updates or reminders to providers (billing reminders or updates, regulation changes, EDI, ERA/EFT, program changes, etc. (information would be available on our website as well).
- **Quick reference guide** to offer providers summarized critical process information from the Provider Manual, including eligibility verification and reference information.

Our communication strategies will address topics of importance to providing and delivering quality care and services to Iowa members including Early and Periodic Screening, Diagnostic, and Treatment Services (EPSDT), lead testing, children with special healthcare needs, asthma, prenatal care, behavioral health, LTSS, inappropriate utilization of emergent services, and reduction of racial and ethnic healthcare disparities to improve health status. Various quality and utilization reports also serve as communication vehicles for providers. For example, providers will receive a gaps-in-care/missed opportunity report to remind them of EPSDT services due while provider profiles benchmark individual provider performance for identified metrics against plan performance, available State benchmarks, or the NCQA Quality Compass percentile.

Amerigroup's locally based Provider Services staff work in the field, connecting and meeting one-on-one with providers, associations and community-based organizations. Provider Services staff members are recruited from the communities they serve and understand the health beliefs and practices of the population and the needs of the providers they serve. Through their one-on-one meetings and via training sessions held in person or via telecommunication tools such as WebEx, our Provider Services staff help bridge any gaps that may develop between program requirements and the realities of local healthcare delivery systems, services and supports. They supply information that supports successful operating procedures and an understanding of the Iowa Initiative, as well as program policies and requirements, billing procedures, and electronic billing, answering questions and resolving issues for providers. In Georgia, a state of comparable geographic size and rural nature to Iowa, our affiliate health plan's Provider Services staff made 7,500 face-to-face visits in 2014 to provider offices.

Amerigroup develops profiles that are used in partnership by Provider Services staff and local providers to customize training and education sessions for individual providers and their office staff. Our profiles benchmark and rank individual provider performance against plan performance goals, available State benchmarks, and the NCQA Quality Compass percentile. The profile is available to providers to track their own performance and identify areas where they might require the assistance of Provider Services staff.

Located throughout Iowa, Provider Services staff will be visible in the provider community and enhance their relationship with our providers by attending professional events and associations of practice

management leaders, professionals and other administrators. For example, our representatives speak at the American Association of Professional Coders conference where we provide valuable information regarding claims and billing.

Evaluating our Provider Communication Strategy

Amerigroup embraces a multipronged approach to evaluating the effectiveness of our provider communication strategy. We design our education and communication programs to comply with all State and contractual requirements, and we monitor adherence through our robust Quality Management and Improvement (QM/QI) infrastructure. Some of the ways we monitor effectiveness include:

- Post-training surveys
- Annual provider satisfaction surveys
- QM/QI program outcomes

We incorporate data from these sources, along with feedback from the Medical Advisory Committee, into our communication strategy.

Post Training Surveys

Following each formal training activity, providers complete a survey on their training experience to evaluate the content shared and the presentation of information. Amerigroup also conducts random audits of Provider Services visits to determine whether on-site training met the desired objectives. We incorporate this feedback to improve the performance of our Provider Services staff.

Provider Satisfaction Surveys

Nationally, less than one percent of providers voluntarily terminate from Amerigroup's affiliates' Networks. We continually strive to improve the provider experience by collection and analysis of satisfaction surveys. Annually, the survey process assesses provider satisfaction with training and education, communications, provider enrollment, complaints resolution, claims processing and reimbursement, and Utilization Management processes. Survey information helps us better understand our Provider Network—its needs, its challenges, and the opportunities it presents for member-centered, cost-saving innovations.

Quality Management and Improvement Program Outcomes

Our QM/QM Program monitors and measures the outcomes of clinical care and services by analyzing clinical and service performance indicators and healthcare outcomes to identify and act on opportunities for improvement. This information is also used to identify performance improvement and compliance rates and to identify and act on opportunities for improvement, such as provider training and education strategies. The QM/QI team compares findings to results from previous years and to national and State value-based performance goals. We understand that provider training contributes to overall outcomes, and we include a provider training component in all our performance improvement plans. Our quality assessment and improvement programs for the Iowa Initiative will track measures, including:

- Access to Care and services
- Reduction of inappropriate utilization of emergent services
- EPSDT
- Asthma
- Maternal/child health
- Wellness
- Behavioral health

Question 6.1.6, #2

2. Describe your policies and procedures to maintain communication with and provide information to providers.

We design provider communication policies and procedures to give providers easy access to the information they need to help better serve members. Communication policies and procedures meet or exceed regulatory compliance considerations such as HIPAA. In addition, they are designed to simplify program and service navigation for both providers and their patients.

We identify topics to communicate to providers weekly, monthly, quarterly, and annually. Topics are derived from State and federal regulations pertaining to Medicaid and/or Medicare, State contracts, NCQA standards, the health plan policies and procedures, balance billing, provider requests, and other relevant sources.

For the Iowa Initiative, Amerigroup Provider Relations staff will work with our national Provider Services Organization and operational areas to prepare detailed provider education materials that meet changing business needs and to make sure providers have access to pertinent information. Changes to federal and State requirements and company policy are carefully monitored and communicated to providers.

Communication Channels

Our communication policies and procedures are in place for multiple media channels. As a result, we can communicate with and support providers in ways that fit into their individual work flow and preference. We use:

- **Provider Services staff** – Amerigroup Iowa Provider Services staff will be present daily in the communities they serve to build long-standing, trusted relationships. They will meet regularly with Network Providers, administrators, billing and clinic managers to make sure they have up-to-date program information.
- **Online resources and training** – The provider website gives providers immediate access to prior authorization services, claims tools, reimbursement policies, communications, other resources and tools to support them in delivering the best possible care to our members.
- **In-person training** – All Network Providers participate in an orientation session. Please see the response to Question 6.1.6.5 for a description of information offered during these sessions.
- **On-demand training for new technology and program changes** – When we introduce new tools and technology or there is a program change, local and national Provider Relations resources collaborate to create and deliver training strategies, materials, and schedules to make sure providers are up to date.
- **Print resources** – We offer the Provider Manual in hard copy upon request at no cost and post it online. Provider newsletters offer up-to-date information on policies and procedures, program changes, and enhancements. We fax and/or mail updated program information to physician offices, clinics, facilities, LTSS and other providers. Quarterly Reimbursement Policy Bulletins summarize policy changes.

We request feedback from Network Providers to determine what is working well and how to improve policies and procedures whenever possible. We also monitor data from provider and member services helplines as well as grievance and appeals filings to identify opportunities to revise policies and to develop new communication approaches.

Provider Manual (6.1.6.1)

Amerigroup will develop and maintain a Provider Manual that is created specifically to meet the needs of the Iowa Initiative and serve as a comprehensive document designed to inform Network physicians, hospitals, clinics, facilities, LTSS and other providers of Amerigroup guidelines and requirements.

Topics include but are not limited to:

- Program benefits, limitations, and State waivers
- Claims filing instructions and balance billing
- Prior authorization criteria and processes
- Cost-sharing requirements
- Definition and requirements pertaining to urgent and emergent care
- Participant's rights and responsibilities
- Providers' rights for advising or advocating on behalf of their patients
- Provider non-discrimination information
- Policies and procedures for grievances and appeals in accordance with 42 CFR 438.414
- Contractor and DHS contact information, such as addresses and phone numbers

The manual is available on our provider website and as a downloadable PDF. A hard copy of the manual is available upon request by the provider.

Provider Website (6.1.6.2)

Question 6.1.6, #3

3. Describe your plan to develop a provider website and describe the kinds of information you will make available to providers in this format.

Amerigroup maintains a comprehensive, secure, provider website that maximizes usability and administrative simplicity. Our provider website offers a variety of tools and resources, including an online copy of our Provider Manual along with a variety of provider training and education resources from the latest provider communications to toolkits (such as our EPSDT Toolkit), all designed to make the provider's job easier. We showcase basic information and tools such as our Provider Manual, prior authorization procedures, formularies, and reimbursement policies, and we use the website to deliver information to providers, including announcements, alerts, and forms. Our provider website includes a search engine with advanced options for finding information. The latest forms and training materials are always available on the provider website. We have staff available to support provider queries about website information, ranging from our Provider Services staff who can help find data on our websites to staff who can help providers register and access information.

We understand the value a well-designed website offers to providers. Our provider website will be designed to simplify practice management, enable site users to navigate easily to the information they need, and support provision of excellent care to the Iowa Initiative program members. The site simplifies practice management by giving providers the ability to review billing and claims payment information.

They can access:

- Important billing news and administrative updates
- Claims submission and status
- Prior authorization requirements and request status

Amerigroup web technology offers the following benefits:

- Providers can use a single sign-on process instead of logging in to multiple payer systems.
- Providers can submit claims, determine member eligibility, view claims status, and access payment information for Amerigroup and multiple other payers in one place.

Table 6.1-9 identifies provider website functions.

Table 6.1-9. Amerigroup Provider Website Functions

Function	Description
Before Login	
New User Registration	Allows Network and out-of-network providers to register for access to our site
Login Assistance	<ul style="list-style-type: none"> • Recover user name • Reset password • Recover account activation code
Application Request	Allows providers interested in joining the Amerigroup Network to submit a request for more information
After Login	
Eligibility Tool	Allows user to verify a patient’s enrollment status and assigned PCP
Panel Listing Tool	Allows user to see panel listings for a provider, group, or independent practice association over a specified date range
Claims Tools	Claims submission <ul style="list-style-type: none"> • Claims status look-up • McKesson’s Clear Claim Connection to verify code combinations • Instructions to submit claims using electronic data interchange • Notification receipts for 837 batch uploads via the site’s Message Center
Account Management Tools	Allows user to manage: <ul style="list-style-type: none"> • Demographic information (practice info, profile information, updated rosters) • Provider accounts (add new Tax ID numbers and manage Tax ID numbers) • User profile information (user name, password, contact info)
Delegated Administration Tools	Permits delegated administration, enabling a provider or practice administrator to assign/revoke user rights; features include: <ul style="list-style-type: none"> • Managing user roles • Activating accounts • Adding and activating new TINs
Help and Reference Library	Repository of forms and documents available for download: <ul style="list-style-type: none"> • Provider manual and quick reference card • Medical and office support forms • Claims forms • Links to our State and vendor partner websites
Provider Announcements	Ongoing Amerigroup and DHS news and bulletins, including those related to billing

Function	Description
Before and After login	
Ongoing Amerigroup and DHS News and Bulletins, including those related to billing	Local office and toll-free Provider Helpline phone numbers and email addresses
Prior Authorization Tools	The authorization/precertification tools allow: <ul style="list-style-type: none"> • Determination of service precertification or notification requirements • Submission of authorization requests • View of authorization status • Download of special authorization request documents
Clinical Policy Guidelines	Assists in providing quality care by reducing inappropriate use of medical resources
Reimbursement Policies	Allows access to our reimbursement policies, including information on electronic data interchange and electronic funds transfer; helps providers submit accurate claims by outlining the basis for reimbursement if the service is covered by a member’s benefit design
Online Tutorials and User Guides	Flash tutorials and downloadable user guides to assist users with the site’s functionality; upcoming training opportunities and tutorials on other topics, such as cultural competency

Enhanced Website Resources—Member 360

To advance providers’ access to member health information, Member 360 combines member data and information from various sources into a single record to deliver a holistic picture of the individual’s utilization, care management services, and gaps in care. It includes information such as member health risk assessments, care plans, longitudinal health records, and clinical data. Through the *provider facing* Member 360, providers can see their members’ records via the Amerigroup self-service website, giving them simple, easy-to-access data and information to help *engage members in their own health and well-being*. The integrated data are displayed to make it easy for providers to act, assuring their patients of the services they need. This view enables providers who treat our members to see the full picture, including care plans and assessment information, enhancing their ability to reduce duplication and improve quality of care. The physician view will enable providers to understand from a population health perspective how members are doing and, more importantly, to get information to help them achieve better results.

Provider Services Helpline (6.1.6.3)

Question 6.1.6, #4

4. Describe your plans for the provider services helpline, including the process you will utilize to answer, route, track and report calls and inquiries.

Timely and accurate responses to our providers are essential to building a relationship with them. Complementing our local Provider Services staff, our national Provider Helpline offers convenient access to specifically trained, seasoned representatives who address questions through a single point of contact. We offer providers who telephone our Provider Helpline a menu of both automated and live agent services. We will staff the Provider Helpline daily between 7:30 a.m. and 6:00 p.m. central time. During business hours, providers can opt out of the voice portal and connect with a Provider Services Representative. After business hours, providers can use the provider website to access practice guidelines, frequently asked questions, Provider Manual, and other information. Providers will use a toll-free number to speak with someone about billing questions, access prior authorization for services, and receive assistance with member eligibility questions.

We train our Provider Services Representatives to consistently and accurately respond to provider requests and questions. Our integrated desktop technology enables rapid access to information and displays all data related to a member's benefit design, assigned PCP, service utilization and claims history, authorizations, and other health insurance coverage. Combined, the provider services helpline and provider website offer providers support 24 hours a day every day.

Answer, Route, Track, and Report Processes

Calls received from our Network Providers automatically will be identified by their area codes and routed to the Provider Services Representative who is trained and equipped to address information, processes, benefits, and services that are part of the Iowa Initiative.

We track reasons for provider calls, including:

- Benefits
- Billing claims
- Eligibility
- Network
- Prior Authorization

We report the following metrics for provider calls:

- Total provider calls logged as complaint or appeal
- Total provider calls referred
- Total provider calls resolved

We are committed to meeting DHS performance standards and reporting requirements, as specified in Scope of Work Section 6.1.6.3. Amerigroup will use the information received from tracking provider calls to improve how we can enhance our communications, training and relationships with providers in Iowa thus improving provider satisfaction.

Provider Training (6.1.6.4)

Question 6.1.6, #5

5. Describe your provider training plans.

Amerigroup will provide annual and ongoing education and training to Provider Network participants. We agree to have all training materials reviewed and understand that they are subject to approval by DHS. In addition, we will develop training plans that support traditional LTSS providers who transition to offering services. We will assist with services such as information technology, billing, and systems operations. Provider training will address the topics identified in Scope of Work Sections 6.1.6.4.1 through 6.1.6.4.10. In addition, as we build relationships and contract with providers Amerigroup will identify additional training topics that would be included in our training and orientations. For example, in California our affiliate health plan worked with the Nursing Home Association to solicit input on our training materials prior to conducting our training sessions. This approach allowed us to ensure that we were addressing all their key questions as they transitioned from fee for service to managed care for LTSS.

Network Providers represent the foundation of how our members access care that supports health and well-being and how members experience our organization. From the beginning, we will work collaboratively with our Network Providers and make sure they have the training and resources needed to serve our members and other patients well. Our training plans are designed to inform and support providers using:

- An in-person, group and webinar orientation sessions
- Ongoing training
- Dedicated Provider Services staffs
- Online tools and resources

Using monthly provider training meetings and webinars, we will tailor information to give providers personalized assistance, which helps make sure providers have the information and tools needed to support Amerigroup members. Using the methods listed above, we will introduce and reinforce information on the important topics listed in Scope of Work Section 6.1.6.4, including:

- The role of the Care Coordinator and the importance of notifying a member's Care Coordinator
- Abuse and neglect training including procedures and requirements
- Critical incident training
- Provider requirements and responsibilities
- Prior authorization policies and procedures
- Medicaid policies including updates and changes
- Member Centered Planning Process
- HCBS settings per CMS regulations

Orientation

Amerigroup will invite newly contracted providers and their office staff to participate in an orientation session, which will take place within 30 days of contract execution or anytime at the request of the provider. We will provide training to 100 percent of our Iowa Network PCPs within the first 30 days of contract execution. We design our in-service, face-to-face and webinar orientation sessions to:

- Communicate DHS and Amerigroup policies, procedures, regulations, and expectations
- Identify resources made available by Amerigroup, such as online tools and the Provider Helpline
- Introduce the roles of Provider Services staff and how they can assist each clinic or office
- Define how to communicate with Amerigroup quickly and easily for each given circumstance or need (for example, patient referrals and administrative questions)

At initial training, we provide copies of our Provider Manual, prior authorization quick reference guide, and member benefit collaterals. We also include a Q & A session to address provider questions and provide clarifications.

Ongoing Training

Amerigroup will provide educational sessions for Network Providers several times a year. We will develop and offer educational sessions for Network Providers. Training will be tailored to meet the particular needs of local providers. The sessions will give providers:

- Program and regulation updates
- Information on industry and care trends
- New information that can improve member outcomes
- Recommendations on reducing administrative burden
- Information and steps that can impact performance goals
- Introduction to enhancements to our Iowa services and programs

In addition, we will offer quarterly group training sessions as refreshers and to enable providers to train new office or billing staff on the Iowa Initiative and our specific programs and services. Amerigroup Provider Services staff support individual trainings and on-site sessions anytime we identify a need or providers make a request. Session location options include group presentation settings, webinars, the providers' offices/facilities, and during the quarterly State-led workshops.

We cover meaningful topics in several ways, including online tutorials, in-person, and live web seminars. Topics include.

- **The Iowa Initiative program overview:** populations served by the program, eligibility, covered services, waivers, value-added services, Medicaid policies and procedures, and our local contact information
- **Provider responsibilities:** cultural competency and assisting members with special needs; appointment access, after-hours availability and wait time standards; reporting communicable disease; preventive health service standards; grievances, appeals, and claims dispute processes; medical record standards and reviews, and other policies or procedures; working with our pharmacy benefits administrator; and emergency service responsibilities
- **Amerigroup programs:** Provider Incentive Programs and Patient-Centered Medical Homes
- **Amerigroup services:** our role and responsibilities; Quality, Chronic Care, and Case Management Programs and referral processes; behavioral health services and the whole-person treatment model; electronic service records; language and interpreter services; and telemedicine and Amerigroup On Call programs
- **Member services:** enrollment process; rights and responsibilities; PCP selection, assignment, and change processes; ID cards; advance medical directives; compliance with State EPSDT and immunization schedules; and grievance and appeals processes

Certain high-volume providers receive training via monthly, quarterly, and annual education visits or via operational meetings with Provider Services staff. Provider Services staff will meet one-on-one with hospitals quarterly and with PCPs at least annually.

Communication Review and Approval (6.1.6.5)

Amerigroup will submit provider communications to DHS for pre-approval at least 30 calendar days prior to expected use and distribution, unless otherwise requested by DHS. We will submit substantive changes to previously approved communications to DHS for review and approval at least 30 calendar days prior to use. We will comply with DHS processes that facilitate submission and approval of materials. We will also submit information that includes the State's name and correspondence that may be sent to providers on behalf of DHS to DHS for review and approval. Approval given for DHS or other State agency name or logo is specific to the use requested and shall not be interpreted as blanket approval. Upon DHS request, we will include State program logos in its provider communication materials. We understand DHS reserves the right to mandate that specific language be included in provider communication materials.

At least 30 calendar days prior to use and distribution, Amerigroup will submit new and previously approved communications to DHS. Following DHS approval, we will post each provider communication piece to our Iowa provider website.

To facilitate version control and communication integrity, we will assign unique document control numbers to each provider communication. The document control information includes a date that identifies when we finish a document originally or when we finish an update or revision.

Contractor Developed Materials (6.1.7)

All materials developed by Amerigroup will be made available to DHS and archived in an electronic library. The materials will be available to DHS throughout the contract term and transitioned to DHS after the contract term.

Notification of Provider Disenrollment (6.1.8)

Question 6.1.8, #1

1. Describe procedures for ensuring continuity of care and communication with members when a provider disenrolls.

Our primary concern is the well-being of our members. Assuring seamless transitions and continuity of care is an integral part of assisting members when a provider disenrolls from the Network. We manage our care coordination services and processes so that each member receives uninterrupted care. As the national annual voluntary termination rate for our PCPs is less than 1 percent across our affiliates, we seldom need to transition care for a member due to provider disenrollment. However, Amerigroup does have policies and procedures in place to accommodate members in those rare instances when a provider becomes unavailable.

Member Notification of Provider Termination

When a PCP or other provider serving as the primary source of care for a member voluntarily or involuntarily disenrolls from our Network, we will send notification letters to affected members in accordance with Agency and federal requirements.

When termination involves a PCP:

- The letter will explain the member's need to choose a new PCP within 30 days.
- We will encourage members having difficulty choosing a new PCP to contact the Member Services Helpline for assistance.
- We reach out to members in active care or who have not selected a new PCP within 30 days to see if they require assistance selecting a new PCP.

When members do not select a new PCP, Amerigroup assigns them to a PCP in our Network who best meets their needs within their geographic area. If a provider disenrolls from our Network but remains a provider part of the Iowa Initiative, we will monitor the provider to make sure he or she continues to care for program members at least 30 calendar days or until the member has a new provider. If a provider disenrolls from the Iowa Initiative, we will help the member locate a new provider that meets his or her needs.

Provider Disenrollment Information Submission

Using web interchange, we will notify the State fiscal agent's provider enrollment unit of the intent to disenroll a provider. When advance notice of disenrollment is available, notification will occur within five business days prior to the effective disenrollment date. When advance notice is not feasible, we will submit the disenrollment within five business days of the provider's termination effective date.

We reassess our Network when a PCP terminates to verify that PCP access and network composition are not impacted by the termination. We will notify the proper regulatory agencies within 15 business days if there is a determination that the Provider Network could materially reduce access to care. We will submit any required reporting of provider enrollments and disenrollments by email, fax, or mail, as requested by

the Agency. We will report Network status of PCPs, specialists, hospitals, ancillaries and other providers annually or when there are significant changes in the Network.

Provider Notice of Termination and Continuity of Care Requirement

A contracted provider terminating his or her contract with us must submit written notification at least 90 days prior to the termination date. As stipulated in their agreements, when providers terminate their contract, they must provide continuation of care for members for at least 30 calendar days or until the member's assignment to another provider becomes effective. We also help our members on a one-on-one basis to receive continuity of care when their specialist has terminated from the Network.

Medical Records (6.1.9)

Question 6.1.9, #1

1. Describe your process for transmitting and storing medical data, including the use of technology and controls to ensure confidentiality of, and access to, medical records.

To comply with Iowa Administrative Code 441, Chapter 79.3, Amerigroup Iowa will draw upon our affiliates' more than two decades of experience developing and implementing policies and procedures to meet and exceed contractual requirements for participating provider medical records content and documentation. As a partner with numerous State and federal government agencies, our affiliates have established extensive processes to verify the consistent protection of the confidentiality of member information. Amerigroup's participating providers contractually agree to follow all federal and State laws and regulations regarding medical records, specifically 42 CFR 456 with regard to utilization control requirements, related policies, and procedures. Amerigroup will comply with all requirements addressed in SOW Section 6.1.9 Medical Records and SOW Section 2.15 Confidentiality of Member Medical Records and Other Information.

Transmitting and Storing Medical Data

Amerigroup requests medical records from providers by confidential mail or fax request. When requesting by fax, we use cover sheets to protect the names of our members, sending the request to a private fax machine in the provider's office. We verify private fax numbers with our providers on an ongoing basis. The majority of our providers return requested medical records to us by mail or fax. Some provide copies when we visit their offices during medical records reviews. In all cases, we store the medical record using one of two methods, depending on the intended use and receiving department:

- We receive electronic data as an image through a secure portal. We store the image in a secure database repository such as FILENET or Ultera. Once we secure the image within the repository, originals are destroyed.
- We receive hard-copy medical records or other protected information and store them in a secure, locked filing cabinet accessible only to those clinical employees requiring use of the data.

When receiving electronic data that need to be stored as a hard copy, the file arrives through a secure portal, and we maintain the file(s) in a locked filing cabinet. Then, we destroy the electronic originals. Amerigroup adheres to all standards set forth in our records retention policy.

Access to RightFax (a secure facsimile process available on computers) and electronic database repositories is limited to those with network security and authorization to access the information. Users of either software program can enter and access the information only with a unique user ID and password.

Technology and Controls to Secure Medical Records

On the rare occasion we send or receive protected health information (PHI), medical records, and other confidential information by email, our company uses the ZIXCorp® software program Secure eMail, a program that automatically encrypts emails and attachments identified as potentially containing PHI.

Secure eMail

Secure eMail requires setting up a user ID and password to retrieve information sent to recipients outside our email system. Here is how it works:

- If we send a provider an email or attachment containing PHI, the provider is notified that he or she has a Secure eMail message
- By clicking on a link in the email notification, the provider is directed to the Secure eMail website
- Providers can forward the email, but the recipient cannot access the content of the email
- Providers using Secure eMail for the first time must register to create a password-protected account
- The provider logs into the Secure eMail Message Center to retrieve the email and attachment

Secure eMail also enables the provider to encrypt and send us secure emails. The Secure eMail program has a help desk to answer technical questions. The service is available to Amerigroup network providers at no charge.

Provider Medical Record Standards

Medical records will be maintained in a manner that supports effective and confidential member care and quality review. Providers must comply with HIPAA security requirements. Amerigroup performs medical record reviews upon signing a provider contract and, at a minimum, every three years thereafter to verify that providers comply with these standards. Policies, procedures, and expectations will be documented in the Provider Manual. We require providers to store

and retrieve medical records in a manner that protects patient information according to the Confidentiality of Medical Information Act. This act prohibits a provider of healthcare from disclosing any individually identifiable information regarding a patient's medical history, treatment, or behavioral and physical condition without the patient's or his or her legal representative's consent or specific legal authority. Records required through a legal instrument may be released without patient or patient representative consent.

We perform random medical record reviews of all primary care providers (PCPs), including General Practice, Family Practice, Internal Medicine, Pediatrics, select OB/GYNs, and other specialists who may be serving as a member's PCP, to verify that providers comply with these standards.

Medical Record Documentation Standards

In accordance with State and federal laws, Amerigroup makes sure that medical records contain documentation that supports all medical services a member receives. Our standards for medical records comply with IAC 441-79.3 and 79.4. Every medical record, at a minimum, must be legible; dated; and signed by the physician, physician assistant, nurse practitioner, or nurse midwife providing patient care and include the following:

- **Identification.** Each page or separate electronic document of the medical record must contain the member's first and last name. In the case of electronic documents, the member's first and last name must appear on each screen when viewed electronically and on each page when printed. As part of the

medical record, the medical assistance identification number and the date of birth must also be identified and associated with the member's first and last name.

- **Basis for service — general rule.** The medical record must reflect the reason for performing the service or activity, substantiate medical necessity, and demonstrate the level of care associated with the service. The medical record will include the items specified below unless the listed item is not routinely received or created in connection with a particular service or activity and is not required to document the reason for performing the service or activity, the medical necessity of the service or activity, or the level of care associated with the service or activity:
 - The member's complaint, symptoms, and diagnosis
 - The member's medical or social history
 - Examination findings
 - Diagnostic test reports, laboratory test results, or X-ray reports
 - Goals or needs identified in the member's plan of care
 - Physician orders and any prior authorizations required for Medicaid payment
 - Medication records, pharmacy records for prescriptions, or providers' orders
 - Related professional consultation reports
 - Progress or status notes for the services or activities provided
 - All forms required by the department as a condition of payment for the services provided
 - Any treatment plan, care plan, service plan, individual health plan, behavioral intervention plan, or individualized education program
 - The provider's assessment, clinical impression, diagnosis, or narrative, including the complete date thereof and the identity of the person performing the assessment, clinical impression, diagnosis, or narrative
- Any additional documentation necessary to demonstrate the medical necessity of the service provided or otherwise required for Medicaid payment

Service Documentation

The record for each service provided will also include information necessary to substantiate that the service was provided:

- The specific procedures or treatments performed
- The complete date of the service, including the beginning and ending date if the service is rendered over more than one day
- The complete time of the service, including the beginning and ending time if the service is billed on a time-related basis; for those time-related services billed using Current Procedural Terminology (CPT) codes, the total time of the service will be recorded, rather than the beginning and ending time
- The location where the service was provided if otherwise required on the billing form
- The name, dosage, and route of administration of any medication dispensed or administered as part of the service
- Any supplies dispensed as part of the service
- The first and last name and professional credentials, if any, of the person providing the service
- The signature of the person providing the service or the initials of the person providing the service if a signature log indicates the person's identity
- For 24-hour care, documentation for every shift of the services provided, the member's response to the services provided, and the person who provided the services

Security of Medical Records

Medical records will be secure and inaccessible to unauthorized access to prevent loss, tampering, disclosure of information, alteration, or destruction of the record. Information will be accessible only to authorized personnel within the provider's office, Amerigroup, and DHS representatives or to persons authorized through a legal instrument. Records will be available to Amerigroup for purposes of quality review, HEDIS®, and other studies.

Internal Safeguards to Maintain Data Integrity

To support the Iowa Initiative, we will maintain appropriate administrative, physical, and technical safeguards to maintain data security, including the following:

- Enforcing administrative procedures for execution of security measures
- Maintaining physical safeguards such as protection of computers, equipment, locks, and keys
- Implementing and maintaining adequate measures to control access to computer systems
- Instituting processes to prevent unauthorized access to data that are transmitted electronically

All employees receive thorough training on the overall requirements of HIPAA Privacy and Security Rules, as well as how these rules apply to specific job functions, as described in Section 2.15.

Maintenance and Retention (6.1.9.1)

Active medical records will be secured and inaccessible to unauthorized persons. Amerigroup has electronic record-keeping system procedures in place to help verify patient confidentiality, prevent unauthorized access, authenticate electronic signatures, and maintain upkeep of our computer systems. Security systems are in place to provide back-up storage and file recovery, to provide a mechanism to copy documents, and to make sure that recorded input is unalterable. To that end, Amerigroup makes sure that our retention practices align with the requirements outlined in SOW Section 6.1.9.1 Medical Records Retention, including:

- Identifying each medical record by State identification number
- Identifying the location of every medical record
- Placing medical records in a given order and location
- Maintaining the confidentiality of medical records information and releasing the information only in accordance with SOW Section 6.1.9.4 Confidentiality of Medical Records
- Maintaining inactive medical records in a specific place
- Permitting effective professional review in medical audit processes
- Facilitating an adequate system for follow-up treatment, including monitoring and follow-up of off-site referrals and inpatient stays

Amerigroup will maintain records during the time the member is receiving services from the provider, for a minimum of seven years from the date when a claim for the service was submitted to the medical assistance program for payment, and as may be required by any licensing authority or accrediting body associated with determining the provider's qualifications.

Corrections to Medical Records

In compliance with DHS rules, we understand that a provider may correct a medical record before submitting a claim for reimbursement and that DHS allows for corrections to medical records as follows:

- Corrections must be made or authorized by the person who provided the service or by a person who has firsthand knowledge of the service.

- A correction to a medical record must not write over or otherwise obliterate the original entry. A single line may be drawn through erroneous information, keeping the original entry legible. In the case of electronic records, the original information must be retained and retrievable.
- Any correction must indicate the person making the change and any other person authorizing the change, must be dated and signed by the person making the change, and must be clearly connected with the original entry in the record.
- If a correction made after a claim has been submitted affects the accuracy or validity of the claim, an amended claim must be submitted.

Member Rights (6.1.9.2)

In accordance with SOW Section 8.10.6 Copy of Medical Records and 42 CFR 438.100(b)(2)(vi), Amerigroup maintains procedures that guarantee members have the right to request and receive a copy of his or her medical records and to request that they be amended or corrected. Providers are required to offer a copy of a member's medical record upon reasonable request by the member at no charge, and they must facilitate the transfer of the member's medical record to another provider at the member's request.

Consent and Availability of Medical Records

A provider's medical records system must allow for prompt retrieval of each record when a member comes in for a visit. Providers must maintain members' medical records in a detailed and comprehensive manner that conforms to good professional medical practice, facilitates an accurate system for follow-up treatment, and permits effective professional medical review and medical audit processes. Medical records must be legible, signed, dated, and maintained for at least seven years as required by State and federal regulations or for the duration of contested case proceedings, whichever is longer, in accordance with SOW Section 2.4.2 Medical Records.

Access to Medical and Financial Records (6.1.9.3)

Providers must permit Amerigroup and DHS representatives to review members' medical records for the purposes of monitoring provider's compliance with the medical record standards, capturing information for clinical studies, monitoring quality, or any other reason. Our contracts include the necessity to share information for oversight and better member outcomes. Providers will be encouraged to use technology, including the Iowa Health Information Network (IHIN), to transmit and store medical record data.

Confidentiality of Medical Records (6.1.9.4)

All members' medical records will be stored in a confidential manner and will not be released without written consent of the member or responsible party. Written consent is not required for transmission of medical record information to physicians, other practitioners, or facilities providing services to members under contract with Amerigroup or for transmission of medical record information to physicians or facilities providing emergency care. However, written consent is required for the transmission of medical record information of a former member to any physician not connected with Amerigroup. The extent of medical record information to be released in each instance will be based upon tests of medical necessity and a "need to know" on the part of the practitioner or facility requesting the information. All releases of medical records will be compliant with the HIPAA Privacy Rule.

Availability of Services (6.1.10)

Question 6.1.10 #1

1. Describe your plans to ensure that network providers offer hours of operation that are no less than the hours of operation offered to commercial members or comparable Medicaid members.

Appointment Availability and After-hours Access

Amerigroup affiliates have extensive experience managing networks to help assure providers adhere to all requirements of the health plans we develop and manage. For the Iowa Initiative, we will establish an in-depth, cross-functional process to monitor the current status of our network, project future needs, readily identify any network deficiencies or gaps, and replicate this successful process to make sure our network is able to meet and exceed the needs of Initiative beneficiaries. In accordance with 42 CFR 438.206, we will consider multiple elements when developing and maintaining our provider network. Our network providers will maintain hours of operation that are no less than the hours of operation offered to commercial members. We will also make covered services available twenty-four hours a day, seven days a week (24/7), when medically necessary. We are uniquely positioned to anticipate Medicaid enrollment; evaluate member needs, preferences, and utilization patterns; and demonstrate our ongoing commitment to a robust and responsive provider network. We will routinely review the overall member enrollment to gauge our network against the total eligible population. This allows us to understand the scope of eligible individuals and anticipate and meet the needs of any increase in enrollment. We will also conduct ongoing analysis of clinical data to make sure the network contains the appropriate mix of providers to serve Iowans.

We inform providers about appointment availability and after-hours access standards in their provider agreements, orientations, and Provider Manual. Through the orientation and training, we emphasize that hours of operation for our Medicaid members can be no less than those offered all other patients in their practice. We routinely monitor provider adherence to these standards through:

- Annual audit of a random, statistically valid sampling of primary care providers (PCPs) and designated specialists to assess appointment availability and after-hours coverage
- Review of member grievances, critical incidents, and advisory committee feedback
- Feedback from Care Coordinators and Case Managers

After-hours Services

Our members must have access to healthcare 24/7. Providers are required to have a system for members to call after hours with medical questions or concerns. We regularly monitor provider compliance with after-hours access standards by randomly sampling providers and conducting calls to their offices after hours. Failure to comply with after-hours access requirements may result in corrective action, including termination from our network.

Providers must adhere to the following after-hours protocols:

- Answering service or after-hours personnel must:
 - Forward calls directly to the PCP or on-call provider or inform members that the PCP will contact them within 30 minutes

IA_6.1.10_CGB_1.2

- Ask if the call is an emergency; if so, they must immediately direct the member to dial 911 or proceed directly to the nearest hospital emergency room
- Have the ability to contact a telephone interpreter for members with language barriers
- Return all calls
- Answering machine messages:
 - May be used when staff or an answering service is not immediately available
 - Must instruct members with emergency healthcare needs to dial 911 or proceed directly to the nearest hospital emergency room
 - Must provide instructions on contacting the PCP or on-call provider in a nonemergency situation
 - Must provide instructions in English, Spanish, and any other language appropriate to the PCP's practice

We require providers to use an Amerigroup-contracted network provider for on-call services. When that is not possible, the provider must use his or her best efforts to make sure that the on-call provider abides by the terms of our provider contract and standards.

When we identify a provider who is out of compliance with appointment standards, our employees visit the provider and present a letter requesting a Corrective Action Plan. We continue to monitor compliance and re-survey the provider after 90 days to verify compliance. Ultimately, we remove any provider who fails to meet access standards from our network.

Provider Compliance (6.1.11)

Question 6.1.11 #1

1. Describe procedures for ensuring network providers comply with all access requirements and for monitoring providers for compliance.

Policies and Procedures for Network Provider Accessibility

Amerigroup has established policies and procedures that outline our standards for timely, appropriate access to quality healthcare. Following guidelines set by DHS, NCQA, and the American College of Obstetricians and Gynecologists (ACOG), these standards promote fair, reasonable, timely medical appointments, emergency services, and continuity of care for new and transferring members. They establish timeliness standards based on provider type and urgency of member needs, as well as maximum in-office wait times. We closely monitor provider compliance with access to care standards and take corrective action to address noncompliance. We will comply with all requirements specified in Attachment 1, Scope of Work.

Amerigroup is committed to maintaining an Iowa Initiative provider network that not only meets geographic access standards, but also our members' racial, cultural, and linguistic needs. We recognize that there can be cultural and linguistic barriers that affect our members' ability to understand or comply with certain instructions or procedures. In addition to recruiting a diverse network, we offer various tools and resources to help providers deliver culturally competent services. For example, we regularly educate providers around cultural competency and include this topic in our provider orientation. We also provide internal training around cultural competency and developed our Caring for Diverse Populations Toolkit that we post to the Provider Resources page on our website. We developed the toolkit to address very specific operational needs that often arise in a busy practice because of changing service requirements and legal mandates. Toolkit topics include:

- Resources to assist with a diverse patient population base
- Resources to communicate across language barriers

- Resources to increase awareness of cultural background and its impact on healthcare delivery
- Regulations and standards for cultural and linguistic services
- Resources for cultural and linguistic services

Amerigroup outlines our internal appointment waiting time standards in Table 6.1-10. We educate providers on these requirements during initial orientation and reinforce them through ongoing training and our Provider Manual.

Table 6.1-10. Appointment Waiting Time Standards

Service/Provider Type	Assessment and/or Treatment
Emergency examinations	Immediate access during office hours
Urgent examinations	Within 24 hours of request
Non-urgent “sick visits”	Within 72 hours of request
Non-urgent routine exams	Within 21 days of request
Specialty care examinations	Within 3 weeks of request
Outpatient behavioral health examinations	Within 14 days of request
Routine behavioral health visits	Within 10 days of request
Outpatient treatment following discharge from an inpatient hospital	Within 7 days of discharge
Post-psychiatric inpatient care	Within 7 days of discharge

Medical Appointment Standards

Through provider education, our Provider Manual, and provider visits, we encourage PCPs to perform an Initial Health Assessment (IHA) and Preventive Care Assessment for newly assigned members. An IHA is not needed if the member is an existing patient of the PCP group (but new to Amerigroup Iowa). In addition, follow-up is not needed if there is an established medical record that shows baseline health status. The medical record should include sufficient information for the PCP to understand the member’s health history and to recommend treatment as needed. Transferred medical records meet standards for an IHA if a completed health history is included. Medical appointment standards for members under the age of 21, those 21 and older, and prenatal and postpartum visits are shown in Tables 6.1-11 through 6.1-13.

Table 6.1-11. Medical Appointment Standards: Services or Members Under the Age of 21

Nature of Visit	Appointment Standards
Initial Health Assessments	<ul style="list-style-type: none"> • Newborns: within 14 days of enrollment • Children: within 60 days of enrollment • Adults (18–21): within 8 weeks of enrollment

Table 6.1-12. Medical Appointment Standards: Services for Members 21 or Older

Nature of Visit	Appointment Standards
Initial Health Assessments	Within 90 days of enrollment

Table 6.1-13. Medical Appointment Standards: Prenatal and Postpartum Visits

Nature of Visit	Appointment Standards
First trimester	Within 14 days of request
Second trimester	Within 7 days of request
Third trimester	Within 3 business days of request or immediately if an emergency
High-risk pregnancy	Within 3 business days of request or immediately if an emergency
Postpartum exam	Between 3 to 8 weeks after delivery

Question 6.1.11 #2**2. Describe emergency/contingency plans in the event a large provider is unable to provide needed services.**

In the event a large provider is unable to provide needed services, Amerigroup will implement contingency plans. We will submit these plans to DHS for approval and will include the following elements:

- If a large provider is unable to provide a specific service, the Healthcare Services team in concert with the Provider Services team will find an appropriate alternative for the member's care. The member will be engaged in care with the identified provider as quickly as medically necessary.
- If a large provider is not available to render any services, we recognize that many members are likely to be affected. In this instance, care of the members will be quickly triaged to determine how rapidly medically necessary care is needed, and appropriate arrangements will be made with surrounding area providers to get the member the care within the defined time frame. This can include arranging for transportation, if necessary, and making sure members' care is managed to help assure continuity of care. In addition, we will incorporate the use of telemedicine as part of the plan.
- If a natural disaster is the cause of significant providers becoming unavailable, we maintain a Disaster Recovery Program that not only addresses our business needs but also encompasses member services.

In August 2012, Hurricane Isaac devastated portions of Louisiana as its slow-moving trajectory, far-flung storm surge, and torrential rains impacted portions of the State.

Following the Disaster Recovery and Business Continuity Plan, our Louisiana affiliate collaborated with the State agency to support our members, including staffing the State's Emergency Operations Center 24 hours a day during the worst part of the disaster. Daily calls between health plan leadership and national support resources focused on member access to services, employee safety, and continued business operations. Before, during, and after Hurricane Isaac, our affiliate initiated a number of activities, including:

- **Member Outreach** — The affiliate plan provided members useful information on its website and through automated calls:
 - Health plan employees personally called more than 500 active members in Case Management to confirm that they had a disaster plan
 - They initiated automated calls to members in the Tangipahoa Parish to warn them of impending flood waters in the aftermath of Hurricane Isaac
 - The ongoing Emergency Procedures homepage and Community Resources link on its website delivered useful information that helped members stay prepared
- **Managing our Members' Care** — Our affiliate successfully transitioned all members' services activities to the national call center during the worst of the storm. Once it abated and employees were able to return to the New Orleans offices, member services were transferred back to the local plan. To meet member care needs, the health plan:
 - Waived authorization requirements from the start of the storm through September 2, 2012
 - Worked with the call center clinical team to manage authorizations and inpatient admissions, complete discharge planning, and align members with special healthcare needs to PCPs and available community resources to avoid duplication of effort
- **Partnering with our Subcontractors** — Our affiliate worked with subcontractors to enable members to get the support they needed. This specifically included:
 - Relaxing pharmacy rules for medical injectibles so members were able to get medications without authorizations

- Working with durable medical equipment and transportation vendors before the storm to support members (for example, getting to shelters, having evacuation plans, having proper medical supplies)
- **Maintaining Quality Management** — The health plan collaborated with national Quality Management partners to prevent disruption of quality of care and appeals.

As part of our organization-wide culture of continuous improvement, our Louisiana health plan conducted a detailed review of its response to Hurricane Isaac to identify what went well and opportunities for improvement. The health plan provided recommendations to the State, including suggesting briefings with all Louisiana MCOs to promote timely and accurate exchange of information and provide uniform communication of crisis-related information to members and providers.

Network Development and Adequacy (6.2)

Member Choice (6.2.1)

Amerigroup Iowa (Amerigroup) is committed to offering quality care in the least restrictive manner possible. Part of that is offering members choice with respect to providers. We have already started building relationships with key Iowa providers and provider organizations that will be the foundation of a sufficient provider network that includes an array of primary, acute, long-term support services, behavioral health, and ancillary providers for members covered under the Iowa Initiative. This provider network will offer members choice in providers and sufficient access to covered services without regard to variations in provider reimbursement. From our list of participating providers, members can choose a primary care provider (PCP) that best meets their needs. They can choose to have a second opinion rendered by providers within the system, and if there is not a reasonable alternative, we will work with the member to find an acceptable non-participating provider for that opinion. Additionally, if a member needs the services of a specialist, he or she can work with his or her primary care provider to select a specialist that best meets his or her needs. We provide a listing of LTSS services and supports that are available to members in their area so that they can choose an LTSS provider of their choice

IA_6.2.1_COB_12

Amerigroup’s programs are built upon a member-centric focus with emphasis on improved health outcomes and quality of life one member at a time – by doing the right thing for every member every time.

Members can view our provider network via our member website. The website includes a searchable online directory to select a PCP based on the member’s preferences and location. The tool always contains the most accurate information on our provider network. We update the web-based provider listing every night from our core operating system. Prospective members can also view our provider directory from our

website. If a member enrolls and has an established relationship with a provider who is not part of our network, Amerigroup will contact that provider with the intent to contract him or her into the network.

Network Development and Maintenance (6.2.2)

Question 6.2, #1

1. Describe in detail your plans to develop and maintain a comprehensive provider network, including goals and tasks and the qualifications and experience of the staff members who will be responsible for meeting network development goals.

Amerigroup's affiliate health plans have a strong record of developing and maintaining provider networks that meet and often exceed adequacy and sufficiency standards in the 19 states where we manage state-sponsored health programs. We diligently monitor access to and the availability of our provider network. We continually generate and evaluate GeoAccess reports for physical and geographic access to make sure members have ample choice of providers. We also regularly monitor information obtained through our Network Strategy Workgroup and Health Education Advisory Committee, as well as Provider Services, Medical Management, Quality Management, and Member Services departments to identify opportunities to improve the network and address any deficiencies. When we identify a deficiency in meeting access standards, our Provider Services staff promptly develops a detailed action plan—including staffing, responsibilities, resources, and a timeline—to correct the situation. Strategies may include:

- Identifying and recruiting additional providers
- Identifying out-of-network providers for single-case agreements
- Working with existing providers with closed panels to meet requirements for re-opening the panels or asking them to accept the member on an exception basis
- Expanding or facilitating transportation services.

We monitor the plan's progress until we attain compliance. Amerigroup has created a Provider Network Development and Management Plan to meet the requirements contained in SOW Section 6.2 Network Development and Adequacy. We use the plan to develop, maintain, and monitor an adequate provider network and will be maintained by our Iowa-based Provider Services Department. Our Provider Services team developed and will refine, evaluate, and manage the Plan with ongoing input from our Network Strategy Workgroup. This cross-functional workgroup includes representatives from Provider Services, Medical Management, Quality Management, Compliance, Community Outreach, Government Relations, and Finance. The workgroup provides valuable insight and feedback to make sure that our network has the right number, mix, and geographic distribution of quality providers to meet the needs of our members and to comply with Amerigroup standards and Contract requirements. The workgroup is led by the Provider Services Manager and meets quarterly. Our Iowa Health Plan CEO, Medical Director, and Chief Operating Officer also serve on the workgroup.

Our provider network development and maintenance tasks incorporate the following:

- Establish rapport with the provider community
- Educate providers regarding services that Amerigroup provides
- Discuss partnerships with provider population to meet the membership needs
- Secure agreements to form network
- Credential providers
- Provide ongoing provider support through Amerigroup's Provider Services Department

As mentioned earlier in Section 6.1.1, through a close partnership with Wellmark, Inc., and engagement with existing Iowa State resources for valuable feedback, we have gained an understanding of Iowa's provider community and the health care needs of its Medicaid, hawk-i and other members who will be served under the Iowa Initiative.

We will build trust and develop collaborative working relationships with Iowa providers through our on-the-ground approach. We will assure that providers are well-versed in our programs, processes, or procedures. Our goal is to forge successful relationships with Iowa's providers that will position us at the forefront of the contracting process and assure compliance with network requirements. We will continually seek to improve our network by listening and responding to our members, providers, stakeholders, and community partners. Our collaborative approach to developing, assessing, and updating our network will foster an adequate and accessible network for our members.

Excluded Providers (6.2.2.1)

Amerigroup will comply with all requirements in Section 6.2.2.1 and will not execute provider agreements with providers who have been excluded from participation in the Medicare, Medicaid, and/or CHIP programs per Sections 128 or 1156 of the Social Security Act or who are otherwise not in good standing with a State's Medicaid or Medicare program. We have proven processes in place so that excluded providers are not included in our network. This includes checking the lists of providers currently excluded by state and federal governments every 30 days.

Network Development Considerations (6.2.2.2)

Our network adequacy and capacity model considers all of the requirements in the RFP for establishing and maintaining a provider network that offers members adequate access to covered services, including those found in RFP Exhibit D – Covered Benefits. Our intent is to develop a network that meets and/or exceeds access and capacity standards to foster member access and choice of providers based on:

- Expected utilization of services required by the populations served by the Iowa Initiative
- Anticipated enrollment of all populations included in the program, including Medicaid, CHIP, SSI, and waiver populations
- Numbers and types of providers required to furnish the contracted services, including training, experience, and specialization
- Provider capacity (including the effect of providers who are not accepting new Medicaid/CHIP patients)
- Geographic location of providers and Medicaid enrollees (including distance, travel time, means of transportation, and physical access for members with disabilities)

In our considerations of access for members with disabilities, we capture physical access for each provider location and use this to map access for members with disabilities and expand contracting as indicated. All network providers will execute a written agreement to participate in our network. Our network capacity modeling incorporates the following steps and considerations.

Anticipated Enrollment (6.2.2.2(i))

Our anticipated enrollment determines the composition and capacity needs of our provider network, including PCPs, specialists, hospitals, ancillary providers, and long-term care providers. We start by identifying and counting the available providers by type and specialty that we will target for participation in our network based on the needs of our expected members. We target all available providers for contracting, including but not limited to providers with whom we have already obtained LOIs.

In determining our initial network capacity, we estimate the projected number of enrollees we expect to receive. For modeling purposes, we adjust our initial network capacity target to accommodate twice the

anticipated enrollment, allowing for sufficient excess capacity in our network projections. For Iowa, which intends to award two to four Contracts, we estimated three Contract awards, which would mean that one-third of the number of beneficiaries will be enrolled with Amerigroup; we then double that number to obtain the baseline enrollment from which we determine the needed provider network capacity.

Expected Utilization of Services, Numbers and Type of Providers Required, Providers not Accepting New Medicaid Patients (6.2.2.2(ii) – 6.2.2.2(iv))

We analyze the expected populations and the services they need. To account for expected utilization of services, we establish target ratios of members to providers by provider type. *We use conservative member-to-provider ratios, assuring appropriate access for services.* For example, we model our PCP capacity using a ratio of 1,500 members to a PCP and 750 to a physician extender. We also recognize that advanced registered nurse practitioners serve as PCPs in Iowa and are considered independent practitioners. We use a ratio of 10,000 members per provider for specialists, while also assuring that we include the subspecialists experienced at working with our members with various special needs.

We also examine travel time for specialists, particularly higher volume specialists such as OB/GYNs, cardiologists, psychiatrists, allergists, dermatologists, gastroenterologists, general surgery, ophthalmologists, and orthopedic surgeons. This allows us to assure we have adequate capacity to absorb variations in utilization caused by variations in populations and other variables.

Amerigroup's Participating Provider Agreements require providers to accept members up to the specified capacity limits. During the contracting and credentialing process, providers may designate when they are open to accept new members or are limiting enrollment to current patients. Amerigroup maintains an expectation that if a provider closes his or her practice, he or she is taking that action for all populations and payer. We adjust our capacity estimates to account for providers who are accepting current patients only or are not open to new Medicaid members. For example, if we have 350 PCPs in a given service area but only 300 have open panels, our adjusted number of available PCPs for new member enrollment would be 300. Providers with closed panels that have actual Amerigroup members are considered when determining overall network capacity.

Geographic Location of Providers and Members (6.2.2.2(v))

We target all available providers within the travel distance requirements established in the RFP, including providers in contiguous states that also fulfill the travel and distance requirements. Travel time and distance standards vary between urban and rural areas to account for the different means of transportation available in those areas, such as availability of public transportation. We use GeoAccess software to measure both the average distance of members to a provider and the percentage of members who have access to a provider of each type within the defined travel distance standard. This method allows us to assess the adequacy of our network for each provider type against the time, distance, and capacity standards and assists in identifying any gaps in coverage that we need to target for continued ongoing contracting.

Throughout our initial network development period, we evaluate our provider network against the time and distance and capacity measurements. To determine capacity, we multiply the provider counts for each provider type by the applicable capacity ratio to determine network capacity. For example, if we have 200 age-appropriate PCPs and 35 physician extenders in a given area with open panels, we multiply 200 by 1,500 and 35 by 750 to obtain a maximum PCP network capacity of 326,250 members within the area.

We test the capacity result obtained from the network adequacy model against our anticipated enrollment. We couple geographical adequacy with the capacity standards in GeoAccess software to allow us to take both elements into consideration when evaluating the capacity and adequacy of our network.

Amerigroup uses data to support our on-the-ground, local approach to network development. Iowa is the 14th least densely populated state, which presents a challenge in network development. Amerigroup's affiliates have built strong provider networks in states with challenges similar to Iowa—including Kansas, Nevada, and New Mexico, which are the 11th, 9th, and 6th least densely populated states. In Iowa, we will use census data, enrollment files, and various State/federal agency reports to identify members' language, race, and ethnicity. This information helps assure that our network meets the cultural and linguistic needs of members. In developing our initial network, we will target all available Iowa providers to serve the needs of the populations served under the Iowa Initiative

Using available data, we also perform analyses to identify population centers and high-volume Medicaid providers. Our goal is to maximize continuity of services for members so we can focus our efforts on those providers who are currently providing the most services to the covered population. Conversely, this analysis also identifies areas where both the population and availability of providers are sparse. This helps us develop our strategies for contracting with the available providers in those areas and developing our approaches to outreach strategies in underserved areas.

Upon development of a provider network, we monitor it to assure it continues to meet the needs of our members. As part of our efforts, we use actual data collected from various internal and external sources, including:

- Utilization and claims data, encounter data, laboratory data, and pharmacy data
- Results from health risk assessments
- Information on State agency eligibility categories
- Demographic information
- Health Department epidemiology reports
- Member complaints
- Quality of services
- Volume of out-of-network authorizations

We use this information to evaluate and adjust our provider network, as needed, to meet the needs of our members and future members.

We also use data to learn about provider availability. For example, Amerigroup studied Iowa's provider availability and learned about the State's historic shortage of physicians using data from sources such as the U.S. Department of Health and Human Services report on Health Professional Shortage Areas and Medically Underserved Areas/Populations. This data supported our development of solutions to enhance access, such as the use and promotion of physician extenders and telemedicine.

Policies and Procedures for Selection, Credentialing and Retention of Providers (6.2.2.3-6.2.2.5)

Amerigroup understands the complexities surrounding Medicaid provider network development and expansion. We have the knowledge, tools, and experience necessary to develop and maintain statewide networks that offer members a selection of providers. Our systems, employees, and policies and procedures allow us to select, accurately credential, train, and re-credential the full spectrum of providers in a timely and efficient manner.

We maintain policies and procedures that prohibit discrimination with respect to participation in the program, reimbursement, or indemnification against any provider solely on the provider's type of licensure or certification [42 CFR 438.12(a)(1) and (2)]. In addition, Amerigroup does not discriminate against providers that service high-risk populations or specialize in conditions that require costly treatment [42 CFR

438.214(c)]. Amerigroup will not refuse to credential and contract with a qualified provider on the sole basis of the network already meeting the contractual distance accessibility standard if there is a subset of enrollees in the proposed service area that must travel beyond the average standard to access care.

Current DHS Providers (6.2.2.6)

Our network development activities for the Iowa Initiative will include giving specific provider, who are currently enrolled as DHS providers, the opportunity to participate in the Iowa network for the first two years of the Contract: (i) community mental health centers (CMHCs), (ii) 1915(i) HCBS Habilitation Services providers, (iii) nursing facilities, (iv) ICF/IDs, (v) health homes, and (vi) 1915(c) HCBS waiver providers, with the exception of Case Managers and Care Coordinators. Our plan also addresses the DHS performance standards that will be required of providers, and during the first two years of the Contract, Amerigroup will recommend to DHS disenrollment of providers who do not meet the performance measures. After this two year time period, we will continue to reimburse these provider types at a rate equal to or higher than the current Iowa Medicaid fee-for-service rate.

Provider Reimbursement Rates, Provider Notification, and IDPH Network (6.2.2.7-6.2.2.9)

Amerigroup will extend contract offers at Medicaid fee-for-service rates to all provider types not identified in Section 6.2.2.6 of the SOW during the first six months of the Contract. We will continue to reimburse these provider types at a rate that is greater than or equal to the current Iowa Medicaid fee-for-service rate after this six month time period. Amerigroup will provide written notice to individual providers or groups of providers who we have elected not to include in our network, as well as the reason for the decision. Amerigroup understands that IDPH will procure the provider network for IDPH-funded substance abuse treatment services and will contract with the IDPH network for inclusion in our provider network.

Qualification and Experience of the Provider Services Staff

Amerigroup is committed to staffing the Iowa health plan's Provider Services department in a manner that complies with all DHS requirements and that positions us to deliver high quality services to Iowans from Day One. Since Amerigroup is new to the IHQI program, we do not currently have individuals fulfilling all roles. However, in preparing to implement operations in Iowa, Amerigroup has identified a seasoned Transition Team of leaders with extensive Medicaid experience and a deep understanding of the needs of the Medicaid members. The Transition Team will be responsible not only for overseeing the initial operations of the IHQI Contract—which includes hiring highly-qualified Iowa-based staff—but these individuals will have accountability and responsibility for the success of the Iowa health plan on an ongoing basis.

The Provider Services staff, led by its Manager, will have responsibility for the continued development and maintenance of the provider network and in monitoring the network's adequacy. On the Transition Team, Julie Skaggs is the Provider Services Manager. Within our national organization, Julie serves as a Director of Health Plan Support and National Provider Relations. A seasoned professional with over 20 years of health care experience, she has experience in building and enhancing provider networks, managing network operations, exceeding financial targets, formulating health plan policy, the development of health plan accreditation programs, and extensive leadership experience in managed care. With this depth of knowledge and experience in managed care, Julie will work diligently to build a successful team in Iowa.

The staff Amerigroup assembles will work to build lasting and trusting relationships with providers to offer our members the right size, the right composition, best quality, and the most efficient network. An integral part of our plan is to hire the staff necessary to provide the highest level of quality service to Iowa providers and thereby create a path that enables quality care for our members.

We look to hire locally based staff that understands the intricacies of the State and its health care delivery system. At a minimum, staff will be expected to have a high school diploma with one to three years of experience in customer service or any combination of education and experience that provide an equivalent background. In a management position, we look to recruit staff that has a BA/BS degree with seven years of experience in managed health care or hospital environment, provider relations or network management and three years leadership/management experience or any combination of education and experience that would provide an equivalent background. For staff that will be engaged in contracting activity, we do require that they have one to three years of contracting experience.

Furthermore, Amerigroup will seek to hire staff that has experience in working with the wide variety of provider types that are part of our network. Our affiliates' 24 years of experience in state-sponsored health programs has proven that by hiring staff with such experience, we develop a level of trust with our providers because we have staff working with them that understands their business, their concerns, and their challenges.

Network Adequacy (6.2.3)

Amerigroup will deliver a statewide network of high quality providers to meet network adequacy standards for a January 2016 start date. Amerigroup will document adequate network capacity—which addresses time and distance standards and the provider number, mix, and geographic distribution as outlined in Exhibit B of the SOW—at the time we enter into a contract with DHS, at any time there is a significant change in our operation, or the program changes in services, benefits, payments, enrollment of new populations, or as directed by the State. Amerigroup's CEO will sign all documentation of network adequacy before submission to DHS. In addition, Amerigroup will provide written notification to DHS at least 90 days in advance of any anticipated inability to maintain a sufficient network in any county. We diligently monitor access to and the availability of our provider network. We generate and evaluate GeoAccess reports continuously for physical and geographic access to make sure members have ample choice of providers. We also continuously monitor information obtained through our national Network Strategy Workgroup and Health Education Advisory Committee, as well as Provider Services, Medical Management, Quality Management, and Member Services units, to identify opportunities to improve the network and address any deficiencies.

When we identify a deficiency in meeting access standards, our Provider Services staff promptly develops a detailed action plan—including staffing, responsibilities, resources, and a timeline—to correct the situation. Once launched, we monitor the progress and effectiveness of the plan until we meet or exceed standards.

Provider Outreach / Contracting in Rural Areas (6.2.3.1)

Question 6.2, #2 (6.2.3)

2. Describe your strategies for provider outreach and contracting in rural areas.

Our affiliates' experience in building provider networks extends to some of the most geographically challenging areas in the United States. We will employ a proactive outreach and contracting plan to build our target provider network that incorporates the approach we have used in our affiliate plans with a high concentration of rural populations. We understand the extra attention that is needed to build and maintain a successful network in the rural areas of Iowa, where providers may be unaccustomed to managed care and need additional support through face-to-face interactions or similar outreach. Our knowledge allows us to fully leverage our experience and collaborate with providers to improve the delivery of services covered under the Iowa Initiative.

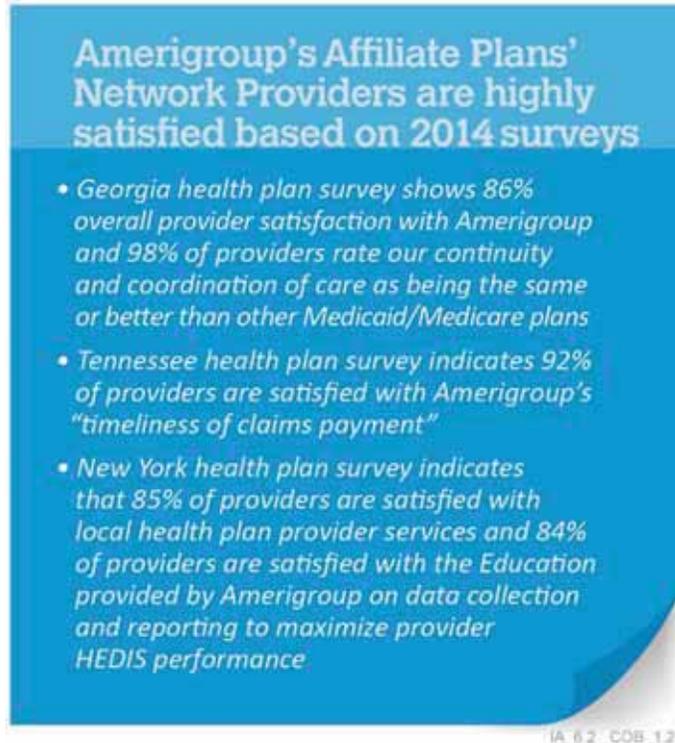

We strive to maintain a comprehensive network of providers that meets the needs of the members we serve, and we make every attempt to retain our network providers. We continually seek to identify opportunities to improve the experience for our providers from annual provider satisfaction surveys to one-on-one interactions. We provide more detail in SOW Section 6.3 on Amerigroup's support, training and active engagement with providers that maintains a high level of provider satisfaction and retention.

Amerigroup has been steadily working on building relationships with Iowa providers. To ensure we provide the best possible statewide network, we engaged with provider associations and other organizations that represent providers throughout Iowa to introduce Amerigroup and gain their support. Our results and summary of LOIs were presented earlier in Section 6.1.1.

We are working with our strategic partner, Wellmark, to develop a robust statewide database of all Iowa Medicaid, non-Medicaid and safety net providers incorporating the listings and information provided by the State.

Amerigroup recognizes that access to specialty care is limited in several areas in Iowa, particularly in rural counties. Together with our affiliate health plans in numerous rural markets across the nation, we leverage and employ an array of proven strategies for provider outreach and contracting, including:

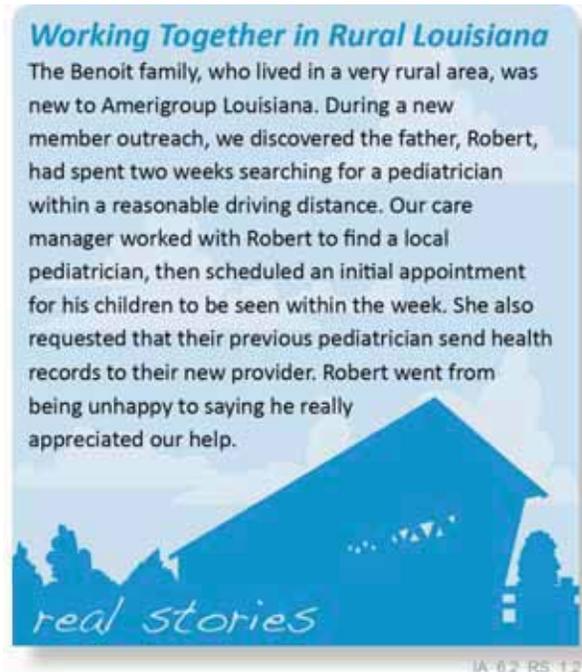

- Monitoring of our current provider network through GeoAccess to identify network gaps in access and inform provider network development efforts
- Ongoing partnering with strong network providers to open offices in rural areas, offer additional needed services, and provide after-hours and weekend appointments
- Co-locating of clinical health plan and provider staff in FQHCs, CMHCs, RHCs, and School-based Health Clinics (SBHCs)
- Developing innovative programs that provide supportive, in-home case management and identifying available community-based resources, such as our Nurse and Family Partnership for at-risk pregnant women and mothers
- Creating awareness and use of existing telemedicine opportunities, as well as identifying and funding additional opportunities through partnerships with providers and community-based organizations
- Providing in-home and telephonic pregnancy monitoring for members with high-risk pregnancies through home injections, hyperemesis treatment, and pre-term labor management
- Providing a prenatal packet to all pregnant members upon identification that provides important information to support healthy mom choices, including early and ongoing prenatal care, nutrition, and choosing a pediatrician prior to childbirth

Amerigroup will also synchronize efforts with DHS' Bureau of Primary Care and Rural Health Iowa Primary Care Association and the Iowa Hospital Association to identify and assess opportunities for boosting access to specialty services throughout Iowa's rural counties and make sure we build upon and do not duplicate existing initiatives within the State.

Although our focus has primarily been in-state, we have reached out to providers in border areas up to 50 miles outside of the Iowa State line to facilitate access to services for recipients who may not have them readily available within their area of the State. We also identified providers that provide outreach and linkages to address access challenges in rural areas of Iowa, such as the University of Iowa.

Our strategies for increasing access to care in rural and hard-to-reach areas include expanding the use of technology in rural areas, contracting with community health centers, and authorizing services provided by out-of-network providers. We will also implement targeted strategies for connecting members with developmental disabilities to services, such as specific outreach events and educational programs directed toward informing members with disabilities, their caregivers, and providers about how to access available services.

Enhancing Services Through FQHCs, CMHCs, RHCs and SBHCs

Amerigroup and our affiliates cultivate deep roots in the communities we serve, and we seek long-term solutions to health care challenges, including the lack of access to specialty care in rural areas. A strategy that has been effective in other states is our collaboration with FQHCs, CMHCs, RHCs, and SBHCs to expand their scope of specialty services. These providers have established operations in rural communities, including relationships with recipients, community agencies, and other stakeholders.

In other states, our affiliates have worked with FQHCs and RHCs to add specialty services not currently available locally. For example, in one rural area, access to behavioral health services was restricted, so our affiliate health plan worked with the local PCPs to add a behavioral health specialist to the practice, enabling access to specialty services that had been severely limited, to improve health outcomes in the community. Amerigroup actively explores similar options for other specialty services that can be built into the existing infrastructure of safety net providers.

Many health plans struggle to address access issues for their members with behavioral health conditions due to a lack of providers in certain market territories. We have developed several innovative approaches to address provider shortage and access issues.

To provide behavioral health services in rural areas, we employ various network development strategies. We extensively outreach to all behavioral health providers within rural areas to encourage them to join our network. We outreach to providers willing to do home visits for members who lack transportation. Amerigroup also reaches out to PCPs practicing in rural areas to determine each clinician's ability and willingness to provide basic behavioral health assessments and treatment. Amerigroup may adjust credentialing standards to accept PCPs who are trained and experienced in psychopharmacology. We support PCPs in screening and treating members for behavioral health conditions through our PC-INSITE program and Screening, Brief Intervention, Referrals and Treatment (SBIRT), both described in detail below. We also offer PCPs telephonic consultative services with Amerigroup's Physician Advisors.

Finally, we identify rural hospitals and determine their capabilities to provide behavioral health services, including brief inpatient or substance use detoxification services, for members who are unable to travel to larger or more specialized facilities.

Telehealth Services

Given Iowa’s shortage of behavioral health professionals in rural service areas, telehealth services can play an important role in providing a network with ready access to services. Telehealth is used to support health care when the provider and member are physically separated. Amerigroup offers innovative behavioral health services via telehealth, including outpatient consultation services, outpatient psychotherapy, and medication evaluation and monitoring. These behavioral health services are delivered via special secure webcams that providers have installed in their offices. Teleconferencing has been shown to be a highly economical, convenient, and effective services delivery method. In addition, Amerigroup will use the services of Breakthrough Behavioral, Inc., described earlier in Section 6.1.1, that will enable a member to receive behavioral health therapy via an Internet connection.

PC-INSITE

Amerigroup understands that many members with behavioral health conditions may not seek assistance from a behavioral health provider, and as such, we are working to make sure the members get the services they need in the primary care setting. Our PC-INSITE is a program we developed for PCPs that will enhance and support the identification and treatment of behavioral health conditions in the primary care office where Amerigroup has Health Coaches.

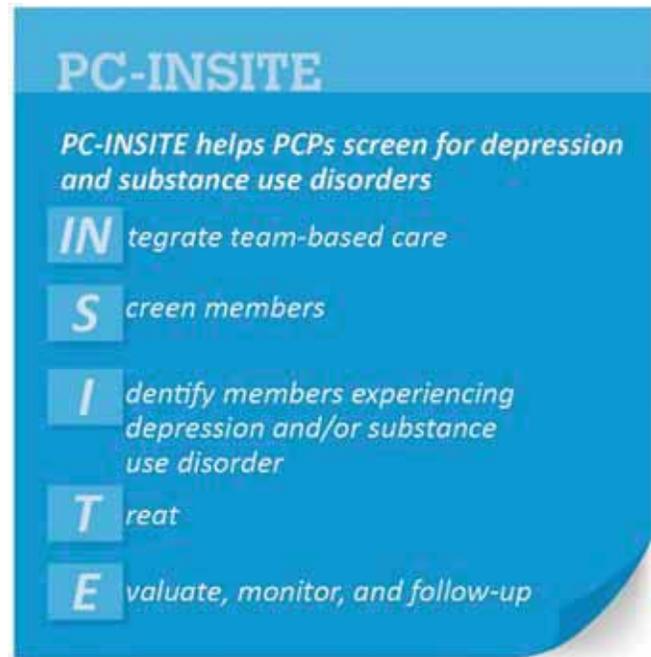

PC-INSITE is an approach that works to screen members in primary care settings for depression and/or substance use disorders and diagnose, treat, and manage these conditions to reduce a negative impact or complications of their medical conditions. PC-INSITE is based on well-documented evidence that depression and substance use disorder are correlated with higher total health care costs and the fact that PCPs are more likely to prescribe

antidepressants than psychiatrists. In our experience with primary care practices, we have learned that roughly 10 percent of members were diagnosed with depression, while various studies have reported that the general population prevalence is 15 to 40 percent. We decided that our objectives would be to bolster the information and resources in the primary care setting to enhance the prompt diagnosis and treatment of behavioral health conditions. PC-INSITE is described in more detail in Section 3.2.4.

By improving the management of a member’s depression or substance use disorder, overall health is improved, the member’s health service experience is enhanced, the practice improves quality scores (HEDIS), and health care costs are reduced.

SBIRT - Screening, Brief Intervention, Referrals and Treatment

We will work closely with PCPs to share evidence-based practices such as screening tools that will enable them to assess their members’ needs and provide targeted treatment or referrals. One such best practice

IA_62_C08_13

that we will promote to our PCPs is SBIRT, a covered service for our members. SBIRT is a comprehensive, integrated public health approach to the delivery of early intervention and screening for individuals with risky substance use and referral to treatment for those members who meet criteria for a substance use disorder. SBIRT has been demonstrated to reduce both alcohol abuse and health care treatment for the abuse. We are committed to increasing the use of this covered service through provider education and partnerships. Through provider education, we will support PCPs in screening our members for behavioral health conditions, and on the web portal we provide them the tools and trainings to complete such screenings. We reimburse all PCPs for all SBIRT services.

Monitoring Utilization to Assure Equality of Service Areas and Availability

Amerigroup will monitor utilization to assure that all members covered through the Iowa Initiative have equal service access and availability, a full network of providers located within the applicable mileage standards established by the State, and reasonable wait times and appointment access. Additionally, throughout the care management process, we monitor access to care and collaborate with our network development team should we identify trends that suggest restricted access in parts of Iowa. In all cases, we focus on facilitating member access to the full array of services available to them.

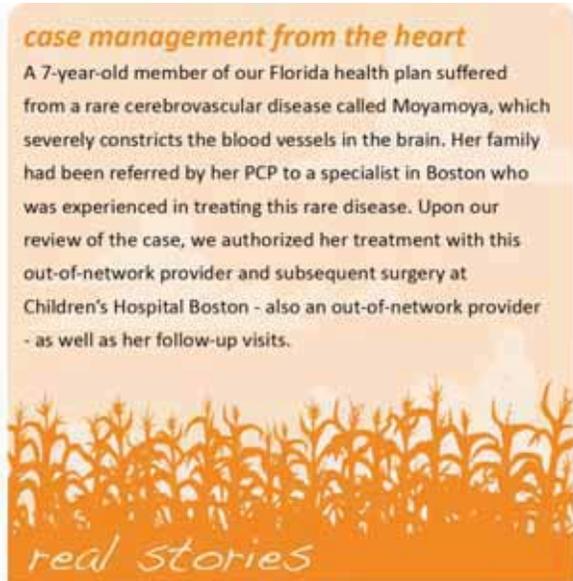

Question 6.2, #3

3. Detail any way in which you propose to limit members to in-network providers.

Out of Network Providers (6.2.4)

Amerigroup will establish a network that provides all covered services and access standards to our members as required by DHS and Exhibit B of the RFP, and, with the exception of family planning, emergency services, and services to maintain continuity of care, we will require members to use in-network providers. We encourage participation of all qualified providers and will seek DHS approval before closing the network. Amerigroup is developing a robust statewide network in Iowa. However, our experience validates that accessing out-of-network services to deliver care in accordance with DHS requirements and local member needs is required even in mature markets. This is especially true for members with special health care needs residing in rural areas. To assure that these services are appropriately provided and paid for, we will adopt an authorization process that has proven successful in our other health plans. When an in-network provider is not available to meet a member’s non-emergency needs, Amerigroup refers the member to an out-of-network provider. In this instance, the Nurse Medical Management clinician or nurse case manager monitors the case from the point of a request for an out-of-network authorization, verifying that treatment is available and delivered.

Upon receipt of an authorization request from the PCP, our medical management clinician verifies member eligibility and then ascertains the reason

IA_6.2_ORIS_1.1

the service is requested of an out-of-network practitioner or facility. The prior authorization Utilization Management Nurse performing the assessment of the member's health needs forwards requiring continuity of care coordination to our Chief Medical Officer or Behavioral Health Medical Director for further discussion and review determination. If the Chief Medical Officer deems providing services by the out-of-network practitioner is medically necessary, we then execute a single-case agreement, following the steps below:

- We check to verify provider licensure and no licensure sanctions, including confirmation that the provider does not appear on any exclusion lists, at a minimum, when we authorize care to an out-of-network provider. We will not enter into single case agreements with any provider who has sanctions.
- Our Utilization Management Nurse approves the authorization for services by an out-of-network provider.
- Our Provider Services Department negotiates a single-case agreement with the provider which sets forth provider payment (a comparable in-state/network rate, the State Medicaid fee-for-service rate, State-approved out-of-network provider payment methodology, or a negotiated fee schedule that assures the cost to the member will not be greater than the in-network cost), as well as prior authorization and care management requirements.
- During initial contact with an out-of-network provider, our Provider Relations Department develops a relationship with the provider to encourage contracting with Amerigroup and to establish open, two-way communication to support information sharing and coordination of care.
- Our Utilization Management Nurse develops a strategy to coordinate a member's transition to an in-plan provider once the member is stable or the care requires long-term treatment that is available from a participating practitioner.

To assure timeliness, each day our Utilization Management team reviews reports that track aging of open cases to set priorities and focuses on those that require immediate action. The team also reviews system-generated logs to identify and resolve potential barriers to timely case closure. Finally, they monitor data in weekly or monthly reports to identify trends that might indicate problems with current processes or workload distribution.

Out-of Network-Care for Duals (6.2.4.1.1 – 6.2.4.1.3)

Our model emphasizes individualized care and service coordination, which are vital for the Iowa dual eligible population that typically includes members with the most severe chronic, complex, and disabling conditions. Amerigroup's affiliates currently serves 231,000 dual eligibles through both Medicare Advantage Special Needs Plans (SNPs) and Medicaid programs. For services where we are not the primary carrier, an authorization will not be required. If we are the primary carrier, Amerigroup will require authorization for services (for example, LTSS). We will pay the coinsurance or deductible, but no more than the Iowa Medicaid rate.

Question 6.2, #4

4. Describe your plans to ensure providers do not balance bill its members and plans to work with members to help resolve billing issues.

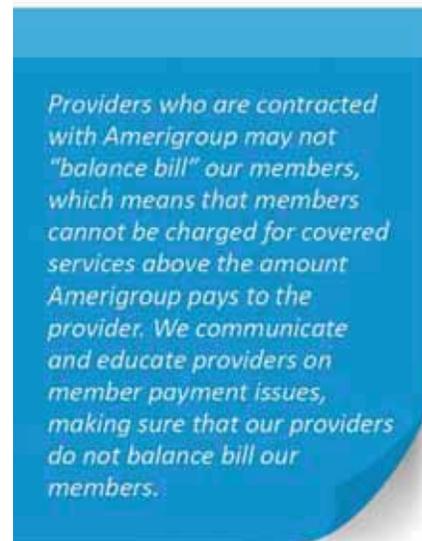

Making Sure Providers do not Balance Bill Members

Amerigroup will comply with all requirements addressed in Scope of Work Section 6.2.4 Out-of-Network Providers and Section 5 Billing and Collections. In accordance with 42 CFR 438.106, Amerigroup and our contracted network will not hold members liable for any of the following:

- Any payments for covered services furnished under a contract, referral, or other arrangement to the extent that those payments are in excess of the amount that the member would owe if Amerigroup provided the services
- Covered services provided to the member for which DHS does not pay Amerigroup
- Covered services Amerigroup provided to the member for whom DHS or Amerigroup does not pay the provider that furnishes the services under a contractual, referral, or other arrangement
- Amerigroup’s debts or our subcontractor’s debts, in the event of the entity’s insolvency

Providers contracted with Amerigroup may not “balance bill” our members, which means that members cannot be charged for covered services above the amount Amerigroup pays to the provider. We communicate and educate providers on member payment issues, making sure that our providers do not balance bill our members. We remind providers in a variety of modes and methods. For example, we inform providers regarding balance billing requirements through the following methods:

- **Provider agreements**—our contracts with providers explicitly explain that members may not be billed for covered services.
- **Education for new providers**—we train new providers who join the network, and balance billing is one of many topics that we address.
- **Education for existing providers**—we train existing providers through group seminars throughout the year and during one-on-one office visits at least annually; if balance billing is an issue, we review our policy and federal and State laws and regulations.
- **Provider policy and procedure manual (Provider Manual)**—we address balance billing in our Provider Manual, which is an addendum to the provider agreement.
- **Provider bulletins and other general communications**—if balance billing occurs as an issue across the network, we include this topic in general provider communications, such as provider bulletins and newsletters. If it is specific to an individual provider or small set of providers, we address the issue in a custom, personal letter and outreach.

IA_62_COB_32

By signing our participating provider agreement, providers acknowledge acceptance of payment from us as payment in full as a condition of participation in our network.

A provider can bill a member only when the following conditions have been met:

- The member receives a non-covered service
- The member has exceeded the program limitations for a particular service
- The member chooses to receive a non-covered service, knows the service is non-covered prior to receiving, and knows he or she is responsible for the charges associated with the non-covered service. In this case, the provider must maintain appropriate documentation and communicate and monitor compliance with these billing procedures to substantiate that the member voluntarily chose to receive and take responsibility to pay for a non-covered service.

Payment to Out-of-Network Providers

Our single case agreements outline payment terms, billing instructions, and member cost sharing, as applicable. Our single case agreement will specify that member cost sharing will not be greater than it would be if the services were provided by a network provider and that provider reimbursement will not be less than 100 percent of State fees. Prior to authorizing services with out-of-network providers, we will assure that they fully understand and accept the prohibition against balance billing.

Working for our Members Regarding Payment Liability

We inform members that they may not be balance billed. Members may contact our Member Services Helpline for assistance with billing issues. Our Member Services and Grievance and Appeals Departments work with members to promptly resolve balance billing issues.

Further, in accordance with SOW Section 6.2.4 and all related State and federal regulations (such as 42 CFR 438.106), we and our subcontractors will not hold members liable for any covered service or for our debts.

We continually encourage non-participating providers to become enrolled with Amerigroup so they can participate in our provider network. In some cases, our members may access covered Medicaid services from a provider who is not enrolled in the network and then receive a bill from that provider (that is, an Amerigroup member inadvertently seeks covered services from an out-of-network provider). If a member notifies Amerigroup he or she is receiving a bill, we will contact the out-of-network provider and assist him or her with becoming enrolled so he or she can receive reimbursement for covered services. Amerigroup will also educate the provider so he or she can submit a clean claim to Amerigroup for reimbursement and he or she will cease billing our member. If appropriate, Amerigroup will also consider this provider for contracting and inclusion in our provider network.

Requirements by Provider Type (6.3)

Question 6.3, #1

1. Indicate if you will use a primary care provider (PCP) model of care delivery.

Amerigroup understands the value of a strong member-provider relationship and will institute a primary care provider (PCP) model for members of the Iowa Initiative. In this model, members are assigned to a single PCP who is responsible for coordinating their care and making referrals to specialists.

Amerigroup's PCP approach has proven to be a valuable resource for enhancing the member care experience, improving member health outcomes, and controlling medical costs. To meet the needs of individuals enrolled in the Iowa Initiative, we will build a comprehensive, accessible PCP Network. We understand that all policies and procedures related to our PCP model will be reviewed and approved by DHS prior to implementation.

Primary Care Providers (6.3.1)

Amerigroup's PCPs will serve as the primary point of contact for members of the Iowa Initiative. Amerigroup will not impose restrictions on a member's freedom to change between PCPs. PCPs provide members with a health home, their first stop in the healthcare process and a centralized hub for a wide variety of ongoing healthcare needs. Specific PCP designations are required for members under a value-based purchasing arrangement. We make monthly panel listings available to each PCP, which includes a current list of enrolled members assigned to them. The PCP's role is to:

- Coordinate a member's healthcare twenty-four hours a day, seven days a week (24/7)
- Develop the member's care and treatment plan, including preventive care
- Maintain the member's current medical record, including documentation of all services provided by the PCP and any specialty or referral services
- Adhere to wait times as outlined within the provider agreement and Provider Manual
- Refer members for specialty care
- Coordinate with outpatient clinical services
- Provide complete information about proposed treatments and prognoses for recovery to members or the representatives
- Facilitate interpreter services by presenting information in a language that members or their representatives can understand
- Keep members' medical and personal information confidential as required by State and federal laws

The PCP's scope of responsibilities includes providing or arranging for:

- Routine and preventive healthcare services
- Emergency care services
- Hospital services
- Ancillary services
- Specialty referrals
- Interpreter services
- Coordination with outpatient clinical services, such as therapeutic, rehabilitative, or palliative services

PCPs coordinate and make referrals to specialists, ancillary providers, and community services. PCPs are expected to:

- Help members schedule appointments with other healthcare providers, including specialists and ancillary providers
- Track and document appointments, clinical findings, treatment plans, and care received by members referred to specialists or other healthcare providers to provide continuity of care
- Refer members to health education programs and community resource agencies, when appropriate
- Coordinate with the Women, Infants, and Children (WIC) program to provide medical information necessary for WIC eligibility determinations such as height, weight, hematocrit, or hemoglobin
- Coordinate with the local tuberculosis (TB) control program to make sure that members with confirmed or suspected TB have a contact investigation and receive Directly Observed Therapy
- Report to DHS or the local TB control program any member who is noncompliant or drug resistant or who is or may be posing a public health threat
- Screen and evaluate for detection and treatment of, or referral for, any known or suspected behavioral health problems or disorders

Question 6.3, #2

2. If a PCP model will be utilized, describe the following:

- a. Physician types eligible to serve as a PCP.
- b. Any panel size limits or requirements.
- c. Proposed policies and procedures to link members to PCPs.

Types of Physicians Eligible to Serve as a PCP

For the Iowa Initiative, Amerigroup will use the following standard provider types that can serve as a PCP: family practice, general practice, internist, pediatrician, obstetrician/gynecologist (OB/GYN), certified nurse midwife (in rural areas only), nurse practitioners, Advanced Registered Nurse Practitioners (ARNPs) and tribal providers. In addition, Aged, Blind, or Disabled (ABD) beneficiaries often need a level of service that is best met by a specialist who assumes the PCP role; in these instances. Members may request a specialist as a PCP, or their Case Manager may arrange for a specialist as a PCP in consultation with the member. All requests must be approved by our Medical Director, who verifies that the specialist understands and agrees to provide all services required by PCPs and agrees to adhere to PCP access standards.

Panel Size Limits or Requirements

In terms of panel size, Amerigroup holds the view of maximum capacity is the important measure rather than a minimum panel size. We review provider panel sizes on a regular basis to confirm access and availability are not an issue. Additionally, we generally limit the panel size for an individual PCP to 1,500 and 750 for physician extenders.

Policies to Link Members to a PCP

Members' relationships with their PCPs have a significant impact on their health. Members will select a contracted PCP as their primary provider of healthcare services. If the member does not select a PCP, Amerigroup will assign a PCP to the member.

We keep providers up-to-date with detailed information. Amerigroup makes available to each PCP a current list of assigned members and, from time to time, provides medical information about the member's potential healthcare needs. That way, providers can more effectively provide care and coordinate services.

Amerigroup works with members and providers to establish and maintain strong relationships from initial enrollment through ongoing preventive care and treatment. In helping members identify, voluntarily select, and connect with PCPs who best meet their needs, we focus on choice, convenience, and member comfort. Our outreach is both high tech and high touch and employs an ongoing, layered communications approach to reinforce the importance of the member/PCP connection.

We engage members and providers through a variety of means with messages that foster close relationships between members and providers, including:

- One-to-one contact
- Phone calls and messages
- Member incentives such as Healthy Reward credits that can be used to buy health-related products
- Member and community events
- Clinic Days (designated days at a provider's office to schedule members with gaps in care)
- Mass media such as print ads and billboard notices
- Emails, printed material, text messages
- Amerigroup Mobile 2.0
- Sharing reports with providers such as missed opportunities, recent emergency room visits by their attributed member
- Online resources and tools
- Provider Quality and Population Management program that encourages providers to promote members to receive preventive health care

Initial PCP Selection/Auto-assignment/Notification

Members have an opportunity to make an initial connection with their PCP during enrollment when they select a PCP. If the member does not select a PCP, Amerigroup will assign a PCP to the member. We will continuously work with members to assist them in making appropriate PCP selections. Amerigroup examines member data, factoring member preference/familiarity with providers into each auto-assignment based on the following algorithm:

1. Assign the member to the most recent valid PCP the member had an historical relationship with
2. Assign the member to an active family member's (closest in age) PCP
3. Assign the member to the PCP of a family member found in the claims history file
4. Automatically assign the member to a PCP based on quality and efficiency ratings as well as geographic proximity, language, specialty, and other relevant factors.

Members may change their PCP selection at any time without restriction. Amerigroup makes available to each PCP a current list of assigned members and, from time to time, provides medical information about the member's potential healthcare needs. That way, providers can more effectively provide care and coordinate services.

Question 6.3, #3

3. If a PCP model is not proposed, describe methods to ensure compliance with 42 CFR 438.208 as described in Section 6.3.1.

As explained in our response to Questions 6.3, #1 and 6.3, #2, Amerigroup proposes a PCP model.

Question 6.3, #4

4. Describe your plan for providing a sufficient network of all provider types outlined in Section 6.3, including timelines and tasks.

Plan for Providing a Sufficient Network

Our approach to building a strong Provider Network is based on collaboration, mutual respect, and trust. To that end, Amerigroup makes a significant commitment to our providers because we understand that managed care for low-income and underserved individuals requires the development of customized, community-based systems of care with specialized knowledge and capabilities. We will use our resources to strengthen our Network Provider practices by supporting their needs, assisting quickly with issues as they arise, and, most importantly, providing the tools and resources providers need to successfully serve Iowa Initiative members. Our approach emphasizes access and quality of care for our members by helping us achieve a fully integrated and accountable system of care that provides and promotes member-centered, family-centered, community-based, coordinated, culturally competent, and accessible care and services for our members.

As part of creating a sufficient network, it is important to have a plan that allows for the network build to be completed on a timely basis. To that end, Table 6.3-1 contains a high-level summary of the tasks and timelines that will be followed to accomplish the build of the network, including all provider types in SOW Section 6.3. These tasks will be detailed further within Amerigroup’s overall implementation plan that is subject to DHS approval.

Table 6.3-1. Amerigroup’s Plan to Provide Sufficient Network across All Provider Types in SOW 6.3

TASK	Pre-Award Period	Award to Contract Effective Date
Document key providers for each of the populations that will be served under the IHDS program	✓	
Engage with the provider community, associations, and community groups to begin to foster and develop trust and understanding	✓	✓
Educate providers regarding Amerigroup, its history, and its dedication to building networks	✓	✓
Obtain Letter of Interest (LOIs) where possible	✓	
Obtain DHS approval of Amerigroup’s provider contract		✓
Begin process of obtaining contracts and credentialing information for all providers that will allow for a sufficient network to be available to members		✓
Within 90 days of Contract effective date, have a network that is 50% compliant		✓
Within 60 days of Contract effective date, have a network that is 70% compliant		✓
Within 30 days of Contract effective date, have a network that is 90% compliant		✓

Physician Extenders (6.3.2)

Amerigroup values the services that physician extenders, including Nurse Practitioners, ARNPs, and Physician Assistants, can provide to our members. In Iowa, we understand Nurse Practitioners can work without the supervision of a physician, and we will contract accordingly. Other physician extenders are healthcare professionals who are licensed to practice medicine under the supervision of a physician. Our experience with physician extenders has resulted in enhanced provider accessibility—especially in more rural, underserved areas; improved quality of care for our members; and reduced costs. Amerigroup has extensive experience working with physician extenders in our affiliate plans, and we have developed a physician extender fee schedule. Amerigroup will comply with all requirements of Section 6.2.12 of the SOW.

Amerigroup will work with our PCPs and specialty providers to help them understand and support the use of physician extenders. Our Provider Education program will include benefits and policies of using and reimbursing physician extenders, including allowing for better use of physician expertise and providing career advancement for nurses. We will work with DHS to expand our training programs, including internships, for physician extenders.

Our approach to expanding physician extender acceptance and use includes the following key elements:

- Demonstrating the clear and compelling value, especially to physicians, of the benefits of physician extenders
- Communicating our goal of increasing the number and quality of physician extenders to all stakeholders
- Educating providers about our reimbursement policies for physician extenders

As part of the Amerigroup Network and in accordance with 42 CFR 441.22, we will make sure that Nurse Practitioner services are available to our members, including out-of-network Nurse Practitioners if no Nurse Practitioners are available in our Network. We will inform members about available Nurse Practitioner services.

In addition, our Provider Services Staff's fieldwork in Iowa will include the topic of physician extenders in their contact lists, mailings, and outreach activities. We will include this topic in our discussions with providers and in our initial provider orientation.

Behavioral Health Providers (6.3.3)

Amerigroup's Network of behavioral health providers will be appropriately credentialed and meet or exceed DHS requirements for access, availability, and network composition.

Through continued discussions and research with our provider partners in the Iowa community, we are engaging the behavioral health liaisons to identify this medically underserved population. Through engagement with the University of Iowa Health Alliance, the Regional Health Centers, and the Community Mental Health Centers, we will develop outreach to rural areas of Iowa with plans to engage in telemedicine opportunities in the Rural Health Clinics, Health Departments, and Federally Qualified Health Centers (FQHCs) and peer specialists, where we commit to support training of peer specialists, and also commit to paying for initial credentialing fees for 100 new peer specialists (peer support is a covered mental health benefit).

Essential Hospital Services (6.3.4)

We will develop and maintain our Network to ensure sufficient access to essential hospital services to Iowa Initiative members. Using GeoAccess software, we will continually monitor and regularly analyze hospital access for our members to confirm ongoing compliance with the standards of accessibility set forth in Exhibit B of the RFP. If any member(s) does not have access to a hospital within program time and distance standards, our Access to Care Unit will authorize and arrange for member access to an out-of-network hospital.

Amerigroup has outreached to all hospitals in the State of Iowa and contiguous bordering markets in South Dakota, Nebraska, Illinois, and Wisconsin. Large systems encompass roughly 71 percent of the hospitals in Iowa and perform close to 90 percent of the current Iowa Medicaid hospital usage. They have verbally agreed to begin negotiating agreements or returned Letters of Intent (LOIs) or Letters of Recommendation on behalf of Amerigroup.

Physician Specialists (6.3.5)

Amerigroup's Network of specialist providers will be appropriately adequate and reasonable in number by specialty and geographic distribution to meet or exceed DHS requirements for access, availability, and network composition to medical and behavioral health needs without excessive travel. We will have signed provider agreements for all specialty types listed in Exhibit B of the SOW.

Amerigroup is working with several physician specialty groups to bring specialized services to members through discussions with various health systems, primary care associations, and established relationships. We have received Letters of Intent and Letters of Recommendation from The University of Iowa Health Alliance, The Iowa Clinic and Paramount as well as verbal commitments from several large health systems that work directly with specialty provider groups. We are collaborating with specialty providers regarding our tools and expertise to make sure we work together to help manage this member population.

Health Homes (6.3.6)

Health Homes are an emerging best practice to address members with chronic health conditions or a serious mental illness or serious emotional disturbance (SMI/SED). Drawing upon our affiliates' experiences and expertise in Health Homes, we are prepared to continue Iowa's work in evolving health homes for members with two or more chronic conditions (chronic condition health homes) and integrated health homes for members with SMI/SED conditions. In Section 3.2.10 of our response, we provide a detailed review of our approach to Integrated Health Homes and Health Homes. Additionally, in developing the Integrated Health Homes and Health Homes network, we will help assure all providers meet the minimum requirements for participation as defined in the State plan and DHS policy.

FQHCs and RHCs (6.3.7)

We understand the value that local health agencies and community-based organizations have in the delivery of healthcare to the Medicaid population. FQHCs and Rural Health Clinics (RHCs) are essential to provide the medical, behavioral, and additional support services needed for this population. These provider types are also more influential in the rural areas of Iowa and provide services in the medically underserved areas of the State. We strive to maximize the inclusion of these agencies and

Amerigroup understands the value that local agencies and community-based organizations have in the delivery of healthcare to the Medicaid population. FQHCs and RHCs are essential safety net providers, and we will contract with those organizations that are willing to join the Amerigroup network and that meet all of our requirements that confirm the ability of these providers to deliver quality services.

IA_6.3.7_COB_1.2

organizations in our Network and collaborate to provide better services for our members. We have conducted ongoing outreach to 100 percent of the FQHCs and RHCs, with many LOIs and verbal support for contractual engagement. Additionally, we have received a letter of support from Iowa Health+ as well as their assistance in soliciting and collecting LOIs from their FQHCs.

We understand the value that local health agencies and community-based organizations have in the delivery of healthcare to the Medicaid population. Amerigroup and our affiliates have a strong history of working with FQHCs and RHCs, many of which are part of our quality improvement and member-centered medical home programs in many states. Our collaboration with these agencies helps to provide better outcomes for our members.

Family Planning Clinics (6.3.8)

Amerigroup has developed relationships with various providers of Family Planning services in Iowa, including but not limited to the Family Planning Council of Iowa, RHCs, Departments of Public Health, and FQHCs. Reaching out to 100 percent of these clinics, many of whom participate in Family Planning Waivers, we have defined opportunities of collaboration between our organizations that can promote the health and well-being of the members and to encourage their participation in the Iowa Initiative.

Maternal and Child Health Centers (6.3.9)

Amerigroup has identified, contacted, and begun discussions with 76 percent of the defined Maternal and Child Health Centers in Iowa. Many of the services provided take place in Family Planning Clinics and Public Health Departments across the State. In working with the Family Planning Council of Iowa and other Public Health Departments, we are sharing various programs and enhanced services to meet the needs of this population. We will continue to work collaboratively to help assure that all Maternal and Child Health Centers are participating in the Amerigroup Iowa Network.

Urgent Care Clinics (6.3.10)

Amerigroup understands that urgent care centers play an important role in providing an option to more expensive emergency room care and that the clinics also provide convenient access for members. Amerigroup will continue to seek opportunities for independent and health systems who have established urgent care clinics to contract additional urgent care centers throughout Iowa. Amerigroup will include urgent care clinics for members enrolled in the Iowa Initiative. These facilities meet the State's accessibility requirements for urgent care facility participation as they are open at least 11 hours Monday through Friday and at least five hours on the weekends. Amerigroup understands that upon execution of the Contract, agency approval will be required regarding our approach to the use of urgent care clinics in our network. In addition, Amerigroup will implement and adhere to agency approval of the approach, and any changes to the approach will be submitted to the agency for prior approval as outlined in the executed State Contract.

Other Safety Net Providers and Community Partners (6.3.11)

Amerigroup intends to use and partner with community entities and advocates, such as the Area Agencies on Aging, to:

- Enhance our understanding of services that are available in Iowa
- Expand our knowledge of where gaps in the delivery system may exist
- Collaborate on solution designs that will address such gaps in care
- Understand their abilities to provide the needed services

- Contract with them to provide services to our members

Amerigroup understands that upon execution of the Contract, agency approval will be required regarding our approach to the use of other safety net providers and community partners in our network. In addition, Amerigroup will implement and adhere to agency approval of the approach, and any changes to the approach will be submitted to the agency for prior approval as outlined in the executed State Contract.

Community-Based Residential Alternatives (6.3.12)

Amerigroup understands the important role that community-based residential services may play for members under the age of 18 with needs that require services and treatment outside of the family home. Amerigroup will work diligently with providers and Community-Based Case Management team to identify community-based residential alternatives that are close to the member's natural home, or the place they consider home, to foster greater family involvement and reunification whenever possible.

Indian Healthcare Providers (6.3.13)

Question 6.3, #5

5. Describe your plans for meeting the requirements regarding Indian Healthcare Providers.

Amerigroup will comply with Section 5006(d) of the American Recovery and Reinvestment Act of 2009 (ARRA) and the requirements as outlined in the SOW Sections 6.3.13.1 through 6.3.13.6 and enumerated below:

- Amerigroup will permit any Native American (Indian) member who is eligible to receive services from a participating Indian healthcare provider to choose to receive covered services from that Indian healthcare provider, and if that Indian healthcare provider participates in the Network as a PCP (if applicable), to choose that Indian healthcare provider as his or her PCP, as long as that Indian healthcare provider has the capacity to provide the service.
- Our Provider Services staff will be responsible for demonstrating that there are sufficient Indian healthcare providers in Amerigroup's Iowa Network who will provide timely access to services available under the Contract for Indian members who are eligible to receive services from such providers.
- We will reimburse Indian healthcare providers, whether in-or out-of-network, for covered services provided to Indian members who are eligible to receive services from such providers either at: (i) a rate negotiated between Amerigroup and the Indian healthcare provider; or (ii) if there is no negotiated rate, at a rate not less than the level and amount of payment that would be made if the services were provided by a Network Provider who is not an Indian healthcare provider.
- Amerigroup will make prompt payment to all Indian healthcare Network Providers as set forth in Section 13.4.6 of the Scope of Work (SOW).
- Amerigroup will provide DHS—in the timeframe and manner required by DHS—utilization and/or reimbursement data that are needed to make any applicable supplemental payment to a Indian healthcare provider
- Amerigroup will not reduce payments to Indian healthcare providers or other providers of contract health services under referral by an Indian healthcare provider for covered services provided to a Indian member by the amount of a copayment or other cost-sharing that would be due from the Indian member if not otherwise prohibited under Section 5006(a) of American Recovery and Reinvestment Act of 2009 ARRA.

- Amerigroup has contacted the Meskwaki Health Center, which is the only Indian Health Service clinic in Iowa, to begin discussions and seek assistance in outreach opportunities to potential Indian healthcare providers in states bordering Iowa. Our affiliate health plans and Tribal Liaison managers have existing relationships with Indian Health Services and Tribal 638 providers in other states, which will allow Amerigroup to bring our best practices to Iowa. Additionally, as part of our outreach efforts, we will provide healthcare information to Native Americans residing in Iowa. Amerigroup will closely monitor the inclusion of Indian healthcare providers in Iowa and comply with Section 6.2.3 of the SOW in the event an Indian healthcare provider enters the market.

Eligibility (7.1)

In accordance with Section 7.1 of the Scope of Work (SOW), Amerigroup Iowa (Amerigroup) acknowledges that the State has the exclusive right to determine an individual's eligibility for the Iowa Initiative and that Amerigroup cannot review or appeal the individual's eligibility once it has been determined by the State. Subsequently, we can provide the State with information indicating the member's eligibility has changed.

Our affiliate health plans have a combined 24 years' experience in receiving eligibility and enrollment information from state entities and in enrolling members into our plans. Together, we have more than 5.2 million members enrolled in state-sponsored healthcare programs in 19 states across the nation. Our affiliates have managed member enrollment and disenrollment for our healthcare programs that are new, covered under waiver programs, and transitioning from another plan into our plan. We analyze state-delivered information to determine eligibility changes. This includes out-of-area members, data issues that are in conflict with business edits, and enrollment in products that do not coincide with members' demographic information. We also identify members who may be issued multiple state-identified numbers (Medicaid IDs) through enrollment load edits and robust duplicate member reporting.

When we determine that a member's eligibility has changed to the extent that he or she should not be eligible, we provide this information to the state, through secure email, for review. We will update the member's eligibility status based on feedback and guidance received from the state.

MCO Selection and Assignment (7.2)

In accordance with the Scope of Work Section 7.2, Amerigroup Iowa (Amerigroup) understands the enrollment of members by DHS may be the result of the enrollee's selection of a plan or through the assignment by DHS. Through our parent company and affiliate health plans, we bring years of experience working with state Medicaid Management Information Systems (MMIS) and enrollment brokers to share member information. We are well accustomed to these processes—our dedicated national Enrollment Department currently receives transaction-based and full-roster files from 19 state agencies and/or their enrollment brokers. We can receive data through electronic media and will support transmission of enrollment data utilizing the HIPAA-compliant ASC X12N 834 transaction format. With our extensive enrollment experience, we are well positioned to work with DHS and its enrollment broker.

Current Enrollees (7.2.1)

Amerigroup understands that enrollees will be eligible for enrollment in our health plan at the start date of operations and will be assigned by DHS in accordance with the auto-assignment process. Once the auto-assignment process has occurred, DHS will notify the member that they have 90 days to choose another contractor and that the Enrollment Broker will accept the members' requests for a plan change. Through our affiliate health plans experience managing eligibility, enrollment, and disenrollment across other state-sponsored programs, we have experienced employees, robust technology, and established processes, policies, and procedures for receiving the eligibility file from the Enrollment Broker, as well as managing the enrollment of all Amerigroup-assigned members according to DHS requirements. Our national Enrollment Department manages enrollment files and uses the enrollment data received to properly map the members to the correct benefit packages, including those members who may have copays.

1915(c) HCBS Waiver Enrollees and Institutional Populations (7.2.1.1)

In accordance with SOW Section 7.2.1-2, Amerigroup will enroll all members into our health plan, including members under the Home and Community-Based Services (HCBS) waiver and those in institutions, nursing facilities, or ICF/ID who select or are auto-assigned to Amerigroup. We are committed to assuring all our members receive quality healthcare without discrimination or delay. Our enrollment process ensures any mandatory or voluntary member who selects or is assigned to Amerigroup Iowa will be enrolled and that all potential enrollees will be accepted in the order in which they are assigned without restriction.

New Enrollees (7.2.2)

In accordance with SOW 7.2.2, Amerigroup understands that applicants will select a contractor at the time of application and that new enrollees who do not select a contractor at the time of application will be auto-assigned in accordance with the auto-assigned process.

New Enrollee Plan Selection Information (7.2.2.1)

Amerigroup will support the State in its efforts to assist members and their families in making informed decisions regarding their health. Amerigroup will provide the State with plan information, within the appropriate timeframe, to assist the State in developing informational materials for potential enrollees.

We believe that health plan selection is paramount to initiating or continuing healthcare for members, and we support the State's process of automatic assignment to a health plan to promote timely member outreach and engagement. Upon notification of a member's automatic assignment or selected health plan enrollment with Amerigroup, we will conduct member engagement activities, including providing education and information on members' rights and responsibilities, benefits, services, how to engage in their own healthcare decisions, and how/who to contact for assistance for reassignment to another health plan. We accomplish this through:

- Member handbook
- Our website
- Network Providers
- Our Member Services helpline
- New member welcome call

All reachable new members will receive a welcome call within the first 30 days of enrollment. In addition, to personally introducing Amerigroup, orienting the member to our services and identifying any member-specific issues during the welcome call, we will:

- Welcome new members to Amerigroup, as well as verify and update member information
- Verify a member's PCP selection; or if a member has been auto-assigned to a PCP, the member may change PCPs
- Explain the member's benefits, including behavioral health and substance abuse services
- Conduct a screening survey for any special health needs

By using this approach, and providing the State with the required plan information, we are able to efficiently assist potential members in understanding Amerigroup benefits and how to access care.

We will also provide education and training to our Network Providers and health plan employees on State and health plan requirements for member eligibility, enrollment, and disenrollment, including but not limited to the following:

- Receiving eligibility and enrollment information from the State
- Assisting members in applying for Iowa Initiative benefits
- Enrolling members in our health plan following their selection of or auto-assignment to our health plan

Auto Assignment (7.2.3)

In accordance with SOW Section 7.2.3, Amerigroup acknowledges the State's algorithm for automatic assignment into the Iowa Initiative. We acknowledge that the members auto-assigned to Amerigroup may not understand why they were auto-assigned and/or may have the desire to change health plans for a variety of reasons. We believe that individuals want and have the right to be informed and involved in the decisions about the care they receive and through whom they receive that care. We will assist these members by answering any questions they may have, attempt to resolve any concerns, and/or will refer them to the Enrollment Broker to change health plans if warranted.

Enrollment Discrimination (7.3)

In accordance with SOW Section 7.2, Amerigroup Iowa (Amerigroup) will enroll all members into our plan in the order they are listed on the 834 within 48 hours of receiving the file. We will not discriminate against individuals eligible to enroll in the Iowa Initiative on the basis of their health status or their need for special healthcare services. In addition, we will not discriminate against eligible enrollees based on race, color, or national origin.

Immediately upon enrollment, members will be eligible for the full scope of the Iowa Initiative's program benefits. Amerigroup has no policy or practice in place that has the effect of discriminating against enrollees. To help assure adherence to our policies against discrimination, we train employees annually on our Compliance Program. The local Iowa Compliance Officer (PCO) monitors all employees training results and supplies them to management for follow-up if required. The Compliance Officer is responsible for the overall compliance with State, federal, and company policies.

Amerigroup has policies and procedures to assure that Network Providers do not engage in unlawful discrimination against any eligible or prospective health plan member. We prohibit providers from using discriminatory practices against Amerigroup members such as preference to other insured or private pay patients or separate waiting rooms or appointment days. We require that services always be provided without regard to race, creed, gender, color, ancestry/national origin, marital status, sexual orientation, income status, age, program membership, or physical/behavioral health status. We currently meet all State and federal requirements across our affiliate Medicaid health plans and will do the same in Iowa. Network Providers must accept members for treatment and not intentionally segregate members in any way from other persons receiving services.

Our provider contract and provider manuals specifically prohibit unlawful discrimination. The provider contract contains a nondiscrimination clause that prohibits providers from denying any member "... aid, care, service, or other benefit on the grounds of race, color, national origin, sex, age, disability, political beliefs, or religion." The clause cites the Civil Rights Act of 1964, the Americans with Disabilities Act, and the Federal Rehabilitation Act of 1973, in addition to other State and federal statutes. All providers are legally obligated to abide by the terms of the contract, and Amerigroup is legally, ethically, and morally bound by the same State and federal statutes. We review these requirements with providers during orientation, and our Provider Services Staff reinforce these requirements during their ongoing interactions with providers. Providers found to engage in unlawful discrimination will be subject to disciplinary action up to and including suspension or termination of Network status.

Member Disenrollment (7.4)

Question 7.4, #1

1. Describe your grievance process for addressing member quality of care concerns and member disenrollment after the first ninety (90) days of enrollment.

Amerigroup Iowa (Amerigroup) acknowledges, understands, and will comply with the requirements in Section 7.4 Member Disenrollment understanding that members may disenroll without cause either during the first 90 days of enrollment and/or every 12 months thereafter. We take member disenrollment very seriously and understand that members will disenroll from our health plan for a variety of different reasons. Through our affiliate health plans operating state-sponsored programs, we have 24 years of experience identifying and managing situations in which members may choose to disenroll from our health plan or demonstrate behavior that may lead to disenrollment.

Whether based on member request or Amerigroup's internal policies, we look at potential disenrollment as an opportunity to develop new, innovative programs that meet our members' needs. Consequently, we review, adjust, or eliminate our processes or policies that create barriers to our members engaging in their own healthcare. Our primary goal is to support our members' voice and choice in their healthcare decisions, which includes honoring their requests for disenrollment from Amerigroup's Iowa Initiative program.

Where possible, we make every attempt to resolve a member's concerns. We have a variety of tools, resources, and supports that are effective in connecting members to the benefits and services they need. We strive to inform and empower members and their families on how to use Amerigroup benefits, how to access services, and the importance of preventive care. Our goal in supporting members is always to improve healthy behavior and avoid unnecessary disenrollment that can disrupt continuity of care for those who need it most.

Member Disenrollment for Cause (7.4.1)

Cause (7.4.1.1)

Amerigroup acknowledges the for "cause" reasons that a member may disenroll from a plan as listed in the SOW Section 7.4.1.1. Amerigroup prides itself on educating all members assigned to our plan. Amerigroup is committed to delivering quality healthcare to all its members, including those members who may be better served by disenrolling from our program. Amerigroup proactively informs members, from the beginning of enrollment, via the welcome call and the member handbook, of their member rights. We reach out to new members via welcome calls in the first 30 days of their enrollment and member retention calls prior to the end of the 12-month consecutive enrollment period. During these calls, we:

- Orient members to the health plan
- Verify member information
- Assist with primary care provider (PCP) assignments or adjustments
- Address any other issues related to their eligibility

It is our experience that the majority of members' issues relate to the PCP. These PCP issues are often easily and quickly resolved at this first level of intervention. If a member expresses any concerns about enrolling or remaining with Amerigroup, we will make every attempt to resolve the issue.

Members may choose to change their documented preferred language or PCP at any time and as many times as they desire. Members may request a change in their PCP in writing or verbally through our Member Services, Nurse HelpLine, their Case or Disease Manager, or Member Advocate. Should the member have prior healthcare services upon enrollment, we will honor all existing authorizations with the member's current provider, including authorizations for services provided by out-of-network providers, and frequency of service identified in the member's care plan for up to 90 days following enrollment or until Amerigroup completes a comprehensive assessment with the member. Consequently, we design our Case Management programs to provide members with high-risk or specialized healthcare needs additional supports to foster their engagement resulting in improved member satisfaction.

Amerigroup and our affiliate health plans promote the appropriate use of services and maintain our position as a steward of precious healthcare resources. We are committed to serving our members and work closely with members and all providers involved in their care to address inappropriate utilization or behavior. Our proactive approach in addressing the most common reasons members disenroll shows in the success rate of our affiliate Louisiana health plan, where we effectively reduced disenrollment to less than 1 percent.

Process (7.4.1.2)

Amerigroup understands and acknowledges the process of disenrolling a member for cause as outlined in the SOW Section 7.4.1.2.

Amerigroup's grievance and appeals resolution process identifies and addresses quality-of-care matters and issues occurring for members who disenroll within the first 90 days of enrollment. We will encourage members to contact the plan to report all grievances regardless of the subject matter. The member can report a grievance telephonically to our Member Services Department. We document all issues in a common database to enable appropriate classification, timely investigation, and accurate reporting to the appropriate quality committee with an escalation process in place for grievances of a critical nature. Trended data will be reviewed on a periodic basis. Should the member be dissatisfied with the outcome, we will direct the member to the Enrollment Broker, as well as provide the Enrollment Broker with a copy of the member's grievance record.

Amerigroup has a highly structured grievance resolution process, in accordance with all applicable contracts and federal and State laws and regulations, that affords several levels of recourse to our members for addressing their issues in a professional, respectful, and timely manner. The health plan's Quality Management Department investigates and resolves all grievances. Amerigroup has a record of resolving complaints, grievances, and appeals in timeframes below state limits in the states where we operate today. ***For example, in Texas—our largest affiliate health plan—the average time for resolving member complaints was 16.2 days from date of receipt to date of notification of disposition.***

In all cases, we support the member throughout these processes. It is our experience that designating specially trained staff to work closely and advocate on the member's behalf throughout this process results in greater member satisfaction and prompt resolution of grievances.

Contractor-initiated Disenrollment (7.4.2)

In compliance with SOW Section 7.4.2, Amerigroup will neither terminate the enrollment of nor encourage a member to disenroll because of his or her healthcare needs or a change in healthcare status. We acknowledge all State-initiated disenrollments and the circumstances under which they may occur.

Amerigroup's goal is to maintain continuity of quality care for its members. Therefore, a Call Center Representative or Case Manager will attempt at least three interventions with a member before requesting disenrollment when we identify noncompliant behavior. Our multi-step intervention process includes:

1. At least three verbal attempts over a period of 90 calendar days by a Case Manager to consult with the member and reconcile the situation with counseling
2. At least one verbal caution issued to the member
3. At least one written warning sent to the member, certified return receipt requested
4. At least one notification of acceptable reason for disenrollment to DHS

The Case Manager conducts the first step in our disenrollment intervention process by consulting the member and documenting the identified concern. If the concern is identified by another Case Manager or a provider, the consulting Case Manager obtains documentation from the identifying party. If it is determined from the discussion with the member that an adjustment in, or addition to, treatment (for example, mental health counseling) is needed, the Case Manager will facilitate the change to the treatment plan. If the member continues to be non-compliant, we issue a verbal caution and subsequent written warning.

Before requesting adverse enrollment, our Case Manager will work with the PCP and any other treating professionals involved in the member's care, including behavioral health and home and community-based providers, to develop an individualized care plan that will help the member address his or her behaviors. The care plan will also include all supportive services and resources required to meet the member's needs. The care plan is aimed at achieving treatment goals and addressing any barriers to the improvement of the member's quality of life. Ultimately, the goal is to define and address all medical, behavioral, and social service needs, including educating the member about compliant behavior.

Notification of Member Death or Incarceration (7.4.3)

In accordance with SOW Section 7.4.3, Amerigroup will notify the State, in the manner prescribed, of the death or incarceration of any Amerigroup member within 30 days of our becoming aware of the member's death or incarceration. Upon notification, Amerigroup will provide the State with the member's full demographic information including any and all incarceration or date of death. Furthermore, Amerigroup will not pursue recovery against the estate of any deceased member.

Marketing (8.1)

Marketing Activities (8.1.1)

Question 8.1, #1

1. Describe in detail your marketing and outreach plans.

Leveraging Affiliate Experience for Iowa

Amerigroup Iowa (Amerigroup) will leverage the experience of our parent corporation and our established programs to forge relationships with community, social and supportive services, and faith-based organizations in Iowa as a foundation to build a marketing and outreach program tailored to meet the needs of Iowa's children, adults, seniors, and individuals of all ages with disabilities on Medicaid and other state programs.

Nationally, our affiliates currently serves more than 5.2 million members in state-sponsored programs, and have designed marketing plans that recognize the unique needs for the diverse populations in each of those 19 states. Before members can effectively engage in improving their health status, they must first be informed of the programs available to them, how these programs can improve the quality of their lives, and how to enroll and stay enrolled in our member-centric plan.

Our Amerigroup Iowa marketing and outreach efforts will include a geographically balanced plan, a multi-level media campaign, and collaboration with stakeholders and community organizations and directly informing members, their families and guardians about covered services, our Provider Network, and the programs we will offer to help members maintain or improve their health, emphasizing member choice, access, independence, and responsibility. The goals of this plan are to:

- Create program awareness to engage and retain individuals eligible for the Iowa Initiative
- Introduce Iowa members to the superior education, access, quality, and service experiences available to Amerigroup enrollees
- Maintain an Amerigroup presence in both urban and rural communities in which we live and work
- Increase accessibility to our programs and employees
- Provide clear and easy-to-understand materials to members young and old, those in recovery from mental health or substance abuse challenges, children, foster children, parents, and single adults
- Extend services to all members and communities by promoting alliances with community-based organizations and events

We will also use marketing activities and materials to promote the use of Amerigroup's member incentive program and Value-Added Services, such as:

- **Healthy Rewards**, our easy-to-use member incentives program, which allows members to earn rewards for achieving health goals and receiving checkups and preventive screenings
- **Financial Training and Skills Development** including education, coaching and access to self-assessment tool.
- **Self-Advocacy Memberships** to help members develop the skills to advocate for themselves through training, resources and participation in advocacy
- **Taking Care of Baby and Me**, our prenatal care program for pregnant members

- **SafeLink**, extra cell phone minutes through our association with a national firm that provides cell phones and text messaging services to our members so they can establish and maintain contacts with our Care Management staff
- **Tobacco Cessation Program** including coaching to support members in their decision to quit smoking in addition to pharmacological therapies

Geographically Balanced Marketing and Outreach

Amerigroup will deploy regional, field-based marketing and outreach teams assigned to six distinct geographic areas in the State, targeting urban centers like the Des Moines area and the Cedar Rapids-Iowa City corridor, as well as reaching all the rural areas where 36 percent of Iowans reside, to inform potential members about the Iowa

Exemplifying our investment in the communities we serve, Amerigroup affiliates participated in over 74,000 community events and activities.

IA_8.1_COB_1.1

Initiative and to introduce Amerigroup. These six areas correspond to the DHS behavioral health regions.

Our teams will conduct marketing and outreach events across the State such as health fairs, Back to School Days, and a range of other events and presentations with local organizations, social and supportive services, and faith-based groups. Our teams work on a day-to-day basis with organizations such as:

- Centers for Independent Living, Meals on Wheels, Area Agencies on Aging, senior centers, and statewide aging and disability organizations
- Churches, synagogues, and mosques, with which we collaborate to conduct outreach and host health fairs
- Public health departments and community organizations with whom we conduct joint outreach

Our community-level marketing includes attending local events, distributing brochures, and talking with the staff and members of these community organizations to provide information about Amerigroup, share important health messages, describe available services and benefits, and provide information on how Amerigroup Iowa can help them address their healthcare needs. In 2014, Amerigroup affiliates participated in over 74,000 community events and activities in the 19 states in which we operate.

Additionally, we will leverage technological solutions, such as social media, that have proven effective in reaching across geographical boundaries to allow us to connect with members and potential members no matter where they live.

Multi-level Media Campaign

Amerigroup seeks to meet members and potential members where they are by offering multiple means for them to learn about the services and benefits available to them and how to access them. We will engage in a multi-level campaign to raise awareness of our program as a premier healthcare solution for children and their families, foster children, adults, seniors, and individuals of all ages with physical, intellectual, and developmental disabilities—a solution that will include benefits and services specifically designed to address needs related to the unique needs of our specialized populations. We will leverage communication channels such as mail, phone, mass media, and customized brochures, as well as newer techniques such as conversational automated calls and social media sites with DHS authorization—which have demonstrated effectiveness in the states where we employ these methods. Our multi-level campaign will incorporate personal, high-touch campaigns and traditional marketing and educational materials.

Personal, High-touch Media Campaigns

In our affiliates' 24 years of experience administering state-sponsored health programs, frequent and personal communication is most effective when conducting marketing and outreach activities. Therefore, we will employ several personal, high-touch methods for communicating with potential members, which include:

- Grassroots outreach
- Sponsorships
- Social media

Grassroots outreach

In our experience, grassroots outreach is the most effective way for us to communicate our message to members and potential members when and where they are most likely thinking about their health. To that end, we regularly participate in health fairs and other health-related community events. Our geographically distributed core teams will travel throughout Iowa to conduct grassroots marketing, talk to people in the community, and provide information about important health messages and the benefits we offer. We will customize our outreach information based on identified needs and preferences for Iowa members, including for children and families and those who have physical health, behavioral health, and/or participating in LTSS.

Sponsorships

Amerigroup affiliates sponsor health-related events and exhibits geared toward specific ethnicities within the community. Our goal is to connect with members and potential members where they are in a culturally and linguistically competent way.

Amerigroup will join with local organizations to sponsor community-wide events that serve as a forum for marketing activities. These partnerships will enable us to engage with community-based organizations to co-deliver key health messages targeted to the local populations and to provide them with resources to meet their diverse needs. These organizations will include advocacy groups for Iowa Medicaid populations, including foster children, individuals with behavioral health needs, individuals with physical, and intellectual and/or developmental disabilities.

Social media

Amerigroup will leverage the Internet and other technology to break down barriers that traditional communications often face, including geographic barriers. Examples include using Facebook and Twitter to promote health and wellness efforts. An innovative approach that uses a very familiar social media format is introducing Disabled Sports USA to members through YouTube. For our members who are blind or have vision loss or other disabilities, we work with and help support Disabled Sports USA. Highly accessible through the Internet and YouTube, Disabled Sports USA serves more than 60,000 youth, wounded warriors, and adults annually through a network of approximately 100 community-based chapters in 37 states, including Adaptive Sports Iowa, a chapter in Ames, Iowa, offering the following activities: beep baseball, cycling, guide running clinic, National Junior Disability Championships, skiing, track and field, and wheelchair basketball.

Stakeholder and Community Organization Collaboration

Amerigroup affiliates in 19 states have forged strong bonds with stakeholders and community organizations, providing us an in-depth knowledge and understanding about the needs of our many diverse communities. We will leverage this experience and the collaborative relationships we have built over time with community organizations to educate members and potential members about the Iowa Initiative program.

We will use this approach in Iowa and have already identified key organizations with whom we intend to partner, such as:

- Community Health Charities of Iowa
- March of Dimes Iowa
- The Arc of Iowa
- Vera French Foundation
- Healthy Birth Day
- Rick's House of Hope
- Child and Family Policy Center
- Iowa Library Association
- Statewide Independent Living Council
- Caregivers Association
- Community Action Association
- Epilepsy Foundation
- Boys and Girls Clubs of Central Iowa
- Johnson County Case Management
- Child Advocacy Board
- Public Health Association
- IOWAHEALTH+ and its member Federally Qualified Health Centers
- Area Agencies on Aging
- NAMI Iowa
- Disability Rights Iowa
- Iowa Foster and Adoptive Parents Association
- Iowa Disability and Aging Advocates
- Easter Seals
- Youth Homes of Mid America
- Centers for Independent Living

Additionally, as a Value-Added Service to help ensure our members are aware of all local Iowa community-based services, *we will provide members access to our Amerigroup Community Resource Link*. This Link is a searchable online resource for community-based programs, benefits, and services in an easy-to-use format and searchable with GPS technology. The Amerigroup Community Resource Link will be a reliable source for members and valuable tool regarding the wide range of programs and services available throughout Iowa.

Permissible Marketing Activities (8.1.1.1)

Traditional Marketing Strategies

We have found that traditional marketing strategies are effective in connecting with a large number of members and potential members. These strategies include:

- General media campaigns
- Written materials
- Public relations initiatives

General Media Campaigns

Media messages will inform the public about Amerigroup participation in Iowa Initiative programs and benefits and the importance of preventive care and establishing a medical home. To penetrate urban areas, we will use outdoor media, such as billboards, combined with radio. For rural areas, we will look to a combination of radio and advertising in free local and regional publications. Our strategy will be formulated at the county, township, and ZIP code levels, with additional resources committed to difficult-to-reach rural pockets and medically underserved areas.

In addition, we will continue to advertise in the most effective ways to reach our members and prospective members. We typically invest in such approaches as online banner advertisements tied to print advertising with statewide publications. We will also consider online and mobile contacts that are able to reach members and their families. Because time is precious to these multi-tasking individuals who often use mobile devices, we are investing in digital advertising as a new way to reach this population.

All material described in this section will be submitted to DHS in draft for approval at least 30 days prior to distribution.

Written Materials

Amerigroup's marketing team will create a comprehensive offering of materials, including the welcome packet, reminder postcards, flyers, surveys, and other materials, to support broad and specific healthcare education in Iowa. We will distribute these on a regular basis as our marketing and outreach staff participates in health fairs and community events and interacts with enrollment brokers. Written materials will be available in alternative formats, such as large print and Braille upon request.

Public Relations Initiatives

Amerigroup will provide editorial content to publications statewide, and our Medical Director and other clinical leaders will participate in on-air radio and television interviews about key health topics, such as prenatal care, well-woman visits, immunizations, smoking cessation, exercise, diabetes, heart disease, and other topics, when opportunities are available for them to do so. These key personnel will also be made available to health and lifestyle reporters covering Medicaid issues and healthcare in Iowa.

Prohibitions on Marketing to Potential Members (8.1.1.2)

Amerigroup values the trust it must earn from its members as foundational to a lasting relationship. Accordingly, our Compliance Program and Marketing Oversight Program have controls in place to monitor and oversee our marketing team to prohibit direct or indirect door-to-door, telephone or other "cold call" marketing activities. Amerigroup will assure that a potential member makes his or her decision whether or not to enroll in our plan free from inappropriate enticements, such as offering other types of insurance as a bonus for enrolling.

General Marketing Prohibitions (8.1.1.3)

Marketing Monitoring and Oversight

Tracking our activities is important to us because it helps us see how well we are meeting or exceeding our marketing goals in all areas of the State, both urban and rural. It also lets us know if we need to re-evaluate an approach. Amerigroup outreach teams will use *Salesforce.com*, a tool that allows us to systematically track our activities to make sure that we are geographically balanced and that our activities are effective.

Evaluating the Effectiveness of Marketing Strategies

We will measure the success and continually improve our marketing plan based upon the following indicators:

- Market-leading plan preference rates tracked through membership enrollment data. This will be an indication of how well we execute the program overall.
- Member satisfaction tracked through customer surveys. This will indicate how well we meet our members' needs.
- Member retention rates tracked through disenrollment data. This will also indicate the level of member satisfaction with their healthcare experience. We will use these data and information to adjust our marketing and outreach strategies to maximize our efforts to engage and educate members and potential members.

Monitoring for Compliance with State and Federal Requirements

Amerigroup's marketing oversight program is designed to verify that all marketing activities are performed by employees (including vendor employees) who are trained to understand their responsibilities and who display a continued commitment to carry out their obligations with the utmost

care, accuracy, and integrity. Amerigroup will submit all marketing materials to DHS for approval at least 30 days prior to distribution.

To monitor compliance with marketing requirements, Amerigroup has a Compliance Program and a corresponding marketing oversight program, both of which have proven effective with our affiliate plans in other state-sponsored programs.

Our Compliance Program has as its cornerstone in our parent company's Code of Business Conduct and Ethics (Code). The Code establishes standards of behavior for all Amerigroup employees. It is supported by specific Compliance Program Policies and Procedures.

All Amerigroup employees will receive compliance program training covering the Code; employee responsibilities for reporting violations of law, regulations, the Code, or Amerigroup policies; the use of our hotline as a reporting mechanism and other compliance issues. Marketing and other Amerigroup employees must comply with the Code and all relevant laws, regulations, and contractual integrity program documents that pertain to their offices. Failure to comply with the Code, the marketing integrity program, the Compliance Program policies and procedures, or the marketing policies and procedures will lead to disciplinary action that may include termination of employment.

Member Communications (8.2)

General (8.2.1)

Question 8.2, #1

1. Describe your overall strategy for communicating with members.

Member Communications

Our affiliate health plans have a proven track record of informing and helping potential and current enrollees across many specialized populations understand the requirements and benefits of new, expanded managed care programs and migrating those populations from years of fee-for-service delivery system experience to the new managed care program. Our organization's modalities, in-person communications, written materials, web-based content, social media, and call center supports have been so successful that our state partners have used them in their own campaigns to educate citizens on new program advances.

We appreciate and respect the unique aspects of the specialized populations enrolled, their clinical needs, and their cultures. We understand that trauma-informed care is as essential to a foster child as self-directed home care is to an adult with a physical disability or a recovery- and hope-oriented philosophy of care to an individual with a severe and persistent mental illness. We will use every opportunity to deliver important information about benefits, preventive care, and the value of our member-centric programs as we engage our members and their families. Amerigroup will provide written notice to members about any actions that might impact their benefits or how they access care. Our member education, outreach, and engagement strategies are informed by our routine analysis of member information and how members respond to our engagement efforts. We analyze member utilization and demographic data to:

- Identify the cultural groups or unique characteristics of the communities we serve
- Determine communities or cultural groups that are not being reached or served
- Understand the reasons why those communities or groups are not being reached or served

Amerigroup Iowa (Amerigroup) will comply with the information requirements at 42 CFR 438.10, making certain that all information is accurate in content and easily understood.

Language Requirements (8.2.2)

Question 8.2, #2

2. Describe your plans to provide oral interpretation services and translated written information and how you intend to notify members of the availability of these services and how to obtain these services.

Member Communications to Members with Non-English Language Preferences

Through our affiliate health plans, Amerigroup has significant national experience producing culturally responsive materials to our members. In Iowa, where nearly seven percent of the population over the age of five speaks a language other than English in the home, we will distribute all printed member materials in English and Spanish. We will also distribute printed materials in other prevalent languages as identified by DHS and as determined to be the language spoken by at least five percent of the general population in our service area at no additional cost to DHS. We will use the primary language indicator in the enrollment file to most cost-effectively deliver communications to members in the appropriate language. Members who speak non-prevalent languages or want a communication in a language other than that indicated on their enrollment record may request a written, oral, or alternate format translation of materials they receive. We provide oral translation/interpretation services for over 200 languages at no cost to our members.

We inform our members of our written and oral translation/interpretation services and how to access them in the member handbook, on the member ID card, during the welcome call, on our member website, and via taglines in prevalent languages on all written materials. In addition, members are notified of the oral interpretation services that are available each time they call us.

Interpreter Services

Amerigroup understands and will comply with Section 8.2.2 requirements around interpreter services. We continuously assess the communication needs of our members and design solutions to best meet their needs. Our Iowa staff will include employees who reflect the cultural and linguistic backgrounds of the members we serve. We will hire sufficient Spanish-speaking employees to meet the needs of our Spanish-speaking Iowa members. We will also hire employees that speak other languages as determined by our member population and/or as directed by DHS.

To meet members' cultural and linguistic needs, we offer phone menus in English and Spanish, as well as access to bilingual Member Services Representatives. We provide free, immediate translation services in more than 200 languages 24 hours a day, seven days a week (24/7) whenever a member calls us. Our employees are trained to quickly identify situations requiring interpreter services and can usually arrange for a representative who speaks the language or an over-the-phone interpreter to join a call to speak to the member in his or her native language within an estimated 45 seconds. The interpreters understand medical and benefit terminology. This interpretation service is also available to members during visits with Amerigroup providers. When a member needs language interpretation to communicate with a provider, the provider contacts us, and a Member Services Representative creates a conference call between the provider, member, and interpreter.

In some parts of Iowa, Amerigroup may use locally contracted interpreter vendors or on-site interpreters. In these situations, an Amerigroup Care Manager can make arrangements for an interpreter to accompany the non-English-speaking member on a medical appointment so he or she can communicate with the provider. Our Care Management department can also make arrangements for a sign language interpreter

to accompany a deaf or hard-of-hearing member on a medical appointment to offer signing services. After hours, such arrangements can be made by the Nurse HelpLine.

Members with hearing or speech disabilities can contact us through either Relay Iowa’s 711 TTY number or Video Relay Service to communicate with our Member Services Representatives in the same efficient and effective manner as those calling directly.

Relay Iowa may be used by our members who are deaf, hard-of-hearing, or deaf-blind or are having difficulty speaking to call us just like any other standard telephone user. The member calls 711, and the operator assists the caller in communicating with the Amerigroup employee.

Video Relay Service (VRS) allows those who are deaf or hard-of-hearing to communicate over the phone. The caller, using a television or a computer with a video camera device, contacts a communications assistant at their vendor of choice. The communications assistant then calls Amerigroup and relays the conversation back and forth between the parties – in sign language with the caller and by voice with Amerigroup. Because the conversation flows more naturally back and forth between the parties, the conversation can take place much more quickly and effectively than with TTY. Since individuals using VRS communicate in sign language, they are able to more fully express themselves through facial expressions and body language, which cannot be expressed in text. We train our staff to identify and respond to TTY operators and VRS communications assistants as if the employees were talking directly to our members.

Alternative Formats (8.2.3)

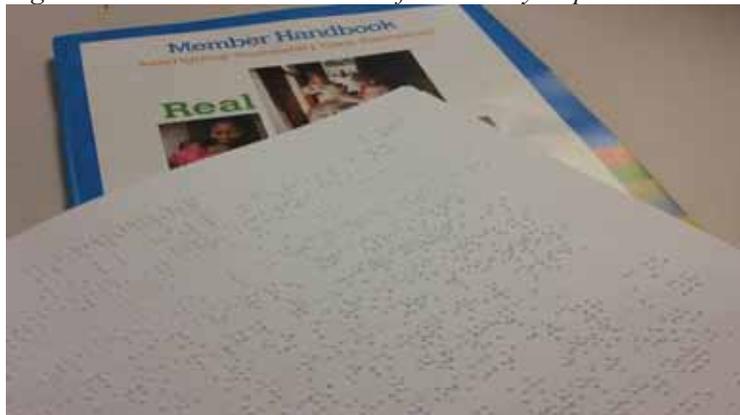

Question 8.2, #3

3. Describe your plans to provide all written materials in alternative formats and how you will identify members needing alternative formats.

Through our affiliates, Amerigroup has extensive experience addressing the communication needs of members who speak non-written language; are blind, deaf, or hard-of-hearing; or have other disabilities that make traditional communication difficult. We will leverage this experience in Iowa as follows:

- Our websites are fully 508 compliant and available in Spanish; members may use Google Translate on any page to access it in over 90 languages. In addition, the U.S. Access Board has released a proposed rule updating accessibility requirements for information and communication technology (ICT) under Sec. 508 of the Rehabilitation Act (“508 compliance” standards). We are tracking this emerging regulatory guidance closely and look forward to responding in our member- and provider-facing ICTs
- Upon request, we will provide a Braille, large-print, or audiotope/CD version of any printed communication a member receives. Figure 8.2-1 shows an alternative format for visually impaired members

Figure 8.2-1. Alternative Format for Visually Impaired Members

- Members may call us and have us read written materials to them over the phone (may also be used with TTY and VRS services)
- Our provider directory information includes languages spoken by certain providers

We inform our members about these no-cost services and how to access them in the member handbook, on the member ID card, during the welcome call, on our member website, and via taglines in prevalent languages on all written materials.

Review of Member Communications (8.2.4)

Amerigroup will submit all new marketing and member materials, as well as any substantive changes to previously approved materials, to DHS at least 30 calendar days prior to expected use and distribution or within the time frame requested by DHS. We will comply with all DHS-specified processes for such review and approval. Amerigroup will also submit for State approval any information that includes the State's name or logo and any correspondence that we may send to participants on behalf of DHS. We understand that approvals given are specific to the use requested and shall not be interpreted as blanket approval. We will include the State program logo(s) in our marketing/member communications upon DHS request and include any and all DHS-specified language in our communications as mandated.

Policies and Procedures for Ensuring Accuracy (8.2.5)

Question 8.2, #4

4. Describe your policies and procedures for ensuring materials are accurate in content and translation.

We develop member materials collaboratively across departments and with our state partners to help assure we deliver clear, concise, accurate, consistent, relevant, and culturally appropriate messages to our members. Across our affiliates, member materials for more than 5.2 million members have been developed through our national Member Communication, Brand and Marketing Departments using specifically tailored messages, benefits, services, and languages; policies, processes, and procedures; compliance and regulatory requirements as well as community and member event programs.

We take seriously our adherence to state guidelines and requirements around member materials. We use a Collateral Materials Approval Process (CMAP) to review all proposed member materials for accuracy, readability, and language/alternate format translation and to assure materials do not defraud, mislead, or confuse members. During CMAP, a multi-disciplinary team of subject matter experts, regulatory and compliance staff, and legal counsel will review the materials for cultural sensitivity, accuracy, and compliance with all relevant federal and State of Iowa requirements. In addition, we also incorporate guidance from CMS's *Toolkit for Making Written Material Clear and Effective* in creating written materials that are easier to read, understand, and use. We use an online tracking tool that promotes consistency in routing all materials for review and that thoroughly documents each reviewer's approval and/or changes. Once member materials has been approved internally, we will submit the finalized material to the State for review and approval prior to printing or distributing.

As part of our process, we translate State-approved new or revised materials in English to Spanish, or other identified primary language. We send materials in English to our translation vendor, who will create a Spanish version (or other language version, as requested). This vendor produces the translation, which we will also submit to the State for approval. Only then do we consider the document complete and ready to disseminate. Amerigroup reviews member materials at least annually. We will provide copies to the State of all policies and procedures related to member materials upon request.

New Member Communications (8.2.6)

Question 8.2, #5

5. Provide sample member enrollment materials as described in Section 8.2.6.

We know that our members lead busy lives, and new programs or changes to existing programs can be an adjustment. Once members are assigned to our health plan, we execute a multi-modal outreach campaign to help assure they feel welcome and supported and they understand their benefits. This campaign may include welcome mailers or automated welcome calls to connect with members as soon as we can after receipt of the enrollment file. We also mail members the required new member packet and inform them each year that they may request a new member handbook, provider directory, or any other information related to their benefits and care. We use these materials to engage and encourage members to invest in themselves by effectively using the benefits, services, programs, and community resources available to support positive health outcomes.

New Member Communications — Enrollment Materials Pre-enrollment Welcome Flyer

Provided enrollment data is available in time, we will send a mailer to welcome members in advance of the ID card and new member packet. This flyer describes what the member will experience over the next one to two months, reassures them that we are dedicated to providing good service, and provides contact information.

Welcome Calls

We use automated welcome calls as a cost-effective and timely way to welcome members and provide information. Members have the option to speak with a live agent to ask questions or learn more. This call may also include some of the initial health screener questions.

Member ID Card

Within five days of notice of enrollment from DHS, Amerigroup sends each member an ID card via first-class mail. Member ID cards are sent separately from the welcome packet to help assure that the member has access to and knowledge of his or her PCP as soon as possible. The member ID card will include the benefit plan, effective date, PCP name and contact number, and Amerigroup contact information. A mocked up ID card for a member served by Amerigroup Iowa is shown in Figure 8.2-2.

Figure 8.2-2. Sample Member ID Card

New Member Packet

We mail new member packets within five business days of receipt of enrollment files. All information will meet the requirements set forth in Section 8.2 and will be submitted for DHS review and approval prior to distribution in accordance with Section 8.2.4. These packets will include:

- A welcome letter designed to provide a warm and welcoming start to each member’s experience with us. We thank members for joining us and reiterate that they can change their PCP by calling the Member Services helpline. We also direct members to our website and encourage them to register to

access our convenient online tools. Finally, the letter provides key contact information such as phone numbers for the Member Services helpline and our 24-hour Nurse HelpLine.

- A notice telling the member how to find a network provider nearby by using our online provider directory or calling our Member Helpline; the directory will include all information detailed in 42 CFR 438.10(e)
- A member handbook
- Recognizing the differences in the types of members we will enroll and the variety of unique benefits and services they are eligible for and need, Amerigroup may customize our new member packets through the following ways that we have found effective in making members feel welcome and helping them understand the program:
 - **Member handbook supplements** that detail specific benefits, services, and operations involved in supporting certain subsets of members. To streamline communications, make them as easy to read as possible, and reduce costs, we may develop an all-member handbook that covers the benefits, services, and operations that are consistent among all populations and then add unique supplements for different populations whose benefits, services, and needs are unique.
 - A **member packet contents flyer** that explains everything in the packet so that members don't get overwhelmed by the contents and know how to use them. We develop a flyer for each type of packet, considering the information needs of different populations such as standard Medicaid vs. Waiver groups.
 - **Benefit-specific flyers** if something needs to be called to a member's attention, such as how to use transportation or take advantage of incentive programs.
 - **Population-specific flyers** to highlight services for certain populations, such as service coordination.
 - **Value-Added Services booklets** that highlight extra benefits we provide and explain how to use them. Again, we tailor these booklets to the member population.

Right to Request and Obtain Information (8.2.7)

Each year, either on the member's anniversary or the anniversary of the Contract effective date, Amerigroup will notify members of their right to request information in accordance with 42 CFR 438.10. We will mail a postcard with information about how to request a new member handbook or provider directory and reminders that they must recertify their eligibility to continue to receive benefits. Such notification includes reminders that members may receive information in the language and format of their choice upon request.

Notification of Significant Change (8.2.8)

Question 8.2, #6

6. Describe your processes for identifying significant changes as described in Section 8.2.8 and notifying members of such changes.

Amerigroup has a robust system in place that enables us to quickly identify, respond to, and communicate material changes to members. We take a similar approach as described in Section 2.16 (Material Change to Operations) by assessing any significant change in our health care delivery that impacts our members' accessibility to services and benefits, and then developing and disseminating responsive communication materials to notify members of that change as quickly as possible.

Our experienced Iowa management team will make sure that significant changes are minimized, but when necessary, implemented effectively. To that end, our Iowa leadership will engage and work directly with the State to communicate these changes.

To identify significant changes, the Amerigroup Regulatory Oversight Manager monitors events, such as contract amendments and policy notices, and works with business owners to evaluate the impact of the event on operations. The Regulatory Oversight Manager uses our Compliance 360 tracking tool, which will notify all impacted departments of material or significant changes in health plan contracts and operations, and impacted departments must immediately respond. Business owners must acknowledge receipt and document steps to implement the change.

Communicating Change to Members

Amerigroup recognizes that every change is different in the manner and extent to which it may affect our members. Depending on the nature of the change and its impact to members, we determine the most effective ways to communicate.

To communicate significant changes to members, our Iowa health plan team will work in conjunction with our national Communications Department to develop member communications/notifications and to update/change member materials, such as the handbook or any other materials, where significant changes affect the accuracy of content. All communication materials will go through our CMAP process, as described in Question 4.

We will notify members of significant changes within the State's prescribed timeframes. Such notification will be via first-class mail and may be augmented by website postings, automated outbound calls, or live-agent outreach. For example, when a provider leaves the network, a letter to all impacted members is automatically generated and mailed. If there are few nearby providers to replace that provider, a Member Services Representative may telephone members assigned to him or her to help them find a new provider.

When material changes require updates to the member handbook, we work to revise the handbook as quickly as possible. While the handbook undergoes updates and approvals, we include the original member notification of the change in new member packets until the revised member handbook is ready.

Certain changes have significant impacts on members' choice and benefits, and Amerigroup is prepared to address them quickly:

- **Restrictions on the member's freedom of choice among network providers:** Amerigroup takes pride in our ability to build effective, collaborative relationships with providers. If a contracted provider is terminated from the network, we will notify each affected member who received primary care from or was seen on a regular basis by the terminated provider within 15 days of receipt or issuance of the termination notice. If there are significant changes to the ways members access

providers (for example, if a referral will be required to see a certain provider type), we will notify members 30 days in advance of that change.

- **Member rights and protections:** If member rights and protections change, we will notify them of the specific changes and the impacts thereof by mail. A revised rights and responsibilities document will be inserted into the member packet until the handbook is revised, approved by the State, and made ready for distribution. We will also post a notification of the change and the revised rights and responsibilities document on the member website.
- We will notify members 30 days in advance of any changes to the following operations. If a member handbook revision is needed, we will include an insert to accompany the handbook in new member packages until the handbook can be revised.
 - Grievance and fair hearing procedures
 - Amount, duration, and scope of benefits available
 - Procedures for obtaining benefits, including authorization requirements
 - The extent to which, and how, enrollees may obtain benefits from out-of-network providers
 - The extent to which and how after-hours and emergency coverage are provided
 - Policy on referrals for specialty care and for other benefits not furnished by the member's PCP
 - Cost-sharing

Notice of Action (8.2.9)

Amerigroup will give members written notice of any action, not just services authorization actions, within the timeframes for each type of action as described in State and federal rules, regulations and policies and according to our response in Section 11.2.7 Notice of Actions for Services.

Member Services Helpline (8.3)

Question 8.3, #1

1. Describe your plans for the member services helpline, including the days and hours of operation.

Amerigroup Iowa (Amerigroup) will offer comprehensive, personalized customer service to our members using a fully-integrated call center technology platform. In 2014, our Member Services Call Center answered more than 5.5 million calls from members across all of our health plan affiliates with a call abandonment rate of less than one percent. We make it easy for members to reach us to get the assistance they need, their questions answered, and their concerns resolved. We believe in quality over quantity as evidenced by our 2014 member services average quality score of 96.8 percent.

Members who call our toll-free number can select from a menu that directs calls to our Member Service Representatives (MSRs), Behavioral Health (BH) associates, Nurse HelpLine or points of self-service, depending on the caller's needs and preferences. Our Member Services Helpline offers:

- A single point-of-contact for members to simplify services
- Menus in English and Spanish
- 24/7 automated self-service for checking enrollment status, changing PCP, updating address and phone number, and requesting an ID card, Member Handbook, or provider directory
- Advanced technology that enables us to flow calls among multiple call centers if needed to respond to spikes in call volume or business disruption due to a natural disaster, such as a hurricane
- MSRs specifically trained to serve Iowa Initiative members
- Clinical assistance through our Nurse HelpLine 24 hours a day, seven days a week (24/7)

Member Services Helpline Operations

MSRs will be available from 7:30 a.m. to 6:00 p.m. Central time, Monday through Friday, excluding State Holidays, to meet the needs of Iowa Initiative members. We understand that good customer service drives overall satisfaction. We continually evaluate and adjust staffing levels to adapt to evolving call trends and help assure adequate staffing during peak call periods.

Our call routing and monitoring technology maximizes efficiency and productivity by assuring real-time access to the full range of call data, including trends for call volume, average handle time, average hold time, average speed of answer, call blockage rate and call abandonment rate. Such capability allows us to be nimble in responding to spikes in call volume – such as during implementation phases – or business interruptions due to a natural disaster at any one location. Our call center technology enables us to seamlessly route calls to different sites to continue serving members. Our call centers have continuously maintained high call efficiency without delay to members during these critical times. Our platform is scalable, replicable, and already operational.

In addition, we recognize the importance of being available to members beyond normal business hours. Through Interactive Voice Response (IVR) technology – described in Question #2 below – we assist members 24/7 through self-service options as well as the option to speak with a registered nurse through the Nurse HelpLine.

We know that members expect and deserve customer service that gets them the information or assistance they need quickly. The strategic design of our call center enables MSRs to provide callers the accurate information they need. Our call center system design features:

- Professional, courteous, and knowledgeable staff who will efficiently and effectively address a variety of member inquiries
- An integrated desktop and online tools that enable consistently accurate responses
- Ongoing feedback to MSRs designed to support and enhance high performance levels
- An up-to-date, online Knowledge Management system

Question 8.3, #2

2. Describe the process you will utilize to answer, route, track and report calls and inquiries. Indicate if an Interactive Voice Response (IVR) system is proposed.

Answering and Routing Calls

Amerigroup uses call routing technology that recognizes the area code of the caller and routes members to our English- or Spanish-language Interactive Voice Response (IVR) menus where, once the member's ID number is authenticated, they can access our self-service menu. Members who either do not have or do not know their Member ID number are asked the reason for their call and are immediately routed to the most appropriate resource to meet their need. At any point during a call a member can opt to speak to a MSR, a BH associate, or a HelpLine Nurse.

The IVR enables us to quickly identify a caller's need and rapidly direct him or her to the most appropriate resources with a minimum of prompts. Based on the member's selection, our automated call distribution system routes the call to an employee who is most appropriate to meet the caller's needs (for example, a Nurse or an MSR with particular expertise in Pharmacy benefits). The IVR also offers self-service options for select functions, including checking eligibility status, changing contact information, selecting a new PCP, or requesting a new ID card, Member Handbook, or Provider Directory.

Routing to Member Service Representative

When members choose to speak with a MSR, IVR technology connects them with someone who can help. Our IVR enables members to reach the right MSR using a minimal number of prompts. For example, if a caller needs to speak with someone related to behavioral health, we route the call directly to the most appropriate, trained, and knowledgeable staff. MSRs provide their names when greeting callers.

Across our affiliate health plans, more than 90 percent of member inquiries are resolved during the initial call. Often, calls that are not resolved during the initial conversation require follow-up work with external entities. For example, a caller has a plan effective date that requires follow-up with the state. When members need to speak with an external entity, such as DHS representatives, MSRs will warm-transfer (if warranted) members to make sure they are connected to the assistance they need.

After Hours Automated System Provides Members with Clear Options and Instructions

We recognize the importance of being available for our members. Through our IVR, we can assist members 24/7 by offering self-service options as well as access to clinical staff through the Nurse HelpLine. The automated system instructs members to call 911 in case of an emergency or connects them to the Nurse HelpLine if they are unsure whether they are experiencing an emergency or if they need non-emergency clinical assistance. The Nurse HelpLine is described in Section 8.4.

Automated Self-service Options for Members

Amerigroup recognizes the importance of being available to members beyond normal business hours. We assist members 24/7, including holidays, through our Interactive Voice Response (IVR), offering Members self-service options. Amerigroup's automated self-service options will allow Members to retrieve information commonly requested during after-hours calls to the Member Services Call Center. We find this is an increasingly popular option for Members along with the Member website for 24/7 access to information. Members can access our voice-controlled automated system in English and Spanish. The prompts provide self-service options for such functions as checking eligibility status, changing the member's contact information, changing the member's PCP, requesting a new member ID card, Member Handbook, and provider directory. The option to leave an after-hours voicemail message informs callers about how to obtain urgent/emergent assistance and instructs them on how to leave a message for non-urgent/non-emergent services. Designated employees retrieve voicemail messages the next business day. The associate will contact the member within one business day following receipt of the message. Our Voice Mailbox provides ample capacity to handle message volume.

Tracking and Reporting Calls

Amerigroup uses multiple call status reports at a variety of frequencies, ranging from every 15 minutes to quarterly, that detail our compliance with performance standards. Our reports show trends for call volume, average speed of answer, and abandonment rate. We evaluate existing processes for our Call Center and make necessary adjustments to meet or exceed all service levels and requirements to improve the quality of service offered by our MSRs. Amerigroup maintains established processes that allow leadership to monitor adherence to established performance standards for delegated services.

We maintain operating protocols that promote consistent achievement of our service standards. Our Workforce Management team conducts real-time monitoring of the Call Center's telephony metrics using a variety of technology tools and custom reports. When call volume increases beyond the capacity of our scheduled MSRs, we expand the call answering queue to include designated backup MSRs who may be located in any of our six national Call Centers. This approach enables us to optimize staff efficiency while capably meeting performance standards. Additionally, our workload balancing application helps assure that our scheduled staff can meet the forecasted needs. An added benefit of being able to move calls between our multiple Call Centers is that we react quickly during natural disasters. For example, inclement weather during the winter of 2015 forced the closure of Amerigroup Call Centers in New York, Virginia, Kansas, and Tennessee. We were able to immediately shift calls to our other Call Center sites and maintain service.

In accordance with Scope of Work (SOW) Section 8.3.6, Amerigroup will report service level performance and will work with DHS to provide this information in DHS's preferred timeframes and specifications.

Availability for All Callers (8.3.1)

Question 8.3, #3

3. Describe your plans to provide services for the hearing impaired and non-English speaking population.

Amerigroup strives to assure that all members have meaningful, timely, and convenient access to care. Our MSRs include employees who reflect the cultural and linguistic background of our members.

Other interpretive services that are provided:

- Professional over-the-phone interpreter (OPI) service vendor
- TRS line for those who are deaf or hearing impaired
- Iowa-based interpreter service vendors

Services for Members with Limited English Proficiency

Amerigroup provides access to linguistic services for all members. This is not only a regulatory and contractual requirement; it is a core element of our Cultural Competency program and philosophy. To meet members' cultural and linguistic support needs, we offer phone menus in English and Spanish, as well as access to Spanish/English bilingual MSRs. We train all of our employees on how to identify the need for and initiate interpretation services. Our call center is able to accommodate members of various languages through our OPI vendor. Through our OPI vendor, **we serve our members in more than 200 languages**. When a member who does not speak English or Spanish contacts us, the Member Service MSRs will place the caller on a brief hold to bring in an OPI. Generally, within an average of 45 seconds, the interpreter, the member, and the MSRs will be connected in a three-way conversation.

Services for Members With Hearing and/or Language Disabilities

We train all MSRs to interact with members and parents or guardians who contact Amerigroup using Telecommunications Relay Service (TRS). The Federal Communications Commission adopted use of the 711 dialing code for access to TRS. To further assist members and potential members in understanding the requirements and benefits of their plan, and to meet their customer service needs, Video Relay Service (VRS) allows those who are deaf or hard of hearing to communicate over the phone. Using a television or a computer with a video camera device, the caller contacts a communications assistant at their vendor of choice. The communications assistant then calls Amerigroup and relays the conversation between the parties, using sign language with the caller and by voice with the Amerigroup MSRs. Individuals using VRS communicate in American sign language and so can express themselves using facial expression and body language, which are important components of American Sign Language.

Additional Language Assistance Options for Members

To further assist members and potential members in understanding the requirements and benefits of the Iowa Initiative, and to meet their service and care needs, we will also provide the following, free of charge to members:

- Oral interpretive services will be available either in provider offices or telephonically
- In-office sign language assistance at the provider's office
- Written materials in English and Spanish or any additional prevalent language identified
- Member Handbook including information on accessing linguistic services to members
- Provider directory will include a listing of the languages spoken by providers

Helpline Staff Knowledge (8.3.2)

Question 8.3, #4

4. Describe your training program curriculum and training process for call center staff.

Amerigroup understands that employees who directly interact with members and providers are critical to building and maintaining trusting relationships in each community that we serve. We make training a priority for our MSRs and will offer all employees serving Iowa members an extensive customer service training program that will include curriculum specific to the Iowa Initiative. We will maintain a diverse team of thoroughly trained employees who cultivate respectful and supportive relationships with Iowa members and their families and with our providers. Our training curriculum employs several educational strategies designed to accommodate different learning styles, including written materials, interactive class discussions, and computer-based tutorials and supports MSRs to build the skills necessary to deliver knowledgeable and accessible assistance and services to our providers and to members of all cultures and abilities.

As part of our extensive training program, all Amerigroup employees serving Iowa members will attend a one-day orientation about Amerigroup, HIPAA privacy compliance requirements, and our customer and membership base. MSRs then participate in an intensive 18-day training course before they begin answering live calls from members in the Nesting environment. The full training continues for a total of 43 days and is delivered in segments in which a MSR learns certain processes and applies those processes for a short period of time. The MSR then returns to the classroom and learns additional skills that build on the first segment. Our training process will be broken into the following components:

- Classroom training: multi-week program will be facilitated by an experienced trainer who has in-depth knowledge of the Iowa Initiative services and benefits
- Nesting: live calls are received in the production environment to acclimate to system tools and resources
- Huddles during the nesting period: MSRs meet for an hour daily to discuss situational events for clarification or resolution
- Quality Review: during the nesting period, increased call monitoring is performed to ensure MSRs are performing to expectation.

Beginning with new hire training, we educate employees on our member-centered approach to care, best practices, and strategies for engaging customers. Throughout their employment, we provide continuous training, coaching, and supervision to support employees in consistently applying these principles when serving our customers. We teach employees to demonstrate our values through the choices they make in daily interactions with each customer and that a single action by any one employee has a ripple effect that ultimately impacts the customer experience. We conduct our training in a controlled environment with supervision and coaching, followed by an evaluation period. The curriculum covers a variety of topics, including but not limited to Member Services core training, Provider Services training, and training specific to the Iowa Initiative.

MSRs are also trained to use our Knowledge Management system and Integrated Desktop application for real-time access to program requirements, covered services, eligibility, and claims data. MSRs will be instructed and be proficient on all Iowa Initiative program details and update alerts so when members and providers call, they will receive up-to-date program information and changes.

Member Services Helpline Staff Training Curriculum

Our structured classroom-based curriculum includes modules that will educate MSRs on:

- Covered Programs and Services, including behavioral health, LTSS, and community-based services
- Eligibility Policy for the Iowa Initiative
- Structure of the Iowa Initiative, Covered Services, and Program Requirements
- Iowa Contract Requirements
- Positive Behavior Supports; Person-Centered Practices
- Community Inclusion and the Importance of Maintaining Independence in the Community
- Cultural Competency Program, including Assisting Members with Limited English Proficiency
- Hearing Disabilities, and Responding to Members with Communication Difficulties or Challenging Behaviors
- Amerigroup Managed Care Principles, including Coordination of Care and the Importance of Consumer Directed Services
- Medicaid, Medicare and Managed Care
- Value-Added Service offerings
- Compliance/Amerigroup Fraud and Abuse Program and Member Rights and Responsibilities
- Systems Training/Online Resource Tools
- Non-Capitated Services and Community and Social Services
- Providing Training to Members Regarding Protections Related to Abuse, Neglect, or Exploitation
- Identifying and Reporting Critical Events or Incidents such as Abuse, Neglect, or Exploitation
- Systems Training/Online Resource Tools
- Triaging Calls, Caller Verification Process
- Locating a Provider/Disseminating Information about a Provider
- Call Monitoring and Quality Management
- Processes for Submitting a Complaint/Grievances and Appeals
- Appointment Availability/Access Standards
- Handling Crisis Calls
- Incentive Programs
- Balance billing issues and cost-sharing and liability inquiries

Nesting Period

During the nesting period, recorded and live calls are monitored to ensure employees are performing according to expectations. This allows new staff to practice the skills they learn during training and receive real-time feedback on the quality of their interactions with callers.

Ongoing Training

After MSRs receive initial training and begin taking member calls, they benefit from ongoing training initiatives to make sure that their skills remain fresh and they are continually engaged in professional development. For example, when we introduce a new product or system, we make certain each MSR receives training and fully understands. We offer courses to enhance service skills and professional development, such as the following:

- Identifying and Responding to Customer Styles
- Providing Customer Service Over the Phone vs. Face-to-face
- Shaping the Direction of Customer Service in Your Organization
- Understanding the Defining Moment in a Customer Interaction
- Implementing Standards to Stay In Tune to Your Customer Needs and Expectations
- How to Uniquely Serve Each Customer

Other training topics will include quality, best practices and opportunities, Iowa bulletins, advance review of member and provider communications, and program and/or benefit changes. All training documentation, lists of attendees, and staff agendas are retained for tracking and review purposes.

Helpline Performance Metrics (8.3.3)

Question 8.3, #5

5. Describe your call center monitoring process to ensure helpline performance metrics are achieved.

Amerigroup will meet or exceed a service level of 80 percent of calls answered within 30 seconds or less using the equation identified in SOW Section 8.3.3. In fact, *over the last year, our performance across all our affiliate health plans administering state-sponsored programs was 90 percent of member calls answered in 30 seconds or less.* We continuously monitors call metrics (e.g., number and percentage of calls answered during a defined timeframe, average speed of answer, call abandonment rate) to manage Member Services Helpline (call center) performance.

A Workforce Management team conducts real-time monitoring of the call center's telephony metrics, using a variety of technology tools and custom reports. When call volume increases beyond the capacity of our scheduled MSRs, we expand the call answering queue to include designated back-up MSRs who may be located in any of our six national call centers. This approach enables us to optimize staff efficiency while capably meeting performance standards. Additionally, our workload balancing application helps to assure that our scheduled staff can meet the forecasted needs.

Backup System (8.3.4)

Question 8.3, #6

6. Describe your plans for a backup solution for phone service in the event of a power failure or outage or other interruption in service.

Amerigroup is committed to maintaining member access to information and services in any emergency. We will use our Member Services Helpline, our member website, and IVR to provide information – and our Business Continuity and Disaster Recovery Plan contains processes to maintain availability of these services before, during, and after an emergency or business disruption. Through this Plan, we will maintain call center operations in the event of a disaster or emergency. The Plan enables both systems and services during power failure, outage, or other interruption using a combination of resources, including network redirection of work, national-owned worksite recovery capacity, mobile recovery resources, and secure satellite connectivity for voice and data.

Nationwide, Amerigroup and our affiliates employ a proven backup plan and system to assure that in event of a power failure or outage, our members continue to have easy access to MSRs. Amerigroup's Medicaid Service Organization maintains call centers in Houston, Overland Park, Tampa, Nashville, New York, and Virginia Beach. Our telephone technology enables these national call centers to flow calls among each other as necessary, creating one virtual call center. When call volume exceeds forecasted levels and the capacity of scheduled MSRs, we quickly expand call answering queues across the country. Cross-trained MSRs in several national call center sites can immediately start to take calls for a site impacted by power failure, outage or other service interruption. All of our call centers maintain the same high standards concerning abandonment rate, service levels, and other key call center metrics. We also provide the same cultural and language services to meet the needs and preferences of members.

We maintain a nimble call center plan that goes beyond staffing ratios. Because using these ratios as a means to assure appropriate call response for members is too rigid to respond in a timely fashion to any kind of spike in call volume, we instead forecast our staffing needs. This allows us to predict staffing levels down to 15-minute increments. Forecasting, based on many factors, including call arrival patterns, seasonality, and contractual obligations, gives us the dexterity to respond to unexpected call volumes, such as service interruptions at any call center due to natural disasters or other business continuity events, or simply an increase in call volume without risking our members' timely access to a MSR.

Our Business Continuity and Disaster Recovery Plan aligns the business requirements of the operating units and the deliverables of support areas to meet stakeholder commitments following an unplanned event. Given the importance of open communication in our continuity activities, we will work and coordinate with DHS and appropriate contractors to help assure a continuous delivery of services at all times. This plan is detailed further in Section 13.2. Further, as part of our business continuity and disaster recovery processes, we will immediately notify DHS in the unlikely event our phone system becomes inoperable or a back-up system is being used.

Integration of Service Lines (3.5)

Question 8.3, #7

7. Describe if any separate member services lines or staff will be used to address member needs by service type (i.e., physical health, behavioral health and long-term care services).

Through our single, fully-integrated call center platform, members can use our toll-free number for assistance with any and all of their benefits under the Iowa Initiative. Our six national call centers are managed as one virtual call center served by employees trained and qualified to respond to callers with questions or issues across physical and behavioral health, and long-term care services and supports.

If the call is outside a MSRs' skill set, they may direct callers to employees with more in-depth expertise. Calls can be routed to specialized call teams within the organization such as:

- Member Pharmacy MSRs
- Website technical support
- Nurse HelpLine RNs
- BH and Physical Health Case Managers
- Community-Based Case Managers

Question 8.3, #8

8. Describe proposed entities to which you will be capable of warm transferring member calls.

On occasion, callers request or require assistance with being connected to an external entity. Amerigroup supports warm transfers to select entities as appropriate for a given caller and circumstance. Such entities include:

- Transportation services
- Dental services
- The health crisis line
- The Case Manager and Case Management team

Nurse HelpLine (8.4)

Question 8.4, #1

1. Describe how the Nurse HelpLine will be publicized to members.

Our 24/7 Nurse HelpLine is part of our Amerigroup On Call Program that provides medical and behavioral health advice based on approved protocols to guide members to the most appropriate point of care, such as an urgent care center, the emergency room, or self-care at home for non-urgent conditions. We take every opportunity to inform members so they know how to contact our Nurse HelpLine any time day or night. We use multiple communication channels and methods to publicize the helpline to members such as:

- Publishing the direct toll-free Amerigroup On Call telephone number on on Member ID cards
- Including information in our Member Welcome Letters, and Member Handbook
- Featuring contact information on our website
- Promoting information in our automated welcome calls to each member during program implementation and to new enrollees going forward
- Providing focused outreach that includes information to members who are identified (through our utilization data analysis) as visiting the Emergency Room (ER) frequently

The Nurse Helpline enhances member access to physical and behavioral health care while also encouraging appropriate use of health care services and avoiding unnecessary hospitalization and ER visits. Members can contact the Nurse HelpLine for non-emergency medical questions and concerns by calling the single toll-free Member Services call center number and choosing the Nurse HelpLine option.

Question 8.4, #2

2. Describe the credentials Nurse HelpLine staff must possess.

All of our AOC staff are licensed registered nurses with the clinical experience and skills necessary to meet the needs of Iowa Initiative members. They will receive extensive training that will assure their ability to guide callers and deliver knowledgeable assistance to members.

Question 8.4, #3

3. Describe processes and protocols for when a physician must be consulted.

The processes and protocols for when a physician must be consulted are incorporated into sophisticated clinical algorithms software used by our Nurse HelpLine registered nurses to assess a caller's health condition and provide recommendations for seeking treatment, which may include self-care, an appointment with the caller's PCP, instruction to call 911, or referral to the emergency room or urgent care services – all based on the nature and severity of the symptoms.

The algorithms used by the program are very meticulous in their design and allow the nurse to quickly and efficiently guide the conversation with the member to ensure appropriate recommendations are brought forth. When a situation arises where the registered nurse believes he or she needs additional support in rendering a final recommendation to the member, the registered nurse will have access to a physician, who will respond to the inquiry within 30 minutes.

In addition, Amerigroup may offer Iowa members our virtual physician telemedicine program made available through our innovative solution, LiveHealth Online. LiveHealth Online provides access via a secure website that enables members with a video-enabled computer, tablet, or smart phone to receive a live audio/video consultation with an Iowa licensed, board-certified physician who can diagnose, make

medical recommendations, and prescribe medications when necessary. In implementing LiveHealth Online, Amerigroup will fully comply with all Iowa statutes, regulations, and rules regarding virtual health care services.

Electronic Communications (8.5)

Question 8.5, #1

1. Describe how technology will be leveraged to communicate with members.

Technology Informs and Educates Members and Families

Amerigroup's member education strategy will continually evolve to support our members and families through access to information to promote better health outcomes. We will employ a variety of technological solutions to improve communication and provide our members with a diverse selection of communication choices, including.

- Email communication
- Smart Phone mobile applications
- Text messaging
- Social Media

We provide additional detail on each of these programs later in this section. We pride ourselves on having a member-centric engagement strategy and strive to communicate with our diverse membership through means that individuals find comfortable and familiar. Amerigroup has the ability to collect member preferences through a variety of contact points during and after the orientation process. We will make it as easy as possible for members to opt in or out of electronic communication modes at their convenience.

Question 8.5, #2

2. Describe how information on member's preferred mode of receipt of communications will be collected and how information will be sent in accordance with such selection.

Upon enrollment into Amerigroup Iowa, members will be given an orientation to our program and be offered a choice of receiving communications from us via regular mail or electronically. Members will receive an orientation through a welcome call apprising them of their options. Member Handbooks will contain information needed to choose and change their preference for receiving communications, and prompts will be included in the registration process for the secure member website. Members receiving Long-Term Services and Supports will be informed by their Community Based Case Managers as to their communications options. Members may alert us at any time to a change in their preference simply by contacting the Member Services Helpline.

Members choosing to receive communications from us electronically will receive e-mail alerts letting them know that materials are available on the secure member website for their review. The e-mail alerts will never contain Protected Health Information. If Amerigroup receives a notice of failed delivery, we will send a follow-up notification via regular mail within three business days with directions to contact the Member Services Helpline for assistance to restore electronic communications or opt back into paper

communications with material delivered by regular mail. Upon receipt of the request to change their preferred mode of communication, we will store the member’s preference in our system.

Question 8.5, #3

3. Describe how electronic communications will be received.

Receipt of Electronic Communications

Amerigroup will collect and store e-mail addresses of those members wishing to receive information electronically. Those members will receive e-mails alerting them to log on to the secure member website at: www.myamerigroup.com to get information containing Protected Health Information (PHI) and other communications.

Amerigroup will provide members appropriate documents in electronic format as quickly as possible. Members choosing to receive electronic communications will:

- Receive an alert anytime an electronic notice is posted to the member website
- Receive a notice by regular mail if e-mail is returned as undeliverable
- Be informed as to how they can contact Amerigroup’s Member Services Helpline to restore e-mail communications

This website also allows members to ask questions about their benefits as well as any type of customer service question and an Amerigroup employee provides a response within one business day of receipt of the member’s question.

Leveraging Technology

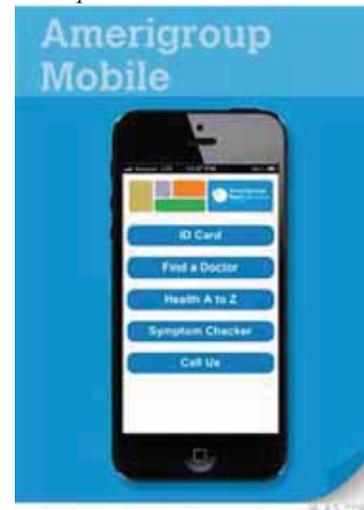

Amerigroup Mobile Application

Through Amerigroup Mobile, members and families can access resources from the convenience of their smartphones. As shown in Figure 8.5-1, member functions now available through this application include:

- ID card (view, fax, email)
- Find a Doctor (searchable provider directory accessible before login or from the primary menu once logged in)
- Health A to Z (health topics powered by Healthwise)
- Symptom checker (powered by Healthwise)
- Call Us! (member service information and clickable phone number)

Amerigroup Mobile App is available for free to users of iOS or Android OS through the iTunes App Store or Google Play. Members must know their member identification number and ZIP code to log in to Amerigroup Mobile. The downloadable ID card is not stored on the phone but will generate a copy to the provider via e-mail and print functionality. Our Member Handbook and other fliers offer directions on how to install and use Amerigroup Mobile.

Figure 8.5-1. Amerigroup Mobile Delivers Communication to Members Through Their Smartphone

Mobile Text Program

In 2014, Amerigroup’s affiliates launched a pilot program, which delivers important text messages to adult members participating in the SafeLink program (a free phone program described in detail in Section 3.2.14) across all markets. Participating members may opt in to receive text messages from Amerigroup affiliates upon receiving their new SafeLink phones and may opt out at any time. There are three series of text messages:

- **Administrative:** Texts are focused on benefits and provide information on the value of the *Nurse HelpLine*, ID cards, assistance finding a doctor, and more. They focus heavily on our newest members as a tool to engage them with the health plan.
- **txt4hlth:** These text messages focus on member health and give individuals the date of their last physical exam and reminders for dental check-ups and mammograms and include health quizzes. They are sent throughout the year.
- **txt4baby:** These text messages focus on pregnant members and provide them with important information and reminders for prenatal care. Via two-way texting or live chat, members can get their questions answered and receive timely, relevant information about their pregnancy or infant care.

Through May 2014, *more than 1.4 million text messages have been delivered to our affiliates’ members.* The program has experienced a *91 percent retention rate* for member participation. Further, records indicate *99 percent of all text messages are opened*, and *8 percent of our users directly respond* to the messages. Amerigroup is committed to this new avenue, as it will allow us to directly engage our membership.

Linking Members to Useful Apps

Amerigroup has developed customized apps to support health, wellness, and self-care for chronic conditions such as diabetes, asthma, and hypertension.

Apps also provide a fun, interactive venue for children and adolescents to independently learn about conditions they are diagnosed with and alerting them of symptoms for which to seek help. We collaborate with organizations such as school-based health centers to further support access to appropriate apps that promote self-management skills for our adolescent and young adult members. Apps will be carefully vetted by Amerigroup, and we will seek approval from DHS 30 days prior to distributing apps through our website.

Figure 8.5-2 illustrates apps that we plan to make available to our members.

Figure 8.5-2. Better Self-care Through Mobile Applications

Social Media

Amerigroup uses Facebook and Twitter to share and receive information from members. Sharing articles and news stories stimulates active member participation. Our social media sites are used to provide information to and solicit feedback from our “followers,” keep members and followers actively engaged in healthy topics, and alert them to community events.

Amerigroup uses YouTube to highlight videos of our success stories. On our National Medicaid Division’s YouTube channel, there are videos featuring our Real Stories, corporate social responsibility

stories featuring our philanthropic arm, presentations and seminars, short features on our volunteer efforts on our "In Your Community" page, and Amerigroup news and media clips.

Member Website (8.6)

Question 8.6, #1

1. Describe your plan to develop a member website and mobile applications in English and Spanish, and the kinds of information you will make available to members in these formats.

Amerigroup understands that Iowa Initiative members, including seniors and individuals with disabilities, are evolving in their use of computers and smartphones. We maintain a robust, secure, and user-friendly member website that allows greater ease of access to information and more active management of healthcare. Available 24/7, our website will feature vital tools and resources for Iowa Initiative members, where they can access a broad range of information and capabilities in English and Spanish. In addition to information about our plans and benefits, the provider network, and important contact information, members will find links to community resources, community events, and health and wellness information. The website also features health-related topics and seasonal reminders, such as flu shots, and our Healthwise link to help members understand their symptoms with a "symptom checker."

All information available on the website and the mobile application will be submitted to DHS at least 30 days prior to posting to secure approval. Further, our website complies with Section 508 of the Rehabilitation Act, optimizing accessibility for members with disabilities. All confidential member information is protected according to HIPAA privacy and security requirements.

User-friendly Member Website Information and Tools

Amerigroup's member website provides a quick, personal way for members to learn about and research their health plan services and benefits. The Amerigroup Iowa website will include capabilities and services that facilitate members' easy access to information about their benefits including cost and quality information. The site architecture and navigation platform is user-friendly, accessible, and can be accessed on a smart phone. Website content includes culturally appropriate information, written at a fifth grade reading level, and available in English and Spanish. The website can be easily converted to Spanish simply by clicking the translation button found in the upper left-hand corner on the landing page. Our content will be tailored toward identified populations and health conditions relevant to Iowa Initiative members. Further, it will be fully optimized for those who have visual, auditory, physical, speech, cognitive, neurological, multiple, and age-related disabilities. We consider the needs of those who may:

- Require screen reader technology to narrate content
- Lack the ability to navigate using a mouse
- Have visual disabilities and may have difficulty discerning colors and/or text elements on a screen
- Be deaf or hard of hearing and may not be able to hear multimedia content

The website offers the following features:

- Easy, more secure access to personalized member services
- Quick access to common member tasks such as finding a Member Handbook, ordering a new ID card, choosing an electronic communication preference, and updating personal information
- Access to searchable tool of community resources and services that can be displayed by ZIP code or community
- A searchable provider directory (updated nightly)

- A formulary look-up feature
- Resources for community stakeholders such as foster parents or case workers
- Ability to take our Health Risk Assessment tool
- Electronic library of documents including the Member Handbook
- Request for replacement ID cards
- A secure message center

For this Contract, Amerigroup will offer additional functionality tailored to our diverse and specialized populations and interactive features designed to promote nutritional education, peer support, member engagement and self-care, and health and wellness activity tracking.

Additional functionality includes:

- Caregiver section identifying tools and resources for support
- A searchable member benefits tool
- Healthy Rewards incentives allowing members to track rewards progress
- Health cost estimator tool (for those members with premium or cost sharing provisions)
- Resources for members managing behavioral health conditions including materials for their families and access to peer support

Knowing that there are approximately 20,000 households in Iowa without Internet connectivity, Amerigroup is in discussions with senior centers and public libraries to identify ways to promote the use of these web-based resources by visiting any of the 544 public libraries spread throughout the State. Amerigroup has already engaged with the Iowa Library Association (ILA) to expand access.

Amerigroup will propose to the ILA's Board of Directors that ILA member libraries include links to the DHS Iowa Initiative website on every public library computer in the State to assure that Medicaid beneficiaries can easily navigate to State information on the Iowa Initiative and information on participating MCOs.

Amerigroup uses our website and several social media sites for the benefit of our members and providers. Our current websites have public and secure login-only areas. Our public areas enable members and the community to access general information about Amerigroup, our programs, and the benefits available to our members, as well as links to community resources and informational materials. Our secure login-only areas give our members and providers a secure environment where information specific to their needs can be located in an easy-to-use, compliant location.

Members can register for secure website access by providing their Amerigroup ID number, last name, date of birth, and home address ZIP code. After information is validated, the member is asked to create a user name and password. Members can contact the Member Services Helpline for assistance. Website tools are available to assist members who forget their user name or password.

An example of public and secure member website content for Iowa is presented in Table 8.6-1.

Table 8.6-1. Public and Secure Content on the Member Website

Public Website Content	Secure Member-only Website Content
<ul style="list-style-type: none"> • Iowa health plan overview with information • Available benefits/services • Searchable provider directory • Member rights and responsibilities • Frequently asked questions • Safety and privacy information • Member Handbook • Tool to report fraud, waste, and abuse • Tool to submit questions or comments • Community resources with links to area websites • Login to the secure member area 	<ul style="list-style-type: none"> • HIPAA-compliant registration process that will enable members to generate a new user name and password for simple login on their return to the site • Demographic information with option to update • PCP information with option to change • Additional program-specific “Resources in Your Area” • How to request or contact a Case Manager/Care Coordinator • Information on our Integrated Medical Management Model written in a way that is relevant for members and includes behavioral, social, and physical health information • Details on eligibility • Access to member and plan documents, such as the Explanation of Benefits requested electronically by the member • “Call Me!” allows Members to enter their phone number (during normal business hours) and get a response from a MSR at their preferred call back time

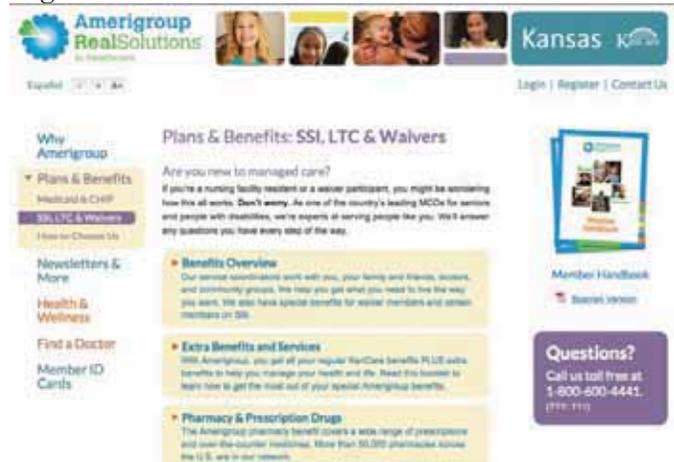

Our website also includes detailed information on programs and services, specific member benefits, an area to ask questions, helpful links to area resources, and other audience-tailored and program-specific information.

A password-protected member portal stores and facilitates members’ changes to demographic and primary care provider (PCP) information. Additionally, we include an innovative, interactive provider search tool that enables our members to search for providers by location and includes provider names, locations, telephone numbers, office hours, and non-English languages spoken by current Network PCPs and specialists; hospital listings, including locations of emergency care and post-stabilization services; and a list of providers accepting new patients. This information is updated nightly. Upon a member’s request, Amerigroup will send the member a hard copy of the directory. Members may also contact Member Services for assistance.

Additional tools under the selections list above include:

- Are You Pregnant?—a survey for members to tell us about their pregnancy and any special needs they may have, as well as numbers to the Tobacco Quitline, Member Services, and 711 Telephonic Relay
- Find a Provider—a tool that guides members to quickly find PCPs or specialists, hospitals, laboratories, and behavioral health providers

Figure 8.6-1. Members May Also Access an LTSS Web Page

Long Term Services and Supports

We develop web pages that describe specific benefits in more detail such as our Kansas affiliate's member web page describing SSI, long-term care, and waiver programs. We will offer our Iowa members a similar web page encompassing information on Iowa's LTSS benefits and programs.

Updating Content and Monitoring for Accuracy

Amerigroup's overall quality framework includes targeted audits, telephonic outreach, and proactive and reactive responses to any website information discrepancies identified through various sources, including automated reports and provider outreach. We will maintain policies and procedures for monitoring the content of the member website for accuracy and incorporating changes to content as needed. Our employees will review the general volumes and trends of web transactions. We will query transaction logs to research specific web events on an as-needed basis. This information helps guide our efforts to modify and update the website to encourage members to seek it out as a useful resource. Currently, we do this in our affiliate health plans.

Health Education and Initiatives (8.7)

Question 8.7, #1

1. Describe your proposed health education initiatives including topic areas and strategies for communication. Provide sample materials.

Health Education and Communication Strategy

Engaging members in accessing healthcare resources appropriately and adapting healthier lifestyles begins in the community. To that end, *we customize our health education approach to address community priorities and health concerns*. We work with both State and local resources to communicate and engage members in a culturally and linguistically responsive way. We do not take a “one size fits all” approach. Rather, our efforts range from general health education initiatives that seek to build health literacy and empower all members to take responsibility for their health status to high-touch, personalized outreach strategies tailored to the preferences and needs of individual members. Building on the success of our affiliate health plans operating state-sponsored health programs in 19 states and serving more than 5.2 million members, Amerigroup brings comprehensive and thoroughly vetted health education initiatives to Iowa.

We communicate our health education initiatives through a variety of methods with consideration for members' culture, ethnicity, language, sexual orientation, age, and other socioeconomic needs. We provide members with tools, information, and resources in a clear, actionable, and accessible format. We make all materials available in English and Spanish, have bilingual Member Services Representatives on staff, and provide interpretation services for more than 200 languages to assist members with limited English proficiency. We also offer alternative communication forms for members who are deaf or hard of hearing (through video relay) or who have low vision or are blind (through Braille and audio versions of materials). Our health education strategies enhance access to information, empower members to make informed health decisions, and improve quality of care and member satisfaction. Strategies include:

- Member incentives that promote well checks and participation in preventive or routine healthcare, such as PCP well visits and various screenings (Refer to Section 10.3 for a complete list of member incentives planned for the Iowa Initiative)
- Collaboration with community- and faith-based organizations to help deliver important healthcare messages through health fairs and special events, at which educational materials are readily available; free health screenings and immunizations can also be offered through these events
- Dedicated, local case managers who use best practices for engaging, educating, and coordinating care of members who may be challenging to locate (such as those who are homeless)
- Online and mobile technologies to give our members credible and reliable health information (materials can also be easily downloaded on our website or mailed upon their request)
- Specialized programs tailored to address specific member conditions (such as asthma and diabetes) or special healthcare needs such as maternal-child program and disease management
- Use of social media (Twitter, Facebook, YouTube communities) and partnerships with existing community-based organizations' websites to promote local educational events and programs
- Highly trained and knowledgeable Member Services staff coupled with sophisticated technology to assist members in addressing their healthcare conditions

Innovative Health Education Initiatives (8.7.1)

Our health education initiatives will focus on the health issues most prevalent to Iowa members. We will work to influence the behavior of our Iowa members building on the existing programs that are proven successful in other states and implementing new strategies to further educate and motivate members in making healthy decisions. Our proposed health education initiatives include, but are not limited to, maternal and child health, preventive and general health, member engagement and empowerment, appropriate use of emergency services, community outreach and education, substance use disorder prevention and treatment, and education for members and caregivers about suspected abuse and neglect.

Maternal and Child Health Education Initiatives

Nurse-Family Partnership®

The Nurse-Family Partnership will give Iowa members who are pregnant critical information to help facilitate a healthy pregnancy and a healthy baby as well as promote parenting skills and child safety. Through the Nurse-Family Partnership, public health nurses visit women who are low-income, pregnant for the first time, and at risk during their pregnancy and until the baby is two years old. The program offers additional support, education, and resources for the new mom and helps her transition to the community after having a baby. The nurses teach parenting and life skills and help new moms gain access to job training and education programs. The nurse becomes an essential resource for the woman by offering her knowledgeable guidance and resources to assist her in the community. Please see Attachment 8.7.1-1 for our Nurse Family Partnership brochure.

Taking Care of Baby and Me

This maternal-child health program provides quality, culturally competent case management services to pregnant members during the prenatal and postpartum periods and to their infants. Nurse case managers encourage pregnant women to optimize the outcome of their pregnancies, to prepare for the delivery and homecoming of infants, and to participate in their infants' care should an NICU stay be required. Taking Care of Baby and Me includes a full array of support tools that foster close communication between Amerigroup and the member and that promote a healthy pregnancy and baby:

- **Prenatal Incentive Packet** – Includes information and incentives to encourage pregnant members to attend pregnancy and postpartum office visits as well as *Planning a Healthy Pregnancy* booklet. Members may receive \$25 for attending prenatal appointments during the first trimester and \$50 for attending postpartum appointments between 21 and 56 days after delivery. Members continue to receive informational materials throughout the pregnancy and after delivery, including a booklet, *Caring for Your Newborn*. Please see Attachment 8.7.1-2 for a sample of our maternal and child health materials.
- **SafeLink Phones** – Qualified members will receive a free cell phone with up to 250 minutes per month, and as a Value-Added Service, 100 additional lifetime minutes. These additional minutes give case managers real-time access to members to encourage them to keep appointments and fill prescriptions. Numbers pre-programmed into the phone give pregnant women an easy way to contact their obstetricians, case manager, and other essential service providers. Pregnant members also receive a series of messages developed by our maternal health and pediatric specialists.
- **March of Dimes Centering Pregnancy®** - This multifaceted model of group care integrates three major components—health assessment, education, and support—that may help reduce the disparities that exist among women in Iowa who are childbearing (preterm birth affects Hispanic and African-American women at disproportionate rates). Preliminary studies of participants in this program show increased birth weight, decreased incidence of preterm birth, and greater knowledge about pregnancy. Amerigroup works closely with the March of Dimes to support this and other programs to improve the health of women and children.

Smoking Cessation during pregnancy – We coordinate with the CDC and the March of Dimes on educating women about the dangers of smoking during pregnancy. During the risk-screening survey, we ask every woman about her recent smoking history. Through the one-on-one relationship established by the case manager with every woman who is pregnant and high-risk, we urge members to take advantage of the smoking cessation benefits available. Emphasizing that pregnancy is an ideal time to stop smoking, all our case managers are trained in coaching techniques on how to approach the topic of quitting.

- **Community Baby Showers** – We honor mothers through health, education, and fun activities by hosting a Community Baby Shower. Community partners that participate in the baby showers provide educational information to the participants. Resources include Departments of Family and Children Services, WIC, health departments, pregnancy resource centers, Toys R Us, Babies R Us, Safe Kids, technical schools, dental offices, and many more. Participants also have access to health screenings such as blood pressure, vision, and glucose.
- **txt4baby** – We joined the text4baby program to promote this free text message information service. Once pregnant members enroll, they receive educational messages and helpful reminders tailored to particular weeks of their pregnancy and through their baby's first year.
- **Warm Health** – We use Warm Health to support our maternal outreach and education program. This tool educates pregnant women and new moms via interactive voice response, texts, and smart phone applications. Enrollees receive twice weekly messages during the prenatal phase and weekly postpartum and well-child messaging. Via two-way texting or live chat, members can get their questions answered and receive information about their pregnancy or infant care. Data validates that women who participate attended 30 percent more prenatal care visits and six percent more postpartum visits. Obstetric screenings increased 3.5 percent.

Preventive and General Health Education Initiatives

Healthy Families Program

A Value-Added Service we will offer in Iowa is our Healthy Families program. Healthy Families is a six-month program created to reduce childhood obesity and to help families adopt healthier lifestyles. The program connects mind and body, physical and behavioral health, parents and children to focus on healthy lifestyle choices through a family-centric approach, multiple levels of support via the family and community, availability of tangible materials for participants, and web-based resources for further information. Nurse coaches telephonically engage and educate families to make positive behavior change in healthy eating and activity. They also provide nutrition counseling, send educational material via mail, and refer members to online resources and local activities. Additionally, the program features fitness and nutritional education programs that range from interactive demonstrations of cooking and exercise to lectures showing how video games can help keep kids active.

We will also introduce Weight Management for specialized populations, leveraging components of Healthy Families, to support tailored health initiatives for members with physical, intellectual and/or developmental disabilities. We will coordinate with nurses serving these populations, ICF/IDs, adult day care centers, day habilitation programs, other providers and community-based organizations on health promotion, social and recreation programs, and nutrition education.

AmeriTips Promote Healthy Lifestyles

Amerigroup provides easy-to-read, appealing tip sheets on preventive healthcare and management of chronic disease conditions to our members at providers' offices, community organizations, and community events. AmeriTip topics include immunizations, creating a healthy lifestyle for your child, lead poisoning, diabetes, hypertension, and flu shots, just to name a few. Members may request AmeriTips on specific topics of interest from their assigned case managers or from Member Services as

well as through our member website portal. Attachment 8.7.1-3 Health Ed – Initiatives AmeriTip Flyers includes samples of AmeriTips flyers.

Farmers' Market Initiative

Amerigroup's farmers' market events highlight healthy eating in an educational and fun environment. The market provides fresh produce from local farmers, provides a community gathering place, strengthens the local economy by redirecting dollars to local growers and producers, and educates the community about the importance of healthy eating. During the event we provide free health screenings, children's activities, and tips about obesity, diabetes, wellness, and nutrition. In our Georgia health plan, over 3,000 people attended these events. As an adjunct, Amerigroup's Community Outreach Vehicle Farm Station provides healthy snacks and vegetables in the community and also provides information on healthy eating and lifestyles.

Smoking Cessation

Another Value-Added Service we will offer to our members is our Smoking Cessation program. The program consists of individual smoking cessation counseling, coaching to quit, cessation planning and support, and follow-up member outreach. The program's coaching sessions include assessment tools with personalized feedback, strategies for reducing harm and secondhand smoke exposure, information on setting a meaningful quit date, and preparation for high-risk situations.

Flu Campaign

Through seasonal flu campaigns, we outreach and educate members on the importance of receiving the flu shot, with specific focus on high-risk members. We include flu shot reminders in our AmeriTips flyers, member and provider newsletters, provider and member websites, and seasonal mailers and via telephonic notices to high-risk members who have not received their annual flu shot.

Txt4health Initiative

Given our adult members' busy lives, texting is a proven reliable and convenient method for health education. In 2014, we launched a texting program to deliver key messages to members participating in the SafeLink program. These members can opt in to receive text messages from us upon receiving their new SafeLink phones and may opt out at any time. Currently, over 185,000 of our affiliate health plans' members across the country participate, and only four percent opted out of receiving text messages. Our messages focus on member health and give individuals the date of their last physical exam as well as provide reminders for dental check-ups and mammograms. We also include health quizzes. Through May 2014, we delivered 1.4 million text messages. The program experienced a 91 percent retention rate for member participation. Records indicate 99 percent of all text messages are opened, and 80 percent of our users directly respond to the messages. Of members who responded, 72 percent stated that the texts helped them remember to go to the doctor. Members who received texts about certain programs/phone numbers (such as the Nurse HelpLine or coaching) were six times more likely to call the promoted phone number within 30 days of the text. Members who received texts reminding them to get a screening/physical were three times more likely than non-members to get a physical exam within 90 days of the text.

Member Engagement and Empowerment Initiatives

Interactive Member Website, including Health A to Z

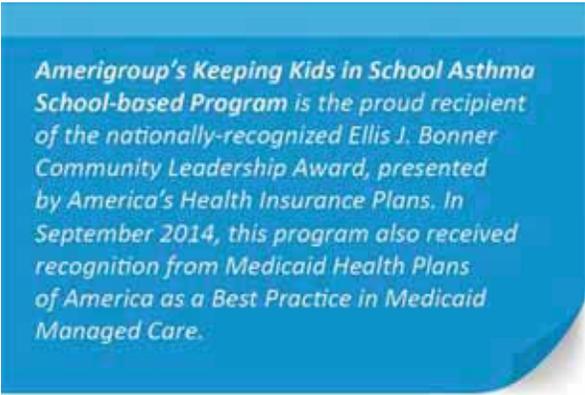

To promote member engagement and responsibility in their health status, we make our member website available 24/7, which features vital information, educational materials, and tools to empower members to make fully informed healthcare decisions. Members can access health-related topics and seasonal reminders (such as flu shots) as well as information related to specific symptoms and health issues. Section 8.6 fully describes the content and functionality of our member website. Through *Health A to Z* (powered by the Healthwise® KnowledgeBase), members can access a variety of tools and resources on

our website that include the breadth and depth of health content that people need to make the informed healthcare decisions. Members with chronic conditions such as serious and persistent mental illness, diabetes, congestive heart failure, chronic obstructive pulmonary disease, and many others can easily find information and decision tools about their conditions. There are more than 7,000 topics on health conditions, medical tests, procedures, medication, and everyday health and wellness issues.

Asthma Management Outreach and Education

Our award-winning Keeping Kids in School Asthma Education Program uses a one-of-a-kind approach to promote asthma awareness and control. Our health educators conduct sessions designed for children, parents, teachers, and adults at numerous places and times throughout the week. Sessions are also offered in various languages. The program consists of three components:

- **School-based Hands-on Asthma Education in the Classroom** – A 45-minute classroom presentation for children and teachers in grades three to six that engages students in role playing and demonstrates asthma management tools like inhalers and spacers.
- **Parents/Adults Asthma Workshops** – Parents and adults participate in a one-hour session taught at schools, health centers, social service agencies, and community- and faith-based organizations to learn about asthma causes and symptoms, triggers and how to control them, and how to avoid missing school or having to go to the emergency room (ER) or hospital.
- **Annual Asthma School Poster Contest and Awards Ceremony** –Public schools can take part in the annual asthma poster contest with winners recognized at an awards ceremony.

Amerigroup's Keeping Kids in School Asthma School-based Program is the proud recipient of the nationally-recognized Ellis J. Bonner Community Leadership Award, presented by America's Health Insurance Plans. In September 2014, this program also received recognition from Medicaid Health Plans of America as a Best Practice in Medicaid Managed Care.

IA_87.1_COE_32

In addition to this program, we also use dedicated outreach employees to contact parents/guardians of children who have had ER visits with asthma issues. They work with parents/guardians to gauge their comfort level in dealing with asthma, make sure the child has appropriate medication, provide information on Nurse HelpLine, and provide a referral to an Amerigroup case manager if necessary. Members will also receive "My Asthma Action Plan," a guide to understanding the severity of different asthma symptoms and when to contact the doctor or go to the ER. We also provide AmeriTip handouts to educate members on asthma triggers and how to avoid them. During the spring, we mail a *Spring Into Asthma Care* flyer to members reminding them to know their triggers, take their medication, and visit their doctor. Please refer to Attachment 8.7.1-4 for a copy of our member education material on asthma tips and triggers.

Additionally, another innovative solution we will provide for our high-risk members are inhaler sensors to track adherence to asthma controller medications. The inhaler sensors will help case managers identify members so they can provide outreach to help members avoid symptom escalation. We will focus on members with acute symptoms resulting in ER visits or inpatient admissions for asthma-related events.

Appropriate Use of Emergency Services Initiatives ***Access to 24/7 Education***

Our Nurse HelpLine, part of our Amerigroup On Call Program, is accessible 24/7 to link members to physical and behavioral health resources who will answer their questions and locate the most appropriate

point of care to address their needs. This program helps minimize unnecessary use of ERs by providing members access to information and resources, such as:

- **Nurse HelpLine.** Nurse HelpLine callers can speak to nurses with physician oversight through Amerigroup On Call. Amerigroup On Call offers translation services for over 200 languages and guides members on appropriate next steps for non-emergent medical conditions.
- **Urgent Care Services Network.** Amerigroup On Call can connect members to a comprehensive urgent care services network—including PCPs who have extended hours, urgent care centers, and retail clinics—all of which broaden access to care and provide ER alternatives, especially after hours.
- **Emergency Room Care.** Amerigroup On Call nurses and physicians educate and direct members to nearby ERs when those services can provide the most appropriate treatment.

LiveHealth Online Offers Alternatives to ER Visits

LiveHealth Online will provide members a convenient alternative to visiting the ER. We will offer online physician visits, when appropriate, given members' conditions and ability to access secure video streaming online services. As we implement this option for Iowa members under the statewide Contract, we will fully comply with all State statutes, regulations, and rules on virtual healthcare services.

Emergency Room Education in Action

Amerigroup mails postcards to members who live in areas with urgent care clinics, where providers have walk-in hours or extended office hours, or when a new PCP becomes available, informing them of alternatives to the ER. We focus these mailings on areas with high ER utilization and send to all members when we identify a new provider with extended office hours.

Community Outreach and Education Initiatives

Community-Based Partnerships for Health Education

Our affiliate health plans in 19 states have forged strong bonds with faith- and community-based organizations that educate, advocate, and serve our members. Our goal is to increase awareness of our programs, promote healthy behaviors through health education, and build trust within the communities we serve. We are meeting with key Iowa organizations to establish relationships, such as:

- Community Health Charities of Iowa
- The Arc of Iowa
- Vera French Foundation
- Healthy Birth Day
- Rick's House of Hope
- Child and Family Policy Center
- March of Dimes Iowa
- Caregivers Association
- Community Action Association
- Alzheimer's Association
- Boys and Girls Clubs of Central Iowa
- Johnson County Case Management
- Child Advocacy Board
- Public Health Association
- Homestead Center for Autism
- Coalition for Family and Children's Services
- Alliance in Home Care
- Association of Community Provider

As an example, our Georgia health plan establishes partnerships with approximately 1,400 groups each quarter to sponsor events, conduct health education meetings, and promote wellness and preventive care. These groups include government agencies, faith- and community-based organizations, federally qualified health centers, schools, youth associations, chambers of commerce, employers, vendors, and Boys and Girls Clubs. In Georgia, we sponsor or participate in more than 5,100 events annually, ranging from birthday parties, family nights, and healthcare screenings, Farmers' Markets focusing on healthy eating, and back-to-school events where we provide children with school supplies and a variety of other events designed to engage and educate members.

Amerigroup designs events to be fun and informative. We highlight our healthy message in a variety of ways, including our superhero Captain Amerigroup mascot making appearances at schools, health fairs, and other community events. Captain Amerigroup is a “crusader for health,” who helps families learn how to be healthy and safe. He is accompanied by an Amerigroup Health Promotion employee or marketing officer who delivers our health-related messages about exercise, healthy eating, regular checkups, immunizations, and a variety of other topics. He also distributes health education collaterals and giveaways including sunscreen, healthy snacks, flashlights, Frisbees, and toothbrushes.

Clinic Days Promote Education

Our affiliate health plans partner with physicians, health departments, and other primary care delivery sites to hold clinic days where members can obtain timely preventive services, screenings, and diagnostic tests to close identified gaps in care. In partnership with Network Providers, we will host Clinic Days for Iowa members who have not received immunizations, other preventive services, or postpartum care or who are due for diabetes or other chronic condition care. During a Clinic Day, Amerigroup's Health Promotions Team will be available to provide health-related information and offer healthy snacks. Clinic Days are an effective way to help make sure members receive necessary preventive services and screenings to maintain health or avoid exacerbation of chronic conditions.

Education and Outreach for Children and Their Families

Head Start programs are proven to positively affect immunization rates and other preventive and screening-related measures, and a high percentage of children enrolled in Head Start programs are also enrolled in Medicaid. To reach young children and their families, we will work closely with Head Start programs in Iowa, providing financial assistance to the programs and education and outreach to parents. We will also sponsor health promotion activities for Head Start programs, affording an opportunity to connect with young children and their parents to educate families and promote wellness compliance. To reach our Iowa school-aged members and their parents, we will sponsor back-to-school events. Our affiliates in other states have seen great success and participation with distributing backpacks filled with school supplies and member education materials, including information about the EPSDT periodicity schedule and healthy start checkups.

Prevention and Treatment of Substance Use Disorder

Screening, Brief Intervention, Referrals, and Treatment (SBIRT) is a comprehensive, integrated, public health approach to the delivery of early intervention and screening for individuals with risky substance use and referral to treatment for those members who meet criteria for a substance use disorder. In Iowa, we will promote use of SBIRT with our adolescent population. We will begin working closely with our larger at-risk provider groups to implement SBIRT, expanding to other pediatric practices as the program strengthens. SBIRT is demonstrated to reduce both alcohol abuse and healthcare treatment for the abuse. We are committed to increasing the use of this covered service through education and provider partnerships.

To further promote prevention and treatment of substance use disorders, we provide members with our “*I want to stop substance use*” flyer—a six-question quiz to see what members know about stopping substance use, other resource contact information, and a contact for Amerigroup Member Services. Please refer to Attachment 8.7.1-7 for a copy of the Initiatives Ameritip Flyer on substance abuse.

Education for Members and Caregivers about Suspected Abuse and Neglect

Amerigroup educates members and caregivers about suspected abuse and neglect and evaluates members and their environment to determine their current needs and confirm the appropriate delivery of services.

Our health risk assessment informs the care manager of specific health and/or safety concerns that may require attention. If any results imply suspected abuse or neglect, the care manager will arrange immediate services for the member and report the issue to the appropriate authorities. One of our assessments, *Potential Abuse and Neglect Assessment*, focuses on the member's home and safety of their environment. This assessment identifies potential issues that the case manager uses to educate members to signs and potential triggers in their environment that may be harmful, such as neglect by a family caregiver or abuse of the member. When appropriate, we make available a copy of our educational flyers that provide valuable information to assist members with understating the different types of abuse and immediate access to the telephone number for protective services.

Question 8.7, #2

2. Describe how you would propose to participate and interface with the Healthiest State Initiative.

Partnering with Healthiest State Initiative

Through its Healthiest State Initiative, Iowa has committed to improve from Number Ten on the Gallup-Healthways Well-Being Index to Number One by 2016. We are excited to collaborate with the State on this bold effort and will appoint a local Amerigroup team that includes key members from our clinical, network, marketing and outreach, and innovation departments, led by a senior plan executive. The team will meet biweekly, or more frequently as needed, to develop strategies for participating and interfacing with the Healthiest State Initiative.

Our team will collaborate with key constituents, community organizations, providers, designated State workgroups, and others to support, participate, and cross-promote Healthiest State Initiative events, like the annual Healthiest State Walk, to engage our members, local staff, and the community. We also plan to participate in Healthiest State Conferences and will send quality leads and encourage them to maximize the opportunity to learn, network, and share best practices. Leveraging our commitment to wellness and prevention across our portfolio of state partnerships, we will build on the most relevant programs to target key performance gaps. Specifically, we will implement programs that target each of the five key goals of the Healthiest State Initiative. To support these goals, we have identified specific programs planned for deployment in Iowa—many of which have been proven effective by our affiliate health plans in other states. The programs identified thus far are detailed below, according to the goal they support.

Goal 1: Decreasing the Number of Iowans Who Smoke

Amerigroup is committed to helping Iowa reduce high smoking rates and our Smoking Cessation Value-Added Service provides telephonic coaching to engage and empower members to make positive behavior changes to reduce and ultimately stop smoking. Our smoking cessation benefit is specifically structured to enhance Iowa's QuitNow Program by offering additional counseling services for members. Together with coverage of smoking cessation medications on the Iowa Medicaid formulary, these programs will help establish the Iowa Initiative as a best practice for the smoking cessation model. In 2014, 31.75 percent of our affiliate health plans' members receiving coaching and medication achieved the six-month quit metric. In addition to coaching and medication, we provide general smoking cessation education. For example, our Member Services call center's on-hold messaging provides health tips related to smoking cessation and prevention.

Goal 2: Increasing Consumption of Fruits and Vegetables

Another Value-Added Service is our Healthy Families Program, where we provide education and coaching on nutrition and fitness. The program helps parents and their children focus on adopting healthy lifestyles through a family-centric approach with multiple levels of support and education materials. Our Healthy Families Program has been highlighted by Medicaid Health Plans of America Diabetes Care Best Practice Compendium. It is currently deployed in five affiliate health plans in Kansas, Florida, Washington, Louisiana, and Kentucky with the following positive results:

- 57 percent of members increased fruit/vegetable intake
- 58 percent increased H2O consumption
- 42 percent increased activity level
- 30 percent decreased screen time

Another program that focuses on helping members make healthier dietary decisions is our Diabetes Prevention Program. This nationally recognized, 16-week, community-based program is conducted by trained lifestyle coaches to teach people with pre-diabetes how to modify their eating and physical activity habits and to sustain those changes overtime. We will also leverage our experience participating in other state diabetes performance improvement initiatives to develop a best-in-class approach tailored to the Iowa population. For example, our New York health plan is participating in a two-year performance improvement project aimed at diabetes prevention and control with the Department of Health. The goal of the program is to help members with high risk of developing diabetes reduce their weight through a healthy, low-calorie, low-fat diet and by engaging in at least 150 minutes per week of moderate physical activity.

Goal 3: Increasing the Number of Iowans Who Have Visited the Dentist in the Last Year

We successfully work with dental subcontractors across our affiliate plans and will leverage best practices from other states to foster positive working relationships with dental vendors. We will use established protocols to help coordinate with the incumbent dental vendor and the State to optimize oral health and the number of members who visit the dentist. This includes regular communication to identify opportunities for improvement and to share treatment information as well as prevention via member education on decreasing/preventing dental caries and stressing the importance of dental preventive care. We will also coordinate care, including cases where members require a medical setting for a dental procedure, and with other medical, behavioral, or dental providers where needed (for example: cases where a member may be at risk for seizures or have co-existing health issues). Additionally, through Text4Health text messages, we will outreach and remind members to visit the dentist and provide helpful information to schedule an appointment.

Goal 4: Increasing the Number of Iowans Who are Learning or Doing Something Interesting Daily

We have a number of "on-hold" messages that provide health and wellness tips to members. An example on-hold message is included in new member household welcome calls to encourage members to socialize and participate in an interesting activity: *"Many of our members enjoy the fun health tips we sometimes share. So, we'd love to share a quick one with you right now. Did you know that laughing for 15 minutes a day can give your immune system a boost, help decrease stress, and just make you feel better? So invite your friends over for a night of karaoke or a game of charades. Bring on the laughter and let the good health flow!"*

Goal 5: Increasing Number of Iowans Who Feel Their Boss Treats Them Like a Partner at Work

We believe in leading by example: We promote collaboration among all employees, regardless of position. We will support the **Blue Zone** project to help Iowans “live better, longer” by promoting infrastructure and policy to “make the healthy choice the easy choice.” We have policies already in place that promote health and well-being. To drive Blue Zone achievement in Iowa, we will:

- **Get certified** - Amerigroup Iowa health plan will become a Blue Zone Certified Workplace.
- **Support provider certification** – We will include this commitment in our PCP Quality and Access to Care Provider Incentive Program to align with our operating model.
- **Build on experience** – We work closely with Healthways and others on Blue Zone–like programs in several other states, and we will expand that relationship to Iowa.

We are a leader in workplace health and prevention as well as a socially responsible employer. We believe there is no better means of communicating commitment and generating momentum than setting the standard in how we operate and leading by example. We support the 10 characteristics of a Socially Responsible Employer per the Healthiest State Initiative and will be proud to build on our established policies and successful workplace model in Iowa:

- 1) **Sustain a work environment founded on dignity and respect for all employees** – Our town halls, informal workgroups (huddles), committees, subcommittees, and other routine meetings make sure that every functional area has a regularly scheduled time to communicate with other related areas. Our Associate Resource Groups help develop a deeper understanding of diversity and cultural competence in the workplace and in the marketplace. They promote opportunities for leadership development and growth among all employees and act as internal consultants by providing cultural insight on initiatives for different segments of our multicultural marketplace.
- 2) **Make employees feel their jobs are important** – Our annual employee satisfaction survey helps us focus our approach to continually improving the experience of our employees. Over 80 percent of employees in our 2014 survey indicated that they would recommend our organization to their informal networks while reporting high levels of engagement in their work.
- 3) **Cultivate the full potential of all employees** – We know that unlocking our employees’ full potential is critical to driving performance and engaging employees in becoming high performers. We have several programs to acknowledge employees for longevity, professional growth, and exemplary job performance. This includes monetary awards for first-time completion of approved certifications relevant to a profession, job-related licensure reimbursement, and education reimbursement toward the completion of a degree that will assist employees in their current role.
- 4) **Encourage individual pursuit of work/life balance** – We understand that work-life balance is vitally important to our employees and encourages engagement, productivity, and accountability, which in turn drive company success. We offer employees programs that include flexible work schedules, work-at-home options, job sharing, part-time employment, and phased retirement.
- 5) **Enable the well-being of individuals and their families through compensation, benefits, policies, and practices** – We offer employees competitive compensation and rewards for achievement. We structure base pay at competitive levels, while also sharing our financial success through employee incentives. All of our employees are eligible to receive an annual or quarterly bonus, depending on the type of job they perform. We also offer a competitive benefits package, which includes a comprehensive selection of health, dental, and vision benefit options.
- 6) **Develop great leaders at all levels that excel at managing people as well as results** – We fully support ongoing learning and development for our employees to grow their careers. We offer an extensive library of online learning in over a dozen skill areas. In addition, we sponsor several

- year-round leadership development forums, which are a blend of classroom and online learning and include the assignment of a mentor to each program participant.
- 7) **Appreciate and recognize the contributions of people who work there** – We have several means of recognizing contributions. For example, our *Values in Action Program* rewards employees on the spot for specific accomplishments that exceed expectations. The program is designed to recognize high performers who exemplify Amerigroup's values and who contribute to the overall success of our company. We also engage in *Informal Recognition activities*, which reward an employee's contribution toward a department goal or objective. Rewards may be gift certificate/card; cash; occasional tickets for such events as movies, sporting events, and amusement parks; occasional team parties; and other appropriate gifts or outings.
 - 8) **Establish and communicate standards for ethical behavior and integrity** – Our management team builds training into the annual development plan for each employee. These trainings are at various levels from leadership training and career development to current job enhancement skills. Annual required training includes cultural sensitivity and diversity training, compliance, ethics, and HIPAA and privacy training.
 - 9) **Get involved in community endeavors and/or public policy** – We strongly encourage participation in volunteer and community events. In 2014, nationally, our organization's employees completed 35,375 volunteer hours in the communities that we serve. We also believe in giving back to those communities. Through our *Associate Giving Program*, employees have the opportunity year-round to give back by contributing to nonprofit organizations focused on health and human services in our communities. The Anthem Foundation matches employees' contributions 50 cents for every dollar. In 2014, nationally our associates raised \$3 million with \$1.5 million matched by the Anthem Foundation. In addition, 90 percent of giving is for healthcare-related causes in the communities served by Amerigroup and our Parent Company, Anthem. Since 2000, we have collectively raised over \$160 million to such causes, including active lifestyles, cancer prevention, diabetes prevention, and maternal practices. We strive to find ways not only to help those in the communities we serve but our own employees as well. Through the *Anthem Cares Fund*, employees can help their coworkers who experience a natural disaster or personal hardship. The Anthem Foundation matches their contributions 50 cents for every dollar.
 - 10) **Consider the human toll when making business decisions** – Our employees are at the heart of what we do for our members. In many of our organizational units, we cross-train our employees to handle a variety of tasks and responsibilities, which allows us to redeploy our resources to other areas of the business, when necessary, to avoid job reductions. In addition, our leaders are expected to motivate, develop, and retain employees. Every management-level employee has a "people leadership" goal, which is weighted to at least ten percent of his or her overall annual performance goal metrics.

Cost and Quality Information (8.8)

Question 8.8, #1

1. Describe proposed strategies to provide price and quality transparency to members.

Providing Quality Transparency

Amerigroup Iowa (Amerigroup) and our affiliate health plans have extensive experience and leadership in implementing and providing innovative strategies to provide price and quality transparency for our members. These strategies support the migration from volume- to value-based delivery systems – working to improve the quality of care and health outcomes while decreasing the overall cost of care. For example, in our affiliates' commercial markets, we offer quality comparisons of our healthcare providers through a secure member website. Through the member website, our Provider Finder is linked to a secure tool, which provides quality comparisons of our healthcare providers, as well as the National Committee for Quality Assurance (NCQA) Health Grades, and other provider rating sites.

To support DHS's objective of providing quality and price transparency to members, we will leverage our experience and propose the following strategy.

- Establishing a workgroup across other health plans in the State of Iowa and with DHS to establish a consistent way to measure provider quality. Amerigroup is willing to help lead these workgroups
- Developing a common definition of quality and using common tools will provide a consistent measurement approach. Creating an equitable measurement process across all health plans will allow providers to be measured on an equal basis and provide consistent quality information members need to help facilitate more responsible use of healthcare services and inform their healthcare decision-making.

We expect that the 3M Value Index Scoresm (VIS) will be utilized to measure quality for high volume PCPs and ACOs, and are fully supportive of this concept. However, we recommend that the above workgroup be tasked to develop a diverse view of provider quality. This would include developing measurements of quality for independent LTSS providers, behavioral health providers, OB/GYNs as well as other high volume specialists, independent hospitals as well as PCPs with lower volumes of membership. ***We will use organization-wide expertise to developed provider incentive programs for each of these types of providers that include quality measurements. We can take a leadership role on this workgroup regarding the development of diverse provider quality measurement.***

Our affiliates have experience bringing other payers together from other initiatives such as the CMMI Comprehensive Primary Care Initiative. Through our affiliate plans in New Jersey, Colorado, Ohio, and New York, we participated in the CMMI Comprehensive Primary Care Initiative, which brought payers together to agree to a set of common quality measures.

Providing Cost Transparency

Providing cost and quality information gives members the opportunity to make more informed choices for their healthcare services, which in turn has the potential to reduce costs and improve member satisfaction and quality. It also promotes members taking responsibility for their healthcare. Our Iowa member portal will provide quick access to comparative cost information for members. We will base initial development for the cost comparisons on the Iowa Medicaid fee schedule, including region, provider type, and setting. The portal will provide members access to average costs for common procedures including comparisons such as PCP visits versus emergency room visits, free-standing radiology setting high-technology diagnostic exams versus radiology diagnostic exams in a hospital

setting, and outpatient surgery in an ambulatory surgery center versus outpatient surgery in a hospital setting.

In addition, we reflect what the plan paid for delivered services in the member Explanation of Benefits (EOB), which is made available to members based on their preference, either via paper or web-based portal. Providing access to this information further facilitates members' ability to take responsibility and make informed choices for their healthcare services.

Explanation of Benefits (8.8.1)

Question 8.8, #2

2. Provide sample EOBs as an exhibit or attachment.

Member Explanation of Benefits

Explanation of Benefits (EOBs) provides valuable member information. EOBs give members a record of services received, inform members of any obligations they have, notify members about services not covered, and ask members for verification of services to prevent fraud. Amerigroup will provide EOBs within 45 days of the payment or denial of claims to:

- **A statistically valid sample of members each month.** This includes members in the Iowa Health and Wellness Plan (IHWP) and hawk-i. These EOBs will be sent to verify services and help identify fraud. We tell members to confirm that they received the services and contact us immediately if there is a discrepancy.
- **All members who received services that are not covered or will otherwise not be paid.** We tell members about denied claims because we want them to have accurate information if a provider attempts to bill them. We explain that members may appeal denial decisions.
- **All members who may be responsible for coinsurance for nursing facility services or home- and community-based services.** We explain the services that require coinsurance and how members can pay for the coinsurance.

EOBs contain all required elements as specified in 42 CFR 433.116(e) and (f). We will include information about the delivery of EOBs in our member handbook and on our member website. We will ask members their preferred choice of receiving EOBs and provide EOBs to members based on their preference either via paper or secure web-based portal. To maintain confidentiality, EOBs will not include family planning confidential services. We will track and monitor the delivery of EOBs and quickly respond to resolve any issue if one should arise.

Attachment 8.8.1-1 Member Explanation of Benefits is a sample member EOB that Iowa program members will receive.

Quality Information (8.8.2)

Question 8.8, #3

3. Describe processes for making provider quality information available to members.

Members Receive Provider Quality Information

Amerigroup will make provider quality information available to our Iowa members to facilitate informed healthcare choices and more responsible use of healthcare services. We will capture quality information on our Network Providers, and members will have the ability to view providers' quality and select the

provider that best meets their preferences and physical health, behavioral health and/or social service needs in the fashion described below. This type of transparency promotes both member responsibility and healthcare quality improvement.

We believe there is great value in using a consistent methodology across payers to measure providers' quality and value across the State of Iowa, and we fully support the Iowa State Innovation Model (SIM) concept of using VIS, which shows how well a primary care physician cares for patients, irrespective of a patient's health status. This approach provides opportunity for providers to work toward the same goals and focus on the same measurements and allows for the delivery of consistent quality information to members. We have been in discussions with 3M to explore the ways in which we can leverage and use their VIS product. As described more fully in our response to 10.3.2 Provider Incentive Programs, we propose to use the VIS generated through 3M's software product, which is included in Iowa's SIM, to establish quality scores for our ACO Shared Savings/Shared Risk program.

Furthermore, we intend to work collaboratively with DHS and across all contractors to devise a consistent system for displaying relative provider VIS performance to our members for the ACO providers. One potential example of a solution is to develop a five-star rating system, driven by VIS performance, and to display the star rating of providers who achieve three or more stars in our online provider directory, or via other means, depending on the member's preference of receiving contractor communications. We will update ratings at least annually. As a part of making this information available to members, we will identify and communicate any limitations of the data including communication in the online provider directory.

Advance Directive Information (8.9)

Respecting Members End-of-Life Decisions

Amerigroup Iowa (Amerigroup) understands the importance of supporting members to make informed end of life decisions that reflect their personal and cultural values, preferences and beliefs. End of life planning guides members discussions about care options that may optimize the quality of the member's life while he or she is living with a life-threatening illness, is in the final stages of a terminal illness, or as a part of health decline due to aging. We will support members and when appropriate their family or surrogate, to develop plans in accordance with state regulations.

Policies and Procedures (8.9.1)

Advance Directive Policies and Procedures

Amerigroup will implement and maintain written policies and procedures concerning advance directives. These policies and procedures will meet the requirements set forth in Iowa State law and Subpart I of 42 CFR 489, including:

- Informing members about advance directives and their rights
- Acknowledging that advance directive provisions will not be construed to prohibit the application of Iowa law, which allows for an objection on the basis of conscience for any provider or agent of such provider
- Informing members with a clear and precise statement of limitation if we cannot implement an advance directive on the basis of conscience
- Clarifying any differences between institution-wide conscience objections and those that may be raised by individual physicians
- Identifying the state legal authority permitting objection
- Describing the range of medical conditions or procedures affected by the conscience objection

- Outlining how Amerigroup or the provider, as applicable, will notify members of the objection and advise them of their right to file a complaint with the state survey and certification agency
- Documenting whether or not members have advance directives
- Declaring that Amerigroup places no conditions on care provided to members and does not discriminate against members, based on whether or not they execute advance directives
- Informing members of their rights to file complaints concerning advance directive requirements with the state survey and certification agency
- Training Amerigroup employees on advance directives
- Educating and documenting the education of Iowa communities about advance directives, defining what constitutes an advance directive, emphasizing that an advance directive is designed to enhance member, family, or surrogate control over medical treatment decisions through end of life planning and describing applicable Iowa laws
- Furnishing advance directive information to members in various settings:
 - Hospital at time of inpatient admission
 - Skilled nursing facility at time of residential admission
 - Home health agency and personal care services at time of first home visit before care is provided
 - Hospice at initial receipt of hospice care
- Stating that Amerigroup will not provide care that conflicts with members' advance directives
- Acknowledging that Amerigroup and its network providers are not required to implement an advance directive in matters of conscience, State law permitting
- Working with members' families on advance directives if members are incapacitated

Member Notification (8.9.2)

Advance Directive Notification

Members receive information about advance directives in the member handbook they receive upon enrollment. This information:

- Explains what an advance directive is
- Informs members if they are incapacitated at the time of initial enrollment and are unable to receive information or articulate whether or not they have executed advance directives, the information may be given to their family members or surrogates, and that once they are able to receive the information, they will be given the information directly
- Outlines members' rights to file complaints with the state survey and certification agency about noncompliance with advance directive requirements, and how to file such complaints
- Asks members to discuss advance directives with their PCPs
- Provides a clear and precise statement of limitation if we cannot implement an advance directive on the basis of conscience. The statement will:
 - Clarify any differences between institution-wide conscience objections and those that may be raised by individual physicians
 - Identify the state legal authority permitting objection
 - Describe the range of medical conditions or procedures affected by the conscience objection
 - Outline how Amerigroup or the provider, as applicable, will notify members of the objection and advise them of their right to file a complaint with the state survey and certification agency

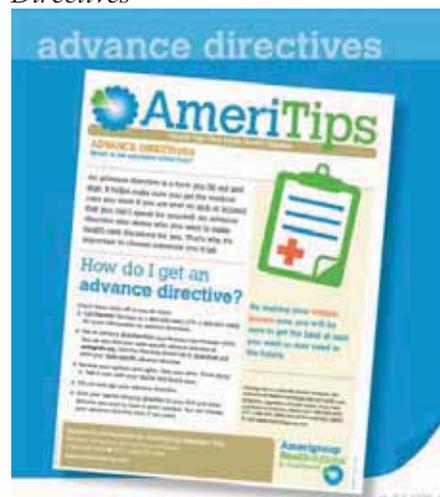

If Iowa law regarding advance directives changes, we will inform members as soon as possible and no later than 90 days from the effective date of the change.

Member Education

Members have access to advance directive information through the following:

- Member website—Website that provides ready access to members informing them of their options and importance of completing an advance directive.
- Member Education Materials, such as an AmeriTip—This is a fact sheet that explains what an advance directive is and the value of having one and instructs members to contact their PCP to obtain the appropriate forms. The Advance Directive AmeriTip shown in Figure 8.9-1 may also be mailed to members to reinforce verbal education provided by an Amerigroup employee as needed. We will make these materials available through provider offices, health fairs, and other community events to educate the community about advance directives.

Figure 8.9-1. Engaging Materials to Educate the Community about Advance Directives

Upon initial enrollment or the start of care, we will confirm if the member has executed an advance directive; in the event that a member is considered incapacitated and/or is unable to receive information (due to his or her medical condition), we will provide the member’s family or legal guardian advance directive information in accordance with Iowa State law. If the member returns to a status in which he or she can receive information about and discuss advance directives, the member’s Case Manager will follow up provide information and discuss options. We will have follow-up procedures in place to work with the member and family, as necessary, to inform a member who is no longer considered incapacitated about his or her advance directive rights at the appropriate time.

Employee Education

Employees interfacing with members receive advance directive training at the time of initial employment, annually thereafter, and upon changes to relevant laws. Staff may assist members if they have questions about advance directives and will advise members that their PCP can also be a resource for this information when requested by the member. Our Member Services Representatives may access a knowledge repository that includes information on our advance directive processes and procedures. We provide all of this education in the interest of serving our members most effectively and respecting members’ decisions regarding their end-of-life care.

We will evaluate and update advance directive policies and procedures as needed to make sure internal processes remain aligned with Iowa law, and we do not and will not discriminate or make treatment conditional based on whether or not a member has executed an advance directive. We instruct employees that they may not serve as a witness to an advance directive or as a member’s authorized agent or authorized representative, and no employee may provide any legal advice to members or providers. We will advise members to contact the local Iowa Ombudsman’s Office for further guidance and assistance with these services.

Provider Education

As part of the provider orientation process, we educate PCPs about the importance of advance directives and recommend they ask members about their choices at the first appointment. If the member has an executed advance directive, the PCP is expected to obtain the signed directive and include it as part of the member's medical record.

If an advance directive has not been executed, we request that provider's office staff answer member questions about advance directives and assist the member with completing the appropriate advance directive documents when requested by the member. The provider and office staff may also refer to the Amerigroup Provider Manual, which further explains advance directives. We instruct providers during training and through provider relations communication to inform members of their options and stress to members the importance of having an advance directive.

We require PCPs to document all activities related to advance directives in the member's medical record and supply this information regarding the end-of-life process directly to the member. We will encourage providers who are using Electronic Health Records (EHRs) in their practice to record all pertinent advance directive information in a member's EHR. We will require all network facilities to respect all lawfully executed advance directives that meet the requirements of federal and state law.

Member Rights (8.10)

Question 8.10, #1

1. Describe your process for ensuring member rights as described in Section 8.10.

Amerigroup Iowa (Amerigroup) respects and works to protect members' rights. We believe members want to understand, engage in, and take responsibility for health care that will promote good health, wellness, and quality of life. In accordance with 42 CFR 438.100, we will implement a multifaceted approach to notifying members of their rights and responsibilities when receiving care and/or services. This notification will include assurance that exercising these rights will not result in retaliation or discrimination from our employees, subcontractors, or network providers. We will also inform members on how to notify us if and when they believe that their rights have been violated. We use multiple avenues to notify members of their rights including:

- The member handbook posted on the member website and included in each member Welcome Packet
- During welcome activities and outgoing/incoming calls as appropriate to the reason for the call
- Periodic notices in the member newsletter directing members to the member handbook, the member website, or to the Member Services Department to obtain a copy of their member rights
- We also notify our employees, providers, subcontractors, and vendors of member rights with clear expectation that they adhere to and protect member rights at all times:
 - **Employees:** We address member rights during orientation for all employees and during additional program and role-based trainings for Members Services and Utilization/Care Management staff.
 - **Providers, subcontractors and vendors:** We include notification of member rights and language requiring subcontractors, vendors, and providers to protect member rights in our contracts. We also address member rights and responsibilities during subcontractor, provider, and vendor orientation activities.
 - **Stakeholders:** We will work with the Amerigroup Iowa Stakeholder Advisory Board and solicit meaningful input and advice on ways to continuously improve our processes to inform members of and protect their rights.

Additionally, we will develop collaborative relationships and cross-training opportunities with a wide range of stakeholders to make sure that our communication of member rights is tailored for the many different member audiences in Iowa including individuals with intellectual and developmental disabilities, individuals with brain injuries, people with serious mental illness or chronic conditions or children, adolescents and young adults in foster care, and all members who may find the information difficult to understand or navigate. We will include consumer advocacy and protection groups to cross train and address issues regarding communications and understanding member rights and benefits.

Amerigroup will include member rights notification along with other member communications materials for review and approval prior to dissemination. We will notify members, caregivers, subcontractors, and others of any significant changes to member rights. Our policies and processes will assure protection of all member rights as detailed below.

Receipt of Information (8.10.1)

In accordance with the SOW Section 8.10.1 and 42 CFR 438.10, Amerigroup will implement policies and procedures that assure timely communication with members and potential members (see Section 8. 2 for a full description of that process) in appropriate language and via formats that are easily understood.

Dignity and Privacy (8.10.2)

Our written policies and procedures require employees, providers, and subcontractors to treat members with dignity and respect. These documents make it clear that any inappropriate disclosure or breach of private information is unacceptable and a violation of HIPAA regulations, and thus, treated very seriously. Our Member Rights and Responsibilities Policy will clearly articulate that members have the right to be treated with dignity and respect for their privacy.

Information on Available Treatment Options (8.10.3)

Amerigroup has written policies and procedures that require PCPs and other treating providers to provide each member with information on all available treatment options. Provider discussions on treatment options will not be limited based on the cost of an option. Amerigroup encourages and supports members in gathering information, making good decisions, and taking responsibility for their health care. Member services representatives are available to help members identify relevant sources of treatment information, such as Health A to Z, find specialty providers, and answer questions about referrals and authorizations. Our 24/7 Nurse HelpLine staff, community-based case managers, and care coordinators are available to answer member's health care-related questions within the scope of their licenses. Community-based case managers and care coordinators coordinate treatment options with members enrolled in case management, their families or caregivers, and treating providers providing the level of support needed to make informed health care decisions.

Participation in Decisions (8.10.4)

Our approach to community-based case management and care coordination supports the right to self-determination through partnership and collaboration with members, families and legal representatives (if applicable). Planning processes are member and family driven to facilitate holistic care, treatment and/or service plans that include medical, behavioral health, social and educational support needs to maximize health, well-being, and independence through informed decision-making. Members are supported self-direct services and to select providers they believe to be qualified to meet their care and/or service needs and you match their values and preferences. Service plans as well as other care/treatment plans as a part of the their system of care are monitored, assessed and evaluated to be responsive to changes in member preferences, support needs and personal goals.

We also make it clear to the members that they have the right to refuse care, treatment and services. Should a member decline medical or behavioral care or treatment and/or long term services and supports, Amerigroup employees and providers are required to explain the consequences in a non-coercive manner and reassure the member that exercising this right will not result in discrimination.

Freedom from Restraint or Seclusion (8.10.5)

Our member handbook addresses a member's right to receive care and services without the use of restraints and/or seclusion. Our written policies and procedures strictly prohibit employees, providers, and affiliates from using restraints and/or seclusion unless there is a threat of imminent physical danger to the member or others. We clearly state that each member is guaranteed the right to be free from any form of restraint or seclusion used as a means of coercion, discipline, convenience, or retaliation. When we become aware of, or receive notification of, a member restraint or seclusion at a facility or by a community-based provider, we immediately launch an investigation and work with that facility or provider to determine why such action was taken, if federal regulations were violated. We will institute training and corrective actions to make sure best practices are in place are used eliminated the restraints or seclusion. Amerigroup and its contracted providers, subcontractors, and vendors will comply with the Iowa critical incidents reporting requirements, including categorization of incidents as minor or major, and as warranted, requiring and monitoring corrective actions in accordance with those requirements. We will also comply with any additional mandated reporting to protective service agencies.

Copy of Medical Records (8.10.6)

Amerigroup policies and procedures require our employees, providers, and subcontractors and vendors to provide members with copies of their medical records within 14 calendar days of request at no charge. Our member handbook describes member's right to receive a copy of their medical record, and request amendments or corrections. Notification regarding this requirement is included in our contractual agreements with providers and subcontractor.

Treatment Setting (8.10.7)

The member handbook informs members of the right to receive services in the least restrictive setting. Amerigroup's employees, subcontractors, and providers must comply with the requirement when considering treatment options for a member's health care needs and facilitate treatment in the least restrictive setting that will result in the best possible outcome for the member.

Community Participation (8.10.8)

Our person-centered approach to service planning focuses on working in partnership with members to create a service plan that reflects their strengths, preferences, supports needs, and personal goals across physical health, behavioral health and social services systems of care to optimize independence, well-being and full participation in their community. We work with our members, providers, advocacy groups and community organizations to enhance success at school, increase opportunities for meaningful community involvement, increase competitive employment and support self-determination.

Health Care Services (8.10.9)

Amerigroup will comply with contractual requirements regarding access to care and services and make sure that all health care and services are provided in accordance with 42 CFR 438.206 through 438.210. We will provide adequate and timely access to all covered services through a network of culturally competent providers adequate to serve the needs and preferences of the enrolled population. Members will also have access to non-network providers, when necessary to assure continuity of care as described in Section 3.3.

Redetermination Assistance (8.11)

Question 8.11, #1

1. Describe in detail your plans to assist members in the eligibility redetermination process and control against prohibited activities.

Timely eligibility redetermination is essential so that members do not experience gaps in coverage. Our experience has taught us that some members need assistance in navigating the healthcare system, including completing the redetermination process. Amerigroup conducts redetermination outreach in over 92 percent of our affiliate health plans where permitted. As a result, we have reduced our overall disenrollment rate within our affiliate plans from 6.0 percent to 4.4 percent.

Our strategy to inform members of approaching renewal dates involves several modes of communication. These may include outreach calls to members and/or caregivers, postcards sent via direct mail, emails, texts, and reminders/instructions listed on the member website. We also provide redetermination assistance through a call from our retention center from an employee who helps members understand what they need to do in order to keep their benefits.

Permissible Activities (8.11.1)

Amerigroup understands we are permitted to perform specific redetermination activities such as conducting outreach calls to current members, reviewing State redetermination requirements, answering questions regarding the redetermination process, and assisting the member in obtaining the required documentation and collateral verification needed to process his or her redetermination application.

In successfully performing the permitted activities, Amerigroup generates rosters each month of members whose eligibility is due to lapse in 45–60 days using State-provided redetermination dates. In turn, we conduct outbound calls in English or Spanish, as well as mail State-approved reminder postcards. Those members who speak languages other than English and Spanish or languages not spoken by staff are connected to an interpreter to facilitate the call.

- Understanding the importance of members keeping their redetermination appointments, we conduct telephonic and mail outreach to support members in the following methods:
- Reminding members of the recertification requirements for the Iowa Initiative and the importance of renewing their eligibility
- Tracking members' approaching renewal dates
- Monitoring what sort of notice, if any, members will receive from the State
- Distributing phone numbers to call, websites to visit, and/or social services office locations to contact if members do not receive or have misplaced the re-enrollment forms
- Giving instructions on where to submit completed forms
- Clarifying that only the State determines eligibility and that Amerigroup plays no role in that decision

Our outbound communications provide members and/or their caregivers the option to speak with Amerigroup Retention Unit employees who will answer questions regarding the redetermination process. Employees also assist members in obtaining required documentation and collateral verification to process their application.

Our automated call service places multiple calls to members and/or their caregivers to alert them of pending redetermination deadlines. Calls are made on different days and at different times of the day, including evening hours, to increase the likelihood of reaching the member. We augment outbound calls with reminder postcards mailed during the same 45- to 60-day period as shown in Figure 8.11-1 and Figure 8.11-2. Amerigroup recognizes that our members increasingly use the Internet and their phones on a daily basis. We are expanding our use of emails, texts, and member website reminders as important tools to communicate with members when we have their consent and accurate information to do so.

Prohibited Activities (8.11.2)

Amerigroup will comply with and not engage in prohibited activities when assisting members with the redetermination process. The prohibited activities include:

- Discriminating against members, particularly high-cost members or members who have indicated a desire to change MCOs
- Talking to members about changing MCOs (if a member has questions or requests to change MCOs, we will refer him or her to the Enrollment Broker)
- Providing any indication as to whether the member will be eligible (we will inform members that the decision is at the sole discretion of the State)
- Engaging in or supporting fraudulent activity in association with helping members complete the redetermination process
- Signing members’ redetermination forms
- Completing or sending redetermination materials to the State on behalf of members

We train our staff on State requirements and maintain a Compliance Plan that provides clear guidance for staff on best practices for supporting members. Amerigroup routinely monitors employee compliance with requirements related to assisting members with the redetermination process. We will leverage our current practices and lessons learned from our affiliate health plans across the country to develop and implement ongoing monitoring. Our goal throughout this process is to support our members in maintaining their eligibility while complying with State and federal requirements. Staff are monitored continually, trained regularly, and tested annually on our Compliance Plan to help assure compliance.

Amerigroup requires all staff involved in any form of marketing to complete training specific to marketing and outreach guidelines. The training will cover DHS marketing guidelines, including general provisions, permitted and prohibited redetermination activities, provider compliance, State licensure and appointment laws, telephone activities, written materials requirements, and other elements related to marketing compliance. All staff will receive extensive training before interacting with members. Part of this training will include a review of Amerigroup’s Policy and Procedure for Redetermination. The training will occur with new hires and is also required as a semi-annual training event for all marketing employees.

Figure 8.11-1. Redetermination Postcards Remind Members to keep Their Healthcare Coverage

Figure 8.11-2. Redetermination Postcards Remind Members to keep Their Healthcare Coverage

Our Iowa Medicaid Compliance Plan will include examples of best practices pertaining to permitted and prohibited activities. It will also address applicable State and federal requirements related to marketing; State-required notifications; and approval processes for advertisements, materials, telephone marketing scripts, and other related communications. It is our policy to require all employees to become knowledgeable of and comply with Amerigroup's Compliance Plan. All new hires are trained on the Compliance Plan, with all staff receiving regular reminders through email blasts, targeted trainings, and managerial supervision.

Member and Stakeholder Engagement (8.12)

Question 8.12, #1

1. Describe in detail your member and stakeholder engagement strategy.

Amerigroup's strategy for member and stakeholder engagement includes several key components that allow us to offer a comprehensive and broad-based approach built on strong partnerships with community-based organizations and provider groups and the member advocacy groups that serve our members and their families.

Amerigroup has and will continue to meet and partner with key provider groups and community-based organizations such as Iowa's six area agencies on aging (AAAs), Iowa Association of Community Providers, the State's six Centers for Independent Living (CILs), Statewide Independent Living Council, Developmental Disabilities Council, IowaHealth+, the Iowa Primary Care Association and its member federally-qualified health centers (FQHCs), LeadingAge Iowa, Iowa Health Care Association, Iowa Center for Assisted Living Iowa Behavioral Health Association, and Easter Seals. We have met individually with these and other groups and will work with them to identify opportunities for partnering on their provider conferences, community events and activities. We will continue to meet with these organizations to learn more about their ideas and to answer questions regarding transition to the new managed care program and to obtain their input on what they would like to see us consider doing as we further develop the planning, structure, and implementation for our Iowa program.

We have and will continue to engage with member advocacy groups such as NAMI Iowa, AARP Iowa, Brain Injury Alliance of Iowa, the Iowa Foster and Adoptive Parents Association, and Iowa Association of People Supporting Employment First to gain further understanding of their ideas and perspective on the HQHI program. We will explore ways to partner with them and sponsor events and activities to provide us opportunities to engage with advocates, member advocates, members, and their families and caregivers. We want to have opportunities to help educate our advocates about the new program and to hear what they need most for us to provide and what gaps in services are most important for our new program to fill.

Amerigroup will develop partnerships with a range of stakeholders and member groups to help promote good health care, personal health, and quality of life outcomes. For example, we may find an opportunity to sponsor a program that promotes health, fitness, and exercise activities for members. We may also be able to sponsor nutrition or falls prevention education programs for members. We will work with each community-based organization and member advocacy group to identify meaningful opportunities.

Amerigroup will employ our proven comprehensive member education, outreach, and engagement strategies that are informed by our routine analysis of local member information and how members respond to our engagement efforts in the communities. We use this information to develop our multi-pronged approach to facilitating members' active participation in care. When engaging members in the Iowa Initiative, we will tailor our existing processes to meet their unique individual and geographic needs.

For example, we will offer innovative tools to enhance their participation in managing their health, chronic conditions and support their independence and well-being such as:

- **The Healthy Rewards Program** which promotes overall member responsibility and engagement as well as targeted improvement in specific HEDIS and other preventive care measures via incentives. Healthy Rewards will include physical, behavioral, oral social and LTSS components in order to engage members in an integrated approach to improving holistic health
- **MySupport** is a new platform designed to help older adults, people with chronic health conditions and disabilities connect with personal care attendants (PCAs) and other support workers with skills that match their individual needs, preferences and values.
- **Taking Care of Baby and Me** is comprehensive case management and care coordination program that offers: Individualized, one-on-one case management support for women at the highest risk; Care coordination for moms who may need a little extra support; Educational materials and information on community resources; Incentives to keep up with prenatal and postpartum checkups.
- **Financial Education and Coaching** via the National Disability Institute. This Value-Added Service financial management program provides individuals with disabilities tools to decrease their financial stress including a financial health assessment tool, 12-modules of the self-paced online financial capability education program including interactive real-life case studies to test skill development, and financial education webinars.

We listen to our members and stakeholders and incorporate their feedback, requests, and comments to refine our processes and approaches in a systematic and consistent manner. Member education and tailored services are at the heart of our member engagement philosophy.

Community-Based Activities for Members and Stakeholders

Our robust community outreach efforts will foster better knowledge and understanding of the Iowa Initiative and the opportunities available to our members. We will designate geographically-distributed staff throughout Iowa to engage with people in the community and provide information about important health topics and the benefits we offer. ***Our staff will participate in community events, presentations, and health-related contacts in which they interact with members, advocates, providers, and other community partners each week.***

We will provide members, providers, and the community-at-large with information and events focused on health, wellness, and the benefits available through the Iowa Initiative. We also provide relevant information that helps members make informed choices while promoting meaningful life in the community. We will actively promote the benefits of the Iowa Initiative, as well as preventive care and healthy behaviors, through the following methods:

- Reaching out to members at community partner sites to answer questions and provide assistance
- Sponsorships of health fairs, Amerigroup Clinic Days, community organizations, conferences, and seminars (such as employment first, foster parent trainings), luncheons and other health education forums
- New member outreach activities, as we work with Federally Qualified Health Centers (FQHCs), community mental health centers (CMHCs), Public Health Departments, Centers for Independent Living (CILs), Area Agencies on Aging (AAAs), community- and faith-based organizations, providers, and other stakeholders to deliver new member orientations.

Ongoing Member Outreach

Amerigroup's outreach and engagement strategies, honed over many years, emphasize the inclusion of all stakeholders and the value of initiating grassroots-level involvement with community organizations to enhance improvements in our programs. Our community-based approach helps us better understand local health issues, including barriers and gaps that may be driven by cultural, geographic, or other challenges unique to certain communities and populations. Our approach also helps us more fully partner with members, their caregivers, and providers. Our member outreach activities for the Iowa Initiative will build upon strategies our affiliates have used to effectively engage members in other state-sponsored programs.

Stakeholder Advisory Board (8.12.1)

Question 8.12, #2

2. Submit your Stakeholder Advisory Board strategy and discuss how meaningful representation from member stakeholder groups will be ensured.

The Amerigroup strategy for establishing a robust and active Stakeholder Advisory Board is to organize a board for the purpose of providing communications and education about the new managed care program and receiving input from Stakeholders about how Amerigroup is implementing the program. Obtaining input and advice from each board participant ensures we have a continuous feedback and advice on our programs and operations, which will solidify a sustainable approach through actionable changes. The Stakeholder Advisory Board strategy must include a strong effort to have input on all aspects of the managed care program to ensure we have a program that meets the needs of the community, the providers, and most importantly the members.

We know that building strong communities contributes to the health and well-being of everyone. That's why *we help national and local community-based organizations make a real difference in our members' lives by becoming part of the neighborhoods we serve*. In addition to engaging members and their families, Amerigroup engages government agencies, schools, and community organizations, among other stakeholders.

Amerigroup's affiliates have strong experience convening and facilitating Stakeholder Advisory Boards in several states. Most recently, our Georgia health plan created the Georgia Families 360⁰ Monitoring and Oversight Committee. The Georgia Families 360⁰ Program *serves members in foster care or receiving adoption assistance and select youth in the juvenile justice system*. The committee serves as a steering committee for oversight and quality of the program. The Georgia Families 360⁰ Monitoring and Oversight Committee encourages collaboration on quality improvement activities, focused studies, and other improvement initiatives between Georgia state departments, relevant agencies, and the Georgia Families 360⁰ care management organization.

We will thoughtfully *plan meeting logistics and locations to make sure that meeting sites are geographically and physically accessible*. Information provided will be available in alternative formats. Interpreters and translators will also be available for members requesting those services. For a location to be considered, it must support individuals who have accessibility challenges (such as individuals who use wheelchairs or who are blind) to participate easily.

Amerigroup will assist with travel costs and assist with providing transportation as needed. In addition, meetings that take place via teleconference access will be supported to help make sure those who have difficulty traveling can participate.

Advisory Board Plan (8.12.1.1)

Within 30 days of Contract execution, Amerigroup will submit a plan to DHS for the Stakeholder Advisory Board subject to the review and approval of DHS. The plan will include procedures for implementing the Stakeholder Advisory Board and details discussing how Amerigroup will assure meaningful representation from stakeholder groups' participation from around the State and describe how we track feedback from participants and actions taken based on that feedback.

During the initial Stakeholder Advisory Board meeting, Amerigroup will introduce health plan leaders who will serve as board facilitators. Stakeholder Advisory Board participants will be introduced and a member selected as the advisory board leader, if that is what participants choose. During this meeting, we will give special emphasis to the importance of having input, ideas, issues, and solutions from committee participants. We will present the board with an overview of the Iowa Initiative and Amerigroup's design. The advisory board leader will have a roundtable discussion of the priority topics the participants want to have on the agenda for future meetings. The board leader, in partnership with Amerigroup leadership, will compile the list of topics and develop a work plan for addressing each topic at future meetings. In addition, the work plan will introduce components of the program to the board, including the outreach plan, the quality improvement plan, the care coordination plan, and the member advocacy plan to get input from the participants on implementation plans for the new program.

Advisory Board Composition (8.12.1.2)

Stakeholder Advisory Board participants will reflect geographic, socioeconomic and cultural diversity. Amerigroup has a strong cultural diversity program that is an integral part of daily health plan operations. In planning the Stakeholder Advisory Board, Amerigroup's Marketing and Outreach Director will make sure Board participants are culturally and geographically diverse, reflecting the populations served and providers who participate in the Medicaid program. In addition, the director will make sure key community partners who also serve Medicaid populations are represented.

All of the specialized Iowa Initiative populations, including foster children and parents, individuals with disabilities, low income families, and members with mental health or substance use conditions, will be represented on the Stakeholder Advisory Board, along with providers, caregivers and advocacy groups. The Advisory Board will have an equitable representation of its members in terms of race, gender, populations, and Iowa geographic areas. More than 51 percent of the Stakeholder Advisory Board will be composed of members and/or their representatives. Provider membership will be representative of the different services covered under the Contract, including and not limited to Centers for Independent Living, Area Agencies on Aging, support coordinators, transition and employment specialists, nursing facility providers, behavioral health providers, primary care, hospitals, 1915(c) HCBS waiver providers, disability service providers, and a range of HCBS providers.

Documentation (8.12.1.3)

Amerigroup will maintain written documentation of all attempts to invite and include members in the Stakeholder Advisory Board meetings. Additionally, Amerigroup will maintain meeting minutes that will be made available to DHS upon request. Amerigroup will report to DHS participation rates, engagement strategies, and outcomes of the committee process in the timeframe and manner required by DHS.

Facilitating Member Participation (8.12.1.4)

Amerigroup will implement strategies to facilitate member participation in the Stakeholder Advisory Board meetings, including through the provision of transportation, interpretation services, and personal care assistance. Meetings will be accessible and will provide information in accessible formats. We will strive to host the meetings in locations that are accessible by public transportation. To support

participation of individuals with travel challenges, we can support virtual attendance by phone or video-conferences as needed.

Meeting Frequency (8.12.1.5)

Because the Iowa Initiative is new to Medicaid members and providers, Amerigroup proposes monthly meetings of the Stakeholder Advisory Board in Year One to keep stakeholders informed of progress, elicit early feedback on program issues, and respond quickly to questions and concerns. In the years following Year One, meetings will be held at least quarterly. All meetings will be held in a central location, and Amerigroup will notify DHS of all meetings at least 15 calendar days in advance of the meeting.

Meeting Outcomes (8.12.1.6)

Question 8.12, #3

3. Describe how feedback obtained from the Stakeholder Advisory Board will be utilized.

Amerigroup finds genuine utility and value in the recommendations from and perspectives of our members and stakeholders. The feedback we receive from our Stakeholder Advisory Board will inform our policy and procedure development processes and drive our quality assessment and performance improvement programs.

The Stakeholder Advisory Board meetings will have a structured feedback loop, resulting in issues being reviewed, addressed and reported on by Amerigroup leadership. The list of issues and recommendations will be reviewed and addressed by the plan leadership, and decisions made by Amerigroup's CEO to take action on those items will be reported back to the board. In this way, Amerigroup will promote transparency in how it operates and invite stakeholders to hold plan executives and leadership staff accountable for answers and execution.

Stakeholder Education (8.13)

Question 8.13, #1

1. Describe your plan for stakeholder engagement including proposed timelines and topics.

Amerigroup recognizes the important roles various stakeholders play in state-sponsored care programs and has extensive experience partnering with state agencies, advocates, providers, community organizations, and other stakeholders to implement progressive managed care programs across a variety of populations. We understand the challenges with implementation, such as advocate support, member adoption and understanding, and provider participation. From pre-award to post-go live, we employ proven strategies to facilitate a successful transition. We will publicize methods for members to obtain support and ask questions during the implementation of the Iowa Initiative, including: information on community partners who can help, the Member Services Helpline, and information on how to contact our Ombudsman.

Amerigroup has begun developing relationships in Iowa with key member constituencies and community groups. Listening to and learning about the challenges, preferences, and needs of these organizations and their clients enables us to tailor our program to the unique personal and geographic service and support needs of our members. This approach has proven successful in gaining advocacy groups' support of new programs, which – in turn – contributes to member acceptance.

Amerigroup proposes to launch a two-stage education program for stakeholders.

Stage One is slated for October through December of 2015, will cover the following topics:

- Member marketing materials and member letters
- Provider contracting and training – to educate stakeholders on the Amerigroup provider experience
- Provider education and training: how to submit claims, online access and claims submission, electronic funds transfer, and related topics
- Member enrollment process, including: the state notices, timetables for selection of plans, and enrollment decisions
- Member Value-Added Services
- Transition from traditional Medicaid to managed care – how we assure members' continuity of care
- Member contacts from Amerigroup: what to expect from us as we start the program, welcome letter, welcome calls, health risk assessments, and home visits for those on the waiver programs

Stage Two will continue from January through June of 2016, encompassing:

- Amerigroup's Complaints and grievance processes
- Care Coordination with the key health care providers and CBOs
- Integration of Behavioral Health services and Physical Health services with LTSS
- Member outreach and health education activities and materials
- Transportation services
- How to access Amerigroup if you are a provider and if you are a member
- Quality program and performance standards
- Coordination with Medicare services for members

Our Stakeholder Advisory Board will monitor the success of this curriculum and inform the development of subsequent topics and educational materials. Details on the Stakeholder Advisory Board can be found in sections 8.12.1 – 8.12.1.6.

Question 8.13, #2

2. Describe how you will identify and outreach to stakeholders.

Amerigroup recognizes establishing a deliberate planning process that leverages input from all stakeholders is required for a program to be successful. Open, continual dialogue beginning early in program development is crucial. In Iowa, we have begun to identify and reach out to key stakeholders called out in Section 8.12; stakeholders which include members and caregivers, advocates, families, providers and community organizations.

Finally, we have set up an office in Iowa and are recruiting an Ombudsman to be trained and ready for members' questions once the award is announced. Like all of our employees, the Ombudsman will be well-versed in the benefits and methods of community integration, home- and community-based services, and managed care programs, as well as Iowa's goals for citizen health and well-being.

Our strong partnership model applied from the outset between the State and MCOs fosters collaboration and problem-solving toward agreed-upon goals. As a result, program development and policy transparency in rate-setting supports long-term program sustainability.

Amerigroup tailors engagement for members, their families, providers, community organizations, and other stakeholders in ways that:

- Build strong communities
- Connects members to the services and care that contribute to their health and well-being
- Enables informed decision-making by members, caregivers, providers, and others

Descriptions of how Amerigroup will use stakeholder outreach and engagement to support these initiatives are provided below.

Community Organizations and Partners

We identify and reach out to community organizations long before Amerigroup is awarded a contract. Both nationally and in Iowa, we are:

- Uniting with community organizations, schools, faith-based groups, and local businesses to foster access to health care, provide health education to families, and offer resources to educate and improve neighborhoods
- Giving grants and resources to organizations that set out to improve the lives of people who need a little help. We've donated more than \$15.5 million to community organizations and events in the states we serve
- Collaborating with Community Mental Health Centers to improve communities by providing mental health and addiction services that are accessible and effective
- Doing volunteer work on the ground in the communities we serve. Across our organization, our employees have donated over 64,000 hours helping at local community events and health fairs, rebuilding housing for people impacted by disaster, and serving the elderly, children, and people with disabilities
- Being the solution. Amerigroup believes it is our social responsibility to continue to maintain and improve the environment we all live in. Our family of companies hosts an annual educational Eco fair, maintain a telework program to reduce the carbon footprint caused by commuting, and strive to use green power whenever possible

Members, their Families and Caregivers

To engage members in their own care effectively, members and their caregivers must understand what their benefits are and how to access them. Our programs and services will be easy to identify and access. The Amerigroup engagement strategy for members will feature:

- Ongoing member education designed to address challenges and concerns common to the populations we serve. For example, educational messaging and calls to action for vaccines, annual well-visits, and healthy behavior are designed to guide members into making informed health care choices and understanding the value of making those choices
- Early and ongoing, culturally relevant outreach appropriate for each individual
- Highly trained Member Services Representatives who use sophisticated technology to make sure callers receive accurate information and can access the care they need
- Strategic partnerships with schools and community-based organizations who offer significant insight into the challenges and service gaps experienced in Iowa communities and populations

Providers and Advocates

Amerigroup engages and educates its network providers to make sure they have the tools they need to serve members. We engage and support providers using:

- An in-person orientation session at the provider's office, facility or clinic
- Ongoing training
- Dedicated Provider Services Staff and Internal Claims Resolutions Specialists
- Online tools and resources

Using provider training meetings and webinars, Amerigroup will tailor information to give providers personalized assistance, which helps make sure providers have the information and tools needed to support good care and provide services.

Orientation – Amerigroup will invite newly contracted providers and their billing and office staff to participate in an orientation session. The sessions will communicate DHS and Amerigroup policies and procedures, identify resources such as the provider website and provider services call line, and introduce the roles of Provider Services Representatives and how they can assist providers.

Ongoing Training – Amerigroup provides educational sessions for network providers several times a year. Amerigroup will develop and offer educational sessions for network providers. Training will be tailored to meet the particular needs of local providers and the particular populations they may serve

Provider Services Representatives – Provider Services Representatives support providers by connecting providers to Informational resources, provide ongoing training, and proactively share information that assists providers in being successful partners with Amerigroup.

Implementation Support (8.14)

Question 8.14, #1

1. Describe proposed strategies to support members during program implementation.

Through our parent company and affiliate health plan experience serving over 5.2 million members in 19 states, we bring a long-standing history of implementing new programs and seamlessly transitioning members from a fee-for-service to a managed care model. Our organization successfully managed the startup of Medicaid health plans in Kansas, Louisiana, and Washington – representing and supporting more than 180,000 new members within a 15 month timeframe. We do this time and time again – without fail.

We have the experience, infrastructure, and proven processes that will be required to seamlessly support all members. Our previous experiences with implementation will minimize disruption for members, providers, and our state partners. We know how to stand up complex Medicaid programs covering diverse populations quickly and smoothly.

We will draw on our affiliates' extensive national experience serving similar populations, and we will also use the insight gained from Iowa stakeholders. To support members during program implementation, we have engaged many Iowa stakeholders already. This includes state agencies, advocacy groups, community-based organizations, and provider associations. These Iowa stakeholders can provide us with valuable insight into the overall Iowa healthcare landscape as well as local community needs and nuances. We've reached out to over 50 community-based organizations and stakeholders to learn about what is and

is not working. We have also learned where there are opportunities to positively impact the health and well-being of members from Day One.

We understand that members live busy lives, and we have designed the program implementation member support strategy accordingly. We will support Amerigroup members during program implementation by proactively reaching out to each and making sure they have easy access to the information they need and want. We understand that this direct contact is critical. We will also reach potential enrollees and members through several community-based outreach strategies. Our experience shows that combining both direct and community-based outreach will lead to a successful transition. As a result, potential enrollees and members will understand where and how they can access care, ask questions, and be connected with providers and services.

Amerigroup’s Proven Direct Member Engagement

Amerigroup understands the critical importance of effectively communicating with new members during program implementation. Our primary strategy to promote awareness of available services will focus on direct engagement – in person and through telephone calls. This high-touch outreach gives Amerigroup members an opportunity to have their questions answered immediately and maximizes our opportunity to inform them of the benefits and services available. We will also use written communications and online resources for additional opportunities to increase awareness and understanding of the Iowa Initiative. We know from our vast experience that multiple communication methods help assure members understand the available health care options.

We will welcome new members with the tools and information they need to understand and access the benefits and services available to them. Our communication with new members will begin when they enroll in Amerigroup. Table 8.14-1 provides a summary of our member communication methods, materials, and timeframes.

Table 8.14-1. Summary of Member Communication Methods, Materials, and Timeframes

Material	Method	Focus and Information	Timeframe
Pre-Enrollment Welcome Flyers	Direct Mail	Provided enrollment data becomes available in time, we will send a mailer to welcome members in advance of the ID card and new member packet. The flyer describes what the member will experience over the next one to two months, reassures them that we are dedicated to providing good service, and provides contact information.	Within 10 days of receipt of enrollment data
Welcome Call	Telephone	We will reach out to new members with a welcome call. During this call, members will learn how to change their PCP and access services. Members will be directed to go online or call Member Services if they wish to change their PCP at any time, not just upon enrollment.	Within five business days of the notice of enrollment from the State
Member ID Card	Direct Mail	Amerigroup will send each member an ID card via first-class mail. Member ID cards are sent separately from the welcome packet to make sure that the member knows and has access to his or her PCP as soon as possible.	Upon notice of enrollment from the State, and prior to the member’s effective date of coverage (with exceptions for newborns and emergency enrollments)

Material	Method	Focus and Information	Timeframe
Member Welcome Packet	Direct Mail	Each new Amerigroup member will receive a new member packet that will include a: <ul style="list-style-type: none"> • Welcome letter • Member handbook • Member grievances, appeals, and State fair hearing rights information 	Within 10 business days of the notice of enrollment from the State
Member Website	Internet Site	Our Amerigroup member website will deliver a variety of information and self-service tools to our members, including plan and benefits, provider directories, health surveys, community resources, and health and wellness information.	Our Amerigroup member website will be continuously available to support our members covered under the Iowa Initiative.

Successful Community-Based Implementation Strategies

Supporting members during program implementation will also include community-based efforts. These strategies will complement our direct contact efforts by providing additional avenues for potential enrollees and members to engage with Amerigroup.

- We will provide and publicize a toll-free number for prospective members, their families, and guardians to call with questions regarding the program. The hotline will be staffed with employees who have been extensively trained on the Iowa Initiative. These employees will be trained to provide assistance, answer questions, and route calls to the Member Advocate/Non-Discrimination Manager (Ombudsman) when appropriate. The number will be publicized on every marketing and member communication. It will be included on all launch materials, print materials, mass media materials, and our website.
- We will host community forums and orientations for all stakeholders, including members, providers, families, and caregivers. At the forums, we will explain the program change, introduce Amerigroup, and instruct forum attendees on how to contact the Member Advocate/Non-Discrimination Manager (Ombudsman) and our Member Services Department for assistance. The forums will provide an opportunity for members and stakeholders to ask questions in person.
- We will orchestrate health fairs and other community events to reach as many members, families, and caregivers as possible to share information about the program, enrollment process, and Amerigroup. These events will provide an additional opportunity for individuals to have questions answered in person.
- We will use DHS-approved mass media to introduce the new program and Amerigroup to members and stakeholders. We will submit all materials, presentations, and advertising to DHS for review and approval and clearly communicate both State and Amerigroup contact information.

Grievances, Appeals, and State Fair Hearings (8.15)

General (8.15.1)

Question 8.15, #1

1. Describe in detail your system for resolving inquiries, grievances, and appeals, including how your system ensures all policy and processing requirements are met.

Amerigroup Iowa (Amerigroup) respects members' rights to make inquiries, file grievances, and appeal decisions. Amerigroup's affiliate health plans bring 24 years of experience managing and resolving member inquiries, grievances, and appeals. Our policies and procedures comply with applicable federal Medicaid managed care requirements and will be modified to meet Iowa-specified time frames and requirements for noticing, monitoring, and reporting. We will provide members with several levels of recourse in accordance with Iowa Contract requirements, inclusive of federal and state laws and regulations. We maintain robust and effective procedures and systems for tracking and monitoring member inquiries, grievances, and appeals from initial receipt to escalation processes and resolution time frames to investigation processes and follow-up responsibilities.

Amerigroup's Iowa-based Grievance and Appeals unit oversees the entire grievance and appeal process, including the intake procedure, documentation in the medical management system, investigation, and resolution and file closure. The unit's Manager will oversee compliance with regulations and timely case handling. We train all employees on standards for appropriately managing member inquiries, grievances, and appeals. The training will include reinforcement of the fact that employees will not review or make decisions on cases where they were involved in previous levels of review or decision-making. Additionally, Amerigroup's Iowa Medical Director will oversee the Grievance and Appeals Unit's processes for the Iowa Initiative. The Medical Director reviews data and issues, identifies trends and actions that require immediate attention during the grievance and appeals processes, and renders decisions on the resolution of clinical grievances and appeals.

Our systems support ongoing tracking of all grievances and appeals via a daily report sent to designated grievance and appeals personnel on all open and unresolved cases. We monitor status, track timeliness of resolutions, identify and quickly address patterns or concerns, and ultimately improve the quality of care provided to our members. Through this system, we will report on the data elements required by Iowa and are prepared to submit all required grievance and appeals information in the required format and time frames stipulated by the State of Iowa.

Informing Members of Their Grievances, Appeals, and State Fair Hearing Rights

Members are notified of their right to file a grievance or an appeal and of the State Fair Hearing Process through clearly written materials that are easy to understand and access as well as are in accordance with contractual requirements for written member communications. We train Member Services Representatives, Care Managers, and Utilization Management staff to inform members of their rights and responsibilities during each contact when a member or his or her authorized representative expresses dissatisfaction with any aspect of care.

- Member rights, including the right to file a grievance or appeal or to request a Medicaid Fair Hearing, are described in the member handbook, which is posted on the member website and included in the new member enrollment materials (the Amerigroup Welcome Packet).
- We provide forms for filing a grievance or appeal that includes instructions on completion and submission of the form, the time frames for submissions and determinations, and how to obtain assistance completing or filing the form. These forms also describe a member's right to request a State Fair Hearing and the process and time frames for making this request.

When a service request is denied, reduced, or approved in an amount or duration less than requested, we provide a Notice of Action letter that explains the steps to appeal an adverse decision.

Amerigroup Notices of Action will include the information specified in Scope of Work (SOW) Section 8.15.8 and will confirm that a member; member's authorized representative; or estate representative of a deceased member, including a provider who has the member's written consent, may file a grievance or appeal and to be parties. Providers and subcontractors are also notified of our processes at the time they enter into contract with us and via other administrative processes. Out-of-network providers that provide services to Amerigroup members will be provided with this information at the earliest opportunity, either within 10 calendar days of approval for a service or immediately upon receipt of a claim. We will also provide materials that will help members and other parties distinguish between those grievances and appeals that are directed to Amerigroup for resolution and those that are to be directed to DHS, including grievances and appeals related to eligibility, effective dates of coverage, and patient liability such as copayments and premiums.

Grievance, Appeal, and State Fair Hearing Process

When a member, parent, or an authorized representative wishes to make an inquiry or file a grievance or appeal, they typically call the Amerigroup Member Services Helpline. Our Member Services Representatives receive in-depth training on our internal inquiry, grievance, and appeal policies and procedures and are skilled at identifying grievances and appeals. They present the greatest opportunity to address members' needs before an issue escalates to complaint status. They are trained to resolve concerns raised during the initial call if possible and to alert Care Managers for those members enrolled in care management to assist with resolution. We focus on responding to members in a courteous and professional manner and make every effort to resolve any issues that may arise through a well-defined and documented process that supports the member every step of the way.

Oversight and Responsibilities

A full-time, Iowa-based Complaints, Grievance, and Appeals Manager, and his or her team, will be devoted to overseeing Amerigroup's compliance with regulations and timely case investigation and processing for the Iowa Initiative. They will serve as a liaison between the member and the health plan. As appropriate, they will interact with members, caregivers, or advocates throughout the grievance and appeals process, verifying that members understand their rights and the decisions made. In all cases, the Quality Management leader will be available to facilitate the process, coordinating language assistance where needed and making sure all materials are in the member's primary language.

Additionally, Amerigroup executives, including the Iowa Medical Director, will have the authority to require corrective action. If a grievance is related to a quality of care issue or a denial of an expedited appeal, the Quality Management Lead reviews the issues and involves the Medical Director (or external specialists) as appropriate. We retain inquiry logs and use them for trending and identifying patterns or potential areas of concerns. We also record random calls for quality review monitoring.

We track and trend all expressions of dissatisfaction, regardless of whether they are filed as a formal grievance or appeal, including potential quality of care issues. We track findings at the provider level so we can identify repeated concerns involving a given provider. This information highlights opportunities to

initiate service improvements and corrective actions to enhance our service delivery system. When we identify concerning issues, our Provider Services Representatives contact non-compliant providers and coordinate with our Quality Management Department to develop corrective action plans with providers.

Appeals (8.15.2)

Appeals Process

Our members or their authorized representative may communicate dissatisfaction with any adverse determination. We notify members of their rights to file an appeal within 30 calendar days of the initial Notice of Action through our member handbook, website, and newsletters. In addition, all Notice of Action letters indicating an initial denial notify members of their right to file a grievance and to appeal.

Members may file an appeal in the same manner as a grievance. They may call our Member Services Helpline, where a Member Service Representative will describe the appeal process and help the member file an oral appeal request. Members may opt to file an appeal in writing by either mailing or faxing a letter. We record the date we receive the initial appeal request. If a member files an oral appeal on a matter with a standard resolution time frame (45 days) we will send the member an acknowledgement letter and include the appeal form, requesting completion and return with any additional information that the member may have. We use the date of receipt of the oral appeal to calculate the final date for resolution.

When we receive a mailed, faxed, or oral appeal, we record the appeal in our electronic medical management system. This system documents all data elements needed to investigate, track, trend, and record appeals. Additionally, the electronic medical management system initiates the mailing of a written acknowledgment to the member regarding his or her appeal request within three business days of its receipt. The letter notifies the member of the right to present evidence and allegations of fact or law in person, as well as in writing. It also notifies the member of his or her right to examine the case files including any medical records or other documents and records both before and during the appeals process.

After receipt of a request for an appeal, a Grievance and Appeals Nurse reviews the case and obtains information relevant to the appeal, including clinical detail, any additional information, and medical records as necessary. The nurse summarizes the case and any subsequent actions taken within the electronic medical management system. The Grievance and Appeals Nurse then routes the case to an appropriately licensed physician in the same or similar specialty as the provider on record. The Medical Director or reviewing physician will not participate in the review if they have been involved in the initial determination or are subordinate to any person involved in the initial determination. The Medical Director or physician reviewer contacts the provider as necessary to discuss possible appropriate alternatives. They render a decision and document the decision in the electronic medical management system.

Expedited Appeals

Members may request an expedited appeal if the turnaround time for a standard appeal could seriously jeopardize the member's life or health or ability to attain, maintain, or regain maximum function. Medical judgment is used in reviewing all requests for expedited appeal. No punitive action will be taken against anyone who requests an expedited resolution. Amerigroup has comprehensive policies and procedures for managing expedited appeal requests. The request is logged into our information system, including the document management system. The Appeal Nurse researches the information and documents the issue in a case file. Additional information is requested as needed. Within 24 hours of receipt of the request for an expedited appeal, the Medical Director receives the case for review. The Appeal Nurse confirms that the Medical Director or designee is not the same physician or a subordinate to the physician involved in the initial adverse determination. The Medical Director or designee makes a determination to approve or deny the request within three business days of receipt of an appeal, unless this time frame is extended pursuant to 42 CFR 438.408. Amerigroup provides the member with a written notice of the decision within two

business days of the expedited appeal request and will make a reasonable attempt to provide oral notification when feasible. If a request for an expedited appeal is denied, the appeal is reviewed within the standard 45 calendar day time frame. The member may file a grievance if his or her request for an expedited appeal was denied.

Grievances (8.15.3)

Grievance Process

If a member calls to report a complaint or dissatisfaction with some aspect of service, Member Service Representatives identify this as a grievance and escalate the issue to the Grievance and Appeals Unit. Our Grievance and Appeals staff document and track all member inquiries in our existing customer service system and send an acknowledgement letter to the member or the member's authorized representative. This system documents all data elements needed to record, investigate, track, trend, and report on the status of all grievances. We monitor all grievances via a daily report that notifies the Grievance and Appeals Lead and Grievance and Appeals Manager of all open and unresolved cases. The Lead and Manager will follow up with unit employees to discuss and resolve any issues that may jeopardize timely resolution of the grievance.

We handle all grievances by reviewing the specifics, analyzing records and other information, interviewing persons involved, and making a disposition within the time frames specified by the State (within 30 calendar days for standard grievances and within three business days for expedited grievances in Iowa). If the disposition of the grievance cannot be completed in the appropriate time frame, we notify the member of the expected date of disposition in writing prior to the expiration of the time frame.

The Grievance and Appeals employee will send an acknowledgment letter regarding a grievance to the member within three business days of receiving the grievance. The letter informs the member of the right to present further information he or she feels should be considered in the grievance investigation. The employee will route the grievance to the appropriate department and staff level for review, investigation, and resolution. The unit employee will monitor progress to make sure that the information necessary to complete the investigation is provided in a timely manner allowing us to provide written notice of the disposition of the grievance within the 30-calendar-day resolution timeframe. On rare occasions we may extend the time frame up to fourteen calendar days, pursuant to 42 CFR 438.408(c). If extended, for any extension not requested by the member, Amerigroup will give the member written notice of the reason for the delay. Once a grievance is resolved, the notice of the disposition provides Amerigroup's decision and the reasons, policies, and procedures used as the basis for the decision; the contact telephone number and address for the member to contact Amerigroup regarding the decision; and all other content specified by the State of Iowa.

State Fair Hearings (8.15.4)

State Fair Hearing Process

Upon exhaustion of Amerigroup's appeal processes, members who are not satisfied with our appeal resolution may request a State Fair Hearing. We include information describing the State Fair Hearing process as part of our written internal process for the resolution of appeals. We also describe the State Fair Hearing process in our member handbook. Appeal resolution letters inform the member of his or her State Fair Hearing rights and how to request a hearing. We cooperate fully with the State Fair Hearing processes and decisions. Amerigroup will inform the member, the member's authorized representative, or a provider authorized by the member that they may request a State Fair Hearing within 90 calendar days of Amerigroup's date of notice. We document Fair Hearing requests in our electronic medical management system and produce a position statement, which is forwarded to the State. Amerigroup representatives from relevant departments within the health plan may attend the hearing and present

testimony, arguments, and all related documentation such as physician adviser's case notes, medical management case notes, medical records, and contract benefits.

Contractor Appeal Policies (8.15.5)

Filing a Grievance or Appeal (8.15.5.1)

Amerigroup's affiliates have extensive experience managing Medicaid grievances and appeals processes for members, their authorized representatives, estate representatives for deceased members, or providers with written consent from the member. We will modify our processes and internal policies to include any Iowa-specific requirements, and we will provide members with reasonable assistance to file a grievance or appeal, including help completing forms and others procedural steps including as well as providing interpreter services and toll-free numbers that have adequate TTY/TTD and interpreters available.

General Process for Appeals (8.15.5.2)

In accordance with SOW Section 8.15.5.2 and 42 CFR 438.406 & 408(c), Amerigroup will notify members of the right to examine their case file, including medical records and any other documents or records considered during the appeals process, and will afford them an opportunity to present evidence and allegations of fact or law in person or in writing. Once a final determination has been made regarding an appeal, we will notify the member and other authorized parties. The notification will describe the actions taken, the reasons for the action, the member's right to request a State Fair Hearing, the process for filing a Fair Hearing, and other information set forth in 42 CFR 438.408(e).

Staff Processing Requirements (8.15.5.3)

In accordance with SOW Section 8.15.5.3, Amerigroup's policies and procedures will clearly denote that the employees making the decision were not involved in prior levels of review and that they have the appropriate expertise treating the condition or disease for the services being appealed. We will implement appropriate oversight and monitoring procedures to assure compliance.

Expedited Appeals (8.15.5.4)

In accordance with the SOW Section 8.15.5.4, Amerigroup will establish an expedited appeals process to resolve appeals when the standard appeal may jeopardize the member's health or ability to regain or maintain function. We will provide general and targeted education regarding our expedited appeal process to providers. The information provided will detail requirements for submission of an expedited appeal, and guidance on when it is appropriate to file an expedited appeal.

Appeals Processing Timeline Requirements (8.15.5.5)

In accordance with SOW Section 8.15.5.5 and 42 CFR 438.406, 408, and 410, Amerigroup will implement policies, procedures, and oversight processes to comply with the appeals processing timeline requirements.

State Fair Hearing Process (8.15.6)

In accordance with SOW Section 8.15.6 and 42 CFR 408, Amerigroup will implement policies, procedures, and oversight processes to comply with the State Fair Hearing process inclusive of timelines and notification requirements.

Continuation of Benefits Pending Appeal & Reinstatement of Benefits (8.15.7)

In accordance with the requirements in Sections 8.15.7.1 -8.15.7.4 and as outlined in 42 CFR 438.420, Amerigroup will develop procedures so that certain members may continue receiving benefits pending the outcome of an appeal. It is understood that:

- For benefits continued or reinstated while the appeal is pending, we will continue the benefits until the conditions outlined in Section 8.15.7.2 are met.
- If the final resolution of the appeal is adverse to the member, we may recover the cost of the services furnished to the member while the appeal was pending if the services were furnished solely to maintain benefits in accordance with 42 CFR 431.230 and 42 CFR438.420.
- As outlined in 42 CFR 438.424, if the State's Fair Hearing Officer reverses a decision to deny, limit, or delay services that were not furnished while the appeal was pending, we must authorize and provide the disputed services promptly and as expeditiously as the member's health condition requires.

Notices of Action & Grievance, Appeal, and Fair Hearing Procedures (8.15.8)

In accordance with SOW Section 8.15.8, and as cited in 42 CFR 438.10(g)(1), we will update our policies and procedures to include Iowa-specific requirements including citation of the Iowa Code and/or Iowa Administrative Code. All policies will be submitted to DHS for approval and we will notify members, their authorized representatives, providers, and subcontractors in the format and time frames specified.

Exception to Contractor Policy Process (8.15.9)

Question 8.15, #2

2. Describe your proposed exception to Contractor policy process.

Amerigroup will implement an exception policy process that will consider potentially authorizing coverage for an item or service not otherwise covered under the terms of the managed care contract with the State of Iowa or by Amerigroup, when a member has exhausted all other options for a service request and Amerigroup's physical health, behavioral health, and/or LTSS professionals, and the Medical Director as appropriate, believe that the member's needs may best be met through an alternative service. Amerigroup will:

- Request a coverage exception from DHS in writing and document the original service request, basis for denial, and rationale for requesting an alternative service
- Accompany the request with supporting information from the member or the member's authorized representative, the member's treating provider(s), and appropriate health plan clinicians
- Present evidence that the requested service exception will be cost-effective and consistent with evidence-based treatment of the member's condition or need and will not be excluded from coverage by federal or state law

The clinical review team will present the exception request to the Amerigroup Iowa Chief Executive Officer and/or the Chief Operating Officer to review the case and determine if the case warrants an exception. We will notify the member or the member's authorized representative of the decision.

General (9.1)

Care Coordination Overview

With 24 years of experience coordinating care for low-income populations and currently serving more than 5.2 million members in Medicaid and other state-sponsored programs across 19 states, Amerigroup Iowa (Amerigroup) and affiliate plans have vast experience providing integrated, member-centric care coordination to all populations included in the Iowa Initiative. *We serve our members through a “whole person” approach that supports their physical, behavioral, cognitive, functional, and social strengths and needs across the full spectrum of health care settings.* Our member-centered model helps members optimize their benefits and available services to get the high quality health care and support they need. Our care coordination model incorporates health promotion and preventive care services, coordinating care among treating providers, and including social supports that reinforce positive health and quality of life outcomes.

We will bring to Iowa our years of experience and hard-earned lessons, national expertise, population-specific programs, and innovative technology to give our Iowa members voice and choice in receiving the support they need to access the services that enable their health, wellness, and quality of life. In addition, we are also excited to introduce CareMore to Des Moines. CareMore offers a breakthrough model of care delivery that combines wellness, medical supervision, and a revolutionary approach to care coordination for at-risk members who require higher levels of clinical intervention due to complex and/or chronic conditions.

In compliance with 42 CFR §438.208 and all the requirements outlined in the Scope of Work, our integrated case management program drives the processes, policies, procedures, and tools that support the following activities:

- Identification of members with potential or actual case management needs through early screening, comprehensive assessments, and periodic reassessments
- Stratification of risk level for each member based on a multifaceted consideration of available information for each individual
- Placement of members into care coordination based on needs assessment
- Development of integrated care and service plans that addresses physical health, behavioral health, and Long Term Services and Supports (LTSS) needs for members as they transition across all settings
- Reciprocal referrals and information sharing
- Formation of an interdisciplinary team to support the member, providing consistency and continuity of contact with a familiar support system, as well as the expertise of a broader team of specialists as members' needs evolve over time
- Care coordination support for the member in accessing the services he or she needs, including scheduling appointments, arranging transportation, conducting appointment reminder calls, following up to verify service initiation, member progress, and need for service adjustment and incorporation into the care plan
- Ongoing evaluation of our care coordination program, including reviewing, tracking, monitoring, adjusting, and analyzing for outcomes, quality metrics, and performance improvement

Between 2012 and 2013, Amerigroup and our affiliate health plans experienced an overall reduction of 20% in emergency room visits and 26% for inpatient admissions based on claims analysis across disease management programs.

IA_9_COB_1.2r

- Proactive referral to and coordination with Integrated and Chronic Health Homes, as appropriate
- Emphasis on disease prevention, chronic condition management, and increasing member compliance with recommended treatment protocols
- Member education to enhance understanding of healthcare conditions and prescribed treatment
- Member empowerment to take responsibility and self-direct their care and services

Fully Integrated Model

Amerigroup has an established history of systems-level integration administering both physical and behavioral health benefits, as well as integrating disease- and condition-specific expertise in addressing physical and behavioral health conditions with a focus on healthy behaviors. We have built the operational systems and infrastructure and developed programs and services that promote integration and a holistic approach in addressing member health service needs. Moreover, integration addresses psychosocial needs such as housing, education/employment, and meaningful participation in the community through linking and coordinating with community services and supports.

Amerigroup strongly believes in taking a fully integrated approach across the members' systems of care, to meet the holistic support needs including, but not limited to, physical health, behavioral health, oral health, and social and functional supports through LTSS programs and community-based resources. We believe this integrated approach is crucial to improving the member's health and welling and quality of care and services while proactively managing cost efficiencies, emphasizing member informed choice, preferences, access, wellness, independence, and responsibility. We will bring our interdisciplinary team approach to Iowa to assure integrated care delivery in supporting the State's health goals. ***Our approach does not subcontract core components of our care coordination model. Services are integrated internally and promoted with our provider network.***

Our integrated care system incorporates a broad array of services and supports that are organized into a comprehensive service network that promotes collaboration and coordination. The system identifies and addresses health disparities, is culturally competent, and builds on Iowa's strengths.

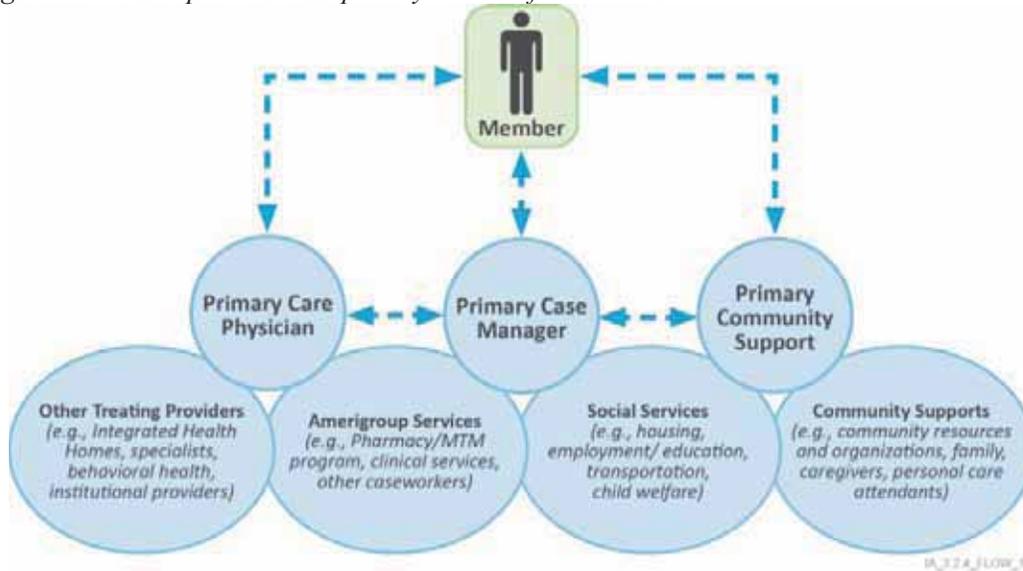

In Iowa, we will use our proven interdisciplinary team infrastructure, processes, and technology tools to assure integration and coordination to promote high quality, cost efficient, and well-coordinated care:

- The member's interdisciplinary team (see Figure 9.1-1) includes the member, family, our medical and behavioral health professionals, LTSS community-based Case Managers, and our health care specialists, Integrated Health Home and Chronic Condition Health Home staff, and HCBS providers who work together on a day-to-day basis and during joint rounds to design and execute a single, member-centered care and services plans based on members' holistic needs and goals
- Providers are a critical partner in integrating care and a key component of the interdisciplinary team. This includes medical, behavioral, and LTSS providers as well as the Iowa dental vendor and community partners providing social supports. We provide a feed of comprehensive, actionable information to empower providers to take a coordinated approach to providing high-quality, cost-effective care and services. We link integration to provider incentive programs and encourage providers to flow information back to the health plan and the State to improve data integration. We have already had discussions with the Iowa Primary Care Association, community mental health centers (CHMC), and the Regional Service Systems for Mental Health and Disability Services (MHDS). We plan to work with these partners and others to collaborate on evolving integrated care clinics and supporting integrated data sharing
- Our interdisciplinary team uses a flexible and member-centered process to meet members where they are, assess needs, risk stratify, and work with members and providers to deliver integrated care and services, emphasizing member choice, access, safety, independence, and responsibility

- Innovative technology tools are available to the interdisciplinary team, our provider partners, and other extended members of the “treatment team” to support integration. This includes our multifaceted, bi-directional care coordination and member information system as well as telehealth platforms

Our interdisciplinary team approach is flexible, such that the team assigned to a given member will include different specialists or shift emphasis based on the member’s evolving situation. We will use specific strategies to serve specialized populations’ unique needs and address key transitions of care and services.

Figure 9.1-1. Sample Interdisciplinary Team Infrastructure

Section 9.1, #1

1. Describe proposed strategies to ensure the integration of LTSS care coordination and Contractor-developed care coordination strategies as described in Section 9.

Amerigroup’s fully integrated care coordination model includes integration of LTSS. Like all other Amerigroup members, members participating in LTSS programs are served by highly collaborative interdisciplinary teams in constant communication and working on the same platform. The consistency of our care coordination model, our team structure, our care coordination processes and procedures, as well as our integrated platform, assures that our members experience the same consistency of high quality support and services from our care coordination programs as their needs evolve in their interactions with us over time.

We deploy a number of strategies to make sure that LTSS remains fully integrated with our other care coordination programs and services:

- *For every member, we assign a Community-Based Case Manager who serves as the main point of contact and leads with the member service planning along with the interdisciplinary team*, selected by the member. Members are matched with a Community-Based Case Manager experience, knowledge, and skills are matched with our members based on diagnosis, complexity of medical and/or behavioral health conditions, and intensity of service and support needs. The assigned

community-based Case Manager has clear overall accountability for coordinating care and services for LTSS members

- We use the same integrated care management platform across physical health, behavioral health, and LTSS
- Our clinical staff operates in co-located regional teams, facilitating constant daily communication among our Case Managers
- Our clinical staff engages in case rounds at least twice per month to strategize on ways to meet the needs of members with complex healthcare needs, including LTSS members. When needed, ad hoc discussions occur on a routine basis with team members so that they can address member needs in a timely manner.

CONTAINS CONFIDENTIAL INFORMATION

- We provide members with a single phone number (a direct line to the Case Manager), which is included in the care management welcome letter

See Section 4.3.2 for more detail on LTSS care coordination.

Initial Screening (9.1.1)

Question 9.1.1, #1

1. Describe your plan for conducting initial health risk screenings.

Initial Health Risk Screening Process

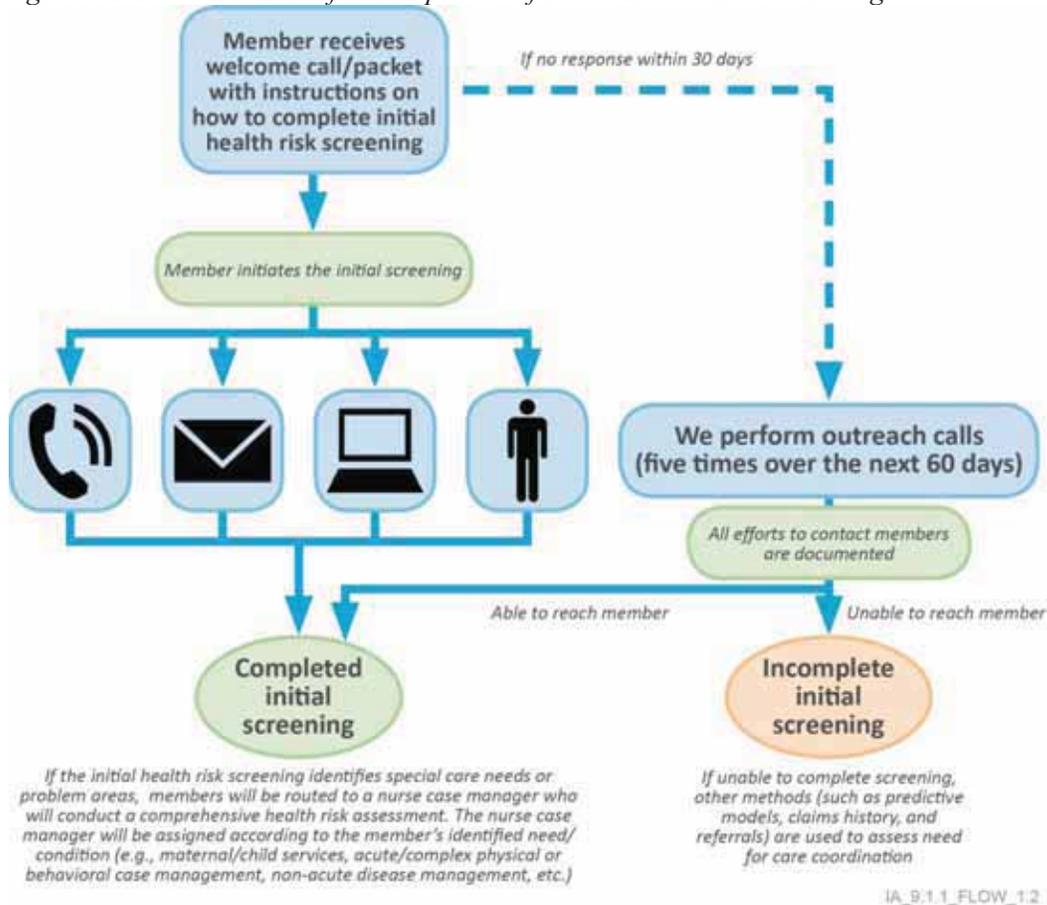

As part of our comprehensive approach for identifying needs of our new Iowa members, Amerigroup will conduct an initial screening on all of our members within 90 calendar days of enrollment. ***The initial screening is our first opportunity to identify immediate physical health and/or behavioral health needs that require expedited appointments with providers, as well as to identify members for disease management, complex case management, behavior health, care coordination, or other programs and services.*** We have established processes to conduct initial health risk screenings for new members, members who have not been enrolled in the prior twelve months, and members for whom there is a reasonable belief they are pregnant. We provide a variety of time-tested approaches to encourage participation and engagement and provide members the opportunity to obtain assistance if needed to complete the screening.

New Members

All new members will receive a welcome packet and member handbook upon enrollment. The packet will include a copy of the initial screener and will give instructions to members on how to complete it via mail (paper form), over the phone, or online through the member portal. In addition, we place welcome calls to all reachable newly enrolled members (except for our institutionalized members), subject to all applicable state and federal regulations. During the call, we will remind the member to complete the initial screening questionnaire from the welcome packet if he or she has not yet done so. The member will be offered to complete the survey telephonically at the time of the welcome call.

If the initial screening is not completed within 30 days of receipt of the welcome call, we will conduct outreach calls to members who have not completed the screener. We will attempt to contact the member by telephone on up to five different occasions to meet the required timeframe for completing the initial screening within 90 calendar days of the member’s enrollment. If we have not received a response by mail or through the member portal, we will complete the initial screening process with the member while on the telephone. All attempts to contact the member will be documented in our care management system. Figure 9.1-2 provides an overview of the process to reach out to members to complete the initial screening.

Figure 9.1-2. Process Flow for Completion of Initial Health Risk Screening

During the welcome call, we will assist our members in choosing a primary care physician (PCP) if the member has not chosen one and assist members in making their first appointment with their PCP. If members indicate on the phone that they have an issue or a need that would benefit from advice from a nurse, a behavioral health specialist, or member services representative, they are connected with that requested resource upon completion of the initial screening. We provide this opportunity while the member is engaged to assist with immediate needs, whether they are clinical or administrative in nature. When appropriate, we will arrange an expedited appointment with a provider.

To encourage all members to complete the screener in a timely manner, we will offer our Iowa members a \$20 member incentive as part of our Healthy Rewards program. Completing the initial screener will officially initiate the Healthy Rewards Program and trigger Amerigroup to send the Healthy Rewards card to members. Our Healthy Rewards Program is described in detail in Section 10.3.

Members Who Have Not Been Enrolled in the Prior 12 Months

Any member who was previously enrolled in Amerigroup, but not within the prior 12 months, will be asked to complete the initial screener again. The process is the same as for first-time new enrollees, as described above.

In addition, when a member transfers from another health plan to Amerigroup, we will:

- Obtain state notification of the member's transfer into Amerigroup from the other health plan
- Evaluate the member's immediate health care needs through outreach and screening
- Review claims and authorization data information received from the prior health plan, as available
- Contact the member's PCP or specialty provider to coordinate care
- Document the member's information in our clinical management system

Upon state agency notification of the member's transfer to Amerigroup, we will quickly engage members in the services and supports they need (including those that the member needs to avoid disruption of treatments, care, or services already underway), encouraging appropriate utilization of services and giving them the information they need to learn for self-management. We will contact the member through a welcome call within 30 days from the date of the state agency notification of the member's expected enrollment date to identify the member's previous health plan and request relevant member information from that plan.

Members for Whom There Is a Reasonable Belief They Are Pregnant

Early identification of members who are pregnant is essential to impact positive pregnancy and birth outcomes. We have established processes and systems that support early identification of members who are pregnant:

- Network providers who develop relationships and engage in preconception discussions with their patients are often among the first to know when a woman becomes pregnant. Our providers are required to furnish notification of pregnancy to Amerigroup upon the member's first prenatal visit.
- New member outreach, including the member handbook, welcome calls, and the self-administered health risk assessment, will include targeted information and questions to help identify women who may be pregnant. Amerigroup will actively work to educate members on the importance of notifying the health plan as soon as possible to access the health care that will support their own pre- and perinatal wellness and that of their baby.
- Members will have 24/7 access to our Member Services and Nurse HelpLine call centers to notify us if they suspect or have confirmed a pregnancy.
- We conduct frequent and ongoing analysis of enrollment files, claims data, laboratory reports, hospital census reports, provider referrals, and self-referrals. Currently, approximately 60 percent of our members who are pregnant are identified upon enrollment.

Amerigroup screens all pregnant members for possible referral into our High Risk OB Program, which is a component of our Taking Care of Baby and Me[®] program. We will initiate a call to provide case management services, particularly reproductive health education, to reproductive-aged women with a history of prior poor birth outcomes, including those with pre-term deliveries at less than 37 weeks. For more information regarding Taking Care of Baby and Me, refer to Section 9.1.3.

Initial Health Risk Screening Tool (9.1.1.1)

Question 9.1.1, #2

2. Submit a proposed initial health risk screening tool. Exhibits and attachments may be included.

Early engagement with our Iowa members will encourage appropriate use of health care services and result in better health outcomes. Amerigroup and our affiliate health plans have extensive experience using and developing different screening and assessment tools that are tailored to the unique needs of the market. We believe that an effective screening tool requires a careful balance of brevity and comprehensiveness. ***Our collective experience across our 19 affiliate health plans suggests the optimal tool must be quick and easy for members to complete, yet provide sufficient insight to uncover areas for additional probing into our members’ physical, behavioral, social, functional, and psychological health needs to further explore their need for enrollment in a care coordination program.***

Amerigroup concurs with DHS’s preference to have a uniform tool across contractors. We understand that the tool ultimately used will be designated by DHS. We are flexible and will adapt, as necessary, to whichever tool DHS designates. Further, we are willing to lead, or at a minimum participate in, a workgroup across contractors and DHS to agree on a uniform screening tool.

As a starting point, Amerigroup proposes a 13-question initial health risk screening to assess the needs of Iowa’s Medicaid populations, as shown in Table 9.1-1. Amerigroup affiliates have had success with similar questionnaires due to the brevity, ease of use, and ability to complete on paper copies for return by mail.

Table 9.1-1. Our Proposed 13-question Initial Health Risk Screening Tool

Initial Health Risk Screening Tool Questions	
1	Do you have any of the following urgent medical or behavioral health conditions? <ul style="list-style-type: none"> • Shortness of breath • Chest pain • Lightheadedness or fainting • Severe pain • Wanting to hurt yourself or others, etc.
2	Do you feel your health is: excellent, very good, good, fair poor?
3	Do you have a history of: <ul style="list-style-type: none"> • Heart disease • Asthma /respiratory illness • Diabetes/pre-diabetes • Cancer • Back pain • Mental illness • Substance abuse • Overweight/obesity
4	In the last year, have you seen your: primary care provider, dentist, specialist?
5	Do you have (a) specialist(s) that you see on a regular basis?
6	How many times have you been to the emergency room in the last year?
7	How many times have you been admitted to the hospital in the last year?
8	How many prescription medications do you take per month?
9	Are you currently pregnant?

Initial Health Risk Screening Tool Questions	
10	During the last two weeks, have you felt: <ul style="list-style-type: none"> • Little or no interest in doing things • Down, depressed or hopeless • Bad or guilty about drinking and/or recreational drug use • Criticized by family or friends about your drinking and/or recreational drug use
11	Do you need help with finding: <ul style="list-style-type: none"> • Transportation • Food/shelter • Quitting smoking • Alcohol/drug treatment • Weight/blood pressure
12	Would you like to discuss ways in which we can assist you to change how you are currently managing your health? If yes, in what area (s)?
13	Would you please provide your current height and weight?

Subsequent Health Status Screenings (9.1.1.2)

Question 9.1.1, #3

3. Describe the methods that you will use to determine whether changes in member health status warrant subsequent screening.

Changes in a member’s status will require additional subsequent screenings to make sure that we continue to properly identify those needing care coordination promptly as needs arise – across physical, behavioral, social, and functional needs. We will ascertain health status changes through continual data mining and claims review, as well as provider notifications and referrals.

Continual Data Mining and Claims Review

Once a member is enrolled in our program, our continual data mining and claims review will help us quickly identify trigger events which would require subsequent screening. Trigger events that will warrant a subsequent assessment include:

- A hospital admission or unexpected facility placement
- New diagnoses (such as chronic obstructive pulmonary disorder, congestive heart failure, diabetes)
- A change in the ability to perform activities of daily living and instrumental activities of daily living
- A significant change in caregiver status (such as a serious illness)
- Homelessness, significant changes in housing situation, or inadequate housing that may necessitate a reassessment and an alternate plan for a member

Each month, the entire member population is evaluated, and candidates for subsequent screening are identified. As we receive data, we monitor our membership through multiple layers of predictive modeling analyses. Our system reviews 12 months of rolling member historical information, including diagnosis and demographics, to predict future outcomes.

Provider Notifications and Referrals

We recognize that a member’s health status is highly fluid. Members who have not been identified through our predictive modeling may still be in need of subsequent screening for care coordination. Our providers and community partners have information and experience working with our members that are invaluable for informing us of the member’s level of service. We therefore have a “no wrong door” policy for accepting referrals. We believe this joint approach to stratification, using both predictive

data analysis of indicators and real-time “eyes and ears” detection of emerging member needs, will enable us to accurately and appropriately assign our members to the level of service that best meets their evolving, individualized needs. Our “no wrong door” policy for care coordination referrals allows us to accept referrals for care coordination from:

- Members (or family/caregivers)
- Providers
- Community-based organizations
- Family and Social Services Agencies
- 24/7 Nurse HelpLine
- Member Services Representatives
- Discharge Planning staff
- Pharmacy Benefits Manager staff

Methods to Maximize Contact with Members (9.1.1.3)

Question 9.1.1, #4

4. Describe methods that you will use to maximize contacts with members in order to complete the initial screening requirements.

Medicaid members can present special challenges and complexities to outreach and engagement by the health plan. Engaging newly enrolled members to participate in the required initial screening is critical to effectively identifying needs and providing members with the care, supports, and services to improve their health.

Frequent, timely contact is one of the most important parts of engagement for effective care coordination. At each contact with our members, we proactively validate their address and phone number and ask for their preferred method of contact. This validated information can be updated in our system by any Amerigroup employee. We can then focus our strategic outreach on members who are identified as having complex health care or psychosocial needs and who may be transient or homeless or face other challenges that affect our ability to engage these members in need.

Based on our experience, we recognize that for many members, significant effort may be required just to reach out and conduct the initial screenings. To provide ease of access and personal choice to our members, we present them with multiple avenues for completing the initial screening. We have several processes in place to conduct initial screenings:

- In person
- By phone
- Electronically through a secure website
- By mail

In Person Communication

Our experience in working with Medicaid members over many years across many states has taught us that, despite all efforts, some members simply cannot be reached through conventional phone, web, and mail outreach methods. ***Our engagement strategies emphasize the inclusion of all stakeholders surrounding the member, and the value of initiating grassroots-level involvement with community organizations to enhance efforts to locate members who are homeless, transient, or otherwise difficult to locate.*** We will work on behalf of our members to engage stakeholders and enlist their support for placing members in our care coordination program.

We will use strategic field-based approaches across local Iowa communities to assist us in locating and engaging our members. The examples that follow demonstrate how we will engage with members in the community in Iowa:

- Facility visits
- Clinic days
- Community Partner Organizations

Facility Visits

Amerigroup works with physical and behavioral health hospital partners, nursing facilities, and intermediate care facility for individuals with intellectual disabilities (ICF/IDs) to facilitate timely notification of admissions, discharges, and transfers as close to real time as possible. We are able to speak with members, either in person or by telephone, during their inpatient stay. These collaborations with facility staff and clinicians also provide our care coordination teams with the opportunity to complete necessary screenings and assessments and to work with the member and family to identify the member's service and support needs prior to discharge, enabling a smoother transition home.

Clinic Days

As we have done effectively in affiliate Amerigroup markets, our plan in Iowa is to partner with physicians, health departments, and other primary care delivery sites to hold Clinic Days. Clinic Days provide the opportunity for members to obtain timely and convenient preventive services, screenings, and diagnostic tests to close identified gaps in care. ***In partnership with network providers, we will host a series of Clinic Days for members who have not received immunizations, other preventive services, or postpartum care or who are due for diabetes or other chronic condition care.*** Our outreach specialists will be on site to engage the members to complete an initial screening, if not already completed. Members will be directed to the office of the provider identified as their PCP. We will coordinate transportation for members, as needed, and members may be eligible for related Healthy Rewards incentives. Clinic Days are another effective way to engage hard-to-reach members and to help assure that members receive necessary preventive services and screenings to maintain health or avoid exacerbation of chronic conditions.

Community Partner Organizations

Amerigroup is committed to building community partnerships in Iowa to reach our members wherever they are. Across all Amerigroup markets, we have a track record for quickly establishing deep collaborative relationships with providers, consumers, advocates, and other organizations to enable creative, local solutions. In cooperation with established community-based organizations, we will deploy outreach specialists to help overcome barriers and engage members for their screening and assessments.

For example, Amerigroup has experience working with Women, Infants, and Children (WIC) Programs in other states. We will require our in-network providers to document and refer eligible members for WIC services. As part of our initial member screening and as part of the initial evaluation of newly pregnant women, our in-network providers will provide and document the referral of pregnant, breast-feeding, or postpartum women, or a parent/guardian of a child under the age of five, as indicated, to the WIC

Program. We also partner with WIC centers to co-locate our clinical and care coordination staff, using this as an opportunity to engage members for screening assessments for our maternity programs.

We also expect that these strategies, shown in Table 9.1-2, will serve to spread awareness of our care coordination programs across organizations throughout Iowa. This awareness will lead to additional avenues for referral of members who may need care coordination support services.

Table 9.1-2. Strategies for Partnering with Community Organizations

Strategy	Approach
Develop relationships with community resources and community access points	We will develop relationships and partnerships with community-based resources, such as locally-based food banks, school-based health clinics, and other community networks. We recognize that the types of barriers our members face may force them to choose between providing food for their children or filling a prescription. It is critical to have partnerships in place with local community resources that can provide members access to food and other basic needs. By assisting members with these needs, we can eliminate barriers and develop trusting relationships that engage members to participate in their health care.
Develop relationships with faith-based organizations throughout Iowa communities	Faith-based organizations may be among the main pillars of working with individuals who are homeless or at risk of becoming homeless. Churches are often the place that people in crisis go for assistance. We will look to develop relationships and garner support in our efforts to locate and engage members who would benefit from care coordination. Faith can play a strong role in people’s approach to their health. Forming strong and trusting relationships with faith-based community organizations informs our Case Managers about our members’ beliefs and cultural preferences. Understanding an individual’s beliefs and adapting our engagement strategies and the delivery of our initial screening will ultimately improve our care coordination for the member.
Develop relationships with and coordinate/participate in events at housing complexes	Across all of our markets, Amerigroup coordinates events at housing complexes. This outreach is a productive avenue for reaching members who may be difficult to contact and who are at risk of becoming homeless. We typically work with public housing and low-income communities to bring multiple resources together for health events. In Iowa, we will continue to create social forums, offer health education screenings, and leverage our outreach with existing community development projects and housing authorities.

Since March 2015, we have identified and met with dozens of community organizations to discuss how we could collaborate. For example, we have already begun to develop relationships with key community partners in Iowa including:

- Brain Injury Alliance of Iowa
- The Iowa Developmental Disabilities Council
- The University Center for Excellence on Developmental Disabilities
- The University of Iowa Center for Child Health Improvement
- Centers for Independent Living

Telephonic Communication

We place welcome calls to all reachable newly enrolled members (except for our institutionalized members), subject to all applicable state and federal regulations. During the call, we will remind the member to complete the initial screening questionnaire from the welcome packet if he or she has not yet done so. The member will be offered to complete the survey telephonically at the time of the welcome call.

All member contact numbers that are found to be no longer connected or accurate are investigated:

- Using Member 360, we analyze data against medical and pharmacy claims to find more current contact information for invalid addresses and unreachable members

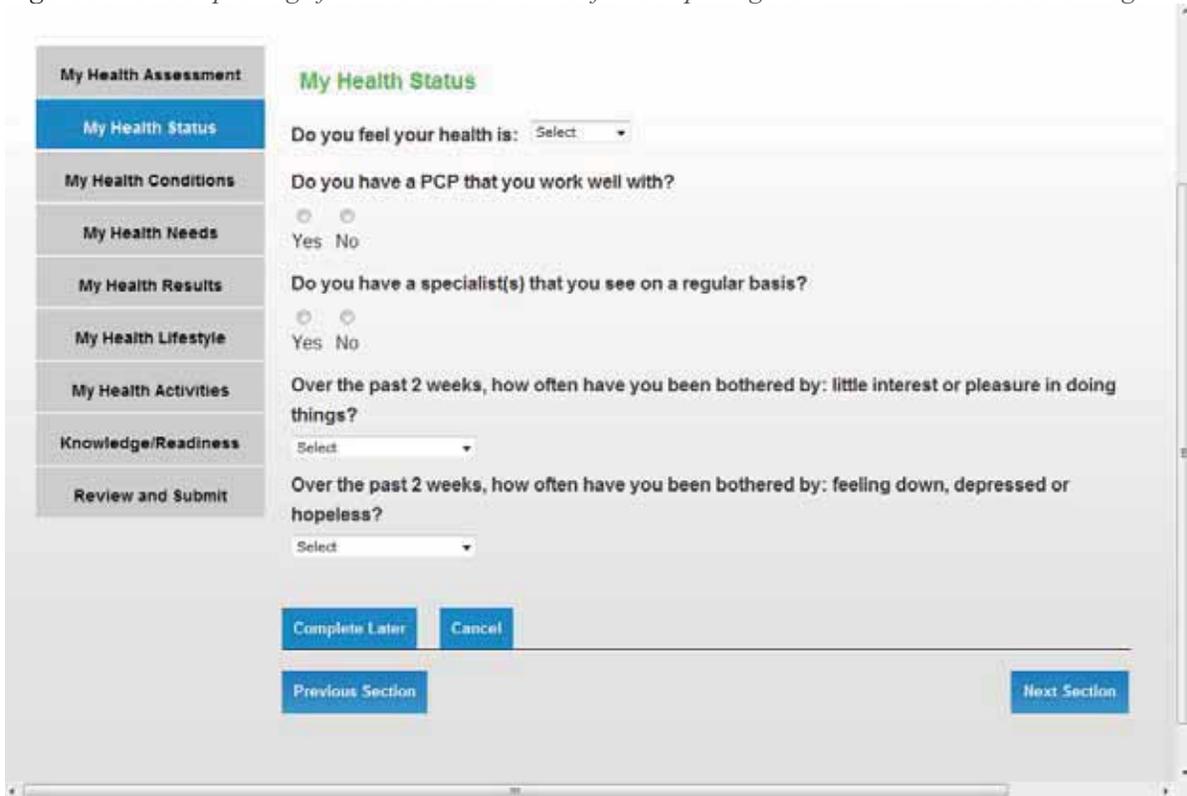

- We analyze data against any other public programs' data that the state may have available – an opportunity that we would like to explore during program implementation
- We mail an approved Unable to Contact letter to the member with a phone number and contact instructions if the we are still unable to reach the member by telephone

If we learn that the member does not have reliable phone service, Amerigroup will help the member obtain a free cell phone through the federal SafeLink Program. Amerigroup facilitates the SafeLink Wireless process by helping members get the phone and, depending upon the wireless plan, up to 250 minutes per month. Additionally, as a Value-Added Service for our members, Amerigroup provides 100 extra lifetime minutes. Amerigroup members can use these cell phones to contact their Case Manager or providers. By providing our members with a free cell phone, our care team and providers will have more consistent and reliable access to these members as well as a communication channel for healthy reminders and text messaging, should they sign up for those programs. This service improves member participation in assessments and care planning and helps members keep appointments, remain adherent to care plans, and complete appropriate follow-up. The SafeLink phones provided to the members will have Amerigroup's Member Services phone number pre-programmed into the device to assist members in contacting us.

Electronically through a Secure Website

While some members may prefer to conduct the screening over the phone, others may prefer to complete the screening on their own using our online format shown in Figure 9.1-3. Members may go online to complete their initial screening using the link provided in the welcome letter as well as shared on the welcome call. If a member has opted to complete the initial screening online and requires additional assistance, we will have resource available by telephone to help walk the member through the questions while online.

Figure 9.1-3. Sample Page from the Online Format for Completing the Initial Health Risk Screening

Mail Communication

Members also have the option to complete the initial screening by mail. Along with the welcome letter, all members will receive a paper copy of the initial screening questionnaire. The welcome packet includes instructions on how to complete the questionnaire and return it to us by mail. We include a return envelope and postage in the welcome packet.

We know from experience that inaccurate contact information is often a significant barrier. We investigate all mail that comes back as undeliverable through:

- A comprehensive analytics program to improve access to accurate, current contact information, and support our ability to engage members (We accomplish this by using a wide range of data sources to gap-fill or correct invalid or outdated member contact information)
- External partners for member data cleansing, as needed, when internal data analytics cannot secure accurate contact information
- Contact with the PCP, hospitals, pharmacies, or other providers that the member has recently visited (based on claims data) to ask for updated contact information

Comprehensive Health Risk Assessment (9.1.2)

Comprehensive Health Risk Assessment Process

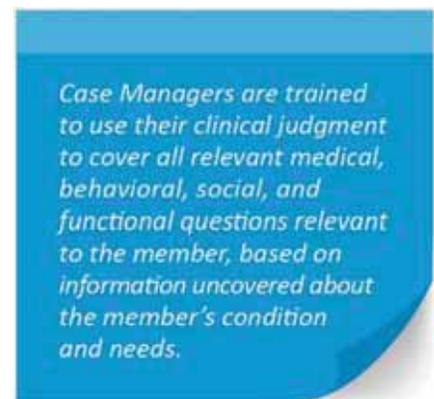

If the initial health risk screening identifies special healthcare needs or problem areas, members will be routed to a Case Manager who will conduct a comprehensive health risk assessment. The comprehensive health risk assessment includes:

- Review of the member’s relevant history (including encounters and pharmacy history)

- Telephonic or face-to-face contact with the member to administer standard assessments (which may include, with appropriate authorization, contact with relevant family members/caregivers and/or significant others)
- Review of the member's referral and/or any completed assessments
- Discussion with the member, caregivers, and/or significant others to identify health- and social-related needs and goals that are important to the individual
- Contact with relevant providers for input on the member's history and current healthcare needs
- Review of relevant disease-specific, evidence-based clinical guidelines

The comprehensive health risk assessment will be tailored to each member based on demographics and areas of need. For example, only pregnant members are asked obstetrics questions, and only children's parents or authorized guardian are asked pediatrics questions. Our Case Managers are trained to use their clinical judgment to cover all relevant medical, behavioral, social, and functional questions relevant to the member, based on information uncovered about the member's condition and needs. At a minimum, every comprehensive Health Risk Assessment will probe on the following areas:

- Health status, including condition-specific issues
- Documentation of clinical history, including medications
- Activities of daily living
- Behavioral health status, including cognitive functioning
- Life planning activities (for example, living wills, advance directives)
- Culturally background and linguistic service needs, such as translation services
- Visual and hearing services
- Caregiver resources and involvement
- Available Medicaid benefits and community resources
- Medical and non-medical fact-finding
- Medical equipment needs

Case Managers are trained to use their clinical judgment to cover all relevant medical, behavioral, social, and functional questions relevant to the member, based on information uncovered about the member's condition and needs.

IA_912_COB

Case Managers who administer comprehensive health risk assessments will be registered nurses and social workers experienced in working across all Medicaid populations. All such Amerigroup personnel will hold a valid Iowa professional license in their respective specialties. Amerigroup Case Managers will conduct comprehensive health risk assessments with the member, the authorized representative, and family or caregivers, when appropriate, and with member consent. Prior to contacting a member, the Case Manager will review all available documentation in CareCompass, our care coordination and management system, to determine whether an in-home assessment is indicated.

Amerigroup understands that proactive identification of the correct level of care coordination support is critical to meeting the member's needs and improving health outcomes. Therefore, there are several avenues for our members to receive a comprehensive health risk assessment:

- When a member is ***identified in the initial screening process*** as having a special health care need or when there is a need to follow up on problem areas identified in the initial screening
- When members are identified for additional care coordination needs through ***subsequent screenings*** as members' needs evolve over time

- When *referred for care coordination* (we accept referrals from all sources, including providers, self-referrals, caregivers or family members, and community-based organizations)
- When *analysis of claims* reveals a major change in status (such as a hospital admission, new diagnosis, change in ability to perform activities)
- When *predictive models* identify members with high-risk, complex, chronic, or co-occurring needs

Special Health Care Needs or Problem Areas Identified in Initial Screen

A Case Manager will evaluate all members whose initial screening indicates that they may benefit from complex case management services. Using risk scores generated through initial screening questionnaires and predictive modeling, we contact those with the highest scores first, making sure that members with the most imminent needs receive a comprehensive health risk assessment quickly as a first step to identifying specific care coordination needs and developing an individualized care or service plan.

Our predictive models will support prompt identification of newly enrolled members as well as those whose scores may escalate between periodic assessments, such as members with newly diagnosed chronic conditions or members newly at risk for facility placement because of a recent fall, the death/disability of a caregiver, or other acute behavioral or physical health needs. If we have exhausted all our attempts to complete the initial screen, we will be able to identify candidates for care coordination programs by running our predictive models, even without data from the initial screening questionnaire.

Referrals for Care Coordination

Our “no wrong door” approach supports identification of members with special health needs through multiple sources. In addition to using the initial screening results, a variety of sources may refer members to one of our programs when they identify a need during contact with a member or based on review of a member’s electronic health records. These sources include:

- Concurrent reviewers/discharge planners
- Staff who review the results of members’ assessments and screenings
- Case Managers
- Disease managers
- Outreach specialists
- Member Services staff
- Nurse HelpLine staff
- Primary care providers
- Other physicians
- Specialists and mental health/substance abuse providers
- Other community providers
- Pharmacy staff
- Family members, caregivers, and guardians
- Member self-referral

Claims Analysis

Amerigroup proactively reviews claims, internally generated reports, screening and assessment results, referrals, and provider information to identify members who may need care coordination services. Our predictive model assigns a risk score based on the member’s attributes, claims, and utilization history, enabling Amerigroup to determine the likely required level of care based on the severity of the score. The predictive model considers past utilization (claims, authorizations), general demographics, and information on aid categories to home in on those members who will benefit most from care coordination. For additional information on our predictive models, refer to Section 9.1.4.

The types of member characteristics we identify for care coordination include:

- Clinically manageable conditions, such as asthma, cardiovascular or pulmonary disease, diabetes, or metabolic disorders – those conditions where care coordination interventions and support have proven to have the highest potential impact on outcomes
- Members with more than three non-emergent emergency room visits and an emergency room Triage Score indicating a likelihood of continued emergency use for low-level visits

- Members at high-risk for admission and readmission to an inpatient setting
- Women with high-risk pregnancies and newborns with complications at or following birth
- Members with serious mental health conditions, such as schizophrenia, bipolar disorder, recurrent major depression, and substance use disorder (see Section 3.2.8 for more detail)
- Multiple medication prescriptions with high or low utilization
- Co-occurring or co-morbid physical and behavioral health

We will identify members who may benefit the most from care coordination through our Continuous Case Finding process that includes predictive modeling tools that enable monthly data mining to identify and prioritize candidates. The process begins each month with a review of the entire eligible member population. Members are identified through review of their available past 12 months of claims data. Additionally, the system considers member historical information, including diagnosis and demographics, to predict possible future risks and care coordination needs. Once members have been identified as potential candidates for care coordination, we will reach out and conduct a comprehensive health risk assessment to further determine the level of care needed.

Health Home Assignment

The results of the comprehensive health risk assessment, in conjunction with our claims analysis, will help to identify members with complex needs – including those with behavioral health conditions, diabetes, or other chronic conditions – that may be appropriate candidates for enrolling in the Integrated or Chronic Health Homes. If a member meets our criteria to be managed by Amerigroup's Complex Case Managers, while also being eligible for chronic condition or integrated health home services, our Case Manager will specifically reach out and coordinate with the health home care coordinator. We will also proactively reach out to these members, inform them about health homes, and assist in enrolling them, as appropriate.

Our Case Manager is alerted once health home enrollment is complete through our data systems, which track members assigned to a specific health home, as well as the member's primary care physician with enrollment dates. The collaboration and coordination with the health home care coordinator facilitates a robust care coordination plan without duplicating activities and services.

Additional details on health homes are included in Section 3.2.9 and 3.2.10.

Comprehensive Health Risk Assessment Tool (9.1.2.1)

Question 9.1.2, #1

1. Submit a proposed validated comprehensive health risk assessment tool. Exhibits and attachments may be included.

Amerigroup proposes for Iowa our proprietary comprehensive health risk assessment tool, which we use across our affiliate plans in 19 states. It has been developed specifically to assess the needs of different Medicaid populations and meet NCQA requirements. *Amerigroup Case Managers use our comprehensive health risk assessment tool to conduct an in-depth clinical assessment in which they gather information about the member's health status and needs, across physical, behavioral, social, functional, and psychological health.* The assessment uses a hierarchy and branching logic to probe into more than 20 potential clinical areas for risk factors and includes specialized assessment modules for specific conditions or populations, such as behavioral health, maternal health, or pediatrics. See Figure 9.1-4.

For example, when the Case Manager identifies during assessment an existing or potential mental health or substance abuse issue, the Case Manager asks the behavioral health questions to gather more detailed information on the member’s specific diagnoses, mental health and substance abuse history, current providers, co-morbidities, and service needs. The Case Manager initiates additional questioning as needed to gather details on the acuity level for a member’s conditions. This information helps determine the member’s need for case management services based on complexity, severity, intensity, and risk.

Figure 9.1-4. Sample of Specialized Assessment Modules

Table 9.1-3 shows the minimum assessment that adult Medicaid members receive before branching off to further specialized assessments. While the full set of questionnaire permutations is too long to include as an exhibit in this document, we would be happy to supply it to the State upon request.

Table 9.1-3. Questionnaire from the Comprehensive Health Risk Assessment

Question	Branching logic
General Information 1	
Is the address and phone number correct?	
If no, please explain	
Do you have an alternate contact person/phone?	
If yes, please explain	
Are you being case managed by another agency?	
If yes, explain	
General Information 2	
Do you have a spoken language preference?	
Does the member speak another language at home?	
How well does the member speak English?	
Do you have a written language preference?	
Does the member require a translator?	
What is the member’s race? Note: Explain that Asian is: Asian Indian, Chinese, Filipino, Japanese, Korean, or Vietnamese. Explain that Other Asian is Native Hawaiian, Guamanian, Chamorro, Samoan, or Other Pacific Islander.	
What is the member’s Ethnicity? Are you of Hispanic, Latino/a or Spanish origin (such as Puerto Rican, Latin American, Mexican, or Cuban)?	
General Information 2-Race/Ethnicity Questions	
If Asian was selected, please ask member if they are Asian Indian, Chinese, Filipino, Japanese, Korean, or Vietnamese.	
If Other Asian was selected, please ask the member if they are Native Hawaiian, Guamanian, Chamorro, Samoan, or Other Pacific Islander.	
If yes was selected in the Ethnicity question, please ask the member if they are Mexican/Mexican American/Chicano, Puerto Rican, Cuban, or Another Hispanic/Latino.	

Question	Branching logic
General Information 3	
What, if any, beliefs do you have that you feel may impact your ability to make healthcare decisions or follow your doctor's instructions ?	If N/A, branch to General 3
Do you have any other Health Insurance coverage?	
If yes, explain	
In general, would you say your health is excellent, very good, good, fair, or poor? On a scale from 1-5, 5 is excellent, 4, Good, 3 is Average 2 is Fair 1- Poor.	
Do you see your Primary Care Physician regularly for check-ups?	
Is the PCP an Amerigroup provider?	
When was your last PCP visit?	
Are you Pregnant?	If yes , go to OB Assessment, (next page final) If male, do not show; if female, show.
CM Program Summary	
Would you like assistance with the management of your health by participating in our intensive care coordination program?	
If no, please explain	
When is a convenient date to call?	
When is a convenient time to call?	
ER Use 1	
How many times have you visited the ER in the last year? (Note: For any answer other than "None" you will be directed to the condition list to enter the related diagnosis after completing this page).	If "None", branch to Inpatient 1
ER Use - Condition List	
Condition List Module	
ER Use 2	
Did you try to call your PCP/regular doctor/Nurse Helpline before you went to the ER?	
Did you call your PCP/regular doctor after you went to the ER to update them that you went to the ER?	
ER Use 3	
For your visit(s) why did you use the ER?	
If other, please explain	
What instructions were you given or what happened after you left the ER?	
If other, please explain	
Inpatient 1	
How many times have you been IP in the last year? (Note: For any answer other than "None" you will be directed to the condition list to enter the related diagnosis after completing this page).	If none, branch to health history If none and the focus area is DM, branch to BMI
Inpatient- Conditions List	
Condition List Module	Link to condition list

Question	Branching logic
Inpatient 2	
Date of your last IP admission?	
What was the reason for your admission?	
If other, please explain	
How much time between admissions? (CM note the number of weeks)	
Was the diagnosis the same?	
Health History	
I'm going to run through a list of conditions with you and you can tell me if you've had any of these conditions?	
What is the date of onset of each condition?	
Are there any other conditions that have not been mentioned?	
If yes, explain	
What is the date of onset of each condition?	
CM: If the member has Allergies, would you like to be brought to the Allergy List?	If yes, branch to Allergy (Module)
Allergy	
Allergy List Module	
Medication 1	
Do you take prescription or OTC meds? (Note: If yes you will be directed to the Medication List after completing this page).	If yes, branch to Medication List If yes, and the focus area is DM, branch to DM Medications
Medication List	
Medication List Module	Branch to Medication List
Medication 2	
Have you been able to take your medication(s) as directed?	
Any difficulties getting RX filled?	
If yes, please explain	
Are side effects keeping you from taking your Rx?	
If yes, please explain	
Has your medication been checked for potential OTC/Prescription Interactions?	
Healthcare Provider Utilization	
Have you seen a dentist?	
If yes to dentist, when was your last visit?	
(For CM response only. Do not ask member this question). Has member been to the dentist within the past year?	
Are you seeing any other Healthcare Providers other than your PCP?	
Diabetes Content	
CM: If the member has Diabetes, ask the following questions:	
Have you seen an Ophthalmologist (Eye Specialist)?	
If yes, when was your last visit?	
Have you seen a Podiatrist?	
If yes, when was your last visit?	
Other Healthcare Providers Address Book Content	
CM: If the member answered Yes to any other Healthcare Provider, you will be directed to the Address Book to review or update other Health Care Providers?	
Other Health Care Providers- Address Book	
Address Book Module	Link to Address Book

Question	Branching logic
Cognitive	
Does the member show signs of cognitive impairment?	
If so, please explain	
What is today's date?	
(Directions to CM: say all three words below at once and ask to repeat) I would like to test your memory. Please say these words: Pencil, Apple, Table	
If unable to assess, please explain why.	
Mental Health 1	
In the last year have you received treatment for a substance abuse problem?	
Do you use drugs other than the medicines your doctor wants you to take? (Recreational or Illicit)	If answer to this and the previous question are both "No", go to the Mental Health 2 section (skipping the next 2 questions)
Do you drink Alcohol?	
Mental Health 1a	
Have you been told you should cut down on your drinking or drug use in the last 3 months?	
Have you felt guilty or bad about how much you drink or use drugs in the last 3 months?	
Mental Health 2	
In the last year, have you been treated for depression or any other mental health condition?	
During the past month have you been bothered by feeling depressed, down or hopeless every day or most days?	
Have you recently noticed any symptoms such as seeing or hearing things that are not there, your mind playing tricks on you, or other "thinking" problems?	
Have you had periods of feeling excessively tense or anxious or overwhelmed by anxiety in the last 6 months?	
In the past three months have you had thoughts of hurting yourself or anyone else? (CM if answered YES assess immediately for imminent danger)	Show: If Yes, assess immediately for imminent danger
CM: IF MEMBER ANSWERED YES TO ANY OF THE MH QUESTIONS OR IF YOU HAVE CONCERNS ABOUT BH ISSUES, ADMINISTER THE BH GENERAL ADULT OR BH PEDS HRA.	
Smoking/Tobacco	
Current smoker status	
When was the last time the member smoked?	
Special Needs/Functional Status	
Is the member blind or have serious difficulty seeing even when wearing glasses?	
If yes, do vision problems interfere with the ability to carry out normal daily activities?	
If yes, how does the vision problem affect you?	
Does the member have a communication preference? If yes, please explain.	
Do you have hearing problems?	
If yes, please explain.	
Assistance	
Do you need assistance with any of the following activities of daily living?	
If you need assistance with any other daily living activities not listed, please explain	
Does the member have difficulty doing errands alone such as visiting a doctor's office or shopping due to a physical, mental, or emotional condition?	

Question	Branching logic
Do you have family/caregiver to assist you if needed?	
Describe support system and/or need.	
Describe the level of involvement.	
Nutrition	
Do you have any problems with nutrition?	
Any difficulties obtaining food?	
If yes, please explain	
Do you have someone to assist you in your care?	
If yes, please explain	
If yes, describe the level of involvement.	
Are you involved in any program or receiving services that help support your care?	
If yes, please explain	
If no, does the member need community resources?	
If yes, provide list of resources given.	
Fall Risk	
Have you fallen within the last month?	
If no, do you feel you are at risk for falling?	
If yes, please explain.	
DME/Supplies	
Do you have any Durable Medical Equipment (DME) or Supplies in your home?	If yes, branch to DME/Supplies 2
DME/Supplies 2	
Do you have any of the following Durable Medical Equipment (DME) or supplies in your home?	
If DME/Supply is not listed above, please explain	
Has your physician suggested other medical equipment/supplies that you are unable to obtain?	
Home Health Care	
Are you currently receiving Home Nurse/Therapy Visits?	
If you are receiving Home Health Visits/Private Duty Visits not listed, please explain	
Outpatient Professional Services	
What outpatient service are you currently receiving?	
If you are receiving Outpatient Professional Services not listed, please explain	
How are these services meeting your needs?	
Any interruptions or difficulties?	
If yes, please explain	If the focus area is DM, branch to Vital signs
Preventative Health	
Which of the following you've had in the last two years?	
Have you had the flu shot in the last year?	If yes, Go to Vaccination Tracker
Other	If yes, Go to Vaccination Tracker
Preventative Health - Vaccination List	
Vaccination List Module	
Social Issues/Barriers	
Do you have any of the following social concerns?	
If other, please explain	

Question	Branching logic
Do you have a Housing concern?	
Do you have a Safety concern?	
Do you have a Violence/Abuse concern?	
End of Life Planning	
Do you have any of the following in place?	
Does the member have any of the following?	
Member Rights	
Did you know that Amerigroup has a Nurse HelpLine that is available 24 hours a day/7days a week for our members?	
If no, you can contact our Nurse HelpLine at 1-800-xxx-xxxx?	
Did you know that you have the right to “opt-out” of Intensive Medical Coordination programs?	
Member Rights – 2	
For CM only: Information concerning CM Services can be found on our member website www.amerigroupcorp.com . If you have any questions regarding recommendations given to you by the CM Coordination Team, please contact your PCP	
Did you know that as an Amerigroup member you can expect that our medical records and communications will be treated confidentially and will not be released without your permission?	
Did you know that you have the right to have Amerigroup act as a patient advocate?	
You have the right to file a complaint with Amerigroup and be told how to make a complaint. This includes knowing how Amerigroup answers complaints on time. It also includes knowing how quality issues are taken care of.	
If you have any questions or need help understanding or reading information received from Amerigroup please call member services at 1-800-xxx-xxxx.	
Assessments	
Select additional Assessments at this time?

17- MS	
18- Neuro	
19- Obesity	
20- PDN	
21- TBI	

Timeline for Completion of Health Risk Assessments (9.1.2.2)

Question 9.1.2, #2

2. Propose the timeframe in which all comprehensive health risk assessments shall be completed after initial member enrollment.

It is our goal from program launch forward to perform all initial screenings and comprehensive health risk assessments promptly so that we can rapidly engage members in care coordination services when appropriate. Amerigroup will conduct initial screenings within 90 calendar days of the member's enrollment and will complete comprehensive health risk assessments, as applicable, within 30 days of the initial screen. *We know that the sooner we perform an assessment, the sooner the member's unmet needs can be addressed and continuity of care and services can be promoted.* Therefore, we will prioritize the scheduling of comprehensive health risk assessments so that members with the most urgent needs can be assessed as soon as possible after identification. All members will be assessed based on this priority ranking.

To make sure that we complete the comprehensive health risk assessments within the above timeframe, our care management system will generate a list of all members who need to receive one and will flag and send reminders for any approaching due dates. Our Case Managers will initiate a comprehensive health risk assessment for identified members within five business days of receiving the referral, not to exceed two weeks of accepting the member into care coordination. At minimum, our Case Managers will call twice and send out one letter as attempts to contact each member who needs to complete the comprehensive health risk assessment. In some cases, in-person assessments may be required. It may take multiple visits/calls to complete the assessment; however, the entire assessment will be completed within 30 calendar days of the initial screen. If we have not been able to complete the assessment in 30 days (after making and documenting the above efforts), we will close the case and monitor for further needs.

Question 9.1.2, #3

3. Describe how the assessment process will incorporate contact with the member and his/her family, caregivers or representative, healthcare providers and claims history.

Comprehensive Health Risk Assessment Process

As stated in Section 9.1.2, the comprehensive health risk assessment process includes multiple inputs with focus on the following:

Review of the Member's Claims History

Review of the member's relevant history through claims analysis is a core part of our standard approach to comprehensive assessment. Claims and encounter data are a valuable source of information about a member's health care utilization, and lack of claims can indicate gaps in care. As a part of the comprehensive health risk assessment, our Case Managers review the member's relevant history, including utilization, encounters, and pharmacy history. If the State of Iowa provides Amerigroup with two years of claims history for members enrolled in our program, we will incorporate this data into our health risk assessment process as of day one.

Contact with the Member and His/Her Family, Caregivers, or Representative

We conduct comprehensive health risk assessments either over the phone or in person, as requested by the member. Face-to-face assessments will be conducted in the setting of the member's choice. We will conduct the assessments in the member's primary spoken language, using a qualified interpreter when

needed. If necessary, the assessment can be completed across more than one contact for members who tire easily or need additional time. With appropriate authorization from the member, we will invite relevant family members, guardian, caregivers, and/or significant others to participate in the assessment. Through a discussion with the member, caregivers, and significant others, we will identify health- or social-related needs and goals that are important to the individual and any potential barriers to those goals.

Contact with the Member's Health Care Providers

Amerigroup Case Managers will contact the PCP and other relevant treating providers or professionals for input on the member's history, current health care needs, and plan of treatment when completing the comprehensive health risk assessment. As applicable, we will inform the member of who is being contacted to obtain information.

Our Case Managers also consult on complex situations or diagnoses during integrated rounds with our clinical staff, which includes our Chief Medical Officer, nursing staff, Behavioral Health Medical Director and behavioral health clinicians.

Care Coordination (9.1.3)

Question 9.1.3, #1

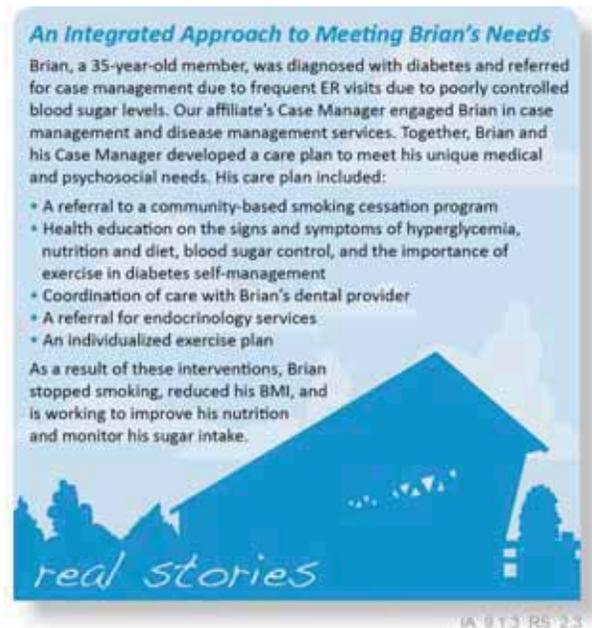

1. Describe in detail your proposed care coordination program including selection criteria and proposed strategies.

Overview of Care Coordination

Amerigroup will bring to Iowa our member-centric, integrated care coordination program developed over 24 years to monitor and coordinate the care for our members with special health needs across all Medicaid populations. We do not subcontract any key part of our care coordination model, giving us superior consistency and quality control and enabling a seamless member experience. The physical health, behavioral health, LTSS, and pharmacy needs of our members are managed by a consistent, assigned team, using a consistent process, in a fully integrated manner.

Our established processes, robust systems, and experienced people support early and effective identification of members with special health needs and members with new, unmet, or undiagnosed needs, including the following:

- Members who have identified physical or behavioral needs
- Members with recent inpatient admissions, including physical and behavioral health facilities
- Frequent users of emergency room (ER) services
- Reproductive-aged women who are expecting or recently delivered a child with a poor birth outcome
- Children with multiple gaps in care or not participating in such services as EPSDT visits, annual well checks, dental care, and early intervention screening

- Members with existing or potential chronic care or disease management needs
- High or concerning utilizers of pharmaceuticals, such as two or more prescriptions in one drug classification

Using retrospective two-year claims data from the State, Amerigroup will quickly and effectively be able to identify members new to our plan who may have initial or ongoing high-risk, complex, chronic, or co-occurring needs and those members who may need additional support or referral during and after the transition. We will review provider types, procedure codes, dates of service, and other indicators to identify existing care coordination support needs among our members.

Each member is stratified based on his or her level of risk for adverse outcomes. This allows us to identify members with complex and specialized health needs and conduct outreach to provide them with the services and supports they need for positive health outcomes.

Our comprehensive care coordination program will include the following components:

- Catastrophic/complex case management
- Disease management
- Programs to target members overusing and/or abusing services
- Discharge planning
- Transition planning
- Care coordination for populations with specialized needs
- Health promotion

Catastrophic/Complex Case Management

Amerigroup’s most intensive level of support is our catastrophic case management program (which we refer to as complex case management), a fully integrated physical health, behavioral health, and LTSS model designed to address each member’s health care and social support needs.

Amerigroup uses local and national expertise, specialized programs, and innovative technology to give our members voice and choice in receiving the care needed to support their health, wellness, and quality of life goals. Our case management model is person-centered and helps members optimize their use of benefits to get high quality health care across settings. It emphasizes coordinating health care services, supports, and resources that address all members’ needs, incorporating health promotion and preventive care services, coordinating care among treating providers, and integrating social supports that reinforce positive health and quality of life outcomes.

COMPLEX Case Management

- Identification**
Members are identified for enrollment into case management from data analysis, risk stratification, or referral. The Continuous Case Finding process reevaluates our entire membership monthly helping to ensure members receive the appropriate level of case management support.
- Enrollment**
Members are enrolled into complex case management (longer term) or stabilization case management (short term).
- Assessment**
Case Manager (CM) completes a comprehensive health risk assessment with member and his or her family.
- Care Plan Development**
CM develops an individualized, member-centric care plan with the member, family, and PCP.
- Care Plan Implementation**
CM implements the care plan, providing health education and coordinating physical health, mental health, substance abuse, and social support needs with providers, community-based organizations, and agencies.
- Care Plan Assessment/Reassessment**
CM periodically assesses member’s progress, revises goals, and modifies level of support up or down as needs change.
- Care Plan Completion**
CM, member, and his or her family determine support needs are met. Member transitions to a lower level of support such as disease management or health promotion.

Our complex case management model includes the following seven core components as detailed below:

1. Identification
2. Enrollment
3. Assessment
4. Care plan development
5. Care plan implementation
6. Care plan assessment/reassessment
7. Care plan completion

Identification

Proactive identification of individuals in need of complex case management is critical to improving the health outcomes of Iowa Medicaid members. We identify members for enrollment in complex case management through data-driven risk stratification and manual referrals.

Amerigroup's evidence-based predictive modeling tools enable us to stratify all members appropriately based on their level of risk for adverse outcomes. Our tools consider a member's chronic illnesses, likelihood of inpatient admission including the risk of first time admission for a mental health or substance abuse condition within two months, and risk for future emergency room use. Each member is assigned a risk score that correlates to a projected level of care coordination support. Members stratified into the highest risk group are assigned to complex case management. We continually evaluate our entire membership's risk level by mining updated data and claims monthly and applying our predictive modeling tools.

In addition to prospectively identifying members for enrollment into care coordination, a variety of sources or individuals may refer members to one of our programs when they identify a need during contact with a member or based on review of a member's electronic health records. These referral sources include but are not limited to providers, Case Managers, family/caregivers, and the members themselves.

Enrollment

Each member enrolled in complex case management is assigned a single Case Manager best qualified to meet the member's needs.

- Members with clinically manageable conditions, such as asthma, cardiovascular or pulmonary disease, diabetes, or metabolic disorders, are assigned to a physical health (nurse) Case Manager
- Members with serious mental health conditions, such as schizophrenia, bipolar disorder, recurrent major depression, and substance use disorders, are assigned to mental health and substance abuse Case Managers, who address members' co-morbid mental health and substance abuse issues
- At-risk pregnant members are assigned to a maternal and child health Case Manager who addresses the full range of the member's needs

Following assignment, the Case Manager contacts the member to complete a comprehensive assessment.

Assessment

The assigned Case Manager contacts each member to confirm interest in complex case management services and to help ensure active participation and the greatest benefit from case management services. Members who decline case management may be reengaged when they experience a change in health care status such as an inpatient admission.

Once the member agrees to engage complex case management, the Case Manager assesses the member's clinical and social support needs, identifies gaps in care or potential barriers to success, and initiates member-centric care planning.

The Case Manager uses our comprehensive HRA tool to conduct an in-depth clinical assessment in which he or she gathers information about the member's health status and needs across physical, behavioral, social, functional, and psychological health. The assessment uses branching logic to probe into more than

20 potential clinical areas for risk factors and include specialized assessments for specific conditions, such as behavioral health or maternal health.

Care Plan Development

Case Managers develop an individualized, person-centered care plan that incorporates the interventions necessary to improve the member's health status across all conditions and reflecting each individual's goals and preferences. Amerigroup's care management platform includes templates for complex case management care plans with evidence-based interventions for specific diagnoses, such as bipolar disorder, diabetes, or substance abuse, and specific needs such as nutritional management. The care plan helps engage the member, family, PCP, treating providers, and, as appropriate, other agencies and programs providing services to the member by:

- Identifying and prioritizing member biopsychosocial needs and the strengths that will support achievement of health goals and objectives
- Developing achievable, measurable, short- and long-term goals and objectives with members
- Engaging families, caregivers, and natural supports for planning and member support
- Identifying specialty or other providers that are aligned with the member's condition and needs
- Linking members to community-based supports and resources
- Using clinical practice guidelines (CPGs) that support member adherence to prescribed medications and monitor provider prescribing practices
- Emphasizing personal responsibility, healthy lifestyle choices, and routine preventive care

For members new to Amerigroup who were receiving complex case management services at the time of transition to our health plan, our Case Managers will facilitate a seamless transition. Our Case Managers will review the previous care plan, arrange continuity for all medically necessary and preventive and specialized care and services, identify any gaps in care, and arrange services to close the care gaps.

Care Plan Implementation

The member's PCP and other treating providers are an integral part of the interdisciplinary team. The PCP plays a key role in overseeing the member's primary care needs, including receipt of preventive care and coordination of specialty services. The PCP and other treating providers are engaged by the member's Case Manager, who coordinates the member's care plan with treatment plans to provide holistic management. Providers may also participate in our complex case rounds by teleconference, facilitating coordination of the member's care and treatment plans.

Providers also may access information to support coordination of care and services through the provider facing Member 360 application. Member 360 combines data and information from various sources into a single record comprising a holistic picture of the member's utilization, care coordination services, and gaps in care. Providers who have members attributed to them can see their records through the Amerigroup secure provider portal, giving them simple, easy-to-access data and information to assist them in engaging members in their health and well-being.

The integrated data are displayed, making it easier for providers to act and verify that their patients are getting the services they need. This view enables any provider treating our members to see the full picture, including care plans and assessment information.

Our Case Managers work closely with members, their family, PCPs, and other providers, including noncovered services providers, schools, social service agencies, and community-based organizations, to deliver services that support the outcomes identified in the member's care plan. Because we hire our Case Managers from the local community, they are experts on community resources and the local provider network. Our mental health and substance abuse Case Managers are experienced working with members who may be involved with multiple agencies or who have co-occurring mental health, substance abuse, and physical health conditions that make it challenging for them to navigate the system.

Additionally, Amerigroup will deliver an information-sharing and collaborative platform where interdisciplinary team participants can review and contribute to the care plan, as authorized by the member. The platform is operational today in several states serving members with disabilities and mental health and substance use conditions, including individuals with intellectual and developmental disabilities or those with a serious mental illness. Through our platform, we will strive to deliver the right information to each audience in a way that supports understanding, coordination, and action in the context of role-based authorization and access. Working together, we can help support our Iowa members in directing a meaningful plan with their desired health and quality-of-life outcomes.

Care Plan Assessment/Reassessment

A care plan is a dynamic roadmap that changes as members' needs progress or evolve. Case Managers regularly monitor member progress at a frequency indicated by the member's risk level and work with the member and his or her family/caregivers to evaluate the member's progress and identify solutions to overcome barriers that may stall progress. Case Managers also work closely with the member's PCP and other providers as necessary to assess the member's progress and needs in order to properly adjust the care plan to meet the member's health goals.

Amerigroup conducts complex case rounds at least once per week: our Chief Medical Officer, Mental Health Director, and Substance Abuse Medical Director lead a team of nurses, mental health and substance abuse clinicians, social workers, a nutritionist, pharmacist, and other Medical Directors to strategize on how to meet the holistic needs of members with complex co-morbid needs. The team collaboratively shares information and jointly recommends changes in care plans to best serve members as they move toward achieving their goals.

For members readmitted to an inpatient setting for a physical health, mental health, or substance abuse condition, we review their previous discharge plan, the factors that led to the readmission, and any unmet needs that must be addressed for the member to successfully transition the member back to the community.

Care Plan Completion

Through the process of continual assessment and reassessment of a member's health status during the case management process, if our Case Managers determine with the member and his or her family/caregivers that the member's goals for complex case management have been met and the member's condition has improved sufficiently, members will be transitioned to either a lower level of care coordination (such as disease management) or will be removed from active case management and put on continued surveillance and health promotion.

The primary goal of our case management model is to provide members with needed support during difficult times in their lives, while providing them with the necessary education and tools for them to take ownership and responsibility for their own health care. We realize achieving this goal is different for every member and is based on his/her condition, symptomatology, engagement, progress, literacy, and support system. Therefore, Amerigroup has written processes, policies, and procedures for closing case

management services and is careful to only terminate these services under acceptable circumstances, especially for members with specialized health care needs. These circumstances include:

- Upon agreement between the member and Case Manager when the member achieves goals identified in the care plan and is stabilized through access to primary care, home and community-based services and supports, as well a natural support involvement
- When the member no longer participates in case management activities or communicates with the assigned Case Manager
- When the member is no longer enrolled with the health plan

Prior to closure, Amerigroup's behavioral and medical clinical leadership will review cases considered for case management termination during weekly integrated clinical rounds with the assigned Case Manager. They will identify the reason for closure and any potential opportunities for a member in need to continue in case management. Upon approval, the assigned Case Manager will enter case management closure in CareCompass and send written notification to PCPs.

Disease Management

We have established processes, policies, and procedures based on 24 years of experience serving members with chronic illnesses who receive their health care from government-sponsored programs across the nation. The key feature of Amerigroup's Chronic Care/Disease Management program is our member-centered focus and approach. ***We support member behavioral, social, and physical health care needs by providing individualized services by screening, assessing, and developing tailored member interventions while working collaboratively with the member, family, guardians, caregivers, providers, and others involved in the member's care.***

Amerigroup offers twelve Chronic Care/Disease Management programs for our members, including eight programs with NCQA accreditation.

NCQA accredited programs:

- Asthma
- Coronary Artery Disease (CAD)
- Congestive Heart Failure (CHF)
- Chronic Obstructive Pulmonary Disease (COPD)
- Diabetes
- HIV/AIDS
- Major Depressive Disorder
- Schizophrenia

Additional Chronic Care/Disease Management programs

- Bipolar Disorder
- Hypertension
- Substance Use Disorder
- Weight management services

We realize our members often must make significant changes to their lifestyles and daily living behaviors to achieve sustainable progress in health outcomes related to chronic conditions. Delivering health education has limited impact unless it is framed by members' readiness to make those changes and addresses their individual ambivalence about adopting new behaviors. Amerigroup achieves positive outcomes by encouraging member education and self-care through motivational interviewing, collaboration, and coordination of health care services and supports through our providers and by providing interventions within a holistic care coordination model.

Disease Management is a multidisciplinary, continuum-based approach to health care delivery that proactively identifies populations with or at risk for chronic medical conditions and identifies the gaps, incidence, and prevalence of these conditions within the populations. Disease Management programs are selected based on analysis to identify high volume conditions in which there is a potential to improve member self-management.

As detailed below, each of our Disease Management programs include the following seven core components:

1. Population identification processes
2. Chronic disease care gaps identification
3. Evidence-based practice guidelines
4. Collaborative practice models to include both the member’s primary health care practitioner and other members of the health care team
5. Member self-management education
6. Process and outcomes measurement, evaluation, and management
7. Routine reporting and feedback loops

Population Identification Processes

Under the direction of our Chief Medical Officer, we conduct frequent and ongoing prospecting activities to identify conditions that are chronic in nature, usually lasting three months or more, that are impacted by health-damaging behaviors, such as tobacco use, lack of physical activity, poor hygiene, and poor eating habits. We review and analyze available data, including any claims data provided by the State; daily census reports; open authorizations; member demographics, including diagnoses; behavioral health, pharmacy, and dental utilization reports; notification of pregnancy for members with prior poor birth outcomes; and case management enrollment.

Disease Management

- Identification**
Members are identified for enrollment into disease management from data analysis, risk stratification, or referral. The Continuous Case Finding process reevaluates our entire membership monthly helping to ensure members receive the appropriate level of disease management support.
- Gaps in Care**
Gaps in care are identified through case manager evaluations, claims history, data analysis, predictive modelling, screening and assessment results, and referrals.
- Evidence-based Practice Guidelines**
Our disease management efforts are based on nationally recognized standards and are continually reviewed to ensure quality.
- Collaborative Practice Models**
Our disease management models include working with PCPs and other providers.
- Member Self-Management Education**
Our disease management program fosters member education on how best to self-manage chronic conditions, address gaps in care, work with disease managers and providers, and achieve health goals.
- Measurement and Evaluation**
We measure and assess the quality of our disease management program, and identify and implement steps to improve.
- Reporting and Feedback Loops**
Disease managers assess members’ progress, revise goals, and modify levels of support up or down as needs change.

Chronic Disease Care Gaps Identification

Amerigroup has a variety of means to identify and continually assess members who may have chronic disease care gaps, including:

- Clinical expertise of Case Managers who develop relationships with our members and their families or caregivers
- Claims history
- Data analyses that identify risk indicators, such as under- or over-utilization of medications, frequent emergency room visits, and recent inpatient admissions
- Predictive modeling and risk stratification results
- Screening and health risk assessment results
- Real time referrals from providers, community partners, and others who have ongoing “eyes and ears” on our members on a daily basis

We recognize that our members' needs may frequently fluctuate across the spectrum of services and supports needed to prevent deterioration of their functioning, manage difficult or painful symptoms, and preserve their emotional and physical well-being. Our Case Managers continually monitor members through telephonic or in-person contacts and are trained to adjust the level of intervention as required by the member's physical and behavioral health status.

Evidence-based Practice Guidelines

Amerigroup has adopted standardized definitions to clearly define our disease management program that draw upon industry standards, guidelines, and regulatory requirements. Our disease management program content is based on current evidence-based guidelines referred to as clinical practice guidelines (CPGs). These CPGs are systematically-developed, evidence-based tools that help practitioners make decisions about appropriate health care for specific clinical circumstances.

The guideline adoption process begins when the proposed guideline is reviewed by a minimum of two board-certified practitioners in the related specialty. They are asked to review, comment, and offer recommendations for adoption or rejection of the guideline. Nationally endorsed clinical guidelines may not be available for every condition managed. In these situations, guidelines may be developed. A minimum of two board-certified practitioners from appropriate specialties will be involved in the development of the guidelines.

Guidelines are reviewed every two years. Guidelines are reviewed sooner than the next scheduled two-year review if national guidelines have changed or substantively new scientific evidence is published in the interim. The Clinical Practice Guideline Review Team (CPGRT) reviews monthly updates from the National Guideline Clearinghouse to identify changes to national guidelines and substantive changes to the scientific evidence.

In addition, systematic review of new scientific evidence occurs annually for all disease management CPGs. The CPGRT conducts a literature search to determine if there have been any relevant substantive scientific advances in treating the medical condition the clinical practice guideline addresses. At least two board-certified practitioners from appropriate specialties are involved in the review of the literature relevant to each CPG. If new scientific evidence warrants adopting a new guideline from a recognized source or changing an internally developed guideline based on the clinical judgment of the reviewers, the process described above is followed.

All staff training materials and program content, whether directed toward members or practitioners, is developed in accordance with adopted guidelines, the professional clinical and technical literature, governmental research sources, and the recommendations of professional societies and relevant foundations. Amerigroup provides copies of approved guidelines, as well as guideline updates to

practitioners as changes occur. With respect to our members enrolled in disease management, Amerigroup provides practitioners information about their performance relative to established benchmarks, guidelines, and/or disease-specific standards of care.

Collaborative Practice Models which Include the PCP and Other Providers

Across markets, Amerigroup maintains a close working relationship with our provider partners. We leverage this relationship to inform providers about the benefits of our program, available education, services, and materials, reciprocal sharing of information requirements, and how they can access chronic condition information to improve member care. Moreover, we establish that our care team is available to support and collaborate with providers (and their office staff) to ensure that the care coordination and support needs of our members are identified and addressed. Rather than working redundantly or in conflict with providers' efforts, the Amerigroup care team works to complement and support the providers in addressing the needs of our members.

Our clinical staff facilitates the information sharing process by ongoing collaboration with the member's health care team to assure services are synchronized, unduplicated, and consistently delivered for every individual. The member's health care team may consist of various types of providers, including PCPs, medical and behavioral health specialists, and social workers. Examples of reciprocal sharing of information can include diabetic information that goes to both the cardiac specialist who will educate the member on diabetes and heart health and the behavioral health provider for behavioral modification.

We educate our providers on reciprocal sharing of information, as well as other important components of our program during our initial, ongoing, ad hoc, and annual training. Information includes:

- Provider rights
- Services provided by Chronic Care/Disease Management programs, including how Amerigroup works with members in those programs
- How to enroll a member in the program and use its services
- Provider access to provider facing Member 360 tools
- Reciprocal referral and sharing of information policies and procedures
- Disease manager contact information, including phone number, address, and email
- How to provide feedback or communicate complaints
- How Case Managers furnish feedback to providers about their members

Member Self-Management Education

Chronic illnesses and conditions are among the most common, preventable, and costly of all health care issues. These chronic illnesses include diabetes, coronary artery disease, congestive heart failure, and chronic obstructive pulmonary disease. We understand there are primary risk behaviors that can cause or exacerbate chronic illnesses, such as poor nutrition, lack of physical activity, and substance use, as well as the social and environmental barriers that can compromise member adherence to the care plan or medication regimen. Adding to the complexity, the rate of comorbid physical and behavioral conditions among populations, such as children with specialized health care needs and adults, seniors and members with physical and behavioral disabilities, requires an approach that considers the whole individual, not just a diagnosis.

We have adopted a holistic chronic care/disease management approach that promotes member engagement in the interventions most appropriate for their conditions. Rather than simply educating members about a single condition, such as diabetes, our disease managers educate them on and coordinate the care for many of their needs – physical, behavioral health, and social support. As described below, our disease managers, guided by our evidence-based CPGs, are skilled at understanding and coordinating care across diagnoses.

In our experience, members achieve positive outcomes when we take a hands-on approach to assessing their awareness and understanding of their condition(s), helping them obtain their personal goals, and identifying any gaps in care, knowledge, or access. Then, in collaboration with each member, family, and treating providers, we develop an integrated care plan that is a road map to improving the member’s health, well-being, and quality of life.

Amerigroup is committed to understanding and addressing the challenges our members face that compromise their ability to take charge of their health status to improve outcomes. For many of them, this requires more than one approach. We help our members select the best providers to treat their conditions and have the tools they need to monitor their health – peak flow meters for asthma, blood glucose meters for diabetes, weight scales for congestive heart failure, or blood pressure cuffs for hypertension. We also assess whether their environment is conducive to care plan adherence.

Member Education

Members have 24/7 access to chronic care/disease management educational materials through our web-based member portal, as well as written materials sent directly to the member for easy reference. Our educational materials include easy-to-understand information that is aligned with the member’s diagnoses and the symptoms the member is likely to experience. We have materials that address chronic condition-specific information, such as symptoms, types of treatment, and self-management tools. For example, our written materials include booklets on “Facts about Alcohol,” including information on Alcoholics Anonymous or Alanon community meetings and common reactions to being diagnosed with a chronic condition.

We also make information available for members and families dealing with end-of-life issues. This information covers advance directives, hospice, and respite care. Other educational materials that address behavioral change and that we make available to all members in our program include: “Making a Change – How to Start,” “Making a Change – Making it Last,” and “Making a Change – My Action Plan.”

Further, we also send out invitations to community events, promoting events where we can share with our members different types of health information such as immunizations, prenatal/postpartum care, health lifestyles, childhood lead, and how to talk to your PCP.

Process and Outcomes Measurement, Evaluation, and Management

Amerigroup establishes measurable benchmarks for disease management that promote credibility and consistency in educating our network providers about the care they deliver. We focus on those benchmarks with the most significant impact across all our members. To assess provider effectiveness meeting quality targets, we typically select performance metrics based on the emergency room HEDIS Data Sharing scorecard report:

- **Widest impact for our members** – We selected a mix of adult and child measures, as well as those that reflect the greatest disease prevalence in our covered Medicaid populations, to focus on those that affect the greatest number of our members

IA_9.1.3_RS_42

- **Historically low-performing results** – We included measures with the greatest potential for improvement within our health plan, promoting our own accountability in positively impacting our under-performing quality metrics
- **Ease of reporting** – We selected measures we can report using administrative data only, enabling us to deliver periodic, consistent data to providers without the burden of ongoing record reviews.

Our Quality Management leadership evaluates our performance measures periodically to assess their continued significance.

Through our comprehensive Chronic Care/Disease Management programs, we identify, educate, and coach members with chronic conditions to take greater responsibility for their health, wellness, and quality of life. We empower them to adopt improved self-management skills – thereby improving participation in primary and preventive care, enhancing health outcomes, and reducing preventable emergency room visits or inpatient admissions.

Annual Disease Management Program Assessments

We evaluate our disease management program annually. Assessments verify compliance with internal policies and procedures and are used for retraining and continuous quality improvement initiatives (CQI).

Assessment results are compiled from but are not limited to the following sources:

- Process and outcome measures
- Clinical outcomes
- Health services utilization outcomes
- Member self-reported adherence to treatment plan
- Staff performance appraisals
- Staff productivity measures

At least two clinical measures are monitored annually for each Disease Management program. Each measure utilized will:

- Capture a relevant process or outcome
- Be population-based
- Be measured with quantitative methodologies
- Have a benchmark or performance goal
- Have data and methodology that are valid for the process or outcome measured
- Have results analyzed in comparison with the benchmark or goal

We will target at least four clinical quality measures for improvement, implement interventions to improve performance for each measure, and measure the effectiveness of interventions to improve each measure. Significant or meaningful improvement will be demonstrated, and meaningful improvements will be documented through the Quality Improvement Activity (QIA) form.

Clinical measures reported will include:

- Definition of the population included in the denominator for each measure
- Description of how individuals are placed in the numerator for each measure
- Description of the time period each measure covered and how it impacts inclusions and exclusions in the numerator and denominator

Routine Reporting and Feedback Loops

Upon the member's enrollment in case or chronic care/disease management, Amerigroup captures the members' information in a secure, centralized care management system to support timely access to the most appropriate services for the member's conditions and prevent duplication.

Through the provider facing Member 360 tools, providers who have members attributed to them can see the member record via the Amerigroup provider portal, giving them simple, easy-to-access data and

information to assist them in engaging the member in his or her health and well-being. The integrated data will be displayed to make it easy for the provider to act on it and make sure their patients are getting the services they need. This view will enable any provider who is treating our members to see the full picture, including care plans and assessment information, enhancing their ability to reduce duplication and improve their quality of care.

We also send the provider a letter of introduction explaining the individual's participation, provider responsibility in the care planning process, the CPG associated with the member's condition, and a copy of the care plan.

We engage all treating providers in the case management planning process - soliciting feedback and sharing of information throughout the member's care planning and case management. In addition, we communicate with all treating providers as appropriate throughout the process to:

- Provide regular status updates to the provider regarding the member's stratification level, changes in health status, and contact frequency
- Assist with scheduling appointments or arranging transportation
- Address provider questions about the member's care
- Monitor the member's engagement in services and supports
- Share provider collaboration and communication details
- Reinforce evidence-based CPGs

Contacts are primarily telephonic, but we also regularly deliver updated case management plans by mail or fax to the provider.

Programs to Target Members Overusing and/or Abusing Services ***Data Mining to Identify High Utilizers***

Amerigroup seeks to identify members with the potential for inappropriate utilization of services and quickly intervene, providing the member with support and connection to preventive care. We proactively mine utilization data using the Chronic Illness Intensity Index (CI3), our predictive model, to identify members with high rates of utilization. We also continually analyze emergency room (ER) utilization patterns to understand which members are most likely to have avoidable ER visits. Within our suite of predictive models, our TRIAGE tool synthesizes member data (such as diagnoses, claims history, and authorizations) and assigns a risk score to indicate the likelihood of ER visits for Ambulatory Care Sensitive Conditions.

We further assess member utilization through our Member 360 tool. Member 360 combines member data and information from various sources into a single record to provide a holistic picture of the member's utilization, care coordination, and gaps in care. Member 360 includes such information as member health risk assessments, care plans, longitudinal member health records, and clinical data. This gives our Case Managers a whole picture of the member's needs and the services they receive, allowing us to target intervention with the members and their providers to promote appropriate service utilization.

We produce performance reports to identify members with utilization patterns that fall outside the norms. The utilization norms are adjusted to reflect regional and local practice variations and are compared to national benchmarks or Amerigroup aggregate data for all affiliate health plans. Practice and utilization data elements included in the analysis are:

- Re-admissions
- Pharmaceuticals (drug-seeking behaviors or patterns)
- Specialty referrals
- Emergency room utilization
- Home Health and Durable Medical Equipment (DME)
- Utilization relative to diagnostic entity

Outreach to High Utilizers

When a member’s utilization pattern shows that outreach and education are warranted, our Nurse Medical Management clinical team will collaborate with the Chief Medical Officer to determine appropriate member interventions, to include outbound telephone calls to educate members about appropriate use of services, the importance of preventive care, or the need to refer to care coordination.

Pharmacy Lock-In

Amerigroup is able to restrict members to a particular pharmacy when it has been determined that the member may benefit from coordinating prescription care or that the member has inappropriately utilized Amerigroup pharmacy services. Amerigroup’s Pharmacy Restriction process limits members to a single pharmacy to obtain their medications. The need for restriction is determined as a result of medication claims review and is implemented only in those health plans that have a state-approved program. Using pre-defined queries, the Pharmacy Department identifies members that meet the criteria for lock-in. Members identified with uncoordinated care, excessive utilization, or suspected patterns of fraud and abuse may also be referred to the Pharmacy Department from a specific health plan or providers.

Members identified with uncoordinated care, excessive utilization, or suspected patterns of fraud and abuse may also be referred to the Pharmacy Department from a specific health plan or providers.

Medicaid Special Investigations Unit (MSIU)

Amerigroup will deploy a team of highly trained and experienced individuals to manage our fraud, waste, and abuse program both at the national and local plan level. Our teams comprise former law enforcement offices, former Medicaid regulators (federal and state level), and a wide variety of other experienced healthcare investigators. This wide ranging and diverse set of expertise has allowed us to implement a best in class approach to detecting and reducing Medicaid fraud and positions us to be fully compliant with all required activities. The Medicaid SIU is an internal proprietary function, fully dedicated to the detection, prevention, and prosecution of fraud and abuse in Amerigroup and its affiliate health plans’ state-sponsored program business.

Abuse of Ambulance Services
Using data analytics our TX affiliated health plan identified a significant number of Basic Life Support ambulance services with no corresponding medical service claims. A review of transportation logs from a sample of ambulance providers identified common behavioral health provider destinations. During surveillance, SIU investigators observed a number of questionable practices; up to five members being transported in the same ambulance per ride; transportation provided in van then billed as ambulance services; and members being transported in an unsafe manner.

How Detected—*Referral from health plan, advanced data analytics and member interviews.*

Actions Taken—*A total of forty four investigations were initiated and eleven ambulance providers and six behavioral health providers were terminated from the network. To date, 40 ambulance providers and six behavioral health providers have been referred to the state for credible allegations of fraud. This investigation is ongoing. Overpayment of approximately \$12 million has been identified and approximately \$12.3 million in inappropriate expenditures were avoided. We also contacted Adult Protective Services.*

Appropriate training is key to avoiding fraud, waste, and abuse. We educate our employees, providers, and members on signs of fraud and abuse and how to report suspected cases. Additionally, the SIU publishes monthly tips, available on our website and in provider publications, on how to identify and report fraud, waste, and abuse. We use these same mechanisms to widely publicize our disciplinary guidelines and how we enforce standards.

In addition to corporate compliance training, Program Integrity employees are annually required to receive 40 hours of specialized fraud, waste, and abuse training through professional organizations, including the National Health Care Association, Association of Certified Fraud Examiners, American Academy of Professional Coders, and the National Health Care Anti-fraud Association (NHCAA).

Amerigroup Provider Relations Department employees provide fraud and abuse education to providers during orientation and in-service trainings and through the Provider Manual, e-mail alerts, newsletters, and our provider website. We advise providers and subcontractors of the consequences, including provider termination, of participating and/or contributing to fraud, waste, and abuse via our contractual agreements. We include fraud, waste, and abuse information in the Provider Manual and review it during provider orientation. We periodically include fraud, waste, and abuse training during in-person provider forums and webinar training sessions held during morning and afternoon sessions to allow flexibility to providers to attend based on their schedules. These have proven to be a convenient and economical way to keep providers informed. We also use blast fax communications to update providers on important fraud, waste and abuse issues. The Provider Manual, quick reference cards, and blast faxes are always available to providers on our website.

See Section 12.3 for more detail on fraud and abuse activities.

Discharge Planning

The goal of our discharge planning process is to engage members in services, supports, and resources that minimize the risk of member readmission. In order to accomplish that goal, we have processes in place to coordinate service planning and delivery with the member, family members, guardian/caregivers, providers including the home health agencies, and health plan employees.

Amerigroup developed a transition of care program in alignment with the nationally recognized Coleman model that outlines best practices for care transitions as shown in Figure 9.1-5. The transition of care program facilitates member access to outpatient services by connecting them with these services prior to

Figure 9.1-5. Transitional Care Program

9.4.3_D08_3.0

their discharge. Our care coordination approach integrates the transition of care model, working in collaboration with clinicians located on-site at specified hospitals or providing this level of service directly through the care coordination team. By facilitating outpatient follow-up services, we have reduced admission rates while ER rates have remained flat, evidence that we are facilitating access to the right care in the right place and at the right time. The tenets of this intervention include:

- **Pre-Transition Visits.** Prior to discharge, we will contact the member at least once to discuss discharge planning and assess the risk of re-admission.
- **Follow-up Care.** We verify that follow-up appointments for all services, including home care, after-treatment, and therapy, are scheduled prior to or at the time of discharge. They also verify that the member attends these appointments, including making sure they have a follow-up appointment with their PCP or mental health provider within seven calendar days of discharge. If home health services will be provided, the visits will be initiated within seven calendar days of discharge. The Coach will provide all necessary support, such as arranging for transportation when necessary to make sure the member keeps his or her appointments.
- **Post-discharge Check-In.** Within 48 hours from discharge, we or the PCP will follow up to confirm that all services are appropriate, evaluate care coordination activities, and confirm that the discharge plan is being followed. A second home contact will occur approximately seven to ten days following discharge.
- **Medication Reconciliation.** Members are often discharged without medications that were prescribed to them before their admission. To address this gap, we obtain the hospital discharge medication list from the hospital nurse, hospital discharge planner, or the member and compare prescriptions to the list of medications previously prescribed. We resolve any discrepancies by reviewing discharge medications with the outpatient provider.
- **“Red Flag” Education.** The care coordination team creates a potential problem list, or list of red flags, and educates members and caregivers about condition changes that might require a call to their PCP so that the PCP can address any potential complications.
- **Disease-specific Interventions.** The care coordination team works with members and caregivers to build their knowledge about their specific condition(s) and to boost their ability to take care of themselves, empowering individuals to take charge of their health and promoting optimal recovery. For example, coaching may be complemented by information found in our online health library, Health A to Z. Members may also be enrolled in one of our NCQA-accredited disease management programs.
- **Discharge Plan Reminders.** Within three working days, we will contact the member by telephone to remind him or her of upcoming appointments and to offer assistance if barriers arise to following through with the plan. This is particularly important with regard to well-care appointments that are scheduled for the member. If they have not had a regular checkup with their PCP or other preventive care services, we will facilitate the scheduling and enabling member attendance at these appointments.

Amerigroup understands the unique challenges members can face when transitioning back home from a hospital stay. To help make this transition as smooth as possible, we will provide a post discharge kit and free home-delivered meals to eligible members and their families as Value-Added Services. The discharge kit provides tools for family members and caregivers to successfully help transition members from hospital to home, aid in recovery, and help decrease the chances for readmission. The meal program provides nutritious home-delivered meals, which allows members to focus more on recovery rather than proper nutrition, shopping, or finding a caregiver to prepare them.

Co-located Medical Managers Collaborate with Hospital Discharge Planners

We have learned that the most efficient and effective way to coordinate discharge planning for our members is to co-locate Nurse Medical Management clinicians within hospitals. This allows us to begin discharge planning with the member, the hospital staff, and their PCP on the day of admission. With appropriate permission from our hospital partners, we intend to co-locate Nurse Medical Management clinicians in Iowa in hospitals with high volumes of discharges.

By working side-by-side with hospital staff and discharge planners, our Nurse Medical Management clinicians have direct knowledge of the treatment provided in the hospital, direct access to the medical team serving the member, and near real-time information from the medical record. Additionally, our staff has the opportunity to meet regularly with the member and family, gaining a deep understanding of the issues that may affect the member's successful transition to the community.

By building close working relationships with facility staff, our Nurse Medical Management clinicians become part of their team, creating an environment of collaboration. Our employees participate in discharge planning meetings at the facility, make clinical recommendations for appropriate services upon discharge, conduct authorization reviews, and arrange for the member to receive follow-up services and supports post-discharge.

Our Nurse Medical Management clinicians co-located at hospitals contact Amerigroup's care coordination program upon notification of a member's admission. A Case Manager with the expertise that is most closely aligned with the member's condition(s) initiates the discharge planning process by contacting the member and, with the member's permission, family members, caregivers, and other natural supports. The Case Manager also contacts the hospital employees responsible for the member's care and current providers to develop the discharge plan. With the member taking the lead, the discharge plan is jointly developed, identifying the services and supports the member needs to transition to and remain safely in the location of the member's choice.

Transition Planning

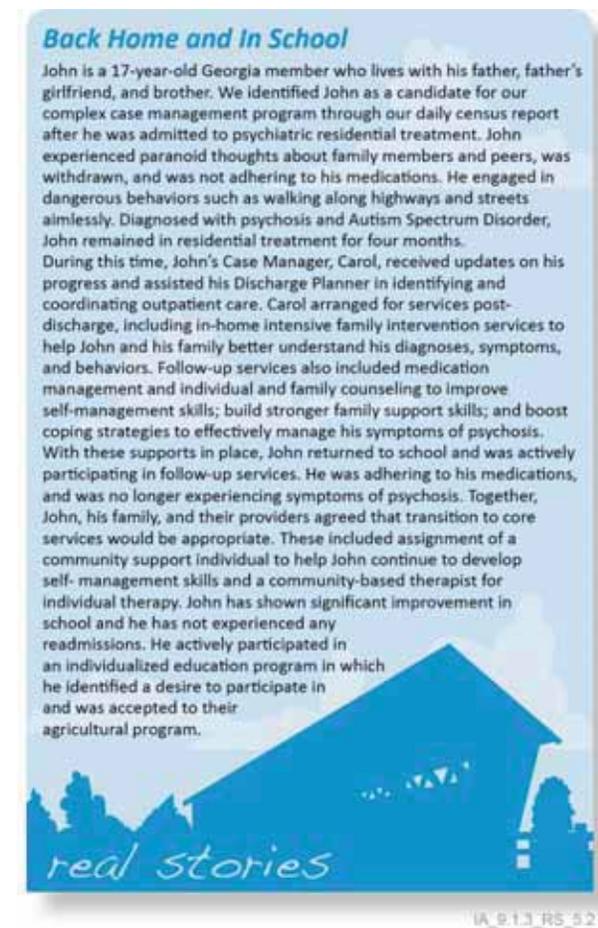

Amerigroup's transition planning program provides enhanced support to members and their families during transitions, including changes in level of care, setting, or providers. Case Managers work with members, their families, and the providers involved in their care to connect members to appropriate services following a transition. Our clinical team also reviews each member who is in an inpatient setting, including mental health and substance abuse setting, during our daily rounds, assessing the member's status and post-discharge needs to help assure appropriate aftercare planning. Our transition planning goals include a reduction in overall 30-day readmission rates for members discharged to lower levels of care or home and improved seven- and 30- day follow-up after discharge appointment adherence.

We use a four-phase approach to work with members identified for transition planning – identification, engagement, stabilization, and maintenance. We have also developed specialized interventions designed to address members' support needs and provide care coordination in different settings:

- Emergency department case management
- Inpatient case management
- Transitional case management

Emergency Department Case Management

Members with more than three nonemergent emergency room visits in a year and an emergency room (ER) TRIAGE score indicating a likelihood of continued ER use for low-level visits receive focused case

management interventions that identify reasons for these visits and methods to reduce future use. Case Managers work with the member and family to make sure members can access timely appointments and necessary specialty care for hard-to-treat conditions and educate members about Amerigroup’s after-hours resources, including our 24/7 Nurse HelpLine and contracted urgent care centers.

When a member requires additional medical management for conditions like chronic pain or substance abuse that are contributing to emergency room use, the Case Manager works with the interdisciplinary care team, including medical and mental health and substance abuse directors, to identify specialized providers and additional resources needed to address the member’s needs in the most appropriate ambulatory care setting.

Inpatient Case Management

Amerigroup’s experience validates that a member’s highest risk of readmission to an inpatient setting is within the first 48 hours following hospital discharge. Amerigroup concurrent review nurses begin discharge planning when a member is admitted to a hospital or inpatient mental health and substance abuse setting, coordinating with hospital employees upon member admission, identifying member needs,

addressing those needs, and confirming ongoing medical necessity of the continued stay to reduce the risk of re-admission or of an acute episode. The concurrent review nurses are the eyes, ears, and feet on the ground at the hospital and the primary liaison with hospital employees: they arrange services necessary to transition a member back home or to a more appropriate level of care based on the member’s needs.

Transitional Case Management

Amerigroup’s transitional case management program is designed to provide one-on-one intensive short-term support to at-risk members who are transitioning from a mental health and substance abuse or physical health inpatient admission, taking into consideration each individual member’s unique health care needs. The goal of transitional case management is to reduce overall 30-day re-admission rates and to facilitate a smooth transition between inpatient settings and the home or other community settings by providing intensive, short-term support.

Transitional case management includes post-discharge follow-up calls, medication reconciliation, and member and family education and assistance with making follow-up appointments to PCPs and other practitioners involved in the member’s care. Every Amerigroup member transitioning from an inpatient stay to home receives a call from a Case Manager immediately prior to or following discharge to confirm that discharge supports are in place and to provide the level of post-discharge support each member needs.

For example, for a member with medically complex conditions who is transitioning to home from acute care hospitalization, the Case Manager ensures that prescriptions are filled and follow-up appointments are scheduled. We identify the member's needs for such things as durable medical equipment, home health care, and transportation services and coordinate with providers to assure that all services and supports are in place prior to the transition.

Care Coordination for Populations with Specialized Needs

Our integrated, member-centric care coordination program will take into account the specialized needs of our members across all Medicaid populations. Amerigroup has specialized, more intensive care coordination areas of focus for our members who have complex, chronic, or specialized health care needs requiring a higher level of care coordination for multiple issues or more challenging benefits and services. These include:

- Children in foster care
- High-risk pregnancies and newborns
- Members with behavioral health needs
- Members with Hepatitis C
- Integrated and Chronic Health Homes

Foster Care – Early Childhood Intervention (ECI)

Amerigroup recognizes that many children involved in the Foster Care system may not have received the screening, evaluation, assessment, and services critical to early identification, intervention, and ongoing care for members with specialized health-care needs (MSHCN) prior to entering into the system. We believe that the sooner children's specialized needs are identified, the more likely they can be supported in reaching their development and learning potential. To accomplish this for Iowa, we will build upon our established Early Childhood Intervention (ECI) policies and procedures, proven service coordination processes, and integrated programs in our affiliate health plans.

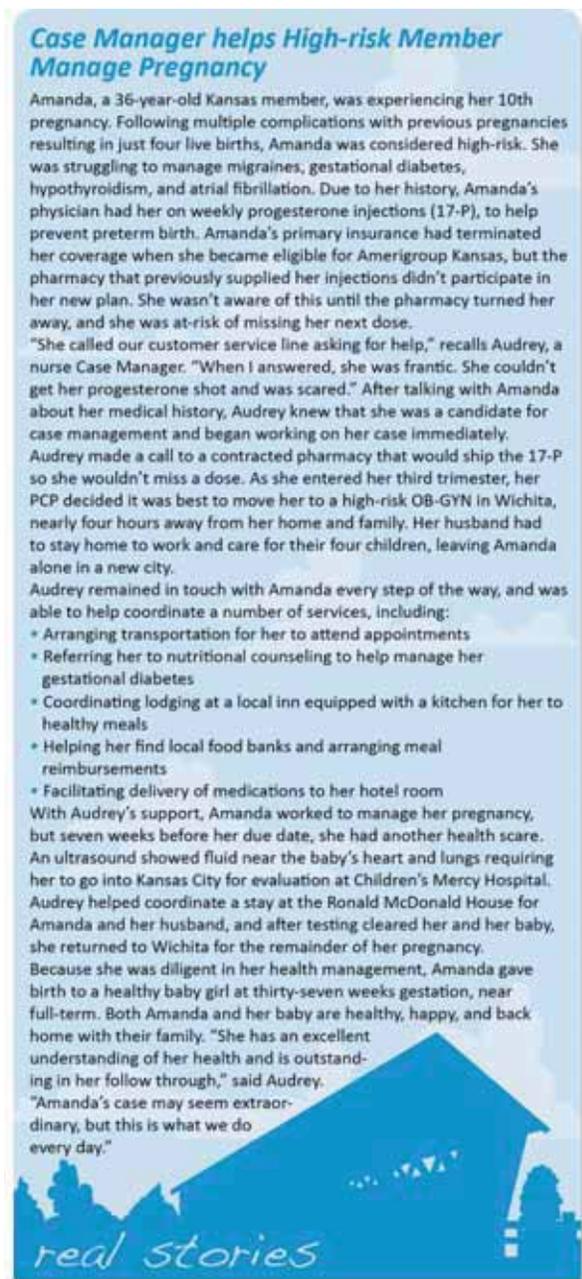

Amerigroup has the expertise and experience needed to rapidly engage infants and children with specialized needs such as disabilities or developmental delays in the screening, assessment, referral, and coordination of ECI services tailored to their individual needs. ***Our affiliate health plans currently serve more than 41,000 children and youth in Foster Care, adoption assistance, and juvenile justice systems in nine states, including Georgia, Kansas, Kentucky, Louisiana, Maryland, New Jersey, Virginia, Washington, and Wisconsin.*** We recognize that approximately one-third of members in Foster Care may have unmet needs related to developmental delays and disabilities across a spectrum from minor to more significant needs.

Amerigroup's Comprehensive Foster Care Solutions program will adhere to all federal, state, and Contract requirements, as well as establish processes, procedures, and policies, for the following:

- Identifying MSHCN through a “no wrong door” approach that promotes referrals from caregivers, medical consenters, conservators, providers, Case Managers, child placing agencies, school-based health clinics, and other participants, as well as review of the eligibility file and claims activity that may indicate potential concerns
- Capturing and regular monitoring of members' ECI information to promote timely, accurate, and complete information sharing
- Assigning Case Managers to all members in the ECI program
- Referring members to the ECI program as expediently as possible and within required time frames
- Participating in the Individual Family Service Plan (IFSP) development as requested
- Coordinating services on the IFSP as requested

We will also maintain a strong provider network experienced in delivering services for children with specialized diagnoses such as Autism Spectrum, Fetal Alcohol Spectrum Disorder, and Severe Emotional Disturbance (SED). Our provider network will include board-certified/board-eligible pediatricians; pediatric specialists (including audiologists and speech, physical, and occupational therapists); ECI specialists; and children’s specialty centers such as teaching hospitals, tertiary care centers, and children’s hospitals.

Caregiver and Key Participant Education. Amerigroup will provide information about ECI services, including early identification, possible indicators, and referral processes to medical consenters, conservators, guardian/caregivers, and other key participants through our Foster Care Academy training and education program, member handbook, and member/caregiver web-based portals. We will also

Case Manager helps High-risk Member Manage Pregnancy

Amanda, a 36-year-old Kansas member, was experiencing her 10th pregnancy. Following multiple complications with previous pregnancies resulting in just four live births, Amanda was considered high-risk. She was struggling to manage migraines, gestational diabetes, hypothyroidism, and atrial fibrillation. Due to her history, Amanda’s physician had her on weekly progesterone injections (17-P), to help prevent preterm birth. Amanda’s primary insurance had terminated her coverage when she became eligible for Amerigroup Kansas, but the pharmacy that previously supplied her injections didn’t participate in her new plan. She wasn’t aware of this until the pharmacy turned her away, and she was at-risk of missing her next dose.

“She called our customer service line asking for help,” recalls Audrey, a nurse Case Manager. “When I answered, she was frantic. She couldn’t get her progesterone shot and was scared.” After talking with Amanda about her medical history, Audrey knew that she was a candidate for case management and began working on her case immediately. Audrey made a call to a contracted pharmacy that would ship the 17-P so she wouldn’t miss a dose. As she entered her third trimester, her PCP decided it was best to move her to a high-risk OB-GYN in Wichita, nearly four hours away from her home and family. Her husband had to stay home to work and care for their four children, leaving Amanda alone in a new city.

Audrey remained in touch with Amanda every step of the way, and was able to help coordinate a number of services, including:

- Arranging transportation for her to attend appointments
- Referring her to nutritional counseling to help manage her gestational diabetes
- Coordinating lodging at a local inn equipped with a kitchen for her to healthy meals
- Helping her find local food banks and arranging meal reimbursements
- Facilitating delivery of medications to her hotel room

With Audrey’s support, Amanda worked to manage her pregnancy, but seven weeks before her due date, she had another health scare. An ultrasound showed fluid near the baby’s heart and lungs requiring her to go into Kansas City for evaluation at Children’s Mercy Hospital. Audrey helped coordinate a stay at the Ronald McDonald House for Amanda and her husband, and after testing cleared her and her baby, she returned to Wichita for the remainder of her pregnancy. Because she was diligent in her health management, Amanda gave birth to a healthy baby girl at thirty-seven weeks gestation, near full-term. Both Amanda and her baby are healthy, happy, and back home with their family. “She has an excellent understanding of her health and is outstanding in her follow through,” said Audrey. “Amanda’s case may seem extraordinary, but this is what we do every day.”

real stories

conduct initial welcome calls to all new members/conservators/caregivers at the time of member enrollment. During these calls, we will provide information about the ECI program and the unique abilities, strengths, and needs that may qualify a child for ECI services.

Provider Expertise. We recognize that our providers play a critical role in identifying children with potential developmental delays or disabilities and that the referral to the right provider is essential to achieving the best outcomes for our members. Amerigroup will require and train all our provider partners to identify potential developmental delays and disabilities, submit timely referrals to the ECI program, and participate in developing the IFSP and transition activities if requested. We also recognize that children receiving ECI services may have a level of need that is best met by a specialist who assumes the role of PCP. Therefore, if a MSHCN receiving ECI services requires specialized care, the conservator, Primary Care Provider Team, or Case Manager may request that the specialist function as the member’s PCP. To promote the best care for the member, we will allow a specialist to function as the member’s PCP upon request.

Care Coordination. We believe strong, sound care coordination is essential to helping our MSHCN reach their potential by accessing medically relevant, high-quality, and cost-effective care; supports positive outcomes; and encourages safety and well-being for members through consistent and frequent communication. Our Case Managers will rapidly access and coordinate services and supports identified for the member during the service planning process upon request and assure the efficient and comprehensive sharing of information with all parties involved in the health care of members.

IA_9.13_RS_6.2

Taking Care of Baby and Me

Amerigroup's Taking Care of Baby and Me® program provides an individualized, one-on-one, comprehensive case management program supporting pregnant women at the highest risk. Educational material, information on community resources, and incentives to keep scheduled prenatal and postpartum visits, as well as well-child visits after the baby is born, provide extra encouragement and motivation for our members.

This program builds an array of services around the pregnant woman and her newborn to provide the best opportunity to have a healthy baby and to be a successful mom. From identification through the birth of the child and the postpartum period, Amerigroup supports the woman in each major stage, helping her achieve a healthy outcome. We address each case individually, one mom at a time, using innovative and proven strategies to identify, assess, inform, engage, and support our members.

Care coordination plays a critical role in this program, in collaboration with Case Managers who perform key functions in this program, such as conducting an assessment, setting goals, and providing interventions. Care coordination activities provide links to community-based resources and health education material.

In 2010, the National Minority Quality Forum (NMQF) awarded Amerigroup Corporation, Amerigroup Iowa's parent company, the first Health Promotion and Disease Awareness Award, which recognizes an individual or organization making an outstanding contribution to the promotion of wellness in minority communities, for its efforts to help moms enrolled with Medicaid have healthy babies.

Through Taking Care of Baby and Me®, Amerigroup Iowa will identify our members who are pregnant as early as possible, referring them to a Case Manager who will conduct a thorough clinical assessment to determine risk and develop individualized care plans that correspond to each woman's risk level. We will offer a full array of support tools that foster close communication between the health plan and the member while promoting a healthy pregnancy and baby, including:

- **Prenatal Incentive Packet.** Incentive signature cards will be sent to encourage prenatal visits within the first trimester of pregnancy or within the first 42 days of enrollment. Once her physician signs a signature card at a prenatal care office visit, the woman will mail the card to our offices, and in return, we will mail her our Healthy Rewards debit card pre-loaded with her \$25 dollar incentive amount.
- **Post-partum Packet.** After a pregnant member gives birth, she will receive a postpartum packet. This packet includes a flyer congratulating the mother on her newborn, a booklet on caring for the newborn, a brochure on baby blues vs. postpartum depression, and "Making a Family Life Plan." A \$50 Incentive will also be provided via the Healthy Rewards debit card for completing a postpartum appointment between 21 and 56 days after giving birth.
- **SafeLink Phones.** In cooperation with SafeLink Wireless and funded by a U.S. government program that ensures that telephone service is available to eligible Medicaid recipients who lack another communication source, Amerigroup Iowa members whom we identify as in need of this service will receive a free cell phone. Amerigroup facilitates the SafeLink Wireless process by helping pregnant members get the phone and, depending upon the wireless plan, up to 250 minutes per month. We also have a partnership with the program, so as a Value-Added Services, our members receive 100 extra lifetime minutes. These additional minutes will give Amerigroup Iowa clinical staff real-time access to members to ensure that appointments are made and kept, prescriptions are filled and taken, and transportation arrangements are made. It gives the pregnant woman an easy way to contact her Obstetrician, Case Manager, and other essential service providers through numbers pre-programmed into the phones. In addition, our pregnant members receive free text messaging from Amerigroup staff so that they can receive alerts at any time. They also receive a series of messages developed by our Maternal Health and Pediatric Specialists. These Amerigroup-specific pregnancy messages assist our members throughout their pregnancies, and infant-care messages continue after their child is born.

- text4baby.** As a designated outreach partner, Amerigroup has joined with the text4baby program to promote this free text message information service. Once pregnant members enroll, they will receive educational messages and helpful reminders tailored to their particular weeks of pregnancy and through their baby’s first year. Over 185,000 of our members have enrolled in this program; only four percent have opted out of receiving the texts. Approximately 72 percent of recipients responded that the texts helped them remember to go to the doctor. Members who receive texts about a certain telephonic program (such as Nurse HelpLine, coaching, etc.) are six times more likely to call the promoted phone number within 30 days of the text than non-recipients. Members who receive texts reminding them to get a screening or physical are three times more likely to comply within 90 days of the text than non-recipients.

My Advocate

The My Advocate program shown in Figure 9.1-6 provides pregnant members proactive, culturally-appropriate outreach and education through a multi-faceted technology tool. It does not replace our high-touch OB case management approach for high risk pregnant members, but instead serves as a supplementary tool to extend our health education reach. The goal of the expanded outreach is to identify pregnant women who have become high risk, to facilitate connections between them and our Case Managers, and improve member and baby outcomes.

My Advocate is a screening and health promotion program for pregnant Medicaid recipients, which is offered as an IVR call, text or smart phone application. It is integrated with our case management platform, Care Compass. Outreach begins with a 20 question risk screening call and continues with two contacts per week until delivery. It is then followed by two contacts per week targeting post-delivery and newborn topics for up to three months after birth. Responses to questions posed during the outreach can generate Case Manager “alerts.” Members also have access to the My Advocate website including additional information and a chat feature.

Maternal Child Services

Amerigroup offers several services related to maternal and child health. These include behavioral health services (screening, post-partum depression care, and substance use disorder care), breastfeeding support, smoking cessation, diabetes management, and preconception/interconception health materials.

The Centering Pregnancy

The Centering Pregnancy is a group prenatal care program for women of similar gestations. It has proven benefits for increasing birth weight, decreasing prematurity, improving pregnancy readiness, and increasing provider satisfaction.

Nurse Family Partnership

The Nurse-Family Partnership is a free, voluntary program that partners first-time moms with nurse home visitors that reinforce the importance of getting good prenatal care, eating healthy, exercising, and quitting smoking. Services have been shown to help break the cycle of poverty, strengthen communities and improve lives.

Neonatal Intensive Care Unit Case Management

Amerigroup also offers services and support to families with babies in the Neonatal Intensive Care Unit (NICU). As the mother and the family are the most valued members of the NICU team, we encourage them to:

- Ask questions and share their feelings
- Visit the baby often and be involved in his/her care
- Ask about Kangaroo Care (placing the NICU baby skin-to-skin onto the parent directly from the incubator or isolette)
- Learn about breast-feeding
- Get to know the NICU staff
- Get postpartum care for the mother
- Prepare for the baby to go home

Behavioral Health

Amerigroup will bring a behavioral health program to Iowa that delivers highly coordinated covered benefits that are fully integrated across our health plan. ***Amerigroup will directly administer the delivery of mental health and substance use disorder treatment and support services that are localized, customized, evidence-based, and above all, recovery and resilience-driven.*** We will build upon the experience of 15 of Amerigroup's 19 affiliate health plans that coordinate the delivery of fully integrated physical health and mental health and substance use disorder treatment services, and in seven states, long-term services and supports (LTSS). Amerigroup affiliates coordinate the full spectrum of behavioral health services, including home and community-based services for children with a serious emotional disturbance. Amerigroup affiliates coordinate the full spectrum of behavioral health services, including home and community-based services for children with a serious emotional disturbance. We also currently cover services similar to Habilitation Program services for members with a serious mental illness in many of our health plans, including in Kansas, Tennessee and Texas. Additionally, we will cover 1915(i) services along with a full spectrum of physical and behavioral services as a Health and Recovery Plan in New York beginning the summer of 2015 and, in December 2015, as a Bayou Health Plan in Louisiana.

Our approach in Iowa will extend the significant work done by the State, advocacy groups, consumers, families, and local providers, to further evolve behavioral health services coordination, integration, and delivery. We will combine clinical evidence, member needs, and State customer needs with Amerigroup's deep and extensive knowledge and experience to implement a recovery-based, integrated, and collaborative model that welcomes and engages members in their personal recovery efforts.

- Our staff will promote recovery and resiliency throughout the provider network and in our interactions with members and their families with the goal of maximizing community integration. A recovery philosophy that is hope-based and focusses on member self-determination, developing empowering relationships, having a meaningful, productive role in society, and eliminating stigma and discrimination, is the foundation for collaboration and integration of health services.
- As a leader in offering a truly integrated model, we do not separate the management and delivery of mental health and substance use disorder services from physical health care, pharmacy services, and LTSS, including social supports. Our highly experienced national behavioral health management team will be a seamless component of the Iowa Health Plan, who will have the support of this national behavioral health expertise. The Iowa Health Plan behavioral health, physical health, and LTSS clinicians will work together as a single team, using a single care coordination and management system to deliver fully integrated care as a seamless part of the member's overall health experience for populations served.

- We will use the Amerigroup Member 360 capability to support coordination and delivery of recovery-based and integrated care. Member 360 is a member dashboard that displays HEDIS® care alerts; authorizations; prescriptions; lab results; and claims organized by type, such as inpatient, emergency room (ER), office visit, and behavioral health. It also provides a timeline of clinical events for the member across a number of domains, including diagnosis, providers, and medication history. Member 360 is available to our clinical team and will be available to providers through our provider portal.
- Amerigroup will deliver an information-sharing and collaborative platform where interdisciplinary team participants can review and contribute to the care plan, as authorized by the member. The platform is operational today in several states serving members with disabilities and mental health and substance use conditions, including individuals with intellectual and developmental disabilities or those with a serious mental illness.
- We will collaborate with local and state-based stakeholders (i.e. families, natural supports, advocacy organizations, and network providers) to ensure access to integrated mental health and substance use disorder services and to the social supports families and children need to maintain a stable and safe family environment and that adults need to live independently.

We will focus on:

- Prevention—working with providers, the community, and consumers around evidence-based interventions for prevention of behavioral health disorders; for example, evidence-based, targeted, time-limited, parent-infant communication training for at risk families, that has a clear connection to improved outcomes
- Early detection—using comprehensive screening programs to identify and treat member’s needs early
- Peer support and recovery—growing Iowa’s strengths- based program grounded in member choice and recovery
- Enhanced access to mental health and substance use disorder services through provider development activities and the use of innovative care delivery technologies, including telehealth and online consultations
- Enhanced access to community supports - especially housing, education and employment - through collaboration with community-based organizations (CBOs), county agencies, advocacy groups, providers and the State
- Provider collaboration and partnerships to pay for value rather than volume (pay for performance) — recognizing that this transition may take more time for some and less time for others. This collaboration is provider specific and takes into account provider experience and preferences
- Innovative, integrated physical and behavioral health care model design—promoting, supporting, and developing additional integrated care model capacity, including patient centered medical homes, established Iowa Accountable Care Organizations (ACOs) and Chronic Care and Integrated Health Homes. For example, one of our recent agreements with a primary care provider group includes quality threshold targets for both physical and behavioral measures.

For additional detail on Amerigroup's approach to behavioral health, see Section 3.2.8.

Case Management for Members with Hepatitis C

Amerigroup recognizes the high cost of medications available to treat this condition. As part of our fully integrated case and disease management programs, we will work to provide solutions that empower members and providers with information, education, and resources to help members adhere to treatment plans and take their medications as prescribed. With many available treatment options depending on the individual's unique situation, it is crucial that members understand and adhere to their individual treatment plans. Through specially-trained pharmacists and pharmacy staff, we will provide personalized outreach consultation to members and their providers, with the primary goal of assuring completion of therapy. Additionally, we will help educate and manage members' care, including assessing and addressing any drug interactions, potential side effects of medication, contraindications, and possible co-morbid concerns through targeted reviews where appropriate.

Integrated and Chronic Health Homes

Amerigroup is committed to supporting DHS's goals to expand and evolve health homes to reduce fragmentation in care and enhance access to services that address the holistic service needs of members experiencing serious mental illness, serious emotional disturbance, or chronic health conditions by increasing service coordination, facilitating transitions in care, promoting self-care and health promotion, and linking to community services and supports. In establishing the rationale and goals for the health home, we embrace the principles that the individual is front and center in addressing his or her preferences, self-identified needs, and health goals consistent with the member's cultural values and beliefs. It is important for the health care system to evolve into one that reduces fragmentation in attending to the physical, behavioral, and social needs of the individual.

Amerigroup will make sure that key Health Home Services specified by DHS in the Health Home Provider Agreement are provided by all Health Homes:

- **Comprehensive Care Management.** Providing for all health care needs/arranging care, developing a Continuity of Care Document, and implementing a formal screening tool for behavioral health
- **Care Coordination.** Assisting members with medication adherence, appointments, referral scheduling, understanding health insurance coverage, reminders, transition of care, wellness education, health support and/or lifestyle modification, and behavior changes; utilizing health information technology (HIT) to facilitate the processes and communicate results
- **Health Promotion.** Coordinating/providing behavior modification interventions aimed at supporting health management, improving disease outcomes, disease prevention, safety, and an overall healthy lifestyle, using Clinical Decision Support within the practice workflow, and implementing a formal Diabetes Disease Management Program.
- **Comprehensive Transitional Care (including appropriate follow-up, from inpatient to other settings).** Transitioning patients from inpatient to other settings, confirming receipt of updated information through a Continuity of Care Document and receipt of information needed to update the patient's care plan, and following up with the patient after transition
- **Individual and Family Support Services (including authorized representatives).** Communicating with the patient, family, and caregivers in a culturally appropriate manner for the purposes of assessment of care decisions
- **Referral to Community and Social Support Services.** Coordinating or providing recovery services and social health services available in the community (for example, understanding eligibility for various healthcare programs and disability benefits and identifying housing programs)

For additional detail, refer to Section 3.2.9 and 3.2.10.

Health Promotion

Members with low-risk health care needs receive health promotion outreach, including health promotion materials and well-care reminders, to help them seek out and access timely preventive care such as periodic checkups, screenings, and immunizations. Examples are shown below in Figure 9.1-7 and Figure 9.1-8. To make sure that the right groups receive the appropriate type and amount of information, our efforts range from providing general member education that builds health literacy (the ability to comprehend and apply information to address issues) and empowering members to take responsibility for their health status to offering high-touch solutions for targeted outreach and education for individual members.

All members and families have access to:

- Our single, toll-free point of contact for all questions through our Member Services call center
- Assistance with referrals that result in timely appointments
- Communication and education regarding available services and community resources
- Assistance developing self-management skills to effectively access and use services

Our health promotion programs are reinforced through periodic outreach to members with identified gaps in care (such as missed check-up appointments).

We have also developed an entire suite of Value-Added Services dedicated to promoting member health and wellness. Within this suite are nine unique benefits, from tobacco cessation counseling to no-cost Weight Watchers® or other similar program vouchers, all designed to promote healthier outcomes, increase member and family self-management and adoption of healthy habits. Detailed descriptions all benefits within our 'Health and Wellness Value-Added Services Suite' are outlined in Section 3.2.14.

Question 9.1.3, #2

2. Provide data on outcomes achieved in your care coordination programs operated in other states, if applicable.

Over 24 years of serving Medicaid and other state-sponsored programs, Amerigroup affiliates have established a successful track record of delivering superior care coordination and quality outcomes, increasing member compliance and empowerment, and improving quality of life across all Medicaid populations. Below are just a few examples of the successful outcomes from and recognition for our care coordination strategies:

In 2014, Amerigroup produced approximately **\$91 million in aggregate utilization reduction and incremental savings** across its 19 affiliate health plans through its combined efforts in utilization management, case management, and disease management across medical, behavioral health, and pharmacy utilization

Between 2012 and 2013, Amerigroup and our affiliate health plans experienced across disease management programs an overall **reduction of 26.1 percent in emergency room (ER) visits and 20.4 percent for inpatient admissions** based on claims analysis as shown in Table 9.1-4.

Table 9.1-4. Our Disease Management Program Has Successfully Reduced ER Visits and IP Admissions between 2012 and 2013

Disease Management Program	ER Visits/1,000	IP Admits/1,000
Asthma	-39.8%	-27.3%
CAD	-20.3%	-22.2%
CHF	-10.2%	-14.0%
COPD	-5.8%	-22.8%
Depression	-9.9%	-17.5%
Diabetes	-12.2%	-17.8%
HIV/AIDS	2.1%	-18.0%
Schizophrenia	-14.7%	-14.1%
Total	-26.1%	-20.4%

- In 2012-2013, for a subset of our members with multiple behavioral health admissions, our Tennessee affiliate **reduced inpatient admissions and readmissions by 47 percent and ER visits by 25 percent**, while increasing outpatient visits by 17 percent
- Amerigroup’s Florida health plan increased follow-up rates for members discharged from the hospital with a behavioral health diagnosis; in 2012, **follow-up rates for seven-day post-discharge visits increased by 14 percent** for members in this program, and increased 19 percent for 30-day follow-up visits as compared to members not in the program
- In our Nevada affiliate health plan, we implemented a stabilization program which **reduced readmission rates for our 75,000 TANF members from 2009 to 2010 by 35 percent** for like conditions and by 20 percent for any condition
- In 2012, our Texas plan implemented our transitional care program, focused on discharge planning efforts and intensive, short-term supports; as a result, **total 30-day readmission rates dropped from 14.9 percent to 7.2 percent**

- In 2014, Amerigroup partnered with a care transition solutions provider to pilot a program in Maryland which enrolled high-risk members in community health programs prior to hospital discharge; so far, that program has resulted in a **15.7 percent reduction in readmission rates for high-risk members** across five Baltimore hospitals
- In a 2009-2012 study on our diabetes care efforts in New Mexico, we demonstrated **improvement in our New Mexico members' HbA1c testing rates from 72.5 percent to 86.2 percent**; for the same timeframe, we brought our members' LDL-C testing rates from 60.5 percent to 72.9 percent
- In a 2008-2010 study measuring the outcomes of our Taking Care of Baby and Me program, we succeeded in **reducing NICU bed days by 8,997**, resulting in savings of more than \$17.83 million across all Amerigroup health plans

Amerigroup and its affiliate health plans also have been recognized by the NCQA for our care coordination programs across the nation:

- We have been **NCQA accredited since 2007 and achieved Commendable level in 2013**. We have achieved NCQA or similar accreditation across all of our state contracts
- In 2010, the National Minority Quality Forum awarded Amerigroup Corporation the first **Health Promotion and Disease Awareness** award, which recognizes an individual or organization making an outstanding contribution to the promotion of wellness in minority communities, for its efforts to help moms enrolled with Medicaid have healthy babies

Risk Stratification (9.1.4)

Question 9.1.4, #1

1. Describe your proposed risk stratification methodology.

CONTAINS CONFIDENTIAL INFORMATION

CONTAINS CONFIDENTIAL INFORMATION

Question 9.1.4, #2

2. Describe your proposed risk stratification levels.

CONTAINS CONFIDENTIAL INFORMATION

CONTAINS CONFIDENTIAL INFORMATION

Question 9.1.4, #3

3. Describe how care would be managed for members in each risk stratification level.

Intensity and Frequency of Follow-up Care

The stratification of our members into risk groups informs how we prioritize our outreach efforts and who conducts the outreach. Members in the highest risk groups as identified by our CI3 and LIPA predictive model are prioritized for immediate contact so that we can complete a comprehensive health risk assessment (HRA) and promptly assign the member to the appropriate care coordination program. As previously shown in Table 9.1-6, members in Risk Groups 3 and 4 are targeted for a focus in complex case management, whereas members in Risk Groups 1 and 2 are targeted for a focus in disease management. Nurse Case Managers and disease managers will be assigned to these members accordingly and will reach out to the members to schedule a comprehensive HRA. Based on the results of the HRA, our Case Manager/Disease Manager will assign a high, medium, or low acuity level, which will then inform the intensity and frequency of follow-up care, as detailed further below.

Case Management

Once a member is stratified into Group 3 or 4, indicating complex clinical issues and high risk for readmission, we will perform outreach to engage the member and conduct a comprehensive HRA. We will assign a Case Manager to the member with the most relevant expertise and focus area for the member's identified conditions and needs. Based on the results of the HRA and previously gathered information, the Case Manager will assign a high, medium, or low acuity level to the case. The acuity

level assignment is guided by applicable operational guidelines and the appropriate medical management system classification tool.

The acuity levels inform the intensity and frequency of contact made by the Case Manager. In determining the optimal contact frequency, the Case Manager will consider the member’s medical condition, self-management, psychosocial status, barriers, utilization, and medication, among other factors. Contacts may involve interaction with the member, physician, or others involved in the member’s case. Based on assessed acuity levels, contact frequency will typically fall in the following ranges:

- High — Case Manager contact once or twice per week
- Medium — Case Manager contact two or three times per month
- Low — Case Manager contact monthly at a minimum

The contact frequency is updated on a periodic basis as the member’s condition warrants. The Case Manager will develop a schedule for follow-up and follow a standard process to assess progress against goals. As the member’s status and needs evolve, the Case Manager may recruit additional experts into the interdisciplinary team to make sure that the member is served by the right team members with the right expertise.

Disease Management

Once members are stratified into Group 1 or 2, indicating clinical comorbidities but lower risk of inpatient admission, we consider them eligible for disease management. Members are further assessed through a comprehensive clinical intake process that identifies needs along the continuum of care. The intake process utilizes health risk assessment to identify and confirm both physical and behavioral health conditions; identify additional health conditions, including cognitive disorders and physical disabilities; screen members for depression and substance use; assess health risk behaviors; and assess both psychosocial and environmental needs, including family, network, and/or caregiver support.

Data collected through the clinical intake process is documented in the disease management data registry and automatically channeled through a standardized stratification algorithm to calculate an additional risk ranking that is used to determine both the intensity and frequency of interventions and care planning tailored to the individual member’s need.

Upon completion of the assessment, members are stratified into three acuity levels — High, Medium, and Low — based on database logic using responses to clinical assessment questions. Our clinical staff can override system logic stratification level assignment based on clinical judgment. In these cases, the rationale for the override is documented in clinical comments. The final stratification level determines ongoing intervention and assessment. Stratification levels and interventions are outlined in Table 9.1-7 below.

Table 9.1-7. Acuity Levels Determine Intensity and Frequency of Outreach

Stratification	Criteria	Member Contact Frequency	Member/Provider written communication
High	5+ gaps/needs identified	Biweekly	Upon enrollment and every 4th member follow-up assessment
Medium	1-4 gaps/needs identified	Monthly	Upon enrollment and every 2nd member follow-up assessment
Low	Gaps resolved and member stable with self-care plan in place	Quarterly	Upon enrollment and quarterly to correspond to the quarterly outreach

Member Identification for Care Coordination (9.1.5)

Question 9.1.5, #1

1. Describe how you will identify members eligible for care coordination programs, including how the following strategies will be utilized:
 - a. Predictive modeling;
 - b. Claims review;
 - c. Member and caregiver requests; and
 - d. Physician referrals.

Member Identification Strategies

Amerigroup's goal is to intervene early – before members even have symptoms or are diagnosed with a chronic condition. We accomplish this by reaching out to our members to develop relationships, conducting assessments as needed, and developing a member-centric care plan that includes our members' strengths, conditions, symptoms, needs, goals, and preferences. We also continually monitor and analyze member health status, risk factors, and family history to assess their risk for existing, potential, impactable, and preventable chronic conditions.

Proactive identification of members for the correct level of care coordination support is critical to meeting the member's needs and improving health outcomes. We identify members for enrollment in our care coordination program through:

- Predictive modeling
- Claims review
- Member/caregiver self-referrals
- Referrals from physicians and other stakeholders
- Initial screening

Predictive Modeling

Amerigroup continually mines data to identify and prioritize candidates for case management. Through our Continuous Case Finding (CCF) process, we evaluate the entire member population each month through our CI3 and LIPA predictive models, allowing us to identify new candidates and prioritize those with the highest expected need for interventions and care coordination services.

Our evidence-based predictive modeling tools enable us to stratify all members appropriately based on their level of risk for adverse outcomes. Our tools consider a member's chronic illnesses, likelihood of inpatient admission including the risk of first time admission for a mental health or substance abuse condition within two months, and risk for future emergency room use. Each member is assigned a risk score based on characteristics that correlate to a projected level of care coordination support. The results of our predictive modeling are reported back to the case management team for appropriate action, as necessary. See Section 9.1.4 for more detail on our predictive models.

Claims Review

Claims review is an integral part of our Continuous Case Finding process and reflected in the monthly CI3 reports. Claims information that feeds our predictive models and may indicate a need for case management involvement includes but is not limited to the following:

- Hospital readmission
- Three or more hospital admissions within the previous 12 months
- An unplanned hospital admission by a member who was recently followed in case management (within previous 30 days)
- Catastrophic illnesses and injuries

- Potential transplant candidates
- Patterns of inpatient and outpatient utilization

Changes in living or support situation that could have direct health status implications, particularly for LTSS members and others who may be dependent on caregivers

In addition to predictive modeling, we review claims on an ongoing basis to identify triggers which generate case management referrals, irrespective of the CI3 score. Cases with specified triggers and criteria are evaluated for eligibility and referred to a Case Manager for case initiation when appropriate. These triggers include high-dollar claims and diagnoses of certain conditions, including hepatitis C, sickle-cell anemia, hemophilia, and end stage renal disease.

Member/Caregiver Requests

While Amerigroup has very robust systems to identify and stratify members' risk and capture the information that supports their engagement and progress, we know that the human factor is one of the most important elements in engaging them in healthy behaviors and self-care. Our program connects people to collaborate and coordinate care that is holistic and individualized to our members' conditions. We encourage open communication with our members and their caregivers. Through our "no wrong door" policy, members and caregivers can contact any Amerigroup employee and request consideration to be placed in a care coordination program. We will honor all such requests – regardless of risk stratification score – and will promptly assign a nurse Case Manager to schedule a comprehensive health risk assessment (HRA). Based on the findings from the HRA, we will assign the member to a care coordination program, as appropriate.

Physician and Other Stakeholder Referrals

In addition to our data-driven processes and self-referrals, a variety of sources or individuals may refer members to one of our programs when they identify a need during contact with a member or based on review of a member's electronic health records. Our multifaceted, proactive approach allows us to intervene quickly and engage members in the level of support they need to achieve positive health outcomes and enhanced quality of life. Our "no wrong door" approach to identifying members includes but is not limited to the following types of referral sources:

- Physicians, vendors, and other healthcare providers
- Utilization management employees
- Disease management referrals
- Customer service employees
- Grievance and Appeals employees
- 24/7 Nurse HelpLine employees
- Health information lines
- Members or their families/caregivers
- Hospital staff, including discharge planners and social workers
- Community social service organizations/agencies
- IVR Outreach Surveys

Initial Screening

Our initial screening of members identifies members' immediate physical, behavioral health, psychosocial, and functional needs, gathers information regarding the level and type of existing care coordination, and reviews information to identify the member's strengths, needs, and available resources to enable person-centered planning in conjunction with the member. Data from the initial screening for newly enrolled members is considered in the risk stratification process and allows us to include a "rush" designation for members found to have immediate needs identified during the initial screening or during any contact with a member.

Care Plan Development (9.1.6)

Question 9.1.6, #1

1. Describe in detail how person-centered care plans will be developed for each member.

Amerigroup will develop individualized, person-centered care plans for each Iowa member who is eligible for care coordination, based on the findings of the initial screening and comprehensive health risk assessment, available medical records, and input from members, their family members/guardians/representative, and their health providers. Because our care model is fully integrated, the physical health, behavioral health, LTSS and pharmacy needs of our members are all seamlessly addressed through an integrated care plan. Throughout the care plan development process, *our approach and emphasis are to empower members to take responsibility and self-direct their care.* The result is a care plan that helps to identify the problems, issues, or barriers for the member; realistic and optimistic goals; member's preferences; and the interventions and actions needed to achieve the goals. The care plan also addresses barriers to goals such as members' lack of understanding, motivation, financial need, insurance issues, or transportation issues.

Our care plans are designed to:

- Establish prioritized person-centered goals and actions
- Facilitate seamless transitions between care settings
- Create a communication plan with providers and members
- Monitor whether the member is receiving the recommended care

Establish Prioritized Goals and Actions

We will document a care plan for every member enrolled into our care coordination program. Only Case Managers (licensed clinical professionals) may lead the planning process, consistent with their scope of professional licensure. After establishing contact with the member, our Case Manager will complete a comprehensive health risk assessment using an integrated, standardized, best practice tool (as detailed in Section 9.1.2).

The Case Manager will assess the member's total health care needs holistically, including physical, behavioral, functional, cognitive, and social factors, as well as access to care. The assessment affords us a full understanding of the member's history, current health needs, perceptions, and overall goals. The comprehensive assessment focuses on determining the member's functional, physical, mental, and support status, then asks targeted questions about the individual's and caregiver's perceptions of needs.

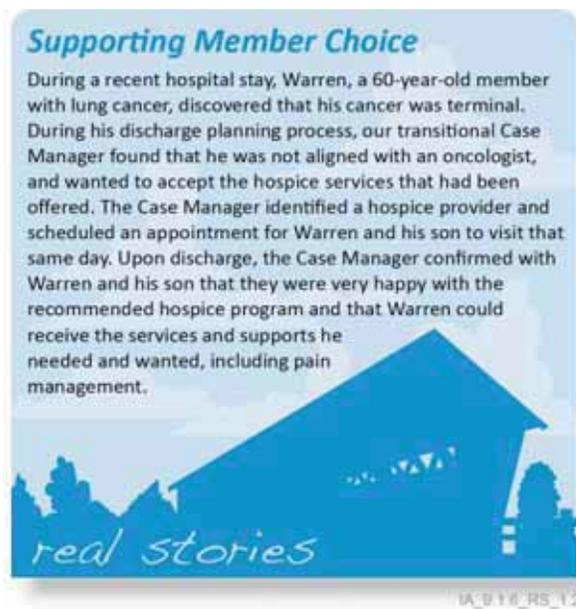

The thorough assessment process enables the Case Manager not only to learn about the member's needs in detail, but also to build trust and credibility with members, their providers, and natural supports. This trust is essential to person-centered care planning. The Case Manager will review any identified concerns, barriers to health, or other specific needs with the member. Together, they will set goals and develop a care plan to meet those goals. The Case Manager will also confirm that the member is fully aware of any potential outcomes if the member does not do his or her part to meet care plan goals. In general, the Case Manager will initiate a care plan within 14 calendar days of accepting the member into care coordination, but not exceeding 30 calendar days for completion.

The goals and actions developed in the person-centered care plan are designed to be:

- **Outcome-Specific:** Care plans will identify prioritized, measurable short-term and long-term goals. Prioritized goals consider the member and caregiver needs and preferences with clear prioritization. Goals shall include target dates and timeframes for reassessment of progress toward and accomplishment of desired outcomes. Short-term goals usually address the immediate health status of

the member. A long-term goal aims to achieve sustaining health improvement or optimal health status.

- **Individualized:** Care plans will specify individualized, prioritized goals for the member and identify the needed resources and collaborative approaches utilized to meet specified needs. The care plan addresses the member's needs and concerns found in the assessment findings.
- **Time-specific:** Care plans will establish goals with designated target dates for achievement. They will include scheduled timeframes for follow-up and evaluation of progress toward goals, based on the severity and intensity of the issues identified. Scheduled times for monitoring are captured through automated follow-up prompts in the care management system.
- **Collaborative:** The Case Manager involves the member or member's representative/caregiver and interdisciplinary team in the ongoing plan of care. The Case Manager will communicate progress toward and/or accomplishments of desired goals/outcomes of the care plan to the interdisciplinary team.
- **Evidence-based:** As appropriate, care plans incorporate evidence-based interventions and goals when evidence-based criteria are available, such as corporate clinical practice guidelines.

Facilitate Seamless Transitions between Care Settings

Under our transition of care model, moderate- to high-risk members leaving inpatient care receive more intensive outreach and one-on-one coaching until they are stabilized at home. It is modeled on transitional care programs that have proven successful reducing readmission rates and improving overall health outcomes. The program incorporates strategies for filling the gaps that most often drive readmissions, including inadequate access to follow-up care or poor coordination of follow-up services at and after discharge.

We recognize that our members' needs change frequently, and supporting them during critical transitions among care settings is one of the most crucial care coordination functions. These transitions comprise some of the most vulnerable times for our members; therefore, our Case Managers are dedicated to facilitating safe, seamless, and successful movement between health care settings for our members. To enable these goals, our Case Managers:

- Assess the member's health status during telephonic and face-to-face interactions to identify changes in the individual's condition
- Conduct a comprehensive health risk assessment when members experience a change in condition to verify whether the plan of care continues to meet their needs, and make adjustments to services and settings where required
- Coordinate with acute facilities to begin the discharge planning process at admission, assuring that those plans are appropriate to the member's level of care
- Share information and obtain input from the member's PCP and specialty providers
- Update the member's plan of care to reflect current health status and needs

- Make referrals for services and assist with scheduling caregivers and physician appointments
- Collaborate with the member, family/caregiver, facility staff, and providers to develop a transition plan

Create a Communication Plan with Providers and Members

As part of the Case Manager's responsibility in facilitating the care planning process, the Case Manager will develop a communication plan and actively engage the member, member's family/guardian or representative, treating physician(s), and other members of the interdisciplinary team, as appropriate and with the member's permission.

The Case Manager engages the member in the planning process as the primary decision maker and goal setter. During the planning process, the Case Manager will communicate directly with the member to understand and incorporate priorities of the member and to educate and empower the member to make informed decisions. Member input and participation in care planning encourages acceptance of the plan and maximizes the potential of achieving the specified goals.

Collaboration with the member's treating physician(s) in developing the care plan is critical to effective case management. As part of the facilitation process, the Case Manager communicates with the physician directing the member's care, notifies the physician that the member is engaged in the care coordination program, and solicits input. This communication should occur within one month of obtaining verbal consent for case management and may take the form of a verbal phone call, letter, or via a verified fax to the physician directly or the physician's office. The method of communication (phone call, verified fax, or letter) is documented in the notes.

The care plan serves to provide a common method for Case Managers to document and plan their involvement in a case. Communication of the care plan to providers will be promoted through the provider portal to ensure they are abreast of all updates and progress. It is also a tool to help ensure timely coordination of services that increase the effectiveness and efficiency of care/services provided. Care plans are dynamic, evolving, and require ongoing evaluation of progress. Input from the member/caregiver, primary care physician, and other health care professionals will be obtained throughout management of the care plan.

Monitor Whether the Member Is Receiving Recommended Care

A care plan is a dynamic roadmap that changes as members' needs progress or evolve. *Case Managers regularly monitor member progress at a frequency indicated by the member's risk level and work with the member, family, guardian, primary care physician, and other providers as necessary to evaluate the member's progress and identify solutions to overcome barriers that may stall progress.*

Case Managers and members will conduct routine reviews of care plans, including updates and revisions based on progress and changes in needs, to support and recognize achievement of goals. This process will also provide information for our quality management processes. See Question 9.1.6, #9, below, for more detail on monitoring strategies.

Question 9.1.6, #2

2. Describe how the care plan development process will be individualized and person-centered.

Individualized and Person-centered Care Planning

Our approach to member care planning emphasizes choice, personal responsibility, and the relevant linkages to community-based services, supports, and resources for each individual. We help our members enhance their quality of life and feel better empowered to take responsibility for contributing to their own health and wellness in a supported, structured way through the setting of clear, achievable, and mutually agreed upon goals.

From the outset, we will engage members to learn about their individual history, goals, preferences, values, and priorities and to identify all relevant treating providers. This information becomes the foundation for building a person-centric care plan. We will encourage participation throughout the care coordination process, including recognizing the member as the center of his or her interdisciplinary team (IDT). The member and family/guardian or representative are involved in the development of the care plan to the extent the member desires and that is feasible.

The care plan will include the member's perspective by:

- Scheduling a date, time, and location for completion of the Comprehensive Health Risk Assessment and health care planning that is agreeable to the member. For example, health care planning may occur by phone or face-to-face at the member's home or in a care setting
- Identifying the suggested members of the IDT. In addition to the member and the Case Manager, the IDT may include the member's PCP, other treating provider(s), providers of other services such as behavioral health services, family members, caregivers, and others of the member's choosing
- Asking the member to state who should participate in the care plan and arranging participation of these other IDT members
- Reviewing the purpose of the care plan with the member and asking the member to identify needs and desired outcomes, services, and providers
- Responding to the member's questions
- Reviewing and obtaining the member's agreement with the final care plan

We meet with members wherever they are or like to be, whether at home, in a restaurant, at a shelter, or at another location, as needed. By meeting and engaging members in their home, other community living arrangement, or facility, we gain significant knowledge of the needs and preferences of each individual. Establishing and maintaining personal bonds that reflect an interest in members overall lives, not just their chronic condition state, demonstrates our commitment to their well-being, care coordination, and recovery and rehabilitation.

The Case Manager will develop the care plan in concert with the IDT based on multiple medical and behavioral factors and discuss the needs with the member and family/caregiver. Preparation of the care plan will include an evaluation of the member's wishes, values, and degree of motivation to take responsibility for meeting each of the care plan goals. Through the use of behavioral interviewing skills, the Case Manager will encourage members to identify their own meaningful goals and achievable milestones. This level of engagement and involvement may increase their investment in following the care plan and successfully achieving their goals. The Case Manager will regularly communicate with the member and providers in an effort to monitor achievement of the goals set within the care plan. Through these communications and reviews of data and other information, the Case Manager and the IDT may

refine the care plan to identify changes to or additions to services and supports or refinement of goals identified in the care plan.

Question 9.1.6, #3

3. Describe how the care plan development process will incorporate findings of the initial health risk screening, comprehensive health risk assessment, medical records and other sources.

Data Inputs for Care Planning

As Case Managers lead the development of a care plan, they will consult all available data sources. The primary framework that informs the care plan is the comprehensive health risk assessment (HRA). However, the results from the initial screening, historical member claims data, and predictive model output will also contribute to a holistic view of the member's strengths, barriers, and needs.

Upon enrollment, each member will be encouraged to complete an initial health screening questionnaire, available through multiple channels including telephonic, mail, online, and in person where appropriate. This brief questionnaire is designed to optimize engagement and identification of those members who may require an in-depth assessment and potential care plan development. It will also help the case manager pinpoint areas across the member's physical, behavioral, and functional status to examine more closely during the comprehensive risk assessment.

In the care planning process, our Case Managers will gather and review any additional available data, including claims and utilization data, clinical information through medical records, and information provided from provider and other referrals. Relevant information from these sources is discussed with the member and IDT during the care plan development. In this way, the care plan is a living document, designed to reflect up-to-date care needs, goals, and interventions for each member in the care coordination program at any given time.

Question 9.1.6, #4

4. Submit a sample care plan for each proposed risk stratification level.

Our member's care plans are goal-focused and have clear milestones and action steps. In Figures 9.1-11, 9.1-12, and 9.1-13 show three sample care plans for members at the low, medium, and high acuity levels, as they would appear in our care management system CareCompass. In these specific examples:

- The low acuity member is fairly well managed, but needs some additional self-management around condition monitoring and nutrition counseling
- The medium acuity member needs more intervention and has gaps around complications, nutrition, and connecting with a PCP on a regular basis to help avoid a crisis resulting in emergency room visits
- The high acuity member not only has needs around complications and nutrition but his or her condition is compounded by depression and a neurological condition

Involved Parties (9.1.6.1)

Question 9.1.6, #5

5. Describe how you will ensure that there is a mechanism for members, their families and/or advocates and caregivers, or others chosen by the member, to be actively involved in the care plan development process.

Active Member Involvement in Care Planning

Trusted and most familiar with the member's abilities and preferences, families, guardians, advocates and caregivers are a critical part of the member's care and often the linchpin to supporting the member in their care plan development. From our experience in providing care coordination across affiliate plans, we recognize that **members are more likely to comply with care plans if they and their families, guardians and caregivers are involved in the planning process and driving their own care decisions.** Case Managers will work closely with the members to communicate in a manner that is appropriate and that helps make sure understanding of the full range of options. When members are unable to become active participants or wish to involve their families, guardians and caregivers, Case Managers will collaborate with the authorized representative and/or those individuals whom the member identifies and consents to participating.

A designated Case Manager will act as the single point of contact for the member and family/caregiver to make communicating easy. Care coordination will involve members, authorized representatives, and families/caregivers in developing the short- and long-term goals of the care plan. With appropriate approval from the member, the Case Manager will engage the authorized representative/family/caregiver to participate in the IDT and help to develop goals for the member's care plan and document their participation. During the care coordination process, the Case Manager will work closely with the authorized representative/family/caregiver to provide information and education that empowers them, in concert with the member, to make informed decisions on necessary care, services and supports. The Case Manager will facilitate agreement among the IDT and the member on the proposed care coordination interventions. The member's consent will be documented in CareCompass. Where authorized representatives or legal guardians are involved, their agreement and signature will represent the consent of the member.

The care plan is a living document. To make sure that it remains current, the Case Manager will maintain ongoing communication with the family/caregiver to assess the member's progress along the care plan goals and to identify new needs. Follow-up communications with the family/caregiver are most critical when a member experiences a change in status, such as a visit to the emergency room or an admission to inpatient. The Case Manager will include the family/caregiver on any and all communications with the IDT during these events and post discharge.

Additionally, Amerigroup will deliver an information-sharing and collaborative platform where interdisciplinary team participants can review and contribute to the care plan, as authorized by the member. The platform is operational today in several states serving members with disabilities and mental health and substance use conditions, including individuals with intellectual and developmental disabilities or those with a serious mental illness. Through our platform, we will strive to deliver the right information to each audience in a way that supports understanding, coordination, and action in the context of role-based authorization and access. Working together, we can help support our Iowa members in directing a meaningful plan with their desired health and quality-of-life outcomes.

Amerigroup understands the critical role families and caregivers play in the lives of many members in our care coordination program. We are sensitive to the emotional, physical, and financial toll this role can take on families/caregivers. Optimizing their own health, resilience, and well-being strengthens the family/caregiver's abilities, promoting stability and quality of life for the member. Our Case Manager will

engage caregivers in a discussion about how they are doing and inquire about needs the caregiver might have that can be supported. Our Case Managers will use free tools, such as the American Medical Association's caregiver assessment, to guide these discussions. Case Managers will have access to resources that can be shared with caregivers throughout the care coordination process. We strive to reduce family and caregiver depression, anxiety, and stress by providing education and information about available caregiver supports, enabling them to provide care longer, thereby avoiding or delaying the member's need for costly institutional care. Family and caregivers can either engage directly with the Case Manager to identify supports available in their community or access resources through our online library.

Question 9.1.6, #6

6. Describe how you will identify other caseworkers to be included in the care plan process and how services will be coordinated to avoid duplication and/or fragmentation of services.

While the Amerigroup care coordination model is fully integrated across physical health, behavioral health, and LTSS, there are situations where members receive care coordination services from additional caseworkers, such as when members are also enrolled in Health Homes, ACOs, or Medicare Advantage HMOs. ***Our coordinated approach places the member in the center to ensure all resource needs are integrated, resulting in better services and allocation of resources, enhancing self-direction, and improved health status with no duplication.*** We are experienced in coordinating the full spectrum of services regardless of whether we or other entities are responsible for payment. The Case Manager synchronizes efforts and draws on the expertise from the member's broader interdisciplinary team (IDT), using technology tools to link all team members and organize activities and interventions.

Care Plan Coordination with External Caseworkers

We will build relationships with other case/care managers or support coordinators, their employees, and the agency to which the employer is contracted. Our Case Managers are trained to identify these types of situation by examining member demographic and historical claims data. We have found that often the most straightforward and effective way to identify other caseworkers that play a part in coordinating a member's care and services is simply to ask the member. We will establish a formal communication process and sign Memoranda of Understanding or Letters of Agreement when appropriate with employers or agencies. We will develop policies and procedures that will elicit coordination with Case Managers or support coordinators and eliminate duplication in services. The IDT structure will provide a mechanism to eliminate duplication of services. For those participants who are enrolled in Home- and Community-Based Services (HCBS) waiver programs, we will collaborate and coordinate services with HCBS care managers, as well as engage with DHS and other State agencies.

Where applicable, Amerigroup Case Managers will coordinate activities with caseworkers from other managed care plans, insurers, programs, and providers. We monitor these activities during a quarterly care plan review process, and we follow up periodically to assess whether the non-covered services have been accessed and are being provided. The Case Manager solicits feedback from the member and the IDT regarding the effectiveness of the process.

To accomplish this coordination, we will establish productive partnerships with other plans and insurers. Case Managers contact appropriate representatives from the programs, plans, and insurers prior to care plan reviews to ensure that all pertinent information is included in the review. Case Managers also communicate with these representatives regarding the status of member care, as appropriate and with expressed permission from the member. When it is necessary to conduct a joint meeting with other programs and insurers, we make these as convenient as possible, offering to schedule a conference call so

that all invitees may participate. As we develop and revise care plans, we distribute copies to all service providers and caregivers.

Preventing Duplication/Fragmentation of Services

Once identified, our Case Managers will maintain open communication and coordinate with caseworkers from other managed care plans, insurers, programs, and providers. As appropriate and with permission of the member, Amerigroup will share the results and identification and assessment of that member's needs to avoid redundant activities.

As soon as the member begins case management, we capture the member's information in Member 360—a secure, centralized information sharing system—to support timely access to the most appropriate services for the member's conditions and prevent duplication. The information we capture for each member includes services and support already in place for each member, so that these can be documented, and duplication of effort to secure such services can be avoided. Through the provider facing Member 360 tools, external Case Managers will be able to see records of members attributed to them via the Amerigroup provider portal, giving them simple, easy-to-access data and information to assist them in engaging their members in their health and well-being. This information will enable all caseworkers serving our members to see the full picture, including care plans and assessment information, enhancing their ability to reduce duplication and improve their quality of care.

Care Plan Requirements (9.1.6.2)

Question 9.1.6, #7

7. Indicate how you will ensure that clinical information and the care plan is shared with the member's PCP (if applicable) or other significant providers.

Coordination with Primary Care Physicians

Amerigroup clinical staff maintains a close working relationship with the primary care physicians (PCPs), Integrated and Chronic Health Homes, and other significant treating providers in our members' IDTs. We leverage this relationship to inform our provider partners about the benefits of our care coordination program; available education, services, and materials; reciprocal sharing of information requirements; and how they can access chronic condition information to improve member care. ***We see our role as supportive, complementing the providers in their care for our members, and actively work with providers to encourage them to collaborate in providing the best care and coordination of services for our members.***

After acquiring releases of information, our Case Managers facilitate the information-sharing process through ongoing collaboration with the member's IDT to ensure that services are synchronized, unduplicated, and consistently delivered for every individual. The member's IDT may consist of various types of providers, including PCPs, Health Homes, medical and behavioral health specialists, and social workers. An example of this type of reciprocal information-sharing is diabetic information that goes to both the cardiac specialist, who will educate the member on diabetes and heart health, and the behavioral health provider for behavioral modification.

Sharing Information with Providers

Through the provider facing Member 360 tools, providers who have members attributed to them can see the member record via the Amerigroup provider portal, giving them simple, easy-to-access data and information to assist them in engaging the members in their health and well-being. The integrated data will be displayed to make it easy for the provider to act on it and making sure their patients are getting the services they need. This view will enable providers who are treating our members to see the full picture,

including care plans and assessment information, enhancing their ability to reduce duplication and improve their quality of care. See Section 9.1.7 for more detail on provider facing Member 360.

We also send the PCP a letter of introduction explaining the individual's participation, provider responsibility in the care planning process, the clinical practice guidelines associated with the member's condition, and a copy of the care plan.

We engage all relevant treating providers in the case management planning process—soliciting feedback and sharing of information throughout the member's care planning and case management. In addition, we communicate with all treating providers as appropriate throughout the process to:

- Provide regular status updates to the provider regarding the member's stratification level, changes in health status, and contact frequency
- Assist with scheduling appointments or arranging transportation
- Address provider questions about the member's care
- Monitor the member's engagement in services and supports
- Share provider collaboration and communication details
- Reinforce evidence-based clinical practice guidelines

Contacts are primarily telephonic, but we also regularly deliver updated case management plans by mail or fax to the provider.

Communication with Members

We have found that active member input and participation in care planning encourages member ownership of the plan and maximizes the potential of achieving the specified goals. The Case Manager will regularly communicate with the member and caregiver/family by phone, email, and in person to monitor progress and achievement of care plan goals. Through these communications and ongoing data review, the Case Manager and the team may revise the care plan to identify changes or additions to services and supports or refine goals.

Our Iowa members will also have online access to their care plans through the member portal. In addition to the care plans, they will be able to view their completed health risk assessments, their risk score, their PCP, and their summarized demographic information. Our Case Managers encourage members to review their care plan once it has been developed, and regularly with changes in health status. This facilitates working with the member to gather input and update the care plan. For members who prefer dealing with paper copies, summaries of the care plans will be mailed or faxed, upon request.

Question 9.1.6, #8

8. Describe how cultural considerations of the member would be accounted for in the care planning process and how the process will be conducted in plain language and accessible to members with disabilities or limited English proficiency.

We take pride in our ability to encourage members to gather information, make good decisions, and take responsibility for their health care. **Setting the right tone for this individual autonomy and engagement requires careful evaluation and planning to meet the member at his or her current place (physically, behaviorally, and functionally), using tools and language the member can readily understand.** Our care planning process will reflect the cultural considerations of our members in Iowa on a community-by-community basis. Our approach to ensuring culturally competent care to our members includes:

- Training Amerigroup employees on cultural competency and plain language communication
- Promoting ease of readability of written materials
- Facilitating communication with members who have limited English proficiency
- Facilitating communication with members who have disabilities

Training on Cultural Competency and Plain Language Communication

Recognizing and being sensitive to the cultural needs of diverse member groups demands that we approach all communication with a strong cultural competency. Amerigroup's cultural competency training plan fully supports this effort. All employees must complete this training when hired and must pass an exam at the end of the course, as well as complete an annual refresher training.

These training efforts help make sure that our employees understand that delivering services to people of all cultures, races, ethnic backgrounds, abilities, and religions must occur in a manner that recognizes, values, affirms, and respects the worth and protects and preserves the dignity of each member. Our training curriculum includes definitions, benefits of cultural competency, government regulations, values, language resources, and variations in social comfort factors. Amerigroup's policies and procedures fully support all 14 federal culturally and linguistically appropriate services guidelines regarding cultural issues, languages, and readability.

Through this training, our Case Managers are equipped to lead care planning discussions in plain language and in a culturally competent manner. This helps to enhance member understanding and engagement in the care planning process, as well as the member's ability to make informed decisions on the care plan.

Readability of Member Materials

All member materials, including the member's care plan, are drafted to be easy to understand and developed in accordance with our commitment to cultural competency. We also make sure that all member materials are written to the Flesch-Kincaid reading level requirements of Iowa. We enhance written materials with pictures and symbols where possible to help convey the meaning of the written text. In addition, for online materials we also use an innovative, interactive software tool designed specifically for health plan applications. This tool replaces hard-to-read medical terms and phrases with plain-language alternatives and helps ensure that members at every reading level can understand Amerigroup materials.

Members Who Have Limited English Proficiency

For all interactions with the member, including the care plan process, Amerigroup will provide oral interpretation services at no charge to members. The availability of oral interpretation is prominently displayed at the front of the member handbook. Our Case Managers will include employees who reflect the cultural and linguistic backgrounds of the members we serve. As needed or as directed by the State, we will hire representatives who speak other languages.

Our telephone menu script will state that oral interpretation is available for any language, and written information is available in Spanish and English. We train our Case Managers to quickly recognize situations requiring interpreter services so that they can arrange for a representative who speaks the language or an over-the-phone interpreter (OPI) to join a call to speak to the member in his or her native language within 45 seconds. The OPIs with whom we work are fluent in over 200 languages and understand medical terminology.

This interpretation service is also available to members during visits with Amerigroup providers. When a member needs language interpretation to communicate with a provider, the provider contacts the Member call center, and a Member Services Representative creates a conference call between the provider, member, and interpreter.

In these situations, a Case Manager can make arrangements for an interpreter to accompany the non-English-speaking member on a medical appointment so that he or she can communicate with the provider. Our Case Management Department can also arrange for a sign language interpreter to accompany a member who is deaf or hard of hearing on a medical appointment to offer signing services.

Members always have the right to refuse the interpreter service. If they do so, Amerigroup documents that decision in the member's file.

Services for Members with Hearing or Visual Impairment

A separate toll-free number provides Teletypewriter (TTY) and Telecommunications Device for the Deaf (TDD) access for members with hearing loss and/or language disabilities through AT&T Relay Services. The member calls the TDD line, and the TDD operator calls Amerigroup. The TDD operator communicates the member's message to a call center representative. The representative then replies to the member through the TDD operator.

Callers with hearing disabilities can also communicate with Amerigroup using technology that allows them to conduct Video Relay conversations by viewing a qualified sign language interpreter. The member actually sees the Video Relay representative, a sign language interpreter, on his or her television screen and is able to both read the content and see the interpreter's facial expressions. Being able to see the interpreter's facial expressions is a subtle but important factor that can help Amerigroup in connecting with members. Our provider directory includes the languages spoken by each PCP. We will contract with a vendor to provide video conferencing with a qualified sign language interpreter for members with hearing impairment.

We will also offer materials in additional formats at no charge to the member, including large print and Braille, to accommodate those with visual impairments, disabilities, or other specialized needs.

Question 9.1.6, #9

9. Describe how the proposed care plan process will include a system to monitor whether the member is receiving the recommended care.

Monitoring Case Managers

Monitoring whether members are receiving recommended care is a core daily responsibility for our Case Managers. Our Case Managers are accountable for coordinating all of the member's acute, behavioral, psychosocial, and functional care needs. Through our integrated care management tools—CareCompass and Member 360—our Case Coordinators have access to up-to-date data on members' progress along with their care plan. Case Managers are expected to:

- Monitor the care, services, and products delivered to members
- Monitor if the goals of the care plan are being achieved
- Determine whether those goals remain realistic and optimistic
- Determine if modification of goals is warranted
- Determine what actions may be implemented to overcome barriers and enhance positive outcomes

In addition, our Case Managers maintain professional rapport and communication with the member and those providing care/services, including the member's physician(s), to enable effective monitoring. This communication helps confirm that the interventions and goals in the care plan can be discussed, any problems or issues can be identified, and adjustments can be made to the plan as needed.

Integrated Interdisciplinary Team Rounds

Amerigroup's behavioral and medical clinical leadership oversees care plans and actively collaborates to engage providers, members, and their families. Our program incorporates clinical case rounds with an interdisciplinary team of professionals. Weekly chronic condition rounds include our medical and behavioral health medical directors, utilization managers, subject matter experts on issues applicable across Medicaid population, pharmacists, and Case Managers. Case Managers prepare and present cases at rounds for validation of the care plan and to obtain suggestions on how to better manage the member. The team discusses available community resources and receives input from the medical directors regarding medical management, medications, and suggested modifications to the care plan.

Amerigroup's model fully integrates physical and behavioral health and will incorporate specialists as required to help address the member's condition and identified needs. Case Managers participate in both medical and behavioral healthcare rounds and present on shared members. The shared learning in these conferences enhances understanding of the complex needs of these members and assists in developing improved strategies for coordinated care. During these rounds, the behavioral health concurrent review team and the case management staff review all complex cases to ensure appropriate and timely interventions. Collaboratively, the team evaluates each case to identify and resolve any barriers to achieving the goals set in the member's care plan, such as language, medication adherence, co-occurring conditions, transportation, or caregiver issues.

Monitoring Timeframe

Each member's care plan includes a timeline for ongoing monitoring of the member's progress toward goals. At specified intervals, the Case Manager will reach out to the member and family/caregiver, his or her PCP, and other treating providers to assess the member's status. If the Case Manager identifies any barriers to progress or members whose progress may have stalled, the team will assess alternatives to get the member back on track toward achieving his or her goals.

Timeframes for scheduled member follow-up will be consistent with the degree of support and motivation the member appears to require to achieve specific goals on the individualized care plan.

Case Managers will follow up and contact members in accordance with the care plan goals. At a minimum, contact will be made with the member as indicated by the activity/acuity level of the case or at least every 30 business days for ongoing management. The Case Manager will document the scheduled follow up timeframe within CareCompass.

Tracking and Reporting (9.1.7)

Question 9.1.7, #1, 2

1. Describe how you propose to track and report on care coordination programs and share care coordination information with the member, authorized representative and treatment providers.
2. Describe the system that you will use to integrate and share information about members in order to facilitate effective care coordination

Fully Integrated Clinical Management Tools

Amerigroup employs innovative, integrated technology solutions that allow us to provide high-quality services to our members in a highly effective, efficient manner. We have developed robust care coordination tools that support member engagement, facilitate coordination of care, and encourage active member participation in service delivery. Our proprietary care management and member information-sharing technology tools, CareCompass and Member 360, integrate seamlessly with the Core Operations System and represent the system of record for member care coordination information. We will bring to Iowa our innovative technology solutions to reduce employee workload, enhance member engagement, and improve communication across all employees and providers who serve the member.

The fully integrated nature of our platform has delivered proven time-saving efficiency for our clinical staff, allowing them to focus more time on the needs of our members for optimal clinical impact. According to an internal survey distributed to pilot users, the integrated system significantly decreased the amount of time to research member information for initial and follow-up outreach:

- For initial outreach, we reduced the time it takes for research of member data from 16 or more minutes to 1–5 minutes
- For follow-up outreach, we reduced the time it takes for research of member data from 1–10 minutes to 1–5 minutes

Innovative Technology Solutions

CareCompass

The cornerstone of our care coordination model is CareCompass, our proprietary integrated care management system. As illustrated in Figure 9.1-14, *CareCompass houses the care plan and provides information about member conditions and medications and chronologically ordered progress notes, which promote comprehensive care coordination for member needs and issues, regardless of whether the driver is physical health, behavioral health, long-term services and supports (LTSS), or all three.* All of our clinical staff involved in the member's care work in CareCompass, enhancing clinical oversight, facilitating communication across departments, and reducing member risk for fragmented care.

CONTAINS CONFIDENTIAL INFORMATION

CareCompass seamlessly integrates with our core operations system, gathering and organizing information for management and coordination of member care and services. Member utilization data, such as claims history, authorization, immunization records, lab results, and care and disease management data, are readily available in an organized format with tools for Case Managers to identify and manage members' needs. It also includes online access to related attachments such as Power of Attorney documents, clinical records, or additional consent documents that have significant relevance to the member's care. CareCompass captures all member assessment information, including results from the initial health risk screening and any completed comprehensive health risk assessments, as shown in Figure 9.1-15.

CONTAINS CONFIDENTIAL INFORMATION

The information captured by CareCompass is used to drive care plan development, maintenance, and monitoring. The system prompts Case Managers on critical items and tasks to be addressed during the assessment and care coordination process. These tools enable Case Managers to track closely both care coordination activities and barriers to care identified through discussions with the member to verify that we are providing the care and services needed. CareCompass's library of reports enables us to use data to monitor Case Manager caseloads, compliance with accreditation requirements, and compliance with required time frames (such as timely completion of health risk assessments).

CareCompass facilitates communication and collaboration among all participants of the member's interdisciplinary team. For each member, we synchronize care coordination efforts through a single, individualized care plan that is tracked through CareCompass. The tool facilitates care coordination through the use of automated tasks, scheduling, and task reminders. Because all care coordination activities are documented in CareCompass, all team members can readily view data and information about individuals and share activities that have occurred, enabling improved care coordination.

Member 360

An integrated adjunct to CareCompass, *Member 360 allows Amerigroup clinical staff to access a single view that displays members' clinical and claims-based data in an easy-to-navigate dashboard, including HEDIS[®] care alerts, authorizations, prescriptions, lab results, and all claims history organized by type such as inpatient, ER, office visit, and behavioral health.* It organizes information into a timeline of clinical events representing a longitudinal patient record for the member across a number of domains, including diagnosis, providers, and medication history, as shown in Figure 9.1-16.

CONTAINS CONFIDENTIAL INFORMATION

HEDIS Gaps in Care Alerts

The Member Care Summary tab of Member 360 organizes member information in an easy-to-see format that delivers an at-a-glance view of a member's service history, including office visits, inpatient admissions, emergency room visits, authorizations, immunizations, lab results, prescriptions, and durable medical equipment.

To see additional information on any item, users can simply hover their mouse over the item or click on it to drill down. This integrated display makes it easy to take action, filling in gaps in care and making sure members are getting the services they need. We prominently display HEDIS gaps in care alerts in the upper left corner of the Member Care Summary screen, as shown in Figure 9.1-17.

CONTAINS CONFIDENTIAL INFORMATION

Leveraging Member 360's robust reporting capabilities, we will create and submit regular reporting regarding the selection criteria, strategies, and outcomes of care coordination programs as prescribed in the Reporting Manual, including reports on completion of initial health risk screening, completion of comprehensive health risk assessments, and care plan development.

Provider Facing Member 360

In the Iowa market, we will expand the reach of the care coordination footprint by making the Member 360 view available to providers — including Integrated and Chronic Health Homes — for our members under their care through our provider portal. ***Through the provider facing Member 360 tool, providers who have members under their care can see the member record via the Amerigroup provider portal, giving them simple, easy-to-access data and information to assist them in engaging members in their health and well-being.***

The integrated data will be displayed to make it easy for providers to act on it, filling in gaps in care and making sure their patients are getting the services they need. This view will enable any provider who is treating our members to see the full picture, including care plans and assessment information, enhancing the provider's ability to reduce redundant efforts and improve the quality of care. The availability of the 360 view will create an enhanced communication platform between Case Managers and providers so that conversations regarding member care coordination and outcomes easily occur.

Additionally, Amerigroup will extend the reach and collaboration with stakeholders involved in the members care. We will deliver an information-sharing and collaborative platform to share information with all authorized members of the interdisciplinary team. Participants in the team will be able to review and contribute to the care plan, as authorized by the member. The platform is operational today in several states serving members with disabilities and mental health and substance use conditions, including

individuals with intellectual and developmental disabilities or those with a serious mental illness. Through our platform, we will strive to deliver the right information to each audience in a way that supports understanding, coordination, and action in the context of role-based authorization and access. Working together, we can help support our Iowa members in directing a meaningful plan with their desired health and quality-of-life outcomes.

Our platform will also help the providers achieve the quality incentives defined in the Amerigroup quality programs, as discussed in Section 10.3. For example, the provider will be able to look up the most recent HgA1c results for each of his or her Amerigroup members with diabetes. The tool will assist providers in delivering care for our members by providing not only relevant data related to each member, but also prompts displayed in a succinct view to create obvious, actionable items at a glance.

Because access, use, or disclosure of information related to certain sensitive medical services is strictly limited by federal and State laws, information related to behavioral health or other sensitive services may only be accessed through Member 360 with the authorization of the member or for treatment purposes.

My Advocate: Maternal Health

CONTAINS CONFIDENTIAL INFORMATION

Sharing Care Plan Information

Our Case Managers actively promote information sharing among the member's interdisciplinary team through ongoing collaboration to make sure that services are synchronized, unduplicated, and consistently delivered for every individual. In addition to the member and family/caregiver, the member's interdisciplinary team may comprise various types of providers, including primary care providers (PCPs), Health Homes, medical and behavioral health specialists, and social workers.

The Amerigroup care team engages all treating providers, including PCPs, specialists, and behavioral health providers, in the care planning process, soliciting feedback and sharing information throughout the member's care coordination. Treating providers will have access to comprehensive and detailed member

data reports through our provider facing Member 360 tools. In addition, we communicate with all treating providers as appropriate throughout the member's care to:

- Provide regular status updates regarding member stratification levels, changes in health status, and contact frequency
- Assist with scheduling appointments or arranging transportation
- Address questions about member care
- Monitor member engagement in services and supports
- Share provider collaboration and communication details
- Reinforce evidence-based clinical practice guidelines

Our Iowa members will have online access to their care plans through the member portal. In addition to the care plans, they will be able to view their completed health risk assessments, their risk score, their PCP, and their summarized demographic information. Our Case Managers encourage members to review their care plan once it has been developed and regularly with changes in health status. This facilitates working with the member to gather input and update the care plan. For members who prefer dealing with paper copies, summaries of the care plans will be mailed or faxed, upon request.

In addition, the Case Manager will regularly communicate with the member, caregiver/family, and providers by phone, by email, and in person to monitor progress and achievement of care plan goals. Through these communications and ongoing data review, the Case Manager and the team may revise the care plan to identify changes or additions to services and supports or refine goals.

Monitoring (9.1.8)

Question 9.1.8, #1

1. Describe your care coordination monitoring strategies

Case Management Quality Improvement Program

Amerigroup has an established, comprehensive Case Management Quality Improvement Program for monitoring the care coordination program and processes. It promotes objective and systematic measurement, tracking, and evaluation of services and implements quality improvement activities based upon the findings. We will deploy this program in Iowa to make sure we identify and seize opportunities to continually improve how we deliver care coordination services to our Iowa members.

The purpose of our monitoring program is to:

- Establish a consistent framework for measuring and reporting case management outcomes, both at the individual employee's performance level and the overall program level
- At least annually, monitor and evaluate the effectiveness of each case management quality measure
- Assist in monitoring compliance with standards of practice in case management
- Continuously improve the case management process
- Document compliance with accreditation standards at least annually
- Maintain compliance with accreditation standards

Case Management Program Authority and Accountability

The Case Management Quality Improvement Committee (CMQIC) has oversight of the Case Management Quality Improvement Program. The CMQIC is comprised of senior-level regional, brand, and specialty company leaders. The CMQIC is responsible for reviewing and approving case management

policies, as well as establishing and developing quality improvement projects aimed at achieving accreditation and enhancing the enterprise's approach to continuously improving the quality of its case management activities. The CMQIC meets, at a minimum, on a quarterly basis to provide oversight and guidance for all quality activities and has input into the case management process and quality measures.

Responsibilities of the CMQIC include:

- Overseeing and guiding case management quality activities
- Overseeing implementation and enhancements of the case management program consistent with our case management strategy, industry standards, business needs, and trends
- Helping assure consistency in delivery of Amerigroup's case management program within business unit requirements
- Collaborating and discussing best practices to help drive the development and implementation of a leading-edge case management program across the company
- Reviewing and approving the case management program description annually
- Reviewing and approving all enterprise-wide case management policies annually
- Identifying and monitoring case management performance measures quarterly
- Helping assure compliance with accreditation standards and regulatory requirements
- Approving, monitoring, and providing oversight and guidance on quality management priorities and projects
- Evaluating the effectiveness of the case management program description at least annually

Annual Evaluation of Program

On an annual basis, the Quality Improvement Committee (QIC) will evaluate the care coordination program to make sure that the scope, goals, performance measurements, and planned activities are consistent with national strategic plans and the national case management standards of practice. This evaluation includes:

- Evaluation of the CMQIC to optimize effectiveness
- Evaluation of the results of the case management quality case review process and review of quality and aggregate data from member satisfaction survey reports and complaints
- Input on trends and action plans related to internal case management activities
- Input on trends, philosophy, and benchmarks available from national case management organizations and professional resources/publications

This evaluation results in the development of the Quality Management and Improvement (QM/QI) Program and Work Plan and revision of the annual Case Management Program to meet the upcoming year's needs.

Defined Quality Performance Measures

Performance measures are quantifiable, used to establish acceptable levels of performance, including a baseline measure, measurable goal, and, at a minimum, annual re-measurement. The QIC reviews all performance measure results. Plan/Regional business unit staff receive their specific performance results in staff meetings. When directed to do so by the QIC, areas below benchmark will implement action plans to improve or correct identified problems.

Quality performance measures for case management may include:

- Case management quality case review outcomes
- Collaboration with the behavioral health program

- Complaints about the case management process
- Member satisfaction with case management services
- Documentation of member-identified issues and concerns in the case management plan
- Medication adherence assessment and follow-up in the care plan as an identified issue with interventions and targets

Case Management Quality Case Review Process

Case managers and non-case managers have quality case reviews completed monthly on a random selection of open and closed case records from within the medical management system. Consistent implementation and documentation of the case management process (that is, case initiation, assessment, planning, coordination, monitoring, and evaluation) are assessed through the quality case reviews process.

The manager and the individual employee review all case review results to assess the Case Manager's learning needs. The Case Manager is provided feedback on trends seen and opportunities for improvement, and an action plan for follow-up is developed, if necessary. Actions plans may include but are not limited to:

- Providing education and/or counseling to the employee until improvement is noted
- Conducting quality case reviews on a more focused basis (for example, weekly or biweekly) until achieving a consistent score at or above the designated minimum threshold

The QIC reviews aggregated quality review results for trending and analysis.

Question 9.1.8, #2

2. Describe how case specific findings will be remediated

Remediating Systemic Issues of Suboptimal Performance or Non-compliance

Based on the findings from the care coordination monitoring strategies described above, Amerigroup promptly develops action plans to remediate all case-specific findings identified. For identified systemic issues of suboptimal performance or non-compliance, the CMQIC develops strategies to improve its care coordination program and processes and resolve areas of non-compliance, including process redesign and quality improvement projects. Case management quality projects will focus on improving the effectiveness of case management services and processes. To assess progress in meeting the goal, each case management quality project includes a baseline measurement, quantifiable measures, established measurable goals, and periodic re-measurements, including the following elements:

- Statement of issue addressed
- Baseline measurements
- Analysis
- Intervention design
- Periodic re-measurement following intervention
- Analysis of new information with redesign of intervention if needed

For quality management and improvement strategies that involve engaging providers, we develop performance improvement projects (PIPs) to help increase the quality of care to our members. See Section 10.1.2 for examples of how we have worked with providers in the past to improve outcomes, including:

- Reducing asthma-related emergency room visits
- Non-urgent emergency room utilization
- Improving access to preventive care
- Mental health follow-up post hospitalization

Example: Case Management Stabilization Initiative

Opportunity for Improvement

An analysis of readmissions within a short time frame (30 days or less) among members of Amerigroup affiliate plans revealed an opportunity to improve the effectiveness of discharge planning. Across our Florida, Louisiana, Maryland, New York, Tennessee, and Texas markets, we developed an initiative in 2013 to address preventable readmissions to improve health care quality and to reduce medically unnecessary hospital spend. The goal was to improve the health of the population and to control/reduce the per capita cost of care.

Description of the Initiative

The Case Management Stabilization initiative is a readmission management program that includes a member identification strategy, nurse outreach protocols, and targeted interventions:

- *Member Identification* — A readmission predictive model was built to provide an indicator of readmission within 30 days of discharge. The methodology included demographic, utilization, clinical, and current admission data to predict admission risk. The Readmission Score (RAS) ranged from 0 to 100, where a score of 80 would represent an 80 percent likelihood of readmission within the next 30 days. The RAS appears on the health plan's Inpatient Daily Census and is recalculated daily using the most recent admission information.
- *Nurse Outreach Protocol* — Nurse outreach to the member/caregiver would begin prior to or immediately after hospital discharge. The call protocol allowed for both outbound and inbound contacts. Members were engaged for 30–45 days post discharge.
- *Targeted Interventions* — Once engaged with a member, the nurse's interventions were based on the Coleman Care Transitions model: Medication Reconciliation, Red Flag Recognition, Follow-up Care, and Patient Centric Medical Record. The nurse would work with the member/caregiver to obtain the hospital discharge medication list to review against the medications in the member's possession. The goal of the reconciliation is to resolve any discrepancies through review with the outpatient provider. Our Red Flag Diagnoses were CHF, angina, COPD, and diabetes. A problem list, including the admission diagnosis and comorbidities, was created to identify the diagnosis and root cause of the admission. The nurse made sure that the member had follow-up appointments and contacted the treating physicians/ancillary providers to facilitate timely resolution of questions/issues. The nurse created a care plan, shared with the member and treating physician, which included the problem list, medication list, any red flags noted, and the discussion notes with the member/caregiver/other providers.

Outcomes

An evaluation of the study population (n=1,908) showed that after implementation of the Stabilization initiative, the readmission rate for any condition decreased from 18.6 percent to 16 percent. The greatest improvement was seen in the **readmission rate for like conditions which showed a decrease from 11 percent to five percent**. Given these improvements, the initiative was expanded in 2014 to the Kentucky and Virginia markets.

Reassessments (9.1.9)

Question 9.1.9, #1

1. Describe in detail your process for reviewing and updating care plans.

Process for Reviewing and Updating Care Plans

Amerigroup recognizes that care plans are dynamic and evolving and require ongoing evaluation of progress. When appropriate, the Case Manager will initiate and implement appropriate modifications or revisions to the care plan. For all members enrolled in our care coordination programs, we will review and update care plans as indicated by a triggering event. For a member in complex case management, we will update his or her care plan on an as-needed basis and at least semi-annually following a care conference with the member's PCP. For members enrolled in disease management, care plans will be updated no less than annually.

Care coordination services involve a continuous process of delivering and monitoring interventions designed to meet the goals of the care plan, along with ongoing assessment of progress toward achieving those goals. The care plan is an evolving document that may need to be re-evaluated and updated based on a trigger event as defined under Question 9.1.9, #3, below, or other changes in the member's healthcare or support needs.

Case Managers will follow up and contact members in accordance with the care plan goals. At a minimum, we will contact the member as indicated by the activity/acuity level of the case or at least every 30 days for ongoing management. The Case Manager will document the scheduled follow-up time frame within CareCompass.

The care plan will be revised and updated as appropriate to document any identified changes in issues, goals, and/or interventions. The Case Manager will evaluate progress toward goals at each member contact and document that goals are being monitored on the care plan, even if there are no changes or revisions to the care plan.

An important aspect of monitoring includes identifying that the member remains eligible for case management services by verifying that the member remains active in his or her healthcare plan. The Case Manager or case management support staff will document verification that eligibility for case management services has been completed at case initiation. Verification will be completed periodically as needed, but no less than once per month.

We track all reassessment and care plan due dates by member in CareCompass and through weekly update reports. Flags and triggering systems are in place to notify and alert the Case Managers of upcoming reassessment and/or care plan due dates. This provides the Case Managers adequate time to schedule the reassessments and care plan reviews and to coordinate updates and changes to the care plan with the interdisciplinary team. This process helps assure compliance with care-plan-required time frames.

Question 9.1.9, #2

2. Describe the protocol that you will use for re-evaluating members to determine if their present care levels are adequate.

Protocol for Re-evaluating Members to Determine if Their Present Care Levels Are Adequate

As part of the monitoring process, the Case Manager maintains communication and collaboration with the member, family/caregivers (as appropriate), and all providers (including behavioral health providers) in the member's system of care to monitor the member's health status and progress toward meeting care plan goals. Whether triggered by the identification of a need through monitoring or a reassessment, the Case Manager will reach out to engage the member to discuss the care plan.

The Case Manager will use the results of the reassessment or other data to talk with the member about his or her current health and/or functional status and explain the service or support options available that will meet the member's needs and continue the member on the path to achieving his or her stated goals. Together the Case Manager and the member/family/caregiver may determine that the stated goals need to be adjusted to take into account the member's changed status. During this conversation, which may occur by telephone or in-person in a setting of the member's choice (as necessary), the Case Manager will provide the member and family/caregiver with information to assist in the decision-making process.

Depending on the preferences of the member, the Case Manager may include in this conversation other members of the interdisciplinary team. Their participation will help the Case Manager discuss specialized clinical or support needs with the member. For example, if the care plan update is related to the member's heart condition, the member's cardiac specialist, PCP, or both providers may participate in the discussion. If the care plan update is related to a social need, such as connecting the member to housing, a social worker may be included.

Amerigroup promotes an environment of shared decision-making that honors both the provider's expert knowledge and the member's right to be fully informed and involved in all aspects of care. This collaborative process empowers individuals with cognitive or behavioral health challenges by helping assure that they are the leader in their care planning process and are also supported by their family/caregiver, the Case Manager, and providers, giving them the assistance they need to make decisions for themselves.

Together the Case Manager, member, family/caregiver, and participating interdisciplinary team members will determine updates to the care plan. The Case Manager will document the changes in CareCompass and outreach to any non-participating members of the interdisciplinary team to inform them of the updated care plan. A copy of the care plan will be shared with the PCP, other treating providers, and the member.

Question 9.1.9, #3

3. Indicate the triggers which would immediately move the member to a more assistive level of service.

Triggers for Moving the Member to a More Assistive Level of Service

For all members enrolled in our care coordination programs, we will review and update care plans as indicated by a triggering event. Our Case Managers will evaluate the need for reassessment when we learn of certain trigger events such as:

- A new diagnosis (for example, COPD, diabetes, CHF)
- A change in the ability to perform activities of daily living and instrumental activities of daily living
- A hospital admission or unexpected facility placement
- A significant change in caregiver status (such as a serious illness)
- Loss of or inadequate housing that may necessitate a reassessment and an alternate plan for a member
- Lack of adherence to medication regimes or follow-up with medical providers

We recognize that our members and provider partners may have greater visibility and more timely information on changes in member status and triggering events. As such, we accept all requests from our members and provider partners to initiate a reassessment.

In cases where a reassessment reveals that the member does not require a more intensive level of care coordination, our Case Managers may provide short-term intensive coordination to assist a member and his or her caregiver/family through a more difficult time. If it is determined that the member requires a more intensive level of care coordination, our Case Manager will work with the member, family/caregiver, and the interdisciplinary team to collaboratively update the care plan.

Because our Case Managers are assigned to all members in their region regardless of level of care coordination needed at any given time, as members' needs change and they move between care coordination and complex case management, their assigned Case Manager will not change. Our Case Managers have the skills and expertise to assist members as their needs evolve, leveraging the expertise of the extended interdisciplinary care team as needs intensify or grow more complex. This continuity will benefit the member and improve quality outcomes and consistency across the delivery system.

Contractor Quality Management/Quality Improvement (QM/QI) Program (10.1)

Program Objectives (10.1.1)

Delivering quality care for each member is a driving goal for Amerigroup Iowa (Amerigroup) and our affiliates. Accordingly, we will implement a Quality Management/Quality Improvement (QM/QI) Program that incorporates all Contract areas with the goal of improving both the quality of care and outcomes for all enrollees across the healthcare delivery system. We successfully operate QM/QI programs for all populations included in the Iowa High Quality Healthcare Initiative through our affiliate health plans, giving us a unique understanding of the challenges and opportunities relevant to achieving sustained quality improvement for these populations.

Our QM/QI Program is embedded across all functions of our organization, and integrates medical, behavioral, pharmacy, oral, social, and LTSS components that reflect our holistic approach to member health and wellbeing. *With our affiliates' extensive experience, Amerigroup currently has in place the quality resources, infrastructure, and expertise to assist Iowa in meeting its quality goals and improving health outcomes and quality of life for members across all populations included in the Iowa Initiative.*

Building on the Medicaid quality programs developed during our affiliates' 24 years of experience and across 19 states, Amerigroup will customize our QM/QI Program to focus the entire health plan on achieving sustainable improvements in the quality and coordination of care for Iowa's members. The scope and depth of our QM/QI Program will reflect the demographic and epidemiological needs of Iowa's members and incorporate the key strategies outlined by the State, including the Healthiest State Initiative, State Innovation Model (SIM), and the Mental Health and Disability Services Redesign.

IA_10.1.1_COB

The purpose of the QM/QI Program is to:

- Objectively and systematically monitor and evaluate the quality, appropriateness, accessibility, and availability of safe and equitable medical, behavioral, and long-term care services
- Identify and implement strategies to improve the quality, appropriateness and accessibility of member care
- Facilitate organizational-wide integration of quality management principles

We will meet, if not exceed, the standards required by the Centers for Medicare and Medicaid Services (CMS), the National Committee for Quality Assurance (NCQA), and the State of Iowa. Our commitment to these standards is evident in our affiliates' widespread NCQA accreditations, strong HEDIS and CAHPS performance measures, innovative quality programs that are responsive to the specialized needs of our members, and effective continuous improvement processes. Key achievements across our state sponsored health program affiliates include:

- NCQA accreditation in 13 states
- Various Amerigroup affiliates have achieved the NCQA 90th percentile on critical performance measures such as timeliness of postpartum care, use of appropriate medications for members with asthma, follow-up after discharge for members hospitalized for mental illness, breast cancer screening, HbA1c screening, and adult BMI assessment
- Widespread improvement in HEDIS rates for Follow-Up After Hospitalization, Well Care, and Annual Dental Visit
- Innovative and effective quality strategies that capitalize on technology and community partnerships
- Rigorous and methodical performance improvement projects

To achieve quality goals, we embrace quality as a workplace culture and philosophy, not simply a separate function within the health plan. All of our employees participate in improving processes, services, and the culture in which we work. We implement cross-functional approaches that include representation from local health plan operational areas working with national leaders in their functional areas. Representatives from Quality Management (QM), Utilization Management (UM), Community-Based Case Management, Case Management (CM), Disease Management (DM), Behavioral Health (BH), Credentialing, Provider Services, Communication, Technology, Compliance, and our specialty organizations come together to solve problems and identify quality best practices. Our College of Quality provides an orientation entitled “Quality 101” for all of our employees, as well as ongoing training on our continuous clinical quality improvement structure. Our quality management philosophy extends to every level of management in the organization, and we embed quality goals into every associate’s performance plan to ensure optimal success. As outlined in Table 10.1-1, *Amerigroup’s Culture of Quality is embedded into every aspect of our organization. Every employee is a quality advocate, and quality is the number one priority in every functional area of the organization.*

Table 10.1-1. Organizational-wide Strategies Focus Every Employee on Quality Improvement

Strategy	Goal	Approaches
Member-centric Focus	Engage members to take charge of their health through targeted wellness, outreach, and incentive programs	<ul style="list-style-type: none"> • Outreach • Incentives • Health promotion • Wellness
Provider Collaboration	Collaborate with network providers to drive achievement of our quality goals	<ul style="list-style-type: none"> • Outreach • Education • Incentives • Medical home/Integrated Health Home • Cultural competency
Customer Satisfaction	Measure member and provider satisfaction and take action to maximize performance	<ul style="list-style-type: none"> • Satisfaction surveys • Benchmarks
Patient Safety	Promote the safety of healthcare services delivered to members	<ul style="list-style-type: none"> • Patient Safety committee • Quality of care • Pharmacy • Data
Accreditation Recognition	Validate performance through external accreditation (NCQA/Accreditation Association for Ambulatory Health Care (AAAHC))	<ul style="list-style-type: none"> • Health plans • Disease management

Strategy	Goal	Approaches
Outcomes Management	Authenticate achievements through industry-leading quality measures	<ul style="list-style-type: none"> • HEDIS • Performance improvement projects • Agency for Healthcare Research and Quality
Culture of Quality	Foster a workplace culture grounded in quality through training and alignment of employee objectives with QM/QI goals	<ul style="list-style-type: none"> • Employee training and mentoring • Executive and middle management role modeling of culture • College of Quality Management (computer based training models)
Clinical Research and development	Leverage credible clinical data, both internal and external, to inform QM/QI initiatives	<ul style="list-style-type: none"> • Clinical studies and Performance Improvement Plans (PIPs) • Best practices • Benchmarks • Health disparities • Continuous Quality Improvement (CQI)
Healthcare Reform (CHR) Readiness	Track and proactively address the future challenges presented by national healthcare reform	<ul style="list-style-type: none"> • Alignment of QM Program with healthcare reform quality goals • New research entities • Active participant with public comment requests for impact on quality • HCR quality sub-team
Network Excellence	Facilitate access to a superior provider network through a rigorous credentialing process	<ul style="list-style-type: none"> • Credentialing • Re-credentialing • Board certification • Audit expertise • Access and availability

We use local and community best practices to respond and adapt to changing market conditions. We incorporate input from clinical and quality improvement staff at the national level and from our affiliate health plans across other states. We also collect and incorporate local provider and member input. Our fully integrated medical and behavioral health programs are analyzed systematically to determine continuity of care processes, over- and underutilization indicators, and effectiveness of outreach to members and providers.

We implement creative, proven member and provider incentive strategies to drive performance improvement and favorable outcomes, as detailed in our response to 10.3. This includes partnering with Wellmark to

Amerigroup's distinguishing features for quality management:

- Integrating quality into every part of the organization
- Creatively reaching members through high-touch and high-tech tactics
- Leveraging technology to identify and prioritize members at the greatest risk for poor outcomes
- Actively engaging providers and members through incentives, education, and outreach

IA_10.1.1_COE_2.2

implement the 3M Treo Solutions Value Index Score (VIS) as a consistent measure of value across ACO providers. We use ongoing assessment, tracking, and work plans based on measurable goals to promote member outcomes, drive provider quality and efficiency, and decrease negative outcomes and incidents.

We also work to engage members in taking responsibility for their health outcomes whenever possible. Our Healthy Rewards program includes member incentives and engagement strategies to enhance members' knowledge about, and management of their health and chronic conditions as well as tools to support their independence and integration in the community. We will also design special programs and partnerships in support of Iowa's specific goals, such as the Healthiest State Initiative (see 10.2) including a commitment to becoming a Blue Zones worksite.

Our data-driven quality approaches have been measured, evaluated, and refined. We continuously develop and implement innovative strategies that improve our members' outcomes and support our network providers. These strategies include new online tools and technology to enhance our ability to achieve the quality and financial goals of our State customers. Through data-driven and validated quality improvement analyses, our QM Program implements and improves services for our members and support for our providers. Our information systems and analytic tools along with our individualized member-centric health risk assessments, care and service plans, care teams, and integrated and community-based "feet-on-the street" QM, CM, and NCQA-accredited DM programs provide the basis for the development of quality improvement interventions.

In the following section, we provide the following information:

- Quality Program Overview
- Work Plan
- Continuous Improvement Process
- Provider Collaboration Strategies
- QM/QI Committee
- State Quality Initiative Alignment
- Provider and Member Incentives
- Critical Incident Tracking, Reporting, and Monitoring
- Provider Preventable Condition Process

QM/QI Program Requirements (10.1.2)

Question 10.1, #1

1. Describe your Quality Management and Improvement Program, addressing all elements outlined in Section 10.1.2. Include how you will monitor, evaluate and take effective action to identify and address any needed improvements in the quality of care delivered to members.

The Quality Management and Improvement Program (QM/QI Program) is comprehensive, systematic, and continuous. It applies to all member demographic groups, care settings, and types of services afforded to Iowa Medicaid, Iowa Health and Wellness Plan, as well as Healthy and Well Kids in Iowa (*hawk-i*) program members. It includes medical, behavioral health, LTSS, and waiver services. ***The QM Program addresses the quality of both clinical care and non-clinical aspects of service.***

The overall goal of the Quality Management Program is to improve the quality and safety of clinical care and services provided to members through Amerigroup's network of providers and its programs and services.

Our QM/QI Program policies and procedures define how departments support quality objectives. This includes how we systematically monitor and evaluate the quality, safety and appropriateness of medical and behavioral healthcare and services offered by Amerigroup and identify and act on opportunities for improvement. We provide all QM/QI Program information and documentation to providers and members and we acknowledge that our Program design must be approved by DHS.

The overall goal is to improve the quality and safety of clinical care and services provided to members through Amerigroup's network of providers and our programs and services. Specific goals are established to support the purpose of the QM/QI Program. All goals are reviewed annually and revised as needed to ensure they are measurable and realistic. QM/QI Program goals are primarily identified through:

- Ongoing activities to monitor care and service delivery
- Issues identified by tracking and trending data over time
- Issues/outcomes identified in the previous year's QM Program Evaluation
- A demographic and morbidity analysis of member age, gender, and most frequently diagnosed disease categories (both inpatient and outpatient)
- Member and provider input
- Internal process reviews (collaboration between clinical and quality staff)
- Accreditation, regulatory, and contractual standards

We also work with the State to establish goals that align with priorities like the Healthiest State Initiative, Mental Health Redesign, SIM, and other programs as they are introduced.

The QM/QI Program is driven by a continuous quality improvement (CQI) philosophy and mode of action (See Figure 10.1-1). Continuous quality improvement processes identified in the Program Description, Work Plan, and Annual Evaluation are approved by the applicable committees and conducted to accomplish identified goals. The strategy incorporates the continuous tracking and trending of quality indicators to ensure outcomes are measured and goals are attained and includes monitoring of quality of care interventions and outcomes through HEDIS[®] measure reviews, external quality review studies, periodic medical record reviews (for chart maintenance, documentation legibility, disease management compliance, continuity of care coordination, information security, etc.), and as required by the Centers for Medicare and Medicaid Services (CMS).

Figure 10.1-1. Amerigroup's Continuous Improvement Process Drives Ongoing Quality Improvement

Quality management activities to monitor and improve behavioral health care are integrated into the overall Quality Management Program and encompass State regulatory requirements as applicable. Areas of focus include but are not limited to:

- Access and availability of services
- Coordination of care (including coordination between medical and behavioral health providers)
- Disease management and case management services
- Assessment of member experience with behavioral healthcare and behavioral services

Behavioral Health HEDIS measures and methodology have been adopted as performance indicators for clinical improvement. Quality initiatives are developed and implemented as indicated by data analysis for process improvements. Initiatives are reassessed on an annual basis to evaluate intervention effectiveness and compare year-to-year performance.

IA_10.1_CR_1.1

Integrated operations include both behavioral health and physical health personnel. Integration is further accomplished by behavioral health practitioner representation on both corporate and health plan QM/QI committees.

We understand the specialized approach required for quality management and improvement for populations receiving LTSS. In addition to standard analysis at the health plan level, and when findings indicate a need for improvement, we will implement systemic enhancements and quality projects specific to this population.

Examples of population-specific analyses include:

- Monthly data mining and analysis for all LTSS members to identify trends in gaps in care and services
- HEDIS and Consumer Assessment of Healthcare Providers and Systems (CAHPS[®]) survey data analysis for LTSS members separate from the all member data analysis
- Analysis of member and provider satisfaction surveys from LTSS members and providers including the Participant Experience Survey (PES) for members enrolled in HCBS waivers

Through our affiliates, we have extensive experience meeting the QM/QI RFP requirements and our program in Iowa will leverage our expertise to incorporate the following:

- An **annual and prospective five-year QM/QI work plan** that sets measurable goals, establishes specific objectives, identifies the strategies and activities to be undertaken, monitors results, and assesses progress toward the goals (see Attachment 14.5.1-1, Work Plan and 10.1.2)
- **Dedicated resources** (staffing, data sources and analytical resources), including a QM/QI committee that oversees the QM/QI functions (see 10.1.5)
- An **integrated approach to physical, behavioral, and LTSS** components through our interdisciplinary team approach to member-centered care and service planning. Quality is a critical component of this process and quality staff and functions are embedded through reporting, data analytics, outreach, education, incentives, and member satisfaction efforts.
- Mechanisms to detect and address both **under- and overutilization of services** are monitored using reports that identify both providers and members with utilization patterns that fall outside the norms. The utilization norms are adjusted to reflect regional and local practice variations and are compared to national benchmarks or Amerigroup aggregate data for all affiliate health plans. Intervention strategies are targeted at enhancing appropriate utilization practices and provide member intervention for cases of member over- and underutilization through care coordination and/or health education and outreach (see 11.1.2 for more detail on our approach to addressing under- and over-utilization).
- A process to monitor **variations in practice patterns** and identify outliers; our QM Department tracks and trends provider performance data on a regular basis to identify trends that represent clinical practice patterns that are not consistent with practice guidelines. This information is reviewed with an interdisciplinary team during QM committee meetings, and corrective actions are taken to address identified issues. Specific provider performance issues are shared with the Credentialing Department for consideration during the re-credentialing process.
- Strategies designed to **promote practice patterns that are consistent with evidence-based clinical practice guidelines** through the use of education, technical support, and provider incentives; Amerigroup deploys in-person and online provider training as well as educational materials, a provider handbook, and website to promote practice patterns consistent with evidence-based clinical practice guidelines. We also engage providers on our quality committees and in meetings to discuss practice guidelines and ensure our approach is aligned and reflects the latest clinical findings. We also share data and reports with providers and grant access to provider facing Member 360 to give providers actionable information to support optimal member care. Our provider incentive program,

detailed in 10.3, also promotes alignment and awareness of evidenced-based clinical practice guidelines by financially incenting appropriate practice patterns and high quality, cost-effective care.

- Analysis of the *effectiveness of treatment services*, employing both standard measures of symptom reduction/management, and measures of functional status; our formal UM evaluation consists of a review of the efficacy of the program structure and an assessment of the program activities, including an assessment of potentially avoidable hospitalizations, over- and underutilization, and inter-rater monitoring and analysis. The UM Annual Evaluation Report concludes with an overall summary and recommendations for next year's activities. Our QM Department also performs an annual review of access and availability as well as an over- and underutilization analysis. This is achieved by analyzing both quantitative and qualitative data to detect barriers and identify trends; monitoring areas with the potential for over- and underutilization specific to the membership population, local practice patterns, and national healthcare trends; and acting on the opportunities identified by implementing interventions and evaluating the effectiveness of the interventions implemented.
- Monitor the *prescribing patterns of network prescribers* to improve members' quality of care coordination services through strategies such as: (i) identifying medication utilization that deviates from current clinical practice guidelines; (ii) identifying members whose utilization of controlled substances warrants intervention; and (iii) providing education, support and technical assistance to providers; and (iv) monitoring the prescribing patterns of psychotropic medication to children, including children in foster care. We conduct regular data analysis and use several reporting mechanisms to identify outliers for provider prescribing patterns. When we identify providers whose prescribing patterns do not align with clinical guidelines, we outreach to the provider to share education and technical assistance. We also work with members and deploy our lock-in and MTM program to avoid controlled substance issues. We also deploy a psychotropic drug prescription management program designed to help assure the safety of persons taking psychotropic medications, reduce or prevent the occurrence of adverse side effects, and help the child/adolescent who is taking psychotropic medications function better and achieve positive clinical outcomes (see 3.2.6 for additional detail on our pharmacy program, including detailed descriptions and parameters of our lock-in, MTM, and psychotropic drug programs).
- *Written policies and procedures* for quality improvement include methods, timelines and individuals responsible for completing each task; we will leverage our extensive QM/QI Program administration experience to adapt our best practice policies and procedures for Iowa.
- *System for monitoring services*, including data collection and management for clinical studies, internal quality improvement activities, assessment of specialized needs populations and other quality improvement activities of value or required by the State (see 10.1.2).
- Participate in *clinical studies and use HEDIS rate data*, healthcare quality measures for Medicaid-eligible adults described in Section 1139B of the Social Security Act, Consumer Assessment of Health Plans (CAHPS) survey results and data from other similar sources to periodically and regularly assess the quality and appropriateness of care provided to members (see 10.1.2 and 10.1.3)
- Utilize and report on the *Iowa Participant Experience Survey (PES)* for members receiving HCBS services (see 10.1.3)
- *Report any performance measures required by CMS*; we are accustomed to meeting all CMS reporting requirements in other states and will bring our experience to Iowa to assure compliance
- *Utilize and report on all quality measures required*, as described in Section 14, including, but not limited to quarterly health outcomes and clinical reports, and the VIS measures; we are accustomed to working with State partners to provide all information required for quality reporting and are confident we will be able to help Iowa meet all reporting needs (see 10.2)

- **Procedures for collecting and assuring accuracy, validity and reliability of performance outcome rates** that are consistent with best practice protocols developed in the public or private sector (see 10.1.2)
- Procedures for a **provider pay-for-performance** program (see 10.3)
- **Member incentive programs** aligned with the Healthiest State Initiative and other quality outcomes (see 10.3)
- Procedures to assess **member satisfaction** not already defined (see 10.1.3)

Question 10.1, #2

2. Describe how you will utilize program data to support the development of the Quality Management and Improvement Work Plan.

Amerigroup will incorporate diverse program data points into the QM/QI Work Plan and Annual Evaluation to drive targeted, continuous quality improvement strategies. We will maintain a prospective five-year work plan with long-term goals based on the membership population and State quality initiatives. We will update the five-year outlook each year through the Annual Evaluation process. See Attachment 14.5.1-1, Work Plan for a preliminary plan specific to our quality goals in Iowa. This work plan will be a dynamic document that we will work with DHS and other stakeholders to continuously refine.

We will develop yearly goals in the QM/QI Work Plan. For example, in Year 1 we will focus on understanding and building baselines so we can identify priorities and measure progress in Years 2 and 3. Once we have established the baseline, we will work collaboratively with the State to determine where Iowa wants to be in five years and refine our work plan to meet those goals.

The annual QM/QI Work Plan identifies specific activities and projects to be undertaken by the plan and the performance measures to be evaluated. Work Plan activities align with contractual, accreditation, and/or regulatory requirements, and identify measurements to accomplish goals.

The Annual QM/QI Evaluation describes the level of success achieved in realizing set clinical and service performance goals through quantitative and qualitative analysis and prior years' trending as appropriate.

The Annual Evaluation describes the overall effectiveness of the QM/QI Program by including:

- Description of ongoing and completed QM activities and projects that address quality and safety of clinical care and quality service
- Quantitative and qualitative analyses and trending of clinical care, safety, and service performance measures to assess desired outcomes and progress toward achieving goals
 - HEDIS data
 - CAHPS data
 - Iowa Participant Experience Survey (PES) for members receiving HCBS services
 - Health plan specific data
 - State performance measures as identified
- Major accomplishments, including an assessment of progress made in influencing network-wide safe clinical practices
- Identification and analysis of issues or barriers to achieve goals and limitations of the data or measure

- Recommended interventions/actions to demonstrate improvements for the upcoming year
- Evaluation of the adequacy of resources, training, scope, and content of the QM/QI Program
- Provider and member participation in the QM/QI and UM Programs

The Annual Evaluation is developed with the participation and support of all applicable parties and is presented to the QM/QI Committee and the Board for final approval and additional recommendations.

An integral component of our Program is the Medicaid QM/QI Work Plan, which represents our road map for the future and is built based on detailed analysis of provider and member data.

The Work Plan is the vehicle through which we monitor, evaluate, and take effective action to identify and address all program improvements, including those related to quality of care. Our Work Plan is the tool that guides our QM team in measuring our success in achieving targeted improvement goals.

Amerigroup will refine and evaluate the five-year Iowa QM/QI Work Plan on at least an annual basis. The Work Plan will include the following:

- Objectives for the coming years and program scope
- Activities planned for the upcoming year, including quality and safety of clinical care and quality of service
- Performance measurement, including benchmarks and goals
- PIPs baselines and interventions
- Timeframe within which each activity will be achieved
- Person(s) responsible for each activity, including department collaboration and coordination
- Monitoring previously identified issues
- Planned evaluation of the QAPI Program and Work Plan
- Schedule for reporting to the governing body (or designee)
- Schedule for evaluation of delegated services

The Work Plan is a dynamic document and is updated as needed to reflect changes in processes, priorities, and/or activities. The QM/QI Committee, National Medicaid Quality Improvement Committee (QIC), and the Amerigroup Board of Directors review and approve the QM/QI Work Plan, with final approval coming from the Board of Directors.

The Work Plan lists the measures we will collect; the previous year's performance and Quality Compass benchmark, if applicable; and the current year's target measure, listing the interventions for each aspect. The Work Plan also reflects quality targets for the health plan's Case Management programs, including CM and DM, such as top conditions, member satisfaction, and member engagement rates.

Leveraging both local and national health plan experience and the best practices across our affiliates managing state sponsored health programs in other states; our Work Plan for Iowa will reflect a full scope of quality metrics. Examples of metrics include those specific to our CM and DM programs, HEDIS measures, Iowa PES findings for members receiving HCBS services, and measures that target condition-specific care, such as diabetes, asthma, coronary artery disease, mental health, avoidable emergency room services, and members with special healthcare needs. We will focus on outreach, patient safety, preventive services, closing gaps in care, and provider engagement and profiling. We will encourage the

IA_10.1_COB_12

use of clinical practice guidelines and high-risk prenatal, chronic, and complex condition management processes. We will also focus on member assessment, care planning, and engagement in their self-management, and we will assist with system of care navigation.

Data Collection and Utilization

Data to support the Program and Work Plan is collected on a routine basis (monthly, quarterly, and/or annually) and on an ad hoc basis from internal and external sources to systematically and objectively monitor, analyze, evaluate, and report health outcomes and indices of quality. Data related to all aspects of member services, departmental operations, and outcomes may be collected to ensure a comprehensive view of quality performance.

Data sources may include, without limitation: enrollment information, claims, encounters, authorizations, appeals, complaints, disease/care coordination documentation, access and availability survey findings, member medical records within provider offices and facilities, surveys by external bodies such as accreditation entities or CMS, quality improvement studies, CAHPS, participant experience survey, and HEDIS results.

Data collection follows protocols established in approved policies or program design. Standardized data collection tools ensure consistent and accurate abstraction of data per indicator/written specifications. Inter-rater reliability is evaluated for all manual data abstraction processes.

Quantitative and qualitative analyses are conducted to evaluate the effectiveness of activities in achieving Amerigroup clinical and service performance goals. These analyses take into account, among other things, potential barriers for achieving desired outcomes and interventions or recommended strategies. Data is aggregated to track and trend over time for identification of optimal and suboptimal plan performance. Revisions to the Work Plan are initiated as a result of findings or reprioritization of projects and new events.

Question 10.1, #3

3. Detail your experience in and strategies for improving quality indicators, including HEDIS measures, CAHPS measures and satisfaction surveys. Describe how you will apply that experience in Iowa.

Our Quality Management and Improvement Program not only defines the standards and guidelines for executing State and accreditation quality requirements, but identifies and targets areas most in need of improvement and then dedicates appropriate resources to identify barriers and design and implement effective interventions. *As noted previously, our affiliate health plans have achieved NCQA's 90th percentile on six major HEDIS measures.* To optimize results, our strategy applies the best practices and proven interventions that have achieved superior results in our affiliate health plans managing state sponsored programs across the country. This includes incorporating results from HEDIS, CAHPS, and other surveys such as the Participant Experience Survey (PES) for members receiving HCBS. Our member and provider satisfaction surveys occur annually and include a full range of questions on medical, behavioral, SUD, and LTSS factors. We also solicit input from the community on quality improvement projects and ways to improve member satisfaction through town hall meetings and other in-person or telephonic member, provider, and community interactions.

We actively solicit member feedback through the annual CAHPS survey, benchmarking the results to national NCQA Medicaid CAHPS survey results. This survey solicits members' input on their ability to receive the needed care quickly, how well providers communicated, customer service, and rating(s) of the physician, specialist, healthcare, and Amerigroup.

Amerigroup uses a "Plan, Do, Study, Act/Assess" methodology to identify and evaluate possible clinical or non-clinical improvement opportunities. We use a standard root cause analysis process, which includes data collection, causal factor charting, root cause identification, and action recommendations in our

monitoring activities. If progress toward improvement is slower than anticipated within the timeline of the project, we employ the Rapid Cycle Learning (RCL) process to make mid-course corrections based on the data received. We continue the RCL process throughout the year as we acquire real-time data.

At least annually and through regular meetings and ongoing data collection and evaluation processes, the QM Department facilitates a formal evaluation of the effectiveness of the QM Program and analyzes outcomes realized from Work Plan activities and data trends:

- Key data points include (but not limited to): HEDIS, CAHPS, Iowa PES for members receiving HCBS services, and other Iowa-specific performance measures
- Analysis and evaluation of outcomes including an assessment of the extent to which QM activities were completed and goals met
- Recommended interventions/actions to demonstrate improvements for the upcoming year

As an example of the effectiveness of these monitoring activities, one of our affiliate health plans noticed that the HEDIS seven-day follow-up after behavioral health admission rate was lower than anticipated. The health plan invoked the RCL process and focused on the adequacy of the discharge plan. They found a problem with the post-discharge appointments — members were either not aware of the appointment post discharge, or the appointment was scheduled beyond the post-discharge seven-day follow-up date. The health plan initiated additional discharge planning interventions, including hospital-based visits by a Case Manager to meet with the member and to develop a discharge plan face-to-face that the member agreed to. They also incorporated the Bridge on Discharge Program - where a provider meets the member to provide education, assess the member and home environment, and identify any barriers to keeping the appointment with the outpatient psychiatrist/therapist - and added providers with capacity to the network. As a result, the health plan's seven-day follow-up after behavioral health admission HEDIS rate improved by 10 percentage points.

Amerigroup incorporates member feedback into our QM activities to drive operational change to improve clinical and non-clinical programs. We use the results of CAHPS, PES, and other surveys to identify areas for improvement. We develop and implement performance improvement activities to address areas of concern specific to our members.

For example, at the end of 2014 in our New Jersey affiliate, our performance improvement activities generated the following CAHPS improvements for our members:

- Increased their customer service ranking from 25th to 90th percentile
- Increased their “Getting Care Quickly” accessibility ranking from 25th to 75th percentile
- Increased their “How Well Doctors Communicate” ranking from 10th to 90th percentile
- Increased their “Health Plan Overall” ranking from 25th to 50th percentile

Question 10.1, #4

4. Describe your experience and strategies in working with network providers to improve outcomes.

Amerigroup assures that our QM/QI Program incorporates local practicing physicians and other clinicians in developing our quality goals and processes, incorporating industry best practices coupled with local variations as appropriate. We work with our providers in developing reports to address our member needs. We also monitor for variations in provider practice and prescribing patterns and conduct education and outreach to outliers to promote evidence-based clinical practice guidelines.

We will supply providers with information about their performance relative to their peers, as well as monthly gaps in care reports based on HEDIS measures, to improve visibility into ways to improve VIS.

IA_10_1_CCB_32

We will supply providers with information about their performance relative to quality metrics that compare their performance to that of their peers, as well as monthly gaps in care reports based on HEDIS measures. Our local, on-site provider services representatives and QM nurses review these with our providers. The provider Quality and Population Management Incentive Program is directly tied to individual and other approved performance measures. Provider performance is determined based on achieving quality targets (for example, HEDIS scores) as well as efficiency (cost) targets.

Complementing these initiatives, Amerigroup also seeks to engage providers through participation in our QM/QI Committee as a means to cultivate positive and productive relationships and

achieve sustainable results. We include active physician participation (primary care and specialists, including behavioral health and specialists skilled at working with members with special healthcare needs) through the Iowa QM/QI and Medical Advisory Committee. Providers are included in the planning, design, implementation, and review of our QM/QI Program. With support from our QM employees, providers will be asked to:

- Assess levels and quality of care provided to members and recommend, evaluate, and monitor minimum standards of care
- Provide applicable advice and input over the development and updating of clinical practice guidelines; identify opportunities to improve services and clinical performance by establishing, reviewing, and updating clinical practice guidelines based on the review of demographic and epidemiologic information to target high-volume, high-cost, high-risk, problem-prone conditions
- Conduct a peer review process that provides a systematic approach for monitoring of quality and appropriateness of care
- Conduct a systematic process for network maintenance through the credentialing/re-credentialing process
- Give advice to the health plan administration in any aspect of the policy or operation affecting network providers or members
- Provide oversight of the peer review process
- Provide guidance and feedback regarding technology assessment

We support our providers through several processes, including orientation, bulletins, performance reports, Provider Services Staff on-site visits, manuals, and our provider website. We also publish updates on QM activities in the provider newsletter. Our quality management nurses deliver provider education on HEDIS, CAHPS, and other State-specific initiatives. Our QM nurses also conduct Medical Record Reviews for document requirements (EPSDT, advance directives, behavioral health, and specialist referrals).

Additionally, a core element of our quality management and improvement strategy involves engaging providers in Performance Improvement Projects (PIPs), which are initiatives to help increase the quality of care to our members. Below are a few examples of how we have worked with providers in the past to improve outcomes:

- Reducing asthma-related emergency room visits
- Non-urgent emergency room utilization
- Improving access to preventative care
- Mental health follow-up post hospitalization

Reducing Asthma-related Emergency Room Visits

More than 22 million Americans have asthma, and it is one of the most common chronic diseases of childhood, affecting an estimated six million children. The burden of asthma affects members, their families, and society in terms of lost hours in work and school, lessened quality of life, and avoidable emergency room visits, hospitalizations, and death.

Increasing compliance with asthma medications over time has been shown to reduce asthma symptoms resulting in fewer asthma visits to the emergency room and, since most asthma admissions are the result of an emergency room visit, also a reduction in asthma admissions.

In 2013, an Amerigroup affiliate and their providers worked together to develop standardized provider education and asthma action plans to increase adherence to medications by asthmatic members and reduced avoidable emergency room visits. The following initiatives were implemented:

- Provided care coordination services to members to ensure adherence to medication and assess reason for emergency room visit
- Used interpreter services for member/parents who do not speak/understand English to meet members' cultural/linguistic needs
- Provided care coordination to promote follow up with PCP
- Worked with members to complete asthma action plan
- Provided members with age appropriate educational material (for example, a 12-minute video, coloring book, story book, parent guide, crayons, etc.)

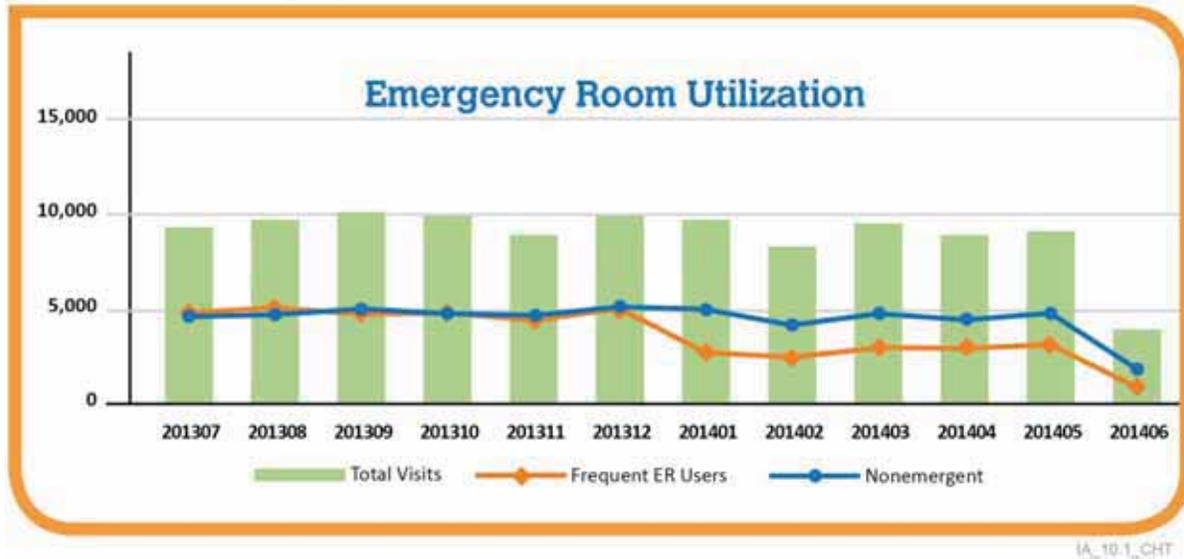

Non-urgent Emergency Room Utilization

In June 2012, our affiliate health plan engaged providers to decrease non-urgent emergency room utilization. To achieve this goal, they implemented the following initiatives:

- Located and contracted with additional urgent care facilities, as well as PCPs with extended hours for non-urgent care, in areas where there is high member utilization
- Assigned care managers to specific high volume emergency rooms to work with providers to assess barriers and drivers of emergency room use, strengthen care management relationships, make PCP appointments, and forward the discharge summary to the PCP
- Deployed UM nurses in specific, high-volume facilities

As illustrated in Figure 10.1-2, the health plan's initiatives steadily decreased the number of non-urgent emergency room visits among members identified as visiting the emergency room significantly more than other members. Additionally, the number of non-urgent emergency room visits among *all members* decreased over the course of a year.

Figure 10.1-2. 2013 Emergency Room Utilization Measurement

Improving Access to Preventive Care

Our Texas affiliate partnered with network providers to combat the lack of preventive care for children and increased access to preventive care through the following initiatives:

- Enhanced provider communication by sending quarterly reports to PCPs indicating which members on their panel required EPSDT visits
- Embedded Health Plan Associates: For those high volume PCP offices that requested assistance with member outreach, Amerigroup “embedded” health plan staff for specific periods to call members with gaps in care and make appointments. If the provider was willing, associates made the calls from the PCP’s office, which resulted in improved member contact success. Additional calls were made by health plan clinical staff to augment standard member outreach efforts
- Our Texas affiliate health plan is now in the NCQA Quality Compass 75th percentile for child and adolescent well care and children’s access to care.

Mental Health Follow-up Post Hospitalization

According to The Commonwealth Fund, about 40 percent of patients hospitalized for a psychiatric condition are re-hospitalized within one year. Amerigroup believes that follow-up care after a hospitalization for mental illness will reduce re-hospitalizations for some individuals or help facilitate necessary readmission before individuals reach a crisis stage.

In 2013, Amerigroup’s affiliate health plan worked with providers to better support mental health patients after their hospitalization through the following initiatives:

- Increased reporting frequency so that rates are calculated once a month, rather than once a quarter, giving greater visibility into the process
- Bridge Program Pilot – outpatient behavioral health providers saw the patient on the day of discharge from the hospital
- Built an in-house behavioral health team to manage the care of members (this included care coordination of chronic members)

Additionally, we will be launching tools in Iowa for HCBS providers that will provide the platform to establish a baseline for measuring quality for HCBS services. With the launch of Careticker, an innovative platform that engages, supports, and incentivizes caregivers and paid personal care attendants to record information to maximize member health, wellness, and attainment of personal goals. Careticker provides a secure web and mobile platform that facilitates real time tracking and reporting related to the member's in-home services and supports. In addition, caregivers and paid personal care attendants submit daily notes and observations regarding the member. This information is reported back to the community-based case manager in real time. The case manager can then communicate and interact with the member, family, and provider to provide necessary support or guidance to meet the improve member experience and outcomes. We believe this platform will provide the basis to develop an additional HCBS quality-based incentive designed specifically for providers of personal attendant services that we plan to develop during the term of the contract.

QM/QI Committee (10.1.3)

Question 10.1, #5

5. Outline the proposed composition of your Quality Management and Improvement Committee, and demonstrate how the composition is interdisciplinary and appropriately represented to support the goals and objectives of the Quality Management and Improvement Committee.

Delivering on our commitment to quality requires orchestration of resources, both local and national, to gather and analyze the data that drive our QM efforts. Amerigroup's QM/QI Program will have the organizational infrastructure necessary to provide effective monitoring, reporting, and analysis and to act on opportunities to improve clinical care and services.

The QM/QI Program contains an interdisciplinary set of resources to provide a more holistic approach to monitoring and improving quality. Aside from national support and leadership from our medical directors (including population-specific directors), we coordinate with Disease Managers, our Clinical Quality Management Department, healthcare delivery systems, Utilization and Care Management departments, as well as practitioners and other health promotion staff.

The Amerigroup Iowa Board of Directors (Board) has responsibility for organizational governance and in this capacity is the governing body of the Quality Management Program. The Board has designated our national Medicaid Quality Improvement Committee (QIC) to oversee the Quality Management Program and activities. The QIC is directly accountable to the national Enterprise Clinical Quality Committee (ECQC). The Board annually approves the QM/QI Program, Work Plan, and QM Program Evaluation.

Amerigroup will have a local Quality Management and Improvement Committee (QM/QI Committee) for Iowa. Its purpose is to provide a forum for local health plan members to engage in review, coordination, and direction of the QM/QI Program. Additionally, the QM/QI Committee:

- Provides recommendations for approval of activities that relate to key processes, clinical guidelines, and Medicaid-specific policies and procedures
- Leads and oversees the Health Plan QM/QI Programs
- Improves the safety and quality of care and services

IA_10.1_COB_42

- Addresses healthcare disparities

The goals of the QM/QI Committee are to:

- Establish strategic direction - monitor and support implementation of the quality management program
- Establish processes and structure that ensures accreditation compliance
- Review and accept national and local QM policies and procedures, as appropriate
- Analyze, review, and make recommendations regarding the planning, implementation, measurement, and outcomes of clinical/service quality improvement studies
- Coordinate communication of quality management activities throughout the Plan
- Review HEDIS, CAHPS, and other quality data and action plans for improvement
- Review, monitor, and evaluate program compliance against Amerigroup, State, federal, and accreditation standards
- Review the annual Quality Management Program description and Work Plan; determine and describe the program's overall effectiveness; consider the adequacy of resources, committee structure, practitioner participation, and leadership involvement in the QM/QI Program and determine whether to restructure or change the Program for the subsequent year based on its findings
- Provide oversight and ensure compliance of delegated services
- Assure inter-departmental collaboration, coordination, and communication of quality improvement activities
- Measure compliance to medical and behavioral health practice guidelines
- Monitor continuity of care between medical and behavioral health services
- Monitor accessibility and availability with cultural assessment
- Publicly make information available to members and practitioners about network hospitals' actions to improve patient safety
- Make information available about the QM/QI Program to members and practitioners
- Assure the availability of Program minutes to the appropriate State regulatory agency, as applicable
- Assure practitioner involvement through direct input from the Medical Advisory Committee or other mechanisms that allow practitioner involvement

Our QIC is composed of interdisciplinary health care professionals to verify that all stakeholder perspectives are represented during times of critical decision-making. The Quality Management and Improvement Committee typically consist of the following members:

- Senior health plan leaders of Quality Management
- Senior health plan leaders of Utilization Management
- Senior health plan Medical Directors

Practitioner Membership

The Medical Director develops a proposed list of practitioners to serve on the Medical Advisory Committee (MAC) and Credentialing Committee. The practitioners are representative of the managed care organization (MCO) network provider community and the local healthcare delivery system. The list is submitted to the QM/QI Committee as a component of the annual QM/QI Program and Work Plan approval process. Efforts are made to rotate membership every two years. However, to ensure continuity of committee activity, membership may be extended. Participating providers do not receive incentives or

gifts intended to improperly influence participation on health plan committees. Participating committee practitioners may be paid an honorarium for attendance for participation in committee meetings.

Enrollee Membership

The QM/QI Committee also incorporates input from members and other stakeholders to address State, community, and population-specific issues. Our MAC will identify issues for inclusion on quality committee agendas on a quarterly basis, which will be incorporated in PIPs and quality work plans as appropriate. We have successfully operated MACs as a strategy to incorporate member and stakeholder input in our quality programs across all our state health plans since inception.

Participating members serving on committees do not receive incentives or gifts to improperly influence participation on health plan committees. Participating members may be paid an honorarium for their attendance and participation in an Amerigroup consumer committee.

Committee Minutes

Minutes are recorded at each meeting and reflect key discussion points, recommended policy decisions, analysis and evaluation of QI activities, needed actions, rationale, planned activities, responsible person, and follow-up. Minutes record the practitioner and health plan staff attendance and participation. Minutes are produced within a reasonable timeframe, at a minimum, within one month or by the date of the next meeting and maintained in confidential secure files. Minutes are reviewed and approved by the originating committee and signed and dated within the same reasonable timeframe. A copy of the signed and dated written minutes for each meeting are available on file and made available for review upon request by DHS or its designee.

Notification of Meetings to the DHS

Amerigroup will comply with the requirement to notify the State at least 10 days in advance of committee meetings. From our experience in other states, we are accustomed to sharing meeting invitations with providers and other stakeholders several weeks in advance. We also plan to share a meeting schedule with the State of Iowa when we submit policies and procedures and other required documentation. Information on the next scheduled meeting is also available in the meeting minutes. Our Quality lead in Iowa will work with the regulatory contract manager to make sure the State-identified DHS representative is aware of meetings. We understand the State representative may or may not decide to attend the meetings. Should they attend the meeting, the agenda would also list the date for the next meeting as well. Should the date or time change, the regulatory and QM leads would ensure the DHS representative would be made aware and provide a reminder 10 calendar days prior to the meeting. All meetings that require notifications to DHS will be kept on a Regulatory Contact Log to ensure notifications occur.

State Quality Initiatives (10.2)

Driving quality program execution and leading wellness and prevention are paramount responsibilities of Iowa's health agencies. Amerigroup Iowa's (Amerigroup) mission is to make it easy for the State to deliver superior quality performance for all of its constituents. In the following section, we demonstrate why Amerigroup is uniquely suited to support the State team in achieving its quality goals.

Amerigroup is well positioned to make it easy for the State to achieve its quality goals because of its:

- **Aligned Philosophy** – We believe in building quality into all of our processes and in leading by example within our own organization
- **Extensive Experience** – We will leverage the extensive experience of our affiliate health plans, that have implemented quality programs across varying population groups with differing needs and State priorities
- **Innovation for Iowa** – We will leverage our established innovative processes and our deep base of wellness and prevention programs to help Iowa become a leader in health and wellness

At Amerigroup, we build quality into our processes rather than just auditing the outcomes. Our organizational quality goals are tightly aligned with Iowa's goals. We believe that personal health is tied to organizational health, and at Amerigroup, as well as our parent Anthem, we have always espoused and implemented socially responsible organizational principles. As a result, we are well positioned to be a leader in the Iowa Initiative.

Our time-tested quality programs, developed over dozens of implementations covering specialized populations within each state's unique context, will minimize the time and effort required for MCO quality management oversight. We will provide all the access and data reporting required in the form, format and timeframe required. As a result, State resources can focus on driving quality innovation such as the effective implementation of the Healthiest State, The Mental Health and Disability Services Redesign, and the State Innovation Model (SIM) Initiatives.

We offer our organization's proven track record helping states meet health goals – the State of Iowa does not need to worry about our ability to meet and exceed required quality standards even in the context of an accelerated implementation.

- According to the 2014-2015 NCQA Medicaid Health Plan Rankings, as published by Consumer Reports, Amerigroup's affiliate health plans operating state sponsored programs are the #1 or #2 ranked plan in Georgia, New Jersey, New York, and Tennessee.
- Amerigroup's affiliates have experience delivering superior HEDIS performance and improving outcomes over time for the measures that are of critical important to Iowa as demonstrated in Table 10.2-1.

Customization to fit Iowa's needs is paramount. Our proprietary Quality Management system as well as our Health and Wellness Programs will be tailored to fit Iowa's environment with a keen focus on driving the goals espoused in the State's core improvement initiatives. Amerigroup will work with stakeholders to achieve new performance standards by aligning with Iowa's goals. Our pre-award field teams have already begun to engage with Iowa stakeholders so that we can move quickly once an award announcement is made. We look forward to collaborating with Iowa to deploy our best practices and to develop new strategies to make it the number one Medicaid program in the nation.

Table 10.2-1. Amerigroup Affiliates Achieved Strong and Improving HEDIS Performance Across Key State Quality Initiative Measures

Annual Dental Visits			
	HEDIS 2012	HEDIS 2013	HEDIS 2014
NCQA 90th Percentile	69.07	69.92	66.8
GA	69.68	69.92	69.67
Well Child Visit 3 to 6 Years			
	HEDIS 2012	HEDIS 2013	HEDIS 2014
NCQA 90th Percentile	83.04	82.08	82.69
NY	82.27	84.58	86.23
Well Child Visit 12 to 21 Years			
	HEDIS 2012	HEDIS 2013	HEDIS 2014
NCQA 90th Percentile	64.72	65.45	65.56
NY	61.83	61.42	69.7

Follow-up After Mental Illness Discharge - 7 days			
	HEDIS 2012	HEDIS 2013	HEDIS 2014
NCQA 90th Percentile	69.57	68.79	63.21
NY	53.47	65.67	67.75
ADHD Initiation Phase			
	HEDIS 2012	HEDIS 2013	HEDIS 2014
NCQA 90th Percentile	52.48	51.86	53.03
TN	61.33	60.54	60.59
Comprehensive Diabetes - HbA1c Test			
	HEDIS 2012	HEDIS 2013	HEDIS 2014
NCQA 90th Percentile	91.13	90.97	91.73
NY	90.19	86.97	90.68

In the following section, we outline how we propose to:

- Assist the State in easily fulfilling its quality management responsibilities
- Collaborating to drive important initiatives (for example, Healthiest State Initiative)
- Leveraging experience to support State programs (for example, Substance Abuse Prevention and Treatment Block Grant)

State Quality and External Independent Review (10.2.1–10.2.2)

Amerigroup is committed to supporting Iowa in meeting its quality management requirements. Specifically, we will:

- Comply with the quality standards established by the State and provide all the information and reporting necessary to carry out its obligations for its quality strategy
- Participate actively in external independent reviews of Amerigroup performance-related quality, timeliness, and access to healthcare services covered
- Provide all information required for the external quality reviews in the timeframe and format requested by the External Quality Review Organization (EQRO)
- Incorporate and address findings from external quality reviews in QM/QI Program
- Collaborate with EQRO to assess quality of care and services provided to members and to identify opportunities for improvement

- Collaborate with the State and EQRO to measure identified performance measures to assure quality and accessibility of healthcare in the appropriate setting to members, including validation of PIPs and performance measures
- Respond to recommendations made by the EQRO within the timeframe established by the EQRO, DHS or its designee
- Make results of each and every external independent review available to participating healthcare providers, members, and potential members of the organization, while not disclosing the identity of any individual patient
- We will verify strong performance through deployment of a dedicated, locally-based, quality team which fully leverages our deep experience using training, systems, policies, procedures, processes as well as assistance from key experienced staff from other markets. Amerigroup's Quality Management Manager will be responsible for making medical and other records available for review as requested. Our provider agreements require providers to make medical records and documentation available for reviews by the Plan, State, or federal entities. The Quality Management Manager and the Quality Department, with further support of our Iowa Compliance Officer and our National Medicaid Operations Compliance team, will actively collaborate with DHS and the EQRO on quality measurement and improvement.

We will ensure strong performance through deployment of a dedicated, locally-based, quality team which fully leverages our deep experience via training, systems, policies, procedures, processes as well as assistance from key experienced staff from other markets.

IA_10.2.1-2_COB_1.2

All quality improvement findings will be operationalized through our quality improvement process.

We report the findings and input provided through the external quality review process to our QM/QI Committee to inform our efforts and Work Plan to improve member health outcomes. We incorporate and address findings from EQRO audits into the QM/QI Program through our annual assessment and Work Plan update process and quarterly quality committee meetings. See 10.1 for more detail on how EQRO findings impact our continuous quality improvement program.

Through our affiliates, Amerigroup has extensive experience and well established processes for supporting State required independent review processes. In the month of March 2015, our affiliate plans participated in activities related to 16 different external review processes.

We believe quality performance is not only a manifestation of our own disciplined operations but also close collaboration with our providers, state partners and other stakeholders.

IA_10.2.1-2_COB_2.2

Building quality into all aspects of health and wellness delivery and being transparent are core Amerigroup principles. We believe quality performance is a manifestation of not only our own disciplined operations but close collaboration with our providers, State partners and other stakeholders. As such, we will not only make the results of each external review available to all relevant stakeholders, but we will actively promote review through active stakeholder outreach. Specifically, our Network Services and Marketing Departments will inform providers, members, and potential members of the availability of the EQRO results through

our website, newsletter, provider fax blast, Town Hall sessions, and through provider office visits.
